

GLOBAL AND REGIONAL CASES

HIGHLIGHTS

- From April 2012 till July 2023, a total of 2605 laboratory-confirmed cases of Middle East respiratory syndrome (MERS) was reported globally, with 936 associated deaths at a case-fatality ratio (CFR) of 36%. The majority of these cases were reported from Saudi Arabia, with 2196 cases and 855 related deaths (CFR: 39%).
- During the month of July 2023, no new cases were reported.
- The demographic and epidemiological characteristics of reported cases do not show any significant differences when compared with the same corresponding period between 2016 and 2023.
- Among primary cases, 50–59 year-olds are at the highest risk for acquiring infection and among secondary cases the 30–39 year-olds are at the highest risk. Among both primary and secondary cases, CFR is higher within the age group of 70–79 years-old.

**Disclaimer: Data are subject to change over time due to lag in reporting.

SUMMARY

2605
Laboratory-confirmed cases reported since April 2012

0
New cases

12
Countries reported cases since April 2012 in the Eastern Mediterranean Region

936
Deaths reported since April 2012

27
Countries reported cases globally
