Supplementary Table 4. Clinical groups used for analysis along with some demographic information. COVID-19 Patients were divided into cohort with elevated Procalcitonin levels (PCT>1) indicating a confounding superinfection (C19_high_PCT) and a cohort C19_low_PCT with normal Procalcitonin levels (PCT ≤ 1). All C19_high_PCT patients had WHO severity grade 4, C19_low_PCT patients on average had WHO severity grade 3. Two other groups were control and HSV Meningitis (HSVE).

	Female			Male			Total		
	Avg Age	Avg PCT	NN pat	Avg Age	Avg PCT	NN pat	Avg Age	Avg PCT	NN pat
C19_high_PCT	63.7	1.8	3	71.8	4.0	13	70.3	3.6	16
C19_low_PCT	69.2	0.1	5	68.8	0.3	17	68.9	0.2	22
control	57.6		17	58.8		11	58.1		28
HSVE	53.2		6				53.2		6

Supplementary Figure 1. Linear dependence of combined log₂ expression of three proteins $y = (C4A + CD14)/2 - NRCAM$ on transformed PCT level $x = \log_2(1 + PCT)$. Proteins C4A and CD14 show increase of expression with increase of x and have nearly opposite dependence on sex and WHO grade, while NRCAM show decrease with increase of x and is almost independent on sex and WHO grade. Linear fit showed that approximately 67% of the variation in combined proteins expression can be explained by BSI ($R^2 = 0.67$). The fit was conducted on all COVID samples (as shown in the Figure) and on WHO grade 4 only samples with practically the same outcome.

Supplementary Figure 2. CircRNA data analysis. (A) Principal component analysis (PCA) of circRNA profile in CSF of Covid-19 patients, healthy controls and patients with neurological disease. Differential expression analysis of circRNAs in (B) CSF of Covid-19 patients and healthy controls and (C) CSF of Covid-19 patients and patients with neurological disease. Red dots: FDR < 0.05.

Supplementary Figure 3 Supplementary Figure. Enrichment analysis of deregulated genes in COVID-19 CSF. Top 10 enriched items in the COVID-19 related gene sets 2021 and cellular compartment localization in the analysis of (A) COVID-19 up-regulated genes and (B) COVID-19 down-regulated genes. The p-value is listed after each item; the items with p-value < 0.05 are significantly enriched; An asterisk (*) next to a p-value indicates the term also has a adjusted p-value <0.05.
