

Supplementary information for Lai et al. “Generation of cloned transgenic pigs rich in omega-3 fatty acids”

Supplementary Figure 1. Photograph of three piglet littermates, *hfat-1* transgenic piglets #8 (middle) and #9 (right) and non-transgenic piglet #10 (left), at age of 3 weeks. They are apparently healthy and no obvious differences in appearance among them were

observed. All the animal work was done following a protocol approved by the University of Missouri-Columbia (Columbia, MO) institutional animal care and use committee.
