Perils of Skipping Meals

Whether we are busy, sleeping, or caught in traffic, skipping meals is not good for weight management or health.

When we don't eat we:

- Get over-hungry and over-eat, not because we lack "will power," but because our bodies are programmed to survive. When we get over-hungry we eat like food is scarce!
- Make unhealthy choices because we become so hungry that we can only think about getting food.
 The food we crave is usually quick and easy like soft drinks, fast food, and chips from our cabinets, the gas station, or vending machines.

Skipping meals:

- Causes the body to lower its metabolism (how much energy it needs to function)
- Causes us to burn less energy (fewer calories)
- Can lead us to gain weight when we eat our usual amount of food
- Leaves us with little energy because the body has run out of the fuel we get from food
- · Leaves us sluggish and tired
- Causes headaches or makes us feel weak and shaky

Many people believe skipping meals or eating less often helps us to lose weight. Nothing could be further from the truth.

- We feel our best if we eat healthy foods about every 4-6 hours while we are awake.
- Eating small frequent meals actually helps us to lose weight.

PREPARE FOR HUNGER

Eating at regular times of the day can help us control how many calories we take in, but running errands can run into your meal times. Follow these tips to avoid eating at a fast food restaurant or a gas station, where we often chose foods that we like instead of smart and moderate amounts of food.

- Try to carry healthy food with you, in the car, or stock up on food at work so that you can have healthy food on hand.
- Always pre-bag snacks so you have the right portion size.
- Snacks to keep in the car:
 - * Pretzels: 28 small sticks = 110 calories
 - * Nuts: 1/4 cup = 200 calories
 - * Peanut butter sandwich crackers:
 - 4 sandwiches = 140 calories
 - *Vegetable juice: 6 oz. can = 60 calories
 - * Popcorn (popped at home):
 - 1 fat-free bag = 100 calories

A healthy daily diet looks something like this:

- 3-6 evenly-spaced eating events about every 4-6 hours while awake
- Protein-rich foods during at least 3 eating events from dairy, animal or vegetable sources
- Calcium-rich foods, or supplements
- 5-9 servings of fruits and vegetables (dark green and citrus are best)
- 6-11 servings of breads and cereals (whole grains are best)
- Healthy fats and oils, whether in foods or added (liquid oils, nuts, poultry, fish, n-3 fatty acids, etc.)

SNACK IDEAS

Calories, carbohydrates CHO, and servings are estimated. Reading a food label for serving sizes, carbohydrates, and calories is the most accurate method.

> Satiety is the **average** amount of time you will feel no physical need to eat. Each person is different.

Food Vegetable juice, 12 oz.	Cal 70	CHO 15	Satiety 0-1 hrs
Banana, 1 medium	105	22	1 hr
Pretzels, 28 small sticks (snack bag)	110	12	1-2 hrs
Light vanilla ice cream, ½ cup	110	17	1-2 hrs
Potato chips, 1 oz	150	16	1-2 hrs
Skim or 1% milk, 1 cup	100	12	1-2 hrs
Vegetable beef soup, 1 cup, with 6 Triscuit® Crackers	280	36	2 hrs
Yogurt with fruit, 6-8 oz. carton	225	43	2 hrs
Cereal, 1 cup, with 1 cup of 1% milk	200	42	2-3 hrs
Cottage cheese, ¾ cup, with ½ cup frozen berries	150	15	2-3 hrs
Apple (medium) with 1 oz. cheese	160	15	2-3 hrs
Raisins, 2 Tbsp (mini box), and 8 walnut halves	145	24	2-3 hrs
Mixed nuts, 1/4 cup	200	9	2-3 hrs
Popcorn, 3 cups, with 1 oz. cheese	170	15	2-3 hrs
Sandwich with 1 Tbsp peanut butter on 1 slice bread	170	15	2-3 hrs
Peanut butter, 2 Tbsp, on 6 Triscuit® crackers	300	20	3-4 hrs
Sandwich with 1 oz. meat or cheese on 2 slices bread	240	30	3-4 hrs
Sandwich with $\frac{1}{4}$ cup water-packed tuna and 1Tbsp light mayo on 2 slices of bread	1 260	30	3-4 hrs
Cheese, 1 oz., on 6 Triscuit® crackers	220	30	3-4 hrs
Pretzels, 10 tiny twists, with ¼ cup mixed nuts	255	20	3-4 hrs
Pear (medium) with ¼ cup mixed nuts	300	25	3-4 hrs

Perils of Skipping Meals

POSITIVES OF HEALTHY EATING BALANCE

Did you know that part of what makes us hungry is when our blood sugar level drops about ten percent? Why is that? Much of the food we eat eventually turns into blood sugar to give our cells energy. When our cells have drained much of the sugar from the blood stream, we get the feeling that we need to eat again!

Have you ever noticed that after eating some foods you are hungry soon? And after eating other foods you stay satisfied for 4 to 6 hours? Here is the reason: if we choose a healthy combination of foods rich in protein, carbohydrate and fat when we eat, we will feel satisfied and not think about food for 4 to 6 hours. However, if we eat protein, carbohydrates or fats by themselves, we may still feel hungry or get hungry very soon. Fruits and vegetables are very important for their vitamins, minerals, fiber and phytochemicals but eaten by themselves do not keep us food satisfied for very long.

How does this affect weight management? If we are not careful about planning what we eat, we can eat more than we need because the food/s do not keep us satisfied, then it is easy to overeat. Here are meal and snack guidelines with ideas to help us pick a healthy combination of foods at meals and snacks:

Meals

 Starch 	Baked potato
Protein	Grilled chicken breast
 Fruit and/or vegetable 	Baked apple; green salad
• Fat	Sour cream; salad dressing
0 1 .	

Snacks

Starch Whole wheat crackers

Protein Peanut butter

On the list of snack ideas (page 2), there is a column named "satiety." The "satiety" of a food is an estimate of how long a food will keep us satisfied. Below are approximate satiety measures for different types of foods.

General food category	Satiety
<u>Sweets</u> —sugar, soda, soft drinks, fruit, fruit juice, candy	½ hour
• <u>Starches</u> —breads, cereals, corn, potatoes, etc.	2 hours
• Starch + Protein—meat, dairy, fish, dry beans, nuts soy, etc.	3 hours
• Starch + Protein + Fat—margarine, oil, fried foods, greasy food, fat in food, etc.	4 hours

There is no food on this planet that will give us much more than about 4 hours of satisfaction, while we are awake. That is why, we feel our best if we eat every 4 to 6 hours!

Perils of Skipping Meals

MEAL PLANNER

Below are suggestions for three days of meals. If you do not like the suggested foods, just follow the food category guidelines and put in your own healthy substitutions. These are suggestions and guidelines—not exact rules!

Meal / Food categories	Day 1	Day 2	Day 3
Meal 1* Starch Protein Fruit (if desired) Fat Drink	 2 slices whole wheat toast 1-2 eggs 1 orange 2 tsp tub margarine Hot tea 	 1 cup oatmeal 1 cup skim milk / 2 Tbsp nuts 1/2 cup berries 	 Peanut butter and banana sandwich on whole wheat bread Coffee
Meal 2* Starch Protein Fruit Vegetable Fat Drink	 2 slices whole wheat bread 2 oz lean meat 1 apple Lettuce and tomato Low-fat mayo or salad dressing Sugar-free soft drink 	 10-15 whole-wheat crackers 2 oz lean meat or 1/3 cup mixed nuts 1 small banana Large lettuce and vegetable salad Vegetable juice 	 2 slices of pizza Fresh fruit Sugar-free soft drink
Meal 3* ■ Starch ■ Protein ■ Fruit ■ Vegetable ■ Fat ■ Drink	 Medium baked potato 3 oz skinless oven-fried chicken 1 cup mixed fruit salad 1 cup steamed broccoli 1 Tbsp tub margarine or low-fat sour cream Water 	 1 cup cooked rice 3 oz lean meat 1 baked pear 1 1/2 cups green beans Sugar-free drink 	 1 cup macaroni and cheese 1 cup mixed fruit 1-2 cups cooked greens 1 Tbsp tub margarine Sugar-free drink
Snack 1** Starch Protein	4-6 crackers8 oz sugar-free yogurt	• 1/2 sandwich	1/3 cup mixed nuts
Snack 2** ■ Starch ■ Protein	4-6 crackers2 Tbsp peanut butter	1/2 cup cereal1 cup skim milk	3 cups low-fat popcorn1 oz cheese

^{*}Eat when you first notice signs of hunger, or within 2 hours of getting up. After your first meal, time your meals so you eat every 4-6 hours until bedtime.

^{*} Have snacks only if physically hungry. If you can't eat a meal within 4-6 hours, eat a healthy snack.
