To: info@dpma.de

This is a formal request made under the Germany *Freedom of Information Act*.

Description of Requested Records:

All records in the possession, custody or control of The Federal Ministry of Health describing the isolation of a SARS-COV-2 virus, directly from a sample taken from a diseased patient, where the patient sample was not first combined with any other source of genetic material (i.e. monkey kidney cells aka vero cells; lung cells from a lung cancer patient).

Please note that I am using "isolation" in the every-day sense of the word: the act of separating a thing(s) from everything else. I am not requesting records where "isolation of SARS-COV-2" refers instead to:

- the culturing of something,
- or the performance of an amplification test (i.e. a PCR test),
- or the sequencing of something.

Please also note that my request is not limited to records that were authored by The Federal Ministry of Health or that pertain to work done by The Federal Ministry of Health. My request includes any sort of record, for example (but not limited to) any published peer-reviewed study that The Federal Ministry of Health has downloaded or printed.

If any records match the above description of requested records and are currently available to the public elsewhere, please provide enough information about each record so that I may identify and access each record with certainty (i.e. title, author(s), date, journal, where the public may access it).

Format:

Pdf documents sent to me via email; I do not wish for anything to be shipped to me.

Thank you in advance, [REDACTED]
