

Highlights

- From April 2012 till August 2022, a total of 2591 laboratory-confirmed cases of Middle East respiratory syndrome (MERS) were reported globally, with 894 associated deaths at a case-fatality ratio (CFR) of 34.5%. The majority of these cases were reported from Saudi Arabia, with 2184 cases and 813 related deaths (CFR: 37.2%).
- During the month of August 2022, no new cases were reported.
- The demographic and epidemiological characteristics of reported cases do not show any significant differences when compared with the same corresponding period between 2016 and 2022.
- Among primary cases, 50–59 year-olds are at highest risk for acquiring infection, and among secondary cases the 30–39 year-olds are at highest risk. Among primary cases, CFR is higher within the age group of 50–59 year-olds, and among secondary cases it is higher among the age group of 70–79 years-old.
