

34/2019 - 26 February 2019

GDP per capita in 281 EU regions

## Regional GDP per capita ranged from 31% to 626% of the EU average in 2017

Three quarters of the EU population live in regions where regional GDP per capita is above 75% of the EU average

In 2017, regional GDP per capita, expressed in terms of purchasing power standards, ranged from 31% of the European Union (EU) average in the Bulgarian region of **North-West**, to 626% of the average in **Inner London - West** in the United Kingdom.

As the graph below shows, there is a considerable variation both in the EU and within the Member States. This information is taken from data released by **Eurostat, the statistical office of the European Union**.

**Variation of regional GDP per capita within EU Member States in 2017**  
in PPS, EU28 = 100

The bar shows for each Member State the range from the region with the lowest value to that with the highest value.

The leading regions in the ranking of regional GDP per capita in 2017, after **Inner London - West** in the United Kingdom (626% of the average), were **Luxembourg** (253%), **Southern** in Ireland (220%), **Hamburg** in Germany (202%), **Brussels Region** in Belgium (196%), **Eastern & Midland** in Ireland (189%) and **Prague** in Czechia (187%). There were 21 regions with GDP per capita 50% or more above the EU average in 2017: five were in Germany, two each in Ireland, Austria, the Netherlands and the United Kingdom and one each in Belgium, Czechia, Denmark, France, Slovakia, Poland and Sweden as well as Luxembourg. Population living in these 21 regions is 52.3 million persons.

In all Member States where there are more than one region at NUTS2 level, the highest GDP per capita is in the capital region, except **Berlin** in Germany, **Eastern & Midland** in Ireland and **Lazio** in Italy.

After **North-West** in Bulgaria (31% of the average), the lowest regions in the ranking were **Mayotte** in France and **North-Central** in Bulgaria (both 34%) and another region in Bulgaria: **South-Central** (35%). Among the 20 regions with GDP per capita below 50% of the EU average, five were in Bulgaria, four each in Greece and Hungary, three in Poland, two each in France and Romania. Population in these 20 regions is 22.9 million persons.

It should be noted, however, that in some regions the GDP per capita figures can be significantly influenced by commuter flows. Net commuter inflows in these regions push up production to a level that could not be achieved by the resident active population on its own. There is a corresponding effect in regions with commuter outflows.

**Regional GDP per capita in the EU in 2017**  
(in PPS, EU28 = 100)

The highest:			The lowest:		
1	Inner London - West (UK)*	626	1	North-West (BG)	31

\* Capital region

#### Geographical information

These data are based on the **Nomenclature of Territorial Units for Statistics** (NUTS 2016) as set out in the amending Regulation (EU) 2017/2391 of the European Parliament and of the Council of 12 December 2017. NUTS 2016 (valid from 1 January 2018) provides an uniform, consistent breakdown of territorial units for the production of regional statistics for the EU and lists 104 regions at NUTS 1, 281 regions at NUTS 2 and 1348 regions at NUTS 3 level.

#### Methods and definitions

**GDP**, and thus **GDP per capita**, provides a measure of the total economic activity in a region. It may be used to compare the degree of economic development of regions. GDP does not measure the income ultimately available to private households in a region.

The **PPS** (purchasing power standard) is an artificial currency that takes into account differences in national price levels. This unit allows meaningful volume comparisons of economic indicators over countries. Aggregates expressed in PPS are derived by dividing aggregates in current prices and national currency by the respective Purchasing Power Parity (PPP).

More detailed data for other variables and by NUTS 3 area is available up to the year 2016 at Eurostat's database.

In the text of this News Release, the names of the regions are in English, while the tables in the annex list regions in the national language as set out in the NUTS.

<i>Extra-regio*</i>	<i>3 776</i>	<i>1.3</i>			

\* **Extra-regio:** The extra-regio territory is made up of parts of the economic territory of a country which cannot be assigned to a single region. It consists of the national air-space, territorial waters and the continental shelf lying in international waters over which the country enjoys exclusive rights, territorial exclaves, deposits of oil, natural gas etc. worked by resident units.

Until 2011, the gross value added (GVA) produced in the extra-regio was allocated pro-rata to the inhabited regions of the country concerned. The order of magnitude of the extra-regio GVA depends in particular on the resource endowment in terms of natural gas and oil. For EU Member States the share of extra-regio GVA varies typically from almost zero to about 1.3% of total GVA at national level. In 2011, Member States and the European Commission agreed to give countries the possibility to calculate regional GDP also for the extra-regio. The resulting GDP is available only in absolute values, because the extra-regio territory by definition does not have a resident population.

Member States are entitled, but not obliged to calculate GDP for the extra-regio. In the table extra-regio GDP appears only for those Member States which decided to make use of this possibility.
