Symbol Legend

* Indicates an estimate that may be less statistically reliable than estimates that are not flagged. The rules for flagging estimated means and percentages are as follows:

Mean: An estimated mean is flagged when based on a sample size of less than 30 times the variance inflation factor (VIF), where the VIF represents a broadly calculated average design effect, or when the relative standard error is greater than 30 percent. The VIF used in this table is 2.76.

Percent reporting a supplement intake: An estimated percentage between 25 and 75 percent is flagged when based on a sample size of less than 30 times the variance inflation factor (VIF), where the VIF represents a broadly calculated average design effect, or when the relative standard error is greater than 30 percent. An estimated percentage less than or equal to 25 percent or greater than or equal to 75 percent is flagged when the smaller of np and $n(1-p)$ is less than 8 times the VIF, where n is the sample size and p is the percentage expressed as a fraction. The VIF used in this table is 2.76.

Indicates a non-zero value too small to report.

-- Estimated mean not presented where sample size is less than 30 times the variance inflation factor (VIF), i.e., sample size less than 83 for VIF = 2.76.

Note: The 2017–March 2020 files represent a unique public-use data release from NHANES. The coronavirus disease 2019 (COVID-19) pandemic required suspension of data collection in March 2020. As a result, the partially completed NHANES 2019–2020 cycle was not nationally representative. Therefore, the 2019–March 2020 data were combined with the data from the 2017–2018 cycle to create the nationally representative 2017–March 2020 prepandemic data files.

Footnotes

¹ Sample weights designed for dietary analysis were used to allow estimates representative of the U. S. population for the years of collection.

² Selection of the 22 vitamins, minerals, and carotenoids was based on the availability of Day 1 nutrient intakes from both food and dietary supplements. At the time of this release, supplement data were not available for vitamin A, vitamin E, and other carotenoids.

Niacin: values do not include niacin-equivalents from tryptophan.

Folic acid: the synthetic form of folate used as a fortificant in foods and dietary supplements.

Folate (DFE): μg dietary folate equivalents = μg food folate + $(1.7 \times \mu\text{g}$ folic acid).

Vitamin D: $1 \mu\text{g} = 40$ International Units (IU).

Calcium and Magnesium: supplement intake includes non-prescription antacids.

³ **Food and beverage intake** was estimated from Day 1 dietary recall interviews conducted in the *What We Eat in America*, National Health and Nutrition Examination Survey (NHANES) 2017-March 2020. The 24-hour dietary recalls were conducted in-person, by trained interviewers, using the USDA 5-step Automated Multiple-Pass Method. Food intakes were coded and nutrient values were determined using the USDA Food and Nutrient Database for Dietary Studies 2017-2020 www.ars.usda.gov/nea/bhnrc/fsrg.

⁴ **Dietary supplement** intake was estimated from the Day 1 Total Dietary Supplements File (P_DS1TOT) of NHANES 2017-March 2020. Collected as part of the dietary supplement component of the 24-hour dietary recall, intakes now reflect the same timeframe as the food and beverage intake. Data are collected on the usage of all vitamins, minerals, herbals, and other dietary supplements as well as non-prescription antacids and calculated using the NHANES-Dietary Supplement Database. Documentation available at: https://wwwn.cdc.gov/nchs/nhanes/2017-March_2020/P_DS1TOT.htm.

⁵ **All individuals:** includes both supplement users and non-users 2 years and over. Pregnant and/or lactating females, breast-fed children, and individuals with incomplete dietary supplement component of the 24-hour dietary recall were excluded.

⁶ **Supplement Users:** includes individuals who reported taking at least one multi- and/or single-nutrient supplement that contained the vitamin or mineral displayed on this page.

⁷ **Non-users:** includes individuals who did not report taking any dietary supplement that contained the vitamin or mineral displayed on this page. Non-users may include individuals that reported other dietary supplements.

⁸ The weighted percentage of respondents in the gender/age group who reported taking at least one multi- and /or single- nutrient supplement containing this nutrient.

Abbreviations

SE = standard error; DFE = dietary folate equivalents.
