

Supplementary Figure 6. NOD.scid mice generate robust Interferon to unmodified siRNA. Plasma Interferon- α in NOD.scid, mice 6h after administration of SNALP encapsulating unmodified and modified siRNA. siRNA was dosed at 5 mg/kg. Mice treated with vehicle alone had no detectable levels of plasma IFN- α (levels of quantitation are 12.5 pg/ml). Values represent mean + SD; n = 4 mice.
