Predictive Services Discussion:

Warmer temperatures are forecast across much of the West today, with scattered showers likely to continue across portions of the Northwest and northern Rockies. Relative humidity will be more moderate overall with minimums 10-30%, although localized areas of southern Arizona and New Mexico into far west Texas may be below 10%. Winds overall will be lighter today across much of the West as well, except for strong westerly winds across central and eastern Montana into the western Dakotas where gusts could reach 50 mph. Temperatures will remain closet to normal across the Florida peninsula today, with isolated afternoon thunderstorms. Scattered to widespread showers and thunderstorms will develop across the eastern Plains through the Mississippi Valley this afternoon, with some storms likely to be severe from northern Missouri into Minnesota. Scattered showers and thunderstorms are also likely to spread eastward into the Appalachians and Deep South this evening. Much of the Northeast will remain dry, but relative humidity will remain elevated and winds light. Slightly above normal temperatures and isolated thunderstorms will continue for much of Interior Alaska, with the warmest and driest conditions in the Upper Yukon Basin along with breezy afternoon easterly winds. Trade winds and windward showers will continue to diminish for across Hawai'i.
