Supplementary Table 8: Genome-wide determination potential ORF from maximally extendable ORFs and proteomics data sets. Abbreviations: log, log phase; heat, heat-shocked condition; stat, stationary phase; pub, publicly available source; equal, exactly match; inside, ORF is inside pORF; FP, false positive.

Supplementary Table 9. Boundary accuracy of pORFs. To examine boundary accuracy, pORFs were compared with ORFs whose translational boundaries have been validated by their N-termini sequences (from EcoGene). We identified 803 pORFs mapped to the validated ORFs (~89%), of which 499 pORFs represent the identical 5' and 3' boundaries (accuracy = ~62%). When we considered the translation start codon selected from the nearest peptide(s) found (npORF), 507 pORFs (accuracy = ~63%) were matched with the validated ORFs.
