

**Figure S1: Levels of endogenous versus overexpressed C9orf72 in N2a and HEK293T cells.** N2a (a) and HEK293T (b) cells were transfected with GFP control or GFP-C9orf72. Cells were lysed 2 days after transfection and lysates were subjected to Western blot using anti-C9orf72 antibodies (Proteintech) to determine the levels of endogenous vs overexpressed C9orf72.
