Nikon D90

Linking, Downloading and Sharing policy

If you're an educator in any college or university, or an official in any scientific society, museum, botanical garden, zoo or comparable, and want to distribute copies of FLAAR Reports on digital photography (www.digital-photography.org), on Maya archaeology, ethnobotany or ethnozoology (www.maya-archaeology.org) or wide-format inkjet printing (www.large-format-printers.org) to your staff or students, please just let us know so that can authorize the distribution.

If your museum, university, college, botanical garden, or zoo want to receive all FLAAR reports in the future (similar to a subscription format), there will be no charge if you arrange a distribution system for your institution by linking to our www.digital-photography.org or www.maya-archaeology.org (currently available only for museums, universities, and comparable).

There is no cost for distributing this report, but it is preferable that the system is authorized by FLAAR publications. We prefer that the link to the actual download comes through our web page. In other words, you can link to our web page whereby the PDF can be downloaded at no cost.

This report is not intended to be put onto any other web site (other than museum, university, botanical garden, zoo) and only when authorized. This report is not available to be placed on other web sites (that are not a recognized educational resource).

One reason our reports are not intended for being copied is that this report may have been updated and we have no way to provide updates if we don't know (via communication) who is posting our PDFs.

To get a legitimate version we suggest you get it from www.maya-archaeology.org, www.digital-photography.org or our new site in 3D technology that covers 3D scanning of cultural heritage, ethno-botanical and ethno-zoology, www.3d-scanners-3d-software-reviews.org.

Updates and improvements

If you find any errors or permission in this report, or if you know anything that we missed, please let us know to consider it. Write to FrontDesk@FLAAR.org

Introduction

The Nikon D90 was released in August 2008. This camera came as a similar and upgraded version of the Nikon D80. Similar in many ways to the Nikon D80, the Nikon D90 offers new and interesting functions, that will be discuss in this report.

Here we will focus on the functions that the camera has to offer, and how these functions can be compared with photo editing software.

Lenses are also a huge factor that will be also discussed, according to the capabilities of the camera.

Nikon D90 is a semiprofessional camera, equip with several features that makes it very versatile. In my experience, it's a great camera, with so much to offer, and the image quality is really great.

What to look for in the D90

Video Recording in HD-resolution

One of the first things that are discussed about the D90, is the video recording. This was the first SLR camera capable of recording HD-resolution video.

It has three ways of recording movies in JPEG formats:

- 320 x 216 pixels
- 640 x 424 pixels, and
- 1,280 x 720 pixels

Its very versatile in the sense that you can use several lenses to record your movies, and also has a great ISO performance if you are thinking of making night videos. You can also use the Picture Control selection to make your videos with the tone and color that you prefer.

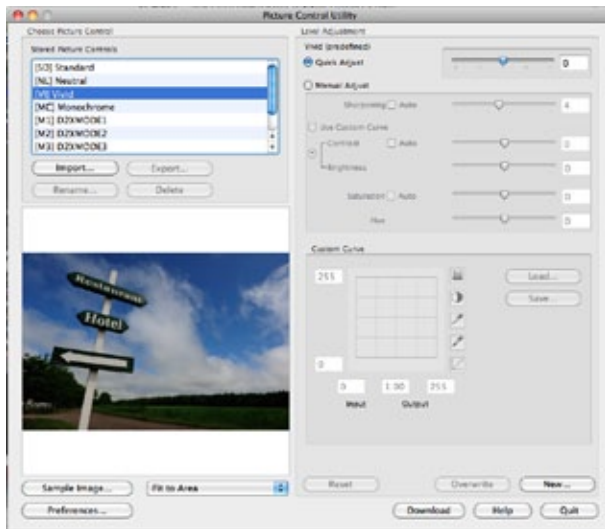

Nikon D90 with 18-105mm f/3.5-5.6 G. ED AF-S VR DX

White Heron (*Ardea alba*)

Picture Control

The Picture Control utility can be really helpful in video recording and also for JPEG photos. This application is very easy to use and is available in the Nikon D90 system, and also in the ViewNX and the Capture NX 2 software. You can program the settings that you want to use in this software, or in the camera.

Picture Control Utility software available in ViewNX 2 Software.

Picture Control Utility available in the camera's software.

D-Lighting

Another new feature in the Nikon D90 is the D-Lighting system. The Active D-Lighting can preserve details in highlights and shadows, for better image quality especially in high-contrast situations. It's suggested that the matrix metering is selected when using the Active D-Lighting. It's also recommended that this feature is used with low ISO, because it tends to produce noise if the ISO is high. In exposure mode M, the Active D-Lighting setting of Auto is equivalent to Normal.

Clean Image Sensor

This camera also has a Clean Image sensor. This option is available in the Setup Menu of the camera. This feature has two options, the “clean now” option, and the “clean at start/shutdown” option. It is recommended that the camera is placed base down when you start the cleaning.

Live view

Nikon D90 also has a live view option so you can look at your subject on the screen instead of the viewfinder. In this option, the mirror will be raised and the view through the lens will be displayed in the camera monitor. The subject will no longer be visible in the viewfinder.

Live view button

File formats

With this camera you have the option of saving your photos in JPEG (normal, basic and good), and in a NEF (RAW) format. You can also save your photos in NEF + JPEG, that way you will have both type of files; although I don't like this option so much, because it tends to occupy to much memory from your computer or from your external disc.

Its better just to have your photos taken in NEF, and then you can edit them in the format that you prefer (TIFF, JPEG, etc.)

ISO performance

The ISO Performance of the Nikon D90 has a really low noise-performance. The ISO ranges from 200 to 3200; it can also be set to an ISO 6400 equivalent. You will see that some photos taken with this camera show this aspect. This is really great for night shots or low light places that you want to picture.

Image resolution and lenses

The Nikon D90 has also a DX-format CMOS image sensor with 12.3 megapixels. In this report it's discussed the use of 3 lenses: the Nikkor 18-105mm f/3.5-5.6 G. ED AF-S VR DX; Af Nikkor 50mm f/1.8D; and the Nikkor 70-300mm f/4-5.6G AF.

The first lens, the **Nikkor 18-105mm** is a very good lens, which is the one that comes with the camera when you buy it as a kit. This is a very versatile lens, which allows you to make close captures and general shots. I have used it for several shots in both auto-automatic and manual. Here are some photos taken with this lens, all taken with manual exposition.

Puerto Viejo beach, Costa Rica. This photograph was taken with ISO 250, f/4.0, and 1/1600.

Classic car; Guatemala. This photograph was taken with ISO 250, f/5.0, and 1/1600.

Nikkor 18-105mm f/3.5-5.6 G. ED AF-S VR DX. Image taken from the Nikon USA web page. Web page: <http://www.nikonusa.com/Nikon-Products/Camera-Lenses/index.page>

Mirador San Andrés Semetabaj, Sololá, Guatemala. This panoramic was made using 10 photographs, using the Photoshop's plugin, Photomerge. All photographs were taken with ISO 500, f/8.0, and 1/4000.

Río Dulce Bridge, Río Dulce, Guatemala. This photograph was taken with ISO 2000, f/7.1, and 6 seconds. This photo was made to see how the camera works with long exposure shots.

The other lens is the **Nikkor AF 50mm f/1.8D**. This lens is one of the favorites for several photographers, especially for its sharpness and its price (about \$130). You can use it with digital and film cameras, and in auto or manual mode. I really like this lens for night shots or low light photography; you can really get amazing photos. Here are some photos taken with this lens, all taken with manual exposition.

Red lored parrot (*Amazona autumnalis*); Guatemala. This photograph was taken with ISO 640, f/2.5, and 1/200.

Sexta avenida, zona 1, Guatemala city, Guatemala. This photograph was taken with ISO 2500, f/2.8, and 1/320.

Nikkor 50mm f/1.8D lens construction. Image taken from the Nikon USA web page. Web page: <http://www.nikon-usa.com/Nikon-Products/Camera-Lenses/index.page>

Stimpy cat; Guatemala. This photograph was taken with ISO 2500, f/1.8, and 1/160.

And last but not least, the **Nikkor 70-300mm AF G**. This lens has also a great prize (at about \$140), its lightweight, and has a very good zoom range. Many people say, and I also agree, that for the prize it has, it has really good optics. This lens help me out big time for bird photography. All of the pictures shown next were taken with manual exposition, and manual focus (I consider it more easy that way, but automatic also a good choice).

Nikkor 70-300mm f/4-5.6
G. AF. Image taken from the
Nikon USA web page. Web

Blue heron (*Egretta caerulea*); Monterrico mangroves; Guatemala. This photograph was taken with ISO 800, f/7.1, and 1/2000. Photograph taken at 6:30am.

Sailboat; Livingston, Guatemala. This photograph was taken with ISO 640, f/7.1, and 1/1250.

Green heron (*Buto ridesvirescens*); Monterrico mangroves; Guatemala. This photograph was taken with ISO 800, f/5.6, and 1/1000. Photograph taken at 7:30am.

Other lenses

Nikon has a wide variety on lenses that can be used in the Nikon D90. The following chart explains the lenses compatibility.

White heron (*Ardea alba*). This photograph was taken with ISO 800, f/8.0, and 1/3200. Photograph taken at 8am.

- IX-Nikkor lenses cannot be used.
- Vibration Reduction (VR) supported with VR lenses.
- Spot metering meters selected focus point.
- Cannot be used with shifting or tilting.
- The camera's exposure metering and flash control systems may not function as expected when the lens is shifted and/or tilted or an aperture other than the maximum aperture is used.
- AF-S or AF-I lens required.
- With maximum effective aperture of f/5.6 or faster.
- When AF 80-200mm f/2.8, AF 35-70mm f/2.8, AF 28-85mm f/3.5-4.5 (New), or AF 28-85mm f/3.5-4.5 lenses are zoomed all the way in at the minimum focus distance, the in-focus indicator may be displayed when the image on the matte screen in the viewfinder is not in focus. Focus manually until image in viewfinder is in focus.
- With maximum aperture of f/5.6 or faster.
- Some lenses cannot be used.
- Electronic analog exposure display cannot be used.
- Shutter speeds slower than 1/60 s not available.
- Attach in vertical orientation; can be used in horizontal orientation once attached.

You can look at this chart also in the Nikon web page. Web page: <http://imaging.nikon.com/products/imaging/lineup/d90/en/system-accessory/#c-5>

Chart system

The following chart is available in the Nikon web page. This chart is an easy way to know what accessories can be used with the Nikon D90.

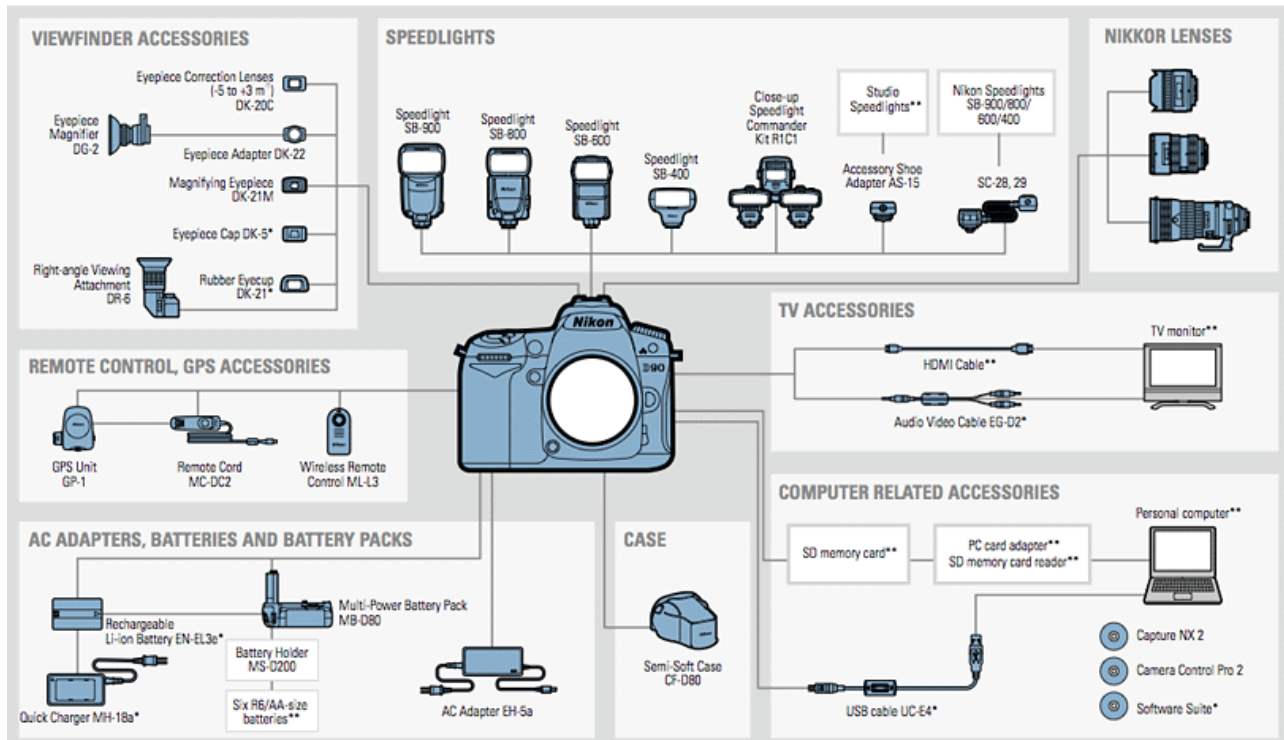

Chart system also available in Nikon's web page. Web page: <http://imaging.nikon.com/products/imaging/lineup/d90/en/system-accessory/#c-5>

Conclusions

In over all, I think this camera is a good buy for someone who is taking photography more seriously than a simple amateur. It has also a great prize, starting at \$750, which is really good for the things that the camera has to offer.

There are only a few things that need consideration, for example, when it comes to recording video, the camera has no provision for external audio input. I think is a convenient way to record simple videos, or experimental videos, but you can not compare the video recording of this camera with video cameras that are specially made for video recording.

Something else that I think is important to discuss is the retouch options that the camera has to offer. These options are important for someone who doesn't know how to use an image editing software (like Photoshop, Lightroom, or the ViewNX 1 or 2 –from Nikon-, among others). With the retouch options of the Nikon D90, which are several features like, D-lighting, red-eye correction, trim, monochrome, color balance, quick retouch, etc. These features are easy to use, but in my opinion the quality isn't that great. I prefer use Photoshop to edit my photographs, because there's so much you can do, to get an outstanding result. But remember, its not always about how much you can retouch an image, for me, the less you do in editing is the best; that's what makes a great picture.
