
Myeloid cell replacement is neuroprotective in chronic experimental autoimmune encephalomyelitis

In the format provided by the authors and unedited

Supplementary File 1: DNA sequence of GFP derived from C57BL/6-Tg(UBC-GFP)30Scha/J

Genomic map of the Ubc-GFP locus with PCR primers showing aligned reads of Sanger sequencing. Created with SnapGene software (www.snapgene.com).

Nucleotide sequence of the Ubc-GFP locus. The sequence, which was used for mapping of the NucSeq data, is highlighted in yellow. The GFP sequence is shown in green letters.
