## Proposed VDI client and plugin version enforcements for 2024

To aid with longer-term testing and updating processes extending beyond the 90-day notice for the next specific versions to be enforced, Zoom is providing a list of VDI client and plugin versions we anticipate enforcing for each upcoming quarterly lifecycle for the upcoming year.

**Important note:** These versions are only a proposal and the final enforcement versions may vary due to further stability and security considerations, but we will strive to ensure the final enforced version is the same or below the proposed version listed here.

Quarterly lifecycle enforcement	Proposed VDI client version	Proposed VDI plugin version
February 2024	5.13.0	5.11.9
May 2024	5.14.10	5.13.0
August 2024	5.15.10	5.14.10
November 2024	5.16.10	5.15.10

For the February 2024 enforcement, version 5.13.0 will be enforced for both VDI client and plugin, as a change in certificate validations will cause issues for lower versions. Beyond this enforcement, the chosen VDI plugin version will trail the VDI client version, to assist customers needing additional time to update VDI plugins.
