

Highlights

- From April 2012 till November 2022, a total of 2601 laboratory-confirmed cases of Middle East respiratory syndrome (MERS) were reported globally, with 935 associated deaths at a case-fatality ratio (CFR) of 36%. The majority of these cases were reported from Saudi Arabia, with 2194 cases and 854 related deaths (CFR: 39%).
- During the month of November 2022, one new case was reported.
- The demographic and epidemiological characteristics of reported cases do not show any significant differences when compared with the same corresponding period between 2016 and 2022.
- Among primary cases, 50–59 year-olds are at the highest risk for acquiring infection and among secondary cases the 30–39 year-olds are at the highest risk. Among both primary and secondary cases, CFR is higher within the age group of 70–79 years-olds.
