Cardiologist, Public Health
Foundation of India (PHFI)
India

Netia McCray

Lived Experience Expert,
CEO & Founder, Mbadika
United States

Simultaneous interpretation available in French, Portuguese, Arabic, and Spanish

The Clinical Management and Operations Unit, WHO Health Emergencies Program supports a webinar program on post Covid-19 condition (also referred to as Long Covid). The series aims to disseminate evidence-based clinical guidance and build the capacity of clinicians globally to identify, diagnose, and treat patients with Long Covid. This initiative is run by the ECHO Institute, a WHO Collaborating Centre for Digital Learning in Health Emergencies, and is supported by a grant from the Schmidt Initiative for Long Covid.

This global monthly ECHO webinar series offers presentations by subject matter experts, examples of emerging best practices and models of care, and a facilitated Q&A. Each topic is offered twice a month, for time zone convenience. Sessions are interpreted in real time from English into Spanish, French, Portuguese, and Arabic, and all languages are also recorded and available for later viewing.
