When complete, the strip below the grid can be split into eight pairs of numbers. Adding the numbers in a pair gives one of the 16 numbers in the grid. Multiplying them gives a different number in the grid. For example, a 4 and 6 in the strip could be paired to make 10 (4+6) and 24 (4x6) in the grid. Enter each sum below the corresponding number in the grid. The blanks in the strip must be deduced, bearing in mind the numbers are listed in ascending order.

This is a tricky position. Black has powerful threats along the back rank and 1 Rxbl obviously fails to 1 ... Rxbl+ and mate next move. As the black queen cannot be captured White would like to protect the fl-rook but this does not seem possible. Nevertheless, White can maintain the balance with a clever sequence. Can you find it?
