Hand Tree**

We thank Regina Aguirre de Riojas for letting us know that we could find flor de manitas in the garden of Rodrigo Ibarguen.

We appreciate his hospitality for allowing us access to the trees and flowers so we could take the photographs here. We had been searching for a flor de manitas tree for almost two years and it sure was helpful that the tree was not 200 km away and halfway up a volcano.

Hand Tree

A close-up photograph of a branch with several bright red flowers. The flowers have long, thin, tubular petals that curve outwards. Some flowers are in full bloom, while others are still in bud or partially open. The background is a soft, out-of-focus green, suggesting a natural outdoor setting. The lighting is natural, highlighting the vibrant red color of the petals.
