

Supplementary Table 3. List of 1511 complete and draft microbial genomes used as a reference set.

These were obtained from the National Center for Biological Information (NCBI), Human Microbiome Project¹⁰ (HMP) and Sanger Center¹¹ (MetaHIT). NCBI taxonomy identifiers reported by the sources are used. Genomes of gut-specific species are marked with an asterisk. Taxonomic classification of these genomes via their 16S rRNA gene sequences using RDP Classifier³⁹ is provided in the last two columns (minimum length 500bp, minimum confidence threshold 0.8).
