

Supplementary Fig. 1 Expression profiles of yeast cells under non-starvation conditions. Two cultures of the wild-type Σ 1278b yeast strain RH2656 (wt) were incubated in YNB medium (+Arg) to mid-log phase. Transcriptional profiles of these cultures were measured as described in Materials and methods. The transcript values of each gene from two independent measurements were plotted against each other, resulting in a correlation coefficient of 0.9758208
