NOTES

ABOUT THIS PUBLICATION

This publication contains final estimates for the main commodities collected in the 2009–10 Agricultural Resource Management Survey (ARMS). Included are statistics on land use, industry activity, crop and horticultural area and production, and livestock numbers. Data will be released as data cubes at Natural Resource Management (NRM) region and Statistical Division (SD) geographical levels in June 2011.

Additional content, attached to this publication as data cubes, includes: agricultural business activity by Estimated Value of Agricultural Operations (EVAO) and area; and state/territory and national data for wheat grain storage and use and grain storage capacity.

The estimates in this publication are based on the Australian and New Zealand Standard Industrial Classification (ANZSIC) 2006 edition, which was adopted for the first time in 2005–06.

Further data from the 2009–010 Agricultural Survey collection will be released in *Water Use on Australian Farms* (cat. no. 4618.0) in May 2011, *Value of Agricultural Commodities Produced* (cat. no. 7503.0) in May 2011 and *Land Management and Farming in Australia* (cat. no. 4627.0) in June 2011.

CHANGES IN THIS ISSUE

The ARMS produces less detailed data on agricultural commodities and livestock breakdowns in comparison to the Agricultural Survey and the Agricultural Census. For further details refer to the Explanatory Notes.

SUMMARY OF FINDINGS LAND USE

LAND USE

Area of farms in Australia fell in 2009-10, by 3% to 399 million hectares. This continues the trend established in recent years.

The area planted to crops in Australia also fell by 6% in 2009-10 to 26 million hectares.

Approximately 52% of Australia's total land area was used for agriculture. On a state basis, Tasmania had the smallest proportion of farm land (24% of state area) while the highest was in Queensland (75% of state area).

AREA OF AUSTRALIAN FARMS, 2000-01—2009-10

SUMMARY OF FINDINGS INDUSTRY STRUCTURE

BUSINESSES WITH AGRICULTURAL ACTIVITY

Table 2 of this publication categorises businesses with agricultural activity into the industry that represents the business' main activity, using the Australian and New Zealand Standard Industrial Classification (ANZSIC), 2006 edition.

The 2009-10 Agricultural Resource Management Survey (ARMS) revealed that the number of businesses undertaking agricultural activity had fallen to a total of 134,000 businesses. This represents a 1% decrease compared with 2008-09.

The beef cattle farming industry remained the largest sector in 2009-10, comprising nearly a third of businesses classified to the agriculture industry.

Notable movements in 2009-10 were the decrease in the number of businesses with agricultural activity in sheep/beef cattle farming, down 12%, and a 10% increase in dairy cattle farming since 2008-09.

The number of non-agricultural businesses which undertook agricultural activity during 2009-10 decreased by 7% to an estimated 14,000 businesses.

SUMMARY OF FINDINGS CROPS

OVERVIEW

Production increased for a number of broadacre crops in 2009-10, in particular wheat, lupins, rice and cotton, despite variable seasonal conditions.

CROPS FOR GRAIN

Wheat

The total area sown to wheat for grain in 2009-10 increased by 3% to 13.9 million hectares. Production rose by 2% to 21.8 million tonnes from 2008-09. Production of wheat decreased in all states, except Victoria, up by 71% to 3.0 million tonnes and in South Australia, up by 68% to 4.0 million tonnes. Due mainly to drought conditions, production in New South Wales was down by 23% to 5.3 million tonnes.

Barley

In 2009-10, the total area sown to barley decreased by 12% to 4.4 million hectares. Production was 2% lower than in 2008-09 at 7.9 million tonnes. Production of barley decreased in all states, except Victoria, up by 28% to 1.9 million tonnes and South Australia, up by 10% to 2.1 million tonnes. Production in Tasmania remained steady at 29,000 tonnes. In New South Wales, production decreased by 15% to 1.2 million tonnes due to drought, flooding and reduced water allocation.

Oats

The total area sown to oats decreased by 2% in 2009-10 to 850,000 hectares. Production in 2009-10 increased marginally to 1.2 million tonnes. Production in New South Wales fell by 19% to 211,000 tonnes and in Western Australia by 13% to 493,000 tonnes. Increases in oat production were experienced in Victoria, up by 27% to 300,000 tonnes and in South Australia, up by 77% to 144,000 tonnes. These increases were due to good rainfall and greater water availability.

Grain Sorghum

There was a 35% decrease in the total area sown to sorghum for grain in 2009-10, with 498,000 hectares sown. Production decreased by 44% to 1.5 million tonnes, with all states recording falls from the previous year.

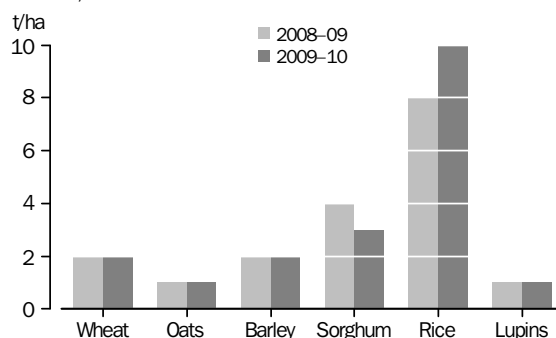

Lupins

In 2009-10, the total area sown to lupins increased by 20% to 692,000 hectares and production increased by 16% to 823,000 tonnes. New South Wales, South Australia and Western Australia all experienced improved conditions for lupins.

Rice

The total area sown to rice more than doubled in 2009-10 to 19,000 hectares, compared with the previous year, due to increased availability of water for irrigation. Production similarly increased to 197,000 tonnes. However, these figures are still markedly below the levels recorded ten years ago.

YIELD, CROPS FOR GRAIN—2008-09 AND 2009-10

SUMMARY OF FINDINGS CROPS *continued*

OTHER CROPS

Canola

In 2009-10, the total area planted to canola increased marginally to 1.7 million hectares. Western Australia experienced an increase, up by 7% to 981,000 hectares, with decreased plantings recorded in most other states and the Australian Capital Territory.

Cotton

The total area of cotton planted in 2009-10 increased by 24% to 196,000 hectares. Production of cotton lint also increased by 14% to 352,000 tonnes in 2009-10. Queensland growers experienced lower production, down by 10% to 138,000 tonnes, due to lack of rain and water availability. Production in New South Wales increased by 38% to 214,000 tonnes.

Sugar cane

In 2009-10, the total area planted to sugar cane for crushing decreased slightly to 389,000 hectares. National production of sugar cane cut for crushing decreased by 1% to 31 million tonnes in 2009-10. Sugar cane production in Queensland decreased by 2% to 29 million tonnes, while New South Wales production increased by 18% to 1.9 million tonnes.

SUMMARY OF FINDINGS HORTICULTURE

FRUIT

Citrus

In 2009-10 the total orange production increased 13% to 391,000 tonnes driven by increases in New South Wales and South Australia. The number of bearing orange trees increased slightly to 6.8 million trees.

Both mandarin production and the number of mandarin bearing trees were up in 2009-10, by 1% and 12% respectively. Production in Queensland was up by 11%. Increases in production in Queensland and South Australia were offset by large decreases in Western Australia and Victoria.

Pome

In 2009-10, apple producers reported a decrease of 142,000 bearing trees (2%) and total production fell by 10% to 264,000 tonnes. Production of pears fell 21% to 95,000 tonnes and the number of bearing trees decreased by 13% to 1.4 million trees.

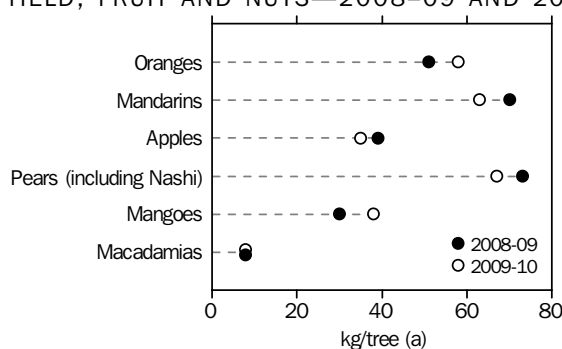

Other fruit and nuts

Total banana production for 2009-10 increased by 12% to 302,000 tonnes. This was driven by increased production in Queensland, up by 13% from 2008-09. These increases bring production levels back in line with pre-2002 levels. The total area of bearing trees decreased by 4% to 12,000 hectares in 2009-10.

Mango production increased nationally in 2009-10 by 9% to 44,000 tonnes driven by a similar percentage increase in Queensland. The total number of trees decreased 12% to 1.2 million trees. The decrease in total tree numbers was driven in part by decreases in Queensland, the Northern Territory and Western Australia.

In 2009-10, macadamia production increased 6% nationally to 31,000 tonnes, driven by a 22% increase in Queensland's production. New South Wales accounted for 58% of Australia's total production of macadamias. The total number of production trees remained steady at 3.9 million.

YIELD, FRUIT AND NUTS—2008-09 AND 2009-10

VEGETABLES

Carrots

The total area for carrots sown in 2009-10 increased by 6% to 5,500 hectares. Increased plantings in Western Australia, Tasmania, Victoria and Queensland were responsible for the overall rise in area sown. Nationally production, however, increased only slightly to 267,000 tonnes. Movements in production matched those for plantings in all states except Western Australia, down by 6%, which had reported poor conditions in some areas.

Mushrooms

Total production of mushrooms declined by 5% to 41,000 tonnes, driven by a 43% decrease in South Australian production. The total area sown to mushrooms also dropped, down by 13% to 139 hectares.

SUMMARY OF FINDINGS HORTICULTURE *continued*

Onions

In 2009-10 decreases were reported nationally in the area of onions (down by 2% to 5,300 hectares) and production of onions (down by 8% to 260,000 tonnes). Despite most states reporting a decrease in production, onion production in Victoria rose by 26% in 2009-10 to 24,000 tonnes.

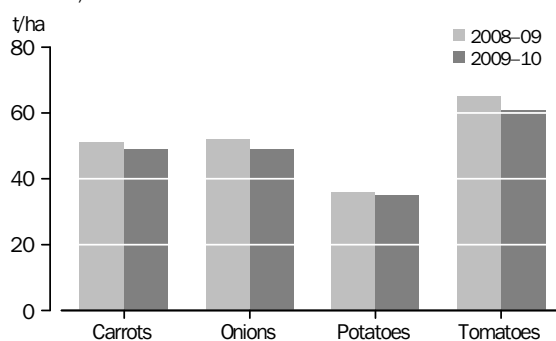

Potatoes

The total area sown to potatoes increased by 12% to 36,000 hectares in 2009-10 and production was also up by 8% to 1.3 million tonnes. New South Wales and Tasmania were the main contributors to the increases, with New South Wales in particular recovering from a wet 2009.

Tomatoes

The total area of tomatoes sown was up by 14% to 7,700 hectares in 2009-10 and total production increased by 7% to 472,000 tonnes. This national increase in production was driven by Victoria which increased its production by 17% to 286,000 tonnes and New South Wales, up by 100% to 55,000 tonnes.

YIELD, VEGETABLES—2008-09 AND 2009-10

SUMMARY OF FINDINGS LIVESTOCK

LIVESTOCK

Milk cattle

The number of milk cattle decreased in 2009-10 by 3% to 2.5 million head nationally, with the total number of cows in milk and dry decreasing by 5% to 1.6 million head. Tasmania experienced the largest decrease of all states in dairy cattle, losing 34,000 head (down by 15%). New South Wales and Western Australia were the only states to record herd increases of 8% and 15% respectively.

Meat Cattle

In 2009-10, meat cattle totalled 24 million head. This is 1.3 million head, or 5% lower than for 2008-09. Notable movements in meat cattle numbers were in Queensland and New South Wales which both recorded an 8% decrease. Falls in meat cattle numbers were recorded in all other states and territories except Tasmania up by 20,000 head, or 5%, and the Northern Territory, which recorded a large increase of 385,000 head or 23%.

Sheep

Sheep and lamb numbers decreased nationally by 6% to 68 million in 2009-10, the lowest level since 1905. The largest decreases were reported in New South Wales, down by 5% or 1.2 million head and Western Australia, down 1.0 million head or 7%.

Pigs

Total pig numbers continued to decline marginally in 2009-10 by 12,000 head, down to 2.3 million head. Falls were recorded in all states except Victoria which registered a substantial increase of 96,000 head, up by 23%.

Chickens

The total number of chickens for egg production fell in 2009-10 by 7% to 12 million chickens. This is the fourth consecutive fall following the peak in 2006. Meat chicken numbers decreased nationally by 14% to 71 million, with Queensland meat chicken numbers down by 23%.

(a) Excludes crops harvested for hay and seed, and pastures and grasses.

(b) Total area of agricultural businesses with an EVAO of \$5,000 or more.

(c) Non-agricultural land is the difference between agricultural land as reported in the Agricultural Survey or ARMS and total land area of the state/territory. It comprises conserved land, forestry, urban and unused land such as vacant Crown land, commercially unused land on Aboriginal and other Crown reserves and waste land, ephemeral lakes and mangrove swamps, as well as establishments not included in the scope of the Agricultural Survey.

(d) Total area of Australia includes Jervis Bay.

np not available for publication but included in totals where applicable, unless otherwise indicated

(a) Includes heifers 1 to 2 years, heifers over 2 years, and other dairy cattle (calves, bulls and bull calves).

(b) Includes bulls, steers and calves.

(c) Includes dairy and meat cattle for all purposes.

(d) Includes maiden ewes intended for breeding.

(e) Includes rams, marked lambs, wethers, hoggets and non-breeding ewes.

(f) Including boars, gilts, suckers, weaners, growers and finishers.

EXPLANATORY NOTES

INTRODUCTION

1 This publication contains final estimates for the main commodities collected in the 2009–10 Agricultural Resource Management Survey (ARMS). Included are statistics on land use, industry activity, crop and horticultural area and production, and livestock numbers. Data will be released as data cubes at Natural Resource Management (NRM) region and Statistical Division (SD) geographical levels in June 2011.

GENERAL

2 The ARMS and the Agricultural Survey are conducted in alternate years, with an Agricultural Census conducted every five years. The ARMS is a combination of a reduced Agricultural Survey and a benchmark survey of land management practices undertaken by agricultural businesses, as well as a survey of management responses to adverse seasonal conditions experienced by affected agricultural businesses.

3 Expanded horticulture and livestock commodities information can be found in the data cubes attached to this publication (cat. no. 7121.0). Estimates for sub-state geographies, specifically Statistical Division (SD) and Natural Resource Management (NRM) regions will also be released in data cubes attached to this publication. Additional data on wheat storage and use, as well as grain storage capacity are also available for downloading.

4 Agricultural water use data collected as part of the 2009–10 ARMS will be released in *Water Use on Australian Farms* (cat. no. 4618.0). Sub-state water data, for SD, NRM and Murray–Darling Basin (MDB) will be included as data cubes.

5 Information on a variety of management practices of Australian agricultural businesses, including land use, fertiliser use, farm management and natural environment protection collected from the ARMS will be released in *Land Management and Farming in Australia* (cat. no. 4627.0). Related data cubes will contain data at NRM geographical level.

6 Where figures have been rounded, discrepancies may occur between sums of the component items and totals.

CROPS, PASTURES AND HORTICULTURE

7 Statistics on area and production of crops relate, in the main, to crops sown during the year ended 30 June. Statistics of perennial crops relate to the position at 30 June and the production during the year ended on that date, or fruit set by that date.

LIVESTOCK SLAUGHTERING AND LIVESTOCK PRODUCTS

8 Livestock slaughtering and livestock products, including milk and wool data, and poultry slaughtering are no longer included in this publication. Further information can be found in the publication *Livestock Products, Australia* (cat. no. 7215.0).

INDUSTRY CLASSIFICATION

9 The industry classification used in this publication is the 2006 version of the Australian and New Zealand Standard Industrial Classification (ANZSIC). Prior to the 2005–06 issue of this publication, estimates were based on the ANZSIC 1993 edition. ANZSIC 2006 was developed to provide a more contemporary industrial classification system taking into account issues such as changes in the structure and composition of the economy, changing user demands and compatibility with major international classification standards. For more information, please refer to *Australian and New Zealand Standard Industrial Classification (ANZSIC), 2006* (cat. no. 1292.0).

STATISTICAL UNITS USED

10 Since 2005–06, the ABS has used an economic statistics units model on the ABS' Business Register (ABSBR) to describe the characteristics of businesses and the structural relationships between related businesses. The units model is used within large and diverse business groups to define reporting units that can provide data to the ABS at a suitable level.

11 Respondents to the 2009–10 ARMS were agricultural businesses drawn from the ABS Business Register.

EXPLANATORY NOTES *continued*

SCOPE AND COVERAGE

12 The scope of the 2009–10 ARMS included all agricultural businesses recorded on the ABS Business Register (ABSBR) above a minimum size cut-off. The ABSBR is based on the Australian Business Register (ABR) which is administered and maintained by the Australian Taxation Office (ATO).

13 A minimum size cut-off of \$5,000 was applied to determine whether a business was in-scope for the 2009–10 ARMS. The measure of size was based on the ABS' Estimated Value of Agricultural Operations (EVAO) or a derived value based on Business Activity Statement (BAS) turnover.

14 While the ABSBR does not include all agricultural businesses in Australia, it provides improved coverage from the former ABS maintained Agricultural Survey frame, as most businesses and organisations in Australia need to obtain an Australian Business Number (ABN) from the ATO for their business operations. The ABR based register is also more up-to-date as it excludes agricultural businesses with cancelled ABNs and incorporates regularly updated information on agricultural businesses from the ATO.

15 For the 2009–10 ARMS, a response rate of 87% was achieved from a sample of approximately 38,000 agricultural businesses selected from an in-scope population of approximately 171,000 agricultural businesses.

RELIABILITY OF ESTIMATES (SAMPLE ERROR)

16 The estimates in this publication are based on information obtained from a sample drawn from the total agricultural business population in scope of the collection, and are subject to sampling variability; that is, they may differ from the figures that would have been produced if all businesses had been included in the survey. One measure of the likely difference is given by the standard error (SE) which indicates the extent to which an estimate might vary by chance because only a sample was taken. There are about two chances in three that a 'sample' estimate will differ by less than one SE from the figure that would have been obtained if all businesses had responded, and about nineteen chances in twenty that the difference will be less than two SEs.

17 In this publication, 'sampling' variability of the estimates is measured by the relative standard error (RSE) which is obtained by expressing the SE as a percentage of the estimate to which it refers.

18 Most published national estimates have RSEs less than 5%. For some states with limited production of certain commodities, RSEs are greater than 10%. Estimates that have an estimated RSE between 10% and 25% are annotated with the symbol '^'. These estimates should be used with caution as they are subject to sampling variability too high for some purposes. Estimates with an RSE between 25% and 50% are annotated with the symbol '*', indicating that the estimate should be used with caution as it is subject to sampling variability too high for most practical purposes. Estimates with an RSE greater than 50% are annotated with the symbol '**' indicating that the sampling variability causes the estimates to be considered too unreliable for general use. Separate indication of the RSEs of all estimates is available on request.

19 A table with RSEs for selected commodities follows:

20 As well as the statistics included in this and related publications, the ABS may have other relevant data available on request. Enquiries should be made to the National Information and Referral Service on 1300 135 070.

GENERAL ACKNOWLEDGMENT

21 ABS publications draw extensively on information provided freely by individuals, businesses, governments and other organisations. Their continued cooperation is very much appreciated: without it, the wide range of statistics published by the ABS would not be available. Information received by the ABS is treated in strict confidence as required by the *Census and Statistics Act 1905*.

RELATED PUBLICATIONS

22 Current publications and other products released by the ABS are listed under the *Statistics* and *Themes* pages on the ABS website <<http://www.abs.gov.au>>. The ABS also issues a daily Release Advice on the website which details products to be released in the week ahead.

FOR MORE INFORMATION . . .

INTERNET **www.abs.gov.au** the ABS website is the best place for data from our publications and information about the ABS.

INFORMATION AND REFERRAL SERVICE

Our consultants can help you access the full range of information published by the ABS that is available free of charge from our website. Information tailored to your needs can also be requested as a 'user pays' service. Specialists are on hand to help you with analytical or methodological advice.
