## **Reporting Summary**

X Life sciences

Nature Research wishes to improve the reproducibility of the work that we publish. This form provides structure for consistency and transparency in reporting. For further information on Nature Research policies, see <u>Authors & Referees</u> and the <u>Editorial Policy Checklist</u>.

| Statistics  |  |  |  |  |
|---|--|--|--|--|
| For all statistical analyse   | s, confirm that the following items are present in the figure legend, table legend, main text, or Methods section.   |  |  |  |
| n/a Confirmed   |  |  |  |  |
| The exact samp  | ble size $(n)$ for each experimental group/condition, given as a discrete number and unit of measurement   |  |  |  |
| A statement on  | whether measurements were taken from distinct samples or whether the same sample was measured repeatedly   |  |  |  |
| X   | The statistical test(s) used AND whether they are one- or two-sided  Only common tests should be described solely by name; describe more complex techniques in the Methods section.  |  |  |  |
| A description of  | A description of all covariates tested   |  |  |  |
| A description of  | A description of any assumptions or corrections, such as tests of normality and adjustment for multiple comparisons  |  |  |  |
| A full description of the statistical parameters including central tendency (e.g. means) or other basic estimates (e.g. regression coefficient) AND variation (e.g. standard deviation) or associated estimates of uncertainty (e.g. confidence intervals)  |  |  |  |  |
| For null hypothesis testing, the test statistic (e.g. <i>F</i> , <i>t</i> , <i>r</i> ) with confidence intervals, effect sizes, degrees of freedom and <i>P</i> value noted Give <i>P</i> values as exact values whenever suitable.   |  |  |  |  |
| For Bayesian analysis, information on the choice of priors and Markov chain Monte Carlo settings  |  |  |  |  |
| For hierarchical and complex designs, identification of the appropriate level for tests and full reporting of outcomes  |  |  |  |  |
| Estimates of effect sizes (e.g. Cohen's d, Pearson's r), indicating how they were calculated  |  |  |  |  |
| 1   | Our web collection on <u>statistics for biologists</u> contains articles on many of the points above.  |  |  |  |
| Software and co   | ode  |  |  |  |
| Policy information about  | availability of computer code  |  |  |  |
| Data collection   | No software was used for data collection. Sequence data was downloaded from public NCBI and UniRef databases.  |  |  |  |
| Data analysis   | All data analysis was performed using openly available software and the commands used are detailed in the Methods section.   |  |  |  |
| For manuscripts utilizing custom algorithms or software that are central to the research but not yet described in published literature, software must be made available to editors/reviewers. We strongly encourage code deposition in a community repository (e.g. GitHub). See the Nature Research guidelines for submitting code & software for further information. |  |  |  |  |
| Data  |  |  |  |  |
| - Accession codes, uniq<br>- A list of figures that h   | availability of data clude a data availability statement. This statement should provide the following information, where applicable: ue identifiers, or web links for publicly available datasets ave associated raw data estrictions on data availability |  |  |  |
| The authors declare that the data supporting the findings of this study are available within the paper and its supplementary information files. Accession numbers for all proteins analyzed in this study as well as alignments used to generate the trees shown in Figures 2 and 5 are included in the Supplementary data files 1 to 3.                                |  |  |  |  |
| Field-specif  | fic reporting  |  |  |  |

Please select the one below that is the best fit for your research. If you are not sure, read the appropriate sections before making your selection.

Ecological, evolutionary & environmental sciences

Behavioural & social sciences

## Life sciences study design

|   | 7 0  |  |  |  |
|---|--|--|--|--|
| All studies must disclose on these points even when the disclosure is negative. |  |  |  |  |
| Sample size   | N/A  |  |  |  |
| Data exclusions   | N/A  |  |  |  |
| Replication   | N/A  |  |  |  |
| Randomization   | N/A  |  |  |  |
| Blinding  | N/A  |  |  |  |
|   |  |  |  |  |
| Reportin  | g for specific materials, systems and methods  |  |  |  |
|   | ion from authors about some types of materials, experimental systems and methods used in many studies. Here, indicate whether each material, ted is relevant to your study. If you are not sure if a list item applies to your research, read the appropriate section before selecting a response. |  |  |  |

| Materials & experimental systems |                             | Methods                   |  |
|----------------------------------|-----------------------------|---------------------------|--|
| n/a                              | Involved in the study       | n/a Involved in the study |  |
| $\boxtimes$                      | Antibodies                  | ChIP-seq                  |  |
| $\boxtimes$                      | Eukaryotic cell lines       | Flow cytometry            |  |
| $\boxtimes$                      | Palaeontology               | MRI-based neuroimaging    |  |
| $\boxtimes$                      | Animals and other organisms |                           |  |
| $\boxtimes$                      | Human research participants |                           |  |
| $\boxtimes$                      | Clinical data               |                           |  |
