UC DAVIS

(USPS 646600)

PUBLISHED AT DAVIS, CALIFORNIA

Volume 41 June 2002 Number 2

A series of administrative publications of the University of California, Davis, California, 95616.

Five issues a year—one in March, one in June, two in July, and one in August.

Periodical postage paid at Davis, California.

POSTMASTER: Send changes of address to
Office of the University Registrar, General Catalog
University of California
One Shields Avenue
Davis, CA 95616-8692.

The provisions of this catalog reflect information as of the date of publication. The most current information available to the Office of the University Registrar may be found in the *Class Schedule and Registration Guide*. The provisions of the catalog in this publication are subject to change without notice and do not constitute an irrevocable contract between any student and the University of California. IT IS THE RESPONSIBILITY OF THE INDIVIDUAL STUDENT TO BECOME FAMILIAR WITH THE ANNOUNCEMENTS AND REGULATIONS OF THE UNIVERSITY PRINTED IN THIS CATALOG AND IN THE CLASS SCHEDULE AND REGISTRATION GUIDE.

The University of California, Davis, will provide assistance to the visually impaired regarding the information contained in this catalog. Questions should be directed to the office or department concerned.

Copies of the *General Catalog* may be purchased from the UC Davis Bookstore, University of California, Davis, 2828 Cowell Blvd., Davis, CA 95616-4902, telephone 530-752-2944.

From the Chancellor

Welcome to UC Davis. We're delighted you've chosen the Davis campus as the place to pursue your academic goals. All of us—faculty, staff and administrators—are committed to helping you toward their successful attainment.

In the time you spend at UC Davis, you will acquire knowledge and skills that will help you shape the rest of your life. You will make lifelong friends and have experiences that will determine the direction of your growth as a human being and as a member of the larger community in which you live. For that to happen there must be a partnership among many individuals working together to ensure the most intellectually stimulating, technologically sophisticated and culturally rich environment. That partnership includes you, the student. Your energy and vision are the catalysts that energize and inspire each of us to help make your time at UC Davis challenging, meaningful—and, yes—fun.

We are very proud of UC Davis. Long renowned for its agricultural and veterinary science programs, in recent years we have attained international stature for our programs in engineering, biological sciences, the humanities and the social sciences. Members of our faculty have won MacArthur genius grants, Pulitzer prizes, Fulbright scholarships and election to the nation's top academies of the arts and sciences. UC Davis is a member of the prestigious Association of American Universities, a select group of 63 institutions of higher learning whose membership is by invitation only. Our alumni have made significant and lasting contributions to society as leaders in government, business, technology, media and the arts. And our students—the cream of California's crop—consistently persist and graduate at among the highest rates of University of California campuses.

UC Davis' character has been built through decades of commitment to a unique core of values and principles. We are using our talents and ingenuity to continue working toward a community that honors our diversity as individuals and reflects our belief in a shared set of values. I'm happy you're about to join our community. Congratulations on becoming an Aggie!

A handwritten signature in black ink that reads "Larry N. Vanderhoef". The signature is fluid and cursive, with a large, stylized "L" and "V".

Larry N. Vanderhoef
Chancellor

DEGREES OFFERED BY UC DAVIS

Undergraduate majors are administered by the colleges of Agricultural and Environmental Sciences (A&ES), Letters and Science (L&S) and Engineering. Professional studies are administered by the schools indicated. All graduate programs are administered by Graduate Studies. The list below indicates the major or discipline, the degree(s) offered and the school or college offering the major.

Degrees offered: A.B.—Bachelor of Arts, B.S.—Bachelor of Science, M.A.—Master of Arts, M.A.M.—Master of Agricultural Management, M.A.T.—Master of Arts in Teaching, M.B.A.—Master of Business Administration, M.Ed.—Master of Education, M.Engr.—Master of Engineering, M.F.A.—Master of Fine Arts, M.P.H.—Master of Public Health, M.P.V.M.—Master of Preventive Veterinary Medicine, M.S.—Master of Science, Ed.D.—Doctorate in Education, D. Engr.—Doctor of Engineering, Ph.D.—Doctor of Philosophy, J.D.—Doctor of Law, LL.M.—Master of Laws, M.D.—Doctor of Medicine, D.V.M.—Doctor of Veterinary Medicine.

UC DAVIS

INTRODUCTION

INTRODUCTION

2002-2003
2003-2004

Welcome to UC Davis. Founded as the University Farm amid the fertile fields of the state's Central Valley, UC Davis initially emerged as an acknowledged international leader in agricultural, biological, biotechnological and environmental sciences and has now gained similar recognition for excellence in the arts, humanities, social sciences, engineering, health sciences, law and management. *U.S. News & World Report* ranks UC Davis among the top 10 public universities nationally, and the campus is among a select group admitted into the prestigious Association of American Universities. Membership in this group of 63 institutions of higher learning is by invitation only.

The campus owes much of its strength to its deep traditional roots in agriculture and the impressive diversity of academic programs that emerged from this foundation. A distinguished faculty of scholars and scientists, a treasured sense of community and a dedication to the land-grant values of creative, responsive and innovative teaching, research and public service are hallmarks of UC Davis, as is interdisciplinary collaboration; many faculty hold cross-departmental appointments, and students are challenged to explore the relationships between fields of study.

The University of California

UC Davis is one of 10 campuses of the University of California, which was chartered as a land grant college in 1868 and now constitutes the pre-eminent system of public higher education in the country. Together, the campuses have an enrollment of more than 187,000 students, nearly 90 percent of them California residents.

Some 150 laboratories, extension centers, research and field stations strengthen teaching and research while providing public service to California and the nation. The collections of the more than 100 UC campus libraries are surpassed in size in the United States only by that of the Library of Congress.

A place for learning

Providing a rich and challenging learning experience for undergraduate and graduate students is critical to UC Davis' mission and is a cherished commitment of the campus. Several programs support this aim, including a \$30,000 prize awarded to a faculty member each year by the UC Davis Foundation in recognition of outstanding undergraduate teaching and scholarly achievement, and a campuswide Davis Honors Challenge program through which students elect special courses and have closer contact with faculty.

UC Davis offers more than 110 undergraduate majors and 70 graduate programs in the College of Agricultural and Environmental Sciences, the College of Engineering and the College of Letters and Science. The campus's Division of Biological Sciences draws students and faculty from across the campus. UC Davis' four professional schools—the School of Law, the Graduate School of Management, the School of Medicine and the School of Veterinary Medicine—is a combination unique within the University of California system. The Division of Education will become a school in 2002, and a proposed Graduate School of the Environment will increase the impact and visibility of the campus's major strengths in environmental science..

A place for discovery

Research is an integral part of teaching at UC Davis. Faculty members share their research findings in the classroom, and students learn firsthand about discovery while working with professors in the laboratory and field. A number of undergraduate research programs offer students the opportunity to work on a research project in a faculty laboratory, in some cases as early as their freshman year.

Research at UC Davis supports California's economic, intellectual and social development. The campus's varied research programs explore and seek solutions to problems in agriculture, resource management, the environment, health, medicine, engineering, business, the economy and public policy. UC Davis scholars also explore the intellectual frontiers of the physical, biological and social sciences, the humanities and the arts.

The campus's reputation has attracted a distinguished faculty of scholars and scientists in all fields. UC Davis faculty rank 16th in quality among comprehensive public universities nationwide, according to a multi-year study of U.S. doctoral programs reported in 1995 by the National Research Council, and UC Davis stands 23rd in research funding among universities in the United States, according to the most recent statistics from the National Science Foundation.

Life on campus

Teaching and research provide students with the academic side of their education, and campus life balances the books. Students enjoy a wide range of offerings, including sports, internships, outdoor activities, student government, clubs and creative arts programs.

Intercollegiate athletic teams participate in the National Collegiate Athletic Association, with most competing at the Division II level. Eleven men's and 12 women's sports are offered. Sports Illustrated for Women in 2000 named UC Davis the top Division II school for women athletes for the second year in a row. More than 30 club sports, organized by students, compete against other area colleges and amateur clubs, or are recreational and focus on skill development and social interaction. Intramural sports annually draw more than 13,000 students for 68 men's, women's and coed activities.

Each year nearly 5,500 students interested in gaining work experiences participate in internships locally, nationally and globally through the campus's Internship and Career Center, among the largest campuswide academic internship programs in the country. UC Davis is known for its student-run facilities—the Coffee House, radio station KDVS and Unitrans provide paid employment and real-world experience to hundreds of students each year.

The Mondavi Center for the Performing Arts, opening in October 2002, will feature internationally known artists and speakers on tour and will showcase offerings of the campus's music, theatre and dance departments in its 1,800-seat performance hall and 250-seat studio theater.

Life in Davis

Davis' proximity to Sacramento, the state capital, and the San Francisco Bay Area makes it easy to take advantage of big-city attractions while enjoying the security and friendliness of a university town. The Davis community combines the right blend of safe neighborhoods, convenient retail and service establishments, cultural amenities for a variety of tastes and plentiful recreational activities. There are 31 parks included in the 521 acres of parks, greenbelts and open space areas owned and maintained by the city. Known as environmentally aware and socially innovative, Davis has a strong history of bicycle use and planning. An estimated 53,000 bicycles are in use in Davis and on the UC Davis campus. City planning integrates bicycle lanes and bike paths on city streets and through community greenbelts. Davis residents are active—in local, national and international political causes, in sports, in the arts and in community organizations. Quality of life is a high priority in this community of more than 62,200 residents. Many citizen committees advise the city council on issues such as quality of child care and natural resources conservation. With students constituting about half the city's population, Davis is one of California's few remaining college towns.

Visiting the Campus

Visitor Services Office
Buehler Alumni and Visitors Center
530-752-8111

You are welcome to pay us a visit. Weekend tours depart from the Buehler Alumni and Visitors Center at 11:30 a.m. Weekday tours depart at 10:00 a.m. and 2:00 p.m. Register for tours one week in advance by calling 530-752-8111 or online at <http://visit.ucdavis.edu>. You may also visit our Virtual Tour Web site at <http://vtour.ucdavis.edu>. If you have questions about application procedures or entrance requirements, write or visit Undergraduate Admissions and Outreach Services in Mrak Hall.

University of California, Davis

Principles of Community

THE UNIVERSITY OF CALIFORNIA, DAVIS, is first and foremost an institution of learning and teaching, committed to serving the needs of society. Our campus community reflects and is a part of a society comprising all races, creeds, and social circumstances. The successful conduct of the University's affairs requires that every member of the University community acknowledge and practice the following basic principles:

WE AFFIRM THE DIGNITY inherent in all of us, and we strive to maintain a climate of justice marked by respect for each other. We acknowledge that our society carries within it historical and deep-rooted misunderstandings and biases, and therefore we will endeavor to foster mutual understanding among the many parts of our whole.

WE AFFIRM THE RIGHT of freedom of expression within our community and also affirm our commitment to the highest standards of civility and decency towards all. We recognize the right of every individual to think and speak as dictated by personal belief, to express any idea, and to disagree with or counter another's point of view, limited only by University regulations governing time, place, and manner. We promote open expression of our individuality and our diversity within the bounds of courtesy, sensitivity, and respect.

WE CONFRONT AND REJECT all manifestations of discrimination, including those based on race, ethnicity, gender, age, disability, sexual orientation, religious or political beliefs, status within or outside the University, or any of the other differences among people which have been excuses for misunderstanding, dissension, or hatred. We recognize and cherish the richness contributed to our lives by our diversity. We take pride in our various achievements, and we celebrate our differences.

WE RECOGNIZE that each of us has an obligation to the community of which we have chosen to be a part. We will strive to build a true community of spirit and purpose based on mutual respect and caring.

The "Principles of Community" were prepared and adopted after extensive discussion within the campus community about the need for a statement that reflects UC Davis' commitment to a learning environment characterized by diversity, understanding and the acceptance of all people. This statement of common principles was published on April 20, 1990, carrying the endorsement of Chancellor Theodore L. Hullar and the leadership of the Davis Division of the Academic Senate, the Academic Staff Organization, the UCD Staff Assembly, the UCDMC Staff Assembly, the Associated Students of UC Davis (ASUCD), and the Graduate Student Association.

Mission Statement:

Philosophy of Purpose

The central purpose of UC Davis, as a comprehensive research university, is the generation, advancement, dissemination and application of knowledge. In this, UC Davis is committed to developing and sustaining leading programs in

- the arts, humanities, biological and physical sciences and social sciences—disciplines at the core of all universities;
- agricultural and environmental disciplines and engineering;
- professional studies in education, law, management, medicine and veterinary medicine.

In these programs, the campus integrates three purposes: teaching students as a partnership between faculty mentors and young scholars; advancing knowledge and pioneering studies through creative research and scholarship; and applying that knowledge to address the needs of the region, state, nation and globe. UC Davis is committed to the tradition of the land-grant university, the basis of its founding. This tradition—built on the premise that the broad purpose of a university is service to people and society—guides today the campus's special commitments and emphases.

UC Davis has a history of focused attention on undergraduate education. The central elements of a liberal education—the arts and languages, history and philosophy and the sciences—offer the opportunity for a broad general education combined with specialization in a scholarly discipline. Coupled with this are manifold opportunities for personal development through programs for academic enrichment, including undergraduate research, work-learn experiences and extracurricular student life.

Dedicated to scholarship, the furtherance of knowledge and the education of graduate students who will advance the next generations of research, UC Davis offers a diverse array of post-baccalaureate programs. Drawing upon the wide range of specialized academic fields, stimulating cross-disciplinary approaches, and using its distinctive graduate groups, a structure that permits students to pursue lines of inquiry that cross traditional disciplinary lines, UC Davis continues to follow and redefine the mandate of a major research university.

The campus has a commitment to advancing teaching and scholarly work in the arts, humanities and the social sciences, studies that also enrich the life of each person and society as a whole. Infusing the pursuit of careers in education, law, management and medicine with these insights and values is also emphasized.

Because of its prominence in the biological, physical and engineering sciences—and building on its distinguished programs in the agricultural and environmental sciences—UC Davis plays a leadership role in modern biology, focusing its strength on basic research and related studies in agriculture, human and animal health and the environment. Consonant with this emphasis is UC Davis' enhancement of its strength in the engineering and physical sciences, reflecting the importance of these disciplines for the economic vitality of California and the nation.

The life of UC Davis extends beyond teaching and study to service to the region, state, nation and the world. This is given in many forms: cooperative extension to agriculture and education; medical services to central California and beyond through the multifaceted UC Davis Medical Center in Sacramento; diverse educational programs of University Extension that share knowledge with the region; voluntary contributions of faculty, staff and students; and athletic and cultural programs for the campus and community at large. UC Davis is surrounded by vibrant, local communities and its proximity to Sacramento, the state capital, gives this outreach urgency and opportunity. Collaborative studies and cooperation between UC Davis and state agencies and the Legislature are both a special responsibility and a unique opportunity.

UC Davis is characterized by a distinguished faculty, a dedicated and high-achieving staff and students of great potential and accomplishment. As we move forward, we recognize that our continued excellence is dependent upon our ability to diversify our university community, consonant with the citizenry of California.

UC Davis remains committed to its human values: caring and personal relationships, collaborative and thoughtful work, all within a human-scale environment. These special qualities are sustained by intellectual strength within a collegial community whose members share a deep desire for teaching and learning, for an abiding commitment to discovering and applying new knowledge.

THE UNDERGRADUATE COLLEGES

The College of Agricultural and Environmental Sciences

College Office
150 Mrak Hall
530-752-0108; <http://www.aes.ucdavis.edu>

The College of Agricultural and Environmental Sciences offers a diverse program of majors and courses and is committed to education that emphasizes a spirit of discovery. Based on the premise that tomorrow's citizens will need to anticipate, understand and solve emerging societal problems and contribute to the discovery and application of new knowledge, the college fosters:

- critical thinking and an appreciation for diversity in thought and approaches to problem solving
- an ethos of lifelong learning—of teaching oneself and others while confronting challenges and solving problems
- an ability to move beyond either/or thinking and to pursue innovative and integrative understanding of the agricultural sciences, environmental sciences, and human sciences.
- intellectual skills that prepare individuals to secure a life-affirming physical and cultural environment based on sound, respectful management of resources
- a commitment to serve the public with informed and open-minded dedication to understanding, critiquing and addressing complex societal needs and interests

The college is proud of its rich agricultural history. From this foundation, it has expanded its educational offerings to encompass programs that highlight interconnections among the environment, plant and animal sciences, biological sciences, and human sciences. Through a wide array of major programs, the college prepares high-potential students for advanced studies in diverse disciplines and leadership in such arenas as public policy; research and development; managerial and natural resource economics; agricultural systems; environmental protection, safety and design; human nutrition, health and development; and the food, fiber, textile and apparel industries.

Undergraduate students enjoy early contact with faculty advisers, graduate students and postgraduate researchers, enriching and broadening the educational experience of all.

Several levels of academic advising are available that are designed to enhance your undergraduate experience. Advisers help you plan your courses, meet degree requirements and take maximum advantage of the resources available at UC Davis. You are encouraged to meet regularly with your assigned faculty adviser and with the Advising Associates and departmental peer advisers. Through a shared commitment to education for service to society, college faculty, staff and students work together to improve the relationship between humanity and the natural world.

The College of Engineering

Dean's Office
1050 Engineering II
530-752-0553; <http://www.engr.ucdavis.edu>

The College of Engineering is among the largest undergraduate engineering colleges in the University of California system, with an undergraduate enrollment of approximately 3,300 and graduate enrollment of 775. The college offers both a friendly atmosphere and the varied academic programs in basic sciences and engineering that have made UC Davis engineering graduates highly valued in private practice and research. The college has seven departments and one division; each has outstanding programs of instruction.

The college integrates teaching, research and service to society with our proud tradition as a land-grant research university, and provides highly qualified students with a firm intellectual and professional foundation, enhanced by an environment of discovery.

With a long-standing commitment to undergraduate students, we provide strong engineering programs that balance scientific principles with practical applications in engineering design. These programs prepare students for entry into both engineering practice and graduate-level research. We challenge our undergraduates to collaborate and communicate effectively as they begin the process of life-long professional growth.

We challenge our graduate students to join with our faculty and staff in advancing the understanding of a broad spectrum of modern technology. We are committed to being one of the world's leading engineering research centers, while contributing to our country's technological leadership and to the benefit of all people.

We are committed to maintain our vision of the college in regular consultation with our students and their families, our alumni and our many partners in academia, industry and government.

- The **Department of Applied Science** instructs students in broad areas of scientific technology and offers an innovative program for undergraduates in optical science and engineering that prepares students to work in areas such as opto-electronics, lasers and opto-communications.
- The **Department of Biological and Agricultural Engineering** combines study in engineering with instruction in the biological sciences to solve challenging environmental and technical problems.
- The **Department of Biomedical Engineering** educates students in a highly interdisciplinary combination of the biological sciences and engineering as this combination applies to medicine.
- The **Department of Chemical Engineering and Materials Science** offers curricula integrating knowledge of chemistry, biological sciences or materials science and engineering that enable students to solve problems in both current and future manufacturing technologies or to analyze the structure, properties and behavior of materials.
- The **Department of Civil and Environmental Engineering** educates students to plan and design systems that have a direct impact on health and human productivity and on the quality of human life.

- The **Department of Computer Science** offers programs in all aspects of design and use of computer hardware and software systems. The department also plays a significant service role for programs throughout the campus.
- The **Department of Electrical and Computer Engineering** offers programs in research and education crucial for the continued success of high technology industries in California and the nation, preparing students to design, analyze and use electronic and computer systems effectively.
- The **Department of Mechanical and Aeronautical Engineering** educates students in the design and manufacture of complex engineering systems for transport, industry or energy and to design, manufacture and operate aircraft and aeronautical structures.

Every effort has been made to provide engineering students with the maximum flexibility consistent with rigorous professional education standards. The key to flexibility is academic advising. You are strongly encouraged to attend the Summer Advising and Orientation Program, held the summer before your first quarter on campus. Summer Advising sessions can provide you with the information you need to make your academic experience rewarding and effective. As an incoming student, you will be given the name and office hours of your departmental staff adviser; you should arrange to meet with your adviser as soon as you arrive on campus. A well-developed peer advising system supplements the departmental advisers.

Undergraduate education in engineering at UC Davis serves as a sound basis for beginning professional practice in engineering design and development, as a preparation for careers in corporate or governmental operations, or as a foundation for graduate study. To these ends, the college emphasizes fundamental sciences to give students the maximum postgraduate flexibility. Technological developments in recent years have made it clear that engineering education must be based on fundamentals or rapidly become obsolete.

Engineers will continue to face new challenges as society demands improvements in the quality of life and as our state and nation demand greater participation by engineers in efforts toward competitiveness in a global market. As part of a land-grant institution, the College of Engineering must help maintain the technological leadership long enjoyed by the United States, while advancing technology for the benefit of all.

The College of Letters and Science

Office of the Deans
200 Social Sciences and Humanities Building
530-752-0392; <http://www-lsdo.ucdavis.edu>

The College of Letters and Science provides students with the opportunity to actively engage the central academic disciplines of the university. The largest of the three undergraduate colleges at UC Davis, the College of Letters and Science offers the majority of the campus's general education courses, more than 50 major programs of study and thousands of courses per year across a broad range of subject areas. Its nearly 500 faculty members are organized into three Divisions—Humanities, Arts and Cultural Studies; Mathematical and Physical Sciences; and Social

Sciences—and the affiliated intercollege Division of Biological Sciences. The college confers Bachelor of Arts (A.B.), Bachelor of Science (B.S.) and Bachelor of Arts and Science (B.A.S.) degrees.

The College of Letters and Science is a community of scholars and students sharing a commitment to liberal education rather than to specialized, vocationally oriented training. The college exposes you to the worlds of human experience, of ideas, of artistic accomplishments and of matter and things. Within this curriculum you are able to explore a variety of academic fields, engage in the pursuit of fundamental knowledge, and gain the capacity for independent study and thought. By learning to think carefully and critically, you will be able to continue the ongoing process of education that begins in the classroom but continues over a lifetime. You will have learned how to learn—the ultimate objective of a liberal arts education.

The educational goals of the college are reflected in the three primary groups of requirements established by the faculty: the English Composition Requirement, the Foreign Language and Area Requirements and the Major Requirements.

The **English Composition Requirement** ensures that you are well versed in written communication skills.

The **Foreign Language and Area Requirements** provide you with a broad background of knowledge, guide you in an exploration of the interdependencies of knowledge and acquaint you with other cultures.

The **Major Requirements** provide you with intellectual depth and competence in a selected area of study.

The college has a well-developed system of faculty advisers, student peer advisers and professional staff advisers who are available for individual consultations with undergraduates in a variety of settings, from the deans' office to departmental offices to campus residence halls.

The strength of the college lies in the faculty's commitment to advancing the frontiers of human knowledge through research, artistic expression and other creative endeavors, and to the effective communication and application of that knowledge through teaching and public service. Together, faculty and students in the College of Letters and Science create a climate that enables students to achieve their highest potential.

GRADUATE STUDY

Office of Graduate Studies
250 Mrak Hall
530-752-0650;
<http://gradstudies.ucdavis.edu>

Graduate students at UC Davis have the opportunity to work with and learn from accomplished faculty, recognized for their contributions to research in their fields. The Office of Graduate Studies oversees more than 80 graduate programs leading to master's or doctoral degrees, which together enroll more than 3,300 graduate students. Many of Graduate Studies' programs are offered through graduate groups, an interdisciplinary concept that allows students to study and work in inter-related areas to broaden their intellectual experiences. See the Graduate Studies chapter.

PROFESSIONAL STUDY

UC Davis has three professional schools—the School of Law (J.D.), the School of Medicine (M.D.) and the School of Veterinary Medicine (D.V.M., M.P.V.M.)—and the Graduate School of Management offers the M.B.A. degree. These schools and programs are described in later chapters.

ACADEMIC RESOURCES

The University Library

530-752-6561; <http://www.lib.ucdavis.edu>

The General Library at UC Davis is one of the premier research libraries in North America. In addition to Peter J. Shields Library, there are four other General Library facilities: the Physical Sciences and Engineering Library, the Loren D. Carlson Health Sciences Library, the Agricultural and Resource Economics Library and the Medical Center Library in Sacramento. The combined collections of the various General Library facilities total more than 2.8 million volumes, and more than 39,000 periodical and journal titles are received annually. An extensive variety of government documents, maps, microfilms and CD-ROMs are also part of the collection.

Shields Library houses the collections in the humanities, arts, social sciences, biological sciences, agricultural sciences, mathematics and computer science. The Physical Sciences and Engineering Library collections support teaching and research in engineering, chemistry, geology and physics. The Carlson Health Sciences Library serves the Schools of Medicine and Veterinary Medicine. The library at the UC Davis Medical Center provides a clinical collection of more than 31,900 volumes. The law library, administered by the School of Law, is located in King Hall.

The California Digital Library (CDL) databases, including the MELVYL online catalog, can be used to access the collections of UC Davis and the other eight UC campuses. The CDL databases and MELVYL can be searched in the libraries, at campus computer laboratories, and remotely with a modem and on the Internet. The libraries also offer access to databases and numerous other electronic resources including electronic journals available through the California Digital Library. Terminals with Internet access are available for patron use in all library facilities.

Information about library services, new full text electronic databases, and important subject-specific World Wide Web sites are available at the library's Web site. The library provides classes on the use of Melvyl as well as subject specific electronic journals and databases. Librarians are available for consultation on resources for research projects and dissertations.

UC Davis Arboretum

Arboretum Headquarters
530-752-4880; <http://arboretum.ucdavis.edu>

The 95-acre UC Davis Arboretum, located along Putah Creek's historic north fork, maintains a documented collection of more than 4,000 different kinds of trees, shrubs and perennials for use in teaching and research. Outstanding plant collections include the Shields Oak Grove, the Mary Wattis Brown Garden of California

native plants, the Ruth Storer Garden of flowering perennials and small shrubs, and the T. Elliot Weier Redwood Grove. The Arboretum Terrace home demonstration garden promotes sustainable and environmentally appropriate garden practices. Internships are available in nursery management, landscape design and maintenance, environmental education, conservation biology, Integrated Pest Management (IPM) and Geographic Information Systems (GIS).

Information and Educational Technology

IT Express
182 Shields Library
530-754-HELP (754-4357); ithelp@ucdavis.edu
<http://scg.ucdavis.edu>

Information and Educational Technology (IET) provides computing, communications and digital media services to the campus in support of research and instruction. IT Express, the campus access point for computing information, offers help activating your campus e-mail account, consultation on various technologies and troubleshooting hardware and software issues.

Other services available through IET include the Bovine Online Internet Tools software package, online technology training materials and multimedia labs for access to media production and editing equipment. Open-access computer rooms are available on campus for drop-in use and provide access to the Internet and a range of software programs used in UC Davis courses. Many computer classrooms are also available on a drop-in basis when not being used for instruction. Students living on campus can connect directly to the UC Davis network using ResNet. Students living off campus need a modem to access the 56K Student Modem Pool. Wireless access to the campus network is also available at Shields Library and the Memorial Union; visit <http://wireless.ucdavis.edu> for more information. UC Davis has also developed a personalized Web portal called MyUCDavis (<http://my.ucdavis.edu>), providing students with centralized access to e-mail, academic information and other campus services.

A comprehensive source for student computing information, the Student Computing Guide Web site (<http://scg.ucdavis.edu>), provides computer room locations and hours, IT Express hours, student-related technology news and much more.

Computer Hardware and Software Needs. Every entering undergraduate student is expected to own a computer that meets certain minimum performance standards and can connect effectively to the Internet. Every student needs ready access to these essential new technologies, and faculty should be able to count on students having the computing hardware, software and connectivity required for using class materials and other instructional resources on the UC Davis intranet and the World Wide Web. Students who do not have ready access to a computer will soon be at a significant disadvantage.

Rather than require a specific system, the campus is stating its expectation in terms of a minimum set of functional requirements that computers must meet to be used effectively in the student's education at UC Davis. A panel composed of faculty, students, administrators and staff has concluded that students should have a computer that will run a word processing pro-

gram, a spreadsheet program, an e-mail program, a World Wide Web browser and is equipped with a CD-ROM drive. A printer is also recommended. Equipment feature suggestions for desktop and laptop computers are available at <http://computerownership.ucdavis.edu>. Two desktop systems and two laptops that meet or exceed the campus recommended specifications can be purchased, at competitive prices, at the UC Davis Bookstore Computer Shop. Students who are eligible for need-based financial aid can apply for additional funding to pay for these systems through the Financial Aid Office.

Although UC Davis continues to provide computer rooms and access ports for student use on campus, facilities are increasingly used for class instruction or focused on courses requiring advanced software or hardware. For more information on the UC Davis student computer ownership statement of expectation, see <http://compterownership.ucdavis.edu> or send an e-mail message to computerownership@ucdavis.edu.

RESEARCH PROGRAMS AND RESOURCES

Organized Research Units

Organized Research Units (ORUs) are campuswide interdisciplinary research programs that further the university's missions of teaching, research and public service, but do not offer courses of instruction. Members of an ORU come from more than one department and normally from more than one school, college or division.

Agricultural History Center

5202 Social Sciences and Humanities Building
530-752-1827

The center coordinates and administers several research and publication programs that further the study of agricultural and natural-resource history. Research activities include studies of comparative farm policy, migration and agricultural development, the history of farm land values, the agricultural-environmental border, rural international borderlands in the Americas, the causes and consequences of agricultural mechanization and other sources of productivity improvements in the 19th and 20th centuries and the impact of scientific research.

Bodega Marine Laboratory and Reserve

Bodega Marine Laboratory
P.O. Box 247
Bodega Bay, CA 94923
707-875-2211; 707-875-2009 (fax); ucdbml@ucdavis.edu;
<http://www-bml.ucdavis.edu>

The Bodega Marine Laboratory is dedicated to research and teaching in marine biology and related fields. Research areas include population biology/ecology, cell and organismal biology, and aquaculture and fisheries. Well-equipped facilities feature running seawater in two classrooms and most laboratories, a marine science library, lecture hall, housing facilities, greenhouses, experimental freshwater system for anadromous fish studies, and a dive locker and air station. Faculty teach a number of undergraduate courses during the academic year and summer session. The laboratory is located in Bodega Bay, Sonoma County, 100 miles west of Davis.

The Bodega Marine Reserve, part of the UC Natural Reserve System, is 362 acres of remarkably diverse habitats, including an excellent rocky intertidal zone, sand beaches, saltmarsh, lagoon tidal flats, freshwater marsh, coastal prairie and dunes. The reserve also administers adjacent subtidal sand and rock habitats in a marine life refuge. Areas of research include a broad spectrum of field studies of plants and animals in coastal marine, intertidal and terrestrial ecosystems.

California Regional Primate Research Center (CRPRC)

Primate Center
530-752-0447;
<http://www.crprc.ucdavis.edu/crprc/homepage.html>

The California Regional Primate Research Center investigates selected human health problems for which the nonhuman primate is the animal model of choice. Research programs include behavioral and neurobiology, developmental and reproductive biology, respiratory diseases, virology and immunology, genetics and a variety of biomedical collaborative research projects. Self-sustaining breeding colonies of macaques are available for study of spontaneously occurring disorders.

Center for Geotechnical Modeling

3101 Engineering III
530-752-7929; <http://cgm.engr.ucdavis.edu>

At the Center for Geotechnical Modeling, students and faculty from several departments and other universities conduct research in physical and numerical modeling of geotechnical problems. The center operates two centrifuges, including the 9-m radius, 4,500-kg payload National Geotechnical Centrifuge. These centrifuges are used to study a variety of topics, including the effect of earthquakes on earth structures, toxic waste transport in groundwater, and deformations of foundations of bridges and large buildings.

Center for Health and the Environment (CHE)

(formerly Institute of Toxicology and Environmental Health)
530-752-1340

CHE coordinates interdisciplinary research on the effect of environmental agents, including chemicals and radiation, on the health of humans, animals and other organisms. Researchers conduct epidemiologic studies in human populations, and experiments are performed with whole animals as well as organisms, cells and molecules to measure environmental exposures and health outcomes associated with them. Research on the development of agents for population control of humans and wildlife seek to mitigate the adverse effects of overabundance on the environment. Studies on toxic, radioactive, mutagenic, carcinogenic and teratogenic compounds are carried out in special animal holding facilities. Laboratories are equipped for studies in analytical chemistry, biochemical toxicology, cell and molecular biology, endocrinology, inhalation toxicology, morphology and reproductive and developmental biology. The center houses a major universitywide program and federally funded center in occupational medicine and a School of Medicine program in reproductive biology.

Center for Image Processing and Integrated Computing

Bernd Hamann and David Rocke
530-752-2387; 530-752-8894 (fax);
<http://info.cipic.ucdavis.edu>

The Center for Image Processing and Integrated Computing focuses on data analysis, visualization, computer graphics, optimization, and electronic imaging. The central emphasis is the investigation of techniques for the study of large-scale, multi-dimensional data sets. These techniques may be applied to the analysis and visualization of environmental, geophysical, astrophysical, biological, fluid flow, and satellite data. The center seeks to solve complex data analysis and visualization problems in a cross-disciplinary environment, working with researchers in academia, national research laboratories and industry.

Crocker Nuclear Laboratory

Crocker Nuclear Laboratory
530-752-1460

This facility is an interdepartmental laboratory for the application of nuclear science to a variety of disciplines. The laboratory has research programs in nuclear physics and chemistry, air pollution analysis, use of pulsed ultraviolet light as an alternative to pesticides and insecticides, biology, material damage studies, the effect of background radiation on computers, and historical studies. Isotopes produced by the variable-energy 76-inch cyclotron are used in clinical and research applications, including pioneering work in brain imaging.

Institute of Governmental Affairs

Alan L. Olmstead, Director
360 Shields Library
530-752-2042; 530-752-2835 (fax)
<http://www.iga.ucdavis.edu>

The Institute of Governmental Affairs (IGA) serves as a research base for social science faculty at UC Davis. IGA serves approximately 80 faculty from 28 campus departments as well as visiting scholars from throughout the United States and around the world.

Located in the core of the Davis campus, IGA houses eleven formal research programs: Asian Economic Panel; Center for International Data; Center for State and Local Taxation; Center on Rural Economies of the Americas and Pacific Rim; Center on Quantitative Social Science Research; Center on Social Sciences and the Law; Joint Center for International Security Studies; Program on Immigration, Population and the Economy; Program on Pacific Rim Business and Development; Program on Technology, Institutions, and Economic Growth; and Program on Welfare, Education, and Inequality.

Specialized services include grant advising, preparation, and administration; research program development; library and data services; social science computing, programming, and statistical consulting; seminar, workshop, and conference organization; and much more. The institute also enhances the education of students by providing research opportunities. The institute sponsors an active public affairs program. IGA serves as the UC Davis liaison to the systemwide program: Institute on Global Conflict and Cooperation (IGCC).

Institute of Theoretical Dynamics

2201 Academic Surge Building
530-752-0938; info@itd.ucdavis.edu; <http://www.itd.ucdavis.edu>

The Institute of Theoretical Dynamics (ITD) promotes research and graduate education in the mathematical sciences and provides a focus for extramural and intramural research pursuits. The two most important research themes are dynamics and stochastic processes. Approximately 30 faculty from all of the colleges participate in conferences, workshops, seminars and summer schools. The institute provides networking of computer workstations, a gateway to supercomputers, and research offices and facilities for interaction with students, faculty and visitors. ITD supports research in mathematical biology, mathematical physics and applied mathematical analysis, especially fluid dynamics, and houses the NSF Computer Graphics Facility for computational biology, which is open to faculty, graduate students and postdoctoral researchers for graphic visualization in biology. ITD also coordinates a campuswide NSF research training group, "Nonlinear Dynamics in Biology."

Institute of Transportation Studies

Daniel Sperling
530-752-6548; 530-752-6572 (fax); dsperling@ucdavis.edu;
<http://www.its.ucdavis.edu>

The institute conducts multidisciplinary research on complex problems related to traffic congestion and local and global pollution, and disseminates research results to the broader academic and professional community. Research priorities are travel behavior, alternative-fueled vehicle technology and policy, energy and environmental projects and advanced vehicle and highway systems. About 30 faculty members and 70 students from more than 10 academic disciplines, including three Engineering departments, Economics, Environmental Science and Policy, Agricultural and Resource Economics, and the Graduate School of Management, participate in the research activities of the institute. The institute also houses the Fuel Cell Vehicle Center and the Graduate Group in Transportation Technology and Policy.

John Muir Institute of the Environment (JMIE)

Robert G. Flocchini
530-754-9135

The institute facilitates research and exchange of information to improve the scientific basis for decisions on environmental issues. It encourages and facilitates multidisciplinary research focused on environmental topics, acts as administrative coordinator for specific programs of organized environmental research, and facilitates communication among policy makers, resource agencies, academic scientists and the public through outreach programs.

Program in International Nutrition

Kenneth H. Brown
3150 Meyer Hall
530-752-1992; 530-752-3406 (fax); khbrown@ucdavis.edu;
<http://www-nutrition.ucdavis.edu/pin/index.htm>

Faculty members of the Program in International Nutrition are studying the epidemiology and causal mechanisms of the major nutritional problems of human populations in developing countries, with the ultimate

objective of planning, implementing, and evaluating programs to ameliorate these problems. Current areas of research include maternal and child nutrition, nutrition and infection, nutritional assessment, and food and nutrition policy. The program manages a small micro-computer center for the analysis of clinical and population-based studies of relevance to international nutrition.

Additional Research Centers and Resources

Adult Fitness Program

Department of Exercise Science
530-752-2540

The Adult Fitness Program serves as an educational laboratory for undergraduate and graduate students engaged in advanced study of the role of exercise and nutrition in the management of optimal physiological function. Basic and clinical research studies focus on cardiovascular, respiratory and metabolic functions. The program emphasizes risk reduction for cardiovascular disease and development of cardiorespiratory endurance. Studies stress fitness, relaxation, and weight reduction and control through appropriate diet and exercise programs that are individually prescribed after extensive medical and physiological testing.

California Agricultural Experiment Station

College of Agricultural and Environmental Sciences
530-752-1610

The California Agricultural Experiment Station has branches in Davis, Riverside and Berkeley. The Davis branch includes 500 faculty in more than 30 departments in the College of Agricultural and Environmental Sciences, the Division of Biological Sciences and the School of Veterinary Medicine. In addition to laboratory facilities, it has approximately 3,000 acres devoted to agricultural research in the areas of experimental crops, orchards and animal facilities. The Experiment Station facilitates research in agricultural production, food processing, nutrition, animal care and disease prevention, consumer sciences and community development and environmental quality, with emphasis on resource conservation and management, water and soil pollution and regional planning.

Center for Child and Family Studies

West House of Child and Family Study Center
530-752-2888; <http://cfcs.ucdavis.edu>

The Center for Child and Family Studies is a research, teaching and demonstration laboratory of the Division of Human Development and Family Studies in the Department of Human and Community Development. At the laboratory, students enrolled in human development courses develop observational techniques and participate with peers, children, parents and professionals in a fully integrated laboratory of developmental programs for young children. Students study theories of development in a naturalistic setting, linking theory to principles of interaction and developing a recognition and respect for individual differences. Selected undergraduate students participate in faculty and graduate student research at the laboratory.

Center for Developmental Nutrition

TB 33
530-752-7516

The Center for Developmental Nutrition supports pre-doctoral and postdoctoral research in nutrition and development. The laboratory promotes collaborative research on the study of how nutrients influence the development of individuals at multiple life stages.

Center for Neuroscience

Edward G. Jones, Director
1544 Newton Ct.
Davis, CA 95616
530-757-8708; 530-757-8827 (fax);
<http://www.neuroscience.ucdavis.edu>

The Center for Neuroscience is an interdisciplinary unit that serves as the focal point for the study of the neurosciences at UC Davis. Faculty affiliated with the center are from 13 departments and sections. The center sponsors a seminar series, conferences and symposia, distributes a quarterly newsletter, provides research space for center members and supports graduate students, post-doctoral scholars and distinguished visitors.

Faculty and students are engaged in the study of brain mechanisms responsible for normal human cognitive and perceptual processes and in the study of fundamental aspects of nerve cell function and development. A core group of cognitive neuroscientists uses various imaging techniques and electrophysiological techniques to study both the normal and lesioned cerebral cortex to understand how the normal brain controls behavior. Other faculty members use either animal models to understand how information is processed in the brain or simple systems to study the fundamental biology of nerve function and development and disorders affecting them.

Health Sciences Research Laboratories

The Health Sciences Research Laboratories are biological science facilities with research staff and assistance for faculty, staff and students.

• Animal Surgery Laboratory

Buildings H and J—Animal Resources Service
530-752-7756; latalken@ucdavis.edu; jesdavis@ucdavis.edu

This unit is a surgical research facility in compliance with NIH, AAALAC, and USDA standards. Instruction in surgical techniques is available. Surgical instruments, drapes, anesthesia machines, scrub suits, and equipment for monitoring vital signs and physiologic parameters are available. Staff are available to perform or assist with both survival and non-survival surgical procedures depending on the investigator's requirements. Staff are available for post-operative care and collection of samples and data as required.

• Biochemistry and Special Instrumentation Laboratory

TB 161
530-752-0320

This central facility provides investigators access to certain common but expensive laboratory equipment, including ultracentrifuges and high-speed centrifuges with rotors, scintillation and gamma counters, UV/VIS spectrophotometers, densitometers, Betaplate and Elisa readers.

Human Performance Laboratory

164 Hickey Gym
530-752-0965/530-754-8675

The Human Performance Laboratory houses equipment for the study of blood and muscle chemistry and enzymology, metabolism and energetics, muscle mechanics and electromyography, movement kinetics and kinematics, body composition and anthropometry, cardiorespiratory function during exercise in a controlled environment, control and acquisition of motor skills and the psychosocial aspects of human performance. Apple Macintosh and IBM microcomputers are available for data collection, reduction, graphing and statistical analysis and for biomechanical, physiological systems and human performance modeling.

Humanities Institute

227 Voorhies Hall
530-752-2295; 530-752-4263 (fax)

The Davis Humanities Institute organizes interdisciplinary research seminars open to faculty and graduate students and promotes creative exchanges among the humanities, social sciences and environmental sciences. Its fellowship program enables campus fellows and distinguished visitors to participate in year-long seminars on designated themes. The institute also sponsors distinguished visiting lecturers, develops conferences and colloquia, supports interdisciplinary research clusters and a graduate student research assistantship program, co-sponsors lectures with other departments, organizes a Friday noon series of talks entitled "Problems and Paradigms," produces a calendar of events and publishes a newsletter, *Humanities at Davis*.

Intercampus Institute for Research at Particle Accelerators

Richard L. Lander
325 Physics/Geology Building
530-752-1780

This institute conducts research using the unique facilities at national and international accelerator laboratories, particularly the Enrico Fermi National Accelerator Laboratory and the Large Hadron Collider to be built in Europe. High-energy particle physics is the dominant area of research. The institute also promotes seminars and lectures by visiting researchers.

Mann Laboratory

104 Mann Laboratory
530-752-1410; 530-752-4554 (fax)

Plant scientists in the Louis K. Mann Laboratory direct their physiological, biochemical and molecular research to improving the quality of harvested fruits, vegetables and seeds. The six faculty housed in this facility are members of the Department of Vegetable Crops and are assisted by numerous students, postdoctoral researchers and visiting scientists. Research ranges from the basic molecular biology of fruit ripening and seed development to practical storage technologies for whole and lightly processed fruits and vegetables. Results are of interest to other researchers in the plant sciences and to growers, shippers, marketers and consumers of fresh fruit and vegetables. The facility is equipped with 18 controlled-temperature rooms, eight research laboratories and a conference room and library.

Molecular Structure Facility

8 Hutchison Hall
(530) 752-6392

The Molecular Structure Facility (MSF) provides state-of-the-art instrumentation for the structural elucidation and identification of biological and organic molecules. Mass spectrometers include MALDI-TOF, ESI, ESI-TOF, LC/MS and GC/MS. Thus, the facility can analyze a wide spectrum of molecules including proteins and peptides. The MSF also provides advanced biotechnological instrumentation for protein sequencing, amino acid analysis and DNA synthesis. Additional capabilities include: 2D-gel electrophoresis, in-gel and on-membrane digestion, rapid protein identification, micro-bore and capillary HPLC and consultation for protein related research. The MSF, as a core instrumentation facility, supports various research programs across the campus and is open to off campus researchers as well.

Natural Reserve System

Virginia Boucher
2112 Wickson Hall
530-752-6949; <http://nrs.ucop.edu>

The Davis campus administers six reserves that are available for teaching and research.

- Bodega Marine Reserve, located at Bodega Bay, 100 miles west of campus, consists of coastal dune vegetation and bay and coastal tidal areas with facilities for overnight and longer stays. (See Bodega Marine Laboratory in "Organized Research Units" section.)
- Eagle Lake Biological Field Station is on the shore of Eagle Lake in northeastern California and has boats, a small laboratory and facilities for overnight and longer stays.
- Jepson Prairie Reserve, located in Solano County 15 miles south of the campus, consists of native California bunchgrass grasslands, vernal pools, playa lakes and freshwater sloughs.
- Donald and Sylvia McLaughlin Reserve, located near Clear Lake about 70 miles northwest of campus, consists of intercoastal range habitat with a mix of serpentine and non-serpentine soils. The reserve has a facility for long-term overnight stays with a well-equipped kitchen, full bath, and a camping area for class groups.
- Quail Ridge Reserve consists of intercoastal range habitat located about 30 miles west of campus on a peninsula jutting into Lake Berryessa. The reserve has a facility with a well-equipped kitchen, full bath, four-wheel drive vehicle, and camping areas for groups.
- Stebbins Cold Canyon Reserve, located about 24 miles west of campus, has representative populations of several different plant communities found in California's inner and outer coast ranges.

The university maintains over 34 reserves throughout the state, many of which are available for teaching and research.

Nuclear Magnetic Resonance Facility

Medical Sciences 1D
530-752-7677

The Nuclear Magnetic Resonance Facility provides qualified researchers in the biological, medical and physical sciences access to state-of-the-art NMR instrumentation for spectroscopy and imaging. At present, the facility operates six spectrometers of varying purposes and capabilities. Three horizontal magnet bore spectrometers are used for in vivo spectroscopy and imaging of small animals and materials, and in vitro spectroscopy of perfused organs. Two vertical bore spectrometers are used primarily for solution studies of biomolecules, with an additional vertical bore instrument for in vitro studies. All of the spectrometers are multinuclear, and a large variety of high resolution, surface and imaging coils are available for use. The facility also has Silicon Graphics workstations for off-line data processing and molecular modeling.

Social Science Data Service

105 Social Sciences and Humanities Building
530-752-6063; <http://www.ssd.sds.ucdavis.edu>

The Social Science Data Service (SSDS) is a unit of the Institute of Governmental Affairs (IGA). SSDS provides consulting, computing and specialized support services to faculty and graduate students involved in quantitative social science research on the UC Davis campus. SSDS staff provides consulting on a wide range of software used by social scientists and assists with questions regarding the use of SSDS computers, as well as statistical and data-related programming. SSDS manages a UNIX system that provides a platform for quantitative social science computing. Specialized support is available for extramurally funded research projects managed by IGA.

Student Farm

530-752-7645; studentfarm@ucdavis.edu
<http://studentfarm.ucdavis.edu>

The Student Farm offers students a wide range of educational and research opportunities in sustainable agriculture through numerous internship offerings, formal courses (e.g., in organic crop production, sustainable agriculture and environmental education) and research efforts. Opportunities include working in several staff-supervised hands-on projects such as year-round production and marketing of organic vegetables, on-farm composting, tractor operations and environmental education tours for school children. In addition, students may conduct field and greenhouse experiments in various aspects of sustainable agriculture or other individual projects. The farm is located on the west edge of the campus core, near the Rec Pool, and is open to all students, regardless of major or background.

UC Agricultural Issues Center

132 Social Sciences and Humanities Building
530-752-2320; <http://aic.ucdavis.edu>; agissues@ucdavis.edu

The UC Agricultural Issues Center, headquartered at Davis, is a universitywide research and outreach unit that draws on expertise from many disciplines. The center focuses on agricultural issues related to science and technology, international trade, agribusiness trends, rural-urban issues, natural resources and the environment, human resources and commodity policy and markets.

UC Davis Herbarium

Section of Plant Biology
530-752-1091/0617; <http://herbarium.ucdavis.edu>

The UC Davis Herbarium is used for research in plant systematics and ecology, as well as for public service requests (especially identification of weeds and poisonous plants). The herbarium contains more than 200,000 plant specimens, including vascular plants, bryophytes, lichens and algae. The majority of these specimens are angiosperms (flowering plants), mainly from California, but the collections are worldwide in scope, with strong holdings from North America, Ecuador, Baja California and regions with Mediterranean climate regimes. The herbarium is well known for its collection of weeds and poisonous plants, although it also has world-class collections of grasses, oaks and spurge.

Veterinary Genetics Laboratory

DNA Laboratory, Armstrong Tract, 530-752-2211

The laboratory is recognized for its pioneering research on animal blood groups and biochemical polymorphisms. Current research activities include studies of the genetic basis of animal diseases, development of DNA marker screening tests and gene mapping. The knowledge acquired is applied to genetic disease diagnostics and parentage verification for domestic animals (horses, cattle, sheep, goats, elk, llamas, alpacas and dogs) and wildlife.

Veterinary Medicine Teaching and Research Center (VMTRC)

UC Davis VMTRC
18830 Road 112
Tulare, CA 93274
530-688-1731; <http://www.vmtrc.ucdavis.edu>

VMTRC is a clinical teaching and research center within the UC Davis School of Veterinary Medicine. The center offers a forum for teaching, research and service programs for D.V.M. students, M.P.V.M. students, graduate students, residents, university faculty and visiting researchers interested in food animal medicine. VMTRC programs emphasize herd health medicine, epidemiology and preventive medicine, production management, agricultural economics, environmental protection, food safety and animal welfare.

X-Ray Crystallographic Facility

Marilyn Olmstead
Department of Chemistry
530-752-6668

The X-Ray Crystallographic Facility, located in the Department of Chemistry, provides crystal structure determinations for researchers. Single crystals from all branches of chemistry are studied. Recently, the facility acquired a Bruker SMART X-ray diffraction system with a low temperature accessory and a high powered stereomicroscope. The facility also has three older X-ray diffractometers, one of which is equipped with a rotating Cu anode source. Consultation and collaboration on a variety of single crystal related projects can be arranged.

UNDERGRADUATE ADMISSION

UC DAVIS

UNDERGRADUATE ADMISSION

2002-2003
2003-2004

UNDERGRADUATE ADMISSION

Undergraduate Admissions and Outreach Services
One Shields Avenue
University of California
Davis, CA 95616-8507
530-752-2971; 530-752-4360 (TTY),
530-752-1280; 530-752-3712 (fax); ugaos@ucdavis.edu;
<http://ugaos.ucdavis.edu>

Applying to UC Davis

You can apply online at <http://www.ucop.edu/pathways>, or you can print your own copy of the application at <http://www.ucop.edu/pathways/getapp.html>.

The Application for Undergraduate Admission and Scholarships can also be obtained from any California high school, community college or from any UC admissions office.

The initial filing periods to apply for admission and scholarships for fall quarter at UC Davis are as follows:

Quarter	Initial Filing Period
Fall 2003	November 1–30, 2002
Fall 2004	November 1–30, 2003

UC Davis is usually closed to new undergraduate applicants for winter and spring quarters. To seek admission for winter or spring quarter, you will need to submit a completed application with fee and an appeal letter directly to Undergraduate Admissions and Outreach Services during the appropriate initial filing period. The filing periods to submit your application for admission and scholarships for winter or spring quarters at UC Davis are as follows:

Quarter	Initial Filing Period
Winter 2003	July 1–31, 2002
Spring 2003	October 1–31, 2002
Winter 2004	July 1–31, 2003
Spring 2004	October 1–31, 2003

Application Fees

The application fee of \$40 entitles you to apply to one University of California campus. If you want to apply to more than one UC campus, you must pay an additional \$40 for each campus you select. These fees are not refundable. You must include the fee with the application or it will not be processed. Attach a check or money order made payable to the Regents of the University of California to the application form.

The University of California will waive application fees for up to four campuses for qualified students who otherwise would be unable to apply for admission. To be accepted for the fee waiver program, you must meet specific requirements related to your family income and size. The fee waiver program is for United States citizens and permanent residents only. Go to <http://www.ucop.edu/pathways/impinfo> for more information.

Preparing for University Work—Freshman

A carefully planned program of high school courses provides you with the best preparation for university work. As a prospective university student, you should give priority to completing the high school courses required for admission—known as the “a–f” subject requirements; see <http://www.ucop.edu/pathways/impinfo/freshx.html>.

You should take college preparatory courses that will challenge you to work hard and will prepare you beyond minimum levels of competence in reading, writing and mathematics. A student who is well prepared for university work will have taken four years of English in high school, three to four years of mathematics, two to three years of foreign language, two to three years of laboratory science, two or more years of history/social science, and one or more years of art or humanities.

Reading: You should become proficient in reading and understanding technical materials and scholarly works. Learn to read analytically and critically, actively questioning yourself about the author’s intentions, viewpoint, arguments and conclusions. Become familiar and comfortable with the conventions of standard written English, and with various writing strategies and techniques. Your reading experience should include original works in their entirety, not just textbooks and anthologies, and should encompass a wide variety of forms and topics.

Writing: Effective critical thinking and proficiency with the written language are closely related, and both are skills that every university student must master. By university standards, a student who is proficient in English composition is able to understand the assigned topic; select and develop a theme by analysis and argument; choose words that aptly and precisely convey the intended meaning; construct effective sentences (i.e., sentences that economically and successfully convey the writer’s ideas and display a variety of structures); and demonstrate an awareness of the conventions of standard written English.

If you plan to attend the university, you must take English courses in high school that require the development and practice of these skills. You must take at least four years of English composition and literature classes that stress expository writing.

Mathematics: Many undergraduate majors require preparation in mathematics beyond the three years required for admission to the university. All majors in the natural and life sciences, engineering and mathematics require calculus. Many majors in the social sciences require statistics or calculus, or both. Calculus is also required for undergraduates preparing for careers in the environmental sciences, dentistry, medicine, optometry, pharmacy and biostatistics. If you select a major that requires either calculus or statistics, you should expect to take that course during your first year at the university.

Prepare yourself for university courses in mathematics while you are still in high school. Good preparation includes a year of mathematics beyond second-year algebra (such as precalculus, mathematical analysis, analytic geometry) and definitely a course in mathematics during your senior year.

Algebra is necessary for success in university mathematics courses. Students who do not take a mathematics course during their last year in high school often find they need to take a preparatory course at the university in order to renew their algebra skills. The need to take such a course at the university could delay your undergraduate studies that require mathematics as a prerequisite.

Finally, take advantage of any guidance your high school offers in study skills and diagnostic tests designed to help you assess your preparation for college. Managing your time well and studying effectively are critical to excelling at the university. Together with solid academic preparation, these skills should enable you to realize your educational goals and, ultimately, fulfill your career aspirations.

ADMISSION AS A FRESHMAN

The University of California defines a *freshman applicant* as a student who has graduated from high school but has not enrolled since then in a regular session in any college-level institution. Summer session immediately following high school graduation is excluded in this determination.

Admission requirements for California residents are different from those for nonresidents. Nonresidents must meet higher scholarship requirements.

The following describes the minimum requirements to establish eligibility at the University of California.

Applicants to UC Davis generally must perform well above these minimums in order to gain admission since the number of eligible applicants exceeds the number of students we can admit. We give priority to students on the basis of highest academic achievements and test scores.

Minimum Requirements for California Residents

To be minimally eligible for admission to the University of California as a freshman, you must meet the subject requirements, scholarship requirement and examination requirements that are described on this and the following pages.

Beginning with applicants for fall 2003, the subject requirements will include one unit of coursework in visual and performing arts (dance, drama/theater, music or visual

arts). The number of college preparatory electives required will be reduced from two units to one. The total number of subject requirement units will remain at 15. The visual and performing arts requirement will be labeled the “f” requirement and the college preparatory elective requirement will be labeled the “g” requirement.

Subject Requirements: a–f

You must complete at least 15 high school units in the subject areas listed below. At least seven of the required 15 units will have to be taken in the last two years of high school. The required course sequence is often referred to as the “a–f” pattern. Go to http://www.ucop.edu/pathways/infoctr/doorway_index.html to view the “a–f” pattern for the UC approved course list for California high schools.

Courses taken in the 9th grade and completed with a grade of C or better can satisfy a subject requirement; however, the grades will not be used in computing your grade point average. If you receive a grade of D or lower in a 9th-grade course, you have not satisfactorily completed the subject requirement until you repeat the course (or, in some cases, complete a more advanced course) with a grade of C or better.

a. History/Social Science—2 years

One year of United States history, or one-half year of United States history and one-half year of civics or American government; and one year of world history, cultures and geography.

b. English—4 years

Four years of English—composition and literature. Classes should stress preparation for university study, including frequent and regular practice in writing expository prose compositions of some length. Not more than one year will be accepted from the 9th grade. (See English Proficiency on the next page.)

c. Mathematics—3 years; 4 years recommended

Three years of mathematics—elementary algebra, geometry and intermediate algebra. (Courses taken in

grades 7 and 8 may partially satisfy the requirement if they are accepted by the high school as equivalent to its own courses.)

d. Laboratory Science—2 years; 3 years recommended

Two years of laboratory science providing fundamental knowledge in at least two of these three areas: biology, chemistry and physics. Not more than one year of laboratory science taken in the 9th grade may be used to meet this requirement.

e. Language other than English—2 years; 3 years recommended

Two years of the same language other than English. Courses should emphasize speaking and understanding, and include instruction in grammar, vocabulary, reading and composition. (Courses taken in grades 7 and 8 may satisfy this requirement if they are accepted by the high school as equivalent to its own courses.)

f. College Preparatory Electives—2 years

Two years in addition to those required in “a” through “e” above.

- **History and English:** courses that fit the general description for courses above.
- **Advanced mathematics:** trigonometry, linear algebra, pre-calculus (mathematical analysis), calculus, statistics, computer science and similar courses. (Courses containing significant amounts of material for arithmetic or from shop, consumer or business mathematics are not acceptable.)
- **Laboratory science:** courses in the biological and physical sciences. A general science course taken in grade 9 as preparation for a laboratory science may be used.
- **Language other than English:** courses may be in either the same language used to satisfy the “e” requirement or a second foreign language. If a second language is chosen, however, at least two years of work in that language must be completed.
- **Social science:** courses that serve as preparation for lower division work in social science at the university. (Courses of an applied, service or vocational nature are not acceptable.)
- **Visual and performing arts:** courses should enable you to understand and appreciate artistic expression, and to talk and write with discrimination about artistic materials studied. Courses that develop creative artistic ability or artistic performance may be used. (Courses that are recreational or are offered under physical education are not acceptable.)

Note: One year of visual and performing arts (VPA) coursework will become a subject requirement for all high school students graduating in or after 2003. The university will allow two semesters of any approved VPA coursework for graduates in 2003. For graduates in 2004 or 2005, the university will allow two semesters of any approved VPA coursework in the same area. Graduates in 2006 or later will be required to complete a year long VPA course where the first semester is a prerequisite for the second semester. The visual and performing arts requirement is labeled the “f” requirement, and the college preparatory elective requirement is labeled the “g” requirement.

If you are a California high school graduate, the courses used to satisfy the **subject requirement** must appear on a list that your high school principal has certified meets the course descriptions above, and has been accepted by the university’s Office of Student Academic Services. If you submit courses from an out-of-state school, Undergraduate Admissions and Outreach Services will determine if your courses fulfill the subject requirement.

English Proficiency

Instead of a fourth year of high school English, you may satisfy the **English proficiency requirement** by completing one of the following:

- SAT-II Subject Test in Writing (a score of 680 or above);
- OR**
- Advanced Placement Examination in English Composition and Literature or English Language and Composition (a score of 5, 4, or 3).
- OR**
- International Baccalaureate Higher Level Examination in English (a score of 7, 6 or 5).

The requirement may also be satisfied with a transferable college-level English course in literature or composition worth 3-semester or 4-quarter units in which you earned a grade of C or higher.

Scholarship Requirement

You must have earned a grade of C or better in all high school courses to satisfy the “a–f” requirements above. The grades earned in these courses that are taken in grades 10 through 12 will be used to evaluate your grade point average for minimum eligibility.

Applicants to UC Davis generally must perform well above minimums in order to gain admission.

UC Eligibility Index and Conversion Table

“a–f” GPA	SAT Total*	ACT score	Equivalent SAT I score
2.80-2.84	4640	36	1600
2.85-2.89	4384	35	1580
2.90-2.94	4160	34	1520
2.95-2.99	3984	33	1470
3.00-3.04	3840	32	1420
3.05-3.09	3720	31	1380
3.10-3.14	3616	30	1340
3.15-3.19	3512	29	1300
3.20-3.24	3408	28	1260
3.25-3.29	3320	27	1220
3.30-3.34	3248	26	1180
3.35-3.39	3192	25	1140
3.40-3.44	3152	24	1110
3.45-3.49	3128	23	1070
3.50 or higher	3120	22	1030
		21	990
		20	950
		19	910
		18	870
		17	830
		16	780
		15	740
		14	680
		13	620
		12	560
		11	500

*SAT total: (SAT I composite) + (2x (SAT II English + SAT II math + third SAT II)). SAT I composite is highest combined mathematics and verbal scores from a single sitting. See conversion table (right) to convert ACT scores to SAT I composite score.

If you are a California resident and your grade point average is 2.80 or above in the required “a–f” subjects taken after the 9th grade, you will meet minimum requirements for the university if you achieve the specified scores on the standardized tests (see the UC Eligibility Index).

The university calculates your grade point average (GPA) in the “a–f” subjects by assigning point values to the grades you earn, totaling the points, and dividing the total number of “a–f” course units. Points are assigned as follows” A=4 points, B=3 points, C=2 points, D=1 point, F=0 points. The university assigns extra points for up to four units of university certified honors level and advanced placement courses taken in the 10th, 11th, and 12th grade: A=5 points, B=4 points, C=3 points. No more than two units of UC approved honors level courses taken in the 10th grade may be given extra points. A grade of D in an honors or advanced placement course does not earn extra points.

In determining the required grade point average, the university will use a semester grade of A in one course to balance a semester grade of C in another. Grades you received in courses taken in the 9th grade or earlier are not used in determining your grade point average. (However, these courses may be used to satisfy subject requirements.) The grades that appear on your official high school transcript, including those earned in accelerated and advanced courses, are the grades the university will use in evaluating your record. Grades are counted on a semester basis unless your school gives only year grades.

To meet the **subject** and **scholarship requirements** you may repeat courses in which you received a grade of D or lower. The grade achieved in the repeated course will be calculated into the grade point average. There is no limit to the number of repeated courses that may be used in the “a–f” pattern, but each course may be repeated only one time.

Examination Requirement

All freshman applicants must submit official scores from the College Board (SAT-I, SAT-II) or the American College Testing (ACT) Program. If you are applying for admission to the fall quarter, take the tests no later than

December of your senior year (earlier testing is strongly recommended). Applicants to UC Davis generally must perform well above the minimum requirements to gain admission. The following tests are required:

- Scholastic Assessment Test-I (SAT-I—College Board)—The verbal and mathematics tests scores you submit must be from the same sitting,

OR

- American College Test (ACT)—the composite score is used,

AND

- Three Scholastic Assessment Tests-II (SAT-II—College Board), which must include (a) writing test, (b) mathematics (level I, Ic or IIc) and (c) one test from the social studies or science or foreign language, or the test in English literature (not mathematics). The English Language Proficiency Test is not an acceptable option.

The UC Eligibility Index incorporates SAT II test scores. If you are a California resident, and your grade point average is 2.80 or above in the required “a–f” subjects taken after the 9th grade, you will meet the minimum requirements for the university if you achieve the specified scores on the standardized tests (see UC Eligibility Index).

Make arrangements to take the required SAT-I and SAT-II with your high school or by writing to College Board SAT, Princeton, NJ 08541; see <http://www.collegeboard.com>. For the American College Test (ACT) write to American College Testing Program, Registration Unit, P.O. Box 168, Iowa City, IA 52240; see <http://www.act.org>. UC Davis’ College Board code is 4834 and the ACT code is 0454.

Eligibility in the Local Context

The top four percent of students at each participating California high school are designated UC eligible and guaranteed admission to one of the eight UC general campuses under the Eligibility in the Local Context (ELC) pathway.

To be considered for ELC, you must complete eleven specific units of the subject requirement by the end of your junior year. With the assistance of each participating high school, the university will identify the top four percent of students on the basis of GPA in the required coursework.

The eleven units include one unit of history/social science; three units of English; three units of mathematics; one unit of laboratory science; one unit of language other than English; two units chosen from among other subject requirements.

The university will notify ELC students of their status at the beginning of their senior year. If you are designated UC-eligible through ELC, you must submit the university’s undergraduate application during the November initial filing period and complete remaining eligibility requirements—including the subject and examination requirements—to enroll.

ELC students are guaranteed a spot at one of the eight UC campuses, though not necessarily at their first-choice campus.

College Board Advanced Placement (AP) Examination Credit

Examination	Score	UC Davis Course Equivalencies*	Continuing Course	Credit Toward Degree
ENGLISH				
A score of 3, 4, or 5 on the English AP examination satisfies the university Subject A requirement.				
English.....	5, 4	English 1, 3		8 units
<i>College of Agricultural and Environmental Sciences:</i> 4 units—Satisfies first half of English composition requirement.				
<i>College of Engineering:</i> 8 units—Satisfies English 1 or 3. <i>College of Letters and Science:</i> Satisfies first course toward English Composition requirement.				
English.....	3			8 units
FOREIGN LANGUAGES				
<i>College of Agricultural and Environmental Sciences:</i> 4 units of credit allowed toward Breadth requirement or Unrestricted electives for each foreign language examination passed.				
<i>College of Letters and Science:</i> Examinations (except for Latin) satisfy the Foreign Language requirement.				
French	5	French 22	French 23, or consultation with adviser	8 units
French	4	French 21	French 22	8 units
French	3	French 3	French 21	8 units
German.....	5, 4	German 20	German 21, upper division literature courses	8 units
German.....	3	German 3	German 20	8 units
Latin (Vergil).....	5, 4, 3	Latin 2	Determined by consultation with Classics adviser	4 units
Latin (Lyric).....	5, 4, 3	Latin 2	Determined by consultation with Classics adviser	4 units
Spanish	5, 4, 3	Spanish 3	Spanish 21, 22, 23, 24, 31, 32, 33 or consultation with adviser	8 units
HUMANITIES				
<i>College of Agricultural and Environmental Sciences:</i> 8 units of credit allowed toward Breadth requirement or Unrestricted electives for each humanities examination passed.				
Art Studio	5	Art Studio 2, 5		8 units
<i>College of Letters and Science:</i> partially satisfies Area (breadth) requirements for A.B. degree.				
Art Studio	4	Art Studio 2		8 units
<i>College of Letters and Science:</i> partially satisfies Area (breadth) requirements for A.B. degree.				
Art Studio	3			8 units
Art History.....	5	Art History 1A, 1B, 1C		8 units
<i>College of Letters and Science:</i> partially satisfies Area (breadth) requirements for A.B. degree.				
Art History.....	4, 3			8 units
American History	5, 4, 3	History 17A, 17B		8 units
Satisfies the university American History and Institutions requirement. History 17A and 17B may be taken for full credit.				
European History	5, 4, 3	History 4B, 4C		8 units
<i>All colleges:</i> History 4A and 4B may be taken for full credit.				
Music.....	5, 4, 3	Music 10		8 units
<i>College of Letters and Science:</i> partially satisfies Area (breadth) requirements for A.B. degree.				
NATURAL SCIENCES				
<i>All colleges:</i> 4 units of credit toward Natural Sciences Credit or Preparatory Course Work allowed for science majors for each Natural Sciences examination passed, except 8 units of credit allowed for Mathematics BC and Physics B examinations.				
Biology.....	5, 4, 3	Biological Sciences 10		8 units
Biological Sciences 1A is the first course taken by most students contemplating majors in the Life Sciences.				
Chemistry.....	5	Chemistry 2A	Determined by consultation with adviser	8 units
Although Chemistry 2A may be taken for full credit, students are strongly encouraged to enroll in the 2HA, 2HB, 2HC sequence.				
Chemistry.....	4, 3	Chemistry 10		8 units
Computer Science AB.....	5, 4	Engineering: Computer Science 30	Engineering: Computer Science 40	4 units
Credit for Computer Science and Engineering 30 may serve as prerequisite for Computer Science and Engineering 40 with consent of instructor				
Computer Science AB.....	3			4 units
<i>College of Engineering:</i> examination awards units towards the unrestricted electives requirement.				
Computer Science A.....	5, 4, 3		Engineering: Computer Science 30	2 units
Environmental Sciences	5, 4, 3	Environmental and Resource Sciences 10, 10G	Environmental and Resource Sciences 60	4 units
Mathematics AB.....	5, 4	Mathematics 12, 16A, 17A or 21A	Mathematics 16B, 17B or 21B	4 units
Mathematics 16A, 17A or 21A may be taken for full credit. Credit for Mathematics 16A, 17A or 21A equivalents may serve as prerequisite for Mathematics 16B, 17B or 21B.				
Mathematics AB.....	3		Mathematics 16A, 17A or 21A	4 units
Mathematics BC	5	Mathematics 12, 16A-16B, 17A-17B or 21A-21B	Mathematics 16C, 17C or 21C	8 units
Mathematics 16B, 16C, 17B, 17C, 21B, or 21C.				
Mathematics BC	4, 3	Mathematics 12, 16A, 17A or 21A	Mathematics 16B, 17B or 21B	8 units
Mathematics 16A, 17A or 21A may be taken for full credit. Credit for Mathematics 16A, 17A or 21A equivalents may serve as prerequisite for Mathematics 16B, 17B or 21B.				
Physics B.....	5	Physics 1A, 1B, 7A, 7B, 7C, 10	Determined by consultation with adviser	8 units
Physics 7A, 7B, 7C may be taken for full credit.				
Physics B.....	4, 3	Physics 10		8 units
Physics CI.....	5	Physics 1A, 7B, or 9A		4 units
<i>College of Engineering:</i> only a score of 5 on Physics CI and CII Examinations applies toward Physics requirement.				
Physics CI.....	4	Physics 1A or 7B		4 units
Physics CI.....	3			4 units
Physics CII.....	5, 4	Physics 1B or 7A		4 units
Physics CII.....	3			4 units
Statistics.....	5,4	Statistics 13		4 units
Statistics 13 may be taken for full credit.				
Statistics.....	3			4 units
SOCIAL SCIENCE				
<i>College of Agricultural and Environmental Sciences:</i> 4 units of credit allowed toward Breadth requirement or Unrestricted electives for each Social Science examination passed.				
American Government	5, 4, 3	Political Science 1		4 units
and Politics				
Political Science 1 satisfies American History and Institutions requirement.				
Comparative Government.....	5, 4, 3	Political Science 2		4 units
and Politics				
Economics (Micro).....	5, 4, 3	Economics 1A	Economics 100	4 units
Economics (Macro).....	5, 4, 3	Economics 1B	Economics 101	4 units
Psychology	5	Psychology 1		4 units
Psychology	4, 3			4 units

* Scores of 5, 6, and 7 on International Baccalaureate (IB) Higher Level examinations may be considered essentially equivalent to scores of 3, 4, and 5, respectively, on the comparable Advanced Placement examinations. Where no comparable Advanced Placement test is indicated, a passing score on an IB test will yield units toward graduation, but no course credit.

Minimum Requirements for Residents of Other States

If you are a freshman applicant who does not claim California residency, you must meet the following requirements for minimum admission eligibility to the University of California. **Applicants to UC Davis generally must perform well above the minimum in order to gain admission to UC Davis:**

- Graduate from a regionally accredited or state-accredited high school
- Satisfactorily complete the subject requirements listed under Requirements for California Residents
- Earn a grade point average of at least 3.40 (B+) in the courses used to meet the subject requirements
- Complete the examination requirements listed for California residents
- Meet the UC Eligibility Index

Minimum Eligibility by Examination Alone

If you do not meet the minimum scholarship and subject requirements for admission, you can meet minimum requirements for eligibility as a freshman by examination alone. The examinations must be taken before you graduate from high school. (If you have completed transferable college courses, College Board subject tests cannot be taken in academic subjects covered in those courses.) You must take the same College Board tests discussed above and receive a total score of at least 1400 on the SAT-I, or a score of 31 on the American College Test (ACT). Your total score on the SAT-II must be 1760 or higher with no score less than 530 on an individual test. If you are a nonresident applicant, your score on the SAT-II must be 1850 or higher with no score less than 530 on an individual test.

High School Proficiency Examination

The University of California will accept the Certificate of Proficiency or the General Education Development (GED) certificate awarded by the State Department of Education in lieu of the regular high school diploma. However, you must also meet all other university entrance requirements (subject, scholarship and examination).

Transfer Credit

Transfer credit may be granted to a freshman applicant for an acceptable college course taken while still in high school when an official transcript is received from the college that conducted the course.

Transfer credit is granted for each College Board Advanced Placement Examination completed with a score of 3, 4 or 5. International Baccalaureate Higher Level Examinations with scores of 5, 6 or 7 will also receive transfer credit. If students take college courses in combination with Advanced Placement or International Baccalaureate Examinations in the same subject areas, transfer credit may be limited due to duplication of credit.

Advanced Placement Examinations

If you take one or more of the College Board Advanced Placement (AP) Examinations and score 3, 4 or 5, you will be awarded college credit. The credit will become part of the minimum 180 quarter units you need in order to receive a bachelor's degree. The credit from the AP Examinations may also be used to satisfy specific degree requirements.

Consult the chart to learn how many units you will receive for an AP Examination (see the column headed: Credit Toward Degree). How those units will be applied toward specific degree requirements in each college is explained for each exam category and in the notes below each exam listing. Please note that the courses for which AP credit has been granted may not be used as a substitute for courses required as part of the UC Davis General Education Requirement. (See General Education in the "Undergraduate Education" chapter.)

In general, you may not earn university credit for college courses that duplicate credit already earned through AP. There are, however, a few exceptions to this general rule. Since it is often difficult to know exactly which UC Davis course you should take when you have earned AP credit, you should talk with an academic adviser in your major department or dean's office before selecting and enrolling in classes.

ADMISSION AS A TRANSFER STUDENT

The University of California defines a *transfer applicant* as a student who has been a registered student in a regular term at a college, university or in college-level extension classes since graduating from high school. Summer session attended immediately following high school graduation is excluded in this determination. If you are a transfer applicant, you may not disregard your college record and apply for admission as a freshman.

California residents must meet the requirements that follow. If you are not a California resident, see "Minimum Requirements for Residents of Other States" below. **Applicants to UC Davis generally must perform well above the minimums in order to gain admission**, since the number of eligible applicants exceeds the number of students we can admit.

The highest priority for admission is given to California community college junior-level transfer applicants with 90 quarter (60 semester) units of transfer work with the highest academic achievement, as well as, in some areas, the completion of lower division major program.

UC Minimum Requirements for California Residents

Transfer applicants must meet one of the following conditions:

Advisers play a major role in making sure students are taking the courses they need to graduate.

- Students who were eligible for admission to the university when they graduated from high school—meaning they satisfied the subject, scholarship and examination requirements—are UC minimally eligible to transfer if they have a C (2.00) in their transferable college course work.
- Students who met the scholarship requirement but did not satisfy the subject requirement must take transferable college courses in the missing subjects, earning a C or better in each required course, and have an overall C average in all transferable course-work to be eligible to transfer.
- Students who were not eligible for admission to the university when they graduated from high school because they did not meet the scholarship requirements must:
 - a. complete 90 quarter (60 semester) units of transferable college credit with a grade point average of at least 2.40 (no more than 21 quarter (14 semester) units may be taken Passed/Not Passed),

and

 - b. Complete the following course pattern requirement, earning a grade of C or better in each course:
 1. two transferable college courses (4-5 quarter or 3 semester units each) in English composition; and,
 2. one transferable college course (4-5 quarter or 3 semester units) in mathematical concepts and quantitative reasoning; and,

3. four transferable college courses (4-5 quarter or 3 semester units each) chosen from at least two of the following subject areas: the arts and humanities, the social and behavioral sciences, and the physical and biological sciences.

Go to <http://www.assist.org> to verify UC transferable courses for California community colleges.

Minimum Requirements for Residents of Other States

If you meet the requirements for admission as a nonresident freshman, you must have a grade point average of 2.80 or better in college courses that are accepted for transfer credit by the University of California.

If you do not meet the minimum requirements for admission as a nonresident freshman, you must have completed at least 90 quarter (60 semester) units of transferable work with a grade point average of 2.80 or better and have completed the subject requirements for California residents. **Applicants to UC Davis generally must perform well above the minimums to gain admission to UC Davis.**

Transfer Admission to the College of Engineering

The College of Engineering, in screening applicants, gives priority to junior-level California community college students who have completed a minimum of 90 quarter (60 semester) units of transfer work **and** the specified required lower division engineering courses with high GPAs.

The lower division programs and required courses are specified in the “Programs and Courses” section of this catalog, under the specific engineering major. You can also find this information on the World Wide Web at <http://registrar.ucdavis.edu/ucdwebcatalog>. Direct questions about courses required for transfer admission to your counselor, to the Engineering Undergraduate Office (530-752-0556) or go to <http://www.assist.org>.

Unit Credit for Courses Taken Elsewhere

The university gives quarter unit credit to transfer students for courses they have completed at other accredited colleges and universities. To be accepted for credit, your courses must be comparable to those offered at the university, as determined by Undergraduate Admissions and Outreach Services. You can find information about transferable credit from California community colleges at <http://www.assist.org>.

A total of 105 quarter (70 semester) transferable units toward a university degree may be earned at a community (two-year) college. Only subject credit will be granted for courses taken in excess of these amounts.

UC Intercampus Transfer

If you are an undergraduate student currently or previously registered at another UC campus and have not since been registered in another institution, you may apply for transfer to the Davis campus. Filing dates, the application, fees and admission requirements are the same as those listed for new applicants.

ADMISSION AS AN INTERNATIONAL STUDENT

International students attend the University of California, Davis, from many countries around the world. There were 87 different countries represented on the Davis campus in the 2000-2001 academic year, by an international student population of approximately 1,400 students, as well as an equal number of visiting international faculty and researchers. To be eligible for admission to the University, international students need to meet specific academic and financial qualifications.

Freshman Admission

Prospective students attending school outside of the U.S., seeking admission as freshmen, must complete secondary school earning superior marks in academic subjects. International students applying to UC Davis from California high schools are considered for admission using the same eligibility criteria as California residents. The eligibility of applicants who have attended both foreign and U.S. high schools will be evaluated using both foreign and U.S. academic records. UC Davis welcomes competent, qualified applicants from around the world. There are no quotas for international students.

Required Tests for Freshman Applicants

The Scholastic Assessment Test I (SAT I) and three Scholastic Assessment Tests II (SAT II) are required. Subject tests include Writing, Mathematics Level 1 or Level 2 and one test in one of the following areas: English literature, foreign language, science or social studies.

Freshman applicants are strongly encouraged to take these tests early because many preliminary admission decisions are made on the basis of test scores and marks. Official scores must be reported to UC Davis no later than the end of December of the year they apply. For information concerning these tests, contact the following:

College Board SAT
Princeton, NJ 08541
<http://www.collegeboard.com>
Phone: (609) 771-7600; e-mail: sat@ets.org

Transfer Applicants

Priority is given to prospective California community college transfer students who are prepared to begin their junior or third year of study. Coursework from other colleges and universities is considered transferable if the applicant completed the course at an institution that is recognized by the University of California and is comparable to coursework offered at UC Davis. Students attending colleges or universities outside of the U.S. should be aware that many foreign technical institutes are not recognized and that vocational coursework is not transferable.

International students applying to transfer to UC Davis from California colleges or universities are considered for admission using the same eligibility criteria as domestic students. Applicants who have attended both foreign and U.S. colleges and universities will be evaluated using both foreign and U.S. academic records.

Note: It is not possible to disregard any college or university work undertaken.

Required Academic Records

International students are responsible for providing UC Davis with official academic transcripts and/or certificates beginning with secondary school records. College and university records should indicate subjects taken; grades or marks earned; rank in class; number of academic terms per year; number of weeks in each academic term; and number of hours per week devoted to lecture and laboratory. Certifications must be provided for any university or government examinations the student has passed. Certified English translations of all academic records are required. To apply for undergraduate admission, send records directly to the following:

Undergraduate Admissions and Outreach Services
University of California
One Shields Avenue
Davis, CA 95616-8507
U.S.A.

To be considered for admission at other UC campuses, send copies of your records directly to the other campuses.

Opportunities for International Students in Engineering

The College of Engineering at UC Davis receives many more applications for undergraduate admission than can be accommodated. As a result, the college can only accept a few applications for the fall quarter from international students who have superior records. You may apply for admission if you meet the following criteria:

Freshman applicants: You must be attending and graduating from a school in the United States. Applications from students completing secondary school outside of the U.S. will not be accepted.

Transfer applicants: You must be a student attending a California university or college, completing the lower division requirements for the College of Engineering, and be at the junior level (60 semester/90 quarter units) with a competitive grade point average at the time you enter UC Davis. Applications from students attending other colleges and universities will not be accepted.

If you are interested in applying for admission in Engineering majors at other University of California campuses, you must contact each campus directly for information about admission.

English Proficiency

Demonstration of English proficiency is required of applicants from abroad, or for those with little schooling in the United States, when English is not the applicants' native tongue. English proficiency may be demonstrated in one of the following ways:

- The Test of English as a Foreign Language (TOEFL) with a minimum score of 550 on the paper based exam or 213 on the computer based exam. Call (609) 771-7100, e-mail toefl@ets.org or go to <http://www.toefl.org> for information.
- Advanced Placement International English Language (APIEL) with a score of 3, 4 or 5. Go to <http://www.collegeboard.com/ap/students/apiel> for information.
- The Scholastic Aptitude Test II (SAT II) Writing examination with a minimum score of 560. Go to <http://www.collegeboard.com> for information.
- Receive C grades or better in two transferable college courses in English composition from an accredited United States college or university.

Estimated Costs for 2002-2003

For the 2002-2003 academic year, international students seeking nonimmigrant visas must guarantee \$29,000 is on deposit, in a bank, available for their support for the first year of study. It is estimated that tuition and fees will be \$15,500 and minimum living expenses will be \$13,500. Financial aid is not available to international students. International students with nonimmigrant visas must anticipate paying full fees for the duration of their stay at UC Davis. Fees are subject to change without notice.

CAMPUS ADMISSION STANDARDS

The University of California makes every effort to provide a place for all California resident applicants who meet the minimum UC admission requirements and file an application during the initial filing period.

In recent years, UC Davis has received more applications than the number of spaces available. When UC Davis cannot accept all eligible applicants, it uses standards that are **more demanding than the minimum requirements** to select students. These standards, which are called **selection criteria**, identify those students who have demonstrated the capacity for high academic achievement and who have a variety of other qualities that can contribute to the strength and diversity of the campus community.

The selection criteria described below were used for applicants for the fall 2001 term. The criteria may differ for the winter and spring terms because enrollment targets and applicant qualifications change. Applicants for winter or spring should contact Undergraduate Admissions and Outreach Services for more information.

Selection Guidelines

Each campus, in consultation with the Office of the President, develops enrollment targets that specify the number of new freshman and advanced standing students expected to enroll. UC Davis receives more applications than required to meet our enrollment target and therefore admits students using the criteria described below.

Freshman Applicants

Freshman are selected based on a comprehensive assessment of their academic and personal accomplishments and the context in which those accomplishments have been achieved.

The assessment honors academic achievement and offers foremost consideration to students with commendable academic records. Academic accomplishments are considered in the context of the opportunities and challenges a student has experienced, and the full range of each student's personal achievements are used to assess merit and likely contribution to the campus community.

No single personal or academic characteristic guarantees admission to UC Davis, and while factors reflecting academic progress and intellectual development continue to be of primary importance, no applicant will be admitted on the basis of academic criteria alone. No eligible applicant will be denied admission without complete review of application materials.

The academic factors considered in the review are high school GPA calculated on UC "a-g" courses completed; scores on required entrance tests; breadth of academic preparation, including coursework in the senior year; number of courses completed beyond the minimum UC eligibility requirements; honors, AP, IB or college coursework completed or in progress; and Eligibility in the Local Context (ELC) status.

Some examples of personal factors included in the assessment are demonstrated leadership; disabilities affecting educational life and goals; perseverance in overcoming life challenges and hardships; significant volunteer or community service; marked improvement in a consistently challenging academic program; and honors and awards in recognition of academic achievement or special talents.

Transfer Applicants

Academic Criteria: UC-eligible California community college junior level transfer applicants with 90 quarter (60 semester) transferable units of work are given top priority for admission consideration. Other UC-eligible transfer applicants will be admitted if space is available.

Applications far exceed the number of spaces available in majors such as engineering, biological sciences, computer science, fermentation science, international relations, managerial economics, psychology, viticulture and enology and biotechnology. Applicants must complete specific lower division preparatory courses with a specific GPA in the major and an overall required GPA. Check your intended major on the Web at <http://ugaos.ucdavis.edu/majors/majors.html> or through <http://www.assist.org>, which provides articulation with California community colleges.

Supplemental Criteria: The same supplemental criteria described above for freshmen are used.

Notification and Acceptance of Admission

Upon completion of a review of your academic records, you will be notified of your admission status by letter. Throughout the admissions process, you can check your application status online at <http://sisweb.ucdavis.edu>.

The length of time before admission notification varies depending upon the completeness of your application. For example, most applicants for fall quarter will be notified of their admission status between March 1 and the end of March.

When you receive your notification of admission you will also receive an important form called the **Statement of Intent to Register (SIR)**. You may complete the form and return it to the Cashier's office, along with the required *nonrefundable* \$100 deposit in order to complete the admissions process, or you may charge your SIR fee to a personal credit card by calling 1-877-580-7101. A \$7.95 convenience fee will be assessed by the vendor. If you pay by credit card, you do not need to return the SIR form. This advance deposit is applied to your university registration fee as long as you register in the quarter to which you are admitted. EOP applicants are not required to submit the \$100 advance deposit; however, they will pay full registration fees at the time of registration.

The Statement of Intent to Register (SIR) for the fall term should be returned by May 1 (freshman) or June 1 (transfer) to notify the campus that you wish to attend. You may not file SIRs at multiple UC campuses for the same term. Students admitted to winter or spring quarter must return the SIR by the date specified on the SIR document.

READMISSION

If you are a former UC Davis undergraduate student planning to resume studies at the Davis campus as an undergraduate, you must file an Application for Readmission, available in the Office of the University Registrar, and pay a nontransferable, nonrefundable fee of \$40. (You are a former student if you have interrupted the completion of consecutive terms of enrollment on the Davis campus.) Official transcripts of all work you may have attempted in the interim must be submitted to the Office of the University Registrar.

Students applying for readmission must file their applications on or before the following deadlines:

Quarter	Deadline Date
Fall 2002	July 31, 2002
Winter 2003	October 31, 2002
Spring 2003	January 31, 2003
Fall 2003	July 31, 2003
Winter 2004	October 31, 2003
Spring 2004	January 31, 2004

SPECIAL PROGRAMS**Open Campus—Concurrent Enrollment**

Concurrent courses are regular university courses open to the community on a space-available basis through University Extension. This program allows an individual to pursue academic interests and to test academic abilities at the university.

For information, write to the University Extension office, Research Park, University of California, Davis, CA 95616 (530-757-8777).

Educational Opportunity Program (EOP)

The Educational Opportunity Program (EOP) assists students from economically, socially or educationally disadvantaged backgrounds. EOP provides help with the admission application process and offers academic, social and cultural support. Application fee waivers and financial aid are available for individuals with demonstrated financial need. Contact Undergraduate Admissions and Outreach Services for information on fee waivers and the Financial Aid Office for information on financial assistance. Once enrolled, contact the EOP Information Office for access to extensive tutoring, advising and support resources. (See "Academic Advising and Student Resources" for more information.)

To apply for EOP, complete the regular UC admission application and answer all questions related to EOP. In addition, we advise you to use your personal statement to discuss your reasons for requesting EOP assistance.

Limited Status

Students in limited status are those whose special attainments qualify them to take certain courses in the university toward a definite and limited objective. To apply for limited status admission, you must either have a bachelor's degree but not be a candidate for an advanced degree, or have completed a substantial amount of college work with a satisfactory grade point average. You must submit an undergraduate application with fee as well as a limited status petition and official transcripts from all schools attended. As a limited status student you will be expected to maintain a certain scholarship average during a predetermined time of enrollment.

Application filing dates are the same as those for new undergraduate applicants. Fees for limited status students are the same as those for new applicants. You will not be admitted to limited status for the purpose of raising a low scholarship average.

Admission to the College of Agricultural and Environmental Sciences requires the approval of the undergraduate admissions director and the dean of the college.

The College of Engineering, the College of Letters and Science and the Division of Biological Sciences do not accept Limited Status applicants.

Learn a new sport or perfect the one you already know when you join an intramural or club sport team.

Second Baccalaureate

If you have a bachelor's degree substantially equivalent to one that is granted by the University of California, you **may** be allowed to enroll as an undergraduate seeking a second bachelor's degree. Admission in this category will depend upon a superior academic record and clear evidence of a change in objective.

Admission to the Colleges of Agricultural and Environmental Sciences or Engineering requires the approval of the undergraduate admissions director and the dean of the college. You must submit an undergraduate application, a second baccalaureate petition (except College of Engineering) as well as official transcripts from all schools attended. The second baccalaureate petition can be downloaded from http://unicorn.ucdavis.edu/Admissions/Second_Bacc.html. Application filing dates are the same as those for new undergraduate applicants.

*The College of Engineering will accept applicants if their first degree is **not** in engineering **and** if they complete the lower division engineering program at a California community college. The College of Letters and Science and the Division of Biological Sciences, except in the major of Plant Biology in the College of Agricultural and Environmental Sciences, do not accept Second Baccalaureate applicants.*

Special Status

The special status classification is for applicants 21 years of age or older who have not had the opportunity to complete a satisfactory high school program or who have not completed a substantial amount of college work, but by reason of special attainment or background may be prepared to undertake certain courses at UC Davis toward a definite and limited objective.

You will not be admitted to special status for the purpose of fulfilling requirements for admission as a regular student. Conditions for admission are determined by the admissions director and are subject to approval by the dean of Agricultural and Environmental Sciences. Admission is for a specified time only and a prescribed scholastic average must be maintained. Application, special status petition, fees and filing dates are the same as those for new applicants.

The College of Engineering, the College of Letters and Science, and the Division of Biological Sciences do not accept Special Status applicants.

ADMISSION CHECKLIST

- 1.** Apply or download an application via the World Wide Web at <http://www.ucop.edu/pathways>. You can also obtain the *Application for Undergraduate Admissions and Scholarship* from your local high school, community college, or a campus of the University of California. If you are a non-resident and cannot apply via the Web, request an application from Undergraduate Admissions and Outreach Services, University of California, One Shields Avenue, Davis, CA 95616-8507.
- 2.** Complete the application, the essay, and list the college and major you prefer. Attach a check or money order to cover the application fees with your application materials, and return them in the preaddressed envelope **during the priority filing period for the quarter in which you are interested**; do **not** attach any other documents.
- 3.** **Keep a copy of your application and essay.**
- 4.** Keep the notices you receive from both the Undergraduate Application Processing Service and the Undergraduate Admissions office.
- 5.** If you are applying from high school, *do not send* a preliminary transcript unless asked to do so by Undergraduate Admissions and Outreach Services. Please arrange to have official test scores forwarded by the testing agency. If you are applying as a transfer student, arrange to have **all** official college or university transcripts sent to each UC campus to which you applied.
- 6.** High school applicants for the fall quarter should take the SAT-I or ACT **and** the **three** SAT-II tests **no later than December**. We **strongly encourage** you to complete these tests by the November test date.
- 7.** Undergraduate Admissions and Outreach Services may request additional information, such as official transcripts, or confirmation of work in progress. Send this information right away so your application can be evaluated without delay. **Your eligibility for admission cannot be evaluated until all your application materials are received**; i.e., completed application form, filing fee, essay, official transcripts (if required), work in progress, and test scores (if required).
- 8.** If you are admitted, keep your admission letter for your records.
- 9.** Return your **"Statement of Intent to Register" (SIR)**, "Statement of Legal Residence" (SLR), Student Address form, Photo ID form, Hepatitis Immunization form (if applicable), the nonrefundable advance deposit of \$100 (if required) and other required forms no later than the date stated on the SIR so you can be authorized to complete registration and obtain housing.
- 10.** After we receive your SIR, you will be sent student health insurance requirement information from the Cowell Student Health Center. If you have comparable coverage, complete a waiver form, (<http://healthcenter.ucdavis.edu/insurance.html>), and submit it to Cowell Student Health Center.

FEES, EXPENSES AND FINANCIAL AID

UC DAVIS

FEES, EXPENSES AND FINANCIAL AID

2002-2003
2003-2004

FEES AND EXPENSES

Give careful consideration to the total financing of your university education. If you will need funds beyond those that you and your family can provide, you should apply for financial aid well in advance of enrollment. The deadlines for applying for financial aid (grants, loans, Work Study and scholarships) are listed on the following pages.

For details concerning fees and deposits, consult the publication *Student Fees and Deposits*, available from the Office of the University Registrar. Current fees are also published in the current *Class Schedule and Registration Guide* and on the World Wide Web at: <http://www.ormp.ucdavis.edu/studentfees>.

At the time of registration each quarter, every student must pay the quarterly fees as shown in the box below. (A Registration Fee Deferred Payment Plan, which allows students to pay quarterly fees in three monthly installments, is available.)

Course Materials Fees

Students may be charged fees in some courses for the use, rental or consumption of materials, tools or equipment, or for the costs of materials or services necessary to provide a special supplemental educational experience. For example, course materials fees may cover the purchase of chemicals and glassware for a science laboratory or of art supplies for an art studio class. They might also cover film rentals, field trips, or the purchase or rental of specific equipment. Courses that may be subject to the course materials fee are listed in the *Class Schedule and Registration Guide*.

Part-Time Students

Students approved for enrollment on a part-time basis pay the same fees as full-time students, but pay only one-half of the Educational Fee. Part-time nonresidents pay one-half of the Nonresident Tuition Fee. Undergraduates file their part-time petition with the Office of the University Registrar, 12 Mrak Hall. Graduate students file their petition with Graduate Studies, 250 Mrak Hall.

Student Fees

These are the quarterly fees for the 2002–03 academic year. Because they are subject to regental, legislative, and gubernatorial action, these fees may change without notice. Go to www.ormp.ucdavis.edu/studentfees for updated information.

	Undergraduate		Graduate		Law*	Medicine	Management	Veterinary Medicine
	Resident	Nonresident	Resident	Nonresident	(Semester)			
Registration Fee†	\$238.00	\$238.00	\$238.00	\$238.00	\$356.50	\$238.00	\$238.00	\$238.00

Total Employee-Student	\$432.50		\$452.50					

* The Law School operates on the semester system.

† Fees for which tax credit can be claimed under the Taxpayer Relief Act of 1997.

¹ Undergraduates must purchase the Undergraduate Health Insurance Plan (USHIP) unless they are able to prove comparable coverage under another insurance plan. Go to <http://healthcenter.ucdavis.edu/insurance.html> for information.

² Graduate students must purchase the Graduate Student Health Insurance Plan (GSHIP) unless they are able to prove comparable coverage under another insurance plan. Go to <http://healthcenter.ucdavis.edu/insurance.html> for information.

³ The Disability Insurance Fee is \$61.00 per year, assessed annually fall quarter. This fee applies only to medical students, not interns, residents or health science academics.

⁴ Includes School of Law and School of Medicine surcharges.

⁵ Students enrolled in the Graduate School of Management Working Professionals Program pay a flat rate of \$1,540.00 per course in lieu of the fees above.

⁶ Effective fall quarter 1997, nonresident Ph.D. candidates who have advanced to candidacy by the first day of the quarter will be assessed 25% of the 2002–2003 Nonresident Tuition charge. The reduced nonresident tuition will be applied for three calendar years, after which enrolled nonresident advanced doctoral students will again be charged the full Nonresident Tuition in effect at that time.

UC Employee-Student Fees

Reduced fees are available to UC career employees and certain UC retirees who are qualified for admission to the university. Once admitted, the employee-student must file a petition for the reduction in fees before each quarter of enrollment. Employee-students pay one-third of the full-time Registration Fee and one-third of the full-time Education Fee. Employee-students also pay the Memorial Union Fee and the Student Facilities Safety Fee.

Employee students may enroll for up to nine units or three courses per quarter or semester, whichever is greater. Information is in *Personnel Policies for Staff Members* (section 51), available in department offices, at Shields Library, the Staff Development and Professional Services Office, and on the World Wide Web. Petitions are also available on the World Wide Web.

Motor Vehicle Parking Permit and Bicycle Licensing Fees

Parking permit rates are available at Parking Services, at <http://www.taps.ucdavis.edu> or by calling (530) 752-8277.

A California State Bicycle License fee is required for all bicycles on campus (initial license, \$8; renewals, \$4). Call (530) 752-2453 for more information.

Costs for a Year at UC Davis

The costs listed to the right are average costs, and your own living expenses may differ somewhat from these. Cost of living expenses are adjusted annually, and fees are subject to change without notice. More information on living expenses can be found in the section on housing or from the Financial Aid Office.

International Student Expenses

International students are responsible for all of their expenses while studying at UC Davis. The expenses include non-resident tuition, educational fees, room and board and a modest amount for personal expenses. For the 2002–2003 academic year, we estimate the cost will be \$29,000. Because the exact cost for tuition and fees is not determined until just before the beginning of the academic year, \$29,000 is only a preliminary figure. This minimum allowance may be increased without advance notice.

During the admission process, most international undergraduate students are required to complete the “Financial Statement for Students Seeking Nonimmigrant Status” form certifying that funds are available for twelve months support. It is very important that students have adequate, reliable, and continuing financial support for the whole time they are here. After students arrive in the United States, it is extremely difficult to obtain additional funding. The university does not offer grants or financial aid to international undergraduate students.

All students need to be aware that there are numerous initial expenses during the first few months, including tuition and fees, an initial down payment for housing, food and personal expenses. We suggest that you bring a minimum of \$7,000 for immediate expenses. Careful budgeting is essential for international students.

Average Student Costs Annually

Undergraduate

Fees*	\$4,645
Books and supplies	\$1,162
Housing and Food	\$8,764
Personal expenses	\$1,189
Health Insurance	\$550
Transportation	\$905
Total (on-campus residence)	\$16,665
Total (off-campus residence)	\$14,206

Graduate (single; living off campus)	\$16,024
Graduate School of Management	\$22,734
Graduate School of Management (evening program)	\$20,097
School of Law (depending upon the year in school)	\$22,419 to 22,621
School of Medicine (depending upon the year in school)	\$23,364 to 27,685
School of Veterinary Medicine (depending upon the year in school)	\$23,625 to 24,956

* Nonresident fee is \$11,132; if applicable, this amount is added to the “fee” category.

Fee Refunds

Cancellation, Withdrawal and Fee Refunds

To cancel your registration before the first day of instruction or to withdraw from the university on or after the first day of instruction, you must complete a Cancellation/Withdrawal form and return the form to the Office of the University Registrar. If you don't submit a Cancellation/Withdrawal form, you will be liable for fees according to university policy (below). No exceptions will be made to this policy.

For students who paid fees and cancel or withdraw with official approval before the end of any quarter, fees may be refunded according to the Schedule of Refunds (see explanation on opposite page).

The effective date for determining a refund of fees is the date you file a completed Cancellation/Withdrawal form with the Office of the University Registrar, and it is presumed that no university services will be provided to you after that date. The percentage of fees that may be refunded is determined by the number of calendar days (not school days) elapsed, beginning with the first day of instruction.

If you enrolled in classes, you will be dropped from all of your courses automatically when the Cancellation/Withdrawal form is processed. If you enrolled, but have not paid fees in full by the tenth day of instruction, you will be dropped for non-payment and officially withdrawn from the university.

New Undergraduate Students:

The nonrefundable \$100 deposit paid when you accepted admission and returned your Statement of Intent to Register (SIR) is withheld from the registration fee and the Schedule of Refunds is applied to the balance of fees assessed.

Thus, before or on the first day of instruction, registration fees paid are refunded in full minus \$100. After the first day of instruction, the nonrefundable \$100 deposit is withheld from the registration fee and the Schedule of Refunds is applied to the balance of fees assessed.

All Continuing Students, Readmitted Students and New Graduate Students:

On or before the first day of instruction, registration fees are refunded in full minus a \$10 service charge for cancellation/withdrawal. After the first day of instruction, the Schedule of Refunds is applied to the total of fees assessed.

Planned Educational Leave Program

The Schedule of Refunds also applies to students who participate in the Planned Educational Leave Program (PELP). Thus, for a full refund of registration fees paid, you must file a completed approved PELP form with the Office of the University Registrar before or on the first day of instruction. See Planned Education Leave in the “Academic Information” chapter.

Schedule of Refunds

The Schedule of Refunds applies to all continuing and readmitted students and new students **who do not receive** federal financial aid.*

The Schedule of Refunds refers to calendar days beginning with the first day of instruction. The number of days elapsed is determined from the date the completed Notice of Cancellation/Withdrawal form is returned to the Office of the University Registrar. Percentages listed (days 1-35) should be applied respectively to University Registration Fee, Educational Fee, Nonresident Tuition, and other student fees.

University Registration Fee, Educational Fee, Nonresident Tuition and other student fees:

Calendar Days Elapsed	Percentage of Fees Refunded
0-1	100% less \$10.00
2-7 days	90%
8-18 days	50%
19-35 days	25%
36 days and over	0%

*New students who receive federal financial aid and withdraw during their first academic term may be refunded fees according to a Modified Fee Refund Schedule, available at the Financial Aid Office.

Refund of Health Insurance Fee

If you paid the health insurance fee and you are cancelling your registration on or before the first day of instruction, you are entitled to a 100 percent refund of this fee. **Undergraduates** must contact the Health Insurance Office at 530-752-2612 to receive the refund. **Graduates** will get an automatic refund from the Accounting Office.

After the first day of instruction, no refund of the health insurance fee will be issued. Any questions regarding the refund of health fees for withdrawals should be directed to the Student Health Center.

FINANCIAL AID

Financial Aid Office
1100 Dutton Hall
530-752-2390; 530-754-6073 (TTY);
undergradfinaid@ucdavis.edu; <http://faoman.ucdavis.edu>

The Financial Aid Office provides financial assistance in the form of scholarships, loans, grants and Work Study employment. To apply, undergraduates and graduate students are required to file the Free Application for Federal Student Aid (FAFSA) which is available online at <http://www.fafsa.ed.gov>. Paper FAFSAs are also available at local high schools, community colleges, and the Financial Aid office. UC Davis students can obtain the FAFSA from the Financial Aid office in December. The priority filing deadline is March 2 each year; however, students are encouraged to apply even if the deadline has passed. Although state and university funding may be depleted, Federal Pell Grants and Loans are available throughout the year for eligible applicants. The Free Application for Federal Student Aid (FAFSA) is available at local high schools, community colleges and the Financial Aid Office.

Financing an education is a responsibility that is shared by the student, the parents of dependent students and the Financial Aid Office (through distribution of federal, state, and university funds). All students are expected to work to help finance their education.

Financial Aid Deadlines

Priority filing period for grants, loans, Work Study and California Student Aid Commission applications	Jan. 1–Mar. 2
Deadline to file for fellowships and graduate scholarships with Graduate Studies	Jan. 15

Undergraduates with outstanding academic records are encouraged to apply for scholarships. See “Scholarships and Awards” at the end of this chapter for information about scholarship applications.

Eligibility for most assistance is based upon demonstrated financial need. (However, most scholarships are not based on need.) Eligibility is determined by the following formula: (1) the student is assigned a standard budget reflecting the average costs for a student attending UC Davis; (2) the student’s resources are analyzed according to federal and state regulations; (3) the resources and an expected student contribution from work are subtracted from the budget; the remainder is

the amount of eligibility. The Financial Aid Office attempts to meet this amount for undergraduates with a combination of grants, Work Study, and loans.

The awards for students with dependents are based on the same basic budget plus the addition of a standard child care allowance, unless documentation is provided about a spouse who is unable to work, in which case a dependent living allowance will also be awarded. Single parents' awards are based on the single student's budget and a child care allowance. If single parents' resources (earnings and benefits) are not sufficient to meet the basic living expenses of their dependents, a standard dependent living allowance may be awarded upon receipt of documentation. The Financial Aid Office can assist student parents who qualify for financial aid with allowances for direct child care costs.

Financial Aid for Graduate Students. Graduate students are required to file a FAFSA and have financial need to be considered for federal loans, Work Study and University Grant. Federal Work Study funds for graduate students are allocated directly to graduate programs or departments to help fund research assistantships. Graduate scholarships, fellowships and teaching and research assistantships are administered through the Office of Graduate Studies.

Satisfactory Academic Progress. Federal regulations require that financial aid recipients meet the published Standards for Satisfactory Academic Progress for Financial Aid concerning units, grade point average and maximum quarters of attendance allowed to obtain a degree. A copy of these standards is available at the Financial Aid Office. Review the policy in detail and discuss it with your academic adviser.

For more information, contact the Financial Aid Office. Regulations and deadlines are subject to change.

Types of Financial Aid

Grants

A grant is an award that does not have to be repaid as long as the student remains eligible. Whenever criteria and funding levels permit, a student's financial aid award includes grants.

Federal Pell Grants. All undergraduate financial aid applicants are required to apply for a Federal Pell Grant each year by filing the FAFSA. Recipients must be enrolled at least half time and must maintain good academic standing and make satisfactory academic progress. Eligibility is determined by the federal government according to a formula developed by the Department of Education and approved annually by Congress. All applicants are notified via a "Student Aid Report" (SAR). The amount you receive depends on your financial need.

Cal Grants are awarded by the California Student Aid Commission (CSAC) and may be renewed each year. All undergraduate financial aid applicants who are California residents are encouraged to apply for one of these awards. Go to the CSAC Web site at <http://www.csac.ca.gov> for more information.

Cal Grant A awards are based on financial need and academic achievement and can be extended for one year

for students entering a teaching credential program. *Cal Grant A* pays partial registration fees.

Cal Grant B awards are based on financial need and are for entering undergraduate students primarily from low-income backgrounds. Recipients are required to complete at least 12 units each quarter. *Cal Grant B* pays a quarterly stipend for living expenses for first-year students, and a portion of the registration fees plus a quarterly stipend for living expenses for students in their second through fourth years.

Cal Grant T provides tuition/fees for a maximum of one academic year for students in a teacher credential program. New recipients must teach for one year at a low-performing school for each \$2,000 received. The filing deadline is June 1.

University Grants. The University determines grant eligibility for undergraduates by subtracting a student and parent contribution, any federal or state resources the student receives, and a standard work and loan contribution from the cost of attendance. Any remaining eligibility would be funded with UC Grant.

Bureau of Indian Affairs (BIA) Grants are awarded to students who are at least one-fourth American Indian, Eskimo or Aleut as recognized by a tribal group served by the Bureau of Indian Affairs and who show financial need. Applicants must submit a Free Application for Federal Student Aid (FAFSA) and provide supporting documents. Write to the agency that administers your tribal affairs and request a BIA Higher Education Assistance application. The BIA Financial Aid officer on campus can help you complete the application. The amount of BIA grant depends on need and availability of funds at each BIA agency.

Loans

Financial Aid almost always includes a long-term loan. Repayment of these loans (with the exception of Federal Direct PLUS loans) begins after you graduate or withdraw from school. Students are encouraged to work as much as possible (while remaining full-time students) and to develop modest personal budgets to keep final loan indebtedness within a manageable range.

Federal Perkins Loans are for U.S. citizens or permanent U.S. residents. Loans may be limited to a percentage of student's need because of demand and limited funds. This is a *subsidized* loan, which means the federal government pays the interest on the loan while the student is enrolled in school. Repayment starts nine months after graduation or withdrawal from school and may be extended over 10 years. Additional deferments are possible for temporary total disability or volunteer service in a private, non-profit organization, VISTA or the Peace Corps. Some teachers of students from low-income families and full-time teachers of handicapped children may also qualify for partial loan cancellation.

Annual Loan Limits

- \$4,000 for undergraduate students
- \$6,000 for graduate/professional students

Aggregate (Maximum) Loan Limits

- \$8,000 for a student who has not completed the first two years of undergraduate work and for programs that are less than two years in length

- \$20,000 for a student who has successfully completed two years of a program of education leading to a bachelor's degree but who has not completed degree work
- \$40,000 for a graduate/professional student (includes loans borrowed at the undergraduate level)

Health Profession Student Loans (HPSL) are awarded to students in the School of Veterinary Medicine who demonstrate financial need. Parental income information is required for all applicants regardless of age and dependency status.

- \$2,500 plus fees maximum
- 5 percent interest
- Repayment begins twelve months after receipt of the degree or withdrawal

Federal Direct Subsidized and Unsubsidized William D. Ford Student Loans (Direct Loans) are available through the Financial Aid Office. Subsidized loans are based on financial need, and interest accrued while the student is in school is paid by the federal government. Unsubsidized loans are available to students regardless of income and assets, and there is no interest subsidy.

- Undergraduate students may borrow up to annual maximums of \$2,625 for freshmen, \$3,500 for sophomores, and \$5,500 for juniors and seniors, up to a maximum aggregate indebtedness of \$23,000.
- Independent undergraduate students may borrow unsubsidized Direct Loans up to annual maximums of \$4,000 for freshmen and sophomores, and \$5,000 for juniors and seniors.
- Graduate and professional students may borrow up to \$8,500 per year, not to exceed a maximum aggregate of \$65,500 for combined undergraduate and graduate borrowing.
- Graduate and professional students may borrow unsubsidized Direct Loans up to an annual maximum of \$10,000.
- Variable interest rate is adjusted annually, capped at 8.25 percent.
- A 3% loan fee is charged on all Direct Loans. The fee is deducted proportionately from each disbursement.
- Repayment begins six months after graduation or withdrawal.

Federal Direct Parent Loans for Undergraduate Students (Direct PLUS) are government-insured loans that are made to parents of dependent students.

- Parents may borrow Direct PLUS up to the cost of education minus other financial aid received during the years the dependent student is an undergraduate.
- The maximum interest rate is 9%. There is no interest subsidy for this loan.
- A 4% loan fee is charged and deducted proportionately from each disbursement.
- Repayment begins within 60 days after loan disbursement.

Short-Term Loans meet temporary or emergency financial needs of registered students. Loan funds are provided by UC Davis alumni, ASUCD, the Cal Aggie Foundation, the Regents of the University of California, and private donors.

- Emergency Loans: \$200 maximum. The maximum repayment period is 30 days.
- Short-Term Loans: \$300 maximum. The maximum repayment period is five months or the end of the academic year.
- Assistant Loans: graduate students who are in the teaching assistant, research assistant, associate-instructor or postgraduate researcher classifications can apply for a maximum of one month's salary. The maximum repayment period is six months or the end of the academic year.

For applications and information about applying, go to <http://faoman.ucdavis.edu/PDF/Stlapp.pdf>.

Work Study

Student Employment Center
1210 Dutton Hall
530-752-0520; sec@ucdavis.edu; <http://jobs.ucdavis.edu>

The Federal Work Study program allows students to earn part of their financial aid through part-time employment. To participate, you must file a Free Application for Federal Student Aid (FAFSA) and receive Work Study as a part of your financial aid package. Your Work Study award offers you both money for your education and work experience. You should obtain a Work Study job or ask to defer your Work Study before December 1 or your award will be canceled. The Student Employment Center coordinates the Federal Work Study program for undergraduates at UC Davis.

Work Study funds for graduate students are allocated directly to the chairpersons of the graduate programs or departments. Graduate students seeking Work Study funding should contact their respective departments for further information. Students must file a FAFSA and have financial need to be considered for Work Study funding.

Robert Arneson's Egghead sculptures are among numerous campus works of art in public spaces.

Neil Michale/Axiom

Community Service. A wide variety of community service jobs are available for students who apply for Work Study funding. These jobs provide an educational and rewarding work experience and help students connect with the community at large.

Undergraduate Scholarships and Awards

Scholarship Office
Dutton Hall
530-752-2804; ugscholofc@ucdavis.edu;
<http://faoman.ucdavis.edu/schol.htm>

Mailing address:
Scholarship Office
University of California
One Shields Avenue
Davis, CA 95616-8696

UC Davis recognizes outstanding students with scholarships awarded on the basis of academic excellence and exceptional promise. The Scholarship Office administers approximately 200 different undergraduate scholarships. Many more scholarships are handled through outside agencies.

Scholarship recipients are chosen by committees made up of both students and faculty. In addition to academic records (a minimum grade point average of 3.25 is required), selection may be based on letters of recommendation, test scores, and a personal essay in which your university goals and objectives are stated. *Some awards are limited to students in specific majors or colleges, residents of certain geographical areas, students of a particular class standing, or students with demonstrated financial need.* Most scholarships are not renewable and you must re-apply each year for scholarship aid.

Students applying to the university for the fall quarter are considered for scholarships using the same forms completed for admission purposes. Winter and spring quarter admission applicants should contact the Scholarship Office for instructions no later than November 1. Continuing students should obtain scholarship applications online in October. These applications are due in early December. Announcement of winners is usually made beginning in April.

Graduate students are also eligible for various scholarships and fellowships. (See the Graduate Studies chapter.)

Regents Scholarships, among the highest honors that undergraduates at the university can receive, are granted to exceptionally promising freshmen or juniors enrolling in the fall quarter. Awards may be honorary

(yearly fees) or may be accompanied by a stipend generally covering the difference between family resources and yearly educational costs. These scholarships are renewable as long as you maintain a 3.25 grade point average.

- Dollar amounts vary—up to full financial need
- 2-year and 4-year renewable scholarships

Alumni Scholarships, provided by the alumni association in cooperation with the university, are based primarily upon leadership and scholastic achievement. Your financial need and extracurricular activities may also be considered.

- \$1,000 maximum
- New undergraduates only
- Selection by local alumni association chapters

Military Scholarships are awarded to outstanding high school seniors without regard to financial need, as well as to UC Davis students who have demonstrated exceptional leadership and scholastic achievement during their freshman and/or sophomore years. Eligible high school seniors apply for the full 4-year scholarship and must file applications by November. UC Davis scholarship students participate in the Military Science (ROTC) Program. Information and applications are available from the Department of Military Science, 125 Hickey Gymnasium, 530-752-5211.

- Full fees, books and supplies
- \$1,000 per year for miscellaneous expenses
- 1-, 2-, 3-, or 4-year scholarships

Other Scholarships are made possible by individual donors, private corporations, and various agencies. Many organizations and groups conduct their own scholarship programs. In most cases, you apply directly to these sponsoring groups. Free scholarship search services are available through our Web site.

- Generally \$300 to \$4,500

Special Prizes at UC Davis recognize outstanding performance, achievement and promise in special programs or majors. The most prestigious prize is the University Medal, presented to the most outstanding graduating senior.

- Plaques or certificates and cash awards
- College and school medals to outstanding graduates

UC DAVIS

STUDENT LIFE

STUDENT LIFE

2002-2003
2003-2004

LIVING AT DAVIS

On-Campus Housing

Residence Halls

Student Housing Office
530-752-2033; studenthousing@ucdavis.edu;
<http://www.housing.ucdavis.edu>

Living on campus adds a measure of convenience to your life and helps familiarize you with the campus. Some 4,100 undergraduate students live on campus each year, including about 90 percent of freshman students. In each of the residence hall complexes, students and staff help create and maintain an environment conducive to personal growth and educational achievement.

Rooms are furnished with a bed, desk and chair, bookcase, chest of drawers, study lamp and wastebasket for each resident. Cost depends on room occupancy (single, double, triple) and which of the eight meal plans you choose. Rates for the next academic year have not yet been formally approved.

All new freshmen whose Statements of Intent to Register (SIR) are received on time are guaranteed residence hall housing as long as they complete all of the instructions that accompany their contracts and return the materials and reservation fee by the due date. Freshmen housing contract offers will be mailed out between May 5 and May 19. Transfer students who return their SIR by June 1 will receive contract offers on a space available basis after all on time freshmen have been accommodated. Due to projected freshman enrollment numbers, we anticipate that housing contract offers to transfer students will be limited. Admitted transfer students should contact Student Housing Residential Services to add their names to the waiting list.

Student Housing information is included with your admissions packet. If you have a physical disability or special dietary needs that require special accommodation, please send a detailed letter of explanation to Residential Services, 160 Student Housing, when you return your housing contract.

Student Housing

Orchard Park/Solano Park Apartments
530-752-2033

Orchard Park and Solano Park Apartments offer 476 university-operated, unfurnished on-campus apartments for UC Davis student families.

- Orchard Park
two-bedroom unfurnished apartment
- Solano Park
one-bedroom unfurnished apartment
two-bedroom unfurnished apartment

Rates have not yet been formally approved. Once approved, they will be effective starting August 1. While our first priority is to house students with children, Student Housing supports the University's commitment to provide on-campus housing to graduate students. Our waiting list is prioritized as follows: students with children; graduate students; undergraduate students. Vacancies in Orchard Park/Solano Park Apartments are filled from a waiting list based on the date the application is received. For a fall assignment, you should apply at least six to nine months in advance. For an assignment during the remainder of the year, the waiting period is usually shorter. You may submit an application before you are admitted to the university. If a member of your family has a physical disability that requires special housing accommodation, please attach a detailed letter of explanation to your application.

Russell Park

530-753-7322

Privately owned and managed on-campus living accommodations are available for student families. Russell Park features one-, two-, and three-bedroom unfurnished units.

Primero Grove

530-754-8455
primero@ucdavis.edu

Privately owned and operated, Primero Grove offers affordable on-campus housing for continuing undergraduate, graduate, and professional students. Apartment sizes range from studios through four bedrooms.

The Colleges at La Rue

530-754-5797

www.tandemproperties.com/colleges

The Colleges at La Rue is on campus housing owned and operated by Tandem Properties. The Colleges, a place where people and ideas come together, is an academic living-learning community that offers one-, two-, three- and four-bedroom apartments.

Graduate Student Apartment Housing

The Atriums

530-753-0659

The Atriums offers on-campus living accommodations for single graduate students. The *privately owned and managed* apartments feature studio and two-bedroom unfurnished units.

Off-Campus Housing

The majority of UC Davis students live off campus. The City of Davis has ample apartments for rent, from one-person studio apartments to 5- or 6-person suites. Townhouses, duplexes and houses throughout the city are also available for student rental. ASUCD maintains a list of available community housing.

Transportation and Parking

Transportation and Parking Services (TAPS)

Extension Center Drive

530-752-8277; <http://www.taps.ucdavis.edu>

Motorist Assistance Program: 530-752-8277

Bicycle Program: 530-752-BIKE

Unitrans

5 South Hall

530-752-BUSS; unitrans@ucdavis.edu

<http://www.unitrans.edu>

The central campus is closed to motor vehicles. Walking and bicycling are the usual ways to traverse the campus, though some students prefer inline skates.

Bicycles. All bicycles ridden or parked on campus must have a current California state bicycle license. You may buy a license or renewal tag at TAPS. Bicycle riding and parking regulations are strictly enforced. Be sure to lock your bicycle to the provided racks and pods—bike theft is common in Davis. The Bicycle Program rents bicycle lockers on a quarterly or annual basis for storage of bicycles only. The **ASUCD Bike Barn** offers repairs and rentals, and sells bicycle parts and accessories. Students can also check out tools to do their own repairs or maintenance.

Parking. If you park a vehicle (including a motorcycle or moped) on campus, you must have a valid parking permit or pay at a meter. Parking is permitted in marked spaces only, with permits clearly displayed on the driver's side dashboard or rear bumper. You may buy a daily permit at dispensers in any visitor parking lot. All other lots require long-term permits, which you may purchase at Parking Services. Parking lots on campus are financed solely by fees collected from parking permits and meters.

Buses. Unitrans, 13 bus lines operated by the Associated Students, serves the campus and city year round. Unitrans is free to undergraduate students with a valid photo ID card; others may ride by paying the single ride fare or by purchasing passes from TAPS or at the Campus Box Office. Full service is provided each UC Davis

school day (Monday through Friday) and Monday through Thursday night during the regular school year. Reduced schedule service operates during the summer, finals week, all academic break periods and on Saturdays. Unitrans also operates a shuttle from Amtrak on Saturday and Sunday for undergraduate students. Schedules are available at the MU Campus Information Center, bus terminals, Davis City Hall and the Unitrans office.

Ridesharing. UC Davis encourages ridesharing. Registered carpools and vanpools receive reduced parking rates and preferential parking. For information on transportation alternatives, public transit, or commuter match assistance, call 752-MILE (752-6453).

Shuttles. The UCD/UCDMC Shuttle provides hourly service Monday through Friday between the Davis campus and the medical center in Sacramento. The shuttle is available to all members of the UC Davis community. You may purchase shuttle passes at Parking Services or the Cashier's Office. Departmental business passes are available at Parking Services.

The Intracampus Bus provides transportation between the Davis campus and the Berkeley campus for university employees, registered students and other university affiliates. Call Fleet Services at 752-8287 for schedule information and reservations.

Student Employment

Student Employment Center

First Floor, Dutton Hall

530-752-0520; <http://jobs.ucdavis.edu>

The Student Employment Center advertises student employment opportunities both on and off campus. Full-time or part-time students, students on PELP and students with a letter of acceptance for the following quarter who have not yet registered are eligible.

Full-time, part-time and temporary jobs are available year-round. New listings are posted daily. Listings of employment opportunities for the summer with government agencies, camps and resorts throughout California are located online. Registered students may access employment opportunities on-line at the World Wide Web address given above and use their student identification number as their password.

Students ride free on Unitrans, the student-run transportation service with routes covering all of Davis.

Child Care and Family Services

TB 122

530-752-5415; baashby@ucdavis.edu;
http://www.hr.ucdavis.edu/childcare

Child Care and Family Services is the principal resource on campus for information, referrals, and publications and serves as the university's liaison with the on-campus day care centers and the off-campus child care services available through the City of Davis Parks and Community Services/Child Care.

On-Campus Child Care Programs and Resources

- **LaRue Park Child Development Center** (753-8716; laruecdc@ucdavis.edu) and **Russell Park Child Development Center** (753-2487; russellcdc@ucdavis.edu) are privately owned and operated with university oversight, serving infants through kindergarten-age children. Residents of student family housing pay reduced rates.
- The **Center for Child and Family Studies** (752-2888), a teaching and research laboratory for the Department of Human and Community Development, offers part-time programs for children aged six months to five years. Children are selected from a waiting list according to criteria designed to meet academic goals.
- The UC Davis **Breastfeeding Support Program** (752-5415) provides lactation sites with electric breast pumps, registration and orientation sessions, and sales of breastfeeding supplies for mothers who wish to continue breastfeeding their infants after returning to school or work.
- The Women's Resources and Research Center (752-3372) sponsors the **Child Emergency Notification Service**, which offers schools and child care providers a way to contact student parents in class if their child has a health-related emergency.
- The **Student Employment Center** (752-0520) posts listings for parents seeking license-exempt providers.

Community Child Care Programs

City of Davis Parks and Community Services/Child Care
604 Second Street
Davis, CA 95616
530-757-5691;
http://www.city.davis.ca.us/pcs/childcare

City of Davis Parks and Community Services/Child Care maintains information on licensed family child care homes, day care centers, nursery schools, playgroups, support groups, and other family-related services for Yolo County. Additional services include parenting workshops and handouts; a bimonthly newsletter; a parenting resource library; and a book, video and toy lending library. The program provides referrals to licensed family child care homes and administers the UC Davis Child Care Subsidy Program and the Child Care Grant, both of which can help low-income families pay for child care. Applications for subsidies are available at the grant office (600 A Street, 757-5695).

COUNSELING AND HEALTH SERVICES

Counseling Center

219 North Hall

530-752-0871; http://www.counselingcenter.ucdavis.edu

The Counseling Center offers free, confidential psychological, psychiatric and peer counseling services to all registered students having problems that affect their academic progress and sense of well-being. Staff members offer assistance with personal and interpersonal issues such as relationships, family, stress, cultural differences, assertiveness, self esteem and intimacy. Additionally, staff can help with educational/vocational concerns such as coping with university life, academic performance, test anxiety, reentry adjustment and determining life goals. Services for relationship issues are also offered to students and their partners.

Confidentiality is strictly maintained in accordance with state laws and ethical standards. Walk-in services are available daily if you need immediate assistance. The center also provides short-term individual counseling, group counseling and assistance with off-campus referrals. Career interest testing, personality testing and information about graduate school admissions tests and the Planned Educational Leave Program are available.

Students, faculty or staff who are concerned about a student or desire consultation or assistance in making a referral are encouraged to call or come to the center.

Cowell Student Health Center

Cowell Student Health Center

530-752-2300; http://healthcenter.ucdavis.edu

Cowell Student Health Center is conveniently located on campus and provides UC Davis students with wellness, illness, and injury care. **Student health services are available to all registered students whether or not they have health insurance.** Student fees subsidize the services of Cowell Student Health Center. Students pay very small fees for most services.

All students must purchase a mandatory health insurance plan as part of registration. Waivers may be granted to students with comparable coverage. For more information, go to <http://healthcenter.ucdavis.edu/insurance.html>, call 752-2612, or visit the Patient Accounts Office at Cowell Student Health Center.

Advice Nurse (752-9649), **Acute Care and After Hours** (752-2300). Services are for acute medical illness and injury care. Appointments are not required, but students are encouraged to call the Advice Nurse before coming for care. Patients are seen according to severity and urgency.

Primary Care Clinics/Specialty Clinics (752-2349). Appointments can be scheduled for routine primary care, nutrition and fitness, men's/women's health/physical exams, allergy care, sports medicine, travel immunizations, and other services. Physician specialists are available upon referral from a primary care provider. Services include dermatology, gynecology, internal medicine, orthopedics, minor surgery, podiatry, neurology and acupuncture. Laboratory, x-ray, pharmacy and physical therapy services are also available.

Health Education

Cowell Student Health Center
530-752-9652

The Health Education Program at Cowell promotes student health through trained peer counselors, health educators, workshops and resource libraries.

Campus Alcohol and Drug Abuse Prevention Program (CADAPP) (professional staff: 752-6334; student coordinators: 754-7104) Individual assessments, small group education courses, workshops and support groups on alcohol/other drug-related problems, as well as issues of dysfunctional families and addiction.

Peer Counselors in Athletics (754-7103). Athlete to athlete resources/peer counseling on alcohol/other drug issues, nutrition, player-coach relationships, steroids, body image issues, tobacco, race and sports, and gender equity issues. PCAs offer mentoring services to fellow UC Davis student athletes and outreach education and mentoring to area high schools.

Health Advocates (752-9651). Presentations/peer counseling for students on dealing with personal alcohol and drug issues, nutrition, exercise, stress management, massage, bicycle safety and other wellness issues. Free individual computerized dietary analysis and peer nutrition counseling available by appointment.

Peer Counselors in Sexuality (752-1151). Presentations/peer counseling on birth control, pregnancy, sexually transmitted disease prevention, safer sex, healthy relationships, partner communication skills, sex roles and orientations and other issues related to sexuality and reproductive health.

The House

Temporary Building 16 (two-story house by Housing Office)
530-752-2790

The House is a professionally managed peer counseling program of the Counseling Center. Students receive confidential support, information and referrals regarding personal or social problems. Well-trained student volunteers assist fellow students through individual peer counseling and a wide variety of workshops and support groups held in an informal setting. No appointment is necessary and services are offered on a drop-in or telephone basis from 8:00 a.m. to 6:00 p.m., Monday through Friday, during fall, winter and spring quarters.

Volunteers for peer counselor positions at the House are accepted winter quarter. Students are trained in basic counseling skills and can receive units for training. Transcript notation is also available for quarters working as a peer counselor volunteer.

ARTS AND RECREATION

Whatever your recreational bent—horseback riding, outdoor activities, music, arts and crafts, or sports—there's a place or program on the Davis campus for you to enjoy your favorite activities.

Social, physical, creative, intellectual and cultural activities and programs provide many healthy activities to offset the stresses associated with a rigorous academic environment. These programs complement the academic mission of the university and enhance the quality of life for the campus.

In addition, the City of Davis has 31 parks with various facilities, including tennis courts, playgrounds, swimming pools, playing fields, and a skateboard facility. The city has several movie theaters, art galleries, the Davis Art Center, Davis Comic Opera Company and Davis Musical Theatre.

Campus Recreation

Memorial Union Programs and Campus Recreation
Memorial Union, Room 457
530-752-1730; <http://campusrecreation.ucdavis.edu>

The following programs are offered through Memorial Union Programs and Campus Recreation. A catalog of activities is published quarterly, mailed to all residences in Davis and distributed throughout campus.

Outdoor Adventures

The Barn (on the corner of California and Hutchison)
530-752-1995/1730

Outdoor Adventures will help you develop your outdoor skills and plan your outdoor excursion. You can rent equipment of professional quality and arrange for custom-designed trips and group rates. An up-to-date library contains topographic maps, trail guides and other materials. Classes, excursions and clinics in backpacking, rock-climbing, whitewater rafting, kayaking, sea kayaking, mountaineering, cross-country skiing and other sports are offered. Outdoor Adventurers also offers training classes in wilderness first aid, EMT, CPR and swift water rescue. Outdoor Adventurers Retail Store has items you might need for your next trip.

Equestrian Center

Garrod Dr. (southwest of Veterinary Medical Teaching Hospital)
530-752-2372/1730

The Equestrian Center is open year round, offering trail rides, practice sessions and instruction in both English and Western riding. Group and private lessons are available for beginning through advanced levels, along with training in horse care and stable management. The Equestrian Center sponsors clinics, horse shows, summer youth equestrian camps and special events, and coordinates the Equestrian Club.

Craft Center

South Silo
530-752-1475/1730

The Craft Center is an ideal place to channel your creative energy. Facilities are available on a day or quarter use basis. Ceramics is available for quarter use only. Workshops and classes are offered each quarter in woodworking, weaving, jewelry-making, art and graphics, computer imaging, ceramics, photography, silkscreen printing, welding, leatherworking, stained glass and other crafts.

Recreation Swimming Pool

Corner of La Rue Road and Hutchison Drive
530-752-2695 or 530-752-1706/1730

Located on campus, the Rec Pool's unique organic shape allows for a wide variety of water activities. The pool includes lap lanes, diving boards, an island, a large grass area for sunbathing and a shallow wading pool. Picnic tables and a barbecue are also available on a first come first served basis. The Rec Pool offers aqua aerobics classes and swim lessons for all ages. The pool opens for the season in mid-April and closes in mid-October.

The Games Area

Games Area (located below the UCD Bookstore)
530-752-2580/1730

The Games Area features bowling lanes, billiards room, video arcade, lounge and storage lockers. The Games Area conducts bowling leagues, classes, clinics and tournaments for all ages from beginning through advanced skill levels. The facility is fully accessible to those with disabilities.

The Memorial Union (MU)

MU Campus Information Center
530-752-2222; infocenter@ucdavis.edu

The MU complex serves as the community center for the campus. The **MU Campus Information Center's** student staff can refer you to people, places, programs and services on and off campus, maintains an up-to-date database of 1,200 on and off campus organizations, and takes reservations for the use of tables and display boards in and around the MU.

The complex houses the UC Davis Bookstore, Corral gift shop, Coffee House, MU II Conference Center, Campus Box Office (where you can purchase tickets for campus events and cash checks), Campus Events and Visitors Services (CEVS) and the MU Business Office.

King Lounge, on the second floor, provides a comfortable and relaxed atmosphere, popular for studying, leisure reading and listening to music. The adjacent Music and Periodicals Center (752-2885) contains current popular periodicals and a large library of music.

Freeborn Hall, a 1,250-seat assembly hall in the MU complex, is used for performing arts, dances, banquets, lectures and conferences.

The Memorial Union operates several facilities that can be rented for group gatherings. With its wood-paneled interior and ceiling-high windows, **Rec Pool Lodge** is an ideal location for meetings, lectures or dances. The covered patio surrounding the lodge offers a shaded environment for outside dining during the warm weather. **Putah Creek Lodge**, secluded in the Arboretum, provides a relaxing atmosphere for lectures, banquets, weddings or dances. The spacious lawn surrounding the lodge is suitable for volleyball and games, receptions and picnics. The lodge has kitchens and outdoor barbecues.

Silo Union

The Silo Union houses food services, meeting/conference facilities, lounges and the campus pub. In the **South Silo** are the ASUCD Experimental College (752-2568), Student Special Services (752-2007), Graduate Student Association (752-6108) and a branch of the Bookstore serving the School of Law (752-2961). To reserve space in the Silo, call Campus Events and Information at 752-2813.

Recreation Hall

Entrance 1B
530-752-6074

Recreation Hall is a multi-use facility for intramural and informal recreation play, intercollegiate athletic basketball and women's gymnastics, physical education classes and sports clubs. Numerous special events sponsored each year by the campus and community are held in the 8,400-seat arena. The tri-level facility has locker rooms; a flat running track; an equipment room; racquetball, wallyball and squash courts; two weight rooms with free weights, universals, Nautilus weight training circuit, stair machines, rowing machines, treadmills, cross-training machines and bicycles; court areas for basketball, volleyball and badminton; and areas for martial arts, table tennis, gymnastics and dance. Aerobics classes are offered daily on a walk-in basis. A state-of-the-art artificial rockclimbing wall is available for climbers of all skill levels under the supervision of Recreation Hall staff.

Undergraduate and graduate students can use Rec Hall facilities by showing their current valid photo ID card. Students may purchase a \$9.00 guest pass valid for three

The student-run Coffee House serves bagels, burritos, soups, salads, bakery items and pizza—and, of course, great coffee.

daily uses. Non-students may purchase a daily, monthly, quarterly or yearly privilege card at Rec Hall to use lockers, equipment and facilities. Prices are available at the Recreation Hall Equipment Room.

Surrounding Recreation Hall are the volleyball and basketball courts, the Community Baseball Field, soccer field, and intramural playing fields.

Intramural Sports/Sports Clubs

IM Sports/Sports Clubs
140 Recreation Hall
530-752-3500

Intramural Sports, Sports Clubs and Intercollegiate Athletics programs provide a coordinated program of organized sports competition and physical recreation activities to meet student needs at every skill and interest level.

Intramural Sports is a structured, competitive program involving 36 men's, women's and coed activities with over 14,000 participants. Complementing this highly popular activity is the sports club program. Forty recreational and competitive offerings for men and women attract roughly 1,300 athletes in activities ranging from archery, badminton, crew, roller hockey, and water and snow skiing to the traditional volleyball, lacrosse, rugby and equestrian events.

Intercollegiate Athletics

Intercollegiate Athletics
264 Hickey Gymnasium
530-752-1111

Although Intercollegiate Athletics at Davis benefits the campus by fostering school spirit, its primary role is to provide personal development opportunities for as many student-athlete participants as facilities and resources permit. Currently, the program consists of varsity teams in 11 men's sports and 12 women's sports. Membership affiliation is with the California Collegiate Athletic Association and Division II of the National Collegiate Athletic Association. Approximately 750 students compete on varsity teams each year.

Arts and Entertainment

Whether you want to participate, be entertained or be inspired, an abundance of musical, theater, art, design and dance offerings take place on campus all year long.

UC Davis Presents

200 B Street, Suite A
530-757-3199; <http://ucdpresents.ucdavis.edu>

UC Davis Presents brings a wide variety of world-class performing artists to UC Davis to serve the campus and surrounding communities. During the academic year, UC Davis Presents offers concerts and recitals by classical, jazz and folk music artists; drama; classical, modern and ethnic dance; and lectures by eminent public figures. Tickets for UC Davis Presents events may be purchased at the Campus Box Office (Freeborn Hall, 530-752-1915) or any BASS outlet.

Music

Department of Music
530-752-0888; <http://musdra.ucdavis.edu>

The Department of Music sponsors the UCD Symphony Orchestra, Chorus, Chamber Singers, Early Music

Ensemble, Gospel Choir, Concert Band, Jazz Band and small ensemble groups. Music majors and other interested students can receive credit for participating in these groups, which perform at concerts and recitals open to the university community. The department sponsors artists-in-residence who give concerts, recitals and lectures. Free noon concerts featuring individual performers and ensembles—both professional musicians and music students—are a favorite weekly event during the school year. The Empyrean Ensemble is in residence on campus. The Department of Music sponsors nearly 100 public concerts each year.

Dramatic Art and Dance

Department of Theatre and Dance
530-752-0888; <http://theatredance.ucdavis.edu>

The Department of Theatre and Dance has one of the finest theater facilities in California, with an unusually good stock of scenery, props, costumes and state-of-the-art lighting and sound equipment. Facilities are complemented by an excellent faculty, the Granada Artists-in-Residence program (which brings a major director, choreographer or playwright to the department each quarter), and graduate students working on Master of Fine Arts degrees in acting, directing, choreography or design and Ph.D. degrees in 20th Century Performance and Culture, all of whom contribute to the fine quality of UC Davis drama and dance productions.

Each year's schedule includes undergraduate festivals in theatre, dance and film; opportunities to work with professional directors and choreographers in three main stage productions; and performance projects and established scripts developed by M.F.A. students. These productions take place on our proscenium (Main), thrust (Wyatt), arena (University Club) stages as well as in the Mondavi Center's Studio Theatre and Jackson Hall. These productions are part of the academic program of the department and serve an important purpose in the study of theatre and dance. Participation is open to all students.

Art Galleries

The Memorial Union Art Gallery (second floor of the MU; 530-752-2885) features a changing series of contemporary and historical art exhibits throughout the academic year. Works by professional artists as well as students are on display for periods of approximately six weeks. The gallery sponsors print sales, special programs and lectures, and offers internships for those interested in career work in an art gallery or museum.

The Design Gallery (first floor of Walker Hall; 530-752-6150) explores diverse topics and media with an emphasis on ethnographic arts and consumer cultures. The gallery is internationally known, with innovative exhibitions based on design from a global perspective. Historical cultural artifacts, contemporary functional objects and creative installations are presented in changing spaces designed specifically for each exhibit.

The Richard L. Nelson Gallery (first floor of the Art Building; 530-752-8500), named in honor of the first chair of the Department of Art, organizes regularly changing exhibitions of historical and contemporary works of art. The gallery's program reflects and complements the teaching program of the Department of Art and brings art to the university community and the Northern California area at large.

The **Fine Arts Collection** (Art Building, adjacent to the Nelson Gallery; 530-752-8500), representing various historical periods and cultures, is the Davis campus's major collection of art.

The **Basement Gallery** (Art Building basement) is a student-directed gallery that exhibits the artwork of advanced UC Davis art majors. There are approximately three shows per quarter.

The **Carl Gorman Museum** (first floor of Hart Hall; 530-752-6567, Native American Studies) was established in honor of Carl N. Gorman, an artist, advocate and former faculty member of Native American Studies. The museum features changing exhibitions of works by Native American and diverse artists.

STUDENT GOVERNMENT

Associated Students (ASUCD)

Student Government Administrative Office
348 Memorial Union
530-752-3632

ASUCD Student Services Office
347 Memorial Union
530-752-1990; <http://asucd.ucdavis.edu>

The Associated Students of the University of California, Davis (ASUCD), authorized by the regents and the chancellor, represents all undergraduate students. Graduate and law students also have access to all ASUCD commercial activities. Funds allocated to ASUCD provide activities and services that make life as a student a little easier, less expensive, or just more fun.

ASUCD operates more than 40 activities, including the Unitrans bus system, *The California Aggie* newspaper, the Bike Barn repair services, travel service, free legal advice for undergraduate students, the Aggie Student Store, Campus Copies, Classical Notes, Project Compost, Cal Aggie Camp, Book Exchange, U.S. Post Office and the Coffee House.

The ASUCD-sponsored Experimental College offers a variety of nontraditional classes each quarter for students interested in diversifying their educational experience. Radio KDVS stereo 90.3 FM, the student-run campus radio station, broadcasts at 5,000 watts. Other ASUCD activities include Housing Viewpoint, Homecoming, Entertainment Council and the Whole Earth Festival.

Picnic Day, a UC Davis tradition since 1909, is the largest student-run event in the nation. This annual

spring open house features more than 100 exhibits and cultural displays, including a parade, a fashion show, sports, sheep dog trials, dachshund races, food, music and dancing.

You can find information about ASUCD programs in the *Student Directory*, which combines details about ASUCD services and organizations with the ASUCD student telephone directory, or by visiting the ASUCD Student Services Office.

Allocated funds are budgeted through the ASUCD Senate. Based on a modified federal form of government, the senate consists of 12 elected senate members and the ASUCD president and vice president. The senate is the policy-making body for ASUCD and supervises all aspects of the association. The ASUCD president is the chief administrative officer and is assisted by the vice president who serves as the executive aide. ASUCD is the liaison for the undergraduate student body and represents the students with other universities, the UC Office of the President and the regents.

Six **commissions** advise the senate and assist the governing board with its decisions by researching legislation and making recommendations. Commission chairs are ex-officio members of the senate. Each commission also involves itself with various projects that relate to its specific area.

- Academic Affairs advocates students' rights in the area of academics, including dealing with the Academic Senate and with issues such as grading policies, tenure and teacher evaluations.
- Business and Finance makes recommendations to the Senate on all financial matters and conducts audits on ASUCD commercial units.
- Environmental Policy and Planning addresses all issues and concerns that pertain directly to the environment.
- Ethnic and Cultural Affairs makes recommendations on policies and programs concerning UC Davis' ethnic community, acts as a liaison between on-campus and off-campus bodies affecting ethnic students and their quality of life at the university.
- External Affairs deals with off-campus concerns (the regents, UC Office of the President, City Council, etc.).
- Internal Affairs recommends policies to improve ASUCD operations and the quality of nonacademic student life on campus.
- The Gender and Sexuality Committee actively promotes awareness of gender and sexuality issues, and prevention of sexual assault through outreach efforts and education programs.
- The Elections Committee ensures the fair administration of ASUCD online elections. The committee coordinates candidate and ballot measure forums and provides unbiased election information.

The **judicial branch** consists of the ASUCD Supreme Court. The court reviews legislation at the request of any ASUCD member and has the ultimate authority to interpret the ASUCD constitution.

UC Davis Administrative Advisory Committees

Office of the Chancellor
<http://chancellor.ucdavis.edu/aac/default.htm>

The Office of the Chancellor encourages students to participate in issues affecting the campus community by applying for membership on an administrative advisory committee. Each committee focuses on a specific area, such as athletics, child care, disability issues, Regent's scholarships, or student services and fees. The committees respond to requests for advice, identify needs or concerns within the charge of the committee, and recommend action to the campus administration.

Applications are accepted each winter for service on committees the next academic year. Undergraduate students should contact ASUCD Campus Affairs. Graduate Students should contact the Graduate Student Association.

Graduate Student Association (GSA)

Room 253, South Silo
 530-752-6108; 530-752-5158 (fax); gsa@ucdavis.edu;
<http://gsa.ucdavis.edu>

The Graduate Student Association (GSA) is the officially recognized student government for UC Davis graduate students. GSA provides a forum for addressing the concerns of graduate students and promotes communication with campus administrators. GSA also serves as an advocate at all levels of the university on behalf of graduate students. Funded by graduate student fees, GSA provides services to all academic graduate students and to professional students in the Graduate School of Management. Services include new student orientation, legal service, fax service, travel awards, newsletters and assorted social events. Other professional students are eligible to join GSA by paying a fee.

GSA General Assembly representatives are designated by other students in their department or graduate group. General Assembly meetings are held once a month and are open to all graduate and professional students. Each year the General Assembly elects the members of the Executive Council, who serve in a variety of positions to carry out the policies and functions of the organization.

STUDENT ORGANIZATIONS

Student Programs and Activities Center

Memorial Union, 4th Floor
 530-752-2027
<http://spac.ucdavis.edu>

More than 350 student organizations are registered at UC Davis. They consist of cultural, social, religious, political, ethnic, academic, international, recreational, performing and service groups, provide students and the entire campus with important educational experiences. The **Student Programs and Activities Center (SPAC)** registers these diverse groups and provides educational programs, advising and support for activities, event planning, leadership development, conflict resolution, resources and campus policies.

In addition, SPAC administers a number of campus programs including the Activities Faire, Club Finance Council, Danzantes del Alma folkloric dance troupe,

Student Leadership Development Series, campus service awards, and acts as liaison to fraternities and sororities. Anyone interested in participating in student organizations or becoming involved in unique activities is encouraged to visit the SPAC office.

Cultural Days is a series of annual programs celebrating the diverse ethnic cultures of the university community. Programs include African Continuum, Asian Pacific Culture Week, La Raza Cultural Days, Native American Culture Days and the Native American Pow-Wow. Everyone is invited to share in these programs featuring speakers, workshops, films, entertainment and family events.

The **Student Recruitment and Retention Center**, located at 16 South Hall, is a student-run program serving traditionally underrepresented students. Programs include Southeast Asians Furthering Education (SAFE); American Indians for Recruitment and Retention (AIRR); African Americans and Africans Cultivating Education (ACE); Filipino Outreach and Retention; Yik'al Kuyum; and Graduate Academic Achievement and Advocacy Program. These programs provide outreach to high schools and community colleges and provide tutoring and study halls to current students.

The **Cal Aggie Marching Band** entertains spectators at athletic, campus and community events. As one of the few student-run bands in the nation, the band has a style and personality indicative of UC Davis.

Cal Aggie Student Alumni Network (CASAN)

Cal Aggie Student Alumni Network (CASAN)
 Walter A. Buehler Alumni and Visitors Center
 530-752-0115 or 530-752-0286; caaa@ucdavis.edu;
<http://www.alumni.ucdavis.edu/casan>

All UC Davis students are encouraged and welcome to become CASAN members. CASAN involves students and alumni in a variety of academic, philanthropic and professional programs that build lasting ties to the university. Programs include Senior Daze, Leadership Conference, new student receptions, career panels, Take an Aggie to Lunch and Aggie Diner. You may join CASAN any time during the academic year; the annual \$15 membership fee includes collegiate membership in the Cal Aggie Alumni Association.

ACADEMIC ADVISING AND STUDENT RESOURCES

UC DAVIS

ACADEMIC ADVISING AND STUDENT RESOURCES

2002-2003
2003-2004

ACADEMIC ADVISING

UC Davis offers many different types of academic advising to help you get the most from your education. College advisers can assist you in meeting degree requirements and taking maximum advantage of the resources available in the university. A conference at least once a quarter with your faculty or staff adviser is especially desirable during your first year and during your final quarters preceding graduation.

College Advising

College of Agricultural and Environmental Sciences

Office of the Dean
150 Mrak Hall
530-752-0108

In the dean's office you will find

- Staff advisers who can help with university and college rules, regulations and policies and procedures that affect students.
- Academic advising: in-depth advice regarding probation/dismissal status, admission to the college, readmission, and second bachelor's, limited and regular status.
- Advice and action on petitions.
- Other services including study plan clearance, college English requirement check, release of holds on registration packets and final evaluation for graduation.

Associate Dean of Undergraduate Academic Programs

Annie King, Associate Dean
150 Mrak Hall
530-752-0108

The college has an associate dean of undergraduate academic programs and advising staff who welcome the opportunity to become acquainted and to talk with individual students. They can also help you with academic problems if you are placed on probation or subject to dismissal.

Faculty Advisers/Staff Advisers. You will be assigned a faculty adviser to help you plan a program that corresponds to your individual educational interests. The master advisers coordinate advising within a major. Staff advisers in the department can advise you on courses, specific requirements of majors and career opportunities. You are strongly urged to consult with your faculty adviser or staff adviser each quarter before selecting your courses.

As educational objectives evolve, you may, in consultation with the master adviser for your major, choose a new faculty adviser whose area of expertise corresponds more directly to your specific objectives.

Exploratory Program (non-degree program)

150 Mrak Hall
530-752-0610

Are you unsure what major you really want to pursue? If so, you may want to register in the Exploratory Program. With the help of staff in the dean's office and the major advisers, you can explore specialized options, develop your decision-making abilities and select the

major best suited to your needs. For registration purposes, indicate "Exploratory" on your admissions materials. You must declare a major before you complete 120 units; see Declaration of Major in the "Academic Information" chapter.

Division of Biological Sciences

Dean's Office
202 Life Sciences Addition
530-752-0410

The associate dean and staff in the dean's office offer complete academic advising services for the Biological Sciences major and general advising information about other divisional majors. The office also advises on college and university requirements, policies, and procedures, including PELP, withdrawal, change of major, and late actions.

This office is also responsible for the academic progress of all students majoring in the division. If you have any problems (personal, medical, financial) that are affecting your academic performance, or if you are on academic probation, make an appointment to see one of the advisers in the dean's office.

Sections and Advising Centers. Students entering or intending to declare majors in biochemistry and molecular biology; cell biology; evolution and ecology; exercise biology; genetics; microbiology; neurobiology, physiology, and behavior; or plant biology should contact the specific section office for academic advising services, where both faculty and staff advisers are available. Students selecting the biological sciences major should contact the dean's office for academic advising services.

Peer Advisers. Peer advisers are available in each section. Biological Sciences houses its peer advisers in the dean's office.

College of Engineering

Undergraduate Office
1050 Engineering II
530-752-0553

Information and assistance on academic, career and personal matters is available in the Undergraduate Office, either through direct assistance from one of the staff advisers or through referral to other offices on campus. The Undergraduate Office handles student petitions, transfer evaluation, articulation and degree certifications.

Advising. As soon as you arrive on campus, you should consult with your departmental staff adviser, whose name and office hours you can obtain at the department office. The departmental staff adviser is aware of the requirements for your major and can assist you with planning your program.

Mandatory Advising. The College has implemented a mandatory advising system through the online registration system. You are required to meet with your adviser once a year, during a specific quarter, which is determined alphabetically. When you enroll in classes for your advising quarter, you will be told that you have an advising hold on your registration. You may enroll in classes for and during this quarter. If you meet with your adviser during this quarter, there will be no difficulties with subsequent registration. If, however, you fail to meet with your adviser during your assigned quarter,

you will be prevented from registering for classes for the second quarter following your advising hold. Therefore, you have approximately four months to clear an advising hold. For more information on mandatory advising, call the Advising Office at 752-0557.

Peer Advisers. A well-developed peer advising system complements faculty and staff advising. Student advisers are in 1050 Engineering II. Peer advisers are also available during designated hours in the residence halls. Call the Engineering Dean's Office (752-0553) to speak with a peer adviser about the specific schedule.

College of Letters and Science

Office of the Deans/Undergraduate Education and Advising Office
200 Social Sciences and Humanities Building
530-752-0392

The deans and staff in the Undergraduate Education and Advising Office can help you with issues relating to your academic goals and experiences. You can consult the Advising Office on matters such as program planning, selection of a major, exceptions to regulations and academic enrichment opportunities. The office also provides a number of additional services:

- Determines how your transfer credits from other institutions apply towards completion of breadth and unit requirements for the bachelor's degree. (Applicability of transfer credit toward the major is determined by your major faculty adviser.)
- Provides degree checks to identify remaining college requirements and certifies graduation.
- Acts on petitions requiring the dean's approval.
- Reviews the records of students who are subject to disqualification and determines whether such students may continue at UC Davis.

Faculty Advisers. New students are assigned to a faculty adviser during their first term of enrollment. If you indicated an interest in a particular program on your application, your adviser will be a faculty member associated with that major. If you change your major, you will be reassigned.

New students are encouraged to see their faculty adviser at least once every quarter during their first year on campus to discuss their educational goals, course program and progress.

Continuing students who have completed three quarters in residence in the college should consult with an adviser at certain important checkpoint stages in their academic careers. You are urged, however, to maintain regular contact with an adviser in your major to avoid program errors that may delay graduation. Seniors should maintain close contact with their advisers to ensure that they are meeting the major requirements.

Academic Options Program. If you did not indicate an initial commitment to a particular major program on your application, you will participate in the Academic Options Program, which provides academic advising to lower division students. You will be assisted by an advising team available at sites in each of the university residence hall complexes. Students living off campus should contact the Letters and Science Undergraduate Education and Advising Office early in the quarter to receive their adviser assignments.

Advising Checkpoints. You should consult with your faculty adviser at two, possibly three, critical stages in your academic career:

- Before you complete 90 units of degree credit, including transfer work, you must develop in consultation with your faculty adviser, a proposal for a quarter-by-quarter program of courses showing how you will meet your educational goals and graduation requirements. You must also have declared a major by this time. Filing this plan with your adviser does not preclude subsequent modifications of the plan or a change of major.
- When you complete 135 units of degree credit, including transfer work, you may pick up Degree Check materials from the Letters and Science Advising Office and consult your adviser concerning course selection and satisfaction of requirements in the major.
- Before you complete 195 units of degree credit, including transfer work, you must develop in consultation with your faculty adviser, a firm study plan in the form of a quarter-by-quarter program that will satisfy all remaining degree requirements as expeditiously as possible. This plan will be filed with your adviser. If the plan indicates that you will have to register beyond the 225-unit limit in order to meet degree requirements, you must contact the Undergraduate Education and Advising Office immediately. Exceptions to the 225-unit limit are granted by the dean only rarely. Typically, approval is granted only to allow completion of *minimum* degree requirements.

If you have not met with your faculty adviser before these established checkpoints, a hold may be placed on your registration as a reminder.

Peer Advisers. Student-to-student advising is an important part of the university advising services. The College of Letters and Science dean's office peer advisers are available in the Undergraduate Education and Advising Office, 200 Social Sciences and Humanities Building, and on a weekly basis in the campus residence halls to talk with students about their academic concerns.

Advising Services

Advising Services
1st floor, South Hall
530-752-3000; <http://advisingservices.ucdavis.edu>

Academic Peer Advising (APA) places peer advisers in over 50 departments to help students find the answers to their questions about major requirements, courses and university regulations. The academic peer adviser complements faculty advising by providing a student perspective on the department. The Academic Peer Advising staff is trained to provide information and assistance about graduate schools, career opportunities and college requirements.

Orientation and Summer Advising coordinates the Summer Advising and Registration Program, fall quarter Orientation activities and other student assistance and orientation programs for new students. The staff will introduce you to the campus environment, procedures and opportunities, and offers programs relevant to your changing needs. Your contribution to orientation programs, through ideas and assistance, is always welcome.

The **Leading Roles** program coordinates several campus-wide student leadership development initiatives and provides information on academic, co-curricular and employment opportunities that promote the attainment of leadership skills and knowledge. Among the offerings are a summer leadership institute, an Academic Theme Program in the residence halls and various workshops and campus events that aid students in developing their leadership skills.

Pre-Graduate School Advising assists students interested in M.A., M.B.A., Ph.D. or teaching credential programs. Services include help in locating graduate school programs in specific fields, completing application forms and statements of purpose, and planning financial options. This unit also coordinates the Undergraduate Research Conference, an annual event open to all undergraduate UC Davis researchers.

Pre-Law Advising offers help with admission requirements and program planning to students interested in the legal profession. You can learn about preparing for law school and a legal career through the many seminars and workshops held each year.

Health Sciences Advising is an important resource if you are preparing for a profession in the health sciences. Staff and student advisers can provide information on requirements, application procedures, professional school curricula and related options.

The **Career and Graduate Study Resource Center**, 114 South Hall, is an extensive reference library managed by Advising Services and the Internship and Career Center. Resources include numerous graduate and professional school catalogs and program directories, admission test materials, fellowship directories, videotapes, and books and journals related to health education. Also available are job listings, general career information materials, and information about companies who recruit at UC Davis. Several personal computers are available to search the Internet for information on graduate and professional study and job opportunities.

Educational Opportunity Program (EOP)

228 North Hall
530-752-3472

The Educational Opportunity Program serves students by assisting them with their academic, social and personal adjustments to the university environment; coordinates EOP new student orientation programs; and serves as liaison to staff, faculty and administrators. The office's diverse peer staff is particularly sensitive to differing social, cultural and ethnic concerns. Students interested in pursuing the helping professions can receive training and experience through the Peer Adviser Counselor training program.

EOP Information Office services are also accessible at various locations on campus, such as the Colleges of Agricultural and Environmental Sciences, Letters and Science and Engineering; Learning Skills Center; The House; and all ethnic studies departments. You are invited to telephone or stop by the EOP Information Office on the second floor of North Hall or at any of the outreach locations to find out more about the peer support services.

The First Resort

1st floor lobby, South Hall
530-752-2807 or 530-752-3323

The First Resort is a place to go if you are feeling bogged down by university red tape, registration procedures, course selection, choosing a major or other general advising questions. The student advisers here can either answer your questions or put you in contact with others who can. The staff can give you advice and assistance from the point of view of someone who has "been there." The First Resort maintains a referral service, a listing of courses of 1 to 3 units and other valuable resources. If you have a problem, remember—start with The First Resort.

STUDENT CONDUCT

Student Judicial Affairs
3200 Dutton Hall
530-752-1128; <http://sja.ucdavis.edu>

Students enrolling or seeking enrollment in the university assume an obligation to act honestly, ethically and responsibly in a manner compatible with the university's function as an educational institution. Rules concerning student conduct, student organizations, use of university facilities and related matters are set forth in both university policies and campus regulations.

Standards for student conduct are included in the *UCD Code of Academic Conduct*, the *Student Activities Handbook*, the *Guide to Residence Hall Life* and the *University of California Policies Applying to Campus Activities, Organizations and Students*. The operation of the campus student disciplinary system is outlined in the booklet, *Administration of Student Discipline*. These policies and regulations are available from the Office of Student Judicial Affairs and on the World Wide Web. A summary of student conduct expectations is also published in the *Class Schedule and Registration Guide*.

Misconduct and Discipline

Misconduct for which students are subject to discipline includes, but is not limited to, plagiarism; cheating; knowingly furnishing false information to the university; sexual or other physical assault; threats of violence; possession of weapons; harassment, including stalking, sexual harassment or “fighting words”; forgery; theft; vandalism; illegal possession, use or sale of drugs or alcohol; hazing; obstruction or disruption of university activities or functions; and alteration or misuse of university documents, records, keys or identification.

Disciplinary sanctions that may be imposed range from a warning to dismissal, and may include restitution and/or assigned community service. Alleged violations of campus or university standards should be referred to the Office of Student Judicial Affairs. If complaints cannot be resolved informally between Student Judicial Affairs, the accused student and the referring party, the case may be referred to a hearing before the Student Conduct Committee, Campus Judicial Board, or a hearing officer. The president of the university, through the chancellor, has ultimate authority for the administration of student discipline.

Student Responsibilities

You are responsible for complying with the announcements and regulations printed in this catalog, in the *Class Schedule and Registration Guide*, on the SJA Web site and with all policies, rules and regulations of the university and this campus. You will not be able to register or receive transcripts of record or diplomas until you have met all university obligations.

Student Judicial Affairs

Student Judicial Affairs
3200 Dutton Hall
530-752-1128; <http://sja.ucdavis.edu>

Student Judicial Affairs supports the standards of the campus by responding to alleged violations of university policies or campus regulations. The office coordinates the informal resolution process and provides information and assistance about how to file formal complaints of alleged unfair policies or practices, arbitrary treatment and prohibited discrimination or harassment (based on sex, race, religion, disability, etc.). The office can help with conflict resolution and provide interpretations of university policies and regulations.

Resolving Academic Problems

Grade Changes

Grades may not be changed once they have been submitted to the Office of the University Registrar **unless** 1) a clerical error has been made (e.g., a homework score is missing) or 2) a procedural error has affected the student's grade (e.g., misapplication of grading procedures, arbitrary treatment or prohibited discrimination). If you believe you received an incorrect grade due to a clerical or procedural error, ask your instructor to file a grade change form with the Office of the University Registrar. If your instructor does not agree, you may request a change of grade by filing a grade change petition with the Office of the University Registrar. Requests must be made by the fifth week of the following quarter (see the *Class Schedule and Registration Guide*).

The Academic Senate Committee on Grade Changes reviews requests for grade change and has no authority to reevaluate student work, but can change the grade if it finds a documented clerical or procedural error. If the alleged procedural error involves arbitrary treatment or prohibited discrimination, the Grade Change Committee may refer the case to the Student-Faculty Relationships Committee, or the student may file a formal grievance under the policy on student discrimination complaints or the *Faculty Code of Conduct*. See the SJA website at <http://sja.ucdavis.edu> for more information.

Other Grievances

If you need a requirement waived or any other type of variance, contact your faculty adviser or the appropriate dean's office for information on your college's procedures. If you cannot get satisfaction through normal channels, contact the ASUCD Grievance Center or the Committee on Student-Faculty Relationships (see below).

Discrimination/Harassment

If you believe that you have been discriminated against or harassed, you may contact the office of Student Judicial Affairs or the ASUCD Grievance Center for information and assistance. It is important to seek assistance as soon as possible, as a 30-day time limit applies to some grievance processes. Advice is also available from the Sexual Harassment Information Line (752-2255). Graduate students may contact Graduate Studies (752-0650) and/or the Graduate Student Association (752-6108).

ASUCD Grievance Center

ASUCD Grievance Center
7 South Hall
530-754-4131; 530-752-6101 (ASUCD Academic Affairs);
530-752-3339 (ASUCD Campus Affairs)

The ASUCD Grievance Center advocates students' academic and nonacademic concerns to the faculty and administration. Grievance counselors assist students one-on-one, directing them to appropriate channels through which to state their academic grievances (e.g., student-faculty relations, sexual harassment, grade change problems, prejudicial treatment in the classroom and problems with academic procedure and policy) and nonacademic grievances (e.g., campus facilities, campus safety, ASUCD, and any other nonacademic concerns). All information discussed between counselors and students is completely confidential. Students can get counseling, referrals and support to aid in the resolution of these matters.

Committee on Student-Faculty Relationships

Academic Senate Office
356 Mrak Hall
530-752-3920

If students with a grievance feel they cannot get satisfaction through normal procedures, they may contact the Committee on Student-Faculty Relationships for assistance. The committee is advisory and can make recommendations to the office having authority to resolve the problem. The chair and/or other designate may also meet informally with the students involved with the grievance.

TUTORING AND LEARNING RESOURCES

EOP Tutoring

Learning Skills Center
2205 Dutton Hall
530-752-2013

EOP tutoring is a free service for EOP students. If you are having difficulty with your course work, the Learning Skills Center offers tutoring in many course areas. Tutoring is provided in groups and on a drop-in basis. For students in academic difficulty, a limited amount of one-to-one tutoring is also available. Although primary emphasis is on the assignments in your classes, tutorial services may also be used to improve study habits and learning skills. The tutoring program is staffed by students carefully selected for both their knowledge of course content and their sensitivity to the needs of students being tutored.

The Learning Skills Center offers pre- and co-classes in mathematics, physics and statistics for EOP students. Pre-classes help prepare EOP students for the regular university class they usually take the following quarter. Co-classes provide supplementary instruction for EOP students enrolled in the regular class. The LSC offers pre-classes for Mathematics 16A, 21A and Physics 9A. The LSC also offers co-classes for the Mathematics 16 and 21 series, the Physics 9 series and Statistics 13. All pre-classes carry 3 workload units and co-classes carry 1 workload unit. These units count toward minimum progress and financial aid eligibility, but do not count toward graduation.

Learning Resource Centers

Student Housing
Chuck Huneke
530-754-6258

Learning Resource Centers are located in the Segundo, Tercero and Cuarto residence hall areas. They offer the following services to all residence hall students: PC computers (Macintosh conversion software), printers, scanners and staff assistance. Other resources include a reference library, CD ROMs, language tapes, an exam file and a quiet place to study. The staff also provides free computer software tutoring and programs.

Learning Skills Center

2205 Dutton Hall
530-752-2013

At the Learning Skills Center you can receive help with such things as general study skills, math/science study skills, writing essays and term papers, reading efficiency, English as a second language, time-management skills, test-taking skills and test anxiety reduction.

Learning specialists can help you individually, or you may participate in workshops covering specific areas of study. The Learning Laboratory has self-help tapes and films that let you work at your own pace. The LSC library contains a variety of programmed instructional materials, reference books, preparation materials for the GRE, MCAT and LSAT exams, and a file of course examinations given in past quarters. Most materials may be checked out.

Under certain circumstances, the center also provides individual tutoring sessions for students on academic probation or subject to dismissal. Group and drop-in tutoring is available to all students. Come in and ask about our services, which are free to all UC Davis students.

Special Transitional Enrichment Program

Learning Skills Center
2205 Dutton Hall
530-752-2013

Freshman EOP students are invited to participate in the Special Transitional Enrichment Program (STEP). The program begins in summer and continues through the first academic year, providing preparatory course work and developing academic skills. It helps students adjust academically and socially to the campus by strengthening their learning skills and study habits, and by providing an extensive orientation to campus life.

INTERNSHIPS AND CAREER SERVICES

Internship Programs

The Internship and Career Center
2nd and 3rd floor, South Hall; Buehler Alumni and Visitors Center
530-752-2855; <http://icc.ucdavis.edu>

You can take advantage of one of the hundreds of organized internships through the Internship and Career Center or initiate your own.

Students can express their creative sides in classes offered through the Experimental College and the art department.

An internship may be full time or part time, credit or non-credit, voluntary or involving a stipend, depending on your needs and interests and the availability of openings. Internship experiences must emphasize learning rather than routine activities, include field supervision by a qualified professional and, where appropriate, the faculty member responsible for giving credit. Academic credit is awarded only for experiences planned and approved in advance by the sponsoring faculty member.

The Internship and Career Center

2nd and 3rd floor, South Hall; Buehler Alumni and Visitors Center
530-752-2855; <http://icc.ucdavis.edu>

If you are an undergraduate, graduate or alumnus, ICC can help you identify your abilities and interests and relate them to jobs; gain access to practical experience to increase your competitiveness in the job market; and find out how and where to look for the jobs you want. If you are considering dropping out of the university for a term or longer, an adviser can also give you information about internships and employment opportunities.

The Career and Graduate Study Resource Room (1st floor, South Hall) contains materials that can help you learn how your major field of study can be translated into job opportunities, and data concerning types of employment graduates have obtained. Useful to job-seekers—and available free of charge—is ICC's *Career Resource Manual*, which provides guidelines for preparing a resume, tips on being interviewed and information on employment in government, business and education.

The office solicits and maintains job vacancy listings, arranges employment interviews and schedules on-campus recruiting by employers.

Graduate Student and Postdoctoral Career Services

The Internship and Career Center
3rd floor, South Hall
530-752-7841

Any student enrolled in the teaching credential program or pursuing a master's or doctoral degree in order to teach should register with the Educational Placement Office.

Services include teaching job vacancy listings, placement files (professional dossiers), special workshops on writing teaching resumes and curriculum vitae, on preparing for interviews, and individual advising.

Advisers maintain contact with school district personnel and work with undergraduate students to explore teaching through internships. The office sponsors the Graduate Career Options Program for advanced degree candidates originally planning a teaching career and now considering other career options.

Human Corps Program

The Internship and Career Center
2nd floor, South Hall
530-752-3813

Human Corps is the student community services program at UC Davis. Public service work can be a rewarding and satisfying experience that may also improve your qualifications for the job market. Community service may or may not be compensated through wages, academic credit or transcript notation and can vary from a one-day activity to a long-term commitment.

The Human Corps is a referral center for students who want to perform community service and as a resource for agencies and campus units with service opportunities. The office has a database and directories with information about nonprofit agencies in California, community service opportunities throughout the world and employment in the non-profit or public sectors after graduation. This office also coordinates the AmeriCorps Bonner Leaders Program at UC Davis.

ACADEMIC RESOURCES

Education Abroad Center

151-155 Kerr Hall
530-752-3014; 530-754-8311 (fax);
<http://www.mrak.ucdavis.edu/provunde/eap>

The opportunity to study abroad is one of the richest educational experiences a student can have. When students return from a quarter at universities in places like Italy or Hong Kong, they routinely describe their time abroad as an experience that changed their lives. The reasons for studying abroad include the desire to see the world, to learn a language, to prepare for a job in the global economy and to have an experience that will add distinction to an application for graduate or professional school.

The Education Abroad Center (EAC) can help students decide which program is best for them, whether to study abroad for a quarter or a year and when to go abroad (freshman through senior year). The EAC advisers also have information about financial aid, fellowships and which programs have internship possibilities.

The EAC is home to the University of California Education Abroad Program and to hundreds of professional study abroad organizations.

Freshman Seminar Program

17 Wellman
530-752-6050; <http://trc.ucdavis.edu/TRC>

The UC Davis Freshman Seminar Program gives first-year students the opportunity to study with faculty members in small groups, meeting in settings more informal than the ordinary classroom. The seminars focus on a current intellectual interest of the faculty member. All freshman seminars emphasize student participation, providing intense intellectual exchange among students and between student and teacher.

STUDENT RESOURCE AND INFORMATION CENTERS

Campus Violence Prevention Program

Fire and Police Building, Kleiber Hall Drive
530-752-3299; jmbeeman@ucdavis.edu

The Campus Violence Prevention Program (CVPP) explores myths and exposes the realities of sexual violence, relationship violence and hate-related activities, focusing on prevention through education. The program offers discussions, workshops, self-defense classes, short-term crisis intervention, referrals and support groups for victims/survivors of all types of interpersonal violence, 24-hour crisis intervention and advocacy and training for peer counselors and professionals. A circulating library of books, videos and articles on related issues is available. Call for drop-in hours or to make an appointment.

Cross-Cultural Center

Information:
Winnie LaNier, Director
Corner of East Quad and Shields road
530-752-4287; 530-752-5067 (fax); ccc@ucdavis.edu;
http://ccc.ucdavis.edu

The Cross-Cultural Center fosters a multi-ethnic and multi-cultural community through educational and cultural programs, and leadership development opportunities. Everyone is welcome and encouraged to participate in the many programs, special events and activities sponsored by the center.

Lesbian, Gay, Bisexual and Transgender Resource Center

Christopher J. Solis, Interim Coordinator
University House Annex
530-752-2452; http://lgbtcenter.ucdavis.edu

The Lesbian, Gay, Bisexual and Transgender (LGBT) Resource Center has information and resources about lesbian, gay, bisexual and transgender issues and offers a safe, supportive environment. Students who are studying or researching these issues are encouraged to use the center's resources. The center also serves as a meeting place for local organizations or support groups. Resources include a library with books on topics ranging from domestic partnership issues to lesbian humor; local and national newspapers and magazines; a resource database and files on local resources, including health professionals, legal services, clubs, organizations and community contacts; and a bulletin board exchange, where community members may advertise special events and services. The LGBT Resource Center is open Monday through Friday; call for daily hours.

Services for International Students and Scholars (SISS)

Services for International Students and Scholars
530-752-0864; siss@ucdavis.edu

Services for International Students and Scholars assists international students, faculty and researchers throughout their programs of study, teaching and research at UC Davis, offering orientation, personal and cultural advising, and information and assistance with U.S. Immigration and Naturalization Services regulations. The office serves as a liaison with home governments and sponsors, and provides orientation to the U.S. university system.

All new and transfer international students must attend a special orientation program held just before each quarter begins. The orientation helps new students with registration, class enrollment, making housing arrangements, immigration regulations, and finding campus services and community resources. Orientation and check-in for new international faculty and researchers is held each week. Students and scholars should report to SISS as soon as possible after arriving in Davis.

Women's Resources and Research Center (WRRC)

North Hall, First Floor
530-752-3372; 752-0222 (fax); http://wrcc.ucdavis.edu

The Women's Resources and Research Center educates the campus community about women's issues and concerns, promotes an understanding of the role and impact of gender in our lives and in our society, helps

women of diverse backgrounds achieve their intellectual, professional and personal goals, and advocates for women's full inclusion, equality and advancement.

The WRRC's staff can answer questions, locate resources and help you with personal, academic or work-related concerns. Services and resources include lectures, workshops and forums; a library staffed by a full-time librarian; resource listings of campus and community services such as health care, counseling, child care, women's organizations and legal resources; child emergency notification service for student parents; and specialized programs, discussion groups and individualized consultation for faculty and graduate students on research, academic, career and personal topics.

Student Special Services

South Silo
530-752-2007

Student Special Services coordinates a variety of programs and services to meet the special needs of students.

Student Disability Center

530-752-3184 (voice) or 752-6833 (TTY)
http://sdc.ucdavis.edu

The Student Disability Center (SDC) provides services to students with disabilities who are eligible for reasonable accommodation under Section 504 of the Rehabilitation Act, the Americans with Disabilities Act or state law. The staff of Disability Specialists assist students with disabilities in identifying accommodations that will ensure the student has equal access to educational opportunities at UC Davis. For information about SDC services, please call us or visit our Web site.

Reentry Student Services

530-752-2005

Reentry Student Services helps students who have returned to the university after several years of life and work experience. The office provides admissions assistance, information, orientation and peer support, and provides referral assistance through the Reentry Resource Network. The office sponsors an annual Reentry Day for prospective reentry students on the last Saturday in February.

Transfer Student Services

530-752-2200

Transfer Student Services helps students who have transferred from other institutions of higher education, coordinating transfer student matters among existing student services units to aid in an easy and smooth transfer to the university. It also sponsors special receptions and workshops for new transfers and publishes an annual *Transfer Guide* of available campus services.

Veterans Affairs

530-752-2020

Veterans Affairs assists veterans, dependents and reservists with a number of services, including certifying course attendance to the Department of Veterans Affairs, coordinating a tutorial assistance program, providing advice and support, and helping with educational fee waivers, work study and financial aid concerns. To initiate a benefit claim, write or drop by with your letter of admission.

ACADEMIC INFORMATION

UC DAVIS

ACADEMIC INFORMATION

2002-2003
2003-2004

Registration

Office of the University Registrar
12 Mrak Hall
530-752-2973; <http://registrar.ucdavis.edu>

Registration is the way you become a student at the university. Every UC Davis student must register each quarter. Registration includes enrolling in classes, paying fees and other financial obligations, filing your current address with the Office of the University Registrar, and completing and filing other information forms.

If you are a *new* or *reentering* student you must also:

- Obtain a student ID.
- Submit a Statement of Legal Residence (see Appendix).
- Return the completed Medical History form, evidence of rubella and hepatitis B immunity, results of a tuberculin skin test and the Insurance Information Request form. These forms are mailed to each new student by the Student Health Center.

New graduate students who have been registered previously at UC Davis as undergraduates are considered to be new students.

Change of Name. Petitions to change your name on official university records can be obtained from the Office of the University Registrar. (Students planning to graduate should file this petition no later than the 5th week of the quarter in which they intend to graduate.)

Change of Address. Be sure to inform the Office of the University Registrar of any change of address. Failure to file your current addresses can result in a hold on your registration. You can update your address in four ways:

- Through SisWeb, the online registration system.
- At the Office of the University Registrar kiosks in Mrak Hall and the MU, adjacent to the Campus Information Center.
- Complete a Change of Address form, available at the Office of the University Registrar or through our Web site.
- Call the Voice Mail Form at 754-9427.

Late Registration

Late registration privileges extend through the 10th day of instruction, but you are assessed a fee of \$50.00 to defray the extra clerical costs. Registration after the deadline is allowed only if action or inaction on the part of the university delays registration. A recommendation from an appropriate administrative unit is required, and the registration fee must be paid with cash, cashier's check, credit union check, university check or fee credit.

Enrolling in Courses

RSVP and Web Registration. Students enroll in courses by using the UC Davis telephone registration system, RSVP (Register Students Via Phone, 530-752-7787) or by using SisWeb on the World Wide Web.

The *Class Schedule and Registration Guide*, available one week before the start of registration for the quarter, explains registration procedures, gives class meeting times and locations and changes to the *General Catalog*, and provides updated information on fees and registration.

The "Schedule of Classes," an open courses list and other information about registration is available on the Web site.

Registration Priority. Access to registration (RSVP and SisWeb) is by priority groups. The groups are established according to student class level, as determined by the number of units completed. Undergraduate classification is determined by the number of quarter units you have completed:

Class Level	Units
Freshman	0.0–44.9
Sophomore	45.0–89.9
Junior	90.0–134.9
Senior	135.0 or more

Study List. You are officially registered in all courses listed on your individual study list. You are responsible for completing each of the courses.

To confirm your study list (class schedule), you can call RSVP, or view and print your class schedule at Office of the University Registrar Kiosks in Mrak Hall and the MU or online using SisWeb.

Adding and Dropping Courses

You can adjust your schedule by adding or dropping courses until the deadlines published in the *Class Schedule and Registration Guide*.

The last day to add courses is the 12th day of instruction. The last day to drop courses without dean's permission or fee is the 20th day of instruction, except for those courses designated by departments as 10-day-drop courses. You need to obtain the permission of your dean and pay a \$3.00 fee to drop a designated 10-day-drop course after the 10th day of instruction or to drop any other courses after the 20th day of instruction.

The *Class Schedule and Registration Guide* for each quarter lists the add and drop deadlines and explains how to use RSVP and SisWeb to adjust your schedule and what add/drop procedures and fees apply after the published deadlines. The academic calendar in the front of this catalog also lists the course add and drop deadlines.

Late Drop

To drop a course after the deadline (but before the day of the scheduled final examination), you need approval of the dean of your college or school. Graduate students must have their adviser's approval in order to drop courses. A \$3.00 fee applies to late drops. Permission to drop courses after the deadline may be granted only in exceptional circumstances.

Late Add

To add a course after the deadline (but before the day of the scheduled final examination), you need approval of the department. A \$3.00 fee applies to late adds.

Retroactive Drop

Occasionally, in exceptional circumstances, students are allowed to drop a course after the course is completed. Reasons for seeking a retroactive drop are very specific: medical problems, severe emotional difficulties, or recent death or severe illness in the immediate family. Petitions are available from the Office of the University

Registrar and should include a detailed account of the problem, appropriate documentation and an adequate explanation of why an I grade or late drop was not taken during the quarter in which the problem occurred. The instructor's signature is required on the petition. A \$3.00 fee is applicable on all retroactive drops.

Retroactive Add

In some rare circumstances, students are allowed to add a course after the course is completed. Petitions for retroactive adds are available from the Office of the University Registrar. Each petition must include the reason for the student's failure to add the course during the quarter in which it is offered. The petition must be supported by the instructor's signed approval, together with a statement from the instructor indicating knowledge of the student's participation and performance during the presentation of the course in question and the instructor's understanding as to the reason for the student's failure to add the course before the end of the quarter. A course grade must be assigned by the instructor. A \$3.00 fee is applicable on all retroactive adds.

COURSE LOAD

Normal Progress. Students are expected to graduate in 12 quarters (four years). To do this, **students should plan to complete an average of 15 units per quarter** (15 units per quarter for 12 quarters totals 180 units). It is understood that for various reasons students will occasionally need to take fewer than 15 units per quarter. However, students must meet the minimum progress requirements of the campus.

Minimum Progress Requirements. Minimum progress is defined as a total of 39 units (including workload units) passed, calculated at the end of every quarter for the preceding three quarters of enrollment. Undergraduate students falling below this requirement will be subject to academic disqualification. Under minimum progress, a student will earn the 180-unit minimum degree requirement within 14 quarters of enrollment. Normal progress would achieve 180 units in 12 quarters (four years).

Minimum progress requirements do not apply to students who have been granted part-time status or to students who have their dean's approval to carry less than

the minimum progress load because of medical disability, employment, a serious personal problem, a recent death in the immediate family, the primary responsibility for the care of a family, or a serious accident involving the student.

Certification of Full-Time Status. Undergraduate students must carry a study load of at least 12 units (including workload units) each quarter in order to be certified as full-time students for insurance and financial aid purposes or to compete in intercollegiate athletics. Graduate students must carry a study load of at least 12 units each quarter in order to be certified as full-time students for insurance and financial aid purposes.

Course Load Limits in the College of Letters and Science. Freshman students in their first year and transfer students in their first quarter of residence may not take more than 17 units each quarter. For all other Letters and Science students, the study list may not exceed 21 units each quarter. These unit limitations include non-credit remedial courses and repeated courses, but not make-up work to remove incomplete grades.

Course Loads in the College of Engineering. Because of the large number of units in some of the double-major programs, students must take more than 15 units per quarter to finish in four years.

Part-Time Student Status

If, for reasons of occupation, family responsibility, health or, graduating senior status (one term only), you are unable to attend the university on a full-time basis, you may qualify for enrollment in part-time status. You must file for part-time status each quarter. To be considered eligible, undergraduate students must be registered in 10 units (including workload units) or fewer by the tenth day of instruction that quarter, and graduate students must be registered in 6 units or fewer by the tenth day of the instruction. Minimum progress requirements are waived for part-time students. Undergraduate petitions are available at the Office of the University Registrar and require approval by the Registrar. Graduate petitions are available at Graduate Studies and approved by the Dean of Graduate Studies. Part-time students have use of the same facilities and are eligible for the same services, including Student Health Services, as full-time students.

The performing arts and scientific inquiry are equally necessary to a university education, and UC Davis has much to offer in both arenas.

THE MAJOR

You'll find a complete list of the majors offered at UC Davis in a chart at the front of this catalog.

Declaration of Major

College of Agricultural and Environmental Sciences.

Students must declare a major by the time they have completed 120 units. Failure to declare a major at this point may result in a hold on further registration. In order to declare a major, you must meet with your faculty adviser and/or advising associate, fill out a Change of Major petition available at the Office of the University Registrar Web site or dean's office and file the petition with the dean's office. If you have completed 120 units, you must prepare a study plan with your adviser and/or advising associate at the same time. You are accepted into a major only after your major department and the dean's office have approved the Change of Major petition. With the approval of the College Executive Committee, additional requirements, such as completion of a particular set of required courses with a specified grade point average (usually well above a C average), may be introduced as conditions for acceptance into any major at any time.

College of Engineering. Students must declare a major when they apply to the College of Engineering. Their freedom to change majors thereafter may be limited.

College of Letters and Science. Students must declare a major by the time they have completed 90 units. If you have not declared a major by this point, a hold may be placed on your registration. Such a hold would be removed only when your Change of Major petition is filed in the deans' office. Petitions can be obtained from faculty advisers, department offices or the Office of the University Registrar Web site. As a part of the declaration procedure, you must, in consultation with a faculty adviser, prepare a projected plan of study. You are accepted into the major when your adviser and the dean have approved the petition.

To be accepted into a major, you must have a C average in all courses you have completed that are required for that major, as well as a C average in the upper division courses you have taken toward the major. With the approval of the College Executive Committee, additional requirements, such as completion of a particular set of required courses with a specified grade point average (usually well above a C average), may be introduced as conditions for acceptance into any major at any time.

If your performance is unsatisfactory after you have declared a major program, you may be required by the dean to withdraw from that major, upon written recommendation from the chair of the department or the curriculum committee that administers the major.

Change of Major Within a College

To change from one major to another within a college, you need the consent of the department or committee in charge of your proposed new major. Admission into a major program may be denied by the program or by the dean if your grade point average (GPA) in courses required for the selected major is less than 2.0.

Procedures for change of major within a college are the same as for declaration of major and the same conditions apply. If you wish to change to a major that has admission restrictions, you must comply with the special procedures and requirements for that major.

Except under unusual circumstances, no change of major will be permitted after you attain senior standing (135 units). It is not possible to change or declare a major in the quarter in which you file to graduate.

College of Engineering. The above provisions may not apply to students in the College of Engineering, whose freedom to change majors is limited. Please contact the Engineering dean's office for specific change-of-major requirements.

Change of Major Accompanied by Change of College

A change petition, available at the dean's office and Office of the University Registrar, must be endorsed by a faculty adviser of the new major you are selecting and signed by the dean of the college from which you wish to transfer. In addition, admission to the new college will require that dean's approval. Permission to transfer from one college to another may be denied or deferred if you are in academic difficulty or have a GPA of less than 2.0 in courses that are required by the new major.

College of Engineering. Requirements for changing to an engineering major vary by major. Please consult the department responsible for the major or the Engineering dean's office for the current requirements.

Multiple Majors

College of Agricultural and Environmental Sciences.

A student choosing to major in multiple majors must petition the departments responsible for the major(s), and the dean. The dean's approval of declaration for multiple majors is subject to the following:

1. At least 80 percent of the upper division units required to satisfy course and unit requirements in each major selected must be unique and may not be counted toward the upper division unit requirements for any other selected major. Courses with substantial overlap in content will not count as part of the 80 percent.
2. If the major/program differ in the number of upper division units required, the major/program requiring the smaller number of units will be used to compute the minimum number of units that must be unique.
3. The student must be in good academic standing and have a C average in the upper division courses taken toward the major/program.
4. Multiple majors will not be approved for the following majors: biochemistry and molecular biology; biological sciences; cell biology; evolution and ecology; genetics; microbiology; neurobiology, physiology, and behavior and plant biology.

College of Engineering. Engineering has several established double majors. Enrollment in combinations of engineering majors other than the established double majors or in an engineering major and a non-engineering major may be possible. A change of major petition is required; this should be filed in the Undergraduate

Office and is subject to approval. Double-major students must satisfy the requirements for both majors. Degree requirements for such double majors ordinarily cannot be completed within four academic years.

The Department of Computer Science does **not** allow double majors of Computer Science and Engineering and Computer Engineering, **or** Computer Science and Engineering and Electrical Engineering, **or** Computer Science and Engineering and Computer Science.

If you want to double major in any over-subscribed engineering major, you will be subject to the additional restrictions for transferring into those majors and must satisfy the requirements of both majors.

College of Letters and Science. Students choosing to major in multiple subjects must notify the dean's office of their decision by submitting for approval a petition endorsed by faculty advisers in the majors. The dean's approval of the declaration of more than one major is subject to the following conditions:

1. At least 80 percent of the upper division units used to satisfy course and unit requirements in each major selected must be unique and may not be counted toward the upper division unit requirements of any other major undertaken. Courses with substantial overlap in content will not count as part of the 80 percent.

If the major programs differ in the number of upper division units required, the major program requiring the smaller number of units will be used to compute the minimum number of units that must be unique.

2. At the time of request, a substantial part of the preparatory subject matter and at least two upper division courses in each major must have been successfully completed.

All degree requirements must be completed within the 225-unit limit.

Combination proposals that *cannot be approved* are two or more majors offered by the same discipline, *except* art history and art studio.

A student who completes all requirements for approved multiple majors in which one major normally leads to an A.B. degree and another normally leads to a B.S. degree, will receive a B.A.S. degree. A single degree is granted to students who graduate with multiple majors.

Cross-College Majors

College of Agricultural and Environmental Sciences.

The College does encourage multiple majors between colleges whenever your academic interests and abilities indicate this to be the best route. After endorsement of the Change of Major petition by the appropriate faculty in the colleges involved, each dean may approve the petition if there are sufficient differences between the requirements for the major programs you wish to study. At least 80 percent of the upper division units used to satisfy course and unit requirements in each major selected must be unique and not duplicate those of the other major. In planning for multiple majors, you should determine the total requirements needed for each major as well as for graduation from each college involved.

All degree requirements must be completed within the 225-unit limit.

The same conditions apply for cross-college majors as for multiple majors. Cross-college programs will not be approved if the majors involved are available within a single college as well. For example, cross-college programs between the colleges of Letters and Science and Agricultural and Environmental Sciences will not be approved if one of the majors is biochemistry and molecular biology; biological sciences; cell biology; evolution and ecology; genetics; microbiology; neurobiology, physiology, and behavior; or plant biology.

College of Engineering. Enrollment in a combination of an engineering major and a non-engineering major may be possible. A change of major petition must be filed in the Undergraduate Office and is subject to approval. Such double-major students must satisfy the requirements for both majors. Degree requirements for such double majors ordinarily cannot be completed within four academic years.

College of Letters and Science. The same conditions apply for cross-college majors as for multiple majors. Cross-college programs will not be approved if the majors involved are available within a single college as well. For example, cross-college programs between the colleges of Letters and Science and Agricultural and Environmental Sciences will not be approved if one of the majors is biochemistry and molecular biology; biological sciences; cell biology; evolution and ecology; genetics; microbiology; neurobiology, physiology, and behavior; or plant biology.

Individual Major

Students with academic interests not covered by an established major have the opportunity to develop an individual major. Such a major requires the selection of interrelated courses totalling a minimum of 45 upper division units from two or more areas of study. If you choose this option you will work closely with faculty advisers to develop a coherent and rigorous academic program. This program is then submitted to a faculty committee for review and approval. Submit the proposed program to the committee **prior to reaching 120 units, or by the fourth full week of the fifth quarter before graduation, whichever is earlier.** If you wish to undertake an individual major, request the appropriate forms from your dean's office. Program requirements are outlined under Individual Major in the Programs and Courses section of this catalog. *The College of Engineering does not offer an individual major.*

rafting as part
of his class on
the rivers of
California.**

THE MINOR

If you are interested in two or more areas of study, you should consider completing one or more minor programs. Minor program requirements are listed in the “Programs and Courses” chapter of this catalog under the department that offers them. You will find a complete list of the minors offered at UC Davis in a chart at the front of this catalog.

A minor consists of 18 to 24 units in upper division courses specified by the department or program offering the minor. Courses used to satisfy the requirements of a minor, including those completed elsewhere, must be approved by an adviser in the sponsoring department or program. **For minors offered by the College of Agricultural and Environmental Sciences, at least half of these units and courses must be completed in residence on the Davis campus.** You are also expected to complete all courses that are prerequisite to the upper division courses required for the minor. Minors offered by the College of Letters and Science do not require that a portion of the units be completed at UC Davis.

To request certification of a minor, **you must have a grade point average of 2.0 in all courses required for the minor.** At most, one course used in satisfaction of your major may be applied to your minor. If you elect more than one minor, these minors may not have any courses in common.

If you want to have completion of a minor certified on your transcript, you must obtain a minor petition from your dean’s office and file it no later than the deadline for filing for graduation. You can elect only one minor in a subject area. Requirements for the minor must be met by the time of graduation.

No minors are available in the College of Engineering, although students in Engineering may, with the approval of the Engineering dean’s office *and* the adviser in the minor department, elect a minor in either the College of Letters and Science or in the College of Agricultural and Environmental Sciences. You must pick up a minor petition in the office of the college that offers your minor and have the completed petition approved by the minor adviser and then certified by the Undergraduate Office of the College of Engineering. The Undergraduate Office in the College of Engineering has the primary responsibility for certifying minors for engineering students and should be consulted before you begin the minor sequence.

ACADEMIC CREDIT

Units of Credit

Academic work at the university is measured by “units of credit.” In conjunction with the letter grade you receive from the course instructor, units of credit give a fairly accurate evaluation of the amount of time you have devoted to a given subject. Units of credit also make it possible to anticipate the amount of work involved in a particular course and enable you to transfer from one campus or university to another without undue difficulty. (To convert quarter units to semester units, multiply by 0.66; from semester to quarter units, multiply by 1.5.)

Units of credit are assigned to courses based on the “Carnegie unit,” which assigns 1 unit of credit for three hours of work by the student per week. Usually this means one hour of lecture or discussion led by the instructor and two hours of outside preparation by the student. In laboratory courses, two or three hours of work in the laboratory are normally assigned 1 unit of credit.

In most courses at UC Davis, the standard procedure prevails, so that a 3-unit course meets for three hours a week, a 4-unit course for four hours, and so on. Courses that are an exception to this pattern may require additional class time or give more demanding assignments. If you have questions about the number of units assigned to a course, you should check the expanded course descriptions (available at your college, department, or on the Web) or ask the instructor what is required in terms of outside reading, term papers, problem sets or field trips. These are not always spelled out completely in the *General Catalog*. By knowing the amount of work that will be required, you can plan your course load more systematically and realistically.

Credit by Examination

Under certain prescribed conditions, currently registered students in good standing may receive course credit by taking an examination without formally enrolling in a course. You may obtain a petition and a copy of the prescribed conditions from the Office of the University Registrar. The petition is subject to the approval of the instructor giving the examination and the department involved.

The completed petition, accompanied by a fee of \$5.00, must be presented for final approval to the dean of your college or school, or if you are a graduate student, to the dean of Graduate Studies.

The credit received for the examination may not duplicate any credit you have already earned toward your degree. You may not use credit by examination to repeat any course you have taken previously, regardless of the grade you received in that course. The final results will be reported to the Office of the University Registrar, which will assign the appropriate grade and grade points to you. Since failure to pass the examination will be recorded as an *F*, you are encouraged to prepare fully for such an examination before attempting it.

You may also receive credit for learning in nonacademic settings through credit by examination.

To earn credit through the credit by examination process, the examination must be given by a UC Davis instructor and be for a course listed in the current *General Catalog*. Students are not eligible to take a credit by examination in a quarter in which they are not currently enrolled.

Concurrent Credit from Another Institution

A student may not obtain transfer credit for courses taken at a non-University of California campus in a term during which the student is registered as a full-time student at UC Davis. A variance can be obtained only by petitioning the dean of your college well in advance of the desired registration. When a variance is granted, units earned are counted toward minimum progress for the term in which the dual registration occurs. Summer Session courses are exempt from this regulation.

Students may gain credit for courses taken during the summer at other institutions, provided the courses parallel those given in the University of California. Assurance that such credit will be accepted, however, can be given only after the courses have been completed. You should arrange to have the transcripts of your Summer Session grades sent to Undergraduate Admissions and Outreach Services for evaluation.

Intercampus Visitor Program

Qualified undergraduates may take advantage of educational opportunities on other University of California campuses as an Intercampus Visitor (ICV). This program enables students who have completed at least one year in residence on their home campus and have maintained a grade point average of at least 2.0 to take courses not available on their home campus, to participate in special programs, or to study with distinguished faculty members on other campuses of the university. Students who meet the above requirements should complete an application available in the Office of the University Registrar.

Summer Sessions

One Shields Avenue
Davis, CA 95616-8715
530-757-3305 or 1-888-VIP-7580
summer-sessions@ucdavis.edu
Summer Abroad programs: 1-800-SUMMER6
<http://summer-sessions.ucdavis.edu>

Every summer, several thousand students earn units, complete their undergraduate degrees, expand their knowledge, do research, take special study courses, meet prerequisites or take courses that are often over-enrolled during the academic year by participating in Summer Sessions at UC Davis.

Summer Sessions offers more than 300 lower and upper division courses in a wide range of subject areas that provide full university credit transferable to most campuses. Since admission is open to virtually all adults, Summer Sessions traditionally attracts students from

universities and colleges, high school graduates and many other qualified applicants. Admission to a summer session, however, does not guarantee or imply admission to the university's regular academic quarters.

Summer session dates are listed in the academic calendar in the front of this catalog, and in the *Class Schedule and Registration Guide*. All UC Davis undergraduates will automatically receive our *Summer Sessions Catalog* and application materials by the end of April; non-UC Davis undergraduates should contact us by phone, e-mail, Internet address or in writing to the address above.

Summer abroad and special programs offered include Community Resources Development in San Francisco; Literature of the Wilderness in McCall, Idaho; the study of volcanoes in Hawaii; and other special topic programs of different lengths. Students often have the opportunity to study in England, France, Germany, Spain, Mexico, Italy, Japan, Peru, Cuba, Ireland, Scotland, Trinidad, Ghana, Guatemala, China, Greece, Panama and Australia.

UC/CSU/Community College Cross Enrollment

If you are interested in taking a particular class at a nearby California State University or community college campus, you may now do so through the Intersegmental Cross Enrollment program. Enrollment is limited to one course per term and participating students need the approval of both the home and the host campus. (Please note that the Los Rios Community College district is NOT participating in the program.)

Senate Bill 361 requires that UC, CSU and the California Community Colleges permit students to enroll in one course per term at a campus of either of the other two systems on a space available basis at the discretion of the two campuses. This program aims to encourage community college students to enroll concurrently in courses offered at local universities, potentially increasing the number of community college transfers, including students from underrepresented groups.

Students must meet certain qualifications and be certified by their home campus as to eligibility, residence, fee, financial aid and health status. Generally, students will be allowed to add a class, if space is available, after the add/drop period on the host campus. To add a course, students must obtain the faculty member's approval and signature on a Cross-Enrollment form, available at their home campus Registrar's Office. The student takes the signed form to the Registrar's Office at the host campus for processing. If you are interested in participating, come to the service counter at the Office of the University Registrar, 12 Mrak Hall, for information.

University Extension

Credit for a limited number of units may be granted for specified University Extension courses, subject to the regulations of the individual colleges (see Bachelor's Degree Requirements section). No grade points are assigned for courses completed through University Extension.

EXAMINATIONS

Midterms

In undergraduate courses for which a midterm examination is required, each student has the right to take the midterm (or submit the take-home examination as opted by the instructor) during one of the regularly scheduled meetings of the class as published in the *Class Schedule and Registration Guide*. The scheduling of a midterm examination at a time other than a regularly scheduled class meeting requires mutual consent of the instructor and each student registered in the course. A student who does not consent in writing to the different time must be permitted to take the examination (or submit the take-home examination) at the officially scheduled time. A student who consents in writing to the change of examination time waives the right to take the midterm at the officially scheduled time.

Final Examinations

Scheduling. The *Class Schedule and Registration Guide* lists the times that final examinations are to be held. These are set up according to the day-and-hour periods in which the classes are given during the quarter. This information is available in the *Class Schedule and Registration Guide* each term so that you can avoid final examination conflicts. A student who has multiple exams on the same day may discuss the situation with the instructors of the courses. There is no regulation mandating a change.

The scheduling of an examination at a time other than the specified time requires the mutual consent of the instructor and each student involved in the change. Any student who does not consent in writing to a different time must be permitted to take an examination (or submit the instructor-opted take-home examination) at the officially scheduled time. A student who consents in writing to a change in the final examination time waives the right to take the examination as originally scheduled. Departures from the published examination schedule should be carried out so as not to disadvantage students who are unable to accept the alternate schedule. An in-class final examination may not be rescheduled for a date earlier than the first day of finals week. The due date for a take-home final examination may not be rescheduled for a date earlier than the first day of finals week. A student who is improperly denied the right to take a required final examination on the published date (or submit the take-home examination as opted by the instructor) may file a petition with the Executive Council of the Davis Division of the Academic Senate by the end of the next regular term for appropriate action.

Requirements. Except under certain specified circumstances, Academic Senate Regulations require that final examinations be given in all undergraduate courses. Final examinations may be given in graduate courses. Exceptions to the regulation would be independent study courses, courses that consist of laboratory work only, and courses in which the examination has been waived (course descriptions will include the statement, "no final examination").

At the instructor's option, the final examination may be completely or in part a take-home examination. The

writing time (in undergraduate courses) of a take-home and an in-class final examination together should not exceed three hours. In each course in which a final examination is required, the students have the right to take the final examination (and/or submit the take-home examination) at the time published in the *Class Schedule and Registration Guide*.

An instructor may release each student's original examination, or a copy, at any time. Otherwise, the instructor will keep the exams, or copies thereof, until the end of the next quarter and students may pick up their exams during this period.

Disabilities. Students with documented disabilities may be entitled to in-class accommodations. The student shall provide the instructor with a letter from the Disability Resource Center (DRC) recommending those academic accommodations that the instructor is responsible for providing. Students must request accommodation as soon as possible, to allow the university reasonable time to evaluate the request and offer necessary adjustments. No accommodations shall alter the nature of the academic demands made of the student nor decrease the standards and types of academic performance, nor require facilities or personnel that cannot reasonably be provided. The instructor should consult with the student and DRC on any questions or concerns.

Religious observances. UC Davis seeks to accommodate any student who, in observance of a religious creed, encounters an unavoidable conflict with a test or examination schedule. The student is responsible for providing, in writing and at the beginning of the quarter, notification of a potential conflict to the individual responsible for administering the examination and requesting accommodation. Instructors will consider such requests on a case-by-case basis and determine whether such conflicts can be resolved without imposing on the instructor or the other students in the class an undue hardship which cannot be reasonably avoided. If so, the instructor will determine, in consultation with the student, a time during which the student can take the test or examination without incurring a penalty or violation to the student's religious creed.

GRADES

Every instructor is required to assign a grade for each student enrolled in a course. The following grades are used to report the quality of a student's work at UC Davis:

A	excellent
B	good
C	fair
D	barely passing
F	not passing (work so poor that it must be repeated to receive recognition)
P	passed (grade C– or better)
NP	not passed
S	satisfactory
U	unsatisfactory
I	incomplete (work is satisfactory but incomplete for a good cause)
IP	in progress

The grades A, B, C and D may be modified by a plus (+) or minus (–).

Grade Points

Grade points are assigned each letter grade as follows:

A+ = 4.0	B- = 2.7	D = 1.0
A = 4.0	C+ = 2.3	D- = 0.7
A- = 3.7	C = 2.0	F = 0.0
B+ = 3.3	C- = 1.7	P/NP = n/a
B = 3.0	D+ = 1.3	S/U = n/a

Grade Point Average (GPA)

The grade point average is computed on courses taken at the University of California, with the exception of courses taken in University Extension. The value of grade points over units attempted determines your grade point average. The grade point balance represents the number of grade points above or below a C average. The grades *IP*, *P*, *S*, *NP* and *U* carry no grade points and are not included in grade point computations. Incomplete (*I*) grades are not included in the GPA at the end of the quarter, but are counted as *F* in determining if a bachelor's degree candidate has earned the minimum 2.0 GPA required for graduation.

A student at UC Davis is expected to maintain a C (2.0 GPA) or better in all work undertaken in the university. If you fall below a C average, you are considered "scholastically deficient" (see Probation and Dismissal).

Passed/Not Passed (P/NP) Grading

Subject to regulation by the faculties of the colleges and schools, an undergraduate student **in good standing** may request to take specific courses on a Passed/Not Passed basis. Such requests must be submitted and confirmed before the 25th day of instruction.

The grade *P* is assigned for a grade of C- or better. Units thus earned are counted in satisfaction of degree requirements but are not counted in determining your grade point average.

The intent of this option is to encourage exploration in areas in which you have little or no previous experience by alleviating grading pressures. **The maximum number of units graded P that will be accepted for degree credit is one third of the units completed in residence on the Davis campus.** Consequently, at least two thirds of the units completed in residence at Davis and presented in satisfaction of degree requirements must be in courses taken for a letter grade.

In specific approved courses, instructors will assign only Passed or Not Passed grades. Such courses count toward the maximum number of units graded *P* allowable toward the degree. If you are planning to take courses on a *P/NP* basis, you should also familiarize yourself with the requirements of your particular school or college, which may have placed conditions or restrictions in addition to the university requirements. If you plan to attend graduate or professional school, you should consult with Advising Services regarding Passed/Not Passed grading.

If you elect the *P/NP* grading option for courses graded upon completion of a two- or three-quarter sequence (In-Progress grading), a petition must be submitted before half of the time covered by the *IP* grading has elapsed. The *P/NP* grading will then be in effect for the entire course sequence.

If you receive a *D* or an *F* in a course, you may not repeat it using the *P/NP* option. If you receive an Incomplete in a course you took for a letter grade, you may not complete the course on a Passed/Not Passed basis.

College of Agricultural and Environmental Sciences:

The Passed/Not Passed option should be used only for elective courses, not for courses taken to fulfill major requirements. An *NP* grade in a course required by the major could prevent graduation. When in doubt, check with your faculty adviser before electing to take a course on a Passed/Not Passed grading basis.

College of Engineering: Students enrolled in any undergraduate major offered by the College of Engineering may **not** exercise the Passed/Not Passed grading option for any course work presented in satisfaction of course or unit requirements for any undergraduate major or degree offered by the College of Engineering. Additionally, undergraduate students may not exercise the *P/NP* option for any course offered through the College of Engineering. **Courses offered only on a *P/NP* basis are acceptable for specific program area degree requirements.**

College of Letters and Science: Students enrolled in the College of Letters and Science are subject to an additional limitation on the number of units that may be completed employing the Passed/Not Passed grading option (see Bachelor's Degree Requirements for the college in the "Undergraduate Education" chapter). Graduating seniors, and other students planning to undertake graduate or professional studies, should consult an adviser before electing for Passed/Not Passed grading in courses required for the major program.

Satisfactory/Unsatisfactory (S/U)

The grade of *S* is awarded to graduate students for work in graduate courses that otherwise would receive a grade of B- or better and for work in undergraduate courses that otherwise would receive a grade of C- or better.

Graduate students, under certain circumstances, may be assigned grades of *S* or *U*, but units earned in this way will not be counted in calculating the grade point average. Petitions to elect *S/U* grading are available from the Graduate Studies Office and must be signed by your graduate adviser. Graduate students may petition to take no more than one course per quarter on an *S/U* grading basis. A graduate course in which a *C*, *D* or *F* grade is received may not be repeated with the *S/U* option.

In specific approved courses, instructors will assign only Satisfactory or Unsatisfactory grades. Such courses count toward the maximum number of units graded *S* allowable toward the degree, as specified by each degree program.

In-Progress (IP) Grading

For a course extending over more than one quarter (designated "deferred grading only, pending completion of sequence" in course descriptions), evaluation of student performance is deferred until the end of the final quarter. Provisional grades of *IP* are assigned in the intervening quarters and are replaced with the final grade at the completion of the sequence. In order to gain credit toward graduation, a student must successfully complete the entire sequence. (See above for electing *P/NP* grading for a course graded in-progress.)

Incomplete Grades

The grade of *I* may be assigned when a student's work is of passing quality and represents a significant portion of the requirements for a final grade, but is incomplete for a good cause as determined by the instructor. (Good cause may include current illness, serious personal problems, an accident, a recent death in the immediate family, a large and necessary increase in working hours or other situations of equal gravity.)

You may replace an *I* grade with a passing grade and receive unit credit (and grade points if the instructor assigns a letter grade) provided you satisfactorily complete the course work as specified by the instructor. In order to change your records, you must obtain a petition from the Office of the University Registrar and present it to your instructor for completion and mailing.

An *I* grade must be replaced with a letter grade (or *P* or *S* grade) before the end of the third succeeding quarter (excluding summer sessions) of the student's academic residence, or the grade will revert to an *F* (or *NP* or *U*). If a student's degree is conferred before the expiration of the time limit for an *I*-grade conversion, the graduated student shall have until the end of the third quarter succeeding the quarter in which the *I* grade was assigned to replace the *I* grade. If the grade is not replaced by then, the *I* grade will remain on the student's record.

You may not re-enroll for credit in a course for which an *I* grade has been assigned. An undergraduate student whose record shows more than 16 units of *I* grades will be subject to disqualification. A graduate student who accumulates more than eight units of *I* grades will be subject to probation.

Incomplete grades will not be included in your grade point average at the end of a quarter. However, at the time of graduation, any remaining *I* grades are included when your grade point average is computed in order to determine whether you have achieved the 2.0 average required for the bachelor's degree. An Incomplete grade, in these computations, has the same effect as a grade *F*, *NP* or *U*, depending on which option you have exercised. Therefore, it is recommended that students not delay the clearance of incomplete grades so as not to jeopardize graduation.

Retroactive Grade Changes

All grades except *I* and *IP* are final when filed by an instructor at the end of the quarter. No final grade

except *I* may be revised by examination or the submission of additional work after the close of the quarter.

If a clerical or procedural error in the reporting of a grade by the instructor can be documented, you may request a change of grade with a petition available from department offices. The request must be made by the fifth week of the following quarter.

Grade changes for "clerical" errors (such as incorrect addition of points), upon documentation, are automatically granted. Requests to interchange *P*, *NP*, *S*, or *U* grades with normal letter grades based upon student need (such as to allow graduation or to meet entrance requirements for professional school) do not involve clerical or procedural errors and are automatically denied. Thus, students should exercise the Passed/Not Passed or Satisfactory/Unsatisfactory grading options with caution.

Students are reminded of their responsibility to be aware of the procedures and regulations contained in this catalog and the *Class Schedule and Registration Guide*, to verify their class schedules, and to familiarize themselves with the expectations of their instructors. No changes, except completion of an *I* grade as noted above, can be made to the student's record once he or she has graduated.

Repeating Courses

Undergraduate students may only repeat courses in which they received a *D*, *F* or *NP*. Courses in which students received a grade of *D* or *F* may not be repeated on a *P/NP* grading basis. (Courses in which a grade of *NP* was received may be repeated on a *P/NP* grading basis.)

Degree credit for a repeated course will be given only once, but the grades assigned for both the first and second time a course is taken will appear on the student's transcript. In computing the GPA of undergraduates who have received a grade of *D*, *F* or *NP*, only the grade and corresponding grade points earned the second time a course is taken will be used, up to a maximum of 16 units for all repeated courses. After the 16-unit maximum is reached, the GPA shall be based on all grades assigned and total units attempted.

Repeating a course more than once requires approval by the appropriate college dean. Departments may restrict the repetition of a course if it is a prerequisite to a course the student has already completed with a grade of *C-* or better.

For luck, students leaving the library on their way to finals touch Bookhead, here enjoying his biannual cleaning.

Graduate students, with the consent of the appropriate graduate adviser and the dean of Graduate Studies, may repeat any course in which they received a *C*, *D*, *F* or *U*, up to a maximum of 9 units for all courses repeated. Courses in which a grade of *C*, *D* or *F* has been earned may not be repeated on a *S/U* basis. (Courses in which a grade of *U* was received may be repeated on a *S/U* basis.)

Degree credit for a repeated course will be given only once, but the grades assigned for both the first and second time a course is taken will appear on the student's transcript. In computing the GPA of graduate students who have received a grade of *C*, *D* or *F*, only the most recently earned grade for each course and corresponding grade points will be used, up to a maximum of 9 units for all courses repeated. After the 9-unit maximum is reached, the GPA shall be based on all grades assigned and total units attempted.

Mid-Term Grade Standing

Students wishing to know their grade at the mid-quarter should ask the instructor. Those who have deficient grades (*D*, *F* or *NP*) are urged to confer with their advisers.

Final Grades

Grades are generally available about three weeks after a quarter has ended. You can check your grades in a number of ways:

- Call RSVP to hear your grades, available on the dates published by the Office of the University Registrar
- Check your grades through SISWEB at <http://sisweb.ucdavis.edu>
- Use the Office of the University Registrar kiosks, MU and Mrak Hall

Transcripts

A record of each student's academic work at UC Davis is retained permanently by the Office of the University Registrar. Copies of your official transcript may be obtained from that office for \$4.00 a copy. Application for a transcript of record should be made at least two weeks in advance of the time needed.

Transcripts of all work done through University Extension or Concurrent Enrollment must be requested directly from the University Extension Office, 1333 Research Park Drive, Davis, CA 95616. Transcripts of work completed at another campus of the university or at another institution must be requested directly from the campus or institution concerned.

PROBATION AND DISMISSAL

The following provisions apply to all undergraduates. Graduate and professional students with scholarship deficiencies are subject to action at the discretion of their respective deans.

Scholastic Deficiencies

A student will be placed on probation or subject to disqualification for failure to meet qualitative or quantitative standards of scholarship.

The **qualitative standards** of scholarship require that a student maintain a *C* average (2.0) or better for all work undertaken in the university and for the work undertaken in any one quarter.

A student will be placed on **probation for qualitative reasons** if, at the end of any quarter, the student's grade point average (GPA):

- is less than 2.0, but not less than 1.5, for the quarter,
- or**
- is less than 2.0 for all courses taken within the University of California.

A student will be subject to **disqualification for qualitative reasons** if, at the end of any quarter,

- the student's grade point average is less than 1.5 for the quarter,
- or**
- the student's grade point average is less than 1.5 for all courses taken within the University of California.
- or**
- the student has attempted more than 16 units graded *I* (Incomplete),
- or**
- the student has spent two consecutive quarters on academic probation.

In the case of probation or disqualification, the official transcript will state "not in good standing." Once a student has met qualitative standards for scholarship, the notation will be removed from the transcript.

The **quantitative standards**, referred to as minimum progress requirements, define scholarship in terms of the number of units that you must satisfactorily complete. It is assumed that a student will earn the 180-unit minimum degree requirement within 12 quarters (four years). This means students must plan to complete, on average, 15 units per quarter. Because occasions arise which prevent students from achieving normal progress towards the degree, the campus has established minimum progress requirements, to which students must adhere. Minimum progress is defined as a total of 39 units passed, calculated at the end of every quarter for the preceding three quarters of enrollment.

A student will be subject to **disqualification for quantitative reasons** if the total number of units passed at UC Davis is **less than 39**, calculated at the end of every quarter for the preceding three quarters of enrollment.

Quantitative standards are not reflected on the official transcript.

The following courses may be counted toward unit minimum progress:

- Required non-credit courses, e.g., Mathematics B, will be evaluated according to the “Carnegie unit” rule and counted as units passed
- Repeated courses passed to improve *D* or *F* grades
- Courses passed in Summer Sessions at UC Davis or at another accredited school and transferred to UC Davis will be counted as units passed (applied to the quarter of registration just preceding the summer session)
- Courses passed by examination in accordance with policies established by the Divisional Committee on Courses (applied to quarter in which exam is taken)
- Courses that are *IP* (in progress) will be counted as units passed
- Courses graded *I* will be counted as units passed when replaced by a passing grade (applied to the quarter in which the *I* grade is received)

The dean of the student’s college may grant a student a minimum progress variance of one or more quarters for an acceptable reason.

Minimum progress requirements do not apply to students who have part-time status or to students who have their dean’s approval to carry less than the minimum progress load because of medical disability, employment, a serious personal problem, a recent death in the immediate family, or a serious accident involving the student.

Dismissal

Dismissal for either qualitative or quantitative reasons (defined above) is based on the decision of the dean of the college in which you are enrolled. Such dismissal is from the University of California system and not simply the college or the Davis campus. Should a former Davis student later wish to be readmitted on the Davis campus, the authority to do so rests with the dean of the college from which the student was dismissed. If you are dismissed from your college, you will automatically receive a full refund of registration fees paid.

See your faculty adviser or go to the dean’s office of your college if you need academic advising about probation and dismissal.

Transfer with Scholastic Deficiencies

To transfer from one University of California campus to another, or from one college or school to another on the same campus, a disqualified or probational student must obtain the approval of the dean whose jurisdiction is being sought. Following the transfer, the student is subject to supervision by the faculty of the new college, school or campus.

HONORS AND PRIZES

Scholarships

228 Voorhies Hall
530-752-2804; <http://faoman.ucdavis.edu/schol.htm>

By mail:
Scholarship Office
University of California
One Shields Avenue
Davis, CA 95616-8696

Students with outstanding academic records who show promise of continued scholarly achievement are encouraged to apply for scholarship recognition and awards. Awards include a financial honorarium or stipend.

Deans’ Honors Lists

According to Davis campus regulations, the quarterly Dean’s Honors List includes names of students who have completed, for a letter grade, a minimum of 12 units in a specific quarter with a grade point average equal to or higher than the minimum grade point average attained by the upper 16 percent of those registered in the same class level and college during that quarter. Honors lists will be posted quarterly outside deans’ offices or on the dean’s office Web sites, and a notation of these honors will be placed on each student’s permanent record by the Office of the University Registrar.

Graduation Honors

Honors at graduation are awarded to students who have a grade point average in the top percent of their college as shown in the table below. (The College of Letters and Science requires that additional criteria be met for high and highest honors—see explanation below.)

Total Quarter Units Completed at UC	Highest Honors	High Honors	Honors	Total
45-89	2%	2%	4%	8%
90-134	3%	3%	6%	12%
135+	4%	4%	8%	16%

Grade point averages from the winter quarter prior to graduation are used to determine the averages that will earn an honors designation. Following are the averages for winter quarter 2002. These averages will be used through winter 2003.

Percent Determining Cut-Off Point	Grade Point Average by College		
	Agricultural and Environmental Sciences	Engineering	Letters and Science
2%	3.912	3.915	3.882
3%	3.862	3.868	3.830
4%	3.820	3.823	3.790
6%	3.745	3.757	3.735
8%	3.692	3.711	3.685
12%	3.592	3.587	3.581
16%	3.492	3.484	3.500

An honors notation is made on students’ diplomas and on their permanent records in the Office of the University Registrar.

College of Letters and Science. Graduation with “honors” requires that a student meet the appropriate grade point requirement described in the above table for all UC courses completed. Students who meet the grade point requirement for graduation with honors, and who

complete the Honors Program of the College of Letters and Science, may be recommended by their departments for graduation with high honors or highest honors on the basis of an evaluation of their academic achievements in the major and in the honors project in particular. A notation shall appear on the student's official transcript indicating that the 194H Honors Thesis was completed. Graduating students will not be awarded honors with the bachelor's degree if more than eight units of grade I (Incomplete) appear on their transcripts. The College Committee on Honors may consider exceptions to this condition. Petitions for this purpose should be submitted to the dean's office.

The Honors Program of the College of Letters and Science

The Honors Program in the College of Letters and Science permits students to pursue a program of study in their major at a level significantly beyond that defined by the normal curriculum. It represents an opportunity for the qualified student to experience aspects of the major that are representative of advanced study in the field. Successful completion of the College Honors Program is a necessary prerequisite to consideration for the awarding of high or highest honors at graduation.

Entrance into the honors program requires that a student have completed at least 135 units with a minimum grade point average of 3.5 in courses counted toward the major. Other prerequisites for entrance into the program are defined by the major. The program consists of a project whose specific nature is determined by consultation with the student's major adviser. It may involve completion of a research project, a scholarly paper, a senior thesis, or some comparable assignment depending on the major. The project will have a minimum duration of two quarters and will be noted on the student's record by a variable unit course number or special honors course designation. Successful completion of the honors program requires that a minimum of six units of credit be earned in course work for the project.

Davis Honors Challenge

530-752-9797; <http://www-honors.ucdavis.edu>

The Davis Honors Challenge is a campuswide program for highly motivated students who are interested in enhancing their education through special courses, closer contact with faculty and dynamic interaction with academic peers.

DHC courses are limited in size so that participants receive substantial individual attention from faculty. In return, students are expected to participate actively in analyzing real world problems. Honors courses and small honors sections of regular courses also encourage individual student participation and self-challenge. Students satisfactorily completing the program will receive transcript notation for each academic year of participation.

First and second year students take two honors courses and one problem-oriented interdisciplinary seminar per academic year. Second year students have the option to substitute an honors contract for an honors course. Third year students are required to complete two honors contracts and one upper division honors seminar, a team-based project in conjunction with an outside interested party. Fourth year students participate in a year long project to identify real world problems, apply research, critical thinking, problem solving and communication skills to develop viable solutions for their outside party.

Other components of the DHC include honors living learning communities, a mentorship program and a service learning program. Each of these programs is designed to enhance students' college experience.

Entering first year students who file a "Statement of Intent to Register" at UC Davis will be mailed detailed information about the DHC application process. Continuing students may obtain information and an application from the DHC Office after the start of spring quarter.

Student- and community-run KDVS broadcasts music, news, public affairs and sports 24 hours a day, 365 days a year from its studios in Lower Freeborn.

Integrated Studies

530-752-9760

Integrated Studies is a campuswide, invitational, first-year residential honors program, now in its fourth decade. Integrated Studies offers specially designed, interdisciplinary honors courses that satisfy General Education requirements. Approximately 70 students live in an Academic Residential Community on campus and take three limited-enrollment honors courses (open only to Integrated Studies students) and two seminars.

Holders of Regents Scholarships, the university's most prestigious scholarship awards, are guaranteed places in Integrated Studies. Other highly qualified students are also invited to participate and are selected to create a balanced community of students from all three undergraduate colleges and the Division of Biological Sciences.

Prizes and Awards

The University Medal is the highest campus honor awarded to a graduating senior in recognition of superior scholarship and achievement. A College or School Medal is also given to the outstanding graduating student in each of the colleges and professional schools.

Departmental citations, special awards and prizes are also awarded to students for superior achievement and scholarship.

College of Agricultural and Environmental Sciences.

Each year, the outstanding graduating senior in the College is awarded a silver medal, known as the "Agricultural and Environmental Sciences Medal." Scholastic excellence (in a minimum of six quarters at UC Davis) is the primary basis for choosing the recipient. The Mary Regan Meyer Prize is awarded to an outstanding graduate who has demonstrated expertise and an interest in serving humanity. The Charles E. Hess Award is awarded to the graduate with the most noteworthy record of public/community service while at UC Davis. The Kinsella Memorial Prize, in honor of John E. Kinsella, is awarded annually to an outstanding individual who submits his or her Ph.D. dissertation during the spring, fall or winter quarter immediately preceding the due date for nomination.

College of Engineering. Each year, outstanding senior students in engineering are selected by their grade point averages as nominees for the M.S. Ghausi Medal. Academic excellence is the primary basis for selecting the recipient of the award.

College of Letters and Science. Graduating seniors with a distinguished academic record may be recommended by the faculty as nominees for the College's Herbert A. Young Medal. Each June, one medalist is selected from among the graduates of the current academic year. The Leon H. Mayhew Award is conferred upon the outstanding graduate majoring in the arts or humanities, preferably music, art, or literature. Academic excellence is the primary basis for selecting the recipients of these awards. The Lawrence J. Andrews prize is awarded to a student entering the senior year who not only has achieved academic excellence but who also has demonstrated interests outside of pure scholarship.

Chancellor's Award

This award recognizes students who have distinguished themselves through their excellence in and contribution to undergraduate research and encourages others to become involved in these types of efforts. Recipients of the award receive a certificate of commendation and inscribed plaque from the president of the university.

In conjunction with the Chancellor's Award, Professor Dean Simonton of UC Davis' Department of Psychology established an endowment for funding a cash prize of \$500 for each year's student recipient.

Honorary Societies

Election to an honorary society is one of the most prestigious awards a student can receive. At UC Davis, the following honorary societies are represented:

- Alpha Kappa Delta (Sociology)
- Alpha Omega Alpha (Medicine)
- Alpha Zeta (College of Agricultural and Environmental Sciences)
- Delta Phi Alpha (German)
- Gamma Sigma Delta (College of Agricultural and Environmental Sciences; Biological Sciences)
- Golden Key (All colleges and schools)
- Kappa Omicron Nu (Family and Consumer Sciences)
- The National Society of Collegiate Scholars (All colleges and schools)
- Omicron Delta Epsilon (Economics)
- Order of Omega (Fraternities–Sororities)
- Order of the Coif (Law)
- Phi Alpha Theta (History)
- Phi Beta Kappa (College of Letters and Science)
- Phi Kappa Phi (All colleges and schools)
- Phi Sigma (Biological Sciences)
- Phi Zeta (Veterinary Medicine)
- Pi Delta Phi (French)
- Pi Mu Epsilon (Mathematics)
- Pi Sigma Alpha (Political Science)
- Prytanean Honor Society (All colleges—undergraduate women only)
- Psi Chi (Psychology)
- Sigma Pi Sigma (Physics)
- Sigma Xi (All colleges and schools—research)
- Tau Beta Pi (Engineering)

LEAVING UC DAVIS

Graduation

Each candidate for an undergraduate degree must file an **Application for Graduation** with the Office of the University Registrar for the quarter in which the candidate plans to receive the degree. The dates for filing are published in the Academic Calendar at the front of this catalog and the quarterly *Class Schedule and Registration Guide*.

Students in the College of Agricultural and Environmental Sciences must have their Major Certification form evaluated by the dean's office before their candidacy for a degree can be finalized (see Bachelor's Degree Requirements for the college in the Undergraduate Education chapter).

Leave of Absence: Planned Educational Leave Program (PELP)

The Planned Educational Leave Program allows students to suspend academic work at UC Davis, leave the campus and later resume studies at UC Davis with a minimum of procedural difficulties.

Any registered student on the Davis campus, undergraduate or graduate, is eligible to enroll in the Planned Educational Leave Program, although restrictions may be imposed on the number of times a student can participate in the program. Undergraduates apply for PELP at the Office of the University Registrar. Graduate students apply through their departments and professional students apply through their dean's office. Applications for PELP must be filed no later than the tenth day of instruction but must be filed by the first day of instruction for a full refund. After filing your PELP form, you must file an exit form with Student Accounting.

An application fee of \$40 is charged to your account when you enroll in the PELP program. This fee is identical to that paid by a student who withdraws and is required to pay a readmission fee upon return.

The minimum Planned Educational Leave is one full quarter; the maximum leave is one full academic year. Applications for PELP should be filed no later than the first day of instruction. While approved applications can be accepted as late as the tenth day of instruction, filing after the first day of instruction will entitle you to only a partial refund of fees paid, in accordance with the Schedule of Refunds. The Schedule of Refunds refers to **calendar days** beginning with the first day of instruction. The effective date for determining a refund of fees

is the date the completed and approved PELP form is returned to the Office of the University Registrar. (See the "Fees, Expenses and Financial Aid" chapter.)

While students may receive academic credit at other institutions and transfer this credit to UC Davis (subject to rules concerning transfer credit), participants are reminded that the intent of the program is to "suspend academic work." Therefore, students should carefully evaluate the desirability of taking academic work while away from the campus during PELP. Students enrolled in PELP are not eligible to enroll in concurrent courses at the Davis campus, or to earn academic credit at Davis during the PELP leave.

Readmission is guaranteed assuming you resume regular academic work at the agreed-upon date and satisfy any holds that may have been placed on your registration. Students who do not return at the agreed-upon date and who do not officially extend their leave will be automatically withdrawn from the university.

You will not be eligible to receive normal university services during the planned leave. Certain limited services, however, such as placement and student employment services, counseling and faculty advising are available. Students on Planned Educational Leave may purchase a health care card from the Student Health Service and may retain library privileges by purchasing a library card. International students should consult Services for International Students and Scholars to find out how the Planned Educational Leave will affect their status. Grants and other financial aids will be discontinued for the period of the leave, but every effort will be made, where legally possible, to allow you to renegotiate loan payment schedules and to ensure the availability of financial aid upon your return.

Withdrawal

Withdrawals may be granted by the university for emergency reasons or for good cause. Petitions for withdrawal (Notice of Cancellation/Withdrawal) are available at the Office of the University Registrar. A percentage of fees paid may be refunded, in accordance with the Schedule of Refunds (see the "Fees, Expenses and Financial Aid" chapter). The effective date for determining a refund of fees is the date the completed withdrawal form is filed with the Office of the University Registrar. After filing your withdrawal form, you must then file an exit form with Student Accounting to complete your withdrawal.

If you are receiving financial aid, you must report your change of status immediately, in person or by mail, to the Financial Aid and Student Accounting Offices. If you are receiving veterans benefits, you must also report your withdrawal to the Veterans Affairs Office.

Retroactive Withdrawals. Petitions for retroactive withdrawals may be obtained from the Office of the University Registrar. Reasons for seeking such are medical problems, severe emotional difficulties, or death or severe illness in the immediate family. Petitions should include a detailed account of the problem, appropriate documentation and an adequate explanation of why withdrawal was not taken during the quarter in which the problem occurred.

UC DAVIS

**UNDERGRADUATE
EDUCATION**

**UNDERGRADUATE
EDUCATION**

**UC DAVIS
AGGIES**

**2002-2003
2003-2004**

UNDERGRADUATE EDUCATION

Students may choose from over 150 major programs in a wide variety of disciplines offered by the three undergraduate colleges. Minor programs, more than 60 in all, are offered by the College of Agricultural and Environmental Sciences and the College of Letters and Science.

College of Agricultural and Environmental Sciences

Office of the Dean
150 Mrak Hall
530-752-0108; <http://www.aes.ucdavis.edu>

Major programs in the College of Agricultural and Environmental Sciences highlight the multiple connections among agricultural sciences, environmental sciences and human sciences within the larger context of the quality of life in the global economy. The majors fall into three broad areas of study described below. Majors in a fourth area of study, the biological sciences, are offered through both the College of Agricultural and Environmental Sciences and the College of Letters and Science and are administered by the Division of Biological Sciences. Refer to the following section, "Division of Biological Sciences," for more information. The College of Agricultural and Environmental Sciences also offers two collegewide degree programs and two collegewide non-degree programs.

The Undergraduate Programs

Agricultural Sciences

These majors prepare students in animal biology and the management of environmental resources as needed to develop sustainable animal production technologies. Also considered is the impact of production and management processes on animal health and welfare, human diet and health, and the natural environment.

The majors that focus on plant science provide a strong background in the context of agricultural and environmental systems and societal needs; ecological understanding of food and fiber production systems; biological and economic principles that underlie management decisions in agribusiness; and a basic background in all areas of plant biology, including plant development, plant protection, biotechnology and postharvest physiology.

Majors:

Agricultural Management and Rangeland Resources, B.S.
Animal Biology, B.S.
Animal Science, B.S.
Animal Science and Management, B.S.
Avian Sciences, B.S.
Biotechnology, B.S.
Crop Science and Management, B.S.
Entomology, B.S.
Plant Biology, B.S.
Viticulture and Enology, B.S.

Minors:

Agricultural Entomology (Entomology)
Applied Computing and
Information Systems (Agronomy)
Animal Science
Apiculture Entomology (Entomology)

Avian Sciences
Entomology
Environmental Horticulture
Fungal Biology and Ecology (Plant Pathology)
Insect Ecology (Entomology)
Medical-Veterinary Entomology (Entomology)
Nematology
Precision Agriculture (Biological and Agricultural Engineering)

Environmental Sciences

These majors focus on the broad facets of the human and natural environments and their interactions. They draw on the social, physical and biological sciences as needed to prepare students for leadership and advanced studies in the areas of natural resource management, environmental quality and stewardship, community planning and design, and public policy decision making.

Majors:

Atmospheric Science, B.S.
Environmental and Resource Sciences, B.S.
Environmental Biology and Management, B.S.
Environmental Horticulture and Urban Forestry, B.S.
Environmental Policy Analysis and Planning, B.S.
Environmental Toxicology, B.S.
Hydrology, B.S.
Landscape Architecture, B.S.
Soil and Water Science, B.S.
Wildlife, Fish and Conservation Biology, B.S.

Minors:

Applied Biological Systems Technology (Biological and Agricultural Engineering)
Atmospheric Science (Land, Air and Water Resources)
Energy Policy (Environmental Science and Policy)
Environmental Policy Analysis (Environmental Science and Policy)
Environmental Toxicology
Geographic Information Systems (Biological and Agricultural Engineering)
Geographic Studies (Environmental Design)
Hydrology (Land, Air and Water Resources)
Landscape Restoration (Environmental Horticulture)
Soil Science (Land, Air and Water Resources)

Human Sciences

These majors foster a deeper understanding of the multiple connections between scientific and cultural issues in the context of human health and the quality of life. Basic physical and biological science, social science, design, and economic principles are taught in this context, linking food and fiber production to consumption, emerging knowledge to societal applications and policy, and human development to active, informed citizenship. Emphasis is on linking resources for humans with humans as resources. Physiological, social, and aesthetic dimensions of the human experience are explored.

Majors:

Clinical Nutrition, B.S.
Community and Regional Development, B.S.
Design, B.S.
Fermentation Science, B.S.
Fiber and Polymer Science, B.S.
Food Biochemistry, B.S.
Food Science, B.S.

Human Development, B.S.
Managerial Economics, B.S.
Nutrition Science, B.S.
Textiles and Clothing, B.S.

Minors:

Aging and Adult Development
(Human and Community Development)
Agricultural and Managerial Economics
(Agricultural and Resource Economics)
Community Development (Human and
Community Development)
Community Nutrition (Nutrition)
Fiber and Polymer Science (Textiles and Clothing)
Food Service Management (Nutrition)
Human Development
(Human and Community Development)
Nutrition and Food (Nutrition)
Nutrition Science (Nutrition)
Textiles and Clothing

Collegewide Programs

The collegewide programs cut across all of the above areas, providing students in a variety of majors with a background in such areas as public policy, economic principles in a global context, and the intersections among environmental, agricultural and socio-economic issues. Collegewide programs also include non-degree, lower division curricula aimed at providing students with a foundational knowledge base and the potential for developing individualized programs.

Majors:

Individual Major, B.S.
International Agricultural Development, B.S.

Minors:

International Agricultural Development
Science and Society

Non-degree programs:

Exploratory
Science and Society

Division of Biological Sciences

(College of Agricultural and Environmental Sciences
and College of Letters and Science)

Dean's Office
202 Life Sciences Addition
530-752-0410; <http://www.dbs.ucdavis.edu/undergrad>

The Division of Biological Sciences is an intercollege unit that coordinates campuswide programs in basic biology and administers undergraduate programs in the core disciplines of biology on behalf of the College of Agricultural and Environmental Sciences and the College of Letters and Science.

The division is organized into five sections that represent major themes of modern biology: Evolution and Ecology; Microbiology; Molecular and Cellular Biology; Neurobiology, Physiology, and Behavior; and Plant Biology. The individual sections offer seven specialized majors, each focusing on one of the core disciplines of basic biology. The major in Biological Sciences, Exercise Biology and the Bodega Marine Laboratory Program are offered by the entire division.

The Undergraduate Programs

Biological Sciences

The biological sciences major is broad in concept, designed to span the numerous core disciplines of biology. The major covers most dimensions of the study of life, ranging from molecules and cells to populations of organisms. While emphasizing breadth, the biological sciences major also requires the student to select an area of emphasis that provides concentrated attention to one facet of biology at the upper division level. Each area of emphasis coincides with one of the divisional sections.

Major:

Biological Sciences, A.B., B.S.

Minor:

Biological Sciences

Evolution and Ecology

The major in evolution and ecology offers the student a broad background in the theoretical and empirical basis of our understanding of the evolution and ecology of living organisms. The program of study begins with a core of introductory courses in mathematics, physical sciences, and biology. These are followed by survey courses in evolution and ecology and more specialized courses that allow the student to focus his or her studies.

Major:

Evolution and Ecology, A.B., B.S.

Exercise Science

The major in exercise biology is an integrative program of study, encompassing the physiological, biomechanical and behavioral aspects of exercise and physical activity. Our focus is on both the acute and adaptive effects of physical activity (and inactivity). Exercise biology deals with the mechanisms and consequences of activity from the molecular to the organismal (human ecological) level. We examine these mechanisms and consequences during growth, development, aging, disease and in altered environmental conditions. The exercise biology major encompasses the critical aspects of an integrative program in applied human biology.

Major:

Exercise Biology, A.B., B.S.

Minor:

Exercise Biology

Microbiology

Microbiology deals with bacteria, yeasts and other fungi, algae, protozoa, and viruses. These microorganisms are ubiquitous in nature and play a crucial role in areas such as agriculture, biotechnology, ecology, medicine, and veterinary science. The field of microbiology contributes to areas of fundamental inquiry such as biochemistry, cell biology, evolution, genetics, molecular biology, pathogenesis, and physiology.

Major:

Microbiology, A.B., B.S.

Molecular and Cellular Biology

The Section of Molecular and Cellular Biology offers three majors. The biochemistry and molecular biology major introduces students to the chemistry of living organisms and the experimental techniques that are

used to probe the structures and functions of biologically important molecules. Students who enjoy both chemistry and biology and who are comfortable with quantitative approaches to problem solving will find this major a rewarding field of study.

The cell biology major provides a comprehensive understanding of the cell, the basic structural and functional unit of all living organisms. The major emphasizes the principles that govern how biomolecules interact with one another to organize themselves into higher order structures that comprise cells and how cellular organization and function contribute to the development, maintenance, and reproduction of adult organisms.

The genetics major provides a broad background in the biological, mathematical, and physical sciences basic to the study of heredity and evolution. The major is sufficiently flexible to accommodate students interested in the subject either as a basic discipline in the biological sciences or in terms of its applied aspects such as biotechnology, medicine, and agriculture.

Majors:

Biochemistry and Molecular Biology, B.S.

Cell Biology, B.S.

Genetics, B.S.

Neurobiology, Physiology, and Behavior

The neurobiology, physiology, and behavior major emphasizes the understanding of vital functions common to all animals. All animals perform certain basic functions—they grow, reproduce, move, respond to stimuli, and maintain homeostasis. The physiological mechanisms upon which these functions depend are precisely regulated and highly integrated. Actions of the nervous and endocrine systems determine behavior and the interaction between organisms and their physical and social environments. Students in this major will study functional mechanisms; the control, regulation, and integration of these mechanisms; and the behavior which relates to those mechanisms at the level of the cell, the organ system, and the organism.

Major:

Neurobiology, Physiology, and Behavior, B.S.

Plant Biology

Plant biology is the study of plants as organisms. It includes the newer disciplines of cellular and molecular plant biology and the traditional areas of botany, such as anatomy, morphology, systematics, physiology, mycology, phycology, ecology, and evolution. The major provides breadth in diverse areas of plant biology and depth in one of several areas of specialization.

Major:

Plant Biology, A.B., B.S.

Minor:

Plant Biology

Divisionwide Program

Bodega Marine Laboratory Program

A full quarter of undergraduate course work in marine biology is available each spring quarter at the Bodega Marine Laboratory (BML) located in Bodega Bay, CA. Course offerings include lecture and laboratory instruction in the developmental biology and physiological adaptation of marine organisms, population biology and ecology, a weekly colloquium, and an intensive individual research experience under the direction of laboratory faculty (Biological Sciences courses 120, 120P, 122, 122P, 123; Neurobiology, Physiology, and Behavior 141, 141P). The program is residential, with students housed on the laboratory grounds. Participants are assessed a room and board fee in addition to standard campus registration fees. This is a 15 unit program. Course offerings and instructors may vary from year to year. Additional information is available from the Bodega Marine Laboratory at (707) 875-2211, P.O. Box 247, Bodega Bay, CA 94923.

College of Engineering

Undergraduate Advising Office

1050 Engineering II

530-752-0553; <http://www.engr.ucdavis.edu>

Engineering is the profession in which the physical and biological sciences are applied in a practical way for the benefit of society. As an engineering student, you will learn to observe and describe technological problems and to seek useful solutions to them. Your skills upon graduation will be useful to you not only as an engineer, but also as a professional in management, sales, operations, manufacturing, and other fields.

Sixteen undergraduate engineering curricula, including five formal double-major programs, are offered. Each of these is a four-year program leading to the degree of Bachelor of Science. Eleven programs are accredited by the Engineering Accreditation Commission of the Accreditation Board for Engineering and Technology (ABET), the nationally recognized accrediting body for engineering curricula: Aeronautical Science and Engineering, Biological Systems Engineering, Chemical Engineering, Chemical Engineering/Biochemical Engineering, Civil Engineering, Computer Engineering, Computer Science and Engineering, Electrical Engineering, Electrical Engineering/Materials Science and Engineering, Materials Science and Engineering, and Mechanical Engineering.

The four-year undergraduate program is divided into two parts: the Lower Division Program and the Upper Division Program.

Lower Division Programs. If you enter the College of Engineering with fewer than 90 quarter units of credit, follow the lower division program specified for your major. If you enter the College with 90 or more quarter units of credit, you must fulfill the requirements for transfer students outlined in this chapter under “College of Engineering, Unit Requirements.”

Upper Division Programs. If you have completed the requirements for the lower division program or have entered the College of Engineering with more than 90 quarter units of credit, you should follow the upper division requirements for the major you have selected from the programs that follow.

Minor Programs: The College of Engineering does not offer minor programs.

The Undergraduate Programs

Applied Science

The Department of Applied Science offers a major in Optical Science and Engineering. The objective of the Optical Science and Engineering program is to provide a basic education in the fundamental principles of optics combined with key courses in physics, mathematics, and the engineering applications of optics. There is a rapidly growing national demand for engineers educated in optical science and engineering. Much of the high-technology infrastructure is based upon optics and its applications, the most prominent being optical digital information transmission. In addition, engineers trained in optical science and engineering are in strong demand in health care and life science, optical sensing for environmental and weather applications, energy-use reduction, commercial camera and space-program optical applications, and national defense applications.

Majors:

Optical Science and Engineering, B.S.

Biological and Agricultural Engineering

The Department of Biological and Agricultural Engineering offers two majors. Biological Systems Engineering majors learn to combine the science and art of engineering with the science of biology to design systems that influence, control, or use biological materials and organisms for improving the quality of life. Specific objectives include designing systems to process biological materials into consumer products; designing machines to interact with biological systems in disciplines ranging from agriculture to medicine; managing, recycling, and using wastes; developing systems to protect and preserve our natural resources and environment; developing and improving processing systems for food; designing equipment and systems that improve nutrition and diets; and minimizing waste discharge to the environment.

Majors:

Biological Systems Engineering, B.S.

Biomedical Engineering

The Department of Biomedical Engineering advances fundamental medical concepts; creates knowledge from the molecular to the organ systems levels; and develops innovative biologics, materials, processes, implants, devices and informatics approaches. These approaches

are applied to the prevention, diagnosis and treatment of disease. The objective is to prepare students for employment in companies that manufacture medical assist devices, human tissue products and therapeutics. The program also prepares students to enter a graduate program in biomedical engineering or pursue professional degrees in medicine and related health fields.

Majors:

Biomedical Engineering, B.S.

Chemical Engineering and Materials Science

The Department of Chemical Engineering and Materials Science offers four majors, including two approved double majors.

Chemical Engineering majors learn to apply chemical and engineering principles to create useful products ranging from antibiotics to zirconium, from petroleum to plutonium, from agricultural chemicals to plastics. Specific objectives include the design of industrial processes as diverse as integrated circuit materials production, integrated waste management, and petroleum refining.

Chemical/Biochemical Engineering majors combine chemical engineering studies with studies in the life sciences and bioprocess engineering. Bioprocess engineering is the application of engineering principles to develop, optimize, and commercialize manufacturing processes. Specific objectives include pharmaceuticals production, environmental repair, industrial chemical production, and food production.

Materials Science and Engineering majors learn to understand the relationships among microscopic structure, properties, and behavior of materials in order to produce new and improved materials with capabilities far superior to common metals, alloys, and ceramics. Specific objectives include the development of materials for high-speed transportation systems, surgical and dental implants, new generations of power plants, and solid-state electronic devices in computer and optical communications technology.

Majors:

Chemical Engineering, B.S.

Chemical Engineering/Materials Science and Engineering, B.S.

Chemical/Biochemical Engineering, B.S.

Materials Science and Engineering, B.S.

Civil and Environmental Engineering

Civil Engineering majors learn to apply the principles of the physical and biological sciences and engineering to plan and design systems to improve the quality of life. Specific objectives include providing potable water and freedom from disease-carrying wastes; protecting the natural environment; mitigating the effects of earthquakes and other natural disasters; designing land-, water-, and air-transportation systems; and building roads and structures.

Majors:

Civil Engineering, B.S.

Civil Engineering/Materials Science and Engineering, B.S.

Computer Science and Engineering

The field of computer science and engineering encompasses the organization, design, analysis, theory, programming, and application of digital computers and computing systems. The curriculum develops versatile engineers with backgrounds spanning a broad computer/software spectrum. The Computer Science and Engineering major provides a solid background in mathematics, physics, chemistry, and electronic circuits and systems—all supporting the computer hardware and software courses that form the focus of the curriculum. A key theme is the hardware/software interaction in computer system design; this theme is reflected in the balance between hardware and software course requirements and in the orientation of the courses themselves. The major requires more humanities and social science electives than other college majors, in order to produce the verbal skills and intellectual breadth demanded by today's employers.

Major:

Computer Science and Engineering, B.S.

Electrical and Computer Engineering

Electrical Engineering majors learn to apply the principles of the physical sciences and engineering to the design, analysis, development, production, and evaluation of electronic systems. Specific objectives include the provision of systems for communications, control, signal processing, integrated circuit fabrication, optoelectronics, consumer electronics, and digital systems.

Computer Engineering majors study the design, development, analysis, organization, theory, programming, and application of digital computers. Specific objectives include developing the student's ability to design both software and hardware. In comparison to the Computer Science and Engineering major, the Computer Engineering major provides greater emphasis on hardware in the key hardware/software interaction in computer system design.

Majors:

Computer Engineering, B.S.

Electrical Engineering, B.S.

Electrical Engineering/Materials Science and Engineering, B.S.

Mechanical and Aeronautical Science Engineering

Aeronautical Science and Engineering majors learn to apply the principles of the physical sciences and engineering to vehicles whose motion is determined by aerodynamic forces. Specific objectives include the design, development, and manufacture of aircraft and other transportation systems integrating the disciplines associated with aerodynamics, propulsion, structures, and guidance/control.

Mechanical Engineering majors learn to apply physical and mechanical principles to the design and manufacture of machines and products, energy conversion systems, and equipment for guidance and control. Specific objectives include the provision of products and processes for intelligent manufacturing systems, biomechanical and sports equipment, power generation systems, propulsion for transportation, integration of vehicles and automated highways, and applications of computer and automation technologies.

Majors:

Aeronautical Science and Engineering, B.S.

Mechanical Engineering, B.S.

Mechanical Engineering/Materials Science and Engineering, B.S.

College of Letters and Science

Office of Undergraduate Education and Advising
Room 200, Social Sciences and Humanities Building
530-752-0392; <http://www.ls.ucdavis.edu>

Major programs in the College of Letters and Science provide students systematic exposure to the key principles, methods, findings and representations of a selected area of study. In pursuing a major, students gain intellectual depth and competency in that subject matter, explore important linkages with collateral fields of inquiry, and are encouraged to engage in independent study.

Most of the academic programs offered through the college are grouped in three divisions: Humanities, Arts, and Cultural Studies; Mathematical and Physical Sciences; and Social Sciences. One collegewide degree program, the individual major, also is available. A set of majors in the basic biological sciences is offered through both the College of Letters and Science and the College of Agricultural and Environmental Sciences and is administered by the Division of Biological Sciences. Refer to the earlier section, "Division of Biological Sciences," for more information.

The Undergraduate Programs

Division of Humanities, Arts, and Cultural Studies

These majors focus centrally on the artifacts, expressions and concerns of humankind in various cultures and times. They provide students the opportunity to explore the creation, performance and analysis of works of art, the language and customs of non-English speaking societies, the theory and criticism of literature, and the peoples and cultures of this nation and its hemisphere. Students interested in studying these types of issues may select from more than 20 different majors.

Majors:

African American and African Studies, A.B.
 American Studies, A.B.
 Art History, A.B.
 Art Studio, A.B.
 Asian American Studies, A.B.
 Chicana/Chicano Studies, A.B.
 Chinese, A.B.
 Classical Civilization, A.B.
 Comparative Literature, A.B.
 Dramatic Art, A.B.
 English, A.B.
 French, A.B.
 German, A.B.
 Italian, A.B.
 Japanese, A.B.
 Medieval Studies, A.B.
 Music, A.B.
 Native American Studies, A.B.
 Nature and Culture, A.B.
 Religious Studies, A.B.
 Russian, A.B.
 Spanish, A.B.
 Women's Studies, A.B.

Minors:

African American and African Studies
 American Studies
 Art History
 Art Studio
 Asian American Studies
 Chicana/Chicano Studies
 Chinese
 Classical Civilization
 Comparative Literature
 Dramatic Art
 English
 Film Studies
 French
 German
 Global and International Studies
 Greek
 Italian
 Japanese
 Latin
 Medieval Studies
 Music
 Native American Studies
 Nature and Culture
 Religious Studies
 Russian
 Social and Ethnic Relations
 Spanish
 Women's Studies

Division of Mathematical and Physical Sciences

These majors focus primarily on the description and interpretation of the structure, processes and events of the physical universe. They provide students the opportunity to explore in depth the structure, properties and reactions of substances; fundamental mathematical techniques and models and their application to the interpretation and explanation of phenomena; studies of matter and energy and their interconversions; the nature and development of computer languages; and earth and environmental processes. Students interested in studying these types of subjects may select from eight different majors. The division strongly encourages undergraduates to enroll in undergraduate research projects with one-on-one instruction by faculty scholar/researchers.

Majors:

Applied Physics, B.S.
 Chemistry, A.B., B.S.
 Computer Science, B.S.
 Geology, A.B., B.S.
 Mathematics, A.B., B.S.
 Natural Sciences, B.S.
 Physics, A.B., B.S.
 Statistics, A.B., B.S.

Minors:

Computer Science
 Environmental Geology
 Geology
 Geophysics
 Mathematics
 Physics
 Statistics

Division of Social Sciences

These majors focus largely on issues and problems that characterize social, cultural, political, and economic life across human societies. They provide students the opportunity to explore the relationships between people and the groups and organizations of which they are a part, the antecedents of individual behavior, the development of political and economic systems, the social forces that have shaped the contemporary world, and the foundations of language, thought, knowledge and perception. Students interested in studying these types of issues may select from more than a dozen different majors.

Majors:

- Anthropology, A.B., B.S.
- Communication, A.B.
- East Asian Studies, A.B.
- Economics, A.B.
- History, A.B.
- International Relations, A.B.
- Linguistics, A.B.
- Philosophy, A.B.
- Political Science, A.B.
- Political Science–Public Service, A.B.
- Psychology, A.B., B.S.
- Sociology, A.B.
- Sociology–Organizational Studies, A.B.

Minors:

- Anthropology
- Communication

- East Asian Studies
- Economics
- Economy, Justice and Society
- Education
- History
- History and Philosophy of Science
- Jewish Studies
- Linguistics
- Philosophy
- Political Science
- Psychology
- Sociology
- War-Peace Studies

Collegewide Program

Students whose academic interests cannot be satisfactorily met through the completion of an established major have the opportunity to develop an individual major. Individual majors may reflect the most recent trends in scholarship and research and are typically interdisciplinary in nature. The major proposal is developed in close and active consultation with two faculty advisers from the academic disciplines most closely related to the subject matter of the individual major. Careful faculty guidance and review assure that individual majors are comparable in academic rigor and intellectual coherence to those regularly available through the departments and programs of the college.

Major:

- Individual Major, A.B., B.S.

Bachelor’s Degree Requirements

University Requirements

All students must fulfill the following University of California requirements:

- Subject A
- American History and Institutions
- Unit Requirement
- Residence Requirement
- Scholarship Requirement

General Education Requirement

Students must complete three courses in the two areas of *topical breadth* outside the assigned area of their major. Students also must complete three *writing experience* courses and one *social-cultural diversity* course.

College Requirements

College of Agricultural and Environmental Sciences

- Unit
- Residence
- Scholarship
- English Composition

College of Engineering

- Unit
- Residence
- Scholarship
- English Composition
- Design

College of Letters and Science

- Unit
- Residence
- Scholarship
- English Composition
- Area (Breadth)
- Foreign Language (A.B. and B.A.S. degrees)

Major Requirements

Course requirements for each major are listed in the Programs and Courses section of this catalog.

BACHELOR'S DEGREE REQUIREMENTS

You must satisfy four groups of requirements before you can become eligible for candidacy for the bachelor's degree. (See box on previous page.) The four groups are:

- University requirements, which apply to all colleges;
- General Education requirement, which applies to all colleges;
- College requirements; and
- Major requirements.

Detailed information on university requirements, the General Education requirement and college requirements can be found in this chapter.

Every student is responsible for seeing that all of his or her degree requirements are fulfilled.

UNIVERSITY REQUIREMENTS

All students must fulfill the following University of California requirements.

Subject A: English Requirement

The university requires every undergraduate student to demonstrate college-level proficiency in English composition. Satisfaction of the Subject A requirement is a prerequisite to all other undergraduate courses in English.

The requirement, as determined by Undergraduate Admissions, may be met in one of the following ways:

- By achieving a score of 680 or higher on the SAT II-Writing Test.
- By achieving a grade of 5, 4 or 3 on the College Board Advanced Placement Examination in English.
- By achieving a score of 5 or above on the International Baccalaureate's Higher Level English A Examination.
- By entering the university with credentials showing the completion of an acceptable 3 semester-unit or 4 quarter-unit college-level course in English composition with a grade of C or better.
- By writing a passing essay on the Subject A Examination. This examination may be taken **only once** prior to enrollment. It is offered in the spring at local sites throughout California; a student admitted for fall quarter who has not already satisfied the Subject A requirement must take this examination. An out-of-state student or any California freshman admitted after mid-April will take another form of the Subject A Examination, which will be offered on the UC Davis campus during the orientation period each quarter. For the time and location, consult the *Class Schedule and Registration Guide*, published before the beginning of each quarter.

If you have not satisfied the requirement in one of the ways described above, *you must enroll in English 57 during your first quarter of residence at the university, or as soon thereafter as space is available in the course.* English 57, offered by Sacramento City College on the Davis campus, counts as 4.5 units on your study list and toward minimum progress but is not transferable as units toward graduation. To satisfy the requirement, stu-

dents must pass the Subject A Examination offered as the final examination for English 57. Students failing the examination must repeat English 57. If the requirement has not been satisfied by the end of your third quarter, and you were not required to take courses for non-native speakers of English in the Linguistics program, you may be disenrolled from the University.

Students whose native and school language is not English, and some students whose schooling combines work in the United States and in another country, must demonstrate proficiency in English. The level of proficiency must meet the standards of both the non-native speakers of English program and the Subject A program. The results of the Subject A Examination and a special examination in English administered during the orientation period each quarter determine whether a student has met the Subject A requirement or must take specific course work in the Linguistics program. Students held for Linguistics course work have three quarters to meet the Subject A requirement **plus** the number of quarters required in Linguistics.

American History and Institutions

The American History and Institutions requirement ensures that every graduating student will have at least a minimum knowledge of the background of this country's development and an understanding of the political, economic and social interrelationships of its way of life.

You may meet this requirement in any of these ways:

- By offering one high school unit in American history, or 1/2 high school unit in American history and 1/2 high school unit in civics or American government, with a grade of C or better in each course.
- By completing any one of the following courses:
African American and African Studies 10, 100, 120, 121
Asian American Studies 1, 2
Economics 111A, 111B
History 17A, 17B, 17C, 72A, 72B, 170A, 170B, 170C, 171A, 171B, 174A, 174B, 174C, 175A, 175B, 175C, 176A, 176B, 177A, 177B, 179, 180A, 180B, 183A, 183B (upper division courses may be taken only with the consent of the instructor)
Native American Studies 1, 10, 55, 116, 130A, 130B, 130C
Political Science 1, 5, 100, 101, 102, 103, 104, 105, 106, 108, 109, 113, 130, 131, 160, 163

(Students electing to offer one of the above courses are subject to the rules for prerequisites and majors.)

- By presenting evidence that the requirement has been accepted as satisfied at another campus of the university.
- By presenting evidence that the requirement has been satisfied through courses in the area of American History and Institutions at another collegiate institution whose credits are acceptable for transfer to UC Davis.
- By successful completion of the Advanced Placement Examination in American History or American Government and Politics.

International students, regardless of the type of visa they hold, must meet the university's American History and Institutions requirement for graduation.

Unit Requirement

A minimum of 180 quarter units is required for graduation. These must be distributed according to the minimum requirements set forth by the faculty of your college.

A maximum of 12 units of Internship Courses (92, 192, or a combination) may be counted toward the 180-unit bachelor's degree requirement.

The acceptability of transfer courses for unit credit is determined by Undergraduate Admissions and Outreach Services. The acceptability of such courses toward specific requirements is determined by the individual college or school.

Students should refer to the Advanced Placement Examination chart and their transcripts to eliminate the possibility of duplication of credit.

Residence Requirements

The minimum residence requirement for a bachelor's degree at the University of California is one academic year (three quarters). Thirty-five of the final 45 quarter units completed by each candidate must be earned while in residence on the Davis campus. Each summer session in which a student completes a course of at least 2 quarter units may be counted as half a quarter's residence. Not more than 18 of these 35 quarter units may be completed in summer session courses at UC Davis.

Regularly approved courses (laboratory, field, or other individual work) done outside of a regular session but under the direction of a department of instruction may be accepted upon the recommendation of the department in partial fulfillment of the residence requirement for the bachelor's degree. Registration is with the consent of the instructor only.

University Extension courses are not accepted as part of the university residence requirement.

There are additional residence requirements for students enrolled in the Colleges of Letters and Science and Engineering. If you are planning to study abroad during your senior year, you should consult your college dean's office.

With the approval of the dean of a student's college or school, a candidate for the bachelor's degree who was in active service in the armed forces of the United States in the year preceding the awarding of the degree may be recommended for the degree after only one quarter of university residence in which the candidate completes at least 16 units or passes a comprehensive examination in the major or field of concentration.

Scholarship Requirement

To receive a bachelor's degree, you must obtain twice as many grade points as units (a 2.0 GPA) for all courses you have attempted in the university. An exception to this rule is made for those students undertaking certain honors courses. Grades earned in University Extension courses are not used in calculating individual grade point averages. For specific college requirements consult the college sections following.

**GENERAL EDUCATION
REQUIREMENT**

The General Education (GE) requirement promotes the intellectual growth of all undergraduates by ensuring that they acquire a breadth of knowledge that will enlarge their perspectives beyond the focus of a major and serve them well as participants in a knowledge-based society. It seeks to stimulate continued intellectual growth by providing students with knowledge not only of the content but also of the methodologies of different academic disciplines. It involves students in the learning process by its expectation of considerable writing and class participation. It encourages students to consider the relationships between disciplines.

The GE requirement has three components: **Topical Breadth, Social-Cultural Diversity** and **Writing Experience**.

Topical Breadth

A GE course in *topical breadth* addresses broad subject areas that are important to the student's general knowledge. It takes a critical, analytical perspective on knowledge, considering how knowledge has been acquired and the assumptions, theories, or paradigms that guide its use.

Topical breadth courses are grouped into three broad subject areas of knowledge:

1. **Arts and Humanities.** Courses in this area provide students with knowledge of significant intellectual traditions, cultural achievements and historical processes.
2. **Science and Engineering.** Courses in this area provide students with knowledge of major scientific ideas and applications. They seek to communicate the scope, power, limitations and appeal of science.
3. **Social Sciences.** Courses in this area provide students with knowledge of the individual, social, political and economic activities of people.

Social-Cultural Diversity

Courses in social-cultural diversity teach students the significance of the many patterned differences that characterize human populations—particular differences of gender, race, ethnicity, sexuality, religion or social class.

Writing Experience

Courses in writing experience improve student writing through instruction and practice. Instruction is provided through workshops or evaluation of content, logical coherence and use of language and grammar, and require student revision during the quarter. Courses require one extended assignment (5 pages or more) or multiple short assignments.

Fulfilling the General Education Requirement

Topical Breadth Component: 6 courses

To fulfill the topical breadth component of the General Education requirement you must successfully complete three approved courses in each of the two subject areas of topical breadth other than the one that includes your major. To identify the area of topical breadth to which your major belongs, refer to the chart at the back of this catalog. Each academic major has been assigned to one of the three subject areas of GE topical breadth. If you have any questions concerning the subject area to which your major is assigned, consult your college dean's office.

- **Double majors** will satisfy the topical breadth subject areas to which they are assigned. You will still be responsible for completing any topical breadth subject area in which you do not have a major. If, for example, two majors are assigned to the same subject area, you will need to complete the topical breadth component in each of the other two other subject areas. If, on the other hand, you complete two majors that have been assigned to two different areas of topical breadth then you will be responsible for completing the topical breadth component in only the remaining subject area.
- **Individual majors** are assigned to an area of *topical breadth* at the time they are approved by your college.
- **Each minor** has also been assigned to one of the three subject areas of *topical breadth*. A minor assigned to a subject area other than the area of your major will satisfy the GE course requirement for *topical breadth* in that subject area.
- **Courses in your major** may count toward the *topical breadth* component when those courses are also assigned to subject areas other than the area of your major.
- **A course approved in more than one topical breadth subject area** may only be offered in satisfaction of **one** of those subject areas.

Social-Cultural Diversity Component: 1 course

To fulfill the *social-cultural diversity* component of the GE requirement, you must successfully complete one course from the approved list at the back of this catalog.

Writing Experience Component: 3 courses

To fulfill the *writing experience* component of the GE requirement, you must successfully complete three

Fulfilling the General Education Requirement

Freshman student, or Transfer student* who has not completed TCC or IGETC†

6 GE courses in topical breadth—3 courses in each of the two subject areas other than your major's assigned area
1 GE course in social-cultural diversity
3 GE courses in writing experience

Bear in mind that some courses may count toward two or three components of GE. For example, a single course might provide GE credit for *topical breadth*, *writing experience* and *social-cultural diversity*. Depending on the GE courses you choose, you can satisfy the GE requirement with 6 courses.

* Transfer work comparable to approved UC Davis GE courses may be used to satisfy the GE requirement, as determined by the college dean's office.

Transfer student who has successfully completed TCC or IGETC†

GE requirement satisfied; no further GE courses required

† Transfer Core Curriculum (TCC) or Intersegmental General Education Transfer Curriculum (IGETC); completion must be certified by the community college. College of Engineering students still have General Education requirements to complete.

courses from the approved list at the back of this catalog.

- **Subject A.** You must satisfy the university Subject A requirement **before** you take any *writing experience* course for GE credit. If you take an approved *writing experience* course but have not yet satisfied the Subject A requirement, you will **not** receive GE *writing experience* credit for that course.

Additional Conditions

1. **Letter grading.** All courses taken to fulfill the GE requirement must be taken for a letter grade. No GE credit will be awarded for a course that you take on a Passed/Not Passed basis.
2. **College and university composition requirements.** The following GE courses may not be used to satisfy university or college requirements in composition and GE writing experience simultaneously: Communication 1, Comparative Literature 1, 2, 3, 4, English 1, 3, 18, 19, 101, 102A, 102B, 102C, 102D, 102E, 102F, 102G, 104A, 104B, 104C, 104D, 104E, Native American Studies 5.

Remember: You must satisfy the university Subject A requirement **before** you take any *writing experience* course for GE credit.
3. **Courses approved for multiple GE components.** Courses approved for more than one component of the GE requirement (*topical breadth*, *writing experience* and *social-cultural diversity*) will be accepted toward satisfaction of all components for which the course has been approved.
4. **Approved GE courses.** You cannot claim GE credit for any course you completed before it was an approved GE course.

GE Exemption

IGETC, TCC, and UC Reciprocity. You are exempt from the UC Davis GE requirement if you come from a California community college and are certified as having successfully completed the “Intersegmental General Education Transfer Curriculum” (IGETC) or “Transfer Core Curriculum” (TCC), or if you come from another UC campus and are certified as having successfully completed the lower division breadth or General Education requirements of that UC campus (UC reciprocity).

If you are in the College of Engineering and have satisfied IGETC or TCC, you are still required to complete two upper-division General Education courses at UC Davis to satisfy College of Engineering requirements.

Approved General Education Courses

A list of the courses that provide General Education credit for 2002–2003 appears in the back of this catalog. Please note that you cannot claim GE credit for a course you completed **before** it was an approved GE course. This list is subject to change. You should check the *Class Schedule and Registration Guide* each quarter for the most current information.

General Education Theme Options

General Education theme options are sets of GE courses sharing a common intellectual theme. Faculty from the College of Agricultural and Environmental Sciences have worked collaboratively to develop sets of complementary courses in several areas of interest. These GE theme options are not a separate element of the GE requirement, but a way of selecting your GE courses so that you may benefit from a coherent focus of study while completing the GE requirement.

Completion of a theme satisfies the GE requirement for students with majors assigned to the GE topical breadth area of Arts and Humanities. Students with majors assigned to the topical breadth area of either Science and Engineering or Social Science will need to complete additional GE courses in Arts and Humanities to satisfy the campus GE requirement.

Beginning a theme option does not prevent you from later choosing to take other approved GE courses to fulfill the GE requirement. If you choose to mix courses from a theme option and the broader GE course lists, you will need to make sure that the combination of courses you select will complete the campus GE requirement.

GE Scholars

GE Scholars is a certificate program related to the GE theme options. In addition to completing the courses in a GE theme option, students choose a capstone experience (either a seminar course or curriculum related internship) that integrates concepts introduced in the theme courses. Students are awarded a certificate upon completion of their capstone experience. The GE Scholars program allows you to participate in the application of knowledge gained in GE courses, focus your academic experience beyond your major and develop a secondary body of knowledge while completing your GE requirement.

For fall 2002, capstone experiences have been developed only for the Food and Fiber Theme Option. Contact the GE Scholars Project Manager at 754-9431; gamartinez@ucdavis.edu or go to <http://gescholars.ucdavis.edu> for more information.

COLLEGE REQUIREMENTS FOR THE BACHELOR'S DEGREE**College of Agricultural and Environmental Sciences****Unit Requirements**

Of the required 180 units counted toward a degree, **54 units must be upper division work.**

Unit Credit Limitations

In addition, the following unit limitations apply to all majors:

- Not more than 6 units can be Physical Education 1 and 6
- Not more than 20 units can be courses numbered 90X, 92, 97T, 97TC, 99, 190C, 190X, 192, 197T, 197TC, or 199
- Not more than 12 units can be courses numbered 92 and/or 192 (credit will not be given for 192s or 199s taken before the completion of 84 units)
- Not more than 5 units per quarter of Special Study courses (99, 194H, 199)
- Not more than 9 units of professional courses (numbers 300–499) may be used toward the 54 upper division units

Limitation on Credit for Units Graded P. The Academic Senate limits the total number of courses graded *P*, including units earned in courses graded “*P/NP* only,” to one third of the units completed on the Davis campus. The *P/NP* option is to be used only for elective courses and should not be used for major requirements.

Credit in University Extension Courses. Students in residence may apply a maximum of 9 units of credit earned in some Open Campus courses taken through University Extension toward the 180-unit requirement provided written approval has been obtained from the dean before registering. Units of credit allowed by the dean may be less than the number of units listed for a course. No grade points are assigned for courses completed through Open Campus or University Extension.

Registration Beyond the 225-Unit Limit. Students may not exceed 225 units; registration for enrollment when the limit has been reached may only be approved by the Dean. A petition to complete excess units may be picked up in the Dean’s office or in your major department.

Residence Requirement

Thirty-five of the final 45 quarter units completed by each candidate must be earned while in residence on the Davis campus. Not more than 18 of these 35 quarter units may be completed in summer session courses at UC Davis.

Scholarship Requirement

Students in the College are required to attain a minimum grade point average of 2.0 for all courses specified as depth subject matter in their major. Only grades earned in courses taken at UC Davis are included in the grade point calculation. Each candidate must complete a program of study either as prescribed in (a) a major approved by the Undergraduate Majors and Courses Subcommittee and printed in this catalog, or (b) an individual major approved by the Individual Major Subcommittee.

English Composition Requirement

The English Composition requirement can be met in one of two ways:

1. by completing, before you have completed 120 units, **either** two courses emphasizing written expression **or** one course emphasizing written expression and one course emphasizing oral expression, with a grade of C- (or P) or better. The following UC Davis courses satisfy this requirement:

(a) one course must be selected from English 1, 3, 18, 19, 101, 102A, 102B, 102C, 102D, 102E, 102F, 102G, 104A, 104B, 104C, 104D, 104E, or 104F (courses with primary emphasis in writing skills);

(b) one course selected from the courses not selected above, or from Communication 1, Comparative Literature 1, 2, 3, 4, or Native American Studies 5 (courses emphasizing either writing or speaking skills);

OR

2. by passing the English Composition Examination administered by the College of Letters and Science upon completion of 70 units of degree credit (the examination does not yield credit).

English Composition Examination. This academic year, the no-fee examination will be offered on the following Saturday mornings:

October 19, 2002
February 1, 2003
April 26, 2003

There are no examinations given during the summer. Sign-up rosters will be posted on the bulletin board near the main English Department office (114 Voorhies), Monday until Friday at noon (or until they are filled) just preceding each Saturday examination date. You must sign up, in person, by noon Friday. The English Composition Examination form, available at the UC Davis Bookstore, is required.

General Education

You should consult your Dean's Office or department adviser in advance to determine exactly how your General Education courses will apply toward your major.

You can choose one of four General Education theme options to help plan your GE courses. The themes, Global Population and Environmental Issues; Biodiversity and Cultural Diversity; Food and Fiber; and Changing Agriculture are described in more detail in the section "General Education Theme Options" in the General Education section at the back of this catalog.

Study Plan Approval

A Study Plan provides for attainment of specific long-term goals and should allow for the acquisition of prerequisite knowledge for courses to be taken in subsequent quarters; the fulfillment of College and major requirements; a proper balance between the demands of the courses and your ability to master the subject matter; and meeting the minimum progress requirements (see the "Academic Information" chapter).

In conjunction with a faculty adviser and/or staff adviser, you must plan and prepare a program that spec-

ifies your goals and shows how the graduation requirements will be met. It is a regulation that a written "study plan" be filed with your faculty adviser or staff adviser by the end of the second quarter of the junior year (having completed not more than 120 units either in residence and/or by transfer).

You may be denied registration for future quarters if you do not comply with this regulation. However, filing this study plan does not preclude a change of major or program modifications.

Major Degree Certification

A Major Certification is completed during the quarter you plan to graduate. At that time, you and your faculty adviser and/or staff adviser check to see that all *major* requirements have been completed. The Dean's Office completes the degree certification by verifying that all *college* and *university* requirements have been satisfied and will notify you with a copy of the Major Certification form.

Degree Requirement Changes

On occasion, the faculty make changes in the requirements that students must satisfy to obtain the baccalaureate degree. So that you will not be penalized by changes that may work to your disadvantage and so that you will benefit by changes that assist you in completing your degree requirements, it is college policy that you may choose to fulfill the university, college and major requirements in effect at the time you were registered at UC Davis. If you have transferred to UC Davis from a community college, state college, or another university, you may follow the requirements as stated in any UC Davis catalog in effect *either* during the three years immediately preceding your transfer to Davis or at the time you first registered at that institution, *whichever is most recent*. Once you have chosen the year of the *General Catalog* under which you wish to be governed, you must satisfy all of the university, college and major requirements specified in that catalog.

College of Engineering

Unit Requirements

Each candidate for the degree of Bachelor of Science in Engineering must satisfactorily complete an approved curriculum in engineering. Each curriculum consists of a specified Lower Division Program (or an approved equivalent program for students who transfer into the College with 90 or more quarter units) and a specified Upper Division Program. **No unit of coursework you complete may be used to satisfy two different degree requirements (except where the catalog specifically indicates otherwise).** Detailed requirements for the approved curricula are given in the "Programs and Courses" section of this catalog; to see the courses required in your major, consult this section. The minimum number of required units in the combined Lower and Upper Division Programs varies, with the curriculum, from 180 to 195. **You are responsible for planning your program and satisfactorily completing all degree requirements.**

You may, for good cause, request a modification of particular degree requirements by submitting a student petition. These petitions, which are available in the Undergraduate Office, can be a valuable aid in resolving individual program conflicts or other special problems. Such petitions are subject to approval by the Student Relations Committee, a body of seven professors and seven (non-voting) students. A negative decision by the committee may be appealed to the Executive Committee of the College for action at a regular meeting.

Transfer students. To be eligible for transfer, you must have at least 90 transferable quarter units, which must include two acceptable courses in university level composition. You will be classified as having upper division status, but you will be required to complete the lower division requirements for your major before your lower division is considered complete. You may, however, start your upper division program while completing your lower division requirements provided you meet all prerequisites for the upper-division courses.

All engineering majors are impacted. For your application for transfer to be considered, you need to have completed a substantial proportion of your lower-division requirements.

For more specific advice on your requirements, see the transfer counselor at your institution, consult Project Assist (available at community college transfer centers) or consult with the advisers in the Engineering dean's office (530-752-0553).

Credit in University Extension Courses. Appropriate courses taken through University Extension may be used for degree credit; however, you may use a maximum of 16 units of courses taken through University Extension for degree credit. Simultaneous registration in resident courses and Extension courses requires *prior approval* by the College's Associate Dean for Undergraduate Studies. Such approval will be given only for a limited number of credits. No grade points are assigned for courses completed through University Extension.

Residence Requirement

In addition to fulfilling the university residence requirement, you must complete at least 35 of the final 45 units characteristic of your curriculum in engineering while registered in the College.

Scholarship Requirement

In addition to meeting the university scholarship requirement, you are required to maintain a 2.0 grade point average for all course work within Engineering.

English Composition Requirement (Upper Division)

After completing 70 quarter units, you may elect to satisfy the upper division English Composition requirement by passing the English Composition Examination administered by the College of Letters and Science. (You should take it early in your junior year and must take it before your last quarter. Units of credit are not given for passing this examination.)

During the 2002–2003 academic year, the English Composition Examination will be offered on the following three Saturdays: October 19, 2002; February 1, 2003; and April 26, 2003. Sign-up rosters will be posted on the bulletin board near the main English Department office (114 Voorhies), Monday until Friday at noon (or until they are filled) just preceding each Saturday examination date. You must sign up, in person, by noon on Friday. You must obtain the English Composition Examination form, available at the UC Davis Bookstore, to take the exam.

Or, upon completion of 90 quarter units, you may satisfy this requirement by completing English 101, 102A, 102B, 102C, 102D, 102E, 102F, 102G, 104A, or 104E with a grade of C– or higher. Students in Computer Science Engineering must complete the upper division composition requirement by taking English 101 or by passing the English composition requirement. Students in Optical Science and Engineering must complete the upper division composition requirement by taking English 101, 102, 104A, 104B, 104C or 104E.

This requirement is in addition to the expository writing course requirement (English 1 or 3; Comparative Literature 1, 2, 3 or 4; or Native American Studies 5) specified in the Lower Division Programs.

Engineering Design Requirement

Engineering design is the process of devising a system, component, or process to meet certain needs. Design involves a decision-making process (often iterative), in which the basic sciences, mathematics and engineering sciences are applied to convert resources optimally to meet a stated objective. Among the fundamental elements of the design process are the establishment of objectives and criteria, synthesis, analysis, construction, testing and evaluation. You must take an appropriate amount of such design course work through a combination of required and restricted elective courses. Specific comments about design are included in individual curricula descriptions. You should also review the design content of your individual program with your adviser in the course of completing the upper division advising worksheet.

Electives

In general, there are three kinds of elective courses in the engineering curricula: *General Education*, *technical*, and *unrestricted*. Some transfer students have an additional set of electives: *Physical and Biological Sciences electives*.

General Education Electives. Because, as an engineer, you will be a significant participant in the human setting, you will need to have a breadth of education that will allow you to deal with contemporary social issues and to understand the impact of engineering solutions on the global and societal context. To these ends, you will need to take a minimum of 24 units (33 units for Computer Science and Engineering majors) of General Education electives. In addition, to ensure that your GE program has a degree of depth and coherence, at least two of the courses that you take for your GE topical breadth requirement must be upper division courses (courses numbered 100 or above).

Since all engineering majors are in the Science and Engineering GE topical breadth area, you will fulfill the campus GE requirement by taking courses in the Arts and Humanities and the Social Sciences areas.

In satisfying the GE requirement, note that (a) you must take GE courses for a letter grade, and (b) you must satisfy the Subject A requirement before you can receive GE writing experience credit for any course. In consultation with your academic adviser, you should attempt to design a coherent approach to contemporary issues by using your GE electives.

The list of Arts and Humanities and Social Sciences electives appears at the end of this catalog. Note that you may not take the following courses for GE credit if you are a College of Engineering student:

Agricultural Education 100, 160, 172
Animal Science 141, 148
Applied Science 137
Civil and Environmental Engineering 165
Engineering 160
Entomology 158
Environmental and Resource Sciences 10

Fiber and Polymer Science 110
Food Science and Technology 10
Geology 115N
Physics 137, 160
Plant Biology 141
Political Science 192A, 192B
Statistics 10
Viticulture and Enology 3

Technical electives permit you to tailor a program to your own academic and career objectives. For some, the technical electives offer the opportunity to prepare for a specific occupation. For others, they offer an opportunity to broaden a background in the sciences and engineering.

You may receive technical elective credit to a maximum of 6 units for any combination of engineering courses numbered 190C, 192, 197, 198 and 199, unless further restrictions are imposed on your major. Academic credit for 199 courses is limited to a maximum of 5 units per quarter for each substantially different project. Academic credit for engineering internship courses (192s) is also limited to a maximum of 5 units per quarter.

With the exception of the following courses, all upper division courses in engineering, physics, chemistry, mathematics and statistics may be taken as technical electives. The courses which may *not* be used are

Applied Science Engineering 137 (restricted to one unit of technical elective)
Physics 137 and 160 (restricted to one unit of technical elective), 194HA, 194HB, 195, 197T, 198, 199
Chemistry 194HA, 194HB, 194HC, 197, 198, 199
Engineering 160 (restricted to one unit of technical elective)
Mathematics 190, 192, 194, 197TC, 198, 199
Statistics 102

In addition to upper division engineering, physics, chemistry, mathematics and statistics courses, the following courses may be taken as technical electives:

Agricultural and Resource Economics 100A, 100B, 106, 112, 113, 118, 130, 132, 135, 136, 138, 139, 155, 156, 157, 171A, 171B, 175, 176
Agricultural Systems and Environment, any upper division course except 101 and 190 through 199
Anatomy, Physiology, and Cell Biology 100
Animal Biology 102, 103
Animal Genetics 101, 105, 107, 108, 109, 111
Animal Science 104, 105
Applied Biological Systems Technology 110L, 161, 163, 165, 170, 175, 180, 181, 182
Atmospheric Science 110, 111, 115, 116, 120, 121A, 121B, 124, 128, 133, 149, 150, 158, 160
Biological Sciences 1A, 1B, 1C, 101, 102, 103, 104, 120, 120P, 122, 122P
Chemistry 2B, 2BH, 2C, 2CH, 8A, 8B (if not used for your major requirement)
Economics 140
Environmental and Resource Sciences 100, 100L, 105, 131, 136, 144, 173, 185, 186, 187
Environmental Horticulture 100, 102, 105, 120, 125, 130, 133, 144, 145, 149, 150, 160
Environmental Science and Policy 100, 110, 121, 123, 124, 126, 150A, 150B, 150C, 151, 151L, 155, 155L, 163, 167, 168A, 168B, 173, 179

Environmental Toxicology 101, 112A, 112B, 114A, 114B, 128, 131, 135, 146
 Evolution and Ecology 100, 101, 102, 103, 104, 105, 108, 112, 112L, 117, 119, 134, 134L, 138, 140, 141, 147, 149
 Fiber and Polymer Science 100, 150, 161, 161L
 Food Science and Technology 100A, 100B, 101A, 101B, 102A, 102B, 103, 104, 104L, 107A, 107B, 108, 109, 110B, 117, 119, 120, 120L, 121, 123, 123L, 127, 128, 131, 159, 160
 Geology 50, 50L, 100, 100L, 101, 101L, 103, 105N, 106N, 107, 107L, 108N, 109, 109L, 134, 135, 138, 139, 142, 143, 145N, 146N, 147, 148, 150A, 150B, 150C, 161, 162N, 163
 Hydrologic Science 103, 110, 115, 117, 122, 122L, 124, 134, 141, 142, 143, 144, 146, 151A, 151B, 182
 Management 11A, 11B
 Microbiology 102, 102L, 105, 110, 120, 120L, 140, 150, 155L, 160, 162
 Molecular and Cellular Biology 120L, 121, 122, 123, 126, 140L, 141, 142, 150, 150L, 160L, 161, 162, 163, 164
 Neurobiology, Physiology, and Behavior 100–169
 Plant Biology 102, 105, 108, 111, 111D, 111L, 112, 112D, 113, 113D, 116, 117, 118, 119, 123, 125, 126, 141, 142, 143, 144, 146, 148, 151, 152, 153, 154, 157, 158, 160, 161A, 161B, 171, 172, 172L, 173, 174, 175, 176, 177, 178
 Plant Pathology 120, 123, 130, 148, 150
 Soil Science 100, 102, 105, 107, 109, 111, 112, 118, 120
 Wildlife, Fish and Conservation Biology 100, 102, 102L, 110, 110L, 111, 111L, 120, 120L, 121, 122, 123, 130, 131, 136, 140, 141, 151, 152, 153, 154, 156, 157

You are urged to discuss the selection of technical elective courses with your academic adviser.

Unrestricted electives. If your curriculum allows for unrestricted electives, you may count any course for which university credit is allowed as an unrestricted elective in the engineering curricula.

Physical and Biological Science electives. Engineering students are required to have 29 units in sciences, typically 10 units of chemistry and 19 units of physics. If you transfer into the College of Engineering with advanced standing, you are required to complete 26 units of physical and biological science by graduation, but you need to have completed only 5-10 units of chemistry (depending on major) and 15 units of physics by the time you transfer. You may make up the remaining 4 units by taking 4 additional units of chemistry, 4 additional units of physics, or 4 units in courses selected from any of the curricula listed below, with the restrictions that follow.

Atmospheric Science
 Biological Science
 Chemistry
 Evolution and Ecology
 Geology
 Microbiology
 Molecular and Cellular Biology
 Neurobiology, Physiology and Behavior
 Physics
 Plant Biology

All courses in these departments numbered 10 and 190–199 are excluded for credit, as are the following courses:

Evolution and Ecology 138
 Geology 1, 3-3G-3L, 4, 116-116G, 135
 Physics 137, 160
 Plant Biology 1, 11, 12

Degree Check

Use the Degree Requirement Check sheets for each of the curricula for monitoring your progress toward a degree. The Undergraduate Office will prepare only one *unofficial* preliminary degree check for you (preferably at the end of your junior year). You should also file for a follow-up degree check the quarter before you plan to graduate. You will be offered the opportunity to have an exit interview degree check during your last quarter before graduation upon your filing for candidacy. The office will contact you to schedule an appointment. You can get further information concerning these services and the forms for requesting a degree check, a follow-up degree check or an exit interview in the Undergraduate Advising Office.

Degree Requirement Changes

Since engineering is a rapidly developing profession, curricular changes are made by the faculty from year to year. To ensure that you benefit from these changes, the College of Engineering has established a policy that you must fulfill the degree requirements stated in the College of Engineering *Bulletin* for the year in which you complete degree work or in the *Bulletin* for the year immediately preceding.

College of Letters and Science

Unit Requirements

A minimum of 180 units is required for the bachelor's degree. Of these units, 64 must be earned in upper division courses.

Registration Beyond the 225-unit Limit. You are normally expected to fulfill all degree requirements within the 180- to 225-unit range. Once 225 units have been completed (excluding units awarded for College Board Advanced Placement Examinations), you may register only with the permission of the dean. Such permission is rarely granted, and then typically only to allow completion of *minimum* degree requirements. You will be expected to adhere to a program of courses agreed upon and to meet other conditions that may have been set. Approval must be obtained before you will be permitted to register for courses for the quarter following completion of 225 or more units.

If you are in good standing, you will be able to complete 12 quarters or the equivalent (e.g., four years) of college work even if you have earned more than 225 units before you finish your fourth year. You must petition for continuation, however, and file the quarter-by-quarter course program you have planned.

Unit Credit Limitations

For certain courses, limits have been established on the number of units that can be counted towards the 180-unit minimum required for the degree. To avoid

discovering just before graduation that you are short units, keep track of the number of units you have taken in each of the following categories.

Limitation on Credit for Graduate and Professional Courses. Undergraduates may enroll in graduate and professional courses in the 200, 300 and 400 series subject to the restrictions described in the Academic Information section in this catalog. Graduate and professional courses that have been completed will be listed on the student's transcript in the usual manner. *However, the units earned may be counted toward degree requirements only under the conditions listed below.*

Within the limitations A, B and C given below, undergraduate students in the College may count an unlimited number of units in graduate 200 series courses and up to a combined total of 9 units in 300 and 400 series professional courses toward degree requirements. These units, however, are not counted as upper division units unless this is granted by petition to the dean.

A. The recommendations of the instructor in the course and the department chairperson—in addition to approval from the dean—must be obtained by petition in order to receive credit toward the degree for the following kinds of courses:

- all graduate courses 200–298, whether offered by a department or program outside of or within the College of Letters and Science
- all professional courses 300–398 for teachers offered outside of the College of Letters and Science
- all postgraduate professional courses 400–498 offered outside of the College of Letters and Science
- all variable unit courses 300–398 and 400–498 offered within the College of Letters and Science

B. The minimum eligibility conditions for an undergraduate student in the College to petition for degree credit for a 200, 300, or 400 series course are a UC grade point average of 3.3 and completion of 18 upper division units basic to the subject matter of the course. These eligibility conditions may be waived, however, upon the recommendation of the course instructor and concurrence of the department chairperson if the student's preparation warrants exception.

C. Undergraduates in the College cannot receive degree credit for special study courses 299, 399, or 499.

Limitation on Credit for Units Graded P. *Excluding courses that are graded on a Passed/Not Passed (P/NP) basis only, the number of units graded P that may be accepted towards a degree in the College of Letters and Science is limited to not more than one fourth of the units completed in residence on the Davis campus.*

The Academic Senate limits the *total* number of courses graded P, including units earned in courses graded "P/NP only," to one third of the units completed on the Davis campus. This limitation applies to *all* Davis undergraduates, including Letters and Science students.

Limitation on Credit for University Extension Courses. Students may apply credit earned in University Extension courses toward the 180-unit requirement only when written approval has been obtained from the dean before registration. The degree credit allowed by

the dean for Extension courses is usually less than the unit value listed in the course description. A maximum of 9 units may be offered for elective credit only. Such units and courses may not be applied toward fulfillment of the Area, Foreign Language, Upper Division, or Residence requirements of the College. No grade points are assigned for courses completed in University Extension.

Other Unit Credit Limitations. The following are additional courses that have limits on the number of units that can be counted toward your degree.

Internship courses (numbers 92, 192): 12 units maximum including internship units taken at other institutions. (See under Nonstandard courses below.)

Nonstandard courses (92, 97T, 97TC, 99, 192, 194H, 197T, 197TC, 199 and similar courses): 30 units maximum or one-sixth of the units taken at UC Davis, whichever is the smaller. (Note the separate unit limits on internship, special study and tutoring courses; and major limitations.)

Physical Education 1 and 6 (combined): 6 units maximum.

Special Study courses (99, 194H, 199): 5 units maximum in any one quarter. (See under Nonstandard courses above.)

Tutoring courses (97T, 97TC, 197T, 197TC): 10 units maximum. (See under Nonstandard courses above.)

Residence Requirement

While registered in the College of Letters and Science, a minimum of 27 upper division units, including 18 upper division units in the major, must be completed on the Davis campus. (Work completed while registered in the Education Abroad Program does not satisfy campus or College Residence requirements.)

Scholarship Requirement

The minimum grade point average to satisfy the scholarship requirement is 2.0 for all courses counted toward the major and for all upper division courses used to satisfy major requirements. Only grades earned in courses taken at UC Davis will be included in the grade point computations. To obtain these minimum averages in the major, you may repeat courses that are graded D or F. If you have to repeat a course more than once, you need the dean's approval.

English Composition Requirement

The English Composition requirement can be met in one of two ways:

1. by passing the English Composition Examination upon completion of 70 units of degree credit (the examination does not yield credit);

OR

2. by completing with a grade of C– (or P) or better
 - (a) one course from English 1, 3, 18, 19, Comparative Literature 1, 2, 3, 4, or Native American Studies 5; **and**
 - (b) English 101, 102A, 102B, 102C, 102D, 102E, 102F, 102G, 104A, 104B, 104C, 104D, 104E, or 104F (which must be taken after 84 units have been completed).

Transfer Courses in English Composition. Transfer courses considered by the dean to be equivalent or comparable to English 1, 3, 18, 19, 101, 104A, 104B, 104C, 104D, 104E, 104F, Comparative Literature 1, 2, 3, 4, or Native American Studies 5 will be accepted toward satisfaction of the English Composition requirement. Note that English 101 and 104A, 104B, 104C, 104D, 104E, and 104F or the equivalent must be taken after you have completed 84 units of transferable degree credit.

If your transfer work does not include an acceptable English composition course taken after you had completed or accumulated 84 units, you may fulfill the requirement by examination (see below) or take English 101, 102A, 102B, 102C, 102D, 102E, 102F, 102G, 104A, 104B, 104C, 104D, 104E, or 104F at UC Davis.

English Composition Examination. This academic year, the no-fee examination will be offered on the following Saturday mornings:

October 19, 2002
February 1, 2003
April 26, 2003

There are no examinations given during the summer. Sign-up rosters will be posted on the bulletin board near the main English Department office (114 Voorhies), Monday until Friday at noon (or until they are filled) just preceding each Saturday examination date. You must sign up, in person, by noon Friday. The English Composition Examination form, available at the UC Davis Bookstore, is required. It is recommended that students with disabilities contact the Student Disability Center (752-3184) and the Subject A Office (752-0450) at least two weeks prior to the exam date to arrange accommodations.

Area (Breadth) Requirement

The College Breadth Requirement promotes the intellectual growth of students by asking them to acquire a broader background of knowledge than is provided by the usual major. The Breadth requirement also guides students in exploring the interdependence of knowledge and, in the case of the A.B. degree, provides students the opportunity to become acquainted with performance in the fine arts.

A.B. degree—satisfaction of the campus General Education requirement **plus** completion of one of the following options:

- a. a “Mini Minor” consisting of a minimum of three **approved** upper division courses in a single Letters and Science department or program other than the major (and which are not offered in satisfaction of major requirements);

OR

- b. a minimum of three **approved** lower or upper division courses in Art, Music, or Dramatic Art from outside the student’s major;

OR

- c. a certified minor from any UC Davis college or program.

The Letters and Science faculty believes that the completion of a certified minor is often the best way for a student to obtain structure and coherence in pursuit of intellectual breadth.

For the purposes of options a and b above, all courses are considered as approved except: courses bearing less than 3 units of credit, internship courses, non-standard courses, directed group study courses, and courses used to satisfy the College English Composition Requirement.

B.S. degree—a total of 90 units in natural sciences/mathematics; and satisfaction of the General Education requirement.

Courses numbered 92, 97T, 97TC, 98, 192, 197T, 197TC, 198, and from 200 through 499 cannot be counted toward satisfaction of the natural sciences/mathematics Area requirement. A maximum of 10 units in special study courses (99, 194H, 199) may be counted toward that portion of the Area requirement. Courses used to satisfy the English Composition and Foreign Language requirements may not be counted toward the Area requirement. Subject to the restrictions just listed, courses acceptable for fulfilling the 90-unit natural sciences/mathematics Area requirement are:

Natural Sciences and Mathematics

Anatomy, Physiology and Cell Biology 100
Anthropology 1, 5, 15, 15V, 151, 152, 153, 154A, 154B, 155, 156, 157, 158

Statistics
Wildlife, Fish, and Conservation Biology 10

Foreign Language Requirement (A.B. and B.A.S. degrees)

The Foreign Language requirement may be satisfied in any language offered at UC Davis, or for which transfer credit is allowed from another academic institution (including American Sign Language).

You may also satisfy this requirement by examination in a language not offered on the Davis campus. In this case, the Dean's Office will assist you in making arrangements to take an examination on another University of California campus, with a faculty member who teaches the language in question.

Satisfaction of the Requirement. Plan to complete the Foreign Language Requirement by the end of your first or second year, as program priorities permit. This is particularly important if you plan to apply for the university's Education Abroad Program. The Foreign Language requirement may be satisfied by examination or completion of language courses as follows:

1. *Foreign Language Placement Test.* This test does not yield unit credit—it only determines whether the Foreign Language requirement has been met, or at which point in the language sequence you should enroll.

You may validate your knowledge of a language learned in high school by taking this test. A test may not be taken, however, in a language for which you have already received degree credit. If you are a transfer student, consult your *Graduation Requirement Degree Check*, which is issued by the Dean's Office within a quarter after enrollment.

2. *College Board SAT II: Subject Test.* Earning a qualifying score of at least 550 on a College Board Foreign Language Subject Test satisfies the requirement. This test may be taken at any time during your high school career. Once your score is on file at Undergraduate Admissions and Outreach Services, notify the Letters and Science Dean's Office so that satisfaction of the College requirement can be noted on your record.
3. *College Board Advanced Placement Examination.* A score of 5, 4, or 3 on any foreign language College Board Advanced Placement Examination, with the exception of Latin, taken in high school will satisfy the Foreign Language requirement.
4. *Course Completion in College (or the equivalent).* A.B. and B.A.S. degrees—15-unit level in one language (e.g., Spanish 3 or Japanese 3). B.S. degree—none, but as is required in the major program.

If you have successfully completed the second or third year of a language in the tenth or higher grade in high school you may receive unit credit for course 1 of that language on a *P/NP* grading basis only. Although a Passed or Not Passed grade will be charged to your *P/NP* option, no petition is required. [See "Passed/Not Passed (*P/NP*) Grading" in the "Academic Information" chapter.]

5. *Proficiency Examination.* If you have not completed the required level language course, but assume you have attained equivalent knowledge, you may satisfy the language requirement by passing a proficiency examination. For more information, consult the appropriate foreign language department.

Major Program Requirements

Requirements for major programs are described in the Programs and Courses section of this catalog. These requirements are fulfilled by completing a major program offered by a teaching department or program committee in the College of Letters and Science (see the list of majors) or an individual major program approved by the College's Committee on Individual Majors.

No more than 6 units in internship courses (numbered 92, 192, or similar internship courses), may be accepted in satisfaction of the requirements of major programs. Courses numbered 97T, 97TC, 197T and 197TC do not satisfy unit or course requirements in the major.

Degree Check

Before the beginning of your senior year, take some time to consider your goals and to plan the academic program for your final year as an undergraduate. To plan properly and to ensure that you get the most out of your remaining education and complete all graduation requirements as well, you should know what requirements remain unsatisfied. To help you in these efforts, the Undergraduate Education and Advising Office provides informational materials and instructions on how to evaluate your progress on college and university requirements. Many departments provide similar information regarding your major requirements.

Once you have completed 135 units of degree credit, you should contact your faculty adviser for a check of your major requirements. At approximately this point, the Undergraduate Education and Advising Office will provide each student with one official degree check summarizing your progress in fulfilling college and university requirements.

Degree Requirement Changes

On occasion, the faculty makes changes in the requirements that students must satisfy to obtain the baccalaureate degree. So that you will not be penalized by changes that may work to your disadvantage and so that you will benefit by changes that assist you in completing your degree requirements, it is College policy that you may choose to fulfill the university and College requirements (see General Education requirement for an exception) as stated in any UC Davis *General Catalog* in effect at any time you were registered in a postsecondary institution of higher education (i.e., community college, college, or university). Once you have chosen the year of the *General Catalog* under which you wish to be governed, you must satisfy all of the university and college requirements specified in that catalog.

With respect to the completion of your major requirements, most of the majors in the College of Letters and Science require completion of the major degree requirements in effect at the time you officially declared your major. However, because departments differ in how they handle these matters, check with the department or major program office if you have any questions about which requirements apply to you.

GRADUATE STUDIES

UC DAVIS

GRADUATE STUDIES

2002-2003
2003-2004

GRADUATE STUDIES

250 Mrak Hall
530-752-0650;
<http://gradstudies.ucdavis.edu>

UC Davis offers advanced degrees in more than 80 graduate programs. Students' graduate study is guided by either departments or graduate groups. Graduate groups are composed of individual faculty members with similar disciplinary or research interests. The group structure, used extensively at Davis, permits faculty to be affiliated with graduate programs in more than one discipline and offers students flexibility and breadth by crossing the administrative boundaries of the various departments, colleges, schools and sometimes campuses. In keeping with UC Davis' progressive spirit, the group structure also allows for expansion of established degree programs and facilitates the development of new ones. More than half of the graduate programs at Davis are sponsored by graduate groups. You will find a list of the graduate degrees available at UC Davis in the front of this catalog.

Graduate study is administered by the Graduate Council, a standing committee of the Davis Division of the Academic Senate and by the dean of Graduate Studies. A universitywide Coordinating Committee on Graduate Affairs determines general policies and establishes common procedures.

Preparing for an Advanced Degree

Admission to a graduate program at the University of California requires a bachelor's degree that is comparable to a degree from the University of California both in distribution of academic subject matter and in scholarly achievement.

The primary requirement for admission to any program is evidence of intellectual achievement and promise. Your application will be evaluated primarily on the basis of your transcript to assure that your qualifications meet minimum standards as set by universitywide and UC Davis Graduate Councils. Generally, you must have a minimum *B* average in undergraduate course work from an institution of acceptable standing to be considered for admission. Graduate programs frequently require submission of additional materials such as a separate application form, Graduate Record Examination (GRE) scores, letters of recommendation, portfolios or examples of written work to assist in selecting from among qualified applicants. Admission to graduate study is limited by the number of spaces available in major programs. Not all eligible applicants can be admitted.

UC Davis is committed to maintaining excellence, preserving fairness and promoting diversity in its student population. In addition to an applicant's past scholastic achievement, admissions criteria include an applicant's potential for service in the field, keeping in mind the needs of our society and of underrepresented and disadvantaged communities. Criteria also attempt to take into account any prior disadvantages applicants have experienced that may bear on future achievements and services.

Applying for Admission

World Wide Web (applications for admission):
<http://gradstudies.ucdavis.edu/b4apply.htm>

March 1 Deadline for **international students** to file applications for admission to graduate standing, with complete credentials, with the program or department, or as required by program, or as required by program

April 1 Deadline for **United States residents** to file applications for admission to graduate standing, with complete credentials, with the program or department or as required by program, or as required by program

Applications are accepted for fall quarter only. You may apply for admission to graduate study online at <http://gradstudies.ucdavis.edu/b4apply.htm>. If you apply electronically, the \$40 nonrefundable application fee and official transcripts from each college and university you have attended must be mailed directly to the program to which you are applying.

You should begin the application process as early as possible in the academic year since many programs have early deadlines. In addition, your chances for appointment as a teaching or research assistant, or of receiving financial support, are greatly enhanced by applying early. The application deadlines are as noted above, unless otherwise indicated by the program, or until your proposed graduate program is full, whichever occurs first.

You are strongly encouraged to apply electronically. If this is not possible, you may request the application for admission and fellowship from the Office of Graduate Studies, University of California, One Shields Avenue, Davis, CA 95616. The completed application form, the application fee and official transcripts must be sent directly to the program to which you are applying. Supplemental application materials required by the graduate program must be sent directly to the graduate adviser for that program.

The Graduate Admissions Advisory Committee for the program will submit its recommendation and evaluation to Graduate Studies; final admission decisions rest with the dean of Graduate Studies. This approval procedure applies to all applicants, including those seeking a transfer to UC Davis from another UC campus.

Applications for the degrees of Juris Doctor, Doctor of Medicine, Doctor of Veterinary Medicine, Master of Business Administration and Master of Preventive Veterinary Medicine must be filed directly with the appropriate professional school.

Readmission

April 1 Deadline to file applications for **readmission** to graduate status with Graduate Studies

If you were formerly registered at UC Davis as a graduate student and wish to return to pursue the **same degree objective in the same major**, you must apply for readmission and pay the readmission application fee of \$40. The readmission application must be filed with Graduate Studies by April 1 (or earlier if the program specifies an earlier date). Readmission to quarters other than fall

is granted on an exception basis by special petition to the dean of Graduate Studies. If you are seeking to return to a new degree program and/or new major, you must apply for admission along with other new applicants. Apply online at <http://gradstudies.ucdavis.edu/b4apply.htm>, or obtain an application from the Graduate Studies office. Transcripts of all work undertaken since you were last registered in graduate status at Davis must be presented with the application. (There is no assurance of reentry, as applicants for readmission will be considered in competition with other applicants for the program.)

International Students

Assessment of a foreign degree is based on the characteristics of the national system of education, the type of institution attended and the level of study completed.

If you are an international student with credentials from universities outside the U.S., you should begin the application process as early as a year in advance. Official copies or certified copies of all transcripts in English and in the original language are required before your application can be processed. Do not attempt to convert your grade point average or ranking to a U.S. equivalent. Graduate Studies will determine your eligibility using U.S. guidelines for credential evaluation. Completed applications from international students along with the nonrefundable \$40 application fee must be received by the program to which you are applying by March 1, unless your proposed program has an earlier deadline.

International students are also encouraged to apply online at <http://gradstudies.ucdavis.edu/b4apply.htm>.

English Requirement. Applicants whose native language or language of instruction is not English must take the TOEFL or IELTS. The minimum score required for admission to UC Davis is 550 on the paper test, 213 on the computer-based test for TOEFL and at least 7 on a 9-point scale for IELTS; scores from tests taken before 1999 will not be accepted. Some programs require a higher score. There is no conditional admission. The score report is required before application processing

begins. You may send a photocopy, however, an official copy is required before registration if you are admitted.

The Test of English as a Foreign Language (TOEFL) is given by Educational Testing Service (ETS), P.O. Box 6154, Princeton, NJ 08541-6154; (609) 771-7100; toefl@ets.org; <http://www.toefl.org>. The Academic Modules of the International English Language Testing System (IELTS) are designed by the University of Cambridge Local Examinations Syndicate and administered by the British Council worldwide. You are responsible for providing an official Test Report Form of your IELTS. To register, contact the IELTS Subject Officer, University of Cambridge, Local Examinations Syndicate, 1 Hills Road, Cambridge, CB1 2EU, United Kingdom; <http://www.ielts.org>.

Visas. If you need a certificate of eligibility for a student visa issued by UC Davis, you will be required to complete a certification of finances form showing the availability of sufficient funding for your graduate program (see International Student Services in the “Academic Advising” chapter for complete details).

Program of Study

New students are assigned an adviser within the appropriate department or graduate group who assists them in planning a program of study. The program will depend to some degree on the student's undergraduate training and may include undergraduate courses to remove deficiencies. Each student must satisfy the degree requirements as published in the *Graduate Program Directory*, or as documented by the program. Additional requirements for study may be established by the department or group and approved by the Graduate Council. These requirements often include a core of required courses, but considerable flexibility is permitted to suit individual needs. Undergraduates at Davis who plan to pursue graduate study should consult with their major adviser early in their senior year to guarantee adequate preparation.

A graduate degree is awarded to recognize a student's command of a wide range of knowledge in an academic field. It is not awarded merely for fulfillment of technical requirements, such as residence, or the completion of specific courses.

Master's Degree

Students working toward a master's degree must be registered in residence for at least three quarters. Two regular six-week Summer Sessions may count as the equivalent of one quarter. Usually, all work for the master's degree is done in residence on the Davis campus. With the consent of the graduate adviser and the dean of Graduate Studies, however, some work taken elsewhere may be credited toward your degree. The normal limit for such transfer credit is 6 units from another institution, or 12 concurrent units, or up to one half of the unit requirement if the courses were taken at another UC campus—providing the units were not used to satisfy requirements for another degree.

A master's degree may be awarded upon completion of one of two basic plans in which either a thesis or a comprehensive examination is required.

Ph.D. Degree

The Doctor of Philosophy degree, as granted at the University of California, means that the recipient possesses knowledge of a broad field of learning and has given evidence of distinguished attainment in that field; it is a warrant of critical ability and powers of imagination and synthesis. It means, too, that the candidate has presented a dissertation containing an original contribution to the knowledge of the chosen field of study.

Students working toward a doctorate must be registered and in university residence for a minimum of six regular quarters. Experience indicates that it takes considerably longer than this to complete a degree program. Two consecutive regular Summer Sessions may count as the equivalent of one regular quarter.

There is no university unit requirement for the doctoral degree. However, individual programs have course requirements that must be completed before admission to the qualifying examination.

The Qualifying Examination is administered by a committee appointed by the dean of Graduate Studies. The examination is intended to demonstrate critical thinking ability, powers of imagination and synthesis and broad knowledge of the field of study. Upon recommendation of the Qualifying Examination Committee, and with the approval of the Graduate Council, the examination may be repeated one time.

After successful completion of the Qualifying Examination, the student must file for Advancement to Candidacy for the degree. At this time, a committee is appointed to direct the research problem and guide in the preparation of the dissertation.

Graduate students in certain Ph.D. programs may participate in a **Designated Emphasis**, a specialization that might include a new method of inquiry or an important field of application which is related to two or more existing Ph.D. programs. The Designated Emphasis is awarded in conjunction with the Ph.D. degree and is signified by a transcript designation; for example, "Ph.D. in History with a Designated Emphasis in Criti-

cal Theory." Programs approved as Designated Emphases include Biotechnology; Classics and the Classical Tradition; Computational Science; Critical Theory; Economy, Justice and Society; Feminist Theory and Research; International Nutrition; Native American Studies; Reproductive Biology; Second Language Acquisition; and Social Theory and Comparative History.

Intercampus Exchange Program

A graduate student registered on any campus of the university may become an intercampus exchange student with the approval of the graduate adviser, the chairperson of the department or group on the host campus and the dean of Graduate Studies on both the home and the host campuses.

An intercampus exchange student has library, health service and other student privileges on the host campus, but is considered a graduate student in residence on the home campus. The grades obtained in courses on the host campus are transferred to the home campus and entered on the student's official graduate transcript.

Application forms may be obtained in Graduate Studies and must be submitted five weeks before the beginning of the quarter in which you wish to participate in the program. Petitions received after the first day of the quarter **will not be processed**.

Fellowships, Assistantships and Loans

<http://gradstudies.ucdavis.edu/support/studsup.htm>

Financial support for graduate study at UC Davis is available in several forms: teaching and research assistantships, financial aid and fellowships/scholarships.

Financial aid is awarded on the basis of demonstrated financial need and is administered by the Financial Aid Office. Federal financial aid includes student loans, grants and work-study funding. You may apply for financial aid before you have been admitted. To be considered for financial aid, or for any awards based on financial need, you must file a "Free Application for

GRADUATE STUDENT DEADLINES*

	Fall 2002	Winter 2003	Spring 2003	Summer 2003	Fall 2003	Winter 2004	Spring 2004
Deadline for students who expect to complete work for master's degrees to file applications for candidacy with the dean of Graduate Studies	Sept. 13	Jan. 3	Feb. 21	May 30	Sept. 12	Jan. 2	Feb. 20
Deadline for candidates for master's degrees to file theses with the dean of Graduate Studies	Dec. 2	Mar. 3	June 2	Sept. 1	Dec. 1	Mar. 1	June 1
Deadline for candidates for master's degrees to file final report on comprehensive examination with the dean of Graduate Studies	Dec. 14	Mar. 22	June 13	Sept. 12	Dec. 13	Mar. 24	June 17
Deadline for students who expect to complete work for the degrees of Doctor of Philosophy and Doctor of Engineering to file applications for candidacy with the dean of Graduate Studies	Sept. 13	Jan. 3	Feb. 21	May 30	Sept. 12	Jan. 2	Feb. 20
Deadline for candidates for the degrees of Doctor of Philosophy, Doctor of Education, and Doctor of Engineering to file dissertation with the dean of Graduate Studies	Dec. 2	Mar. 3	June 2	Sept. 1	Dec. 1	Mar. 1	June 1

* Deadlines are subject to change without notice.

Federal Student Aid" (FAFSA) at <http://www.fafsa.ed.gov> no later than March 1, prior to the fall quarter enrollment. This form, submitted directly to the Federal Student Aid Program Office, Iowa City, IA, is used to determine financial need only. Contact the Graduate Financial Aid Office for information regarding loans, grants and work-study.

Fellowships and graduate scholarships are awarded primarily on the basis of scholarship and promise of outstanding academic and professional achievement. Fellowship awards can include a stipend, fees and/or nonresident tuition. Considered in evaluations are the Graduate Record Examination (GRE) scores, undergraduate and graduate grade point averages, academic transcripts, statement of purpose, letters of recommendation and other documentation such as publications or awards. The minimum cumulative undergraduate or graduate grade point average required for a stipend or in-state fee award is 3.5 (A=4.0); for nonresident tuition fellowships the minimum is 3.25. U.S. citizens and permanent residents are eligible for nonresident tuition fellowships for their first three quarters only at UC Davis. New international students may be awarded nonresident tuition fellowships, but not stipend or in-state fee fellowships, in their first three quarters.

Applications for fellowships and graduate scholarships are due by **January 15** for awards beginning fall quarter. Information for both new and continuing students and application materials for fellowships and graduate scholarships are available at <http://gradstudies.ucdavis.edu/support/studsup.htm>. You may print the application forms, complete them and submit them by mail. The fellowship applications may not be submitted electronically. All students submit the "Internal Fellowship Application for New and Continuing Students" to their graduate programs.

Graduate Certificate Program for Engineers

For engineers who already have a degree, the College of Engineering offers a Graduate Certificate Program. This program consists of course work in selected engineering subjects and requires fewer units than the degree programs. The purpose of the Graduate Certificate Program is to provide practicing engineers with an opportunity to develop additional expertise in specific areas and to explore new fields of technical interest.

General requirements for the program are

- 15 or 16 units of specified graduate course work, or a combination of specified graduate and undergraduate course work
- Admission to Graduate Studies

Further information on the Graduate Certificate Program may be found in the *College of Engineering Bulletin*.

Teacher Credential Programs

School of Education
Teacher Education and Credential Services Office
2078 Academic Surge
530-752-0757; jgmacdonald@ucdavis.edu;
<http://education.ucdavis.edu>

College of Agricultural and Environmental Sciences
Agricultural Education Program
150 Mrak Hall
530-754-6249 or 752-4369; rrengel@ucdavis.edu

The School of Education offers programs for students interested in becoming elementary or secondary teachers. The elementary education program prepares you to teach all the subjects commonly taught in an elementary classroom. In addition, it offers the option of receiving in-depth training for teaching students who are English language learners (Spanish to English). The secondary education program is designed to prepare teachers who will work in grades 7 through 12 in the following areas:

Graduate groups combine the talent and skills of faculty and students from a variety of areas to offer specialties in interdepartmental subjects.

English, science (biology, chemistry, geoscience and physics), math and agricultural education.

To apply you need to have done the following:

- completed a bachelor's degree;
- completed most of the required course work in the area in which you want to teach, or have taken the PRAXIS and SSAT exams in the area in which you want to teach;
- taken the California Basic Education Skill Test (CBEST);
- worked with school-age children; and,
- met Graduate Studies minimum GPA requirement (3.0).

There are additional requirements that we encourage you to take as undergraduates. Information is available in the Student Services and Advising Office.

The teaching credential program starts in the fall quarter only and is nine months long. It is a full-time professional program with a rigorous schedule. Student teachers are in classrooms in the morning and early afternoon and back on campus in the afternoon and evening for course work. The student teaching assignments generally are in the following communities: Winters, Woodland, Dixon, Vacaville, Fairfield, Sacramento and West Sacramento. Student teachers are required to participate in the schools in the role of a regularly credentialed teacher. A typical course schedule follows:

- student teaching
- teaching methods courses (on how to teach your subject area(s) and grade level(s))
- reading methods course
- computer education course
- health education course
- special education course

Upon satisfactory completion of all requirements, you will be recommended to receive a California teaching credential.

Applications and filing deadlines should be obtained from the School of Education.

The teacher education program is also available to

upper division students who have a 3.3 GPA and room in their schedule for a full-time teaching program. Satisfactory completion of your degree and the credential program would entitle you to a nonrenewable **preliminary** credential. Within five years you must complete a graduate year of study to be eligible for an additional credential. Specific requirements may be obtained from the Student Services staff in the School of Education.

Students considering teaching as a career should consult the School of Education **as early as their freshman year**. Because of the complexity of the Teacher Preparation and Licensing Laws and the requirements of Davis campus programs, students are encouraged to maintain close contact with education advisers throughout their undergraduate years.

UC Davis/CSU Sacramento Collaborative Elementary Credential Program

The Collaborative Elementary Credential Program offers accelerated course work for the CLAD or BCLAD elementary credential during the summers; the supervised field experience is completed during the academic year. This program is designed to meet the needs of emergency credential holders and working professionals who are changing careers.

Seminar in College Teaching

Teaching Resources Center
17 Wellman Hall
530-752-6050; <http://trc.ucdavis.edu/trc/taprogs.html>

The Seminar in College Teaching introduces graduate students to the principles and methods of designing and delivering college-level instruction. The seminar deals with a broad range of skills and issues involved in helping college students learn, including classroom presentations, planning discussions, facilitating active learning, writing tests, evaluating student work and employing effective class management strategies.

Seminar participants meet weekly for a two-hour session. Participants also select and complete several assignments, such as developing a syllabus, preparing a lesson plan, practicing classroom presentations or writing a teaching philosophy statement. Readings from various sources complete the seminar experience.

Participants who attend every session and fulfill the required brief assignments in a satisfactory and timely manner receive a certificate of completion that is appropriate to note in a curriculum vitae.

SCHOOL OF LAW

UC DAVIS

SCHOOL OF LAW

**2002-2003
2003-2004**

SCHOOL OF LAW

School of Law, Admission Office
530-752-6477; <http://kinghall.ucdavis.edu>
lawadmissions@ucdavis.edu

The School of Law offers a three-year professional curriculum leading to the degree of Juris Doctor. In addition to the traditional professional curriculum, the School provides professional skills training in interviewing and counseling, negotiation and dispute resolution and trial practice. It also offers opportunities for practical experience through clinical programs and for in-depth study of an area of law in an individualized program of classroom work, research, writing, or experience in the community. The School seeks to promote critical evaluation of law and legal institutions in a broad perspective, integrating non-legal disciplines with professional legal education.

The School is fully accredited by the American Bar Association, is a member of the Association of American Law Schools, and has a chapter of the Order of the Coif.

Preparing for the Study of Law

No specific college major is required for admission to the School of Law, and there is no prescribed pre-legal program. Your college record and Law School Admission Test (LSAT) score must, of course, demonstrate that you are highly qualified for the study of law.

As a pre-law student, you should plan a course of study that will give you a broad cultural background and include intensive work for a substantial period of time in a selected field of study. Pre-law students should develop the ability to think critically. They should gain an understanding of people and institutions and know how to gather and weigh facts, to solve problems and think creatively. They should be able to read rapidly with comprehension, and express themselves clearly, completely and concisely, both orally and in writing.

You can get help with program planning from the Pre-Law Advising Office, 227 Voorhies Hall, 752-3009.

For additional information, see the *Official Guide to ABA-Approved Law Schools*, a publication of the Law School Admission Council and the American Bar Association. This book includes material on the law and lawyers, pre-law preparation, applying to law school and the study of law, together with individualized information on all ABA approved law schools. It can be found at college and major bookstores or ordered from Law Services, <http://www.lsac.org>, 215-968-1001, Box 2400, Newtown, PA 18940-0977.

Applying for Admission

February 1 Deadline for filing applications for admission to the School of Law

1. Request application forms and the school catalog at <http://kinghall.ucdavis.edu>. Return your completed application to the Office of Admission, School of Law, University of California, 400 Mrak Hall Drive, Davis, CA 95616-5201, plus a \$70 nonrefundable application fee, in the form of a check or money order made payable to the Regents of the University of California.

The last date for filing completed application forms, together with all supporting documents, including

LSAT scores, Law School Data Assembly Service (LSDAS) reports and letters of recommendation, is February 1 of the year in which admission is sought. Early filing of all application materials is strongly recommended.

2. You must take the Law School Admission Test and register with the Law School Data Assembly Service so that the score will be reported to the school. You are urged to take the test as early as possible, and no later than December preceding the year in which admission is sought. The February test date is too late.

Testing centers are located in all parts of the United States and in many foreign countries. Tests are given four times a year: February, June, September and December. The completed test application blank, accompanied by the required fee, should be postmarked approximately six weeks before the date of the test to ensure that you will be registered for that test date.

To obtain application forms, information about the test, specific test dates and the location of testing centers, write to: Law Services, Box 2000, 661 Penn Street, Newtown, PA 18940-0998. You can also contact Law Services via e-mail at lsacinfo@lsac.org. The LSAT/LSDAS Registration and Information book is also available in the Law School Admission Office and the Pre-Law Advising Office on campus.

3. Register with the LSDAS no later than December 1 by completing and mailing the registration form supplied in each LSAT/LSDAS Registration and Information book. Have a transcript from each college or university you have attended sent directly to Law Services. Complete instructions and a mailing envelope are available in the book.

4. Submit an official transcript of college work completed during the first semester or quarter of your senior year directly to the School of Law as soon as it is avail-

Cruz Reynoso, holder of the law school's Boochever and Bird Chair for the Study and Teaching of Freedom and Equality, received the UC Davis Academic Senate's 2002 Distinguished Public Service Award.

able. Failure to do so may delay consideration of your application materials. Successful applicants must submit directly to the School of Law a final transcript showing the award of a bachelor's degree.

5. Provide two letters of recommendation from objective and responsible persons to whom you are well known. At least one of these letters should come from a faculty member under whom you studied while in college. There are three options for submission of recommendations: (1) submit recommendations to LSDAS for inclusion with your LSDAS report; (2) have your recommender, career center, prelaw office, or other campus recommendation service send the letters directly to the School of Law; (3) follow the instructions in the School of Law catalog for submission of recommendations with the admission application. Your application cannot be considered until two letters have been received.

Your application will be reviewed by the School of Law Admissions Committee, which seeks students of demonstrated academic ability, as evidenced by LSAT scores and the undergraduate grade point average (GPA). The committee seeks students of diverse backgrounds and considers economic factors, advanced degrees or other advanced studies, significant work experience and extracurricular and community activities during and after the college years. An applicant's growth, maturity and commitment to the study of law are also major considerations. Students are admitted only on a full-time basis and only in August.

6. When accepted by the School of Law, you are simultaneously admitted to Graduate Studies on the Davis campus of the university for the program leading to the degree of Juris Doctor. If you intend to pursue studies leading to other graduate degrees, or wish to become a candidate for a Combined Degree Program (see *General Catalog*), you must make separate application to Graduate Studies or the Graduate School of Management before commencing such studies.

Admission to Advanced Standing

If you have completed at least one year of full-time law course work in another approved law school, you may be considered for admission to advanced standing with credit for not more than one year of such work. The application filing period is June 1–30. No application for advanced standing will be considered until the Office of Admissions has received transcripts for all prior law school work.

Application procedures for advanced standing are the same as described above with the addition of (1) a letter of good standing including class rank from the dean of any law school previously attended; (2) at least one letter of recommendation from a law professor; (3) transcripts of all law school work; (4) LSAT score provided as part of an updated LSDAS report from LSAC; and (5) an official transcript from the school where you earned your undergraduate degree, stating the date the degree was conferred. The deadline for transfer applications is *June 30* of the year for which transfer is sought. Committee decisions on advanced standing are normally made in late July or early August of the year in which admission is sought.

Students who have been disqualified at another law school **will not be admitted** to this school.

Recruitment of Underrepresented Groups

The students and faculty of the School of Law recognize the great need for lawyers from underrepresented groups. The School, therefore, actively solicits applications from those groups that reflect the many diverse populations of California but, traditionally, have been underrepresented in the law school population.

The School of Law, in cooperation with the Association of American Law Schools (AALS) and the Council on Legal Education Opportunity (CLEO), participates in programs designed to increase the number of law students from underrepresented groups. CLEO applications may be obtained by writing to: Council on Legal Education Opportunity, 740 15th Street, N.W., 9th floor, Washington, D.C. 20005; (202-662-8630); <http://www.abanet.org/cleo>.

Applications for the Prelaw Summer Institute for American Indians and Alaskan Natives may be obtained from the American Indian Law Center, P.O. Box 4456-Station A, Albuquerque, NM 87196 (505-277-5462); <http://lawschool.unm.edu>.

The Mexican-American Legal Defense and Education Fund (MALDEF) has scholarships available for Latino students who have applied to law school. Applications may be obtained by writing to MALDEF, 634 So. Spring Street, 11th Floor, Los Angeles, CA 90014 (213-629-2512).

Program of Study

The professional curriculum requires six semesters for completion and extends over a period of three years. It is for full-time students only; no part-time or evening

program is offered. New students are admitted only at the beginning of the fall semester.

After satisfactorily completing the professional curriculum of 88 semester units and the required period of resident study, you will receive the degree of Juris Doctor. Students who fail to attain satisfactory grades may be required to withdraw from the School at the end of any academic year.

The first year's work is prescribed and provides the essential foundation for subsequent legal study. Satisfactory completion of the first-year courses is, in all cases, prerequisite to second- and third-year courses. The work of the second and third years is elective. The courses of the professional curriculum are listed in the "Programs and Courses" section of this catalog. Courses taken in summer sessions at other accredited law schools may, with prior permission, be credited toward the units required for the professional degree.

Combined Degree Programs

Students may find a combined degree involving law and another discipline such as economics, business, sociology, or science advantageous. To encourage this kind of study, the School, in conjunction with other schools and university departments, has established Combined Degree Programs. Under these programs, a student may work toward a J.D. degree and a master's degree in another discipline at the same time. In some instances it may be possible to work on a Ph.D. degree as well. Students working toward a combined degree are required to spend their first year at the law school.

Normally, a Combined Degree Program will take at least four years. You will usually be able to earn up to 10 semester-hours of law school credit for work in the related discipline and normally can complete the combined degrees in less time than it would take to earn the two degrees separately. The first year of the Combined Degree Program must be taken entirely in the School of Law. During the remaining years, course work may be divided between the law school and the related discipline. You must satisfy the admission requirements for both programs and file applications with both units.

Students have pursued degree programs in combination with UC Davis departments for the M.A. degree in economics, philosophy, computer science and sociology, and with the School of Management for the M.B.A. degree. The law school will attempt to work out an additional program if you are interested in other disciplines. You may enroll in the Combined Degree Program any time before the beginning of your third year in law school. If you are interested in pursuing a Combined Degree Program, and have made a separate application to another school or department, you should notify the School of Law if that application is accepted.

School of Law Academic Calendar 2002-2003

The School of Law operates on a semester system rather than the quarter system used on the remainder of the Davis campus.

	FALL 2002	SPRING 2003
Introduction Week	Mon.-Fri., Aug. 19-23	
Law School instruction begins	Mon., Aug. 26	Mon., Jan. 13
Labor Day holiday	Mon., Sept. 2	
Veteran's Day holiday	Mon. Nov. 11	
Thanksgiving holiday	Thurs.-Fri., Nov. 28-29	
Martin Luther King, Jr., holiday		Mon., Jan. 20
President's Day holiday		Mon., Feb. 17
Spring recess		Mon.-Fri., March 24-28
Law School instruction ends	Fri., Dec. 6	Fri., May 2
Reading period	Sat.-Mon., Dec. 7-9	Sat.-Thurs. May 3-8
Law School examination period	Tues.-Fri., Dec. 10-20*	Friday-Friday May 9-23
Law School Commencement		Sat., May 24

Tuesday, November 12 is treated as a Monday for class schedule purposes.

* Exams will be given on Saturday, December 14.

The LL.M. Program

University Extension
530-757-8569; 530-575-8596 (fax)
CMcmillin@unexmail.ucdavis.edu

The law school LL.M. (Master of Laws) program integrates American and foreign law students at all levels of study. For foreign law graduates, the program provides an opportunity to gain a basic knowledge of the United States legal system. United States law school graduates and selected foreign LL.M. candidates may also seek admission on a thesis rather than a course basis. Other opportunities available to all graduate law students include developing special expertise in a particular area and doing special projects and original research under the direction of a faculty member.

Each LL.M. candidate must successfully complete a minimum of 20 semester units of work, usually 10 units each semester. Foreign LL.M. students must enroll in the 1-unit course *Introduction to Legal Research* and the 2-unit course *Introduction to the Law of the United States*. They earn the remainder of their required course credit in regular elective J.D. courses. Each foreign student must also complete an intellectually rigorous legal research and writing project, constituting at least 2 units of credit.

All LL.M. candidates begin their year of study with a complete orientation in the academic and social life of the law school, the UC Davis campus and the city of Davis. LL.M. students are encouraged to enroll in the School of Law's Orientation in U.S.A. Law Program, given in the month before the LL.M. Program begins.

GRADUATE SCHOOL OF MANAGEMENT

UC DAVIS

GRADUATE SCHOOL OF MANAGEMENT

2002-2003
2003-2004

GRADUATE SCHOOL OF MANAGEMENT

Graduate School of Management
106 AOB IV
530-752-7399; <http://www.gsm.ucdavis.edu>

The Graduate School of Management offers a full-time, two-year program leading to the Master of Business Administration degree. The program provides both entry-level and mid-career students with an understanding of management approaches to problem solving and an awareness of the environment within which public and private management decisions are made. Successful completion requires not only a sophisticated understanding of a variety of functional skills in finance, marketing, production, program evaluation and accounting, but also an understanding of computers, information systems and the application of scientific methods to the identification and solution of management problems.

Preparing for the Study of Management

A bachelor's degree and a strong interest in professional management are prerequisites for admission to the Graduate School of Management. The school seeks students from diverse professional and academic backgrounds and does not limit its consideration to applicants from any particular category of majors. Entry-level and mid-career applicants are considered, and women and minorities are encouraged to apply.

Although the program has no specific subject prerequisites, it is strongly recommended that students complete the following course work before enrolling:

Accounting—an introductory course in financial accounting.

Economics—an introductory courses in micro and macroeconomics.

Mathematics—an introductory course in calculus.

Statistics—a course in elementary statistics.

Applying for Admission

Application Deadline	Decision made no later than
December 1	February 28
February 1	March 31
April 1	May 31

Interviews are highly recommended but not required, unless the applicant has less than two years of work experience. A completed application should be on file before scheduling an interview.

Admission is for the fall quarter only. Application materials can be obtained in the following ways:

- call 530-752-7399
 - e-mail the Graduate School of Management at admissions@gsm.ucdavis.edu
 - print the application materials from the Web site at www.gsm.ucdavis.edu
 - apply electronically through the vendor on our Web site
- Complete and return your application, with all supporting documents, by the deadlines given above. The application fee is \$40.00.

In addition to your application, you need to submit:

- Transcripts from all colleges or universities previously attended.
- Graduate Management Admission Test (GMAT) taken within the last five years of the admission date. For further information and registration forms contact: Graduate Management Admission Council; 1-609-771-7330; www.gmat.com.
- Three letters of recommendation. Applicants currently enrolled in school should include one recommendation from a professor. For individuals who are out of school, recommendations from employers or business associates are acceptable.
- Three essays on specific topics.

Personal interviews are not required, although visits from applicants are welcomed. To schedule an interview or visit, call 530-754-4080, or e-mail visit@gsm.ucdavis.edu.

International Students

Foreign students for whom English is a second language must take the Test of English as a Foreign Language (TOEFL) within the last two years, and receive a minimum score of 600/paper based or 250/computer based test. To receive registration forms, contact TOEFL, Educational Testing Service, 609-771-7100; www.toefl.org.

International students must show proof of financial support for one academic year including tuition and living expenses upon being admitted to the program.

Criteria for Admission

The major criterion of the committee granting admission is what an applicant has to gain from, and offer to, the program. Consideration of an applicant's undergraduate performance includes a review of trends in scholastic performance and areas of academic strength as well as an assessment of overall grade point averages. Admissions standards and grading policies of the schools attended are also considered. Both verbal and quantitative scores on the GMAT are used to evaluate measurable general aptitude for management. Background and maturity as indicated by employment history, service and activity records, recommendations and the applicant's essays are factors in the committee's evaluation. Professional management experience is not required for admission but is favorably considered.

Program of Study

The hallmark of the two-year UC Davis MBA program is its flexibility. Students are required to take seven core courses and then choose three additional breadth courses to prepare them for in-depth study in their concentration. The series of core courses in the first year focus on all basic disciplines of business—accounting, economics, finance, marketing, organizational behavior and statistics.

As early as the first year of study, students are able to integrate elective courses into their personal curriculum. Elective courses place an emphasis on real-world application of management principles. Students can focus on one or more of the twelve “standing” concentrations, or may design their own concentration. The concentrations include accounting, agricultural management, e-commerce, environmental and natural resource management, finance, international management, information technology, management science, marketing, not-for-profit management, technology management and general management.

MBA Program for Working Professionals

In addition to the full-time program, the Graduate School of Management offers an evening MBA Program for Working Professionals. Students enrolled in the MBA Program for Working Professionals pay a flat rate per course. Fees are available from our Web site.

Application Deadline **Decision made no later than**
April 1 May 31

Interviews are required and may be scheduled once your application is submitted.

If you would like more information about the evening program, please contact the Graduate School of Management Admissions office at 530-752-7399 or visit the Web site (www.gsm.ucdavis.edu).

GSM's highly successful placement program offers students individualized attention and provides a wide array of opportunities to interact with employers.

UC DAVIS

SCHOOL OF MEDICINE

**UC DAVIS
AGGIES**

**2002-2003
2003-2004**

SCHOOL OF MEDICINE

SCHOOL OF MEDICINE

School of Medicine
530-752-2717; <http://medome.ucdavis.edu>

The Doctor of Medicine degree requires the satisfactory completion of a four-year course of study composed of 15 consecutive quarters. Course work is conducted on the Davis campus, at the UC Davis Medical Center, Sacramento and in nearby affiliated hospitals.

Preparing for the Study of Medicine

When you apply to the School of Medicine, you must submit the results from the Medical College Admission Test (MCAT), so it is recommended that you take the MCAT by the spring before application. Information can be obtained at your undergraduate institution or directly from MCAT Program, Box 4056, Iowa City, IA 52243; Telephone 319-337-1357. To be acceptable for the fall entering class, the MCAT must be taken no later than the previous fall. No scores before August 1999 will be accepted.

Applicants must also meet the following academic requirements:

- A. Completed at least three years of study in an accredited college or university in the United States or Canada. A minimum of 90 semester hours or 135 quarter units of college-level work is required. Courses in highly specialized fields are acceptable only at the discretion of the medical school.
- B. Completed satisfactorily before matriculation each of the following courses:

	Quarter Units	Semester Units
1. English, 1 year or its equivalent	12	6
2. Biological science, 1 year including laboratory, or its equivalent	12	8
3. General chemistry, 1 year including laboratory, or its equivalent	12	8
4. Organic chemistry, 1 year or its equivalent. If two or more undergraduate organic chemistry courses are offered, it is recommended that you elect the more rigorous option	12	8
5. Physics, 1 year including laboratory or its equivalent.....	12	8
6. Mathematics, course work sufficient to satisfy prerequisites for integral calculus (course work through integral calculus is recommended)	6	4

(You will find helpful experience and knowledge gained in biochemistry, genetics and embryology.)

- C. Demonstrate the potential to perform academically at least as well as the average of the current first year class. This reflects the School of Medicine's generally higher standards and our emphasis on potential as judged from the application as a whole, including but not limited to MCAT and GPA scores.

For additional information, contact the School of Medicine Admissions Office.

Applying for Admission

November 1 Deadline for filing applications for admission for to the School of Medicine

The School of Medicine participates in the centralized American Medical College Application Service (AMCAS). Visit the web site for the Association of American Medical Colleges (AAMC) located at <http://www.tomorrowdoctors.org> for information on admission to medical school. You need to submit only one application and one set of official transcripts to AMCAS, regardless of the number of member schools to which you are applying. In addition to the AMCAS, each applicant for 2003 must submit a separate UC application, available on the school's Web site.

Submit the completed application and other required credentials directly to AMCAS for verification, reproduction and immediate distribution to the medical schools you have indicated.

After your AMCAS application has been received by the School of Medicine, the Admissions Office will notify you and may request a secondary application and two letters of recommendation along with a nonrefundable application fee of \$40. Send these items directly to the Chairperson of the Admissions Committee, Office of Admissions, School of Medicine, University of California, One Shields Avenue, Davis, CA 95616-8661, and not to AMCAS. Recommendations can be in the form of a report by a premedical advisory committee at the college or university where you are enrolled or letters from two faculty members who are familiar enough with you and your abilities to make a meaningful evaluation. We recommend that one letter be from a science instructor and the other from a non-science instructor.

Applications are accepted by AMCAS between *June 1* and *November 1*. We strongly recommend that you make an early request for application materials from AMCAS and see that the necessary supporting items reach the Committee as soon as possible after the School of Medicine requests them. The Committee reviews only complete application files and schedules interviews for highly qualified applicants throughout the application period and beyond.

A personal interview is usually required before a place in the first-year class can be offered. However, because of the large number of applicants, it is not possible to interview each one, and for this reason interviews are held only at the invitation of the Admissions Committee. Interviews take place at the medical school in order to provide you with first-hand knowledge of programs and facilities and give you the opportunity to meet some of the students.

As decisions are made, letters of acceptance are sent; this can be as early as mid-October and as late as September of the following year.

Applicant Selection. The class entering in the fall will be limited to 93 students selected on the basis of academic achievement, academic promise and personal characteristics. The Admissions Committee uses these criteria to determine if a candidate will be able to complete satisfactorily the requirements of the medical curriculum and become excellent medical practitioners. Factors taken into consideration include scholastic records, Medical College Admission Test performance, and reports of teachers, advisers and interviewers with regard to intellectual capacity, motivation, emotional stability and personal dedication.

The majority of openings in the entering class will be awarded to students who are California residents. However, the School of Medicine participates in the program of the Western Interstate Commission for Higher Education (WICHE) and residents of participating states will be considered as residents for purposes of admission. For more information, write the WICHE at Post Office Drawer P, Boulder, CO 80302.

The School of Medicine selects students for admission with a view to meeting the needs of society, of the medical profession and of the School. Because we live in a pluralistic society, and the educational experience is enhanced by the interaction of students from various backgrounds, the School desires diversity in its student body. This is reflected in the School's commitment to expand opportunities in medical education for individuals from groups underserved in medicine as the result of socioeconomic disadvantage and to increase the number of physicians practicing in underserved areas. Therefore, the Admissions Committee, composed of individuals from a variety of backgrounds and representative of a broad spectrum of medical sciences, evaluates applicants in terms of all relevant factors. These include academic credentials, with due regard to how they may have been affected by disadvantages experienced by the applicant, such personal traits as character and motivation, experience in the health sciences and/or the community, career objectives, and the ability of the individual to make a positive contribution to society, the profession and the School.

Transfer with Advanced Standing

Currently enrolled students in good standing at approved medical schools in the United States or Canada may apply for admission to the third year of study. In order to provide the best facilities and clinical resources, however, we must limit the number of students in our clinical clerkships. Therefore, applications for transfer to the third year are considered on a space-available basis.

Deadline for application is April 1 of the year of transfer. A nonrefundable application fee of \$40.00 is required. Applicants must provide medical school transcripts, and if accepted, must pass Part I of the USMLE at their current institution. Available spaces may be filled by the Admissions Committee based upon the entire content of an application, or they may request additional information including letters of recommendation and a personal interview. All applicants for transfer must meet the usual requirements for admission, as well as satisfactorily completing the equivalent of two years of study at the medical school. Applicants will be notified of the Admissions Committee's decision starting April 30.

The medical school's student support services ensure that all its students have resources available to see them through to graduation.

Program of Study

Doctor of Medicine. The curriculum for the M.D. degree is normally a four-year program that provides comprehensive training for the practice of medicine, and provides a blend of basic sciences training and clinical experience. The emphasis during the first two years is on the basic-science foundations of medicine. Medical students are introduced to patient care during their very first quarter of study, reflecting the school's commitment to the training of highly skilled clinicians. Several volunteer clinics, largely staffed by UC Davis medical students, provide an ideal setting for hands-on clinical experience.

Combined Degree Program. In addition to the Doctor of Medicine degree, the School of Medicine at Davis offers two formal combined M.D./Ph.D. programs that train physicians to meet, respond to and solve the broad diversity of problems and dilemmas facing current and future health care.

Meeting this challenge requires those capable of advancing our biological sciences knowledge base, and others who can recognize and solve the ethical, political and humanitarian issues that confront the broad delivery of health care to all. Hence, the field for the Ph.D. in the joint degree program at UC Davis can be any graduate program offered on the Davis campus, extending beyond the traditional biological sciences boundaries, and strongly encouraging candidates to seek degrees in social sciences and humanities. All requirements for both degrees are met in a course of study that usually lasts seven years. To be admitted, and be concurrently enrolled in both degree programs, students must apply for separate admission to both the M.D. and Ph.D. programs and obtain permission of the School of Medicine

M.D./Ph.D. Advisory Committee. Funding for two competitive fellowships is awarded annually to students enrolled in the M.D./Ph.D. program.

The University of California, Berkeley, School of Public Health allows students to pursue a Masters of Public Health degree in conjunction with the M.D. degree at Davis. Most typically, the public health portion of this program is taken immediately following completion of the third year clinical clerkships. A directed focus in public health is viewed as a natural extension of the school of medicine mission in the training of primary care physicians. Beginning fall 2002, the School of Medicine at Davis will offer a Master's in Public Health (MPH) degree. The program is restricted to current students in Medicine or Veterinary Medicine, health care professionals and state health services employees.

Advisory Committee. Inquiries about admission to graduate education should be directed to the Dean of Graduate Studies, University of California, One Shields Avenue, Davis, CA 95616. For more information concerning the combined-degree programs, contact Edward D. Dagang, Office of Admissions, School of Medicine, University of California, One Shields Avenue, Davis, CA 95616-8661.

Family Nurse Practitioner/Physician Assistant Program. The Family Nurse Practitioner/Physician Assistant (FNP/PA) credential program educates health care professionals to act as members of a health care team, and improves the availability of culturally relevant primary health care in underserved populations throughout central and northern California. Enrollment in these courses (see Medicine, School of, Department of Family and Community Medicine) is limited to students who are enrolled in the FNP/PA program.

Academic Calendar

The School of Medicine operates on a different schedule from the rest of the campus. A detailed academic calendar may be viewed online at <http://ome.ucdavis.edu>.

The program is a continuous four-year academic experience, with the first year commencing in fall quarter. A six-week break is scheduled between the first and second year academic schedule following spring quarter. The second year concludes with a three- to four-week period for preparation for USMLE Step 1 examination. The third and fourth year clinical experiences begin in summer and continue through spring.

With approval, students may extend the first two years over three years and use the additional time to individualize their programs. This alternative time is highly suitable for including research experiences and/or meeting other academic objectives. Flexibility in the third and fourth years also permits alternate scheduling.

UC DAVIS

**SCHOOL OF
VETERINARY MEDICINE**

2002-2003
2003-2004

**SCHOOL OF
VETERINARY MEDICINE**

**SCHOOL OF VETERINARY
MEDICINE**

School of Veterinary Medicine
Office of the Dean
Surge IV
530-752-1383; <http://www.vetmed.ucdavis.edu>

The mission of the School of Veterinary Medicine is to provide the best possible health care for animals through teaching, research and public service. Students are offered a rigorous four-year program of study that prepares them for diverse career opportunities in veterinary medicine.

**Preparing for the Study
of Veterinary Medicine**

To be considered for admission to the School, you must have completed 108 quarter units (72 semester units) in an accredited college or university and have completed the following courses:

Lower Division Required Sciences Quarter Units

General Chemistry.....	15
Organic Chemistry.....	6
Physics	6
Biological Sciences	10

Upper Division Required Sciences

Embryology.....	4
Genetics	4
Biochemistry	4
Physiology.....	5

Additional Courses

Required English	12
Required Humanities and Social Sciences.....	12
Required Statistics.....	4

(To convert semester units to quarter units, multiply by $\frac{3}{2}$. For example, a 4-unit semester course is equivalent to a 6-unit course in the quarter system.)

You should plan your preveterinary medical education carefully. The required courses should be spaced to permit maximum scholastic achievement. An undergraduate major should be selected on the basis of individual interest and aptitude; there is no advantage gained toward admission by selecting one major over another. If you have definite areas of interest within the general field of veterinary medicine, you are encouraged to take courses (for example, computer science, agricultural economics, molecular and biochemical genetics) that will broaden your background in these areas. Some specialized areas include laboratory animal medicine, exotic animal medicine, public health, food animal practice and biomedical research.

Examinations. You must take the General Aptitude Test of the Graduate Record Examination (GRE) by October 1st of the year you apply for admission. Applications for the exams and additional information may be obtained from the Educational Testing Service, Box 23470, Oakland, CA 94623-0470. The GRE must be taken within five years of the time you submit your application. The highest scores will be used when the GRE is taken more than once.

Grade Point Average. To be considered for admission, you must have a minimum grade point average of 2.50 for both the required sciences and the cumulative grade point average. Applicants who do not meet the minimum grade point average can qualify for admission by receiving GRE scores in the upper 30th percentile for the combined General Aptitude Test scores. Applicants who do not have transcripts with letter grading can qualify for consideration with these same scores or by receiving a bachelor's degree with honors.

Practical Experience. Admission to the School requires extensive experience with animals. This experience must entail more than having family pets and should include experience with several animal species if that

experience includes activities that gives you an appreciation and understanding of the veterinary profession. The minimum requirement for animal, veterinary and biomedical science experience is 180 hours (4.5 weeks). This experience should also include working with veterinarians, to give you an understanding of the duties and responsibilities of a practitioner and the breadth of veterinary medicine.

Applying for Admission

October 1 Deadline for filing applications for admission to enter Fall quarter to the School of Veterinary Medicine

Students are admitted to the School of Veterinary Medicine in the fall only. Applications are available any time after July. Visit our Web site at <http://www.vetmed.ucdavis.edu>. Applications must be submitted online for California applicants.

Students interested in admission to the School of Veterinary Medicine are urged to request an *Announcement of the School of Veterinary Medicine* at an early date so that all minimum academic requirements and deadlines are met.

Applicants with disadvantaged backgrounds (cultural, economic, social, educational, disabled and other factors) are encouraged to apply to the Veterinary Medical Opportunity Program (VMOP). For further information and advising services, call the Office of the Dean—Student Programs at 530-752-1383.

Letters of Evaluation. Three letters of evaluation are required and are submitted with your application. Letters should be requested from those who know you well, who understand academic and professional demands and have had the opportunity to evaluate your personal qualities and potential as a professional person. The evaluator should be willing to write a thorough, comprehensive letter on your behalf.

Interviews. Interviews may be requested, as deemed necessary, by the Dean and Admission Committee to obtain additional information. The Dean and Admission Committee may require additional evaluation procedures for selecting candidates for admission.

Out-of-State and Foreign Applicants. California residents are given priority for admission to the school. A small number of uniquely qualified applicants who are not California residents may be admitted as nonresidents. The criteria for determining residency are explained in Residence for Tuition Information in the Appendix of this catalog. Specific questions should be addressed to the Legal Analyst—Residence Matters, 111 Franklin St., 8th Floor, Oakland, CA 94607-5206. No other persons are qualified to give rulings on residency.

If you are from a country other than the United States, you must include a certified English version of your college transcript, and, if English is your second language, the official scores from the Test of English as a Foreign Language (TOEFL) taken within five years of the date when your application is submitted.

Criteria for Selection

I. Academic Factors (50-60%)

A. College course work:

1. GPA of all undergraduate and graduate course work
2. GPA of required science course work
3. GPA of last two years of college work (minimum of 45 semester units)

B. Graduate Record Examination:

1. General Aptitude Test (Verbal, Quantitative and Analytical)

II. Non-Academic Factors (40-50%)

A. Personal Statement/Experience (5-20%)

B. Letters of Evaluation (5-20%)

C. Interviews (0-20%)

Applicants will also be evaluated for their understanding of the profession and the responsibilities of being a veterinarian, interest in serving the public, maturity, motivation and other qualities necessary for successful academic and professional work.

Program of Study

Doctor of Veterinary Medicine. To receive a Doctor of Veterinary Medicine degree, students must study veterinary medicine for the equivalent of 12 quarters of 10 weeks each. A grade point average of 2.0 (C), computed on all courses taken in the School, is required and students must satisfactorily complete all required work as determined by the faculty of the School.

Master of Preventive Veterinary Medicine. Applicants for candidacy to the Master of Preventive Veterinary Medicine (M.P.V.M.) degree program must have completed the Doctorate in Veterinary Medicine or the equivalent; final admission decisions rest with the Admissions Committee, M.P.V.M. program. Application deadline for August admission is March 31. International applicants are encouraged to apply as early as possible.

The M.P.V.M. degree normally takes one year to complete; however, some students may require as much as two years to finish the program. Students who intend to complete the program in one calendar year must begin the program in August. Candidates for the M.P.V.M. degree must satisfactorily complete a total of 40 units of course work while in residence. This includes 27 units of required courses in epidemiology, biostatistics, information management and a minimum of 13 units of approved electives. Students must also complete a research study which culminates in a written report and oral presentation. A committee consisting of three faculty members reviews each paper for acceptability and assigns an appropriate grade.

Application forms and information about the program are available from the Director, M.P.V.M. Program, Office of the Dean, School of Veterinary Medicine, University of California, One Shields Avenue, Davis, CA 95616; or visit the M.P.V.M. Web site at <http://www.vetmed.ucdavis.edu/mpvm/mpvm.htm>.

Combined Degree Programs. Students may enroll in combined degree programs. General information regarding these degrees can be found in the Announcement of Graduate Studies, available from Graduate Studies, University of California, One Shields Avenue, Davis, CA 95616. For more detailed information, write to the chairperson of the department in which you want to study and the School of Veterinary Medicine.

**School of Veterinary Medicine
Academic Calendar 2002-2003*****Fall Quarter 2002**

Labor Day Holiday	Monday, Sept. 2
Orientation for 4th-year students	Tuesday, Sept. 3
Instruction begins for 4th-year students	Tuesday, Sept. 3
Orientation for 1st-year students	Wed. and Fri., Sept. 4 and 6
Instruction begins for 1st-, 2nd- and 3rd-year students	Monday, Sept. 9
Veteran's Day Holiday	Monday, Nov. 11
Thanksgiving Holiday	Thur.-Fri., Nov. 28-29
Instruction ends	Thursday, Dec. 5
Finals end	Friday, Dec. 13

Winter Quarter 2003

Instruction begins for 1st-, 2nd- and 3rd-year students	Thursday, Jan. 2
Instruction begins for 4th-year students	Monday, Jan. 6
M. L. King Holiday	Monday, Jan. 20
President's Day Holiday	Monday, Feb. 17
Instruction ends	Friday, March 14
Finals end	Friday, March 21

UCDAVIS

**PROGRAMS
AND COURSES**

2002-2003
2003-2004

**PROGRAMS
AND COURSES**

COURSES**Undergraduate Courses****Lower Division Courses**

These courses, **numbered 1–99**, are open to all students for lower division credit, but are designed primarily for freshmen and sophomores.

Upper Division Courses

These courses, **numbered 100–199**, are open to all students who have met the necessary prerequisites as indicated in the catalog course description. Preparation should generally include completion of one lower division course in the given subject or completion of two years of college work.

Variable-Unit Courses

Subject to approval by the department chair, an instructor may arrange to give a special study course (numbers 90X, 92, 97T, 97TC, 98, 99, 190X, 192, 194H, 197T, 197TC, 198, 199) to interested students. These courses may be offered any fall, winter, or spring quarter as determined by the department.

- **90X/190X (Seminar)** are seminar courses for in-depth examination of a special topic within the subject area.
- **92/192 (Internship)** courses enable individual students to obtain practical experience to complement their educational goals or to explore potential career interests and opportunities. Students must have completed 84 units before enrolling in course 192.
- **97T/197T (Tutoring)** and **97TC/197TC (Tutoring in the Community)** are courses for students who want to tutor in a subject in which they are proficient—generally in their major field—while enrolled as an undergraduate.
- **98/198 (Directed Group Study)** courses are set up on a one-time basis for a group of students in a subject for which no regular courses have been established.

- **99 (Special Study for Undergraduates)** is a course arranged for an individual student who shares, with an instructor, an academic interest that cannot be accommodated within the formal course structure.
- **194H (Special Study for Honors Students)** courses are for individual students with honor status, as determined by the department offering the course, and who have completed 84 units.
- **199 (Special Study for Advanced Undergraduates)** courses are the upper division counterparts of course 99, and involve supervised independent study and research requiring adequate background in the subject proposed for study as well as prior completion of 84 units.

Credit in courses 99, 194H and 199 is limited to a total of 5 units per term.

Autotutorial Courses are courses in which students instruct themselves at their own pace. These courses can be identified by the letters AT at the end of their course numbers, e.g., 13AT, 141AT.

Virtual Courses are courses in which instruction is delivered via the Internet. These courses can be identified by the letter V at the end of their course numbers, e.g., 10V, 162V.

Research Conference Courses are courses in which advanced undergraduate students may participate in critical discussions of staff research activities. These one-unit courses are numbered 190C and are graded on a Passed/Not Passed basis.

Graduate Courses

Courses **numbered 200–299** are open to graduate students and to undergraduates who have completed 18 units of upper division work basic to the subject matter of the course. However, admission is subject to the approval of the instructor in charge of the course. Grading in 290C courses and most variable-unit 299 or 299D courses is Satisfactory/Unsatisfactory. Check the course description for grading information.

Neil Michael/Axiom

Professional Courses for Teachers and Nurse Practitioners

Courses **numbered 300–399** are teacher-training courses in the Division of Education and in other departments and are especially intended for teachers or prospective teachers. Courses designed to provide instruction to teaching assistants are included. Courses for certification of family nurse practitioners and physician assistants are also included. These courses are open only to students enrolled in those programs.

Other Professional Courses

Courses **numbered 400–499** are professional training courses. Graduate students should consult their faculty adviser or contact the Graduate Studies Office before registering in 400 series courses to determine if graduate credit may be awarded for the course in question.

Prerequisites

Prerequisites for courses should be noted carefully; the responsibility for meeting these requirements rests on the student. If you can demonstrate that your preparation is equivalent to that specified by the prerequisites, the instructor may waive these requirements for you. However, the prerequisite that requires that you complete 84 units before registering in the course may not be waived. The instructor may request that a student who has not completed the prerequisites be dropped from the course.

COURSE DESCRIPTIONS

Below is a sample of how a course is listed in this catalog.

190. Proseminar in Nutrition (1)

Seminar—1 hour. Prerequisite: course 111; senior standing. Discussion of human nutrition problems. Each term will involve a different emphasis among experimental, clinical and dietetic problems of community, national and international scope. May be repeated for credit with consent of instructor. (P/NP grading only.)—I, II, III. (I, II, III) Smith

Top line: course number; title; units.

Paragraph following: course instructional format; prerequisite; course description; grading if other than letter grading; quarter offered 2002–2003; quarter offered 2003–2004 (in parentheses); instructor (if specified).

Quarters offered: the quarter in which a course is intended to be given is shown as follows:

- I. Fall Quarter (September to December) or Fall Semester (August to December), School of Law
- II. Winter Quarter (January to March) or Spring Semester (January to May), School of Law
- III. Spring Quarter (April to June)
- IV. Summer Quarter (July to September) for students in the School of Medicine only

The quarter a course is offered is subject to change. Consult the *Class Schedule and Registration Guide* or contact the department for more information.

Alternate Year Designation

Some course descriptions will include the phrase “Offered in alternate years.” If the course will be offered in the 2002–2003 academic year, the quarter designation immediately follows the description. If the course will be offered in the 2003–2004 academic year, the quarter designation is inside parentheses.

Multi-Quarter Courses

A series of course numbers followed by two or three letters (for example, Physics 110A-110B-110C) is continued through three successive quarters, ordinarily from September to June. The first quarter course listed this way is a prerequisite to the second, and the second is prerequisite to the third. On the other hand, where A and B portions of a course are listed separately (for example, Economics 160A and 160B), the A course is not a prerequisite to B, unless it is specifically mentioned in the list of prerequisites.

Expanded Course Descriptions

Because of space limitations, you may find that the descriptions in the *General Catalog* do not include all the information you would like about a course. The faculty has responded to this need by writing the “Expanded Course Descriptions,” giving more detailed explanations about each course offering. These descriptions are available each quarter to assist students in selecting their courses. They contain such information as course goals, texts used, preparation required of students, basis for grading, course format, special assignments (papers, field trips, etc.), and a topical outline of the material to be covered.

Copies of the “Expanded Course Descriptions” are available for on-campus use at the Shields Library Reference and Periodicals desks, the College deans’ offices, advisers’ offices, advising centers, departmental offices, and at The First Resort. A limited number of expanded course descriptions are also available in an online archive at <http://registrar.ucdavis.edu/cafinfo>.

The course offerings and instructors listed in this catalog are subject to change without notice. For more current quarter offerings and instructors, refer to the *Class Schedule and Registration Guide*, available at the UC Davis Bookstore and online at <http://registrar.ucdavis.edu/csrg>.

Patricia A. Turner, Ph.D., Professor

Affiliated Faculty

Kristee Haggins, Ph.D., Adjunct Assistant Professor

The Major Program

The African American and African Studies Program provides courses on the history and culture of African Americans. The program provides students with a multi-disciplinary learning experience. Students in the major take selected courses in other programs and departments that complement courses offered within African American and African Studies. Majors and minors are also encouraged to take advantage of internship programs.

The Program. Students are encouraged to combine an examination of African American history and culture in the U.S.A. with African or diaspora studies. The emphasis in African American (U.S.A.) culture includes courses on the history, culture, arts, and literature of African Americans, the patterns of their socio-political and cultural movements, and the struggle with racism as a social and psychological problem. The emphasis in African Studies focuses on the social organization, culture, and religion of West African societies. The diaspora emphasis includes courses on the African heritage in the Americas, Islam in Africa and the Americas, African religion in the diaspora and cinema studies. In addition, students may choose to do special research projects.

Career Alternatives. Students completing the African American and African Studies major are well prepared for employment in the Office of Education, human service units, county social service programs, and counseling services. The major is also an appropriate background for work in community organizations like the Urban League, NAACP, Urban Affairs, and Office of Economic Opportunity, or future study in graduate school.

A.B. Major Requirements:

The major program must be developed in consultation with an African American and African Studies faculty member, and approved by the program's Major Adviser.

UNITS

Preparatory Subject Matter28

African American and African Studies 10 ...4

One course from African American and African Studies 12, 15, 50, 51, 52, 80 ...4

One course from Anthropology 2; Economics 1A, 1B; Geography 2; Sociology 1; Political Science 1, 2; Psychology 14

One course from Chicana/o Studies 10;

Native American Studies 1, 10; American Studies 45; Asian American Studies 1, 24

Two courses from History 15, 17A, 17B8

One course from African American and African Studies 54, 155A, Dramatic Art 41A, 41B, Music 28, 105, 1064

Courses in African American and African Studies (AAS)

Lower Division Courses

10. Introduction to Afro-American Culture and Society (4)

Lecture—4 hours. Introduction to the contemporary Black American experience by critically examining historical, political and social and economic factors that have affected the development and status of Afro-American people.—I. (I.) Turner, Harrison

12. Introduction to African Societies (4)

Lecture/discussion—4 hours. Introduction to African Studies which will focus on the various disciplinary perspectives through which African society and culture are generally studied. A survey of methods, resources and conceptual tools for the study of Africa. GE credit: ArtHum, Div, Wrt.—II. (II.) Olupona, Adejunmobi

15. Introduction to African American Humanities (4)

Lecture—3 hours; discussion—1 hour. Introduction to the humanist tradition developed by writers, philosophers, and artists of African descent in the West. Attention given to African sources, as well as European, Caribbean, Latin-American, and North American variations on this tradition. GE credit: ArtHum, Div, Wrt.—I. (I.) Stewart, Harrison

16. Verbal and Performance Arts in Africa (4)

Lecture/discussion—4 hours. African verbal arts; oral texts from different African cultures. Types of critical response to oral texts, role of oral artists, context and esthetics of oral performance in Africa. GE credit: ArtHum, Div, Wrt.—II. (II.) Adejunmobi

17. Women in African Societies (4)

Lecture/discussion—4 hours. Gender relations in traditional and contemporary African society. Involvement of African women in politics, religion, the economy, the arts. African responses to feminist theory. Images of women in African literature. GE credit: Div, Wrt.—I. (I.) Adejunmobi

50. Black Images in Popular Culture (4)

Lecture—2 hours; discussion—2 hours. A survey of the depictions of Blacks in popular culture (popular press, stage, radio, film, television, advertising) from the middle of the sixteenth century to the present. GE credit: ArtHum, Div, Wrt.—III. (III.) Turner, Acham

51. History of Afro-American Dance (4)

Lecture—2 hours; discussion—2 hours. Evolution of African American dance, tracing its history and development from West Africa through the Caribbean and to the United States. Investigates the social relevance of African American dance and the artistic merits and contributions of African American choreographers and performers.—III. (III.) Bolden

52. African Traditional Religion (4)

Lecture—2 hours; discussion—2 hours. Introduction to the traditional religions of the sub-Saharan African peoples: emphasis on myths, rituals and symbols in West, East, Central and South African indigenous religions. Examines themes such as sacred kingship, divination system, women, prophecy, conversion and adaptation to Islam and Christianity. GE credit: ArtHum, Div, Wrt.—II. (II.) Olupona

54. University Gospel Choir (2)

Rehearsal—4 hours. Prerequisite: consent of instructor; open to any student in the university. Rehearsal, study, and performance of Gospel music. May be repeated for credit. (Same course as Music 54.) (P/NP grading only.)—I, II, III. (I, II, III.) Lymus

80. Introduction to Black Politics (4)

Lecture—4 hours. Introduction to the analysis of Afro-American politics, using conceptual frameworks from political science and other social sciences. GE credit: SocSci, Div, Wrt.—III. (III.) Harrison

99. Special Study for Undergraduates (1-5)

Prerequisite: consent of instructor. (P/NP grading only.)

Upper Division Courses**100. Survey of Ethnicity in the U.S. (4)**

Lecture—4 hours. The history, culture, philosophy, and current problems of groups considered ethnic minorities in the United States as viewed by the groups themselves. GE credit: ArtHum, Div.—II. (II.) Turner, Harrison

101. Introduction to Research in the Afro-American Community (4)

Lecture—4 hours. Prerequisite: course 10 or consent of instructor. Introductory survey of Afro-American Studies methods and techniques; problems and methodology in Afro-American Studies.—III. (III.) Stewart

107A. African Descent Communities and Culture in the Caribbean and Latin America (4)

Lecture—2 hours; discussion—1 hour; term paper. Prerequisite: upper division standing. Origin and development of African descent communities and culture in the Caribbean and Latin America: (a) the evidence for pre-Columbian arrivals; (b) the African slave trade and its aftermath; (c) the emergence of the African-creole cultures. Offered in alternate years. GE credit: ArtHum, Div, Wrt.—(I.) Stewart

107B. African Descent Communities and Culture in North America (4)

Lecture—2 hours; discussion—1 hour; term paper. Prerequisite: upper division standing. Origin and development of African descent communities and culture in the U.S.A., Canada, and Mexico from the African slave trade to contemporary urban society. Offered in alternate years. GE credit: ArtHum, Div, Wrt.—(I.) Stewart

107C. African Descent Communities and Culture in Europe and Asia (4)

Lecture—2 hours; discussion—1 hour; term paper. Prerequisite: upper division standing. The study of early African kingdoms, their relationship with Europe and Asia, and the development of African descent communities and culture in Europe and Asia from the pre-Columbian to the post-colonial era. Offered in alternate years. GE credit: ArtHum, Div, Wrt.—(I.) Stewart

110. West African Social Organization (4)

Lecture—4 hours. Prerequisite: course 101 or consent of instructor. Ecology, population, social organization, and survival culture of West Africa in the pre-colonial, colonial, and post-colonial periods. GE credit: SocSci, Div.—II. (II.) Olupona, Adejunmobi

111. Cultural Politics in Contemporary Africa (4)

Lecture/discussion—4 hours. Prerequisite: upper division standing or course 12. Themes and style of new cultural forms in Africa as displayed in art, music, film and writing, especially in regard to blending of indigenous and foreign influences. Social and political forces shaping contemporary cultural expression. Offered in alternate years. GE credit: ArtHum, Div, Wrt.—(II.) Adejunmobi

123. The Black Female Experience in Contemporary Society (4)

Lecture—4 hours. Prerequisite: upper division standing or consent of instructor. Black female social, intellectual, and psychological development. Black women's contributions in history, literature, and social science; life experiences of Black women and philosophical underpinnings of the feminist movement. GE credit: ArtHum, Div.—III. (III.) Ray, Acham

130. Education in the African American Community (4)

Lecture—2 hours; discussion—1 hour; fieldwork—3 hours. Prerequisite: course 10 or 100, and completion of the Subject A requirement. Examination of the history of the education of African Americans in the United States. Examination and critique of contemporary theories concerning the schooling of African Americans. (Former course 140.)—I. (I.) Turner

133. The Black Family in America (4)

Lecture—4 hours. Prerequisite: upper division standing or consent of instructor. Analysis of social science research to examine relationship between Black family structures, patterns of functioning, and political, economic, and social conditions. Examination of role

differentiation within families by race and social class. GE credit: SocSci, Div.—III. (III.) Harrison

141. Psychology of the African American Experience (3)

Lecture—2 hours; discussion—1 hour. Prerequisite: course 10 or consent of instructor. Introduction to the psychological issues faced by African Americans. Analysis of issues from European/Western and Afrocentric frame of reference. Emphasis on Optimal Theory, a psychological theory based on an Afrocentric world view.—III. (III.) Haggins

145A. Black Social and Political Thought (4)

Lecture—4 hours. Prerequisite: course 10 or 80, or consent of instructor. Exploration and analysis of Black social and political thought in the Americas. GE credit: SocSci, Div.—III. (III.) Harrison

145B. Black Intellectuals (4)

Lecture—4 hours. Prerequisite: course 10, 80, 145A, or consent of instructor. Exposition and critical analysis of selected theoretical writings of Black intellectuals, and especially political and social thinkers, in the Americas. GE credit: SocSci, Div.—III. (III.) Harrison

150A. The Afro-American Visual Arts Tradition: A Historical and Cultural Study (4)

Lecture—4 hours. Prerequisite: upper division standing. Afro-American visual arts tradition, folk and formal, in historical and cultural context, from 1600 through Reconstruction. GE credit: ArtHum, Div.—I. (I.)

150B. The Afro-American Visual Arts Tradition: A Historical and Cultural Study (4)

Lecture—4 hours. Prerequisite: upper division standing. Afro-American visual arts tradition, folk and formal, in historical and cultural context, from Reconstruction to present. GE credit: ArtHum, Div.—II. (II.)

151. Afro-American Vernacular Music and Verbal Arts (4)

Lecture—2 hours; discussion—2 hours. Socio-political dimensions of Afro-American musical forms like spiritual, work song, minstrelsy blues, rhythm and blues, jazz, gospel, soul and contemporary pop, and related verbal arts like preaching, toasting, rapping.—III. (III.) Turner

152. Major Voices in Black World Literature (4)

Lecture—2 hours; discussion—1 hour; term paper. Prerequisite: upper division standing, completion of course 15 or comparable course in literature or the humanities. The recurrence of cultural tropes in the works of major black world authors and formation of an African-oriented canon. Principal activities include critical reading and the discovery of literature as a cultural resource. GE credit: ArtHum, Div, Wrt.—II. (II.) Stewart

154. University Gospel Choir (2)

Rehearsal—4 hours. Prerequisite: consent of instructor; open to any student in the university. Rehearsal, study, and performance of Gospel music. May be repeated for credit. (Same course as Music 154.) (P/NP grading only.)—I, II, III. (I, II, III.) Lymson, Stewart

155A. African American Dance and Culture in the United States, Brazil and the Caribbean (4)

Lecture/discussion—4 hours. A comparative study of the African American dance forms in the U.S.A., Brazil, Haiti, Cuba, Jamaica, Barbados, and Trinidad. Examination of ritual, folk, and popular dance forms and the socio/historical factors that have influenced these forms. (Same course as Dramatic Art 155A.)—II. (II.) Bolden

156. Language and Identity in Africa and the African Diaspora (4)

Lecture/discussion—4 hours. Prerequisite: upper division standing or course 12. Relationship between language and identity in literature from Africa and the African Diaspora. Use of pidgins, Creoles, translation from African languages and impact of language policies. GE credit: Div.—III. (III.) Adejunmobi

157. Literature and Society in South Africa (4)

Lecture/discussion—4 hours. Prerequisite: upper division standing or course 12. Political and social developments in 20th-century South Africa as illustrated by a range of South African writing. Response

of different writers to race relations, impact of government policy on types and context of writing. Offered in alternate years. GE credit: Div, Wrt.—(III.) Adejunmobi

160. African American Folklore (4)

Lecture—2 hours; discussion—1 hour; fieldwork—3 hours. Prerequisite: course 10. Theory and history of African American folklore and folklife, including music, material culture, oral narrative, proverbs, and humor. African and Caribbean cultural influences on New World folk genres will be probed. GE credit: ArtHum, Div.—III. (III.) Turner

162. Islam in Africa and the Americas (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course in African American or Religious Studies, preferably course 12 or 110 or Religious Studies 60. A comparative and historical survey of Islam in the regional and cultural settings of Sub-Saharan Africa and the Americas. GE credit: ArtHum, Div, Wrt.—III. (III.) Olupona

163. African Religions in the Americas (4)

Lecture—2 hours; discussion—2 hours. Prerequisite: course 10; course 15 or consent of instructor. Comparative study of African religious heritage in the Americas: Jamaica, Trinidad, Cuba, U.S.A., Haiti, and Brazil. Emphasis on the origins and development of Candomble, Santeria, Shango, Vodun, and Rastafarianism in the New World. (Former course 153.) GE credit: ArtHum, Div, Wrt.—III. (III.) Olupona

165. Afro-Christianity and the Black Church (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 10, 15 or consent of instructor, upper division standing. Examination of the historical role of Christian belief and practice as well as the institution of the Black Church in the experience of African Americans, from slavery to the present. Offered in alternate years. GE credit—SocSci, Div.—II. Harrison

168. Black Documentary: Theory and Practice (4)

Lecture—3 hours; laboratory—3 hours. Prerequisite: Humanities 10, course 170 and consent of instructor; course 50 recommended. Preference given to African American and African Studies majors and minors. A study of Black documentary history and understanding of the use of the documentary form for political purposes. A discussion of documentary theory. Each student, singly or in a team, will create and carefully edit a documentary project. Offered in alternate years. GE credit: ArtHum, Div.—III. Acham

169. History of African American Television (4)

Lecture/discussion—4 hours. Prerequisite: course 50 recommended. A history of the representation of African Americans in television suggesting how the representations reflect the social and political forces in American society. A discussion of how African Americans have actively taken a role in shaping their representation. Offered in alternate years. GE credit: ArtHum, Div.—II. Acham

170. African American Film and Video (4)

Lecture/discussion—2 hours; term paper; film viewing—2 hours. Prerequisite: one of courses 15, 50, or English 160, or 162. A comparative approach in the study of fictional film and video produced and directed by African Americans, drawing on the social sciences and black feminist theory to examine and discuss selected works. GE credit: ArtHum, Div, Wrt.—II. (II.) Acham

171. Black African and Black European Film and Video (4)

Lecture/discussion—2 hours; term paper; film viewing—2 hours. Prerequisite: one of courses 15, 50, or English 160 or 162. A comparative approach in the study of dramatic films and videos that treat black life in Africa and Europe. Critical attention will focus on the imaginative construction of ethnicity, race, nationality, gender, and sexuality in each particular work. GE credit: ArtHum, Div.—III. (III.)

190. Topics in African and African-Diaspora Studies (4)

Lecture/discussion—3 hours; term paper. Prerequisite: upper division standing in African American and African Studies or consent of instructor. Intensive treatment of a special topic or problem in African or

African Diaspora Studies. May be repeated once for credit when topic differs.—III. (III.) Stewart

192. Internship in African American and African Studies (1-8)

Internship—3-24 hours. Prerequisite: upper division standing, completion of 12 units of upper division study in African American and African Studies courses and consent of instructor. Enrollment limited to African American and African Studies majors and minors. Supervised internship in community, government, or private institutions, in all subject areas offered by the African American and African Studies Program. May be repeated for credit for a total of 12 units. (P/NP grading only.)

197T. Tutoring in Afro-American Studies (1-5)

Tutoring—1-5 hours. Prerequisite: consent of major committee; upper division standing with major in Afro-American Studies. Leading of small voluntary discussion groups affiliated with one of the department's regular courses. May be repeated for credit for a total of 6 units. (P/NP grading only.)

198. Directed Group Study (1-5)

Prerequisite: consent of instructor. (P/NP grading only.)

199. Special Study for Advanced Undergraduates (1-5)

Prerequisite: consent of instructor. (P/NP grading only.)

Agricultural and Environmental Chemistry (A Graduate Group)

Andrew J. Clifford, Ph.D., Chairperson of the Group
Group Office, 4117 Meyer Hall (530-752-1415)

Faculty

Douglas O. Adams, Ph.D., Associate Professor (*Viticulture and Enology*)
Cort Anastasio, Ph.D., Associate Professor (*Land, Air and Water Resources*)
Charles W. Bamforth, Ph.D., Professor (*Food Science and Technology*)
Everett Bandman, Ph.D., Professor (*Food Science and Technology*)
Linda F. Bisson, Ph.D., Professor (*Viticulture and Enology*)
Roger B. Boulton, Ph.D., Professor (*Viticulture and Enology*)
William H. Casey, Ph.D., Professor (*Land, Air and Water Resources*)
M. Judith Charles, Ph.D., Assistant Professor (*Environmental Toxicology*)
Andrew J. Clifford, Ph.D., Professor (*Nutrition*)
Carroll E. Cross, M.D., Professor (*Internal Medicine*)
Susan E. Ebeler, Ph.D., Associate Professor (*Viticulture and Enology*)
Robert G. Flocchini, Ph.D., Professor (*Land, Air and Water Resources*)
Edwin N. Frankel, Ph.D., Adjunct Professor (*Food Science and Technology*)
J. Bruce German, Ph.D., Professor (*Food Science and Technology*)
Norman F. Haard, Ph.D., Professor (*Food Science and Technology*)
Bruce D. Hammock, Ph.D., Professor (*Entomology*)
William R. Horwath, Ph.D., Associate Professor (*Land, Air and Water Resources*)
You-Lo Hsieh, Ph.D., Professor (*Textiles and Clothing*)
Norman Y. Kado, Ph.D., Associate Adjunct Professor (*Environmental Toxicology*)
Peter B. Kelly, Ph.D., Professor (*Chemistry*)
Annie J. King, Ph.D., Professor (*Animal Science*)
Mark J. Kurth, Ph.D., Professor (*Chemistry*)
Yu-Bang Lee, Ph.D., Professor (*Animal Science*)
Fumio Matsumura, Ph.D., Professor (*Environmental Toxicology*)

Michael J. McCarthy, Ph.D., Professor (*Food Science and Technology*)
Alyson E. Mitchell, Ph.D., Assistant Professor (*Food Science and Technology*)
Tadeusz F. Molinski, Ph.D., Professor (*Chemistry*)
Ann C. Noble, Ph.D., Professor (*Viticulture and Enology*)
David S. Reid, Ph.D., Professor (*Food Science and Technology*)
Gerald F. Russell, Ph.D., Senior Lecturer (*Food Science and Technology*)
James R. Sanborn, Ph.D., Researcher (*Entomology/Pesticide Regulation*)
Neil E. Schore, Ph.D., Professor (*Chemistry*)
Takayuki Shibamoto, Ph.D., Professor (*Environmental Toxicology*)
Charles F. Shoemaker, Ph.D., Professor (*Food Science and Technology*)
R. Paul Singh, Ph.D., Professor (*Biological and Agricultural Engineering*)
Gary M. Smith, Ph.D., Professor (*Food Science and Technology*)
Randal J. Southard, Ph.D., Professor (*Land, Air and Water Resources*)
Gang Sun, Ph.D., Associate Professor (*Textiles and Clothing*)
Ronald S. Tjeerdema, Ph.D., Professor (*Environmental Toxicology*)
Andrew L. Waterhouse, Ph.D., Professor (*Viticulture and Enology*)
Thomas M. Young, Ph.D., Associate Professor (*Civil and Environmental Engineering*)
Robert J. Zasoski, Ph.D., Professor (*Land, Air and Water Resources*)

Emeriti Faculty

Donald G. Crosby, Ph.D., Professor Emeritus
Al L. Tappel, Ph.D., Professor
John R. Whitaker, Ph.D., Professor
S. Haig Zeronian, Ph.D., D.Sc., Professor

Affiliated Faculty

Lowell L. Ashbaugh, Ph.D., Associate Researcher (*Crocker Nuclear Lab*)
Diane M. Barrett, Ph.D., Associate Specialist (*Food Science and Technology*)
Christian E. Butzke, Ph.D., Associate Specialist (*Viticulture and Enology*)
Teresa W.-M. Fan, Ph.D., Associate Researcher (*Land, Air and Water Resources*)
Terrell P. Salmon, Ph.D., Wildlife Damage Specialist (*Wildlife, Fish, and Conservation Biology*)
Carl K. Winter, Ph.D., Associate Specialist (*Food Science and Technology*)

Graduate Study. The Graduate Group in Agricultural and Environmental Chemistry offers programs of study and research leading to the M.S. and Ph.D. degrees. Study relates to the chemical and biochemical aspects of foods, wine, fibers/polymers, pesticides, and environmental pollution. Detailed information regarding graduate study may be obtained by writing the Group Chairperson.

Graduate Advisers: D.O. Adams (*Viticulture and Enology*), C.F. Shoemaker (*Food Science and Technology*), Y.-L. Hsieh (*Textiles and Clothing*), T. Shibamoto (*Environmental Toxicology*), T. Young (*Civil and Environmental Engineering*), R.J. Zasoski (*Land, Air, and Water Resources*).

Courses in Agricultural and Environmental Chemistry (AGC)

Graduate Courses

290. Seminar (1)

Seminar—1 hour. Selected topics in agricultural and environmental chemistry, presented by students. (S/U grading only.)—I, II, III. (I, II, III.)

298. Group Study (1-5)

Prerequisite: consent of instructor. The chemistry and biochemistry of foods, nutritional chemicals, pesticides, and other special topics as they apply to agricultural and environmental chemistry.

299. Research (1-12)

Arrangements should be made well in advance with a faculty member of the Group in Agricultural and Environmental Chemistry. (S/U grading only.)

Agricultural and Managerial Economics

Major Program and Graduate Study. See the major in Managerial Economics; and for graduate study, see the Graduate Studies chapter in this catalog.

Major Advisers. See the *Class Schedule and Registration Guide*.

Related courses. See Environmental Biology and Management 110; Environmental Science and Policy 160, 168A, 168B, 173; and courses in Economics.

Courses in Agricultural and Resource Economics (ARE)

Lower Division Courses

1. Economic Basis of the Agricultural Industry (4)

Lecture—4 hours. Agriculture and man; the agricultural industry in U.S. and world economies; production and supply, marketing and demand; agricultural land, capital and labor markets; economic and social problems of agriculture in an urban and industrialized economy emphasizing California. GE credit: SocSci.—III. (III.) McCalla

15. Population, Environment and World Agriculture (4)

Lecture—3 hours; discussion—1 hour. Economic analysis of interactions among population, environment, natural resources and development of world agriculture. Introduces students to economic thinking about population growth, its causes and consequences for world food demand, and environmental and technological limits to increasing food supplies. GE credit: SocSci, Div, Wrt.—I. (I.) Vosti

18. Business Law (4)

Lecture—4 hours. Prerequisite: sophomore standing. General principles of business law in the areas of contracts, business organization, real property, uniform commercial code, sales, commercial paper, employment relations, and creditor-debtor against a background of the history and functioning of our present legal system.—I, III, summer. (I, III, summer.) Alcauskas

49A-49B-49C. Field Practice (1)

Discussion—1 hour; three field trips. Prerequisite: consent of instructor. Field trips and experiences to observe the various management aspects of Agricultural Production. Emphasis will be placed on developing the student's understanding and awareness of economics and management and their application in agricultural production. (P/NP grading only.)—I, II, III. (I, II, III.) Stasulat

98. Directed Group Study (1-5)

Prerequisite: consent of instructor. (P/NP grading only.)

99. Special Study for Undergraduates (1-5)

Prerequisite: consent of instructor. (P/NP grading only.)

Upper Division Courses

100A. Intermediate Microeconomics: Theory of Production and Consumption (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: Economics 1A, 1B; Mathematics 16B. Theory of individual consumer and market demand; theory of production and supply of agricultural products, with particular reference to the individual firm; pricing, output determination, and employment of resources under pure competition. (Not open for credit to students who have completed Economics 100 or the equivalent; however, Economics 100 will not serve as prerequisite to course 100B.)—I, II, III. (I, II, III.) Farzin, Paris, Goodhue, Carman, Summer

100B. Intermediate Microeconomics: Imperfect Competition, Markets and Welfare Economics (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 100A. Pricing, output determination, and employment of resources under conditions of monopoly,

oligopoly, and monopolistic competition.—I, II, III. (I, II, III.) Wilen, Sexton, Caputo, Constantine

106. Quantitative Methods in Agricultural Economics (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 100A, Statistics 103. Statistical methods for analyzing quantitative agricultural economics data: linear and multiple correlation and regression analysis.—I, II, III. (I, II, III.) Constantine, Green, Chalfant, Taylor, Heien

112. Fundamentals of Business Organization (4)

Lecture—2 hours; discussion—2 hours. Prerequisite: upper division standing or consent of instructor. The role of organizational design and behavior in business and public agencies. Principles of planning, decision making; individual behavior, motivation, leadership; informal groups; conflict and change in the organization.—I, III, summer. (I, III, summer.) Butler

113. Fundamentals of Marketing Management (4)

Lecture—4 hours. Prerequisite: Economics 1A. For non-majors only. Nature of product marketing by the business firm. Customer-product relationships, pricing and demand; new product development and marketing strategy; promotion and advertising; product life cycles; the distribution system; manufacturing, wholesaling, retailing. Government regulation and restraints. (Not open for credit to students who have completed course 136.)—I. (I.) Butler

115A. Economic Development (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: Economics 1A and 1B. Major issues encountered in emerging from international poverty, problems of growth and structural change, human welfare, population growth and health, labor markets and internal migration. Important issues of policy concerning international trade and industrialization. (Same course as Economics 115A.) GE credit: SocSci, Div.—I, II. (I, II.) Taylor, Vosti, Boucher

115B. Economic Development (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: Economics 1A and 1B. Major macroeconomic issues of developing countries. Issues include problems in generating capital, conduct of monetary and fiscal policies, foreign aid and investment. Important issues of policy concerning international borrowing and external debt of developing countries. (Same course as Economics 115B.) GE credit: SocSci.—II, III. (II, III.) Woo

118. Tax Accounting (4)

Lecture—4 hours. Prerequisite: Management 11A, 11B; course 18 recommended. Development and application of a framework to understand the tax effects of typical management decisions on both entities and their owners. Impacts that different methods of taxation have on business entities with emphasis on tax planning, using income and deduction strategies, retirement plans, and choice of business entity for tax minimization.—III. (III.) Butler

120. Agricultural Policy (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 100A or the equivalent. Analytical treatment of historical and current economic problems and governmental policies influencing American agriculture. Uses of economic theory to develop historical and conceptual understanding of the economics of agriculture; how public policy influences the nature and performance of American agriculture. GE credit: SocSci.—III. (III.) Alston

130. Agricultural Markets (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 100A. The nature, function, organizational structure, and operation of agricultural markets; prices, costs, and margins; market information, regulation, and controls; cooperative marketing.—III. (III.) L.J. Butler

132. Cooperative Business Enterprises (3)

Lecture—3 hours. Prerequisite: Economics 1A. Study of cooperative business enterprise in the United States and elsewhere; economic theories of behavior, principles of operation, finance, decision-making, and taxation.—I. (I.)

135. Agribusiness Marketing Plan Development (2)

Lecture/discussion—2 hours. Prerequisite: upper division standing. Fundamental components required to develop a marketing plan. Appreciation of the concept of a marketing plan, appropriate research required, including the use of library and Internet, survey and interview instruments, government documents, market analysis, business proposition, action planning, financial evaluation and monitoring. (P/NP grading only.)—I. (I.) L.J. Butler

136. Managerial Marketing (4)

Lecture—4 hours. Prerequisite: course 100A; Statistics 103. Application of economic theory and statistics in the study of marketing. Marketing measurement and forecasting, market planning, market segmentation, determination of optimal product market mix, sales and cost analysis, conduct of marketing research, marketing models and systems.—II, III. (II, III.) Carman, Baydas

138. International Commodity and Resource Markets (3)

Lecture—3 hours. Prerequisite: course 100A, Economics 100 or 104. Basic nature and scope of international trade in agricultural commodities, agricultural inputs, and natural resources. Market dimensions and policy institutions. Case studies to illustrate import and export problems associated with different regions and commodities.—III. (III.)

139. Futures and Options Markets (3)

Lecture—3 hours. Prerequisite: course 100A; Statistics 103. History, mechanics, and economic functions of futures and options markets; hedging; theory of inter-temporal price formation and behavior of futures and options prices; price forecasting; futures and options as policy tools.—I. (I.) Carter

140. Farm Management (5)

Lecture—5 hours. Prerequisite: Economics 1A. Farm organization and resources; economic and technological principles in decision making; analytical techniques and management control; problems in organizing and managing the farm business.—II. (II.)

142. Personal Finance (3)

Lecture—3 hours. Prerequisite: Economics 1B. Management of income and expenditures by the household. Use of consumer credit, savings, and insurance by households. Principles of tax, retirement, and estate planning.—I, II, summer. (I, II, summer.) Shepard, Butler

143. Investments (3)

Lecture—3 hours. Prerequisite: course 142 or consent of instructor. Survey of investment institutions, sources of investment information, and portfolio theory. Analysis of the stock, bond and real estate markets from the perspective of the investor.—II. (II.) Baydas

144. Real Estate Economics (3)

Lecture—3 hours. Prerequisite: course 100A. The economic theory, analysis, and institutions of real estate markets and related financial markets. Case studies drawn from the raw land, single family, multi-family, industrial and office real estate markets.—III. (III.) Shepard

145. Farm and Rural Resources Appraisal (4)

Lecture—3 hours; laboratory—3 hours; field trip. Principles of farm and ranch appraisal; land utilization in relation to problems of development and valuation. Real estate instruments and elements of real estate finance.—II. (II.) Johnston

146. Government Regulation of Business (3)

Lecture—3 hours. Prerequisite: course 100A or the equivalent. Variety, nature and impact of government regulation: anti-trust laws and economic and social regulation. Nature of the legislative process, promulgation of regulations, and their impact, especially as analyzed by economists. GE credit: SocSci.—III. (III.) Goodhue

147. Resource and Environmental Policy Analysis (3)

Lecture—3 hours. Prerequisite: Economics 1A; enrollment open to non-majors only. Natural resource use problems with emphasis on past and current

policies and institutions affecting resource use; determinants, principles, and patterns of natural resource use; property rights; conservation; private and public resource use problems; and public issues. (Students who have had or are taking course 100A, Economics 100, or the equivalent, may receive only 2 units of credit, so must enroll in course 147M instead.) GE credit: SocSci.—II. (II.) Caputo

147M. Resource and Environmental Policy Analysis (2)

Lecture—3 hours. Prerequisite: Economics 1A; enrollment open to non-majors only. Natural resource use problems with emphasis on past and current policies and institutions affecting resource use; determinants, principles, and patterns of natural resource use; property rights; conservation; private and public resource use problems; and public issues. (Students who have had or are taking course 100A, Economics 100, or the equivalent, must enroll in this course (for 2 units) rather than course 147.)—II. (II.) Caputo

150. Agricultural Labor (4)

Lecture—3 hours; discussion—1 hour. Importance of family and hired labor in agriculture; farm labor market; unions and collective bargaining in California agriculture; simulated collective bargaining exercise; effects of unions on farm wages and earnings. GE credit: SocSci, Div, Wrt.—I. (I.) Martin

155. Quantitative Analysis for Business Decisions (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 100A; Statistics 103. Introduction to selected topics in management science and operations research: decision analysis for management, mathematical programming, competitive analysis, and others.—I, II, III. (I, II, III.) Howitt, Heien

156. Introduction to Mathematical Economics (4)

Lecture—4 hours. Prerequisite: courses 100A and 155; Mathematics 16C or 21C recommended (students should note that the formal mathematical content of this course is higher than other courses in the curriculum). Linear algebra for economists; necessary and sufficient conditions in static optimization problems; implicit function theorem; economic methodology and mathematics; comparative statics; envelope theorem; Le Chatelier principle; applications to production and consumer models.—I. (I.) Green

157. Analysis for Production Management (4)

Lecture—4 hours. Prerequisite: course 100A; Statistics 103. Application of economic theory and quantitative methods in analyzing production management problems including inventory control, production scheduling, quality control, simulation, systems approach, and work measurement.—II, III. (II, III.) Whitney, Carman

171A. Financial Management of the Firm (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 106; Management 11A-11B. Financial analysis at the firm level: methods of depreciation; influence of the tax structure; inventory, cash, and accounts receivable management; sources of short-term and long-term financing, and financial problem solving using a computer spreadsheet program. (Students who have had or are taking Economics 134 may not receive credit for this course.)—I, II. (I, II.) Havenner, Smith

171B. Financial Management of the Firm (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 171A. Financial analysis at the firm level: methods of capital budgeting; calculating the cost of capital; dividend policies; mergers and acquisitions; and special current topics in finance.—II, III. (II, III.) Baydas, Whitney, Smith

175. Natural Resource Economics (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 100B or Economics 100 or the equivalent. Economic concepts and policy issues associated with natural resources, renewable resources, (ground water, forests, fisheries, and wildlife populations) and non-renewable resources (minerals and energy resources, soil). (Same course as Environmental Science and Policy 175.) GE Credit: SocSci.—I. (I.) Farzin

176. Environmental Economics (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 100B or Economics 100. Role of the environment in economic activity and methods for protecting and enhancing environmental quality; implications of market failures for public policy; design of environmental policy; theory of welfare measurement; measuring the benefits of environmental improvement. GE credit: SocSci.—II. (II.) Larson

192. Internship (1-6)

Internship—3-18 hours. Internship experience off and on campus in all subject areas offered in the Department of Agricultural and Resource Economics. Internships are supervised by a member of the staff. (P/NP grading only.)

194HA-194HB. Special Study for Honors Students (4-4)

Independent Study—3 hours; seminar—1 hour. Prerequisite: Minimum GPA of 3.50; course 100B; courses 106 and 155 (may be taken concurrently); major in Agricultural and Managerial Economics or Managerial Economics; senior standing. A program of research culminating in the writing of a senior honors thesis under the direction of a faculty adviser. (Deferred grading only, pending completion of sequence.)—I, II. (I, II.) Martin

197T. Tutoring in Agricultural Economics (1-3)

Hours and duties will vary depending upon the course being tutored. Prerequisite: senior standing in Agricultural and Resource Economics and consent of Department Chairperson. Tutor will lead small discussion groups affiliated with one of the department's regular courses, under the supervision of, and at the option of the instructor in charge of the course. (P/NP grading only.)

198. Directed Group Study (1-5)

Prerequisite: consent of instructor. (P/NP grading only.)

199. Special Study for Advanced Undergraduates (1-5)

Prerequisite: consent of instructor. (P/NP grading only.)

Graduate Courses

200A. Microeconomic Theory (5)

Lecture—4 hours; discussion—1 hour. Prerequisite: graduate standing. Linear and non-linear optimization theory applied to develop the theory of the profit-maximizing firm and the utility-maximizing consumer. (Same course as Economics 200A.)—I. (I.)

200B. Microeconomic Theory (5)

Lecture—4 hours; discussion—1 hour. Prerequisite: course 200A. Characteristics of market equilibrium under perfect competition, simple monopoly and monopsony. Emphasis on general equilibrium and welfare economics; the sources of market success and market failures. (Same course as Economics 200B.)—II. (II.) Helms

200C. Microeconomic Theory (5)

Lecture—4 hours; discussion—1 hour. Prerequisite: course 200B. Uncertainty and information economics. Individual decision making under uncertainty. Introduction to game theory, with emphasis on applications to markets with firms that are imperfect competitors or consumers that are imperfectly informed. (Same course as Economics 200C.)—III. (III.) Makowski

202A. Introduction to Applied Research Methods (3)

Lecture/discussion—3 hours. Prerequisite: courses 204 and 256, or the equivalent; 200A concurrently. Study of philosophy and methodology of applied research in agricultural economics. Methods of conceptualization of researchable topics. Method of communication and constructive criticism.—I. (I.) Chalfant

202B. Applied Microeconomics I: Consumer and Producer Behavior (3)

Lecture/discussion—3 hours. Prerequisite: courses 200A and 202A; course 200B concurrently. Application of consumer and producer theory in models of individual behavior and market-level phenomena. Implications of consumer and producer theory for specification of empirical models of supply and demand for inputs and outputs and market equilibrium displacement models.—II. (II.) Goodhue

202C. Applied Microeconomics II: Welfare Analysis and Imperfect Competition (3)

Lecture/discussion—3 hours. Prerequisite: course 202B; course 200C concurrently. Methods of applied welfare economics with emphasis on problems arising in agriculture and the environment. Models of imperfectly competitive markets and their application to industries and institutions in the agricultural sector.—III. (III.) Williams

204. Microeconomic Analysis (5)

Lecture—4 hours; discussion—1 hour. Prerequisite: Economics 100 or courses 100A-100B and Mathematics 16A-16B; open to advanced undergraduates with consent of instructor. Economic reasoning and social choice: behavior of firms and households, theory of markets, partial and general equilibrium analysis, welfare economics, illustrations and applications. (Same course as Economics 204.)—I. (I.) Sexton

214. Development Economics (4)

Lecture—4 hours. Prerequisite: course 100A, 100B, Economics 101; course 204 and Economics 160A, 160B recommended. Review of the principal theoretical and empirical issues whose analysis has formed development economics. Analysis of economic development theories and development strategies and their application to specific policy issues in developing country contexts. (Same course as Economics 214.)—I. (I.) Rozelle, Jarvis, Taylor, Boucher

215A. Microdevelopment Theory and Methods I (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 200A or 204; course 240A recommended. Agricultural development theory, with a focus on microeconomics. Agricultural household behavior with and without imperfections and uncertainty. Analysis of rural land, labor, credit and insurance markets, institutions, and contracts. (Same course as Economics 215A.)—I. (I.) Taylor, Jarvis, Rozelle, Boucher

215B. Open Macroeconomics of Development (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: courses 200A or 204, 200D or 205, and 214 or 215A. Models and policy approaches regarding trade, monetary and fiscal issues, capital flows and debt are discussed in the macroeconomic framework of an open developing country. The basic analytical focus is real exchange rate and its impact on sectoral allocation of resources. (Same course as Economics 215B.)—II. (II.) Kaneda

215C. Microdevelopment Theory and Methods II (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 215A. Extension of development theory and microeconomic methods. Agricultural growth and technological change; poverty and income inequality; multisectoral, including village and regional models. Computable general equilibrium methods and applications. (Same course as Economics 215C.)—III. (III.) Rozelle, Jarvis, Taylor

215D. Environment and Economic Development (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 200A, 204 or 275. Interdisciplinary course drawing on theoretical and empirical research on interactions between environmental resource use and economic development processes. Analysis of issues emerging at the interface of environmental and development economics. (Same course as Economics 215D.)—(III.) Farzin

222. International Agricultural Trade and Policy (3)

Lecture—3 hours. Prerequisite: course 100B or 204; Economics 160A or the equivalent. Analysis of country interdependence through world agricultural markets. Partial equilibrium analysis is used to study the impacts of national intervention on world markets, national policy choice in an open economy and multinational policy issues. Offered in alternate years.—(I.) Carter

231. Supply and Demand for Agricultural Products (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: courses 200A, 202A, and 240A or consent of instructor.

tor. Analysis of supply and demand for agricultural commodities emphasizing the effective use of micro-economic theory with econometric methods, and other empirical procedures, in conducting applied analysis of supply and demand at the firm and industry level.—I. (I.) Alston

232. Agricultural Commodity Markets (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: courses 200A, 202A, and 240A or consent of instructor. Economic analysis of industries that produce, market, transport, store, and process basic commodities. Analysis of market equilibrium under perfect and imperfect competition, with and without government involvement.—II. (II.) Williams

233. Agricultural Policy (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: courses 200A, 202A, and 240A or consent of instructor. Nature, formation, evolution, and institutions of economic policy applied to food, agricultural, and rural issues. Examples for detailed consideration include food security, commodity issues, and trade policy. Analytical approaches include static and dynamic welfare analysis, policy design, and political-economic analysis.—III. (III.) Sumner

240A. Econometric Methods (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: Statistics 133 and a course in linear algebra or the equivalent. Least squares, instrumental variables, and maximum likelihood estimation and inference for single equation linear regression model; linear restrictions; heteroskedasticity; autocorrelation; lagged dependent variables. (Same course as Economics 240A.)—II. (II.) Chalfant

240B. Econometric Methods (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 240A. Topics include asymptotic theory and instrumental variables, pooled time-series cross-section estimation, seemingly unrelated regression, classical hypothesis tests, identification and estimation of simultaneous equation models, cointegration, error-correction models, and qualitative and limited dependent variable models. (Same course as Economics 240B.)—III. (III.) Havenner

240C. Econometric Theory (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 240B. Finite sampling theory; nonlinear and dynamic econometric models; asymptotic distribution theory. (Same course as Economics 240C.)—I. (I.)

240D. Topics in Econometrics (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 240B. Advanced topics in nonlinear econometric modelling. Contents may vary from year to year. (Same course as Economics 240D.)—III. (III.)

240E. Topics in Applied Econometrics (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: courses 240A and 240B. Examination of modern econometric techniques used in applied fields of economic research, such as demand analysis, environmental economics, macroeconomics/finance, etc. Emphasis on selection of appropriate tools for individual fields. Course focus will expand topics covered in courses 240A and 240B. (Same course as Economics 240E.)—III. (III.)

252. Applied Linear Programming (4)

Lecture—3 hours; discussion—1 hour. Applied linear programming methods emphasizing uses for business decisions: production, diet, blending, network and related problems.—II. (II.) Howitt

253. Optimization Techniques with Economic Applications (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 200C. Optimization techniques and methods including linear and nonlinear programming. Empirical applications to household, firm, general equilibrium and economic growth problems.—I. (I.)

254. Dynamic Optimization Techniques with Economic Applications (4)

Lecture—4 hours. Prerequisite: course 253 and elementary knowledge of ordinary differential equations. Necessary and sufficient conditions in the calculus of variations and optimal control, economic interpretations, the dynamic envelope theorem and transver-

sality conditions, infinite horizon problems and phase diagrams, local stability and comparative statics of the steady state, comparative dynamics.—II. (II.) Caputo

255. Advanced Topics in Economic Dynamics (3)

Lecture—3 hours. Prerequisite: course 254. Local stability analysis, steady state comparative statics and comparative dynamics, dynamic duality theory and the principle of optimality, differential games, numerical solution of deterministic and stochastic dynamic models using GAMS, stochastic optimal control, plus other advanced topics in economic dynamics. Offered in alternate years.—(III.) Caputo, Howitt

256. Applied Econometrics (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 106, Economics 140 or the equivalent, or consent of instructor. Application of statistical tools to economic and business analysis. Emphasis on regression analysis, problems of specification, and model development. (Same course as Economics 256.)—II. (II.) Heien

258. Demand and Market Analysis (3)

Lecture—3 hours. Prerequisite: courses 204 and 256 or consent of instructor. Quantitative and theoretical analysis of the factors affecting supply, demand and price determination for agricultural products. Emphasis on analytical tools for assessing the impacts of changes in government policies and macroeconomic variables.—III. (III.) Paul

275. Economic Analysis of Resource and Environmental Policies (4)

Lecture/discussion—4 hours. Prerequisite: course 204/Economics 204. Development of externality theory, market failure concepts, welfare economics, theory of renewable and non-renewable resource use, and political economic models. Applications to policy issues regarding the agricultural/environment interface and managing resources in the public domain. (Same course as Environmental Science and Policy 275.)—III. (III.) Wilen

276. Environmental Economics (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 204 or consent of instructor. Applications of externality theory to the design of efficient environmental policies. Evaluation of pollution control policy instruments in light of information limitations and market imperfections. Methods for nonmarket valuation of the benefits of environmental improvement.—I. (I.) Larson

277. Natural Resource Economics (4)

Lecture—4 hours. Prerequisite: course 254 or consent of instructor. Application of capital theory and dynamic methods to issues of optimal use of renewable and nonrenewable resources. Examination of policy issues associated with forests, fisheries, groundwater, energy resources, watersheds, soil, global climate, and wildlife.—III. (III.) Wilen

293. Analysis of California Agriculture and Resources (3)

Lecture—1.5 hours; fieldwork—45 hours total of field trip, including one 5-day summer field trip. Review and analysis of production, marketing, and resource issues facing agricultural firms in California. Application of economic theory and measurement to individual firm and industry decisions in an applied setting. (S/U grading only.)—II. (II.) Johnston

293M. Analysis of California Agriculture and Resources (2)

Lecture—0.5 hours; fieldwork—45 hours total, including one 5-day summer field trip. Prerequisite: Ph.D. level standing. Review and analysis of production, marketing, and resource issues facing agricultural firms in California. (S/U grading only.)—II. (II.) Johnston

298. Directed Group Study (1-5)

Advanced study through special seminars, informal group studies, or group research on problems for analysis and experimentation. Sections: (1) Managerial Economics; (2) Agricultural Policy; (3) Community and Regional Development; (4) Natural Resources; (5) Human Resources; (6) Research Methods and Quantitative Analysis.

299. Individual Study (1-12)

Sections: (1) Managerial Economics; (2) Agricultural Policy; (3) Community and Regional Development; (4) Natural Resources; (5) Human Resources; (6) Research Methods and Quantitative Analysis; and (7) Dissertation Research Prospectus. (S/U grading only.)

299D. Special Study for Doctoral Dissertation (1-12)

(S/U grading only.)

Professional Course

396. Teaching Assistant Training Practicum (1-4)

Prerequisite: graduate standing. May be repeated for credit. (S/U grading only.)—I, II, III. (I, II, III.)

Agricultural Computing and Information Systems

See Applied Computing and Information Systems

Agricultural Education

(College of Agricultural and Environmental Sciences)

Teaching Credential Subject Representative. You may make an appointment with a credential counselor and obtain a statement of the complete requirements for the credential at 146 Mrak Hall (530-754-6249 or 752-4369). Since many majors in the college do not offer the minimum preparation necessary for entering the Agriculture Teaching Credential program, you should seek counseling as early as possible. See also teacher education credentialing.

Graduate Study. For graduate study, refer to the *Graduate Announcement*.

Graduate Adviser. _____.

Courses in Agricultural Education (AED)

Questions pertaining to the following courses should be directed to the instructor or to 146 Mrak Hall, 530-754-6249.

Lower Division Courses

92. Internship (1-12)

Internship—3-36 hours. Prerequisite: lower division standing; consent of instructor. Supervised internship off and on campus in areas of agricultural education. (P/NP grading only.)

98. Directed Group Study (1-5)

Prerequisite: consent of instructor. (P/NP grading only.)

99. Special Study for Undergraduates (1-5)

Prerequisite: consent of instructor. (P/NP grading only.)

Upper Division Courses

100. Concepts in Agricultural and Environmental Education (3)

Lecture—2 hours; laboratory—3 hours. Prerequisite: upper division standing. Philosophy and nature of formal and non-formal agricultural and environmental education programs. Emphasis on understanding the role of the teacher and observing a variety of programs. GE credit: SocSci, Wrt.—I. (I.) Zilbert

160. Vocational Education (3)

Lecture—3 hours. Philosophy and organization of vocational education, with particular reference to educational principles for agriculture commerce, home economics, and industry. GE credit: SocSci, Wrt.—II. (II.) Whent

171. Audiovisual Communications (2)

Lecture—1 hour; laboratory—3 hours. Prerequisite: upper division standing. Theory and principles of audiovisual communications. Comparison of audiovisual materials such as transparencies, slides, computer-generated graphics, and videos. Operation and use of audiovisual equipment is stressed.—II. (II.) Zilbert

172. Multimedia Productions (3)

Lecture—2 hours; laboratory—3 hours. Prerequisite: course 171 recommended. Design and production of educational, technical, and professional multimedia presentations. Instructional or professional presentations using a variety of media, including slides, video, transparencies, and computer-generated graphics. Offered in alternate years. GE credit: SocSci, Wrt.—(III.) Zilbert

190. Seminar in Agricultural Education (2)

Seminar—2 hours. Discussion of selected critical issues in agricultural education. May be repeated for credit with consent of instructor. (P/NP grading only.)—II. (II.) Whent

192. Internship (1-12)

Internship—3-36 hours. Prerequisite: upper division standing; consent of instructor. Supervised internship off and on campus in areas of agricultural education. (P/NP grading only.)

198. Directed Group Study (1-5)

(P/NP grading only.)

199. Special Study for Advanced Undergraduates (1-5)

(P/NP grading only.)

Professional Courses

300. Directed Field Experience in Teaching (2)

Discussion—1 hour; field experience—3 hours. Prerequisite: course 100. Experience as teaching assistant in agriculture or home economics programs in public schools. May be repeated once for credit. (P/NP grading only.)—I, III. (I, III.) Zilbert

301. Planning for Instructional Programs (3)

Lecture—3 hours. Prerequisite: course 100; course 300 (may be taken concurrently). Major paradigms in program planning and development. Emphasis on key steps in curriculum development, including selection and organization of educational objectives, learning experiences and teaching materials and resources.—II. (II.) Zilbert

302. Teaching Methods in Agricultural Education (3)

Lecture—2 hours; laboratory—2 hours. Prerequisite: course 100, course 300 (may be taken concurrently). Development of teaching strategies with special emphasis on the designing of learning experiences, instructional execution, and use of teaching aids in agricultural education.—I. (I.) Whent

306A. Field Experience with Future Farmers of America and Supervised Experience Programs (4)

Lecture/discussion—2 hours; field work—6 hours. Prerequisite: acceptance into the Teacher Education Program; course 306B (concurrently). Develop an understanding of the Future Farmers of America and supervised occupational experience programs through planning, conducting, and evaluating actual programs.—I, III. (I, III.) Whent

306B. Field Experience in Teaching Agriculture (5-18)

Student teaching (corresponds with public school session). Prerequisite: acceptance into the Teacher Education Program; course 306A (concurrently); courses 100, 300, 301, 302. Directed teaching including supervision of occupational experience programs and youth activities in secondary schools or community colleges. May be repeated for credit up to a maximum of 18 units.—I, II, III. (I, II, III.) Whent

323. Resource Development: Agricultural Education (3)

Lecture—3 hours. Prerequisite: courses 306A, 306B. Selection and implementation of community resources in teaching.—III. (III.) Whent

390. Seminar: Issues in Agricultural Education (2)

Discussion/laboratory—4 hours. Prerequisite: acceptance into the Teacher Education Program and courses 306A-306B. Discussion and evaluation of current issues, theories and research in agricultural education. (S/U grading only.)—III. (III.) Whent

Agricultural Management and Rangeland Resources

(College of Agricultural and Environmental Sciences)

Faculty. See under the departments of Agronomy and Range Science; Pomology; and Vegetable Crops.

The Major Program

This major is designed for students who are interested in understanding agricultural systems, their management, and their relationship to the environment. Courses are selected to provide an interdisciplinary background that encompasses both natural science and social science. Students will acquire a core understanding of agricultural production systems as managed ecosystems, how they function, how they interact with the natural environment and how they are intimately connected with human society and social changes. In addition, students will develop an area of specialization. Within the two areas of specialization, students chose between a broad-based education and one focused in selected areas.

The Program. Specialization in Sustainable Production Systems covers food and agriculture production, agroecology, pest ecology and management, crop improvement and propagation. Students may also develop an emphasis in particular production areas such as agronomy, environmental horticulture, pomology, vegetable crops or viticulture. The Range and Natural Resources specialization emphasizes the theory and practice of natural resource management in grazed ecosystems.

All students gain practical experience through a combination of internships and practica. Students may also pursue an Honors thesis in their senior year.

Career Alternatives. Graduates from this program are prepared to pursue a wide range of careers, including various technical and management positions in agricultural and business enterprises; farming; consulting; private, state and federal agencies concerned with rangeland and natural resource management; Cooperative Extension; international development; teaching; agricultural and environmental journalism, information and communication services. Graduates are qualified to pursue graduate studies in the natural and social sciences, such as agroecology, environmental studies, pest management, education, business management.

B.S. Major Requirements:

	UNITS
Written/Oral Expression	8-12
See college English requirement	8
One of English 102A, 102B, 102C, 102D, 102E, 102F, 102G, or 104A, 104C, 104D, 104E, or 104F	4
Perspectives on Agriculture and the Environment	13
Agricultural Management and Rangeland Resources 1	3

Agricultural Management and Rangeland Resources 2	4
Applied Biological Systems Technology 49	2
Animal Science 1 or 2	4
Preparatory Subject Matter	41-43
Biological Sciences 1A-1B	10
Chemistry 2A-2B	10
Physics 1A-1B or Physics 7A-7B	6-8
Mathematics 16A	3
Agricultural Management and Rangeland Resources 21	3
Agricultural Management and Rangeland Resources 120 or Statistics 13 or 102 ..	4
Economics 1A	5
Breadth/General Education	24
See General Education requirement.	
Depth Subject Matter	17-18
Agricultural Management and Rangeland Resources 150 or Environmental Science and Policy 100 or Plant Biology 117 or 142	4
Agricultural and Resource Economics 112 or 113 or 140	4-5
Agricultural Management and Rangeland Resources 101	3
Agricultural Management and Rangeland Resources 92, 99, or 137, or Applied Biological Systems Technology 145; International Agricultural Development 195A, 195B	3
Agricultural Management and Rangeland Resources 192, 199	3
Senior Thesis. The Senior Honors Thesis includes two or three successive quarters of guided scientific and/or scholarly research on an agricultural and/or environmental subject of special interest to the student. With adviser approval, the senior thesis can satisfy up to 12 units of restricted electives in the major.	
Area of Specialization (choose one):	
Sustainable Production Systems	53-57
Includes food and agricultural production, agroecology, crop improvement, propagation, and pest management. Students may choose between a broad education in sustainable agriculture or focus on one or two areas of agriculture (e.g., agricultural management, agronomy, crop improvement, environmental horticulture, pest management, pomology, vegetable crops, viticulture).	
Crop biology and ecology depth requirement must be met with Plant Biology 142.	
Plant Biology 152 or Biological Science 101	4
Chemistry 8A, 8B	6
Agricultural Management and Rangeland Resources 105	3
Soil Science 100	4
Select courses from Agricultural Management and Rangeland Resources 107, 110A, 110B, 110C, 112, 134, 135, 150, 160, 170A, 170B; Environmental Horticulture 120, 125, 130, 133; Plant Biology 173, 174; Viticulture and Enology 101A, 101B, 101C, 111, 115, 116	12-16
Restricted elective courses chosen from the following groups with approval of the academic adviser	(minimum 24 units)
<i>Plant improvement and propagation</i> (Agricultural Management and Rangeland Resources 118; Biotechnology 171; Plant Biology 143, 152, 153, 154, 160, 171)	
<i>Plant physiology or plant nutrition</i> (Environmental Horticulture 102; Plant Biology 111, 146, 157, 158, 172, 175; Viticulture and Enology 110)	
<i>Atmospheric, soil or water science</i> (Atmospheric Science 133; Environmental and Resource Sciences 100; Hydrologic Science 110, 124; Soil Science 107, 109, 111)	

Pest ecology and management
(Plant Biology 176, 177; Entomology 110, 135; Nematology 100; Plant Pathology 120; Viticulture and Enology 118)

Agricultural economics
(Agricultural and Resource Economics 100A, 120, 130, 147; International Agricultural Development 110)

Agricultural management
(Agricultural and Resource Economics 100B, 140, 145, 150, 157; Applied Biological Systems Technology 142, 147; Agricultural Management and Rangeland Resources 121)

Animal production
(Animal Science 41, 41L, 104)

Policy, social science and ethics
(Agricultural and Resource Economics 147, 176; Agricultural Management and Rangeland Resources 121; Economics 123; Environmental Science and Policy 161, 175; International Agricultural Development 103, 104; Plant Pathology 140; Political Science 107)

Unrestricted Electives13-24

Range and Natural Resources.....47-53

This specialization brings together courses that provide a unified understanding of the interaction between livestock production and environmental quality in rangelands.

Agricultural Management and Rangeland Resources 112, 121, 130, 131, 134, 135, Plant Biology 102 or 14521-23
Soil Science 1004
Environmental and Resource Sciences 100 or 121 or Hydrologic Science 141 or 143...4
Wildlife, Fish and Conservation Biology 110, 111, 120, 1516-7
Animal Science 41, Nutrition 1156
Agricultural Management and Rangeland Resources 132, Applied Biological Systems Technology 180, 182, or Hydrologic Science 182, 1863-5
Environmental Science and Policy 1724
Unrestricted Electives17-30

Total Units for the Major180

Major Adviser: R. Plant.

Advising Center located in 152 Hunt Hall (530-752-1715).

Minor Program Requirements:

UNITS

Agricultural Systems and Environment.....18

Preparatory material: Statistics 13, 32, Agricultural Management and Rangeland Resources 120 or Sociology 42B, or the equivalent.

Select one of the two following tracks:

Sustainable Agriculture track

Agricultural Management and Rangeland Resources 105, 150, Plant Biology 142, Soil Science 10015
Minimum of three units from the following: Agricultural Management and Rangeland Resources 107, 110A, 110B, 110C, 112, 170A, 170B3

Range and Natural Resources track

Agricultural Management and Rangeland Resources 121, 1307
Minimum of 11 units from the following: Agricultural Management and Rangeland Resources 131, 134, 135, 150, Environmental Science and Policy 123, 17211

Minor Advisers: T.C. Foin (*Agronomy and Range Science*), K.J. Rice (*Agronomy and Range Science*).

Advising Center is located in 1144 Plant and Environmental Sciences.

Honors. The Senior Honors Thesis (Agricultural and Environmental Sciences 194H) includes two or three successive quarters of guided, scientific and/or scholarly research on an agricultural and/or environmental subject of special interest to the student.

With adviser approval, the Senior Thesis can satisfy up to 12 units of restricted electives in the major.

Courses in Agricultural Management and Rangeland Resources (AMR)

(Formerly courses in *Agricultural Systems and Environment*.)

Lower Division Courses

1. Agriculture, Nature and Society (3)

Lecture—2 hours; discussion/laboratory—1 hour. Multiple perspectives and connections between the natural sciences, social sciences, and agriculture. Emphasis on agriculture's central position between nature and society and its key role in our search for a productive, lasting and hospitable environment. Several full-period field trips provide hands-on learning.—I. (I.) Gradziel

2. Botany and Physiology of Cultivated Plants (4)

Lecture—3 hours; discussion/laboratory—3 hours. Prerequisite: high school course in biology and chemistry recommended. A holistic introduction to the underlying botanical and physiological principles of cultivated plants and their response to the environment. Includes concepts behind plant selection, cultivation, and utilization. Laboratories include discussion and interactive demonstrations.—II. (II.) Saltveit, Marrush

7. Molecules, Risk and Public Policy (3)

Lecture—3 hours. Natural functions of molecules, their effects on humans, and their regulation through public policy. Students will learn about molecules that are discussed daily in newspapers. GE credit: SciEng, Wrt.

21. Applications of Microcomputers in Agriculture (3)

Lecture—1.5 hours; laboratory/discussion—2 hours; autotutorial—2 hours. Prerequisite: high school algebra. Concepts of computing and applications using personal computers, spreadsheets, database management, word processing and communications. Not open for students who have completed Computer Science Engineering 15, 30, 35 or Engineering 5.—I, II, III. (I, II, III.)

49. Organic Crop Production Practices (3)

Lecture—1 hour; discussion—1 hour; field work—3 hours. Principles and practices of organic production of annual crops. Topics include organic crop, soil, and pest management, cover cropping, composting, seeding, transplanting, irrigation, harvesting and marketing. Includes field trip(s). (P/NP grading only.)—I. (I.) Van Horn

92. Internship (1-12)

Internship—3-36 hours. Prerequisite: consent of instructor. Work experience on or off campus in all subject areas pertaining to agricultural and environmental sciences. Internship supervised by faculty member in the animal, plant, and environmental sciences. (P/NP grading only.)

98. Directed Group Study (1-5)

Prerequisite: consent of instructor. Primarily for lower division students. (P/NP grading only.)

99. Special Study for Undergraduates (1-5)

Primarily intended for lower division students. (P/NP grading only.)

Upper Division Courses

101. Agriculture and the Environment (3)

Lecture—3 hours. Prerequisite: course 2 or consent of instructor. Interaction between agriculture and the environment. Principles required to analyze conflict and develop solutions to complex problems facing society.—II. (II.) Phillips

105. Concepts in Pest Management (3)

Lecture—2 hours; laboratory/discussion—3 hours. Prerequisite: Biological Sciences 1C or course 2, Chemistry 8B. Introduction to the ecological principles of integrated pest management, biology of different classes of pests and the types of losses they cause, population assessment, evaluation of advantages and disadvantages of different techniques used for pest management, IPM programs.—III. (III.) Bayer

107. Small Fruit Production (2)

Lecture—2 hours; two field trips arranged at mutual convenience. Prerequisite: Biological Sciences 1C or the equivalent. Strawberries (*Fragaria*), blackberries-raspberries (*Rubus*), blueberries-cranberries (*Vaccinium*) as important nutritional resources; their origin, production and utilization with emphasis on recent progress in integrated management. Offered in alternate years.—(II.) Shaw

110A. Principles of Agronomic Crop Production in Temperate and Tropical Systems (3)

Lecture—3 hours. Prerequisite: course in general botany or course 2 recommended. Fundamentals of field crop production in temperate and tropical climates. Resource utilization and economic, political and social problems are considered in relation to technological problems and their influences on agricultural development.—II. (II.) Travis, Rains

110B. Management of Agronomic Crops in Temperate and Tropical Systems (3)

Lecture—3 hours. Prerequisite: course in general botany or course 2; course 110A recommended. Application of agronomic principles in production of temperate and tropical crops. Specific crops discussed with reference to management and efficient use of physical and biological resources.—III. (III.) Travis, Rains

110C. Crop Management Systems for Vegetable Production (4)

Lecture—2 hours; laboratory—3 hours; discussion—1 hour. Prerequisite: course 2; course 110A recommended. Horticultural principles applied to production and management systems for vegetable crops. Laboratory and discussion will illustrate efficient field management and resource use practices.—I. (I.) Bloom, Marrush

110L. Principles of Agronomy Laboratory (1)

Laboratory—3 hours. Prerequisite: course 110B (may be taken concurrently). Field-oriented introduction to principles of agronomic crop production.—III. (III.) Travis, Rains

112. Forage Crop Ecology (3)

Lecture—3 hours. Prerequisite: Biological Sciences 1C or consent of instructor. Forages as a world resource in food production. Ecological principles governing the adaptation, establishment, growth and management of perennial and annual forages, including pastures, rangelands and hay; aspects of forage quality which affect feeding value to livestock. Offered in alternate years.—III. Teuber

118. Seed Production and Quality (4)

Lecture—3 hours; laboratory—3 hours. Prerequisite: course 2 or Biological Sciences 1C; Plant Biology 152 recommended. Principles of crop seed production, storage and utilization. Biological and environmental factors influencing seed quality. Measurement and preservation of seed vigor and viability. Technological aspects of crop establishment from seeds. Laboratories include field trips to seed industry facilities. Offered in alternate years.—(III.) Bradford

120. Applied Statistics in Agricultural Science (4)

Lecture—3 hours; discussion/laboratory—2 hours. Prerequisite: upper division standing. Applications of statistical methods to the analysis and interpretation of research data in plant, animal, behavioral, food and nutritional sciences. Lectures cover basic concepts and statistical methods. Specialized laboratory sections cover procedures, data processing and interpretations. GE credit: SciEng.—I. (I.) Teuber, Geng

121. Systems Analysis in Agriculture and Resource Management (4)

Lecture—2 hours; discussion/laboratory—2 hours. Prerequisite: course 21 or equivalent computer

experience, and Mathematics 16A. The process of systems analysis and dynamic simulation of biological and environmental systems, use of systems analysis for development of optimal management strategies for agricultural and environmental systems. GE credit: SciEng, Wrt.—I. (I.) Foin

122. Management of Information for the Agricultural and Environmental Sciences (4)

Lecture—3 hours; laboratory—3 hours. Prerequisite: course 21 or consent of instructor. Introduction to systems and technology for acquiring, storing, manipulating and communicating various types of information including numerical data, text, graphics and multimedia images. Laboratory exercises introduce a wide variety of information management systems used in offices and laboratories. Offered in alternate years.

130. Rangelands: Ecology, Conservation and Restoration (3)

Lecture—3 hours. Prerequisite: Biological Sciences 1C; introductory ecology course and junior standing recommended. Introduction to the ecological principles and processes important for an understanding of the dynamics of range ecosystems. Emphasis on ecological and evolutionary concepts underlying management strategies for conserving biological diversity and environmental quality in rangelands. Offered in alternate years. GE credit: SciEng, Wrt.—(II.) Rice

131. Identification and Ecology of Grasses (2)

Lecture—7.5 hours; laboratory—20 hours; discussion—5 hours (total for course). Prerequisite: Biological Sciences 1C or course 2; Plant Biology 102 and junior standing recommended. Taxonomy and identification of western grasses. Development of skills in using plant identification keys. Ecology and evolution of grasses in grazing ecosystems. Given the week following spring quarter. Offered in alternate years.—III. Rice

132. Geographic Information Systems in Applied Ecology (3)

Lecture—2 hours; laboratory—3 hours. Prerequisite: course 21 or the equivalent computer skills. Introduction to GIS and its application to the analysis and management of agricultural, rangeland, and natural resources. Analysis of landscape properties. Field use of global positioning systems. GIS data organization, acquisition, and analysis. Use of Arcview GIS. Not open for credit to students who have completed Applied Biological Systems Technology 180 or 181.—II. (II.) Plant

134. Comparative Ecology of Major Rangeland Systems (3)

Lecture—3 hours; one Saturday field trip required. Prerequisite: course 130 or the equivalent; Environmental Studies 100 recommended. Study of vegetation structure, composition, and succession in North American rangeland communities. Description and comparison of interactions between vegetation and grazing animals on grassland, desert, forested, and tundra rangelands. Discussion of current rangeland management strategies. Offered in alternate years.

135. Ecology and Community Structure of Grassland and Savannah Herbivores (3)

Lecture—3 hours. Prerequisite: Biological Sciences 1A or 1B and course 2, or Biological Sciences 1C; general ecology course (Environmental Studies 100) recommended. Feeding ecology of grassland herbivores and its importance in evolution of herbivore communities and social systems. Optimal foraging, interspecific interactions, and primary productivity are considered as factors structuring natural and managed grassland and savannah systems. Offered in alternate years. (Former course Range Science 135.)—I. Demment

137. Field Course in Rangeland Monitoring and Management (2)

Lecture—1 hour; fieldwork—3 hours (week-long intensive field course given the week following spring quarter). Prerequisite: course 2 or the equivalent; Plant Biology 102 and junior standing recommended. Introduction to rangeland vegetation monitoring methods and management strategies.

Field sampling of vegetation composition and structure, soil status, and wildlife and fish habitat. Grazing management strategies to achieve desired future condition of rangelands. Offered in alternate years.

150. Cropping Systems of the World (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 2 or Biological Sciences 1C, and Soil Science 10. General concepts of the functioning of cropping systems as related to resource availability, energy flow, economic yield, sustainability and integration; means of increasing resource use efficiency; low and high input cropping systems in temperate and tropical zones.—II. (II.) van Kessel

160. Agroforestry: Global and Local Perspectives (3)

Lecture/discussion—3 hours. Prerequisite: course 2 or Biological Sciences 1C, Plant Biology 142 or a general ecology course (Environmental Science and Policy 100). Traditional and evolving use of trees in agricultural ecosystems; their multiple roles in environmental stabilization and production of food, fuel, and fiber; and socioeconomic barriers to the adoption and implementation of agroforestry practices. (Same course as International Agricultural Development 160.) Offered in alternate years.—I. Weinbaum

170A. Fruit and Nut Cropping Systems (2)

Lecture—1 hour; laboratory—3 hours. Prerequisite: course 2, Biological Sciences 1C, or consent of instructor. Overview of production and handling systems of major pomological crops, analysis of current cultural and harvesting problems and concerns associated with commercial fruit growing. Offered in alternate years.—I. (I.) McGranahan

170B. Fruit and Nut Cropping Systems (2)

Lecture—1 hour; laboratory—3 hours. Prerequisite: course 2, Biological Sciences 1C, or consent of instructor. Overview of production and handling systems of major pomological crops, including analysis of current cultural and harvesting problems and concerns associated with commercial fruit growing. Offered in alternate years.—III. (III.) Gradzziel, McGranahan

190. Seminar on Alternatives in Agriculture (2)

Seminar—2 hours. Prerequisite: upper division standing. Seminar on topics related to alternative theories, practices and systems of agriculture and the relationship of agriculture to the environment and society. Scientific, technological, social, political and economic perspectives. (P/NP grading only.)—II. (II.) Van Horn

192. Internship (1-12)

Internship—3-36 hours. Prerequisite: consent of instructor. Supervised internship on and off campus in agricultural and environmental sciences. (P/NP grading only.)

194H. Senior Honors Thesis (2-6)

Independent study. Prerequisite: Agricultural Systems and Environment major; senior standing; overall GPA of 3.25 or higher and consent of master adviser. Two or three successive quarters of guided research on an agriculturally related subject of special interest to the student. (P/NP grading only; deferred grading only, pending completion of thesis.)

198. Directed Group Study (1-5)

Prerequisite: consent of instructor. (P/NP grading only.)

199. Special Study for Advanced Undergraduates (1-5)

Prerequisite: consent of instructor. (P/NP grading only.)

Agronomy

(College of Agricultural and Environmental Sciences)

Faculty. See under Department of Agronomy and Range Science.

Major Program. See the major in Agricultural Management and Rangeland Resources.

Graduate Study. A program of study is offered leading to the M.S. degree in Horticulture and Agronomy. Information may be obtained in the Advising Office at 140 Environmental Horticulture. Also see the Graduate Studies chapter of this catalog.

Graduate Adviser. R. Plant.

Related Courses. Agronomy and Range Science faculty also teach the following courses that contribute to majors and graduate programs in Agricultural Management and Rangeland Resources, Ecology, Genetics, International Agricultural Development, and Plant Biology:

Agricultural Management and Rangeland Resources 21, 101, 110A, 110B, 110L, 112, 120, 121, 122, 130, 131, 132, 134, 135, 137, 150, 190; Ecology 207; International Agricultural Development 202N; Plant Biology Graduate Group 225; Plant Biology 116, 142, 143, 146, 152, 161A.

Courses in Agronomy (AGR)

Questions pertaining to the following courses should be directed to the instructor or to the Advising Center, 1144 Plant and Environmental Sciences.

Lower Division Course

92. Agronomy Internship (1-12)

Internship—3-36 hours. Prerequisite: consent of instructor. Internship on or off campus in all subject areas pertaining to agronomy. Internships supervised by a member of the faculty. (P/NP grading only.)

Upper Division Courses

192. Internship (1-12)

Internship—3-36 hours. Prerequisite: completion of 84 units and consent of instructor. Internship on or off campus in all subject areas pertaining to agronomy. Internships supervised by a member of the faculty. (P/NP grading only.)

197T. Tutoring in Agronomy (1-5)

Tutoring—1-5 hours. Prerequisite: course to be tutored or the equivalent; upper division standing and consent of instructor. Designed for undergraduate students who desire teaching experience. Student will assist in courses under the direction of the faculty. May be repeated for credit up to a total of 5 units. Same course may not be tutored more than one time. (P/NP grading only.)

198. Directed Group Study (1-5)

Prerequisite: consent of instructor. (P/NP grading only.)

199. Special Study for Advanced Undergraduates (1-5)

Prerequisite: 6 upper division units of agronomy. (P/NP grading only.)

Graduate Courses

205. Experimental Design and Analysis (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: Agricultural Systems and Environment 120 or the equivalent. Graduate students in agricultural and environmental sciences will be introduced to the research process and statistical methods to plan, conduct and interpret experiments. Not open for credit to students who have completed course 205A. (Former course 205A.)—II. (II.) Dubcovsky

206. Multivariate Systems and Modeling (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: Agricultural Systems and Environment 120 or the equivalent. Graduate students in the biological and environmental sciences will be presented multiple regression, multivariate and computer modeling

Agricultural Systems and Environment

See Agricultural Management and Rangeland Resources

methods needed to conduct research experiments and analyze multivariate data systems. Not open for credit to students who have completed course 205B. (Former course 205B).—III. (III.) Laca

211. Principles and Practices of HPLC (2)
Lecture—1 hour; laboratory—3 hours. Prerequisite: undergraduate physics and chemistry; Biological Sciences 102, 103 recommended. Principles and theory of HPLC involving various modes of separation and detection. Optimization of separation using isocratic and gradient elution. Develop practical knowledge about the use, maintenance and troubleshooting of HPLC equipment, including HPLC columns. Development of new HPLC methods.—III. (III.) Goyal

221. Advanced Plant Breeding (4)
Lecture—3 hours; laboratory—3 hours. Prerequisite: course 205; Genetics Graduate Group 201D or Animal Genetics 107; Plant Science 113. Philosophy, methods, and problems in developing improved plant species. Topics include: inbreeding, heterosis, progeny testing, breeding methodology, index selection, germplasm conservation, and breeding for stress resistance. Laboratories include tours of breeding facilities and calculation and interpretation of quantitative data. Offered in alternate years.—(III.) Teuber

290. Seminar in Agronomy and Range Science (1-2)
Seminar—1-2 hours. Topics of current interest related to plant growth, plant breeding, and the production, management, and utilization of cultivated food, feed, and fiber crops. (S/U grading only).—I, II, III. (I, II, III.)

297T. Tutoring in Agronomy (1-5)
Tutoring—1-5 hours. Prerequisite: graduate standing; consent of instructor; and course to be tutored or the equivalent. Designed for graduate students who desire teaching experience but are not teaching assistants. May be repeated for credit for a total of 5 units. Same course may not be tutored more than one time. (S/U grading only.)

298. Group Study (1-5)
299. Research (1-12)
(S/U grading only.)

Professional Courses

396. Teaching Assistant Training Practicum (1-4)
(S/U grading only.)

The Major Program

American Studies offers an alternative approach to the study of American experience for students who feel too limited by departmental approaches. Lower division, introductory classes explore the ways in which cultural systems shape and reflect life in the United States. These classes pay close attention to the ways in which differences of class, race, gender, generation, ethnicity, religion, and sexual orientation unevenly affect American lives.

The Program. American Studies majors take seven upper division, in-depth classes and seminars devoted to close study of major thinkers and of issues crucial to the practice of American Studies. Advanced work in at least two other departments or programs allows each student to emphasize a period, a problem, or a subject tailored to his or her own individual education goals. Students have the option of writing a senior thesis within this emphasis.

Career Alternatives. As an interdisciplinary program, American Studies provides a good liberal arts and sciences undergraduate education. American Studies maximizes a student's contact with a variety of subject matter and approaches. Graduates have moved into a broad range of career settings, including journalism, law, medicine, nursing, law enforcement, teaching, environmental planning, library science, museum curatorship, and business. Some students discover new career possibilities through their internships in American institutions.

A.B. Major Requirements:

	UNITS
Preparatory Subject Matter	24
One lower division American Studies course	4
One course from African American and African Studies 10, Asian American Studies 1, Chicana/o Studies 10 or 50, or Native American Studies 10	4
One course from Women's Studies 20, 50, or 70	4
Two courses from History 17A, 17B, 72A, 72B	8
One course from English 30A, 30B	4
Depth Subject Matter	44
American Studies 100, 111, 115, 120, and 160	20
American Cultural Themes, choose any two courses from the 120, 130, 140, or 150 series	8
Emphasis	16
In consultation with an American Studies adviser, the student designs a program of 16 units of upper division course work around a unifying theme, period, or subject matter in American cultures. The course work should come from at least two disciplines or interdisciplinary programs. The student may choose the senior thesis option (190A-190B) for 8 of these 16 units.	

Total Units for the Major

Recommended

Completion of the college requirement in English composition before enrollment in American Studies 190A.

Minor Program Requirements:

	UNITS
American Studies	20
American Studies, upper division courses	20
No more than 8 units of course 192 may be counted toward this total.	

Faculty Advisers. C. Blair, C de la Peña, R. Frankenberg, J. Mechling, K. Ono, M. Smith.

Teaching Credential Subject Representative. J. Mechling. See also the Teacher Education Program.

Courses in American Studies (AMS)

Lower Division Course

1A. Technology, Science, and American Culture (4)

Lecture—3 hours; discussion—1 hour. American science and technology as cultural systems, mutual influence and interaction of those systems with other cultural systems, including religion, social thought, art, architecture, literature, music, and common sense. GE credit: ArtHum or SocSci, Div, Wrt.—III. (III.) Mechling

1B. Religion in American Lives (4)

Lecture—3 hours; discussion—1 hour. Religions and spiritual practices in the United States, and their interrelationships with other aspects of U.S. history, society and culture; indigenous and imported faiths, and the impact of immigration, colonization and culture contact on religious systems. GE credit: ArtHum or SocSci, Div, Wrt.—I. (I.) Frankenberg, Mechling

1C. American Lives through Autobiography (4)

Lecture—2 hours; discussion—2 hours. American culture as understood through the individual life stories told by Americans, with attention to the roles of gender, race, ethnicity, social class, and sexual orientation in the individual's life course. GE credit: ArtHum or SocSci, Div, Wrt.—II. (II.)

1E. Nature and Culture in America (4)

Lecture—3 hours; fieldwork—3 hours. Uses and abuses of nature in America; patterns of inhabitation, exploitation, appreciation, and neglect; attention to California; emphasis on metaphor as a key to understanding ourselves and the natural world; attention to models of healing: stewardship, ecology, the "rights" movement. Offered in alternate years. GE credit: ArtHum or SocSci, Div, Wrt.—III. Smith

4. Freshman Seminar (2)

Seminar—2 hours. Prerequisite: open only to students who have completed fewer than 40 quarter units. Investigation of a special topic in American Studies through shared readings, discussions, written assignments, and special activities (such as fieldwork, site visits). Emphasis on student participation in learning. Limited enrollment.—II, III. (II, III.)

5. Technology in American Lives (4)

Lecture—2 hours; discussion—2 hours. Prerequisite: completion of Subject A requirement. Technology as both a material cultural force and a symbol in American culture; the lives of engineers at work and play; images of the engineer and technology in popular culture; social political and ethical issues raised by technology. GE credit: ArtHum or SocSci, Wrt.—I. (I.) Smith

21. Objects and Everyday Life (4)

Lecture—2 hours; discussion—1 hour; term paper. Prerequisite: completion of subject A requirement. Material culture (objects and artifacts ranging from everyday objects like toys and furnishings to buildings and constructed landscapes) as evidence for understanding the everyday (vernacular) lives (gender, social class, ethnicity, region, age, and other factors; collecting and displaying material culture; commodity capitalism) of individuals and communities in colonial North America and the United States. Offered in alternate years. GE credit: ArtHum, Div, Wrt.—I. de la Peña

30. Images of America and Americans in Popular Culture (4)

Lecture—3 hours; discussion—1 hour. Investigation of verbal and visual discourses about American identity in various popular culture products, including film, television, radio, music, fiction, art, advertising, and commercial experiences; discourses about the United States in the popular culture of other societies. Offered in alternate years. GE credit: ArtHum or SocSci, Div, Wrt.—(I.)

98. Directed Group Study (1-5)

Prerequisite: consent of instructor. Primarily for lower division students. (P/NP grading only.)

99. Individual Study for Undergraduates (1-5)

(P/NP grading only.)

Upper Division Courses

100. Interdisciplinary Skills (4)

Lecture/discussion—3 hours; term paper. Design and implementation of interdisciplinary research, analysis and writing for American Studies and other cultural studies fields. Library and Internet research skills, project/problem definition, methods of study of texts, individuals, communities. Hands-on, skill-building, focused reading, discussion.—I. (I.) Frankenberg

101A-H. Special Topics (4)

Seminar—3 hours, intensive reading, writing, and special projects. Interdisciplinary group study of special topics in American Culture Studies, designed for non-majors as well as majors. Content will vary according to the instructor and in accord with the following titles: (A) Popular Culture Studies; (B) Women's Studies; (C) Material Aspects of American Culture; (D) American National Character; (E) American Lives Through Autobiography; (F) The Interrelationship Between Arts and Ideas; (G) New Directions in American Culture Studies; (H) Problems in Cross-Cultural American Studies. May be repeated for credit in different subject area only.—I, II, III. (I, II, III.)

110. A Decade in American Civilization (4)

Lecture—2 hours; discussion—2 hours. Prerequisite: one of courses 1A, 1B, 1C, 1D, 1E or 1F. Close examination of a single decade in American civilization; the connections between the history, literature, arts, customs, and ideas of Americans living in the decade. Issues and representations of race, class, gender, age, and sexuality in the decade. May be repeated for credit if decades studied are different. GE credit: ArtHum or SocSci, Div, Wrt.—I. (I.)

111. Theories and Practices of Everyday Life in the United States (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: upper division status; preparatory courses for the American Studies major or the equivalent interdisciplinary experience. Introduction to the cultural studies theories and to critical practices that seek to understand everyday life in the United States, with special attention to uncovering the vernacular theories governing these practices.—I. (I.)

115. Living in Bodies: Body Politics in the United States (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: upper division status; preparatory courses for the American Studies major or the equivalent interdisciplinary experience. Examination of human bodies as sites for cultural constructions of identities and "selves" in the United States; attention to bodily norms, crises, and transgressions; the relation between disciplining the body and controlling social categories, including race, gender, class and sexualities.—II. (II.) Frankenberg

120. American Folklore and Folklife (4)

Lecture—3 hours; fieldwork—1 hour. Theory and method of the study of American folk traditions, including oral lore, customs, music, and material folk culture; the uses and meanings of those traditions in various folk communities, including families, ethnic institutions, voluntary organizations, and occupational groups. GE credit: ArtHum or SocSci, Div, Wrt.—III. (III.) Mechling

125. Corporate Cultures (4)

Lecture—2 hours; discussion—1 hour; fieldwork—1 hour. Prerequisite: one course chosen from course 120, Anthropology 2, Psychology 16, or Sociology 1; or consent of instructor. Exploration of the small group cultures of American corporate workplaces, including the role of environment, stories, jokes, rituals, ceremonies, personal style, and play. The effects of cultural diversity upon corporate cultures, both from within and in contact with foreign corporations.—III. (III.) de la Peña

130. American Popular Culture (4)

Lecture/discussion—3 hours; fieldwork—1 hour. Prerequisite: course 1 or upper division standing. American popular expression and experience as a cultural system, and the relationship between this system and elite and folk cultures. Exploration of theories and methods for discovering and interpreting pat-

terns of meaning in American popular culture. GE credit: ArtHum or SocSci, Div, Wrt.—II. (II.)

132. Critical Approaches to Media Culture (4)

Lecture/discussion—4 hours; film viewing—2 hours. Critical approaches to the study of contemporary media culture, focusing specifically on film, television, computer, and print media and their products and on the various interrelationships between media and U.S. culture. Offered in alternate years. GE credit: ArtHum or SocSci, Div, Wrt.—II. (II.) Ono

133. Rhetoric of Media on Social Issues (4)

Lecture/discussion—4 hours. An introduction to rhetorical analysis of social issues as depicted within media culture, with specific emphasis on the way media frame messages about new social problems. Not open to students who have taken Rhetoric and Communication 124. Offered in alternate years. GE credit: SocSci, Div, Wrt.—(III.) Ono

139. Feminist Cultural Studies (4)

Lecture/discussion—4 hours. Prerequisite: one course in Women's Studies or American Studies. The histories, theories, and practices of feminist traditions within cultural studies. (Same course as Women's Studies 139.) GE credit: SocSci, Div, Wrt.—III. (III.) Frankenberg

151. American Landscapes and Places (4)

Lecture—2 hours; discussion—1 hour; fieldwork—3 hours. Prerequisite: course 1, upper division standing. Comparative study of several American cultural populations inhabiting a region, including their relationship to a shared biological, physical, and social environment, their intercultural relations, and their relationships to the dominant American popular and elite culture and folk traditions. GE credit: ArtHum or SocSci, Div, Wrt.—II. (II.)

152. The Lives of Children in America (4)

Lecture—2 hours; discussion—2 hours. Experience of childhood and adolescence in American culture, as understood through historical, literary, artistic, and social scientific approaches. GE credit: ArtHum or SocSci, Div, Wrt.—III. (III.) Mechling

153. The Individual and Community in America (4)

Lecture—2 hours; discussion—2 hours. Interdisciplinary examination of past and present tensions between the individual and the community in American experience, as those tensions are expressed in such cultural systems as folklore, public ritual, popular entertainment, literature, fine arts, architecture, and social thought. GE credit: ArtHum or SocSci, Div, Wrt.—II. (II.)

154. The Lives of Men in America (4)

Lecture—2 hours; discussion—2 hours. Interdisciplinary examination of the lives of boys and men in America, toward understanding cultural definitions of masculinity, the ways individuals have accepted or resisted these definitions, and the broader consequences of the struggle over the social construction of gender. GE credit: ArtHum or SocSci, Div, Wrt.—I. (I.) Mechling

155. Symbols and Rituals in American Life (4)

Lecture—2 hours; discussion—2 hours. Prerequisite: course 1. Interdisciplinary examination of selected, richly expressive events (parades, festivals, holidays) and symbols (flags, memorials, temples) which encode nationwide values and understandings (Thanksgiving, New Year's, etc.) or which realize more limited, special meanings (Mardi Gras, rodeo, Kwanza, graduation, bar mitzvah, etc.). Offered in alternate years. GE credit: ArtHum or SocSci, Div, Wrt.—III. de la Peña

156. Race, Culture and Society in the United States (4)

Lecture—2 hours; discussion—2 hours. Prerequisite: course 1. Interdisciplinary examination of the significance of race in the making of America; how race shapes culture, identities and social processes in the United States; the interweaving of race with gender, class and nationhood in self and community. GE credit: ArtHum or SocSci, Div, Wrt.—II. (II.) Frankenberg

157. Animals in American Culture (4)

Lecture—3 hours, discussion—1 hour. Animals as symbols in American thought, as found in folklore, popular culture, literature, and art; customs and stories around human-animal interactions, including hunting, religion, foodways, pets, zoos, circuses, rodeos, theme parks, and scientific research on animals. Offered in alternate years. GE credit: ArtHum or SocSci, Div. Wrt.—III. Mechling

160. Undergraduate Seminar in American Studies (4)

Seminar—3 hours; term paper. Prerequisite: open to junior and senior American Studies majors only. Intensive reading, discussion, research, and writing by small groups in selected topics of American Studies scholarship; emphasis on theory and its application to American material. Limited enrollment. May be repeated once for credit when content differs.—II, III. (II, III.)

190A. Senior Thesis Research Seminar (4)

Seminar—2 hours; extensive writing. Prerequisite: senior standing in American Studies major. Research and prospectus writing for senior thesis.—I. (I.) Blair

190B. Senior Thesis (4)

Independent study—12 hours. Prerequisite: senior standing in American Studies major and course 190A. In consultation with advisor, student writes an extended research paper on a topic proposed in course 190A.—I, II, III. (I, II, III.)

192. Internship in American Institutions (1-12)

Internship—1-12 hours. Prerequisite: enrollment dependent on availability of intern positions, with priority to American Studies majors. Supervised internship and study within and about key organizations in American civilization at archives, museums, schools, historical societies, governmental and social agencies, etc., with attention to the techniques of participant observation and the collection of ethnographical data. May be repeated for credit for a total of 12 units. (P/ NP grading only.)

197T. Tutoring in American Studies (1-5)

Tutorial—1-5 hours. Prerequisite: consent of Chairperson of American Studies Program. Tutoring in lower division American Studies courses, usually in small discussion groups. Periodic meetings with the instructor in charge; reports and readings. May be repeated for credit when the tutoring is for a different course. (P/ NP grading only.)

198. Directed Group Study (1-5)

Prerequisite: consent of instructor. (P/ NP grading only.)

199. Special Study for Advanced Undergraduates (1-5)

Prerequisite: consent of instructor and Chairperson of American Studies Program. (P/ NP grading only)

Graduate Courses**207. The Critical Study of Whiteness (4)**

Seminar—4 hours. Prerequisite: Graduate standing in social science, humanities, arts, or cultural studies. Critical study of the emergence and significance of the social and racial status "whiteness" and its cultural practices. The colonial context for emergence of whiteness, its centrality to class, race, gender formation, and to social, cultural, legal, and educational processes. Offered in alternate years.—II. Frankenberg

220. American Folklore and Folklife (4)

Seminar—3 hours; term paper. Prerequisite: graduate standing or consent of instructor. Theory and methods for the study of the folklore and the folk customary behavior of Americans; contributions of folklore studies to scholarship in humanities and social science disciplines.—III. (III.) Mechling, Turner

250. Cultural Study of Masculinities (4)

Seminar—3 hours; term paper. Prerequisite: graduate standing or consent of instructor. Interdisciplinary approaches to understanding the social and cultural construction of masculinities; attention to the effects of biology, gender, race, class, sexual and national identities; criticism of oral, printed, visual, and mass mediated texts, and of social relations and structures. (Same course as Women's Studies 250.)—II. Newton, Mechling

298. Group Study (1-5)

Prerequisite: consent of instructor. (S/ U grading only.)

299. Individual Study (1-12)

Prerequisite: consent of instructor. (S/ U grading only.)

Professional Course**396. Teaching Assistant Training Practicum (1-4)**

Prerequisite: graduate standing. May be repeated for credit. (S/ U grading only.)—I, II, III. (I, II, III.)

Laura S. Van Winkle, Ph.D., Assistant Research Cell Biologist
Inge Werner, Ph.D., Assistant Research Aquatic Toxicologist

Courses in Anatomy, Physiology, and Cell Biology (APC)**Upper Division Courses****100. Comparative Vertebrate Organology (4)**

Lecture—3 hours; laboratory—3 hours. Prerequisite: Biological Sciences 1A and 1B. Functional anatomy of major organ systems in vertebrates. Each system examined from cellular to gross level in fish, birds, and mammals. Emphasis on how differentiated cell types are integrated into tissues and organs to perform diverse physiological functions. (Same course as Neurobiology, Physiology, and Behavior 123.)—II. Guinan

198. Directed Group Study (1-5)

Prerequisite: consent of instructor. (P/ NP grading only.)

199. Special Study for Advanced Undergraduates (1-5)

Prerequisite: consent of instructor. (P/ NP grading only.)

Graduate Courses**202. Organology (2)**

Lecture—2 hours. Prerequisite: course 100 or the equivalent and consent of instructor. Comparative development, growth patterns, and composition of selected organs: liver, kidney, lung, mammary gland, brain, and a skeletal muscle. Offered in alternate years.—(II.)

205. Ultramicroscopic Anatomy (3)

Lecture—3 hours. Prerequisite: histology. The electron microscopic appearance of cells, tissues, and organs of animals emphasizing the structural basis for their physiological functions. Offered in alternate years.—(III.)

215. Veterinary Histology (6)

Lecture—3 hours; laboratory—9 hours. Prerequisite: Biological Sciences 1B. The microscopic anatomy of tissues and organs of mammalian and avian species of veterinary significance.—II. (II.)

220. Physiology and Pathophysiology of the Liver (3)

Lecture—2.6 hours; laboratory—1.2 hours. Prerequisite: systemic physiology; biochemistry or physiological chemistry. Topics in functional morphology, physiology, intermediary metabolism, pharmacology, and disorders of the liver. Emphasis on bile formation; bile pigments; bile acids; drug and toxin metabolism; circulation; carbohydrate, lipid and protein metabolism; trace minerals; basic pathological processes; and function tests. (Same course as 420.)—I. (I.) Bruss

284. Ruminant Nutrition and Physiology (3)

Lecture—2.7 hours, laboratory—0.9 hours. Prerequisite: graduate or veterinary student standing. Upper division nutrition courses (e.g., Nutrition 110), upper division systemic physiology (e.g., Neurobiology, Physiology and Behavior 110), Biochemistry (e.g., Biological Sciences 102 and 103) or the equivalent. Basic and applied aspects of ruminant nutrition and physiology, nutritional and metabolic disorders of ruminants. (Same as course 484.)—III. (III.) Bruss, Bacbus

285. Morphometry of Cells, Tissues and Organs (2)

Lecture—1 hour; laboratory—3 hours. Prerequisite: course 100 or the equivalent, and Statistics 13. At the end of the course, students will be able to define what critical data need to be collected to estimate volumes, surfaces and lengths of organs and their components (e.g., vessels, ducts and airways). Students will also learn how to estimate the number of cells in an organ or tissue, their volumes, products and gene expression using morphometry. Offered in alternate years.—(III.) Hyde

286. Basics of Microscopy and Cellular Imaging (2)

Lecture—10 sessions; laboratory—10 sessions. Prerequisite: graduate standing. Practical applications of basic microscope techniques used to image cells and tissues with the goal of using these techniques

to generate publication quality images. Principles of light, epifluorescent, confocal and electron microscopy, their applications and limitations. Offered in alternate years.—III. Van Winkle

290. Seminar (1)

Seminar—1 hour. Discussion and critical evaluation of advanced topics and current trends in research. (S/U grading only.)—I, II, III. (I, II, III.)

291. Topics in Biology of Respiratory System (1)

Seminar—1 hour. Prerequisite: graduate standing and consent of instructor. Topics concerning structure and function of respiratory system. Possible topics include: lung growth, pulmonary reaction to toxicants, pulmonary inflammation, lung metabolism, biology of lung cells, tracheobronchial epithelium, nasal cavity structure and function. May be repeated for credit. (S/U grading only.)—I, II, III. (I, II, III.) Hyde, Plopper, Wu, Pinkerton

292. Topics in Neuroscience Research (1)

Seminar—1 hour. Prerequisite: graduate standing and consent of instructor. Students will examine current topics in neuroscience research literature, as well as evaluate rationale, methods, results, interpretation of data, and relevance of studies. Possible topics include pain, autonomic nervous system, neuroendocrinology, neurotransmitter regulation of gene expression, neuroendocrine-immune interactions, stress. (S/U grading only.)

298. Group Study (1-5)

Laboratory—6-15 hours. Prerequisite: consent of instructor.

299. Research (1-12)

Laboratory—6-36 hours. Prerequisite: consent of instructor. (S/U grading only.)

Professional Course**397T. Tutoring in Veterinary Anatomy, Physiology and Cell Biology (1-5)**

Lecture—1 hour; laboratory—3 hours; discussion—2 hours. For graduate or professional students who desire teaching experience, but are not teaching assistants. May be repeated for credit. (S/U grading only.)

Professional Courses**410. Equine Locomotor Anatomy (2)**

Lecture—10 sessions; laboratory—10 sessions. Prerequisite: Veterinary Medicine 401 with a grade of C- or better. Normal anatomy of the equine fore and hind limb bones, joints, muscles, ligaments, tendons, nerves and vessels with emphasis on clinically applicable structures.—III. (III.) Stover

420. Physiology and Pathophysiology of the Liver (3)

Lecture—2.6 hours; laboratory—1.2 hours. Prerequisite: systemic physiology; biochemistry or physiological chemistry. Topics in functional morphology, physiology, intermediary metabolism, pharmacology, and disorders of the liver. Emphasis on bile formation; bile pigments; bile acids; drug and toxin metabolism; circulation; carbohydrate, lipid and protein metabolism; trace minerals; basic pathological processes; and function tests. (Same course as 220.)—I. (I.) Bruss

458. Behavior Therapy in Companion Animals (2)

Lecture—20 sessions. Prerequisite: third year standing in the School of Veterinary Medicine. Clinical application of behavior modification procedures, management and drug therapy to resolve common behavioral problems of companion animals including dogs, cats, horses, and birds.—III. (III.) Hart

484. Ruminant Nutrition and Physiology (3)

Lecture—2.7 hours, laboratory—0.9 hours. Prerequisite: graduate or veterinary student standing. Upper division nutrition courses (e.g., Nutrition 110), upper division systemic physiology (e.g., Neurobiology, Physiology and Behavior 110), biochemistry (e.g., Biological Sciences 102 and 103) or the equivalent. Basic and applied aspects of ruminant nutrition and physiology, nutritional and metabolic disorders of ruminants. (Same as course 284.)—III. (III.) Bruss, Bacbus

Anesthesiology and Pain Medicine

Animal Behavior (A Graduate Group)

Judy Stamps, Ph.D., Chairperson of the Group
Group Office, 145 Briggs Hall
(530-752-4863; Fax: 530-752-4863;
e-mail: swalvarado@ucdavis.edu)

World Wide Web:

<http://www.dbs.ucdavis.edu/gradgroups/ab>

Faculty. The Group includes faculty from 11 departments in three schools and colleges.

Graduate Study. The Ph.D. program in Animal Behavior is an interdepartmental program that trains students for teaching and research in a variety of areas, including anthropology, animal science, ecology, entomology, neurobiology, psychology, physiology, veterinary science, wildlife biology, and zoology. Students choose one of the five areas of specialization: (1) ethology and evolutionary bases of animal behavior, (2) physiological basis of animal behavior, and (3) behavior and conservation of wild animals, (4) behavior and management of domestic animals, and (5) integrative studies. All five specializations emphasize the adaptive and evolutionary bases of animal behavior. Resources available to students, in addition to various departmental facilities, include those of the California Regional Primate Research Center, Bodega Marine Laboratory, and the Agricultural Field Stations.

There is an early application deadline of January 1 for fall quarter.

Preparation. Appropriate preparation is a bachelor's or master's degree in a discipline relevant to the biology of behavior. In addition, at least one course from each of the following areas must be taken before admission into the program or before the end of the first year in the program.

Ecology: e.g., Evolution and Ecology 101, Environmental Science and Policy 100

Genetics: e.g., Biological Sciences 101

Statistics: e.g., Statistics 102 or Psychology 103

Evolution: e.g., Evolution and Ecology 100

Animal behavior: Neurobiology, Physiology and Behavior 102

Physiology: e.g. Neurobiology, Physiology and Behavior 100

Core Requirements. Students take two "breadth" courses, at least one course in statistics, a methodology and grant writing course, and a graduate seminar. Required courses:

Comparative psychology: Psychology 250

Methodology and grant writing: Animal Behavior 201

Advanced statistics: Psychology 204A, 204B, 204C, or 204D, Statistics 205, 106, 108, 138, Agronomy 205, 206

Graduate seminars: Animal Behavior 290

Strongly recommended: a course on teaching science—Biological Sciences 310, Psychology 390A, 390B

Strongly recommended: at least one additional course in statistics or modeling. In addition to the above listed courses, modeling courses include Population Biology 231 and Psychology 128.

We also strongly recommend that students increase their breadth of training in animal behavior by taking at least one additional required course from the track other than their chosen track.

12 additional units should be taken in the specialty track that you choose.

Specialization. In addition to the requirements listed above, students must also take courses in one of the three areas of specialization with substitution as approved by the adviser.

Courses in Animal Behavior (ANB)

Graduate Courses**201. Scientific Approaches to Animal Behavior Research (3)**

Lecture—3 hours. Prerequisite: consent of instructor. Philosophical issues, goals, strategies and tools in field and laboratory research. May be repeated for credit when topics differ.—III. (III.)

221. Animal Behavior, Ecology and Evolution (3)

Lecture—3 hours. Prerequisite: Neurobiology, Physiology, and Behavior 102, Evolution and Ecology 100, 101 or the equivalent, graduate standing, and consent of instructor. The interface between animal behavior, ecology and evolution. New developments in behavioral ecology and development and testing of hypotheses in this discipline. (Same course as Population Biology 221.)—Stamps

230A. Interdisciplinary Approaches to Animal Behavior (3)

Seminar—3 hours; term paper. Prerequisite: consent of instructor. Analysis of literature in behavior and an allied discipline or disciplines that offer the potential, in combination, to advance the understanding of a topic in animal behavior conceptually and empirically. Topics will vary from year to year.—II. (II.)

230B. Interdisciplinary Approaches to Animal Behavior (5)

Workshop—4 days total; discussion—3 hours; term paper. Prerequisite: course 230A the previous quarter. Development of an empirical or theoretical interdisciplinary approach to research on a current topic in animal behavior.

270. Research Conference in Behavioral Ecology (1)

Conference—1 hour. Prerequisite: graduate standing and consent of instructor. Critical presentation and evaluation of current literature and ongoing research in behavioral ecology. Limited enrollment. May be repeated for credit. (S/U grading only.)—II, III. (II, III.)

287. Advanced Animal Behavior (2)

Seminar—2 hours. Prerequisite: graduate standing and consent of instructor, courses in animal behavior (Neurobiology, Physiology, and Behavior 102 or the equivalent), and either evolution (Evolution and Ecology 100 or the equivalent) or ecology (Evolution and Ecology 101 or the equivalent). Reading, reports and discussion on current topics in animal behavior, with a focus on topics that lie at the interface between animal behavior, ecology and evolution. (Same course as Population Biology 287.) May be repeated twice for credit.—III. Stamps

290. Seminar in Animal Behavior (1-3)

Seminar—1-3 hours. Prerequisite: consent of instructor. Selected topics in animal behavior. (S/U grading only.)—I, II, III. (I, II, III.)

294. Seminar in Behavioral Ecology of Predators and Prey (3)

Seminar—2 hours. Prerequisite: graduate standing. Presentation and analysis of research papers on social and foraging behavior of predatory animals, antipredator strategies of prey species, co-evolution of predators and prey, and ecology of predator-prey interactions. May be repeated twice for credit. (Same course as Wildlife, Fish, and Conservation Biology 294.) Offered in alternate years.—II. Caro

298. Group Study (1-5)

Prerequisite: graduate standing and consent of instructor.

299. Research (1-12)

Prerequisite: and consent of instructor. (S/U grading only.)

Professional Course**396. Teaching Assistant Training Practicum (1-4)**

Prerequisite: graduate standing. May be repeated for credit. (S/U grading only.)—I, II, III. (I, II, III.)

Animal Biology

(College of Agricultural and Environmental Sciences)

Faculty. Faculty includes members of the Departments of Animal Science; Entomology; Nematology; and Wildlife, Fish, and Conservation Biology.

The Major Program

The Animal Biology major offers students training in the biological and natural sciences as they apply to animals. The major covers the basic biological sciences that explain animal evolution, systematics, ecology, physiology and molecular biology. Students are not restricted to the study of a particular group of animals. Emphasis is on biological principles that can be used in research or in solving societal problems associated with animals in agriculture, urban areas, or natural environments.

The Program. The Animal Biology major consists of core courses in the biological sciences that build an understanding of animal biology from the molecular to the ecological and evolutionary levels of organization. After completing these core courses, students have the option of specializing in various interdisciplinary aspects of animal biology, and plan their chosen emphasis of study as part of a required discussion course and in consultation with their adviser. The Animal Biology major emphasizes courses on biological principles as opposed to courses on animal care and husbandry. This program includes a senior thesis, which each student designs to bridge the disciplines of the major.

Internships and Career Alternatives. The program and interests of each student in solving societal problems guides him or her to logical internship and career choices. On- and off-campus internship opportunities are available in research laboratories, in field situations, with governmental agencies, with private industry, and in international programs. A degree in Animal Biology prepares students for careers in research, teaching, governmental regulation, health or agriculture as each relates to the integrative biology or ecology of animals. Careers in veterinary medicine, animal husbandry and animal management are open to Animal Biology majors, however, other preparation may be required. Students in the major gain research experience and may choose to continue their training at the graduate or professional level in a variety of biological disciplines.

Restricted Electives25

Focused specialty as outlined in the student's major proposal (from course 187) with approval of an adviser. 18 of these units must be selected from courses offered by divisional faculty in any of the following departments: Animal Science; Entomology; Nematology; Wildlife, Fish, and Conservation Biology.

Unrestricted Electives10-20**Total Units for the Major**180

Master Adviser. J. Granett.

Advising Center for the major, including peer advising, is located in 1202 Meyer Hall, (530) 754-7915.

Courses in Animal Biology (ABI)

Lower Division Courses

50A. Animal Biology Laboratory (2)

Lecture/laboratory—4 hours. Scientific methods for answering questions in animal biology by doing exercises to demonstrate hypothesis testing and reporting, short laboratory, population and field experiments. Maintain notebooks, analyze data, interpret results and write reports.—I. (I.) Kimsey, Granett

50B. Animal Biology (3)

Lecture—3 hours. Prerequisite: Biological Sciences 1A, Biological Sciences 1B (may be taken concurrently). Basic biological disciplines important to an understanding of practical animal biology issues including the evolution of animal groups, genetic mechanisms, animal physiology as it relates to maintenance and production, and aspects of comparative anatomy, behavior and ecology.—II. (II.)

50C. Animal Biology (3)

Lecture—3 hours. Prerequisite: Biological Sciences 1B, 1C, courses 50A, 50B. Animal management and conservation. Societal concerns arising from management and conservation issues, including economics, aesthetics, regulations, safety, public perspectives and advocacy.—III. (III.) Pittroff

92. Internship in Animal Biology (1-12)

Internship—3-36 hours. Prerequisite: consent of instructor. Office, laboratory or fieldwork off or on campus in research, governmental regulation, policy making, and private enterprise dealing with animal related issues of production, welfare, pest management, biodiversity and the environment. All requirements of Internship Approval Request form must be met. (P/NP grading only.)

98. Directed Group Study (1-5)

(P/NP grading only.)

99. Special Study for Undergraduates (1-5)

(P/NP grading only.)

Upper Division Courses

102. Animal Biochemistry and Metabolism (5)

Lecture—4 hours; discussion—1 hour. Prerequisite: Chemistry 2A-2B, 8A-8B. Water and biological buffers; thermodynamics of metabolism; structure and function of biomolecules; enzyme kinetics and function; membrane biology; digestion and absorption; carbohydrate metabolism. Not open for credit to students who have completed Biological Sciences 102.—I. (I.) Calvert

103. Animal Biochemistry and Metabolism (5)

Lecture—4 hours; discussion—1 hour. Prerequisite: course 102. Physiological function and metabolism of lipids and amino acids; integrative metabolism; biochemical basis for nutrient requirements; structure and function of vitamins; mineral metabolism and requirements. Not open for credit to students who have completed Biological Sciences 103.—II. (II.) Calvert, Rucker

187. Animal Biology Seminar (2)

Seminar—1 hour; discussion—1 hour. Prerequisite: junior standing, courses 50A, 50B, 50C. Seminar leading to development of the Major Proposal for the Animal Biology major.—I. (I.) Granett, Wilson

189. Senior Practicum (2)

Independent study—6 hours. Prerequisite: junior standing, courses 50A, 50B, 50C, and 187; course 189D concurrently the first time course 189 is taken. The practicum may be an experimental research project, a library research project or some other creative activity that will serve as a capstone experience for the Animal Biology major. May be repeated once for credit. (P/NP grading only.)—I, II, III. (I, II, III.)

189D. Senior Practicum Discussion (1)

Discussion—1 hour. Prerequisite: junior standing, courses 50A, 50B, 50C, and 187; course 189 required concurrently. Course helps prevent or solve problems during the students' senior practicum activity. (P/NP grading only.)—I, II, III. (I, II, III.)

192. Internship in Animal Biology (1-12)

Internship—3-36 hours. Prerequisite: completion of 84 units and consent of instructor. Office, laboratory or fieldwork off or on campus in research, governmental regulation, policy making, and private enterprise dealing with animal related issues of production, welfare, pest management, biodiversity and the environment. All requirements of Internship Approval Request form must be met. (P/NP grading only.)

198. Directed Group Study (1-5)

(P/NP grading only.)

199. Special Study for Advanced Undergraduates (1-5)

(P/NP grading only.)

Animal Genetics

(College of Agricultural and Environmental Sciences)

Faculty. See under Department of Animal Science.

Major Program. See the major in Animal Science.

Related Courses. See Agronomy 221, 224; Plant Pathology 215X; Plant Biology 154; Vegetable Crops 220.

Courses in Animal Genetics (ANG)

Questions pertaining to the following courses should be directed to the instructor or to the Animal Science Advising Center, 1202 Meyer Hall (530-754-7915).

Upper Division Courses

101. Animal Cytogenetics (2)

Laboratory/discussion—1 hour; laboratory—3 hours. Prerequisite: Biological Sciences 101, 102. Principles and techniques of cytogenetics applied to animal systems; chromosome harvest techniques, analysis of mitosis and meiosis, karyotyping, chromosome banding, cytogenetic mapping, chromosome structure and function, comparative cytogenetics.—III. (III.) Delany

105. Horse Genetics (2)

Lecture—2 hours. Prerequisite: course 15 and Biological Sciences 101. Coat color, parentage testing, medical genetics, pedigrees, breeds, the gene map and genus Equus. Emphasis on understanding horse genetics based on the unity of mammalian genetics and making breeding decisions based on fundamental genetic concepts.—(III.)

107. Genetics and Animal Breeding (5)

Lecture—4 hours; laboratory—3 hours. Prerequisite: Biological Sciences 101. Principles of quantitative genetics applied to improvement of livestock and poultry. Effects of mating systems and selection methods are emphasized with illustration from current breeding practices.—I. (I.) Medrano

111. Molecular Biology Laboratory Techniques (4)

Lecture—2 hours; laboratory—6 hours. Prerequisite: Biological Sciences 1C; Biological Sciences 101, 102, 103. Introduction to the concepts and techniques used in molecular biology; the role of this technology in both basic and applied animal research, and participation in laboratories using some of the most common techniques in molecular biology.—II. (II.) Murray, Williamson

120. Introduction to Statistical Genomics (3)

Lecture—3 hours. Prerequisite: Biological Sciences 101, Agricultural Systems and Environment 120 or Statistics 100 or 102. Introduction to the statistical concepts associated with genomics. Topics include linkage analysis and grouping, theory and methods for identifying quantitative trait loci, and algorithms useful in genomics.—III. (III.) Famula

198. Directed Group Study (1-5)

Prerequisite: consent of instructor. Selected topics relating to animal genetics. (P/NP grading only.)

199. Special Study for Advanced Undergraduates (1-5)

Prerequisite: consent of instructor. (P/NP grading only.)

Graduate Courses**204. Theory of Quantitative Genetics (3)**

Lecture—3 hours. Prerequisite: course 107 or the equivalent. Theoretical basis of quantitative genetics and the consequences of Mendelian inheritance. Concepts used to estimate quantitative genetic differences and basis for partitioning the phenotypic variance. Offered in alternate years.—III. Gall

206. Advanced Domestic Animal Breeding (3)

Lecture—3 hours. Prerequisite: course 107 and Animal Science 205; course 204 recommended. Procedures for the genetic evaluation of individuals to include selection indices and mixed model evaluation for single and multiple traits. Methods of estimating genetic trends. Offered in alternate years.—III. Famula

208. Estimation of Genetic Parameters (3)

Lecture—3 hours. Prerequisite: course 107 and Animal Science 205; courses 204 and 108 recommended. General methods for the estimation of components of variance and covariance and their application to the estimation of heritability, repeatability and genetic correlations are considered. Specific emphasis is given to procedures applicable to livestock populations under selection.

211. Genetic Engineering of Animals (2)

Lecture—1 hour; lecture/discussion—1 hour. Review of techniques for the genetic engineering of animals and their limitations and applications. Student-led discussions of recent papers in the field and possible future applications of genetically engineered animals in basic research and applied agricultural and medical research. Offered in alternate years. (S/U grading only.)—(III.) Murray

212. Sequence Analysis in Molecular Genetics (2)

Lecture/laboratory—2 hours. Prerequisite: Genetics 201A, 201B, 201C, or the equivalents. The use of computer algorithms and on-line databases to analyze nucleic acid and protein sequences in molecular genetics research. Offered in alternate years. (S/U grading only.)—II. Medrano

298. Group Study (1-5)

Prerequisite: consent of instructor. Lectures and discussions of advanced topics in animal genetics. (S/U grading only.)

299. Research in Animal Genetics (1-12)

(S/U grading only.)

The Major Program

The Animal Science major is devoted to the sciences central to understanding biological function of domestic and captive animals including birds, their care, management, and utilization by people for food, fiber, companionship and recreation. Advances in science and technology, and an ever growing human population, have increased the complexity of issues surrounding the care and management of animals. Specializations within the major allow students to develop a scientific appreciation of animals and their relationship to their environment. Graduates in Animal Science are able to advance the science and technology of animal care in an objective and effective manner for the betterment of animals and society.

The Program. The curriculum provides depth in the biological and physiological sciences and allows students to specialize within the broad field of applied animal science. Study begins with introductory courses in animal science, biology, chemistry, mathematics, and statistics. Students undertake advanced courses in animal behavior, biochemistry, genetics, nutrition, and physiology and the integration of these sciences to animal function, growth, reproduction, and lactation. Students complete the curriculum by choosing a specialization in either an animal science discipline (behavior, biochemistry, genetics, nutrition, or physiology) or in the sciences particular to a class of animals (aquatic, avian, companion, captive, equine, laboratory, livestock, dairy, or poultry).

Career Alternatives. A wide range of career opportunities are available to graduates. The primary goal of the major is to prepare students for graduate study leading to the M.S. and Ph.D. degree; for continued study in a professional school such as veterinary medicine, human medicine or dentistry; for careers in research, agricultural production, farm and ranch management, or positions in business, sales, financial services, health care, agricultural extension, consulting services, teaching, journalism, or laboratory technology.

Agricultural Systems and Environment 21...3

Mathematics 16A, 16B or 17A, 17B or 21A, 21B6-8
 Agricultural Systems and Environment 120 or Statistics 1004

Note: Some professional and graduate schools may require additional preparatory subject matter. Please consult the advising center.

Breadth/General Education24
 See General Education requirement

Depth Subject Matter38-42

Biology (Biological Sciences 101; Animal Genetics 107; Animal Biology 102, 103; Neurobiology, Physiology, and Behavior 101)24

Integrative Animal Biology (Animal Science 123, 124, and Neurobiology, Physiology and Behavior 121 and 121L)12

Laboratory (Select one from the following: Animal Genetics 111; Animal Science 106 or 136 and 137; Molecular and Cellular Biology 120L; Neurobiology, Physiology, and Behavior 101L; Pathology, Microbiology, and Immunology 126L)2-6

Area of Specialization20

Choose one area of specialization below; the program of study must be approved in advance by your faculty adviser.

Animal Science with a Disciplinary Focus20

Select 20 upper division units, with approval from your faculty adviser, to form a coherent series of courses in one of the following disciplines: animal behavior, biochemistry, genetics, nutrition, or physiology.

At least three courses need to be in a specific discipline.

Select these 20 upper division units from Animal Genetics, Animal Science, or Avian Sciences courses, or Nutrition 115, 122, 123, 123L, or other courses approved by your faculty adviser.

Aquatic Animals20

Animal Science 18 and 131; Nutrition 124; and Animal Science 118 or 119.

Select additional units from any Animal Genetics or Animal Science course, or other courses approved by your faculty adviser.

Students in this specialization must take Animal Science 136 and 137 to meet their Laboratory Depth Subject Matter requirement.

Students in this specialization may elect to substitute any of Biological Sciences 104, Evolution and Ecology 112, or Wildlife, Fish, and Conservation Biology 120 and 121 for the 12-unit requirement under Integrative Animal Biology, with approval of your faculty adviser.

Avian Sciences20

Avian Sciences 13; Avian Sciences 100, 150; Nutrition 123, 123L.

Select additional upper division units from any Animal Genetics, Animal Science, or Avian Sciences courses or other courses approved by your adviser.

Students in this specialization must substitute Avian Sciences 103, 121, and Neurobiology, Physiology and Behavior 117 for the Animal Science 124 and Neurobiology, Physiology, and Behavior 121 and 121L requirement under Integrative Animal Biology.

Companion and Captive Animals20

Animal Science 42, 142; Nutrition 122 or 123 and 123L; Veterinary Medicine 170.

Select additional units from any Animal Genetics, Animal Science or Avian Sciences course, or from Nutrition 115, 122, 123, 123L or other courses approved by your faculty adviser.

Equine Science20

Animal Science 15, 115, 141 and one of Animal Science 125, 126 or 127.

Select additional units from any Animal Genetics or Animal Science course, or from Nutrition 115, 122, 123, 123L or other courses approved by your faculty adviser.

Laboratory Animals20

Animal Science 42, 103, 140, Nutrition 123, 123L and Anatomy, Physiology, and Cell Biology 100.

Select additional units from any Animal Genetics, Animal Science, or Avian Sciences course, or from Nutrition 115, 122, or other courses approved by your faculty adviser.

Livestock and Dairy20

Select two of Animal Science 143, 144, 146; Animal Science 145 or 147; Nutrition 115.

Select additional upper division units from any Animal Genetics, Animal Science or Avian Sciences course, or from Nutrition 122, 123, 123L or other courses approved by your faculty adviser.

Poultry20

Avian Sciences 11, 100, 150; Animal Science 143; Avian Science 149 or Food Science and Technology 121; Nutrition 123, 123L.

Select additional upper division units from any Animal Genetics, Animal Science, Avian Sciences, or other courses approved by your faculty adviser.

Students in this specialization must substitute Avian Sciences 103, 121, and Neurobiology, Physiology and Behavior 117 for the Animal Science 124 and Neurobiology, Physiology, and Behavior 121 and 121L requirement under Integrative Animal Biology.

Unrestricted Electives26-42

Total Units for Degree180

Master Adviser. G.A.E. Gall.

Advising Center for the major, including peer advising, is located in 1202 Meyer Hall, 530-754-7915. *Students must secure their academic adviser through this office upon entering the major.*

Minor Program Requirements

The Department of Animal Science offers five minor programs open to students majoring in other disciplines who wish to complement their study programs with a minor in Animal Science. Some courses have required prerequisites not included as part of the minor, and students should plan accordingly.

UNITS

Animal Science—Animal Biology20

Animal Science 15, 42, 41 and 41L, or 41 and 213-4
 Animal Science 103 or 1043
 Animal Science 123, 124, or Neurobiology, Physiology and Behavior 121 and 121L4
 Additional upper division courses9-10

Select additional units to complete the 20-unit total from upper division Animal Science courses, Animal Genetics courses, Neurobiology, Physiology, and Behavior 121, 121L, Nutrition 115, 122, 123, 123L.

Animal Science—Animal Genetics20

Animal Science 15, 42, 41 and 41L, or 41 and 213-4
 Animal Genetics 107, 1119
 Additional upper division courses7-8

Select additional units to complete the 20-unit total from upper division Animal Science courses, Animal Genetics courses, Avian Science 103, Neurobiol-

ogy, Physiology, and Behavior 121, 121L, Nutrition 115, 122, 123, 123L.

Animal Science—Aquaculture20

Animal Science 184
 Animal Science 118, 1198
 Additional upper division courses8
 Select additional units to complete the 20-unit total from upper division Animal Science courses, Animal Genetics courses, Applied Biological Systems Technology 161, Nutrition 124, Wildlife, Fish, and Conservation Biology 121.

Animal Science—Dairy/Livestock20

Animal Science 41 and 41L or 214
 Animal Science 1043
 Additional upper division courses13
 Select 4 or 8 units from Animal Science 143, 144, 146.
 Select additional units to complete the 20-unit total from upper division Animal Science courses, Animal Genetics courses, Neurobiology, Physiology, and Behavior 121, 121L, Nutrition 115, 122, 123, 123L.

Animal Science—Equine21

Animal Science 153
 Animal Science 103 or 1043
 Animal Science 115, 1418
 Animal Science 125 or 1263
 One additional upper division course3
 Select from upper division Animal Science courses, Animal Genetics courses, Neurobiology, Physiology, and Behavior 121, 121L, Nutrition 115, 122, 123, 123L.

Minor Adviser. G.A.E. Gall.

Graduate Study. The Department of Animal Science offers a program of study and research leading to the M.S. degree. Admission to a second Master's degree, Master of Agriculture and Management (M.A.M.) is currently suspended. Detailed information may be obtained by contacting the Advising Center.

Graduate Adviser. D.E. Conklin.

Courses in Animal Science (ANS)

Lower Division Courses

1. Domestic Animals and People (4)

Lecture—3 hours; laboratory—3 hours. Animal domestication and factors affecting their characteristics and distribution. Animal use for food, fiber, work, drugs, research and recreation; present and future roles in society. Laboratory exercises with beef and dairy cattle, poultry, sheep, swine, laboratory animals, fish, horses, meat and dairy products. GE credit: SciEng, Wrt.—I. (I.) Famula

2. Introductory Animal Science (4)

Lecture—3 hours; laboratory—3 hours. Prerequisite: course 1 and Biological Sciences 1A recommended. Growth, reproduction, lactation, inheritance, nutrition, and disease control in domesticated animals and species used in aquaculture; the application of sciences to animal production. GE credit: SciEng, Wrt.—III. (III.)

15. Introductory Horse Husbandry (3)

Lecture—3 hours. Prerequisite: course 2 recommended. Introduction to care and use of light horses emphasizing the basic principles for selection of horses, responsibilities of ownership, recreational use and raising of foals.—II. (II.) Roser

18. Introductory Aquaculture (4)

Lecture—3 hours; discussion—1 hour. Historical and contemporary aquacultural practices. Interaction between the aqueous culture environment and the biology of aquatic animals. Impact of economics and governmental policies on the development of aquaculture. Interaction of aquacultural practices with larger societal goals. GE credit: SciEng.—I. (I.) Conklin

21. Livestock and Dairy Cattle Judging (2)

Laboratory—6 hours. Prerequisite: course 1 or 2 recommended. Evaluation of type as presently applied to light horses, meat animals and dairy cattle. Relationship between form and function, form and carcass quality, and form and milk production.—III. (III.) Van Liew

22A. Animal Evaluation (2)

Laboratory—3 hours; fieldwork—30 hours (total). Prerequisite: course 21 or the equivalent. Attendance at 3 one-day weekend field trips required. Domestic livestock species with emphasis on visual appraisal, carcass evaluation, and application of performance information. Emphasis on accurate written and oral descriptions of evaluations. Prerequisite to intercollegiate judging competition. Offered in alternate years. (P/NP grading only.)—(I.) Van Liew

22B. Animal Evaluation (2)

Laboratory—3 hours; fieldwork—30 hours (total). Prerequisite: course 22A or the equivalent. Attendance at 3 one-day weekend field trips required. Continuation of course 22A with emphasis on specific species: swine, beef cattle and sheep. Application of animal science principles to selection and management problem-solving scenarios. Prerequisite to intercollegiate judging competition. Offered in alternate years. (P/NP grading only.)—(II.) Van Liew

41. Domestic Animal Production (2)

Lecture—2 hours. Principles of farm animal management, including dairy and beef cattle, sheep, and swine. Industry trends, care and management, nutrition, and reproduction.—I. (I.) DePeters

41L. Domestic Animal Production Laboratory (2)

Discussion—1 hour; laboratory—3 hours. Prerequisite: course 41 (may be taken concurrently). Animal production principles and practices, including five field trips to dairy cattle, beef cattle, sheep, and swine operations and campus labs. (P/NP grading only.)—I, II. (I, II.) DePeters, Van Liew

42. Introductory Companion Animal Biology (4)

Lecture—3 hours; discussion—1 hour. Companion animal domestication. Historical, contemporary perspectives. Legislation concerning companion animals. Selected topics in anatomy, physiology, genetics, nutrition, behavior and management. Scientific methods in studying the human-animal bond. Discussions: application of biological concepts to problems related to companion animals. GE credit: SciEng, Wrt.—II. (II.) Oberbauer

49A-J. Animal Management Practices (2)

Discussion—1 hour; laboratory—3 hours. The application of the principles of elementary biology to the management of a specific animal species. Among the topics offered: (A) Aquaculture, (B) Beef, (C) Dairy, (D) Goats, (E) Horses, (F) Laboratory Animals, (G) Meats, (H) Poultry, (I) Sheep, (J) Swine. Up to four different topics may be taken. (P/NP grading only.)—I, II, III. (I, II, III.) Van Liew

92. Internship in Animal Science (1-12)

Internship—3-18 hours. Prerequisite: consent of instructor. Internship off and on campus in dairy, livestock, and aquaculture production, research and management; or in a business, industry, or agency associated with these or other animal enterprises. All requirements of Internship Approval Request form must be met. (P/NP grading only.)

98. Directed Group Study (1-5)

Prerequisite: consent of instructor. (P/NP grading only.)

99. Special Study for Undergraduates (1-5)

Prerequisite: consent of instructor. (P/NP grading only.)

Upper Division Courses**103. Animal Welfare (3)**

Lecture/discussion—3 hours. Prerequisite: basic course in general/animal biology (e.g., Animal Science 2 or Biological Sciences 1B or 10) and upper division standing. The application of principles of animal behavior and physiology to assessment and improvement of the welfare of wild, captive, and domestic animals. Topics include animal pain,

stress, cognition, motivation, emotions, and preferences, as well as environmental enrichment methods.—I. (I.) Mench

104. Principles of Domestic Animal Behavior (3)

Lecture—3 hours. Prerequisite: Biological Sciences 1A or 1B or the equivalent. Basic principles of animal behavior as applied to domesticated species. Emphasis will be placed on behavioral development and social behavior. External (exogenous) and physiological mechanisms influencing behavior will be discussed. GE credit: SciEng.—III. (III.)

105. Domestic Animal Behavior (2)

Lecture—2 hours. Prerequisite: an introductory animal behavior course (e.g., course 104, Psychology 150, Neurobiology, Physiology and Behavior 102) or consent of instructor. Application of the principles of animal behavior in the management of domestic animals. Includes reproductive behavior, feeding behavior, agonistic behavior, animal handling and human-animal interactions. GE credit: SciEng.—I. (I.)

106. Domestic Animal Behavior Laboratory (2)

Laboratory—6 hours. Prerequisite: course 104 or the equivalent. Research experience with the behavior of large domestic animals. Experimental design, methods of data collection and analysis, and reporting of experimental results. GE credit: SciEng, Wrt.—II. (II.)

115. Advanced Horse Production (4)

Lecture—3 hours; laboratory—3 hours. Prerequisite: course 15; Biological Sciences 101; Nutrition 115; Neurobiology, Physiology and Behavior 101; or consent of instructor. Feeding, breeding, and management of horses; application of the basic principles of animal science to problems of production of all types of horses. Designed for students who wish to become professionally involved in the horse industry. GE credit: SciEng.—I. (I.) Roser

118. Fish Production (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: Wildlife, Fish and Conservation Biology 120 and 121. Current practices in fish production; relationship between the biological aspects of a species and the production systems, husbandry, management, and marketing practices utilized. Emphasis on species currently reared in California.—II. (II.) Doroshov

119. Invertebrate Aquaculture (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: Biological Sciences 1B. Management, breeding and feeding of aquatic invertebrates; application of basic principles of physiology, reproduction, and nutrition to production of mollusks and crustaceans for human food; emphasis on interaction of species biology and managerial techniques on production efficiencies.—II. (II.) Conklin

120. Principles of Meat Science (3)

Lecture—3 hours. Prerequisite: Biological Sciences 1A. Anatomical, physiological, developmental, and biochemical aspects of muscle underlying the conversion of muscle to meat. Includes meat processing, preservation, microbiology, and public health issues associated with meat products. (Same course as Food Science and Technology 120.) GE credit: SciEng.—III. (III.) Bandman, Lee

120L. Meat Science Laboratory (2)

Discussion—1 hour; laboratory—3 hours. Prerequisite: Biological Sciences 1A; course 120 (may be taken concurrently). Laboratory exercises and student participation in transformation of live animal to carcass and meat, structural and biochemical changes related to meat quality, chemical and sensory evaluation of meat, and field trips to packing plant and processing plant. (Same course as Food Science and Technology 120L.)—III. (III.) Lee, Bandman

123. Animal Growth and Development (4)

Lecture—3 hours; lecture/discussion—1 hour. Prerequisite: Biological Sciences 1B; Biological Sciences 104 and Molecular and Cellular Biology 150 recommended. Growth and development of animals from conception to maturity, viewed from practical and biological perspectives; includes genetic, metabolic, nutritional control of cell and organism function. GE credit: SciEng.—III. (III.) Sainz

124. Lactation (4)

Lecture—3 hours; laboratory—3 hours. Prerequisite: Neurobiology, Physiology, and Behavior 101; Animal Biology 103 (may be taken concurrently); or the equivalent background knowledge. Consideration of the biochemical, genetic, physiological, nutritional, and structural factors relating to mammary gland development, the initiation of lactation, the composition of milk and lactational performance. GE credit: SciEng, Wrt.—II. (II.)

125. Equine Exercise Physiology (3)

Lecture—3 hours. Prerequisite: Neurobiology, Physiology, and Behavior 101. Distance learning class broadcast from Cal Poly, Pomona, on basic and applied physiology of the exercising horse. Includes physiological systems, gait analysis, lameness, pharmacology, sports medicine; sport horse performance evaluation and conditioning. (Students and instructor have two-way communication capabilities.)—II. (II.) Roser

126. Equine Nutrition (3)

Lecture—3 hours. Prerequisite: course 15, Nutrition 115. Distance learning class broadcast from Cal Poly, Pomona and CSU Fresno on equine nutrition. Includes equine digestion, digestive physiology, diet development and evaluation, and the relationship of the topics to recommended feeding practices and nutritional portfolios.—I. (I.) Roser

127. Advanced Equine Reproduction (3)

Lecture—3 hours. Prerequisite: an upper division physiology course (e.g., Neurobiology, Physiology and Behavior 101) and an advanced horse production and management course (e.g., course 115). Distance learning course that provides in-depth knowledge of the reproductive physiology, anatomy and endocrinology of the mare and stallion. Emphasis on structure/function relationships as they are applied to improving equine reproductive management and efficiency.—III. (III.) Roser

128. Agricultural Applications of Linear Programming (4)

Lecture—2 hours; laboratory—2 hours; discussion—1 hour. Prerequisite: upper division standing and Agricultural Systems and Environment 21 or the equivalent. Applications of linear programming in agriculture, emphasizing resource allocation problems and decision making. Problems include crop production, ration formulation, and farm management. Hands-on experience in developing linear programs and interpreting the results.—II. (II.) Fadel

129. Environmental Stewardship in Animal Production Systems (3)

Lecture—3 hours. Prerequisite: Biological Sciences 10 or 1A and 1B, Chemistry 2A, 2B, 8A, 8B. Management principles of environmental stewardship for grazing lands, animal feeding, operations and aquaculture operations; existing regulations, sample analyses, interpretation and utilization of data, evaluation of alternative practices, and policy development.—II. (II.) Meyer, Conklin

131. Reproduction and Early Development in Aquatic Animals (4)

Lecture—3 hours; laboratory—3 hours. Prerequisite: Molecular and Cellular Biology 150; Wildlife, Fish and Conservation Biology 120, 121; or consent of instructor. Physiological and developmental functions related to reproduction, breeding efficiency and fertility of animals commonly used in aquaculture.—III. (III.) Doroshov

136. Techniques and Practices of Fish Culture (2)

Lecture—1 hour; laboratory—3 hours. Prerequisite: Biological Sciences 1A and Chemistry 8B or the equivalent. Daily care and maintenance of fish in the personal aquarium, research, and commercial facilities. Biological and environmental factors important to sound fish management. Laboratories focus on fish culture and include growth trials. GE credit: SciEng, Wrt.—I. (I.) Hung

136A. Aquatic Animal Growth Laboratory (2)

Lecture—1 hour; laboratory—3 hours. Prerequisite: Animal Biology 102 or Biological Science 102 or equivalent. Hands-on experience and practical

understanding of fish culture in research, commercial and personal use. Students conduct an 8-week growth trial including experimental design, fish care and maintenance, data collection, interpretation and reporting.—I. (I.) Hung

137. Animal Biochemistry Laboratory (2)

Lecture—1 hour; laboratory—3 hours. Prerequisite: Animal Biology 102 or Biological Sciences 102 or the equivalent. Chemical and biochemical methods, and instruments commonly used in animal science. Wet chemical methods, UV/visible and atomic absorption spectrophotometry, thin-layer and gas-liquid chromatography, commercial chemical kits. Attention to safety.—I. (I.) Hung

140. Management of Laboratory Animals (4)

Lecture—3 hours; laboratory—3 hours. Prerequisite: Neurobiology, Physiology, and Behavior 101. Laboratory animal management procedures in view of animal physiology, health and welfare, government regulations, and experimental needs. Clinical techniques using rodents and rabbits as models.—I. (I.)

141. Equine Enterprise Management (4)

Lecture/discussion—4 hours. Prerequisite: course 115; Economics 1A, 1B recommended. Examination of the concepts and principles involved in the operation of an equine enterprise. Essential aspects of equine enterprise management, including equine law, marketing, cash flow analysis, and impact of state and federal regulations. GE credit: SocSci, Wrt.—II. (II.) Garnett

142. Companion Animal Care and Management (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 42, Biological Sciences 101, Neurobiology, Physiology, and Behavior 101; Animal Biology 102 and 103 recommended. Management and production of companion animals. Integration of the disciplinary principles of behavior, genetics, nutrition, and physiology as related to the care of companion animals.—I. (I.) Oberbauer

143. Pig and Poultry Care and Management (4)

Lecture—3 hours; laboratory—3 hours; Saturday field trips. Prerequisite: Nutrition 115, Neurobiology, Physiology and Behavior 101. Care and management of swine, broilers and turkeys as related to environmental physiology, nutrition and metabolism, disease management and reproduction.—I. (I.) King

144. Beef Cattle and Sheep Production (4)

Lecture—3 hours; laboratory—3 hours; one or two Saturday field trips. Prerequisite: course 41, Animal Genetics 107, Nutrition 115, or consent of instructor; a course in Range Science and a course in micro-computing are recommended. Genetics, physiology, nutrition, economics and business in beef cattle and sheep production. Resources used, species differences, range and feedlot operations. Emphasis on integration and information needed in methods for management of livestock enterprises.—I. (I.) Sainz

145. Meat Processing and Marketing (4)

Lecture—3 hours; laboratory—3 hours. Prerequisite: course 143 or 144 or consent of instructor. Distribution, processing and marketing of meat and meat products. Meat and meat animal grading and pricing. Government regulations and social/consumer concerns. Future trends and impact on production management practices. Includes poultry.—II. (II.) Lee

146. Dairy Cattle Production (4)

Lecture—3 hours; laboratory—3 hours; one mandatory Saturday field trip. Prerequisite: course 124, Animal Genetics 107, and Nutrition 115, or consent of instructor. Scientific principles from genetics, nutrition, physiology, and related fields applied to conversion of animal feed to human food through dairy animals. Management and economic decisions are related to animal biology considering the environment and animal well-being. GE credit: SciEng, Wrt.—III. (III.) DePeters

147. Dairy Processing and Marketing (3)

Lecture—2 hours; laboratory—3 hours. Prerequisite: course 146 or consent of instructor. Examination of distribution systems, processing practices, product quality, impact of government policy (domestic and

foreign), marketing alternatives, and product development.—II. (II.)

148. Enterprise Analysis in Animal Industries (4)

Lecture/discussion—4 hours. Prerequisite: course 141 or 145 or 147 or consent of instructor. Examination and application of decision making and problem solving in the production enterprise. The areas of production analysis, problem solving, risk analysis and cost-benefit analysis will be examined in terms of the total enterprise. GE credit: SocSci, Wrt.—III. (III.)

149. Farrier Science (3)

Lecture—3 hours. Prerequisite: course 115. Distance learning class broadcast from California Polytechnic State University San Luis Obispo, California Polytechnic State University Pomona, and California State University Fresno. In-depth examination of the structure-function relationship of the equine hoof and how it relates to conformation, injury, and performance.—III. (III.) Roser

149L. Farrier Science Laboratory (1)

Laboratory—3 hours. Prerequisite: course 149 (may be taken concurrently) or consent of instructor. The art and science of horseshoeing in equine related fields. Proper use of the tools, materials and techniques in the fabrication of shoes and safe preparation of the hoof for application of shoes. (P/NP grading only)—III. (III.) Roser

190C. Research Group Conference (1)

Discussion—1 hour. Prerequisite: advanced standing; consent of instructor. Weekly conference on research problems, progress and techniques in the animal sciences. May be repeated for credit. (P/NP grading only.)

192. Internship in Animal Science (1-12)

Internship—3-36 hours. Prerequisite: completion of 84 units and consent of instructor. Internship off and on campus in dairy, livestock and aquaculture production, research and management; or in a business, industry, or agency associated with these or other animal enterprises. All requirements of Internship Approval Request Form must be met. (P/NP grading only.)

194. Research in Animal Science (3)

Laboratory—6 hours; discussion—1 hour. Prerequisite: upper division standing, course 193, one laboratory course in animal biology and consent of instructor. Research with a faculty mentor. Weekly discussion and laboratory on specific research topic. May include a seminar to research group. Choose from sections: (1) Animal Behavior; (2) Animal Genetics; (3) Animal Nutrition; (4) Animal Physiology. May be repeated for credit for a total of four times.—I, II, III. (I, II, III.)

194HA-194HB-194HC. Undergraduate Honors Thesis in Animal Science (4-4-4)

Lecture—1 hour; laboratory—9 hours. Prerequisite: Neurobiology, Physiology and Behavior 101, Animal Biology 103; minimum cumulative GPA of 3.2 and selection by the Honors Selection Committee. Students will carry out a research project (chosen from faculty-suggested or approved proposals) during the academic year under the guidance of a faculty member. Upon completion, student will write a thesis and present a public seminar describing his/her research. (Deferred grading only, pending completion of sequence.)

197T. Tutoring in Animal Science (1-2)

Tutoring—1-2 hours. Prerequisite: Animal Science or related major; advanced standing; consent of instructor. Tutoring of students in lower division animal science courses; weekly conference with instructors in charge of courses; written critiques of teaching procedures. May be repeated once for credit. (P/NP grading only.)

198. Directed Group Study (1-5)

Prerequisite: consent of instructor. (P/NP grading only.)

199. Special Study for Advanced Undergraduates (1-5)

Prerequisite: consent of instructor. (P/NP grading only.)

Graduate Courses

200. Strategies in Animal Production (4)

Lecture/discussion—4 hours. Prerequisite: consent of instructor. Examines the forces and issues in animal agriculture through the strategic management process.—(I.)

206. Models in Agriculture and Nutrition (3)

Lecture—2 hours; laboratory—3 hours. Prerequisite: Mathematics 16B; Statistics 108. Basic model building principles and techniques for statistical and systems simulation models. Optimization techniques for non-linear experimental designs and management models are presented. Quantitative analysis and evaluation of linear and non-linear equations used in agriculture and nutrition. Offered in alternate years.—Fadel

290. Seminar (1)

Seminar—1 hour. Reports and discussions of topics of interest in genetics, nutrition, and physiology as they apply to animal science. (S/U grading only)—I, II, III. (I, II, III)

290C. Research Group Conference (1)

Discussion—1 hour. Prerequisite: graduate standing. Weekly conference on research problems, progress and techniques in the animal sciences. May be repeated for credit. (S/U grading only)—I, II, III. (I, II, III.)

291. Current Research in Animal Science (1)

Seminar—1 hour. Prerequisite: graduate standing. Current research in animal science explored at weekly seminars presented by guest lecturers. Discussion of research presented. May be repeated for credit. (S/U grading only)—I, II, III. (I, II, III.)

297. Supervised Teaching in Animal Science (2)

Supervised teaching—6 hours. Prerequisite: consent of instructor. Practical experience in teaching Animal Science at the University level; curriculum design and evaluation; preparation and presentation of material. Assistance in laboratories, discussion sections, and evaluation of student work. An evaluation letter sent to the Graduate Adviser with a copy to the student. (S/U grading only)—I, II, III. (I, II, III.)

298. Group Study (1-5)

Prerequisite: consent of instructor. (Sect. 1, 2, 3—letter grading; from Sect. 4 on—S/U grading only.)

299. Research (1-12)

(S/U grading only.)

Animal Science and Management

(College of Agricultural and Environmental Sciences)

The Major Program

The animal science and management major combines a thorough education in the basic biology of domestic animal species with a strong background in agricultural economics. Graduates of this interdisciplinary major will be well positioned to adjust to our rapidly changing world and job market.

The Program. The interdisciplinary program in animal science and management combines a fundamental background in the natural sciences (chemistry, biology, physiology, nutrition, genetics, mathematics, and behavior), with an understanding of economics and humanities. After completing preparatory courses, students focus on both the animal species that interest them (horses, cattle, sheep, companion animals, goats, fish, crustaceans or mollusks, among others) and principles of managerial economics (marketing, finance, business organization or systems analysis). Students preparing for medical or veterinary school can meet professional entrance requirements with those of this major if they plan ahead.

Career Alternatives. Job opportunities for successful graduates are plentiful and include positions with banking and financial institutions, agribusiness, Peace Corps, and farms of all scales. Most animal science and management graduates are well prepared for professional study (medical, law, veterinary, and graduate business schools) as well as graduate research programs leading to the M.S. or Ph.D. degrees. Advanced degrees open doors to work as extension specialists, farm advisers, and teachers, and prepare students for international service.

B.S. Major Requirements:

	UNITS
English Composition Requirement	8-16
See College requirement.....	8
Select two courses (if not selected for English college requirement) from Communication 130, 134, 135, 136, 140; English 101, 102A, 102B, 102C, 102D, 102E, 102F, 102G, 104A, 104B, 104C, 104D, 104E, 104F.....	0-8
Preparatory Subject Matter	71-75
Animal Science 1 and 2, and one of Animal Science 15, 18, 41-41L, 42, or Avian Sciences 11.....	11-12
Biological Sciences 1A, 1B, and one of 1C, Agricultural Management and Rangeland Resources 2, 110A, 112, or Environmental Horticulture 6.....	13-15
Chemistry 2A, 2B, 8A, 8B.....	16
Agricultural Management and Rangeland Resources 21 or Computer Science Engineering 15.....	3-4
Economics 1A, 1B, Management 11A, 11B.....	18
Mathematics 16A-16B or the more advanced mathematics courses.....	6
Agricultural Management and Rangeland Resources 120, Statistics 100 or 103, or other courses in quantitative skills with prior approval of the Master Adviser.....	4
Breadth/General Education Subject Matter	12-24
Depth Subject Matter	38-42
Biological Sciences 101.....	4
Nutrition 115.....	4
Neurobiology, Physiology, and Behavior 101.....	5
Business Management.....	14-17
Agricultural and Resource Economics 100A;	
One course from Agricultural and Resource Economics 113, 130, 136, 138;	
One course from Agricultural and Resource Economics 120, 132, 140, 145, 157;	
Plus one course from Animal Science 128 or Agricultural and Resource Economics 155.	
Production/Management/Processing/Marketing.....	11-12
At least <i>one</i> course from Animal Science 115, 118, 119, 140, 143, 144, 146;	
At least <i>one</i> course from Animal Science 141, 142, 145, 147;	
Animal Science 148.	
Restricted Electives	5-9
At least two additional courses (minimum 8 units; duplicate from Depth courses not counted) selected with approval of adviser from: Agricultural and Resource Economics 18, 112, 113, 118, 120, 130, 132, 136, 138, 140, 142, 143, 144, 145, 150, 155, 157, 171A, 171B, 176; Animal Science 103, 104, 105, 106, 115, 118, 119, 120, 120L, 123, 124, 125, 126, 127, 128, 131, 136, 137, 140, 141, 142, 143, 144, 145, 146, 147, 192, 194, 194H; Avian Sciences 100, 103, 115, 121, 123, 149, 150; Animal Genetics 101, 105, 107, 111, 120; Nutrition 122, 123, 123L,	

124; Animal Biology 102 (strongly recommended)103; Computer Science Engineering 124; Food Science and Technology 121, 122; Management 100; Neurobiology, Physiology, and Behavior 117, 121, 121L, 130; Wildlife, Fish, and Conservation Biology 120, 120L, 131.

Unrestricted Electives.....**15-44**
Total Units for the Degree.....**180**

Major Adviser. J.G. Fadel.

Advising Center for the major (including peer advising) is located in 1202 Meyer Hall (530-754-7915). *Students must secure their academic adviser through this office upon entering the major.*

- David L. Olmsted, Ph.D., Professor Emeritus
- Carolyn F. Wall, Ph.D., Senior Lecturer Emeritus

The Major Program

Anthropology is the systematic study of human beings as they live in groups. It is a diverse field and the courses at UC Davis are subdivided into four categories—biological, social/cultural, linguistics, and archaeology. The student of anthropology learns about human social life—past and present—and gains a broad understanding of humans and society.

The Program. Students interested in the scientific study of human origins, primate studies and the fundamentals of biology as these relate to *Homo sapiens* should enroll in the Bachelor of Science degree program. Students interested in ethnography and the ethnology of selected culture areas or linguistics (language in culture and society and linguistic field methods) should enroll in the Bachelor of Arts degree program. Students interested in archaeology

(prehistory and the techniques and methods of archaeology) should consult an adviser before choosing one degree program or the other.

Career Alternatives. Although most practicing anthropologists teach in colleges and universities, a bachelor's degree in anthropology can lead to work in museums, in the Park Service, or in other aspects of public archaeology. A Bachelor of Science degree is a suitable major for premedical and pre dental preparation. A degree in anthropology with appropriate courses in education also can be good preparation for high school teaching in social or natural sciences.

A.B. Major Requirements:

	UNITS
Preparatory Subject Matter	20
Anthropology 1, 2, 3, 4.....	16
Statistics 13 or 102.....	4
Depth Subject Matter	44
Anthropological linguistics: one course.....	4
Social-Cultural Anthropology: one course from Anthropology 103, 104A, 122A, 122B, 123A, 123B, 124, 125A, 125B, 126A, 126B, 127, 128A, 128B, 130A, 130BN, 130C, 132, 133, 135, 136, 138, 139AN, 139BN.....	4
Anthropology 100.....	4
Ethnography: one course from Anthropology 140A, 140B, 141A, 141B, 142, 143A, 143B, 144, 146, 147, 148A, 148B, 148C, 149A, 149B, 178.....	4
Biological anthropology: one course.....	4
Archaeology and prehistory: one course....	4
Select 8 units from any upper division Anthropology courses chosen in consultation with an adviser.....	8
Select an additional 12 units in an area of emphasis:	
(a) <i>Anthropological Linguistics</i> Anthropology 110.....	4
Select two additional courses in anthropological linguistics.....	8
(b) <i>Social-Cultural Anthropology</i> Select one course from Anthropology 126B, 128A, 128B, 139AN, 139BN....	4
Select two additional courses in social-cultural anthropology.....	8
(c) <i>Biological Anthropology</i> Anthropology 152.....	4
Select two additional courses in biological anthropology.....	8
(d) <i>Archaeology and Prehistory</i> Anthropology 170.....	4
Select two additional courses in archaeology and prehistory.....	8
Total Units for the Major	64

B.S. Major Requirements:

	UNITS
Preparatory Subject Matter	55-56
Anthropology 1, 2.....	8
Anthropology 3 or 4.....	4
Biological Sciences 1A, 1B, 1C.....	15
Chemistry 2A, 2B, 8A-8B.....	16
Mathematics 16A-16B-16C.....	9
Statistics 13, 32, 100, or 102.....	3-4
Depth Subject Matter	45
Six courses in anthropology, including Anthropology 152, 153 and 154A, and the remaining three chosen in consultation with major adviser.....	22-25
Biological Sciences 101 and Evolution and Ecology 100.....	8
Additional units from the list below to achieve a minimum of 45 upper division units.	
Anthropology 151, 154B, 155, 156, 157, 157L, 158; Anatomy 100; Biological Sciences 102, 103; Cell Biology and Human	

Anatomy 101, 101L; Environmental Science and Policy 100, 125; Evolution and Ecology 101, 102, 105, 133, 136, 136L, 138, 141, 147, 149, 170, 170L; Exercise Science 103, 115; Geography 117; Geology 106, 107, 107L, 144, 145, 146; Molecular and Cellular Biology 120L, 121, 146, 150, 150L, 151, 160L, 161, 162, 163, 164; Neurobiology, Physiology, and Behavior 101, 101L; Psychology 108, 112, 150; Statistics 104, 106, 108, 110, 130A, 130B.

Total units for the Major100-101

Recommended

Anthropology 15; Geology 1, 3, Psychology 1.

Major Advisers. A.B. degree: D. Boyd, C. Darwent, S. Joseph; B.S. degree: L. Isbell, H.M. McHenry, D.G. Smith.

Minor Program Requirements:

course chosen in consultation with A.B.

degree undergraduate adviser2-5

Honors Program. Candidates for high or highest

honors in Anthropology must write a senior thesis

under the direction of a faculty member. The thesis

project will have a minimum duration of two quarters.

Honors candidates must take at least six units

of Anthropology 194H. Only students who, at the

end of their junior year (135 units), have attained a

cumulative grade point average of 3.5 in Anthropology

courses will be eligible for the honors program. The

quality of the thesis work will be the primary

determinant for designating high or highest honors

at graduation.

Teaching Credential Subject Representative.

_____. See also the Teacher Education Program.

Graduate Study. The Department offers a program

of study leading to the M.A. and Ph.D. degrees in

Anthropology. Further information regarding graduate

study may be obtained at the Department Office

and at Graduate Studies.

Graduate Advisers. C. Smith; P. Rodman.

Courses in Anthropology (ANT)

Lower Division Courses

1. Human Evolutionary Biology (4)

Lecture—3 hours; discussion—1 hour. Processes and course of human evolution; primatology; biological and social diversity within Homo Sapiens; human paleontology. GE Credit: SciEng, Div, Wrt.—I, II, III. (I, II, III.) Isbell, Rodman, McElreath

2. Cultural Anthropology (4)

Lecture—3 hours; discussion—1 hour. Introduction to cultural diversity and the methods used by anthropologists to account for it. Family relations, economic activities, politics, gender, and religion in a wide range of societies. Current problems in tribal and peasant societies. GE credit: SocSci, Div, Wrt.—I, II, III. (I, II, III.) Davis, Sawyer, Boyd

3. Introduction to Archaeology (4)

Lecture—3 hours; discussion—1 hour. Development of archaeology as an anthropological study; objectives and methods of modern archaeology. GE credit: SocSci, Div.—I, II, III. (I, II, III.) Darwin

4. Introduction to Anthropological Linguistics (4)

Lecture—3 hours; discussion—1 hour. Exploration of the role of language in social interaction and world view, minority languages and dialects, bilingualism, literacy, the social motivation of language change. Introduction of analytical techniques of linguistics and demonstration of their relevance to language in sociocultural issues. GE credit: SocSci, Div, Wrt.—I, II. (I, II.) J. Smith

5. Proseminar in Biological Anthropology (4)

Seminar—3 hours; term paper. Prerequisite: course 1 and consent of instructor. Course primarily for majors. Integration of related disciplines in the study of biological anthropology through discussion and research projects. Principal emphasis in human adaptation to the environment. GE credit: SciEng, Wrt.

15. Behavioral and Evolutionary Biology of the Human Life Cycle (5)

Lecture—3 hours; discussion—1 hour; term paper. Introduction to the biology of birth, childhood, marriage, the family, old age, and death. Examines comparative characteristics of nonhuman primates and other animals as well as cross-cultural variation in humans by study of selected cases. GE credit: SciEng, Div, Wrt.—II. (II.) Harcourt

15V. Behavioral and Evolutionary Biology of the Human Life Cycle—Web Taught (5)

World Wide Web virtual lecture—3 hours; World Wide Web electronic discussion—1 hour; term paper. Introduction to the biology of birth, childhood, marriage, the family, old age, and death. Examines comparative characteristics of nonhuman primates and other animals as well as cross cultural variation in humans by study of selected cases. Not open for credit to students who have completed course 15. GE credit: SciEng, Div, Wrt.

20. Comparative Cultures (4)

Lecture—3 hours; discussion—1 hour. Introduction to the anthropological study of cultural diversity. Case studies of eight societies will be presented to illustrate and compare the distinctive features of major cultural regions of the world. Concludes with a discussion of modernization. GE credit: SocSci, Div.

23. Introduction to World Prehistory (4)

Lecture—3 hours; discussion—1 hour. Broadly surveys patterns and changes in the human species' physical and cultural evolution from earliest evidence for "humanness" to recent development of large-scale complex societies or "civilizations." Lectures emphasize use of archaeology in reconstructing the past. GE credit: SocSci, Div, Wrt.

98. Directed Group Study (1-5)

Primarily intended for lower division students. (P/NP grading only.)

99. Special Study for Undergraduates (1-5)

Prerequisite: consent of instructor. (P/NP grading only.)

Upper Division Courses

100. Theory in Social-Cultural Anthropology (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 2 or consent of instructor. Discussion of the theoretical and philosophical developments in cultural anthropology from the 19th century to the present. Not open for credit to students who have completed course 137. (Former course 137.) GE credit: SocSci.—I. (I.) Yengoyan

101. Human Ecology (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: one course from course 1, 2, Environmental Studies 30, Genetics 10, or the equivalent. Critical variables in the processes that relate to humans and their environment. Emphasis on the biological, cultural, social, and psychological forces which encourage stability or change in human ecological relationships. (Same course as Environmental Science and Policy 101.) GE credit: SocSci.—II. (II.) Richerson, Borgerhoff Mulder

103. Indigenous Peoples and Natural Resource Conservation (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 2 or Geology 1 or Environmental Science and Policy 30. Integration of the interests of resident and indigenous peoples with the conservation of natural resources and ecosystems, using case study examples from both the developing and the developed world. Offered in alternate years. Not open for credit to students who have completed course 121N. (Former course 121N.)

104N. Cultural Politics of the Environment (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 2 or consent of instructor. Political economy of environmental struggles. Relationship between social inequality (based on race, class, and/or gender) and ecological degradation. Articulation of local peoples, national policy, and the international global economy in the contestation over the use of environmental resources. Not open for credit to students who have completed course 134N. (Former course 134N.) Offered in alternate years. GE credit: SocSci, Div.—III. Sawyer

(a) Anthropological Linguistics

110. Elementary Linguistic Analysis (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 4 or Linguistics 1. Analytical techniques of articulatory phonetics, phonemics, morphophonemics, and morphology. GE credit: SocSci.

112. Comparative Linguistics (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 110. Linguistic prehistory, historical linguistics, and reconstruction. GE credit: SocSci.—III. Macri

113. Indigenous Languages of North America (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 4, Linguistics 1, or consent of instructor. Survey of indigenous languages of North America, including their classification, linguistic characteristics, areal features, and socio-cultural aspects. GE credit: SocSci, Div.

117. Language and Society (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 4, or Linguistics 1 and course 2. Consideration of language in its social context. Methods of data collection and analysis; identification of socially significant linguistic variables. Contributions of the study of contextualized speech to linguistic theory. GE credit: SocSci, Div, Wrt.—III. (III.) J. Smith

119. World Writing Systems (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 4 or Linguistics 1. Survey of major world writing systems, including pictographic, syllabic, and alphabetic scripts used in both the Old and New Worlds in ancient and modern times, examined from linguistic and socio-political aspects. GE credit: SocSci.—(II.) J. Smith

120. Language and Culture (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 4; or course 2 and Linguistics 1. Culture,

cognition, meaning, and interpretation; language and the classification of experience; communication and learning in crosscultural perspective. GE credit: SocSci, Div, Wrt.—(II.) J. Smith

(b) Social-Cultural Anthropology

122A. Economic Anthropology (4)

Lecture—3 hours; discussion—1 hour. Varieties of production, exchange, and consumption behavior in precapitalist economies, their interaction with culture and social-political organization, and the theories that account for these phenomena. The effects of capitalism on precapitalist sectors. Not open for credit to students who have completed course 122. (Former course 122.) GE credit: SocSci, Div, Wrt.—III. (III.)

122B. Anthropology and Political Economy (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 2 or consent of instructor. Survey of anthropological approaches to the study of political organizations; inter-relationships among political institutions, economic infrastructures and cultural complexity. Not open for credit to students who have completed course 123A. (Former course 123A.) GE credit: SocSci, Div, Wrt.—I. (II.) Rouse

123AN. Resistance, Rebellion, and Popular Movements (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 2 or the equivalent. Analysis of popular protest in Third World and indigenous societies ranging from covert resistance to national revolts. Comparative case studies and theories of peasant rebellions, millenarian movements, social bandits, Indian "wars", ethnic and regional conflicts, gender and class conflicts. Not open for credit to students who have completed course 123B. (Former course 123B.)—(II.)

123BN. Multiculturalism and Minority Identity (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 2. Recent developments in conceptions of minority identity, from the point of view of minority populations in the Third World, Europe, and the United States. Challenges to existing categories of gender, race and class, as well as nationalism and imperialism. Not open for credit to students who have completed course 123C. (Former course 123C.) Offered in alternate years.—I.

124. Religion in Society and Culture (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 2. Discussion of anthropological theories of religion with emphasis on non-literate societies. Survey of shamanism, magic and witchcraft, ritual and symbols, and religious movements. Extensive discussion of ethnographic examples and analysis of social functions of religious institutions. GE credit: SocSci, Div, Wrt.—III. (III.)

125A. Structuralism and Symbolism (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 2. Survey of anthropological approaches to understanding the logic of structuralism and symbolism in cultural analysis. Focus on how structural and symbolic interpretations relate to cultural and linguistic universals and to the philosophical basis of relativism in the social sciences. (Former course 125.) GE credit: SocSci, Div.—I. (II.) Rouse

125B. Postmodernism(s) and Culture (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 2. The U.S.—European postmodern condition. "Modernity" as an incomplete project for subordinated groups. The economic, social, technological and political conditions leading to postmodern aesthetics, in comparison with postcolonialism, feminism and minority discourse. GE credit: SocSci, Div, Wrt.—I. (II.) Rouse

126A. Anthropology of Development (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 2 or consent of instructor. Theories of development and current critiques. Colonial legacies and post-colonial realities. Roles of the state and NGOs, population migrations, changing gender identities, cash-earning strategies, and sustainability issues. Stresses importance of cultural understandings in

development initiatives. Case studies emphasizing non-industrial societies. Not open for credit to students who have completed course 126. (Former course 126.) GE credit: SocSci, Div, Wrt.—I. (II.) Boyd

126B. Women and Development (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 2 or consent of instructor. Current Third World and Western development issues concerning women in agriculture, industry, international division of labor, political movements, revolutions, politics of health, education, family and reproduction. Impact of colonialism, capitalism, the world system, and international feminism on women and development. Not open for credit to students who have completed course 131. (Former course 131.) Offered in alternate years. GE credit: SocSci, Div, Wrt.—III. Sawyer

127. Urban Anthropology (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 2 or consent of instructor. Survey of approaches to urban living: political structures, organization of labor, class relations, world views. The evolution of urban life and its contemporary dilemmas. Cross-cultural comparisons discussed through case studies. GE credit: SocSci, Div, Wrt.—III. Zhang

128A. Kinship and Social Organization (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 2. Comparative examination of personal kinship, descent, marriage, household and family organizations; the theories that account for variation, and recent advances in the treatment of these data. Not open for credit to students who have completed course 128. (Former course 128.) GE credit: SocSci, Div, Wrt.

128B. Self, Identity, and Family (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 2 or consent of instructor. Exploration of self, identity, and family systems cross-culturally. Impact of class, gender, race, ethnicity, ruralization, urbanization, and globalization on notions of selfhood in different social/cultural systems. Not open for credit to students who have completed course 129. (Former course 129.) Offered in alternate years. GE credit: SocSci, Div, Wrt.—I.

130A. Cultural Dimensions of Globalization (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 2. The cultural dimensions of recent economic and political developments frequently termed "globalization." Offered in alternate years. GE credit: SocSci, Wrt.

130BN. Migration and the Politics of Place and Identity (4)

Lecture/discussion—4 hours. Prerequisite: course 2 or consent of instructor. Internal and international migration from an anthropological perspective, including causes, processes, and political, economic, and cultural effects of spatial mobility and displacement. Emphasizes the interplay of identity, place, and power in diverse cultural and historical contexts. Not open for credit to students who have completed course 123D. (Former course 123D.) GE credit: SocSci, Wrt.—(III.) Zhang

130C. Latino Migration to the United States (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 2. The experiences of people involved in migration between Latin America and the United States; most significant factors shaping those experiences. Offered in alternate years. GE Credit: SocSci, Wrt.

132. Ethnohistory (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 2 and one other course in either history or anthropology. Course focuses on method and interpretation involved in reconstructing the history and cultural experience of those "people without history" who left no documentary record (pre-literate societies, slaves, peasants). Emphasizes cross-cultural comparison and complementary methods (archaeology, demography, oral history, travel accounts). GE credit: SocSci, Wrt.

133. Cultural Ecology (4)

Lecture—3 hours; discussion—1 hour. Comparative survey of the interaction between diverse human cul-

tural systems and the environment. Primary emphasis given to people in rural and relatively undeveloped environments as a basis for interpreting more complex environments. (Same course as Environmental Science and Policy 133.) GE credit: SocSci, Div, Wrt.—III. (III.) Orlove

135. Peasant Society and Culture (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 2. Comparative study of peasant communities, utilizing historical and ethnographic sources; analysis of urban-rural relations; problems of economic development and culture change. GE credit: SocSci, Div, Wrt.—III. C. Smith

136. Ethnographic Film (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 2. Overview of the use of film in anthropology and its advantages and limitations in comparison to written ethnographic descriptions. Essential features of ethnographic films. Film production in anthropological research and problems encountered in producing films in the field. GE credit: SocSci, Wrt.

138. Ethnographic Research Methods in Anthropology (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: courses 2 and 137. Basic concepts in and approaches to ethnographic field research. Problem formulation, research design, qualitative and quantitative data collection procedures, and techniques for organizing, retrieving, and analyzing information. Ethnographic description and constructed inference. Students will organize and conduct individual research projects. GE credit: SocSci.

139AN. Race, Class, Gender Systems (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 2. Comparative analysis of class/race/gender inequality, concentrating on the ways in which beliefs about descent, "blood," and biological difference interact with property and marital systems to affect the distribution of power in society. Not open for credit to students who have completed course 139. (Former course 139.) GE credit: SocSci, Div, Wrt.—III. C. Smith

139BN. Gender and Sexuality (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 2 or consent of instructor. Gender and sexuality in foraging bands, horticultural and pastoral tribes, agricultural and industrial states. Debates on cultural evolution and distribution of gender hierarchies. Impact of politics, economics, religion, social practices, women's movements on gender and sexuality. Culture, nature, and sexuality. Not open for credit to students who have completed course 130. (Former course 130.) Offered in alternate years. GE credit: SocSci, Div, Wrt.—I. Joseph

140A. Cultures and Societies of West and Central Africa (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 2. Ethnographic survey of West Africa and Congo Basin with analyses of representative societies which illustrate problems of general theoretical concern. Major consideration will be the continuities and discontinuities between periods prior to European contact and the present. GE credit: SocSci, Div, Wrt.

140B. Cultures and Societies of East and South Africa (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 2. Ethnographic survey of Eastern and Southern Africa with analyses of selected societies which illustrate problems of interest to anthropologists. Major consideration will be given to continuities and discontinuities between periods prior to European contact and the present. GE credit: SocSci, Div, Wrt.—II.

141A. Indians of North America (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 2 or consent of instructor. Introductory survey of the Indians of North America: origins, languages, civilizations, and history. GE credit: SocSci, Div, Wrt.

141B. Ethnography of California and the Great Basin (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 2 or consent of instructor. Description and

analysis of the native peoples of California and the Great Basin, and their lifeways at the time of European contact. (Former course 141C.) GE credit: SocSci, Div, Wrt.

142. Peoples of the Middle East (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 2. Peoples of the Middle East (including North Africa). Discussions of class relations, kinship organization, sex/gender systems, religious beliefs and behavior, ethnic relations, political systems. Impact of world systems, political and religious movements and social change. (Former course 136.) GE credit: SocSci, Div, Wrt.—(III.)

143A. Ethnology of Southeast Asia (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 2. Patterns of culture and social organization from prehistory to the present, in the context of historical, ecological, economic, and political settings. Emphasis on the relation of ethnic minorities to national states. Offered in alternate years. GE credit: SocSci, Div, Wrt.—(II.)

143B. Philippine Societies and Culture (4)

Laboratory/discussion—4 hours. Prerequisite: course 2. Introduction to the ethnology of the Philippines. Nature and distribution of ethnic groups, social organizations, cultural patterns and social issues. Emphasis on ethnic minorities, rural populations, effects of modernization, and relation of the state to local groups. GE credit: SocSci, Div, Wrt.—(II.) Davis

144. Contemporary Societies and Cultures of Latin America (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 2. Introduction to contemporary social structure of Latin America. Origins, maintenance and changes in inequality: economic responses to poverty, sociocultural responses to discrimination, and political responses to powerlessness. GE credit: SocSci, Div, Wrt.—(III.) de la Cadena

146. Peoples and Politics of Mexico and Central America (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 2. Politics and culture in Mexico and Central America from the time of Independence to the present. Non-indigenous as well as indigenous people. Regional focus will vary. GE credit: SocSci, Div, Wrt.—(II.) C. Smith

147. Peoples of the Pacific (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 2 or consent of instructor. Ethnographic survey of aboriginal cultures of Oceania. Comparison of origins, prehistory, and traditional social organization of peoples of Polynesia, Micronesia, and Melanesia. Consideration of recent changes associated with colonialism and national independence. GE credit: SocSci, Div, Wrt.—I. Boyd

148A. Culture and Political Economy in Contemporary China (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 2 or consent of instructor. Examination of contemporary Chinese culture and political economy through reading ethnographic studies on recent transformations in rural and urban Chinese society. Special attention to state power, popular culture, spatial mobility, city space, and gender. Offered in alternate years. GE credit: SocSci, Div, Wrt.—(II.) Zhang

148B. Family, Gender, and Population in Contemporary China (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 2. Analysis of family process, gender relations, and population dynamics in relation to state power in China since 1949. GE credit: SocSci, Div, Wrt.

148C. Ethnic Diversity of China (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 2. Analysis of China's ethnic diversity through time and space. Interethnic relations in changing state systems examined among Han majority subethnic groups (e.g., Cantonese, Hakka) and borderlands minorities (e.g., Hmong, Tibetan). Emphasizes intersections of gender and class with race/ethnicity/nationality. GE credit: SocSci, Div, Wrt.

149A. Traditional Japanese Society (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 2. Patterns of culture and social organization from prehistoric to early twentieth-century Japan. Origins, prehistory, and traditional religious and political systems, marriage and kinship, language and culture. Changes and continuities in traditional and contemporary Japanese culture are addressed. GE credit: SocSci, Div, Wrt.

149B. Contemporary Japanese Society (4)

Lecture—3 hours; discussion—1 hour. Introduction to contemporary Japanese social structure, social organization, and patterns of culture. Analysis of rural-urban cultural continuities and contrasts, class relations, political and economic systems, kinship, sex/gender systems, contemporary religious beliefs and behavior, conflict, consensus, and cultural stereotypes. Offered in alternate years. GE credit: SocSci, Div, Wrt.—(III.) J. Smith

(c) Biological Anthropology

151. Primate Evolution (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 1 or Biological Sciences 1B. Origin and relationships of the prosimians, monkeys, and apes. GE credit: SciEng, Wrt.—(III.) McHenry

152. Human Evolution (5)

Lecture—3 hours; discussion—1 hour; term paper. Prerequisite: course 1 or Biological Sciences 1B. Nature and results of the evolutionary processes involved in the formation and differentiation of humankind. GE credit: SciEng, Wrt.—(II.) McHenry

153. Human Biological Variation (5)

Lecture—3 hours; discussion—1 hour; term paper. Prerequisite: course 1 or Biological Sciences 1B. Origin, adaptive significance and methods of analysis of genetic differences among human populations. Special attention given to racial differences such as those in blood groups, plasma proteins, red cell enzymes, physiology, morphology, pigmentation and dermatoglyphics. GE credit: SciEng, Wrt.—(I.) D.G. Smith

154A. The Evolution of Primate Behavior (5)

Lecture—3 hours; discussion—1 hour; term paper. Prerequisite: course 1. Examines ecological diversity and evolution of social systems of prosimians, monkeys, and apes, placing the social behavior of the primates in the context of appropriate ecological and evolutionary theory. GE credit: SciEng, Wrt.—(I.) Rodman

154B. Ecology and Sociobiology of Primates (4)

Lecture—2 hours; laboratory—6 hours. Prerequisite: course 154A, Statistics 13 (or the equivalent), and consent of instructor. Continuation of course 154A for students interested in methods of studying, describing and analyzing the ecology and sociobiology of primates. Laboratory consists of direct observation of captive primates and local birds with quantitative analysis of observations. GE credit: SciEng, Wrt.—(III.) Isbell

155. Comparative Primate Anatomy (4)

Lecture—2 hours; laboratory—4 hours. Prerequisite: Biological Sciences 1B. The functional anatomy of monkeys, apes, and man. Emphasis on the anatomical evidence for human evolution. GE credit: SciEng, Wrt.—(II.)

156. Human Osteology (4)

Lecture—2 hours; laboratory—4 hours. Prerequisite: course 1 or the equivalent. Introductory study of the human skeleton, including bone growth, pathology, radiology, evolution, dentition, and variations in race, sex, and age. GE credit: SciEng.—(III.) McHenry, Darwent

157. Anthropological Genetics (3)

Lecture—3 hours. Prerequisite: course 1 or Biological Sciences 1A, and Genetics 100, 103, 105, or 106. Processes of micro-evolution responsible for biological differences among human populations. Special attention will be given to the adaptive significance of genetic variation in blood group antigens, serum proteins and red cell enzymes. GE credit: SciEng.—(II.) D.G. Smith

157L. Laboratory in Anthropological Genetics (2)

Lecture—1 hour; laboratory—3 hours. Prerequisite: course 1 or Biological Sciences 1A, and either Genetics 100 or enrollment in course 157 (concurrently or following). Methods for identifying genetic variation in human blood group antigens, serum proteins and red cell enzymes (hemagglutination), general electrophoresis on starch, cellulose acetate and polyacrylamide, immunodiffusion and immunoelectrophoresis on agarose. (P/NP grading only.) GE credit with concurrent enrollment in course 157: Wrt.

158. The Evolution of Females and Males: Biological Perspective (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 1. Current theoretical frameworks for explaining the evolution of sex differences and for understanding the interrelationship between biological processes and cultural construction of gender roles. GE credit: SciEng, Div, Wrt.—(I.) Isbell

(d) Archaeology and Prehistory

170. Archeological Theory and Method (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: courses 1 and 3. Introduction to history and development of archeological theory and method, with particular emphasis on the basic dependence of the latter on the former. Stress is on historical development of archaeology in the New World. GE credit: SocSci, Div, Wrt.—(II.) Bettinger, Darwent

171. Geoarchaeology (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 3. Theories, methods, and techniques for studying the geomorphic context of archeological sites. Particular attention to sediment and soil attributes and analyses for understanding important local landform features and developmental histories of archeological sites. Offered in alternate years. GE credit: SocSci, Wrt.

172. New World Prehistory: The First Arrivals (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 3 or consent of instructor. Survey of data relating to the peopling of the New World. Cultural adaptation and development of early inhabitants of North and South America. Offered in alternate years. GE credit: SocSci, Div, Wrt.

173. New World Prehistory: Archaic Adaptations (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 3 or consent of instructor; course 170 recommended. Introduction to and survey of prehistoric hunting and gathering adaptations across North America with particular emphasis on the East, Southeast, Midwest, Plains, Southwest, and Northwest. Offered in alternate years. GE credit: SocSci, Div, Wrt.—(I.) Bettinger

176. Prehistory of California and the Great Basin (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 3 or consent of instructor. Description and analysis of the prehistoric peoples of California and the Great Basin from earliest times to European contact. GE credit: SocSci, Div, Wrt.

178. Hunter-Gatherers (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 2. Study and interpretation of the ancient and modern lifeway in which peoples support themselves with primitive technologies and without benefit of domesticated plants and animals. Offered in alternate years. GE credit: SocSci, Div, Wrt.—(II.) Bettinger

179. Ethnoarchaeology (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 3. Relationships between behavior and its archeological consequences. Ethnography by archeologists examines residence patterning, site-formation processes, hunting/foraging behavior and other artifact creating activities and how these contribute to modern archeological thinking. GE credit: SocSci, Div, Wrt.

181. Field Course in Archeological Method (9)

Lecture—6 hours; daily field investigation. Prerequisite: course 3. On-site course in archeological meth-

ods and techniques held at a field location in the western United States, generally California or Nevada. Introduces basic methods of archeological survey, mapping, and excavation. GE credit: Sci-Eng.—summer.

183. Laboratory in Archeological Analysis (4)
Lecture—2 hours; laboratory—6 hours. Prerequisite: course 181 or consent of instructor. Museum preparation, advanced field investigation, and guidance in preparation of museum material for publication. May be repeated for credit with consent of instructor. Limited enrollment. GE credit: SciEng, Wrt.—III. (III.) Darwent

184. Prehistoric Technology: The Material Aspects of Prehistoric Adaptation (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 2 or 3. Examination of the role of lithic, ceramic, textile and wooden implements as elements in prehistoric survival and development. Emphasis is descriptive, but the significance of material resources as factors in prehistoric adaptation, settlement patterns, and culture change are discussed. GE credit: SocSci.

(e) Special Study Courses

191. Topics in Anthropology (4)
Lecture/discussion—3 hours; term paper. Prerequisite: junior or senior standing in anthropology. Intensive treatment of a special anthropological topic or problem. May be repeated once for credit when topic differs.—II. D.G. Smith

192. Internship in Anthropology (1-12)
Internship—3-36 hours. Prerequisite: Upper division standing; consent of instructor. Work experience off and on campus in all subject areas offered in the Department of Anthropology under the supervision of a member of the faculty. Limited to Anthropology majors. May be repeated for a total of 12 units including 192 courses taken in other departments. (P/NP grading only.)

194H. Special Study for Honors Students (1-5)
Prerequisite: open only to majors of senior standing who qualify for honors program. Independent study of an anthropological problem involving the writing of an honors thesis. May be repeated for a total of 12 units. (P/NP grading only.)

197T. Tutoring in Anthropology (1-5)
Tutorial—1-5 hours. Prerequisite: upper division standing with major in Anthropology and consent of Department Chairperson. Leading of small voluntary discussion groups affiliated with one of the department's regular courses. May be repeated for credit. (P/NP grading only.)

198. Directed Group Study (1-5)
(P/NP grading only.)

199. Special Study for Advanced Undergraduates (1-5)
(P/NP grading only.)

Graduate Courses

201. History of Anthropological Theory (4)
Lecture—2 hours; discussion—1 hour; term paper. Historical development of the various fields of anthropology with emphasis upon their interrelationships.—I. (I.) Yengoyan

202. History and Theory of Biological Anthropology (4)
Seminar—3 hours; term paper. History of thought in biological anthropology and analysis of major theoretical problems in the field. Suggested for all first-year graduate students lacking intensive preparation in biological anthropology.—I. Rodman

203. History and Theory of Archaeology (3)
Seminar—3 hours. History of thought in archaeology and analysis of research methods.—(I.) Bettinger

204. Contemporary Issues in Anthropological Theory (4)
Seminar—3 hours; term paper. Prerequisite: course 2, 137 or consent of instructor. Advanced consideration of fundamental issues in anthropological theory. Emphasis on critical examination of major contemporary debates between proponents of competing theories.—II. (II.) C. Smith

205. History and Theory in Anthropological Linguistics (4)
Seminar—3 hours; term paper. History of thought in anthropological linguistics. Consideration of the historical development of fundamental ideas in anthropological linguistics, of major theoretical issues, and of research methodology.—(III.) J. Smith

206. Research Design and Method in Social Anthropology (5)
Seminar—4 hours; individual student-instructor session (in-depth work on proposal writing). Prerequisite: consent of instructor. Formulation of research problems and preparation of research proposals; relationships between theory and method, funding, pre-fieldwork preparations, entering the community, field research techniques, and problems of ethics; intensive work on proposal writing. May be repeated once for credit. Limited enrollment.—III. (III.) Sawyer

207. Ethnographic Writing (4)
Seminar—3 hours; term paper. Prerequisite: courses 137, 201, or the equivalent. Relationship between conducting participant observation of others and writing it up, emphasizing the processual rift between the reality of fieldwork and its written representation. Study of various literary genres and textual strategies used in cultural anthropology. May be repeated for credit.

210. Aspects of Culture Structure (4)
Seminar—3 hours; term paper. Analysis of various phases of culture, such as religion, economics, law, and folklore. May be repeated for credit when topic differs.—II. (II.) Rouse

211. Advanced Topics in Cultural Ecology (4)
Lecture/discussion—3 hours; term paper. Prerequisite: Environmental Science and Policy/Anthropology 133, graduate standing in Anthropology or Ecology. Topics of current analytical and methodological importance in cultural ecology. Examination of general issues in cultural ecology through study of human response to and influence on climate. (Same course as Ecology 211.)

212. Political Ecology (4)
Lecture/discussion—3 hours; term paper. Prerequisite: graduate standing or consent of instructor. Interdisciplinary seminar evaluating contributions from ecological anthropology, political economy, cultural constructivism, postmodernism, and feminism towards development of theories of political ecology. Historical relationships between local/global power structures, environmental degradation, and resistance movements. Case studies of desertification, deforestation, mining, conservation, development. Offered in alternate years.—III. Boyd

216. Problems in Archeological Method (4)
Seminar—3 hours; term paper. Techniques for analyzing archeological data; application to various prehistoric cultures. May be repeated for credit with consent of instructor.—III. (II.) Bettinger

218. Topics in North American Prehistory (4)
Seminar—3 hours; term paper. Advanced study on current problems in North American prehistory and archaeology. May be repeated for credit only if material is unique for that student, and with consent of instructor.—I. Darwent

220. Field Course in Linguistics (4)
Seminar—2 hours; laboratory—2 hours. Prerequisite: courses 110, 111. Techniques of eliciting, recording, and analyzing; work with a native speaker.

221. Rural Transformation in Postcolonial Societies (4)
Seminar—3 hours; term paper. Prerequisite: courses 223, 265, or consent of instructor. Problems of rural transformation arising out of political and economic interaction between national elites and rural regional and local populations under varying conditions of induced change in postcolonial societies. Attention will be given to the implications of this interaction for rapid economic growth. May be repeated for credit.—(I.) Orlove

222. Cities and Citizenship (4)
Seminar—3 hours; term paper. Prerequisite: graduate standing. The nature of modern cities, urban

socio-economic life, and urban culture and politics from an anthropological perspective.—(I.) Zhang

223. Economic Anthropology (4)
Seminar—3 hours; term paper. Prerequisite: course 122 or consent of instructor. Selected current methodological and theoretical problems in the analysis of nonindustrial economic systems.

224. Problems in Comparative Religion (4)
Seminar—3 hours; term paper. Advanced study of current problems in the anthropological study of religion.

225. State and Nation in the Modern World (4)
Seminar—3 hours; term paper. A presentation of current anthropological theories of the origins and nature of the modern nation-state in both the First and Third Worlds, with special reference to state ideology (nationalism) and forms of control. Offered in alternate years.—(II.) C. Smith

226. Consciousness and Resistance (4)
Seminar—3 hours; term paper. Prerequisite: completion of first-year graduate work or consent of instructor. Consideration of approaches to the study of social inequality, and responses of subordinated groups. Emphasis on situating approaches to contemporary social theory, concrete research problems, and political strategies. Topics: formation of consciousness and identity; collective action, accommodation to frontal resistance.

227. Behavioral Ecology and Anthropology (4)
Seminar—3 hours; term paper. Prerequisite: graduate standing. An exploration of the links between behavioral ecology and the study of human cultural variation, focusing on social organization, marriage, reproduction, inheritance and subsistence in traditional and historical populations. May be repeated once for credit. Offered in alternate years.—III. Borgerhoff Mulder

228. Culture and Power (4)
Seminar—3 hours; extensive writing. Prerequisite: graduate standing or consent of instructor. Exploration of one of the core paradigms within contemporary anthropological inquiry, "culture and power." Focus on how distinct theoretical perspectives - Marxism, post-Marxism, structuralism, post-structuralism, and feminism - have examined the mutually constitutive nature of culture and power.—(III.)

229. Topics in Gender, Identity, and Selfhood (4)
Seminar—3 hours; term paper. Intersections of gender, identity, and selfhood cross-culturally and historically. How the self is feminized and masculinized, and interfaces with sexual, race, class, work, national, minority, and majority identities under different historical, cultural, and social structural conditions. May be repeated for credit when topic differs.—(III.) Joseph

230. Family Systems and Reproduction: Theory and Comparisons (4)
Lecture—1.5 hours; seminar—1.5 hours; term paper. Prerequisite: graduate standing in one of the social sciences including History. Comparative examination of family systems in historical context and of reproductive behaviors and strategizing. A major theme is how family-system norms specify the relative desirability of differently configured offspring sets. Cases are drawn from Western Europe and South and East Asia.

232. Political Movements (4)
Seminar—3 hours; term paper. Prerequisite: completion of first-year graduate work recommended. An interdisciplinary approach to political movements of protest, reform, and revolution emphasizing historical comparison and evaluation of major theoretical approaches including world systems, resource mobilization, state and culture, rational choice, moral economy, social class and gender.

239. Problems in African Society and Culture (4)
Seminar—3 hours; term paper. Diachronic analyses of traditional institutions in sub-Saharan Africa.

241. Topics in North American Ethnology (4)
Seminar—3 hours; term paper. Advanced study on current problems in North American ethnography

and culture history. May be repeated for credit with consent of instructor.

245. Ethnology of Northern and Central Asia (4)
Seminar—3 hours; term paper. Prerequisite: a reading knowledge of German, Russian, Chinese, or Japanese. Lectures on the culture aboriginally found north of the Caucasus-Korea line. Supervised study of the primary and secondary sources. Work with informants when available.

246. Ethnology of Europe (4)
Seminar—3 hours; term paper. Prerequisite: reading knowledge of a European language other than English. Supervised study of the primary and secondary sources dealing with the ethnography and ethnology of the peoples of Europe. Emphasis upon folk, peasant, and minority groups.

248. Topics in Chinese Culture and Society (4)
Seminar—3 hours; term paper. Prerequisite: graduate standing in the social sciences, history, or the humanities. Selected topics in the anthropology of Chinese society. Focus on one or more of the following topics: state-society dynamics, family and gender, city formation and urban life, social movement, labor politics, and religion and ideology in Chinese society. May be repeated for credit when topic differs.

252. Human Evolution Seminar (4)
Seminar—3 hours; term paper. Prerequisite: course 152 or the equivalent; consent of instructor. Study of selected topics in human evolutionary studies. Each year course will focus on one or more of the following: molecular evolution, primate evolutionary biology, Tertiary hominoids, *Australopithecus*, *Homo erectus*, archaic *Homo sapiens*, brain evolution. May be repeated for credit.—(III.) McHenry

253. Seminar in Human Biology (4)
Seminar—3 hours; term paper. Prerequisite: course 153, 157, or consent of instructor. Study of selected topics in human biology. May be repeated for credit when topics vary.—(III.) D.G. Smith

254. Current Issues in Primate Sociobiology (4)
Seminar—3 hours; term paper. Prerequisite: course 154B or the equivalent. Analysis of primate behavior, with particular emphasis on preparation for field studies. May be repeated for credit when topic differs.—(III.) Isbell, Harcourt

258. Evolution and Human Behavior (4)
Seminar—3 hours; term paper. Prerequisite: courses 15; 101; 154 A or 154B; 158 or consent of instructor. Focus will be on reproductive strategies and parental investment. May be repeated for credit when topics vary.—(II.)

270. Anthropology Colloquium Seminar (1)
Seminar—1 hour. Reports and discussions of recent advances in the four subfields of anthropology. To be presented by guest speakers. May be repeated twice for credit. (S/U grading only.)—I, II, III. (I, II, III.) Borgerhoff Mulder

280. Current Anthropology Journal Editorial Workshop (4)
Workshop—1 hour; independent study—3 hours. Students must enroll for all three quarters. Reading and offering workshop critiques of manuscripts submitted for publication, and reading and discussion of other relevant work in anthropology and human ecology. Track and edit published comments and authors' replies that accompany major features. Participation in the development of new sections for the electronic edition of the journal, including a "news and views" section and a debate section. (Same course as Ecology 280.) May be repeated for 12 units of credit with consent of instructor. (S/U grading only.)—I, II, III. Orlove

292. Seminar in Linguistic Anthropology (4)
Seminar—3 hours; term paper. Selected topics in linguistic anthropology. May be repeated for credit when topic differs.—J.S. Smith

298. Group Study (1-4)
(S/U grading only.)

299. Research (1-12)
(S/U grading only.)

299D. Dissertation Research (1-12)
(S/U grading only.)

Applied Behavioral Sciences

See Community and Regional Development

Applied Biological Systems Technology

(College of Agricultural and Environmental Sciences)

Faculty. See under Department of Biological and Agricultural Engineering.

Minor Program. The Department of Biological and Agricultural Engineering offers a minor in Applied Biological Systems Technology for non-engineering students interested in becoming familiar with engineering terminology and procedures. Course work provides knowledge of material properties, design procedures, fabrication principles, and hardware practices.

Minor Program Requirements:

UNITS

Applied Biological Systems Technology	20
Choose one course from Applied Biological Systems Technology 15, 16, or 17	2
Applied Biological Systems Technology 170	3
Select at least nine units from Applied Biological Systems Technology 101, 110L, 121, 142, 145, 147, 161, 163, 165, 175 9	
Select the remaining units from: Agricultural Management and Rangeland Resources 110A; Animal Science 118, 119, 143, 146; Environmental Horticulture 125; Food Science and Technology 102A, 110A, 110B; Hydrologic Science 110; Plant Biology 172, 172L, 196; Viticulture and Enology 140	6

Minor Advisor. J.W. Rumsey.

Courses in Applied Biological Systems Technology (ABT)

Lower Division Courses

15. Wood Properties and Fabrication (2)

Lecture—1 hour; laboratory—3 hours. Physical principles and properties of wood as related to strength, design procedures, and selection and use of wood-working equipment. Experience in working with wood. (P/NP grading only.)—(III.) Grismer

16. Metal Properties and Fabrication (2)

Lecture—1 hour; laboratory—3 hours. Study of metal properties and of techniques for fabricating in metal. Physical principles, design considerations, effects of techniques on quality and appearance, and evaluation procedures. Experience in working with metal. (P/NP grading only.)—(I.) J. Rumsey

17. Plastic Properties and Fabrication (2)

Lecture—1 hour; laboratory—3 hours. Study of the properties of plastic materials and the fundamentals of fabrication techniques. Experience in working with common plastics, with applications to biological systems. (P/NP grading only.)—(III.) Jenkins

49. Field Equipment Operation (2)

Lecture—1 hour; laboratory—3 hours. Operation, adjustment, and troubleshooting of farm tractors and field equipment. Principles of operation, equipment terminology and uses of tilling, cultivating, thinning, and planting equipment. Typical sequences in cropping practices. (P/NP grading only.)—(I, III.) J. Rumsey

52. Field Equipment Welding (2)

Lecture—1 hour; laboratory—3 hours. Prerequisite: course 16 or consent of instructor. Intermediate welding to include hardfacing and inert gas welding. Class projects on repair and fabrication by welding. Troubleshooting and major repair of field equipment. (P/NP grading only.)—(II.) Rumsey

98. Directed Group Study (1-5)

Prerequisite: consent of instructor. (P/NP grading only.)

99. Special Study for Lower Division Students (1-5)

(P/NP grading only.)

Upper Division Courses

101. Engine Technology (3)

Lecture—2 hours; laboratory—3 hours. Prerequisite: upper division standing or consent of instructor. Principles of 2-stroke cycle, 4-stroke cycle gasoline and 4-stroke cycle diesel engine construction and operation. Engine systems, performance, troubleshooting, and overhaul.—(II.) Rumsey

110L. Experiments in Food Engineering (2)

Laboratory—6 hours. Prerequisite: Food Science and Technology 110B (may be taken concurrently). Use of temperature sensors; measurement of thermal conductivity and heat transfer in foods; refrigeration, freezing, concentration and dehydration of foods.—(II.) Singh

121. Animal Housing and Environment Management (2)

Lecture—2 hours. Prerequisite: Animal Science 1 or 2. Optimal structures and environments for animal growth and comfort; heat and moisture transfer principles; heating, cooling, ventilating principles and equipment; animal housing design; environmental regulations and waste management practices. Offered in alternate years.—(II.) Zhang

142. Equipment and Technology for Small Farms (2)

Lecture—1 hour; laboratory—3 hours. Types and characteristics of agricultural equipment and technologies appropriate for small commercial farming. Adjustment and calibration of equipment. Selection of and budgeting for equipment. (Same course as International Agricultural Development 142.)—(III.) J. Rumsey

145. Field Equipment Technology (2)

Lecture—1 hour; laboratory—3 hours. Prerequisite: upper division standing and Physics 1A or 5A. Function, construction, and operating principles of field equipment for harvesting fruit, nut, vegetable, and field crops. Principles of operation and construction of hydraulic systems. Function and application of pumps, motors, and valves for controlling field equipment.—(III.) J. Rumsey

147. Field Equipment Management (2)

Lecture—2 hours. Prerequisite: course 49 (may be taken concurrently) or consent of instructor. Fundamentals of field machinery management to include machinery capacity, selection from capacity and economic standpoints, scheduling, acquisition options, and trade-in considerations. Estimation of operating costs of field machinery.—(I, II, III.) J. Rumsey

161. Water Quality Management for Aquaculture (3)

Lecture—3 hours. Prerequisite: Biological Sciences 1B, Mathematics 16B, Chemistry 2B. Basic principles of water chemistry and water treatment processes as they relate to aquacultural systems. Offered in alternate years.—(II.) Piedrahita

163. Aquaculture Systems Engineering (3)

Lecture—3 hours. Prerequisite: course 161. Design of aquacultural systems: design methodology, principles of fluid mechanics, site selection and facility planning, management operations, computer modeling. Offered in alternate years.—(III.) Piedrahita

165. Irrigation Practices for an Urban Environment (2)

Lecture—2 hours. Prerequisite: Physics 1A or 5A. Basic design, installation, and operation principles of

irrigation systems for turf and landscape: golf courses, parks, highways, public buildings, etc. Emphasis on hardware association with sprinkler and drip/trickle systems.—III. (III.) Hills

170. Design in Biological Systems Technology (3)

Lecture—2 hours; laboratory—3 hours. Prerequisite: Physics 1A or 5A and course 15, 16, or 17. Introduction and application of design procedures and tools. Techniques are presented for solving design problems and selecting appropriate materials. Catalog and handbook utilization, government safety regulations, and environmental considerations are discussed.—II. (II.) J. Rumsey

175. Introduction to Precision Agriculture (3)

Lecture—2 hours; laboratory/discussion—3 hours. Prerequisite: Agricultural Systems and Environment 21 or the equivalent computer experience. Concepts of precision agriculture. Variability in yield, yield monitors and mapping, remote sensing, variability in plant and soil conditions, global positioning system (GPS), geographic information system (GIS), sensors and actuators, map controlled variable rate application (VRT), socio-economic aspects of precision agriculture.—I. (I.) Upadhyaya

180. Introduction to Geographic Information Systems (5)

Lecture—2 hours; laboratory/discussion—6 hours. Prerequisite: Agricultural Systems and Environment 21; Mathematics 16A-16B, and Statistics 13, or the equivalents. Management and analysis of georeferenced data. Spatial database management and modeling. Applications of agriculture and biological resource management. Cartographic modeling. Vector-based geographic information system.—I. (I.) Plant, Wallender

181. Geographic Information Systems Modeling (5)

Lecture—2 hours; laboratory—9 hours. Prerequisite: course 180. Advanced topics in Geographic Information Systems (GIS), such as raster-based GIS (GRID), triangular irregular network (TIN), and networks. Use of GIS ARC/INFO for remote sensing and modeling of environmental terrain, transportation, hydrology, and site specific crop management.—II. (II.) Wallender

182. Environmental Analysis with Geographical Information Systems (GIS) (5)

Lecture—2 hours; laboratory/discussion—6 hours. Prerequisite: course 180; course 181 recommended. Ecosystem and landscape modeling with emphasis on hydrology and solute transport. Spatial analysis of environmental risk analysis including ecological risk assessment. Precision farming. Natural resource management. Spatial database structures. Remote sensing applications. Data quality and error analysis in GIS. (Same course as Hydrologic Science 182.)—III. (III.) M. Zhang

190C. Research Conference for Advanced Undergraduates (1)

Discussion—1 hour. Prerequisite: consent of instructor. Research conferences for specialized study in applied biological systems technology. May be repeated for credit. (P/NP grading only.)—I, II, III. (I, II, III.)

192. Internship in Applied Biological Systems Technology (1-5)

Internship—3-15 hours. Prerequisite: upper division standing; approval of project prior to period of internship. Supervised internship in applied biological systems technology. May be repeated for credit. (P/NP grading only.)

197T. Tutoring in Applied Biological Systems Technology (1-5)

Tutorial—1-5 hours. Prerequisite: upper division standing and consent of instructor. To provide teaching experience to upper division undergraduate students. Activities will vary depending on the nature of the course. May include (but not limited to) assistance in laboratory sessions, advising on projects, tutoring on course material, and grading of homework assignments. (P/NP grading only.)

198. Directed Group Study (1-5)

Prerequisite: consent of instructor. (P/NP grading only.)

199. Special Study for Advanced Undergraduates (1-5)

(P/NP grading only.)

Graduate Courses

233. Pest Control Practices (3)

Lecture—2 hours; laboratory—3 hours. Prerequisite: graduate standing or consent of instructor. Practical and theoretical considerations of pest control systems and techniques. Design, selection, and use of mechanical systems for field, orchard, greenhouse, and vector control use. Biological, legal, and environmental considerations in pest control and pesticide application.—II. Giles

290C. Graduate Research Conference (1)

Discussion—1 hour. Prerequisite: consent of instructor. Research problems, progress, and techniques in applied biological systems technology. May be repeated for credit. (S/U grading only.)—I, II, III. (I, II, III.)

298. Group Study (1-5)

299. Research (1-12)

(S/U grading only.)

Professional Course

317. Teaching Agricultural Mechanics (2)

Lecture—1 hour; laboratory—3 hours. Prerequisite: a course in physics; 6 units related to agricultural mechanics; and enrolled in Agricultural Education Teacher Credential Program. Preparation of the teacher to plan, organize, and conduct an agricultural mechanics program in secondary schools. Development of and presentation of lesson plans and teaching aids. Review of subject matter in metal fabrication, power and machinery and agricultural structures areas.—II. (II.) J. Rumsey

Applied Computing and Information Systems

(College of Agricultural and Environmental Sciences)

This minor is for students interested in applying modern computer technology to management problems in agriculture, resource management, and other areas. Course work provides knowledge of the use of information technology and the methodology of applied quantitative and systems analysis. The minor is offered by the Department of Agronomy and Range Science.

Minor Program Requirements:

UNITS

Applied Computing and Information Systems18

Two or three of the following courses: Agricultural Management and Rangeland Resources 120, 121, Animal Science 128, Computer Science Engineering 167. (The third course may be taken in substitution for a course from either of the elective groups.)

Remainder of the units to be made up of courses in one or both of the following groups.....6-12

Computer applications, computer assisted analysis in data manipulation: Agricultural and Resource Economics 106, 155, Agricultural Management and Rangeland Resources 132, Applied Biological Systems Technology 180, 181, 182, Community and Regional Development 160, Economics 102, Computer Science Engineering 124, Hydrologic

Science 182, International Agricultural Development 170, Statistics 141

Communication and business organization: Agricultural and Resource Economics 112, Community and Regional Development 168, Communication 103, 130, 134, 135, 136, International Agricultural Development 111

Minor Adviser. T.C. Foin (*Agronomy and Range Science*), T.F. Famula (*Animal Science*).

Advising Center is located in 1144 Plant and Environmental Sciences (530-752-1715).

Applied Mathematics (A Graduate Group)

E.G. Puckett, Ph.D., Chairperson of the Group
Group Office, 570 Kerr Hall (530-752-8131)

World Wide Web: <http://math.ucdavis.edu>

Faculty. Consists of members from a variety of departments whose research interests are mathematically oriented. Departments represented include Biological Sciences; Chemistry; Engineering: Computer Science, Chemical and Materials Science, Civil and Environmental, Electrical and Computer, and Mechanical and Aeronautical; Environmental Science and Policy; Epidemiology and Preventive Medicine; Evolution and Ecology; Land, Air and Water Resources; Management; Mathematics; Physics; Radiology; Statistics; and Wildlife, Fish, and Conservation Biology.

Graduate Study. Students prepare for careers where mathematics is applied to problems in the physical and life sciences, engineering, and management. The degree requirements consist of rigorous training in applied mathematics, including course work and a research dissertation under the direction of a member of the Graduate Group in Applied Mathematics. The M.S. degree provides preparation for further study in applied mathematics or an application area, or for a career in industry or public service. The Ph.D. degree provides preparation for a career in research and/or teaching, or in industrial or national research laboratories. Areas of research in the program include mathematical biology, computational neuroscience, atmospheric sciences, continuum mechanics, computational fluid dynamics, hydrology, optimization and control, theoretical chemistry, computer and engineering sciences, mathematical physics, signal and image processing, probability and stochastic processes, statistics, combinatorial and geometric algorithms. Detailed information may be obtained by writing to the Graduate Coordinator, Department of Mathematics.

New applicants are admitted to the fall quarter *only*.

Preparation. The program encourages application from students who have prior training in engineering, physical and life sciences, mathematics, economics, and related fields. Applicants must have completed two years of undergraduate mathematics including linear algebra, differential equations, and vector calculus. A rigorous course in advanced calculus is strongly encouraged.

Graduate Advisers. B. Nachtergaele (*Mathematics*); N. Saito (*Mathematics*).

Faculty

Katharine Burnett, Ph.D., Assistant Professor (*East Asian Languages and Cultures, Art History*)
 Douglas Kahn, Ph.D., Professor
 Dianne Sachko Macleod, Ph.D., Professor
 Lynn Roller, Ph.D., Professor (*Classics, Art History*)
 Jeffrey Ruda, Ph.D., Professor
 Blake Stimson, Ph.D., Assistant Professor
 Diana Strazdes, Ph.D., Assistant Professor

Emeriti Faculty

Mary H. Fong, Ph.D., Professor Emerita
 Robert J. Grigg, Ph.D., Professor Emeritus
 Seymour Howard, Ph.D., Professor Emeritus

The Major Program

Art History is the study of the visual arts in civilization. It examines changing values in all fields of visual culture, including painting, sculpture, graphics, photography, architecture, film, the mass media, and all forms of popular expression. Its interdisciplinary reach encompasses literature, history, anthropology, sociology, philosophy, gender studies, critical theory, and cultural studies. Art History emphasizes both visual and verbal literacy, providing more than the standard advantages to a liberal arts education.

The Program. The student majoring in art history begins with courses that survey the arts of Asia, Europe, and the United States. More specialized lecture courses and proseminars follow in Ancient, Renaissance, Baroque, Modern, and Contemporary American, European, and Asian art and culture. Students are encouraged to complement the major with advanced work in related disciplines such as classics, religion, history, philosophy, literature, sociology, anthropology, gender studies, American studies, East Asian studies, and foreign languages.

Career Options. A major in Art History develops critical thinking and the integration of research and knowledge. It provides an excellent grounding for professions as diverse as law, medicine, and business. The major prepares students for advanced study in Art History, Architecture, and Cultural Studies. It also serves as the foundation for careers in teaching, arts, administration, museums, galleries, historic preservation, art libraries, publishing, journalism, advertising, art conservation, and art investment. As the world becomes increasingly flooded with images, critical visual "reading" skills become more important for a wide variety of careers.

A.B. Major Requirements:

	UNITS
Preparatory Subject Matter	20
Art History 1A, 1B, 1C, and 1D (Art History 25 may be substituted for one of the above)	20
One art studio course.....	4

Depth Subject Matter

- One course in each of the following areas..16
- (a) Ancient Mediterranean: Art History 154A, 154B, 155, 175; Classics 171, 174
 - (b) Asian: Art History 163A, 163B, 163D, 164
 - (c) European and American before 1865: Art History 178A, 178B, 178C, 179B, 182, 183A, 188D
 - (d) European and American since 1865: Art History 183B, 183C, 185, 186, 188E, 189

One additional non-Western area may be substituted for any of these four areas, with consent of the major adviser.

Art History 190.....4
 Five additional upper division Art History courses

- In selecting the five upper division courses, students may choose any other five upper division Art History courses, or may wish to focus on one of the following areas of emphasis:
- (a) Comparative Visual Cultures: choose one additional course in each of the four subfields plus one upper division elective.
- (b) Architectural History: choose at least three upper division courses from Art History 154C, 155, 175, 188A, or 188B, plus up to two upper division electives not used in satisfaction of other major requirements.
- (c) Museums, Collecting, and Patronage: Art History 182, 182B, and 188G, plus two upper division electives not used in satisfaction of other major requirements. Art History 401 and 402 strongly recommended.

Total Units for the Major

Minor Program Requirements:

	UNITS
Art History	20
One course in three of the following four areas	12
(a) Ancient Mediterranean: Art History 154A, 154B, 155, 175; Classics 171, 174	
(b) Asian: Art History 163A, 163B, 163D, 164	
(c) European and American before 1865: Art History 178A, 178B, 178C, 179B, 182, 183A, 188D	
(d) European and American since 1865: Art History 183B, 183C, 185, 186, 188E, 189	

One additional non-Western area may be substituted for any of these four areas, with consent of the major adviser.

Two additional Art History courses, of which at least one must be upper division; Art History 190 strongly recommended.....8

Honors Program. An Honors Program is available to Art History majors who are seriously considering attending graduate school. To be eligible for the program, a student must have a grade point average of 3.7 in the major. In addition to meeting the standard major requirements, the honors student completes at least one quarter of language in German or Chinese, one undergraduate proseminar (course 190), and writes an honors thesis (course 194H). Students participating in this Program are candidates for Departmental recommendation for graduation with High or Highest Honors. See the Academic Information chapter, Letters and Science honors section, of this catalog and consult the department for more information.

Teaching Credential Subject Representative.

Department Chairperson. See also the Teacher Education Program.

Graduate Study. The Program in Art History offers studies leading to the Master of Arts degree in History of Art as preparation for further graduate study or professional work. Further information may be obtained by writing to the Graduate Adviser or consulting the *Graduate Announcement*.

Courses in Art History (AHI)

Lower Division Courses

1A. Ancient Mediterranean Art (4)

Lecture—3 hours; discussion—1 hour. Introduction to the art and architecture of the ancient Mediterranean world, including Mesopotamia, Egypt, Greece, and Rome. GE credit: ArtHum.—I. Roller

1B. Medieval and Renaissance Art (4)

Lecture—3 hours; discussion—1 hour. Christian, Barbarian, Moslem, and Classical traditions in European Art from the fourth through the sixteenth centuries. GE credit: ArtHum.—II. (II.) Ruda

1C. Baroque to Modern Art (4)

Lecture—3 hours; lecture/discussion—1 hour. Survey of developments in western art and visual culture from 1600—present. Major artists and movements, theories of visuality, focused study on changing interpretations of class, gender, sexuality, and ethnicity from the Baroque period through modernism, to the present. May be repeated for credit. GE credit: ArtHum, Div.—III. (III.) Macleod, Strazdes

1D. Arts of Asia (4)

Lecture—3 hours; discussion—1 hour. Introduction to major forms and trends in the arts and material culture of Asia from the Neolithic to the contemporary emphasizing the visual manifestation of secular and religious ideas and ideals. GE credit: ArtHum, Div.—I. (I.) Burnett

5. Introduction to Visual Culture (4)

Lecture—2 hours; film viewing—2 hours; discussion—1 hour. Development of visual literacy for an increasingly visual world. Critical analyses focus on a wide variety of visual media—art, television, film, advertising, the Internet—intended for a diverse spectrum of audiences. GE credit: ArtHum, Div, Wrt.—I. Stimson

10. Twenty Monuments (4)

Lecture—3 hours; film viewing—1.5 hours; lecture/discussion—0.5 hour. Art history through focused analyses of about 20 world-historical monuments and artistic ideas by all members of the Art History faculty. Slide lectures are complemented by a weekly program of influential films raising issues and controversies. GE credit: ArtHum.

25. Introduction to Architectural History (4)

Lecture—3 hours; discussion—1 hour. Formal and social history of architecture, examining design principles, major traditions, and concepts of architectural history with a focus on issues in Western architecture. Emphasis on nineteenth and twentieth centuries. GE credit: ArtHum.

25G. Writing: Introduction to Architectural History (1)

Discussion—1 hour. Prerequisite: course 25 concurrently. Small group discussions and preparation of short papers for course 25. GE credit with concurrent enrollment in course 25: Wrt.

98. Directed Group Study (1-5)

Prerequisite: consent of instructor. Restricted to lower division students. (P/NP grading only.)

99. Special Study for Undergraduates (1-5)

Prerequisite: consent of instructor. (P/NP grading only.)

Upper Division Courses

110. Cultural History of Museums and Art Exhibitions (4)

Lecture/discussion—3 hours; term paper. Prerequisite: course 1A or 1B or 1C or 1D. Evolution of museums in the western world from the "cabinet of curiosities" of sixteenth-century Europe to the mod-

ern "art center." The changing motives behind collecting, exhibiting, and interpretation of objects. Attention to museums' historical legacies and their continuing philosophical dilemmas. Offered in alternate years. GE credit: ArtHum, Wrt.—I. Strazdes

150. Arts of Sub-Saharan Africa (4)

Lecture—3 hours; term paper or gallery studies and review. Traditional arts and crafts of sub-Saharan Africa; particular attention to the relationships between sculpture and culture in West and Central Africa. GE credit: ArtHum, Div.

151. Arts of the Indians of the Americas (4)

Lecture—3 hours; term paper or gallery studies and review. Development of art in North America, emphasizing ancient Mexico. South American relationships and parallels. Recent and contemporary Indian arts and crafts from Alaska to Chile. GE credit: ArtHum, Div.

152. Arts of Oceania and Prehistoric Europe (4)

Lecture—3 hours; term paper. Traditional arts of aboriginal Australia, Melanesia, Polynesia, and Micronesia, as seen in their cultural contexts. Prehistoric art of Europe and the Near East. GE credit: ArtHum, Div.

153. Art, Storytelling and Cultural Identity in the Pacific (4)

Lecture/discussion—3 hours; term paper. Representation of the cultural identities of indigenous and migrant groups of the Pacific in visual arts and storytelling. Offered in alternate years. GE credit: ArtHum, Div, Wrt.

163A. Chinese Art (4)

Lecture—3 hours; term paper or gallery studies and review. A survey from the beginning to the twelfth century focusing on the major art forms that are traditionally known as well as newly discovered through archaeology in China. GE credit: ArtHum, Div, Wrt.—(II.) Burnett

163B. Chinese Painting (4)

Lecture—3 hours; term paper or gallery studies and review. The unique form of ink painting, with or without colors, depicting human and animal figures, flowers-and-birds, and landscape—the favorite and enduring theme of the Chinese scholar-painter. GE credit: ArtHum, Div, Wrt.—Burnett

163C. Painting in the People's Republic of China (4)

Lecture—3 hours; term paper. Prerequisite: course 1D or upper division standing. Analysis of the interaction between art and politics in the emergence of China into the modern world. Integration of Western influence, implementation of Mao Zedong's thought on art, and the formation of contemporary Chinese painting. GE credit: ArtHum, Div, Wrt.—Burnett

163D. Visual Arts of Early Modern China (4)

Lecture—3 hours; term paper. Prerequisite: course 163B or consent of instructor. Variable topics in Chinese art history during the 17th-19th centuries, considering artists' statements (visual and textual) within their historical contexts, asking what was at stake in the creation of new art forms. May be repeated for credit with consent of instructor. GE credit: ArtHum, Wrt, Div.—II. Burnett

164. The Arts of Japan (4)

Lecture—3 hours; term paper and/or gallery studies and review (determined by instructor each quarter course offered). Study of the significant achievements in architecture, painting, sculpture, and decorative arts from prehistoric age to nineteenth century. GE credit: ArtHum, Div, Wrt.—III.

168. Great Cities (4)

Lecture—3 hours; term paper. Transformation in architecture and urban form in Paris, London, and Vienna in the context of varying social, political, and economic systems as well as very different cultural traditions, concentrating on the years 1830-1914. Offered in alternate years. GE credit: ArtHum, Wrt.

172A. Early Greek Art and Architecture (4)

Lecture—3 hours; term paper. Examination of the origin and development of the major monuments of Greek art and architecture from the eighth century to the mid-fifth century B.C. Not open for credit to stu-

dents who have completed course 154A. (Same course as Classics 172A.) Offered in alternate years. GE credit: ArtHum, Wrt.—II. Roller

172B. Later Greek Art and Architecture (4)

Lecture—3 hours; term paper. Study of the art and architecture of later Classical and Hellenistic Greece, from the mid-fifth century to the first century B.C. Not open for credit to students who have completed course 154B. (Same course as Classics 172B.) Offered in alternate years. GE credit: ArtHum, Wrt.—II. Roller

173. Roman Art and Architecture (4)

Lecture—3 hours; term paper. The art and architecture of Rome and the Roman Empire, from the founding of Rome through the fourth century C.E. Not open for credit to students who have completed course 155. (Same course as Classics 173.) Offered in alternate years. GE credit: ArtHum, Wrt.—III. Roller

175. Architecture and Urbanism in Mediterranean Antiquity (4)

Lecture—3 hours; extensive writing. Prerequisite: a lower division Classics course (except 30, 31); course 1A recommended. Architecture and urban development in the ancient Near East, Greece, and Rome. Special emphasis on the social structure of the ancient city as expressed in its architecture, and on the interaction between local traditions and the impact of Greco-Roman urbanism. (Same course as Classics 175.) Offered in alternate years. GE Credit: ArtHum, Div, Wrt.—(II.) Roller

176A. Art of the Middle Ages: Early Christian and Byzantine Art (4)

Lecture—3 hours; term paper or gallery studies and review. Painting, sculpture and architecture of the early Christian era and Byzantine Empire: through the later Roman Empire in the West and to the final capture of Constantinople in the East. GE credit: ArtHum, Wrt.

176B. Art of the Middle Ages: Early Medieval and Romanesque Art (4)

Lecture—3 hours; term paper or gallery studies and review. Painting, sculpture and architecture of western Europe in the early medieval era: from the rise of the barbarian kingdoms through the twelfth century. GE credit: ArtHum, Wrt.

176C. Art of the Middle Ages: Gothic (4)

Lecture—3 hours; term paper or gallery studies and review. Painting, sculpture and architecture in northern Europe from the twelfth through the fifteenth centuries.

177A. Northern European Art (4)

Lecture—3 hours; term paper or gallery studies and review. Painting and sculpture of the fifteenth century in Austria, Germany, France and the Lowlands, including such artists as Jan van Eyck and Hieronymus Bosch. GE credit: ArtHum, Wrt.

177B. Northern European Art (4)

Lecture—3 hours; term paper or gallery studies and review. Painting and sculpture of the sixteenth century in Germany, France and the Lowlands, including such artists as Albrecht Dürer and Pieter Bruegel. GE credit: ArtHum, Wrt.

178A. Italian Renaissance Art (4)

Lecture—3 hours; term paper or gallery studies and review. Giotto and the origins of the Renaissance; painting and sculpture in Italy from Nicola Pisano through Lorenzo Monaco, with emphasis on Duccio, Giotto, and other leading artists of the early fourteenth century. GE credit: ArtHum, Wrt.—Ruda

178B. Italian Renaissance Art (4)

Lecture—3 hours; term paper or gallery studies and review. Early Renaissance in Florence; fifteenth-century artists from Donatello and Masaccio through Botticelli, in their artistic and cultural setting. GE credit: ArtHum, Wrt.—Ruda

178C. Italian Renaissance Art (4)

Lecture—3 hours; term paper or gallery studies and review. The High Renaissance: Leonardo, Michelangelo, Raphael, and Titian in their artistic and cultural settings—Florence, Rome, and Venice in the early sixteenth century. GE credit: ArtHum, Wrt.—I. (III.) Ruda

179B. Baroque Art (4)

Lecture—3 hours; term paper or gallery studies and review. Seventeenth-century painting, including such artists as Caravaggio, Rubens, Rembrandt, and Velázquez. Offered in alternate years. GE credit: ArtHum, Wrt.—(I.) Ruda

182. British Art and Culture, 1750–1900 (4)

Lecture—3 hours; term paper. Prerequisite: course 1C recommended. British painting in relation to the position of women in society and the rise of the middle-class art market. Topics include Hogarth and popular culture, Queen Victoria and the female gaze, and Pre-Raphaelite artists and collectors. Not offered every year. GE credit: ArtHum, Wrt.—III. Macleod

183A. Art in the Age of Revolution, 1750–1850 (4)

Lecture—3 hours; term paper. Prerequisite: course 1C recommended. Emergence of modernism in Europe from the late 18th century to the middle of the 19th century. Major artistic events viewed against a revolutionary backdrop of changing attitudes toward identity, race, and gender. Not offered every year. GE credit: ArtHum.—II. Macleod

183B. Impressionism and Post-Impressionism: Manet to 1900 (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 1C recommended. Innovations of Impressionists, Post-Impressionists, and Symbolists in relation to social changes. Assessment of role of dealers and critics, myth of the artist-genius, and gender relations in French art and culture of the late 1800s. GE credit: ArtHum, Div, Wrt.—II. (II.) Macleod

183C. Modernism in France, 1880–1940 (4)

Lecture—10 hours; discussion—3 hours; fieldwork—11 hours. Course will take place as a 3-week summer course in France. A survey of gender and patronage in the development of modern art in France. Post-Impressionism, Fauvism, Cubism, and Surrealism are considered in relation to the intervention of dealers and women collectors in the formulation of modernism. GE credit: ArtHum, Div, Wrt.—summer (summer) Macleod

183D. Modern Sculpture (4)

Lecture—3 hours; term paper or gallery studies and review. Sculpture from Neo-Classicism to the present.

184. Twentieth Century Architecture (4)

Lecture—3 hours; term paper. Prerequisite: course 25 recommended. Major movements in architecture of the twentieth century in Europe and America. Formal innovations are examined within the social, political, and economic circumstances in which they emerged. GE credit: ArtHum, Wrt.—II.

185. Avant-Gardism and its Aftermath, 1917–1960 (4)

Lecture/discussion—4 hours. Prerequisite: one course in art history, or upper division standing and a major or minor in the arts or humanities recommended. Social, cultural, aesthetic, and theoretical development for artists and their audiences in the context of larger issues like the Mexican, Russian and German revolutions, WWI, the Depression, WWII, etc., and a critical-theoretical inquiry into questions of modernism, modernity, and avant-gardism. Offered in alternate years. GE Credit: ArtHum, Div, Wrt.—Stimson

186. Art After Modernism, 1948–Present (4)

Lecture/discussion—4 hours. Prerequisite: one course in art history, or upper division standing and a major or minor in the arts or humanities recommended. Social, cultural, aesthetic, and theoretical developments for artists and their audiences in the context of such larger issues as McCarthyism, the New Left, free love, feminism, Reaganomics, globalization, etc., and a critical-theoretical inquiry into questions of neoavantgardism, postmodernism, and postmodernity. Offered in alternate years. Not open for credit to students who have completed course 183E. GE credit: ArtHum, Div, Wrt.—I. Stimson

188A. The American Home (4)

Lecture/discussion—3 hours; term paper. Prerequisite: course 188B or any lower division course in Art History or Design; not open to freshmen. American domestic architecture and its responsiveness to

changes in daily life from Colonial times to the present. Vernacular developments, effects of different socioeconomic conditions, and women's role in shaping the home receive special attention. GE credit: ArtHum, Div, Wrt.—Strazdes

188B. Architecture of the United States (4)
Lecture—3 hours; discussion—1 hour. Major movements from colonial times to the present. The role of buildings in a changing society, the interplay of styles with technologies of construction, the relationship between American and European developments, and developments of the architectural profession. GE credit: ArtHum, Wrt.—I. Strazdes

188D. American Painting and Sculpture to the Civil War (4)

Lecture/discussion—3 hours; term paper. Prerequisite: one lower division Art History course or junior standing. Major movements in American painting and sculpture to 1865. Colonial portraiture, development of history painting, rise of genre painting, and the Hudson River School of landscape painting. Emphasis on European cultural currents and their effects. GE credit: ArtHum, Wrt.—(II.) Strazdes

188E. American Painting and Sculpture from the Civil War to World War II (4)

Lecture/discussion—3 hours; term paper. Prerequisite: one lower division course in Art History or junior standing. Major developments in American painting and sculpture from 1865 to 1940. The American adaptations of Barbizon painting, French Impressionism, late 19th-century American Realism, the Ashcan School, Modernist Ideologies, Regionalism. GE credit: ArtHum, Wrt.—III. Strazdes

189. Photography in History (4)

Lecture/discussion—4 hours. Prerequisite: one course in art history, or upper division standing and a major or minor in the arts or humanities recommended. Social, cultural, aesthetic and technical developments in the history of photography including patronage and reception, commercial, scientific, political and artistic applications, and a critical-theoretical inquiry into photography's impact on the social category "art" and the history of subjectivity. Offered in alternate years. GE credit: ArtHum, Div, Wrt.—III. (I.) Stimson

190. Undergraduate Seminar (4)

Lecture—3 hours; term paper. Prerequisite: consent of instructor. Intended primarily for senior and junior students in the history of art. Assigned readings, discussions, and a substantial paper in a particular area of art history will introduce the student to methodology and techniques of art historical research. May be repeated once for credit. Limited enrollment.—I, II, III. (I, II, III.) Stimson

190A-H. Undergraduate Proseminar in Art History (4)

Lecture/discussion—3 hours; term paper. Prerequisite: Art History major, minor, or other significant training in Art History recommended. Study of a broad problem or theoretical issue. Intensive reading, discussion, research, writing. Topics (A) Mediterranean Antiquity, (B) Medieval, (C) Renaissance, (D) American Art, (E) Gendering of Culture, (F) Chinese Art and Material Culture, (G) Japanese Art and Material Culture, (H) Late Modern Art and Theory. May be repeated once for credit when topic differs.—I, II, III. (I, II, III.)

192. Internship (2-12)

Internship—term paper or catalogue. Supervised program of internships at professional art institutions such as museums, galleries, and art archives including collections of slides and photographs. May be repeated once for credit. (P/NP grading only.)

194H. Special Study for Honor Students (4)

Independent study—12 hours. Prerequisite: course 190 or the equivalent, as determined by the major adviser. Open only to students in the Art History Honors Program. Independent study of an art historical problem culminating in the writing of an honors thesis under the supervision of a faculty guidance committee.

198. Directed Group Study (1-5)
(P/NP grading only.)

199. Special Study for Advanced Undergraduates (1-5)

(P/NP grading only.)

Graduate Courses

200A. Visual Theory and Interpretive Methods (4)

Discussion—3 hours; extensive writing. Close study of selected recent developments in interpretive methodology used by art historians and other analysts of visual culture and the place of those developments within art history's history and in the larger field of social, cultural and historical analysis. May be repeated once for credit.—I. (I.) Macleod, Stimson

200B. Research and Writing Methods in Art History (4)

Discussion—3 hours; term paper. Restricted to graduate students in art history. Development of the research, writing, and editing skills necessary for producing publishable work. Focus on reference tools used by art historians and the mechanics of scholarship, from question framing and organization of ideas to writing clear, effective prose.—II. (II.) Burnett, Ruda, Strazdes

200C. Thesis Writing Colloquium (4)

Discussion—3 hours; term paper. Prerequisite: course 200B concurrently. Restricted to graduate students in art history. Structured, supportive environment for second-year art history graduate students writing masters' theses. Students produce substantive sections of their theses, contributing them to the group writing and editing exercises. May be repeated twice for credit. (S/U grading only.)—II. (II.) Burnett, Ruda, Strazdes

250. Problems in Art Historical Research (4)

Seminar—3 hours; term paper. Major topics in art historical research, emphasizing special methods of investigation, and of historical and critical analysis. May be repeated for credit.—II. Stimson

251. Seminar in Tribal Arts (4)

Seminar—3 hours; term paper. Selected topics in the art and aesthetics of small scale societies. May be repeated for credit when topic differs and with consent of instructor.

254. Seminar in Classical Art (4)

Seminar—3 hours; term paper. Selected areas of special study in classical art of the Greek and Roman tradition. Course may be repeated for credit with consent of instructor.

263. Seminar in Chinese Art (4)

Seminar—3 hours; paper. Selected areas of special study in Chinese Art. May be repeated for credit with consent of instructor.—II. Burnett

276. Seminar in Medieval Art (4)

Seminar—3 hours; term paper. Selected areas of special study in medieval art from Early Christian to late Gothic. May be repeated for credit with consent of instructor.

278. Seminar in Italian Renaissance Art (4)

Seminar—3 hours; term paper. Selected areas of special study in Italian art from the fourteenth to the sixteenth century. May be repeated for credit with consent of instructor.—III. Ruda

283. Seminar in Visual Culture and Gender (4)

Seminar—3 hours; term paper. Selected areas of special study in the relationship between visual culture and gender in Europe and America from 1750 to present. May be repeated for credit with consent of instructor. Offered in alternate years.—I. Macleod

288. Seminar in European and American Architecture (4)

Seminar—3 hours; term paper. Exploration of selected topics in European and American architectural history with concentration on the Modern Period. May be repeated for credit with consent of instructor.—(II.) Strazdes

290. Special Topics in Art History (4)

Seminar—3 hours; term paper. Special research seminar in the theory or methods of Art History, or in a period of Art History. Topic will vary depending on the interests of the instructor or students. May be repeated for credit when topic differs and with consent of instructor. Not offered every year.—I, II, III.

298. Directed Group Study (1-5)

(S/U grading only.)

299. Individual Study (1-6)

(S/U grading only.)

Professional Course

390. Introduction to Teaching Art History for Teaching Assistants (1)

Discussion—1 hour. Designed for teaching assistants with emphasis on problems and procedures encountered by teachers of undergraduate art history. (S/U grading only.)

396. Teaching Assistant Training Practicum (1-4)

Prerequisite: graduate standing. May be repeated for credit. (S/U grading only.)

Professional Courses

401. Museum Training: Curatorial Principles (4)

Seminar—3 hours. Approved for graduate degree credit. Study of private and public collections. Museum personalities. Appraisal of works of art; ethics of appraisal. Auction and sales: methods and catalogues. Registration. Technical problems of the museum. Connoisseurship. Collateral reading. Visits to museums. Seminar with assigned papers.—II.

402. Museum Training: Exhibition Methods (4)

Seminar—3 hours; exhibition. Approved for graduate degree credit. History of exhibition methods in private and public collections. Comparisons of different types of museums and their exhibition problems. Lighting and techniques of display with emphasis on actual design. Experimentation with unusual presentation forms.—(II.)

Note: Various of the above courses are not offered each year; please check the quarterly Class Schedule and Registration Guide.

The Major Program

The studio art major provides the knowledge and experience necessary for a broad understanding of practice and interpretation of the visual arts.

The Program. For the beginning student, the major offers an introduction to visual methodologies through drawing, sculpture, and art history. Students may then advance to upper division coursework and specialization in drawing, painting, sculpture, printmaking, ceramics, photography, video production, electronic arts, as well as theory and criticism in upper division work.

Portfolios. Portfolios are not required for admission to the major. However, admitted students, once enrolled, should keep a continuing portfolio of their art work, which can be evaluated at such times as when the student is requesting independent study courses and scheduling an exhibition in the student gallery.

Career Alternatives. The studio art graduate is prepared for graduate work in the visual arts or continuing development as a professional artist or art teacher. Students who have career aspirations in the commercial aspects of the visual arts can acquire a broad general education and a creative foundation in the art studio major, establishing a basis for further specialization in commercial art.

A.B. Major Requirements:

	UNITS
Preparatory Subject Matter	20
Three courses from Art Studio 2, 3, 4, 5, 16; see prerequisites required for upper division courses	12
Two courses from Art History 1A, 1B, 1C, 1D, Art Studio 30	8
Depth Subject Matter	44
Eight courses, under three different instructors, chosen from Group A, Practice of Art.....	24
Group A: Art Studio 101, 102, 103, 104, 110, 111, 113, 114, 115, 116, 117, 120, 125, 126, 127, 128, 141, 142, 143, 144, 145, 146, 147, 148, 149, 150, 171	
Three upper division courses from Art History 150, 151, 152, 153, 154A, 154B, 155, 163A, 163B, 163C, 164, 168, 176A, 176B, 176C, 177A, 177B, 179B, 182, 183A, 183B, 183C, 183D, 183E, 184, 188D, 188E	12
Total Units for the Major	64

Recommended

- (a) Students interested in drawing and painting should take Art Studio 2, 3, 4, or 7 (course 5 is recommended);
- (b) Students interested in sculpture should take Art Studio 2, 3, 5 (course 4 is recommended); and
- (c) Students preparing for graduate work in any of the environmental design professions should take Art Studio 2, 5, 16.

Major Advisers. See the *Class Schedule and Registration Guide*.

Minor Program Requirements:

	UNITS
Art Studio	20
Prerequisite courses must be taken prior to enrollment in upper division courses. Independent study courses are not applicable.	
Upper division art studio courses chosen in consultation with a faculty adviser (one lower division substitute course permissible)	20

Teaching Credential Subject Representative. Department Chairperson. See also the Teacher Education Program.

Graduate Study. The Department of Art offers programs of study and research leading to the M.F.A. degree in the practice of art. Detailed information regarding graduate study may be obtained from the Graduate Admissions Office or the Art Office.

Courses in Art Studio (ART)

Lower Division Courses

- 2. Drawing I (4)**
Studio—6 hours. Form and composition in black and white.—I, II, III. (I, II, III) Henderson, Pardee
- 3. Drawing II (4)**
Studio—6 hours. Prerequisite: course 2. Form and composition in color.—II. (II.) Henderson
- 4. Life Drawing (4)**
Studio—6 hours. Prerequisite: course 2. Form in composition using the human figure as subject.—I, II, III. (I, II, III.) Hollowell, Pardee
- 5. Sculpture (4)**
Studio—6 hours. Form in space using plaster and other media.—I, II, III. (I, II, III.)
- 7. Beginning Painting (4)**
Studio—6 hours; independent study—3 hours. Introduction of a variety of techniques and concepts as related to the practice of painting, to establish a solid base which can be expanded on in upper division painting.—I. (I.) Hollowell, Pardee

10. Introduction to Art Appreciation (3)
Lecture—3 hours. The understanding and appreciation of painting, sculpture, architecture and industrial art. Illustrated lectures. Intended for non-majors. GE credit: ArtHum.

16. Descriptive Drawing (4)
Studio—6 hours. Objective drawing and rendering; representations of space.—II. (II.)

30. Introduction to Contemporary Visual Culture (4)
Lecture—3 hours; discussion/laboratory—1 hour. Establishing visual literacy across the media of fine art, photography, advertising, television and film; media culture; focus on critical decoding of contemporary visual culture. GE credit: ArtHum, Div, Wrt.

98. Directed Group Study (1-5)
Prerequisite: consent of instructor. Restricted to lower division students. (P/NP grading only.)

99. Special Study for Undergraduates (1-5)
Prerequisite: consent of instructor. (P/NP grading only.)

Upper Division Courses

Note: Upper division courses are listed under three groups: (A) Practice of Art; (B) Theory and Criticism; (C) Special Study Courses.

Preenrollment in upper division courses is restricted to art majors. Art minors may obtain permission to preenroll by filling out a "Waiver of Restriction" form in the Art office.

101. Painting: Materials and Carriers (4)
Studio—6 hours. Prerequisite: courses 2, 3, 4, 5, or consent of instructor. Experimentation in media and their supports.—I, II, III. (I, II, III.) Atkinson

102. Painting (4)
Studio—6 hours. Prerequisite: course 101 or consent of instructor. Advanced painting in various media including oil and polymers. May be repeated once for credit with consent of instructor.—I, II, III. (I, II, III.) Henderson, Atkinson

103. Advanced Drawing (4)
Studio—6 hours. Prerequisite: course 2, 3, 4, 16, or consent of instructor. Advanced drawing, composition and form in black and white and color. May be repeated once for credit with consent of instructor.—II. (III.)

104. Figure Drawing and Painting (4)
Studio—6 hours. Prerequisite: courses 4 and 101, or consent of instructor. Advanced figure drawing and painting using the human figure as subject. May be repeated once for credit with consent of instructor.—II, III. (II, III.) Hollowell

110. Photography I (4)
Studio—6 hours. Prerequisite: courses 2, 3, 4, or consent of instructor. Photography as an art form. Experiments with camera and light sensitive materials.—I, II, III. (I, II, III.)

111. Photography II (4)
Studio—6 hours. Prerequisite: course 110 or consent of instructor. Art of camera and light sensitive materials: tonal control, multiple exposure, synthetic negatives, etc. May be repeated once for credit with consent of instructor.—I, II. (II.)

113. Interdisciplinarity (4)
Studio—6 hours. Prerequisite: one course in Art History or Art Studio. Focus on the uses of two or more art forms to make a unique art work; also, ideas of collaboration and reconfigured and integrated forms as new methods of expression that do not solely depend on unique authorship.—III. (II, III.) Hershman

114. Identity and Technology (4)
Studio—6 hours. Prerequisite: one course in Art History or Art Studio. The notion of "self", "portraiture" and "identity" as it is defined in an electronic world in which media alters perceptions of belief as individuals and society. Hands-on projects plus theoretical analysis of media.—(II.) Hershman

116. Video Practice and Theory (4)
Studio—6 hours. Prerequisite: 12 units of lower division art studio classes. Production techniques of video, including shooting, editing, lighting, sound and effects. A conceptual framework for video-art techniques.—II. (II.) Hershman

117. Experimental Documentary (4)
Studio—6 hours. Prerequisite: upper division standing. Study of the documentary form with particular attention to hybrid forms of film, video and computer genres. May be repeated once for credit with consent of instructor when topic differs.—III. (III.) Hershman

121. Reinterpreting Landscape (4)
Studio—6 hours; lecture/discussion—2 hours. Prerequisite: course 2 or Nature and Culture 100 or consent of instructor. Interpretation of landscape through painting, drawing and related media, with emphasis on the integration of historical, cultural, natural and artistic contexts. Course includes field work culminating in an independent project. Not offered every year.—III. Pardee

125. Printmaking: Relief (4)
Studio—6 hours. Prerequisite: courses 2, 3, 4, 5, or consent of instructor. Woodcut, linocut, metal-plate relief and experimental uses of other materials.—II. (II.)

126. Printmaking: Intaglio (4)
Studio—6 hours. Prerequisite: courses 2, 3, 4, 5, or consent of instructor. Metal plate etching, aquatint, hard- and soft-ground, burin engraving and related methods. May be repeated once for credit with consent of instructor.—I, III. (I.) Atkinson, Berry

127. Printmaking: Lithography (4)
Studio—6 hours. Prerequisite: courses 2, 3, 4, 5, or consent of instructor. Stone and metal-plate lithography and other planographic methods. May be repeated once for credit with consent of instructor.—II. (II.)

128. Printmaking: Serigraphy (4)
Studio—6 hours. Prerequisite: courses 2, 3, 4, 5, or consent of instructor. Silk screen and related stencil methods. May be repeated once for credit with consent of instructor.

129. Intermedia Printmaking (4)
Studio—8 hours; independent study—1 hour. Prerequisite: course 125, 126, 127, or 128. Development of intermedia printmaking; advanced modes in each of relief/serigraphy/intaglio/surface, as well as adding serigraphy and digitized imagery. Student will produce prints in several methods including multiplate prints. Offered in alternate years.—I. Atkinson

132A. The Tradition of Modernism (4)
Lecture—3 hours; discussion/laboratory—1 hour. Prerequisite: one of course 30, or Art History 183A, 183B, 183C or 184. The emergence of modernism in painting and sculpture, from the early twentieth century to the 1940s. Critical examination of the emergence of modernism, the ideologies it supported, and the exclusions it practiced. Offered in alternate years. GE credit: ArtHum, Wrt.

132B. The Theory of Modernism (4)
Lecture—3 hours; discussion/laboratory—1 hour. Prerequisite: course 132A. Re-examination of materials of

Modernist art through a set of critical analytical tools which will help in understanding what cultural and ideological beliefs these art forms sustained. Offered in alternate years. GE credit: ArtHum, Div, Wrt.

141. Sculpture: Material Explorations (4)

Studio—6 hours. Prerequisite: course 5. Primary application and exploration of a single sculptural material. Examination of its properties, qualities and characteristics for three-dimensional expression. May be repeated twice for credit in different subject area with consent of instructor.—I. (I.) Puls

142. Sculpture: Ceramics I (4)

Studio—6 hours. Prerequisite: course 2, 3, 4 and 5, or consent of instructor. Introduction to ceramic forms and processes.—I. (I.) Rosen

143. Sculpture: Ceramics II (4)

Studio—6 hours. Prerequisite: course 142 or consent of instructor. Introduction to color, as well as glazing and use of kiln. May be repeated once for credit with consent of instructor.—II. (II.) Rosen

144. Sculpture: Figure Modeling (4)

Studio—6 hours. Prerequisite: courses 2, 3, 4, 5, or consent of instructor. Sculpture in various media using the human figure as subject. May be repeated once for credit with consent of instructor.

145. Sculpture: Concepts (4)

Studio—6 hours. Prerequisite: course 5 or consent of instructor. Investigation through the creation of sculpture of the relationship of idea to form and material. May be repeated once for credit in different subject area with consent of instructor.—II. (II.) Puls

146. Sculpture: Ceramics III (4)

Studio—6 hours. Prerequisite: course 141, 143, 144, or 145. Advanced form and color. Clay sculpture in relief and round. May be repeated once for credit with consent of instructor.— III. (III.) Rosen

147. Theory and Criticism of Photography (4)

Lecture—3 hours; term paper. Prerequisite: course 2 or 5 and one art lecture course. Development of camera vision, ideas, and aesthetics and their relationship to the fine arts from 1839 to the present. GE credit: ArtHum, Wrt.

148. Theory and Criticism: Painting and Sculpture (4)

Lecture—3 hours; term paper. Prerequisite: course 2 or 5, and one art lecture course. Study of forms and symbols in historic and contemporary masterpieces. GE credit: ArtHum, Wrt.—I. Thiebaut

149. Introduction to Critical Theory (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: two of Art History 1B, 1C, or 183F. An overview of 20th century critical theories of culture and their relation to visual art and mass media culture. GE credit: ArtHum, Div, Wrt.

150. Theory and Criticism of Electronic Media (4)

Lecture—3 hours; term paper. Prerequisite: course 116 or 117. The history of electronic media, stressing both critique, application and relationship to art practice. Analysis of the conceptual biases of electronic media as an artistic mode of expression. GE credit: ArtHum, Wrt.—II. (I.) Hershman

171. Mexican and Chicano Mural Workshop (4)

Studio—8 hours; independent study—1 hour. Prerequisite: Chicana/o Studies 70 and/or written consent of instructor. The Mural: a collective art process that empowers students and people through design and execution of mural paintings in the tradition of the Mexican Mural Movement; introduces materials and techniques. May be repeated once for credit. (Same course as Chicana/o Studies 171.)—III. (III.) Montoya

Group C: Special Study Courses

192. Internship (2-12)

Internship. Supervised program of internships in artists' studios and at professional art institutions such as museums, galleries, and art archives including collections of slides and photographs. May be repeated for credit for a total of 12 units. (P/NP grading only.)

193. Seminar in Art Practice (4)

Discussion/laboratory—8 hours; variable—4 hours. Prerequisite: courses 2 and 3; upper division stand-

ing: taking or having taken courses in upper division drawing, painting, and sculpture. Work (painting, sculpture, drawing, etc.) done for group discussion and criticism, as well as group discussion of contemporary topics in the visual arts. May be repeated once for credit.

198. Directed Group Study (1-5)

(P/NP grading only.)

199. Special Study for Advanced Undergraduates (1-5)

(P/NP grading only.)

Graduate Courses

290. Seminar (4)

Seminar—3 hours. Original works produced for group discussion and criticism; associated topics of a contemporary and historical nature. May be repeated for credit.—I, II, III. (I, II, III.) Puls, Hershman, Rosen

291. Seminar: Critical Evaluation (1)

Seminar—1 hour. May be repeated for credit. (S/U grading only.)—II. (II.)

292. Seminar: Comprehensive Qualifying (1)

Seminar—1 hour. Further critical evaluation of the student's work to determine his eligibility to begin the Comprehensive Project. May be repeated for credit. (S/U grading only.)—I.

299. Individual Study (1-6)

(S/U grading only.)

299D. Comprehensive Project (9)

An original body of work accompanied by a catalog summarizing the student's aesthetic position. May be repeated for credit. (S/U grading only.)—III. (III.)

Professional Courses

401. Museum Training: Curatorial Principles

Seminar—3 hours; papers. Approved for graduate degree credit. Study of private and public collections. Museum personalities. Appraisal of works of art; ethics of appraisal. Auction and sales: methods and catalogues. Registration. Technical problems of the museum. Connoisseurship. Collateral reading. Visits to museums. Offered in alternate years.—II.

402. Museum Training: Exhibition Methods (4)

Seminar—3 hours; exhibition. Approved for graduate degree credit. History of exhibition methods in private and public collections. Comparisons of different types of museums and their exhibition problems. Lighting and techniques of display with emphasis on actual design. Experimentation with unusual presentation forms. Offered in alternate years.—(II.)

Note: Various of the above courses are not offered each year; please check the quarterly Class Schedule and Registration Guide.

The Major Program

The Asian American Studies Program offers an interdisciplinary major that examines the experiences of various Asian American groups in the United States. Pertinent to these experiences are the historical, cultural, legal, political, social-psychological, class, and gender contexts for Asian Americans.

The Program. Majors take a prescribed set of lower division and upper division courses in Asian American Studies. Other courses in the major provide the opportunity to develop a knowledge of Asian Americans from either a humanities or social science perspective. For the humanities emphasis, students take courses in an Asian language. They can then opt for a track on literature/culture or history/culture in upper division courses. For the social science emphasis, courses in the social science methodology are required at the lower division level. While Asian language courses are not required for the social science emphasis, students are strongly encouraged to take such courses because of the pertinence of such courses to the major, and because the College has a foreign language requirement. At the upper division level, majors with a social science emphasis can opt for an anthropological or sociological/psychological track.

Career Alternatives. Asian American Studies prepares students for a variety of careers. Given the multicultural nature of society and the increasing relations with different societies, many occupations seek individuals with background and expertise in ethnic relations and cultural issues. Graduates often enter the fields of teaching, research, government service, law, social services, etc., as well as graduate schools for advanced degrees in various disciplines.

A.B. Major Requirements:

UNITS

Humanities Emphasis:

Preparatory Subject Matter34

Asian American Studies 1, 2, 2011

One Asian language: Cantonese 1, 2, 3; Chi-

nese 1, 2, 3; Japanese 1, 2, 3; or equiva-

alent Asian language15

At least two lower division courses from the

following departments or programs:

African American and African Studies,

Chicana/o Studies, Native American

Studies, Women and Gender Studies (all

lower division courses of at least 4 units

are acceptable except those numbered

92, 97T, 98, and 99)8

Depth Subject Matter44-47

At least seven upper division Asian Ameri-

can Studies courses (excluding 197T,

198, 199) and not more than 6 units of

internships28-30

Select four courses from one of the following

tracks16-17

Literature/Culture Track

Comparative Literature 153; Dramatic Art 154, 155; English 178, 179, 185A, 185B

History/Culture Track

Dramatic Art 154, 155; History 191F, 194C, 196B, 173, 178

Total Units for the Major78-81
UNITS

Social Science Emphasis:

Preparatory Subject Matter32

Asian American Studies 1, 28

Select four courses from the following:

Anthropology 2, 4, 20; Human Development 30; Psychology 41; Communication 1, 3; Sociology 46A, 46B; Statistics 13 (at least two of the courses must be methodological/statistical in nature and selected from Anthropology 2; Psychology 41; Sociology 46A, 46B, or Statistics 13)16

At least two lower division courses from the following departments or programs:

African American and African Studies, Chicana/o Studies, Native American Studies, Women and Gender Studies (all lower division courses of at least 4 units are acceptable except those numbered 92, 97T, 98, and 99)8

Depth Subject Matter44-46

At least seven upper division Asian American Studies courses (excluding 197T, 198, 199) and not more than 6 units of internships28-30

Select four courses from one of the following tracks16

Anthropology Track

Anthropology 123BN, 132, 133, 134, 138, 139AN, 143B, 147

Sociology/Psychology Track

Human Development 103; Psychology 142; Sociology 125, 128, 129, 130, 172

Total Units for the Major76-78

Major Adviser. Consult Program Office.

Minor Program Requirements:

UNITS

Asian American Studies20

Asian American Studies 1104

An additional four courses from Asian American Studies 100, 111, 112, 120, 130, 136, 140, 150, 150B, 150C, 151, 152, 155, 192 (no more than 4 units of 192 may be counted toward this total)16

Minor Adviser. Consult Program Office.

American History and Institutions. This university requirement can be satisfied by one of the following courses in Asian American Studies: 1, 2. (See also under University Requirements.)

Related Courses. For courses in Asian languages, see Cantonese (below) and Chinese and Japanese (under East Asian Languages and Cultures). For other Asian courses, see East Asian Languages and Culture and East Asian Studies.

Courses in Asian American Studies (ASA)

Direct questions pertaining to the following courses to the instructor or to Asian American Studies Program, 3102 Hart Hall (530-752-3625).

Lower Division Courses

1. Historical Experience of Asian Americans (4)

Lecture—3 hours; discussion—1 hour. Introduction to Asian American Studies through an overview of the history of Asians in America from the 1840s to the present within the context of the development of the United States. GE credit: SocSci, Div, Wrt.—I, II. San Buenaventura

2. Contemporary Experience of Asian Americans (4)

Lecture—3 hours; discussion—1 hour. Introduction to Asian American Studies through analysis of relationships between ethnicity, race, and culture. Identity development of Asian Americans and their communities in the context of contemporary American institutional practices. GE credit: SocSci, Div, Wrt.—II, III. San Buenaventura

3. The Psychosocial Perspectives of Asian Americans (4)

Lecture—3 hours; discussion—1 hour. Examination of major psychosocial issues of Asian Americans. Theories and empirical research that address cultural values, behavioral norms, ethnic stereotypes, racism, acculturation, ethnic identity development, family communication, stressors and social support systems, academic achievement, interpersonal effectiveness, and psychopathology. GE credit: SocSci, Div.—II. Zane, Sue

92. Internship (1-3)

Internship—3-9 hours. Prerequisite: enrollment dependent on availability of intern positions and consent of instructor. Supervised internship in community and institutional settings related to Asian American concerns. (P/NP grading only.)

98. Directed Group Study (1-5)

Primarily intended for lower division students. (P/NP grading only.)

99. Special Study for Undergraduates (1-5)
(P/NP grading only.)

Upper Division Courses

100. Asian American Communities (4)

Lecture/discussion—4 hours. Prerequisite: course 110. Study of historical and contemporary experiences of various Asian American groups, with the community as the unit of analysis.—I. Hamamoto, Kim

101. Language and Educational Issues of Asian Immigrants (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 1 or 2; upper division standing. Analysis of language diversity issues in American society, especially in public schools. Overview of public policies on language and programs, particularly for Asian language minority students. Offered in alternate years.

110. Theoretical Perspectives in Asian American Studies (4)

Lecture/discussion—4 hours. Prerequisite: course 1 or 2; upper division standing. Theories of race and ethnic relations as tools for understanding the Asian American experience with the society as the unit of analysis. GE credit: SocSci, Div.—I. Hamamoto

111. Ethnic Self and Identity (4)

Lecture/discussion—4 hours. Prerequisite: course 101. Study of cultural and social psychological influences on Asian Americans, with the individual as the unit of analysis. GE credit: SocSci, Div.—III. Sue

112. Asian/Pacific American Women (4)

Lecture/discussion—4 hours. Prerequisite: course 1 or 2; upper division standing. Examination of the cultural, social, and political situation of Asian and Pacific American women using theoretical perspectives from social science disciplines: socialization, family dynamics, domestic and political power, economic production, and division of labor. GE credit: SocSci, Div.—I. Ho

120. Biracial and Multiracial Asian Pacific American Experiences (4)

Lecture/discussion—4 hours. Prerequisite: consent of instructor. Introduction to the experiences of biracial and multiracial Asian Pacific people in the U.S., concentrating on theories of race, racial identity formation, culture, media, and anti-racist struggles. Provides critical approaches to the analysis of popular media and academic representations. Offered in alternate years. GE credit: Div.—III. Ono

130. Asian American Literature (4)

Lecture/discussion—4 hours. Prerequisite: course 1 or 2, or consent of instructor. Analysis of Asian Amer-

ican writings as expressions of various cultural themes, psychological issues, interpersonal relationships and sociopolitical influences on the Asian American experience.—Ho

136. Asian American Drama (4)

Lecture/discussion—4 hours. Prerequisite: courses 1, 2, or 130; or consent of instructor. Comparative introduction to the dramatic literature of Asian American playwrights such as Frank Chin, Philip Kan Gotanda, Velina Hasu Houston, David Henry Hwang, Wakako Yamauchi, and others from diverse socio-historical, artistic, and theoretical contexts.—I. Shimakawa

140. Asian Americans and the Media (4)

Lecture—3 hours; term paper. Prerequisite: course 1, upper division standing. Exploration of how racial identity, class politics, and gender issues are mediated through Asian American figures in print, radio, television, film and new media. Offered in alternate years. GE credit: SocSci, Div, Wrt.—II. Hamamoto

150. Filipino American Experience (4)

Lecture/discussion—4 hours. Prerequisite: course 1 or 2. Examination of the relationship between the Filipino-American community, the Philippine home community and the larger American society through a critical evaluation of the historical and contemporary conditions, problems and prospects of Filipinos in the U.S.—III. San Buenaventura

150B. Japanese American Experience (4)

Lecture—3 hours; term paper. Prerequisite: course 1 and upper division standing or consent of instructor. Analytical approaches to understanding Japanese American history, culture and society. Offered in alternate years. GE credit: SocSci, Div, Wrt.—II. Hamamoto

150C. Chinese American Experience (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 1. Survey of the historical and contemporary experiences of Chinese in the United States, starting with the gold rush era and concluding with the present-day phenomenon of Chinese transnational movement to the United States and its diasporic significance. Offered in alternate years. GE credit: SocSci, Div.—Hing

155. Legal History and the Asian American (4)

Lecture/discussion—4 hours. Prerequisite: course 1 or 2; consent of instructor. Legal history of Asian Americans beginning with the experience of Chinese Americans in the mid-19th century. Includes an examination of laws affecting Asian American communities in immigration, economic activities, and World War II internment.—III. Shimakawa

192. Internship (1-5)

Internship—3-15 hours. Prerequisite: enrollment dependent on availability of intern position with priority to Asian American Studies minors. Supervised internship in community and institutional settings related to Asian American concerns. (P/NP grading only.)

197T. Tutoring in Asian American Studies (1-5)

Tutoring—1-5 hours. Prerequisite: upper division standing and completion of appropriate course with distinction; consent of instructor. Tutoring in lower division Asian American Studies courses in small group discussion. Weekly meetings with instructor. May be repeated for credit once for a given course and also for a different course. (P/NP grading only.)

198. Directed Group Study (1-5)

Prerequisite: consent of instructor. Primarily intended for upper division students. (P/NP grading only.)

199. Special Study for Advanced Undergraduates (1-5)

Prerequisite: consent of instructor. (P/NP grading only.)

Courses in Cantonese (CAN)

Lower Division Courses

1-2-3. Elementary Cantonese (5-5-5)

Lecture—3 hours; recitation—3 hours. Introduction to Cantonese grammar and development of conversational skills in a cultural context. Approximately 250

Chinese characters will be introduced during Cantonese 2 and 3. (Not open to native speakers.)—Chung

4-5-6. Intermediate Cantonese (3-3-3)

Lecture—2 hours; recitation—2 hours. Prerequisite: course 1-2-3 or the equivalent. Development of conversational skills in a cultural context. Community-oriented language materials in health care, social service, and bilingual education will be introduced.—Chung

Atmospheric Science

(College of Agricultural and Environmental Sciences)

Faculty. See under Department of Land, Air and Water Resources.

The Major Program

Atmospheric science is the study of the layer of air that surrounds the planet. It includes all weather phenomena, such as frontal systems and clouds, as well as severe weather events such as hurricanes and tornadoes. Concerns regarding the effects of human activity on the quality of the air we breathe, and on possible global warming are also central to this field of study.

The Program. Modern meteorology is a quantitative science that is becoming increasingly computer oriented. In addition to the study of daily weather events, the program deals with fundamental physical processes that involve the general circulation of the atmosphere; mass and energy transfers at the planetary surface and within the atmosphere; solar and terrestrial radiation; atmospheric interaction with the biosphere; climate variations; air pollution meteorology; and developments in modern meteorological instrumentation. As well as providing a broad background in meteorology, the major includes an informal minor area to be chosen from mathematics, computer science, environmental studies, resource management or a physical or biological science.

Internships and Career Alternatives. Atmospheric science students have participated in internships with the California Air Resources Board, various county Air Pollution Control Districts, and the National Weather Service. Numerous career opportunities exist in the federal and state governments, research and development in the private sector, and education. Examples of career areas are weather forecasting, agricultural meteorology, air-pollution forecasting and control, weather modification, hurricane and severe weather forecasting and research, weather satellite meteorology, environmental consulting, and weather research. About half of our graduates continue their education by seeking the M.S. or Ph.D. degree in atmospheric science.

B.S. Major Requirements:

	UNITS
English Composition Requirement	3-12
See College requirement	0-8
English 19, 104E, or Dramatic Art 10.....	3-4
Preparatory Subject Matter	66
Biological Sciences 1C and course selected with adviser's approval.....	8
Chemistry 2A, 2B	10
Engineering 5 and Engineering 6 or Computer Science Engineering 30 or course selected with adviser's approval.....	7
Mathematics 21A, 21B, 21C, 21D, 22A, 22B	22
Atmospheric Science 60	4
Physics 9A, 9B, 9C.....	12
Statistics 32	3
Breadth/General Education	28
Satisfaction of General Education requirement; additional units in social sciences and humanities to total 28 units.	
Depth Subject Matter	38
Atmospheric Science 110, 111, 120, 121A, 121B, 124, 128	28
Upper division Atmospheric Science courses selected with adviser's approval	10
No more than 3 units of courses 192 and 199 may be counted.	
Restricted Electives	15
Coordinated group of courses (minor area) to be chosen with adviser's approval from mathematics, computer science, environmental studies, resource management, or a physical or biological science (at least 10 upper division units).....	15
Unrestricted Electives	21-30
Total Units for the Degree	180

Major Adviser. B.C. Weare (*Land, Air and Water Resources*).

Advising Center for the major, as well as for graduate studies, is located in 148 Hoagland Hall in the Land, Air and Water Resources Teaching Center (530-752-1669; dgswindall@ucdavis.edu).

Minor Program Requirements:

Minor Program. The minor in Atmospheric Science provides a broad treatment of weather and climate, with the option to focus on such topics as climate change, meteorological instrumentation, and satellite remote sensing. Students undertaking the minor should have completed minimum preparatory course work in calculus and physics (Mathematics 16A-16B, Physics 5A or 7A). Some upper division courses in Atmospheric Science have as prerequisites the Mathematics 21 and 22 series and the Physics 9 series.

	UNITS
Atmospheric Science	20-24
Atmospheric Science 60, 110	8
Four courses selected with the approval of the minor program adviser from the following: upper division Atmospheric Science courses (excluding 192 or 199) or Environmental and Resource Sciences 131	12-16

Minor Adviser. B.C. Weare.

Graduate Study. You can specialize in particular areas of atmospheric science through graduate study and research leading to the M.S. and Ph.D. degrees. For details, see under the Graduate Group in Atmospheric Science. See also the Graduate Studies section in this catalog.

Related Courses. See Environmental Science and Policy 150A; Physics 104A, 104B; Environmental and Resource Sciences 131.

Courses in Atmospheric Science (ATM)

Questions pertaining to the following courses should be directed to the instructor or to the Land, Air and Water Resources Teaching Center, 148 Hoagland Hall (530-752-1669).

Lower Division Courses

5. Global Climate (3)

Lecture—2 hours; discussion—1 hour. Introduction to the climate system and global climate patterns. Emphasis on principles, concepts, and fundamental processes underlying seasonal and regional climate differences. Examination of natural and human factors contributing to climate change. GE credit: Sci-Eng, Wrt.—II. (II.) Weare

10. Severe and Unusual Weather (3)

Lecture—2 hours; discussion—1 hour. Prerequisite: high school physics. Introduction to physical principles of severe and unusual weather: flood, blizzards, thunderstorms, lightning, tornadoes, and hurricanes. Emphasis on scientific perspective and human context. Not open to students who have received credit for course 100. (Former course 100.) GE credit: Sci-Eng, Wrt.—III. (III.)

30. Issues in Atmospheric Science (2)

Lecture—1 hour; discussion—1 hour. Prerequisite: high school physics. Introduction to selected topics in atmospheric science, such as: meteorological aspects of air pollution, use of computer models in weather forecasting, theories of global climate change, impact of satellites on meteorology, and modern meteorological instrumentation. (P/NP grading only.)—II. (II.) Anastasio

60. Atmospheric Physics and Dynamics (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: Mathematics 16A and Physics 5A or 7A. Composition and thermal structure of the atmosphere. Radiation and the heat budget of the earth and its atmosphere. Cloud formation and precipitation processes. The atmosphere in motion, thunderstorms and other severe weather phenomena.—I. (I.) Chen

92. Atmospheric Science Internship (1-12)

Internship—3-36 hours. Prerequisite: lower division standing and consent of instructor. Internship off and on campus in atmospheric science. Internship supervised by a member of the faculty. (P/NP grading only.)

98. Directed Group Study (1-5)

Prerequisite: consent of instructor. (P/NP grading only.)

99. Special Study for Undergraduates (1-5)

(P/NP grading only.)

Upper Division Courses

110. Weather Observation and Analysis (4)

Lecture—3 hours; laboratory—3 hours. Prerequisite: course 60. Acquisition, distribution and analysis of meteorological data. Vertical sounding analysis, stability indices, probability of local severe weather, weather map analysis. Use of National Weather Service analyses and forecast products. Laboratory makes use of computer-generated analyses.—II. (II.) Carroll

111. Weather Analysis and Prediction (5)

Lecture—3 hours; laboratory—6 hours. Prerequisite: courses 110, 121B; knowledge of a programming language. Tools for analyzing observed properties and predicting mid-latitude weather systems. The analysis-forecast system, including various weather forecast models. Laboratory exercises use weather analysis software, illustrate concepts in lecture, and include weather map discussions.—I. (I.) Grotjahn

112. Weather Forecasting Practice (2)

Discussion—2 hours; laboratory—1 hour. Prerequisite: course 110. Formal practice in preparing local weather forecasts. Analysis of current weather conditions and recent model performance. Verification and discussion of prior forecast. Interpretation of current forecast model guidance. Posting of forecast. May be repeated for credit up to three times. (P/NP grading only.)—I. (I.) Grotjahn

115. Hydroclimatology (3)

Lecture—3 hours. Prerequisite: course 60. Examination of climate as the forcing function for the hydrologic system. Emphasis on seasonal variations in the relationship between precipitation and evapotranspiration for meso-scale areas. Watershed modeling of floods and drought for evaluating the effects of climatic fluctuations.—III. (III.)

116. Climate Change (3)

Lecture—3 hours. Prerequisite: course 60. Climate trends and patterns spanning the recent past and the future. Emphasis on natural processes that produce climate variations and human influence on these processes. Evidence of climate change and the role of global climate models in understanding climate variability.—II. (II.)

120. Atmospheric Thermodynamics and Cloud Physics (4)

Lecture—3 hours, extensive problem solving. Prerequisite: Mathematics 21C, Physics 9B, course 60 (may be taken concurrently). Atmospheric composition and structure, thermodynamics of atmospheric gases, thermal properties of dry and moist air, atmospheric stability; cloud nucleation, cloud growth by condensation and collision, cloud models.—I. (I.) Weare

121A. Atmospheric Dynamics (4)

Lecture—3 hours; extensive problem solving. Prerequisite: course 120, Mathematics 21D, Physics 9B. Fundamental forces of atmospheric flow; noninertial reference frames; development of the equations of motion for rotating stratified atmospheres; isobaric and natural coordinate systems; geostrophic flow; thermal wind; circulation and vorticity.—II. (II.) Nathan

121B. Atmospheric Dynamics (4)

Lecture—3 hours; extensive problem solving. Prerequisite: course 121A. Dynamics of fluid motion in geophysical systems; quasi-geostrophic theory; fundamentals of wave propagation in fluids; Rossby waves; gravity waves; fundamentals of hydrodynamic instability; two-level model; baroclinic instability and cyclogenesis.—III. (III.) Nathan

124. Meteorological Instruments and Observations (3)

Lecture—2 hours; laboratory—3 hours. Prerequisite: course 60; Physics 5C. Modern meteorological instruments and their use in meteorological observations and measurements. Both standard and micrometeorological instruments are included.—I. (I.) Paw U

128. Radiation and Satellite Meteorology (4)

Lecture/discussion—3 hours; discussion/laboratory—2 hours. Prerequisite: course 60, Physics 9B, Mathematics 22B, 21D. Concepts of atmospheric radiation and the use of satellites in remote sensing. Emphasis on the modification of solar and infrared radiation by the atmosphere. Estimation from satellite data of atmospheric variables such as temperatures and cloudiness.—II. (II.) Weare

133. Biometeorology (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: one course in a biological discipline and Mathematics 16B or consent of instructor. Atmospheric and biological interactions. Physical and biological basis for water vapor, carbon dioxide and energy exchanges with the atmosphere associated with plants and animals, including humans. Microclimate of plant canopies and microclimatic modification such as frost protection and windbreaks.—II. Paw U, Snyder

149. Air Pollution (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: Mathematics 21D, 22B, Chemistry 2B, Atmospheric Science 121A or Engineering 103. Physical and technical aspects of air pollution. Emphasis on geophysical processes and air pollution meteorology as well as physical and chemical properties of pollutants. (Same course as Civil and Environmental Engineering 149.)—I. Carroll, Chang

150. Introduction to Computer Methods in Physical Sciences (4)

Lecture—3 hours; laboratory/discussion—2 hours. Prerequisite: Engineering 5 or the equivalent, Mathe-

tics 22B and a course in fluid dynamics (course 121A, Physics 104A, or Engineering 103A) or consent of instructor. Computational techniques used in physical sciences. Integral and differential equation numerical solution: mainly finite differencing and spectral (Fourier transform) methods. Includes introduction to C. Specific applications drawn from meteorology. Students write one C and several FORTRAN programs. Offered in alternate years.—II. Grotjahn

158. Boundary-Layer Meteorology (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 121A. Growth, development and structure of the atmospheric layer directly influenced by the underlying surface and extending to a maximum of about two kilometers under convective conditions. Turbulent diffusion in the boundary layer. The microclimate at and near the ground surface.—III. (III.)

160. Introduction to Atmospheric Chemistry (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: Chemistry 2B. Quantitative examination of current local, regional and global problems in atmospheric chemistry (including photochemical smog, acid deposition, climate change, and stratospheric ozone depletion) using fundamental concepts from chemistry. Basic chemical modeling of atmospheric reaction systems.—II. (II.) Anastasio

192. Atmospheric Science Internship (1-12)

Internship—3-36 hours. Prerequisite: completion of 84 units and consent of instructor. Internship off and on campus in atmospheric science. Internship supervised by a member of the faculty. (P/NP grading only.)

198. Directed Group Study (1-5)

Prerequisite: three upper division units in Atmospheric Science. (P/NP grading only.)

199. Special Study for Advanced Undergraduates (1-5)

Prerequisite: three upper division units in Atmospheric Science and at least an overall B average. (P/NP grading only.)

Graduate Courses**215. Advanced Hydroclimatology (3)**

Lecture—3 hours. Prerequisite: course 115. Theoretical and applied aspects of energy and mass fluxes linking the earth's surface, atmosphere, and hydrologic system. Emphasis on regional scale analysis and modeling, spatial data representation, and climate change influences on precipitation and its hydroclimatic expression. Offered in alternate years.—(III.)

221. Advanced Atmospheric Dynamics (3)

Lecture—3 hours. Prerequisite: course 121B. Conditions for instability in stratified atmospheres; baroclinic instability; forced topographic Rossby Waves; wave-mean flow interaction theory; tropical dynamics; stratospheric dynamics.—II. (II.) Nathan

223. Advanced Boundary-Layer Meteorology (3)

Lecture—3 hours. Prerequisite: course 230. Characteristics of the atmospheric boundary layer under convective and nocturnal conditions. Heat budget at the surface and boundary layer forcing. Similarity theory and scaling of the boundary layer. Measurement and simulation techniques. Offered in alternate years.—(III.) Wexler

230. Atmospheric Turbulence (3)

Lecture—3 hours. Prerequisite: course 121B or 158. Dynamics and energetics of turbulence in the atmosphere including vorticity dynamics. Statistical description of turbulence; Eulerian and Lagrangian scales, spectral analysis, conditional sampling techniques. Turbulent diffusion; the closure problem, gradient-diffusion and second-order methods. Offered in alternate years.—III.

231. Advanced Air Pollution Meteorology (3)

Lecture—3 hours. Prerequisites: Course 149A, 160 and one course in fluid dynamics. Processes determining transport and diffusion of primary and secondary pollutants. Models of chemical transformation, of the atmospheric boundary layer and of mesoscale wind fields, as applicable to pollu-

tant dispersion problems. Offered in alternate years.—(I.) Carroll

233. Advanced Biometeorology (3)

Lecture/discussion—3 hours. Prerequisite: course 133 or consent of instructor. Current topics in biometeorology. Physical and biological basis for water vapor, other gases, and energy exchange with the atmosphere. Topics include modeling and measuring turbulent transport from plant canopies, surface temperatures and energy budgets, bio-aerosol physics and aerobiology. Offered in alternate years.—II. Paw U

240. General Circulation of the Atmosphere (4)

Lecture/discussion—4 hours. Prerequisite: course 121B. Large-scale, observed atmospheric properties. Radiation, momentum, and energy balances derived and compared with observations. Lectures and homework synthesize observations and theories, then apply them to understand the large-scale circulations. Offered in alternate years.—(II.) Grotjahn

241. Climate Dynamics (3)

Lecture/discussion—3 hours. Prerequisite: course 121B. Dynamics of large-scale climatic variations over time periods from weeks to centuries. Description of the appropriate methods of analysis of atmospheric and oceanic observations. Conservation of mass, energy and momentum. Introduction to the range of climate simulations.—I. (I.) Weare

250. Meso-Scale Meteorology (3)

Lecture—3 hours. Prerequisite: graduate standing, course 150, a course in partial differential equations; or consent of instructor. The study of weather phenomena with horizontal spatial dimensions between 2.5 and 2500 kilometers. Methods of observational study and numerical modeling of the structure and temporal behavior of these weather systems. Offered in alternate years.—I. Chen

255. Numerical Modeling of the Atmosphere (4)

Lecture—2 hours; laboratory—6 hours. Prerequisite: course 121B and Engineering 5; course 150 recommended. Principles of numerical modeling of the dynamic, thermodynamic and physical processes of the atmosphere. Hands-on experiments on model development using the shallow water equations and the primitive equations. Operational forecast models. Offered in alternate years.—I. Chen

260. Atmospheric Chemistry (3)

Lecture—3 hours. Prerequisite: course 160. Chemistry and photochemistry in tropospheric condensed phases (fog, cloud, and rain drops and aerosol particles). Gas-drop and gas-particle partitioning of compounds and effects of reactions in condensed phases on the fates and transformations of tropospheric chemical species. Offered in alternate years.—(III.) Anastasio

270A-G. Topics in Atmospheric Science (1-3)

Discussion—1-3 hours. Applications and concepts in (A) Meteorological Statistics; (B) Computer Modeling of the Atmosphere; (C) Design of Experiments and Field Studies in Meteorology; (D) Solar and Infrared Radiation in the Atmosphere; (E) Aerosol and Cloud Physics; (F) Atmospheric Chemistry; (G) General Meteorology.—I, II, III. (I, II, III.)

290. Seminar (1)

Seminar—1 hour. Prerequisite: graduate standing in Atmospheric Science or related field. Current developments in selected areas of atmospheric research. Topics will vary according to student and faculty interests. (S/U grading only.)—I, II, III. (I, II, III.)

291A-F. Research Conference in Atmospheric Science (1-3)

Lecture/discussion—1-3 hours. Prerequisite: consent of instructor. Review and discussion of current literature and research in: (A) Air Quality Meteorology; (B) Biometeorology; (C) Boundary Layer Meteorology; (D) Climate Dynamics; (E) General Meteorology; (F) Atmospheric Chemistry. May be repeated up to a total of 6 units per segment. (S/U grading only.)—I, II, III. (I, II, III.)

298. Group Study (1-5)

Prerequisite: graduate standing and consent of instructor. (S/U grading only.)

299. Research (1-12)

Prerequisite: graduate standing and consent of instructor. (S/U grading only.)

Professional Courses**396. Teaching Assistant Training Practicum (1-4)**

Prerequisite: graduate standing. May be repeated for credit. (S/U grading only.)—I, II, III. (I, II, III.)

Graduate Study. The Graduate Group in Atmospheric Science offers both the M.S. and Ph.D. degree programs. A student may place emphasis on graduate work in one or more of the following fields: air quality meteorology, atmospheric chemistry, biometeorology, micrometeorology, numerical weather prediction, remote sensing, climate dynamics, large scale dynamics, and mesoscale meteorology. The diverse and extensive backgrounds of the faculty allow opportunities for interdisciplinary training and research.

Preparation. The Group encourages applications from all interested students with backgrounds in the physical or natural sciences. Basic qualifications for students entering the Atmospheric Science graduate program include mathematics to the level of vector calculus and differential equations, and one year of college-level physics. Flexibility may be allowed for students with high academic potential, but it is expected that deficiencies in preparatory material and in key undergraduate atmospheric science courses be completed within the first year of graduate study.

Graduate Adviser. K.T. Paw U (*Land, Air and Water Resources, 752-1510*).

Graduate Admissions Officer. M.L. Shelton (*Land, Air and Water Resources, 752-6344*).

Avian Medicine

See Medicine and Epidemiology

Avian Sciences

(College of Agricultural and Environmental Sciences)

Faculty. See under Department of Animal Science.

The Major Program

Avian sciences is the study of birds and the ways in which they relate to and are useful to humans. The major combines the study of avian wildlife and their environments, production and marketing of domestic birds and eggs, caged exotic bird management, and basic and applied laboratory research on birds with a broad introduction to biological science.

The Program. The flexibility of the program and the close personal interaction between students, faculty, and specialists in the field give students a large role in selecting and designing their own course work. Students may specialize in a bachelor's program that qualifies them for a particular career or they may choose a program to meet other broader intellectual and cultural interests.

Internships and Career Alternatives. Independent study, undergraduate research, and internships are emphasized in the avian sciences program. Birds for laboratory or special study are housed within the main building as well as at the research farm and the experimental aviary. An avian sciences major has a variety of career options: health-oriented research, teaching biology, gamebird production, domestic and foreign agricultural extension and advisory services, governmental agencies, or the domestic or exotic bird industries. A recent survey has shown that the majority of avian sciences graduates enter graduate school or are employed by the domestic bird industry. The remainder of the graduates were evenly distributed in the categories of professional schools, avian biology agencies, educational fields, and individual jobs indirectly associated with birds.

Courses in Avian Sciences (AVS)**Lower Division Courses****11. Introduction to Poultry Science (3)**

Lecture—3 hours; one field trip required. The mosaic of events that have tied poultry science to other scientific disciplines and poultry to humans. Poultry science techniques and production methods from the time of domestication to the present. GE credit: SciEng, Wrt.—II. (II.) Bradley

13. Birds, Humans and the Environment (3)

Lecture—2 hours; discussion—1 hour; half-day field trip. Interrelationships of the worlds of birds and humans. Lectures, discussions, field trips and projects focus on ecology, avian evolution, physiology, reproduction, flight, behavior, folklore, identification, ecotoxicology and conservation. Current environmental issues are emphasized. GE credit: SciEng, Wrt.—I. (I.) Morzenti

14L. Management of Captive Birds (2)

Fieldwork—3 hours; lecture/discussion—1 hour. Prerequisite: consent of instructor. One weekly discussion and field trip to study practical captive management (housing, feeding, equipment, marketing, diseases). Visit facilities rearing birds such as commercial parrots, hobbyist exotics, ostrich, raptors, waterfowl, game birds, poultry and pigeons.—Morzenti

15L. Captive Raptor Management (2)

Laboratory—3 hours; independent study—3 hours; one field trip. Hands-on experience handling birds of prey. Students are taught all of the skills required to handle and care for raptors, including their husbandry, biology, habitat requirements, cage design, veterinary care, rehabilitation methods, research potential and long-term care requirements.—I. (I.) Morzenti

16LA-16LB-16LC. Raptor Migration and Population Fluctuations (2-2-2)

Fieldwork—3 hours; discussion—1 hour; one Saturday field trip. Prerequisite: consent of instructor. Identify raptors; study effects of weather, crops, agricultural practices on fluctuations in raptor species and numbers. Familiarize with literature; design a project; survey study sites; collect, computerize, analyze data; compare with previous years. Species, observations, emphasis are different each quarter.—III. (III.) Morzenti

92. Internship in the Avian Sciences (1-12)

Internship—3-36 hours. Prerequisite: sophomore standing preferred; consent of instructor. Internship on and off campus in poultry, gamebirds or exotic bird production, management and research; or in a business, industry, or agency concerned with these entities. Compliance with Internship Approval Request form essential. (P/NP grading only.)

98. Directed Group Study (1-5)

Prerequisite: consent of instructor. (P/NP grading only.)

99. Special Study for Undergraduates (1-5)

Prerequisite: consent of instructor. Problems in avian biology; nutrition, breeding, and physiology of poultry/wild birds and their products. (P/NP grading only.)

Upper Division Courses**100. Avian Biology (3)**

Lecture—3 hours. Prerequisite: Biological Sciences 1A, 1B. Survey of avian natural history and study of the diversity, functional morphology, behavior, ecology and evolution of birds.—I. (I.) Weathers

103. Avian Development and Genetics (3)

Lecture—2 hours; laboratory—3 hours. Prerequisite: Biological Sciences 1A and 1B. Unique features of avian development and genetics. Development topics: gametogenesis, fertilization, pre- and post-oviposital development, morphogenesis, sex differentiation, specialized organ systems, incubation, hatching. Genetic topics: genome organization, inheritance, sex determination, avian models. Laboratory exercises: embryology, genetics, model systems.—I. (I.) Delany

115. Raptor Biology (3)

Lecture—3 hours; two Saturday field trips. Prerequisite: Biological Sciences 1A or the equivalent. Study of birds of prey: classification, distribution, habits and habitats, migration, unique anatomical and physiological adaptations, natural and captive breeding, health and diseases, environmental concerns, conservation, legal considerations, rehabilitation, and falconry.—II. (II.) Morzenti

121. Avian Reproduction (2)

Lecture—2 hours. Prerequisite: Biological Sciences 1A, 1B. Breeding cycles and reproductive strategies, egg and sperm formation, incubation, sexual development, imprinting, hormonal control of reproductive behavior and song. Species coverage includes wild and companion birds. Course has a physiological orientation. Offered in alternate years.—II.

123. Management of Birds (3)

Lecture—3 hours. Prerequisite: Biological Sciences 1A, 1B. Captive propagation of birds, including reproduction, genetic management, health, feeding, artificial incubation, artificial insemination, and related legal aspects, including trade and smuggling. Emphasis on exotic species and the role of captive propagation in conservation. Offered in alternate years.—(II.) Millam

149. Egg Production Management (2)

Lecture—2 hours; one Saturday field trip required. Prerequisite: course 11 or the equivalent, or consent of instructor. Management of commercial table egg flocks as related to environment, nutrition, disease control, economics, housing, equipment, egg processing and raising replacement pullets. Offered in alternate years.—III. Ernst

150. Nutrition of Birds (1)

Lecture—1 hour. Prerequisite: Animal Biology 103 (may be taken concurrently). Principles of nutrition specific to avian species, including feedstuffs, feed additives, nutrient metabolism, energy systems, and nutritional support of egg production and growth. Use of computers for feed formulation to support production. Offered in alternate years.—(III.) Klasing

160. Designing and Performing Experiments in Avian Sciences (2)

Laboratory—6 hours. Prerequisite: course 100 or Wildlife, Fish and Conservation Biology 111 or Evolution and Ecology 137 or consent of instructor. Experiments in current problems in avian biology. Introduction to experimental design. Students choose a project, design a protocol, perform an experiment and report their findings. May be repeated for credit with consent of instructor.—I, II, III. (I, II, III.)

170. Advanced Avian Biology (4)

Lecture/discussion—3 hours; project—1 hour. Prerequisite: course 100 or Evolution and Ecology 137 or Wildlife, Fish and Conservation Biology 111. Ecology, behavior, functional morphology and life-history evolution of birds. Emphasis on the importance of

body size as a principle determinant of most aspects of avian performance from lifespan to reproduction and species abundance. Analytical synthesis and critical thought emphasized. Offered in alternate years.—(II.) Weathers

190. Seminar in Avian Sciences (1)

Seminar—1 hour. Prerequisite: upper division standing in Avian Sciences and consent of instructor. May be repeated three times for credit. (P/NP grading only)—I, II, III. (I, II, III.)

192. Internship in Avian Sciences (1-12)

Internship—3-36 hours. Prerequisite: completion of a minimum of 84 units; consent of instructor. Internship on and off campus in poultry, gamebirds or exotic bird production, management and research; or in a business, industry, or agency concerned with these entities. Compliance with Internship Approval Request form essential. (P/NP grading only.)

195. Topics in Current Research (1-3)

Lecture/discussion—variable. Hours will depend on instructor with the number of units being commensurate with time in class. Prerequisite: consent of instructor. Discussion of topics of current interest in avian sciences. May be repeated three times for credit.—I, II, III. (I, II, III.)

197T. Tutoring in Avian Sciences (1-3)

Hours and duties vary depending upon course being tutored. Prerequisite: Avian Sciences or related major; advanced standing; consent of instructor. Tutoring of students in lower division avian sciences courses; weekly conference with instructors in charge of course; written critiques of teaching procedures. (P/NP grading only.)

198. Directed Group Study (1-5)

Prerequisite: consent of instructor. (P/NP grading only.)

199. Special Study for Advanced Undergraduates (1-5)

Prerequisite: consent of instructor. (P/NP grading only.)

Graduate Courses**290. Seminar (1)**

Seminar—1 hour. Reports and discussions of recent advances and selected topics of current interest in avian genetics, physiology, nutrition, and poultry technology.—I, II, III. (I, II, III.)

290C. Research Conference (1)

Discussion—1 hour. Prerequisite: graduate standing and consent of instructor. Major professors lead research discussions with their graduate students. Research papers are reviewed and project proposals presented and evaluated. Format will combine seminar and discussion. (S/U grading only)—I, II, III. (I, II, III.)

297T. Supervised Teaching in Avian Sciences (1-4)

Tutoring—1-4 hours. Prerequisite: graduate standing and consent of instructor. Tutoring of students in lower, upper division, and graduate courses in Avian Sciences; weekly conference with instructor in charge of course; written critiques of teaching methods in lectures and laboratories. (S/U grading only.)

298. Group Study (1-5)

Prerequisite: consent of instructor.

299. Research (1-12)

Prerequisite: consent of instructor. (S/U grading only.)

Pran Vohra, Ph.D., Professor Emeritus

Graduate Study. The Graduate Group in Avian Sciences offers the M.S. degree program to students who wish to pursue specialized advanced work on avian species. Specializations students may choose at present include nutrition, physiology, reproduction, pathology, immunology, toxicology, food chemistry, management, ecology, genetics, comparative incubation, environmental physiology, and cellular and developmental studies using wild and domestic birds as experimental animals. Both master's degree plans, thesis or comprehensive examination, are available.

Preparation. Applicants should have undergraduate preparation in a field appropriate to the course of study selected, including courses in most of the following subjects: general biology, general and organic chemistry, biochemistry, avian biology, genetics, nutrition, physiology, and statistics.

Graduate Adviser. J.R. Millam (*Animal Sciences*).

Dewey D. Ryu, Ph.D., Professor (*Biochemical Engineering*)
Earl Sawai, Ph.D., Assistant Adjunct Professor (*Pathology*)
Carl W. Schmid, Ph.D., Professor (*Molecular and Cellular Biology*)
Jonathan M. Scholey, Ph.D., Professor (*Molecular and Cellular Biology*)
Irwin H. Segel, Ph.D., Professor (*Molecular and Cellular Biology*)
Leigh D. Segel, Ph.D., Professor
Michael F. Seldin, Ph.D., Professor (*Biological Chemistry*)
Kazuhiro Shiozaki, Ph.D., Assistant Professor (*Microbiology*)
Mitchell Singer, Ph.D., Associate Professor (*Microbiology*)
Gary M. Smith, Ph.D., Professor (*Food Science and Technology*)
Valley J. Stewart, Ph.D., Professor (*Microbiology*)
Colleen Sweeney, Ph.D., Adjunct Professor (*Molecular and Cellular Biology*)
Fern Tablin, Ph.D., Professor (*Anatomy, Physiology and Cell Biology*)
Steven M. Theg, Ph.D., Professor (*Plant Biology*)

Michael D. Toney, Ph.D., Assistant Professor (*Chemistry*)
Brett M. Tyler, Ph.D., Professor (*Plant Pathology*)
John V. Voss, Ph.D., Assistant Professor (*Biological Chemistry*)
P. Richard Vulliet, Ph.D., D.V.M., Professor
Valerie M. Williamson, Ph.D., Professor (*Nematology*)
David Wilson, Ph.D., Assistant Professor (*Molecular and Cellular Biology*)
Reen Wu, Ph.D., Professor (*Internal Medicine*)
John I. Yoder, Ph.D., Professor (*Vegetable Crops*)
Glen Young, Ph.D., Assistant Professor (*Food Science and Technology*)
Vincent A. Ziboh, Ph.D., Professor (*Dermatology*)

Graduate Study. The Graduate Group in Biochemistry and Molecular Biology offers programs of study and research leading to the M.S. and Ph.D. degrees. Strong preference is given to Ph.D. applicants. Graduate work involves a broad overview of biochemistry and molecular biology in addition to specialization in one or more areas. Examples of areas of emphasis include gene expression, molecular basis of development, protein structure, molecular virology, protein synthesis, enzymology, signal transduction, membrane transport and structural biology. For more information contact the chairperson of the group.

Graduate Advisers. R. Fairclough (*Neurology*), R. Rice (*Environmental Toxicology*), M. Singer (*Microbiology*), V. Williamson (*Nematology*)

Major Programs and Graduate Study. For the Bachelor of Science program, see the major in Engineering; for graduate study, see the Graduate Studies chapter in this catalog.

Minor Programs. The Department of Biological and Agricultural Engineering offers three minors through the College of Agricultural and Environmental Sciences: **Applied Biological Systems Technology, Geographic Information Systems and Precision Agriculture.**

The Applied Biological Systems program is for non-engineering students interested in engineering terminology and procedures. Course work provides knowledge of material properties, design procedures, fabrication principles, and hardware practices.

The minor in Geographic Information Systems is open to all majors, including those in engineering. This minor is for students interested in information processing of spatial data related to remote sensing for geographical and environmental planning and related areas.

The minor in Precision Agriculture is open to all majors, including those in engineering, and acquaints students with recent developments and their applications to agriculture, in geographic information systems, global positioning systems, and variable rate technologies.

Courses. Courses are listed under Applied Biological Systems Technology, and Engineering: Biological and Agricultural (Biological Systems Engineering).

ciplines of biology on behalf of the College of Agricultural and Environmental Sciences and the College of Letters and Science.

The division has five sections that represent the major themes of modern biology: Evolution and Ecology; Microbiology; Molecular and Cellular Biology; Neurobiology, Physiology, and Behavior; and Plant Biology. Core courses in biological sciences, the Biological Sciences major, and the Bodega Marine Laboratory Program, are offered jointly by the sections of the division. Each section also offers courses and one or more majors focusing on the core disciplines.

Faculty

All faculty are primary members of one section and some faculty are secondary members of a second section as well. See "Sections of the Division," following, for a list of faculty in each section.

The Major Programs

Five majors leading to an A.B. degree are offered in:

- Biological Sciences**
- Evolution and Ecology**
- Exercise Biology**
- Microbiology**
- Plant Biology**

Nine majors leading to a B.S. degree are offered in:

- Biochemistry and Molecular Biology**
- Biological Sciences**
- Cell Biology**
- Evolution and Ecology**
- Exercise Biology**
- Genetics**
- Microbiology**
- Neurobiology, Physiology, and Behavior**
- Plant Biology**

Choice of College. The Bachelor of Arts degree is offered only by the College of Letters and Science. The Bachelor of Science degree is offered by both the College of Letters and Science and the College of Agricultural and Environmental Sciences. The major requirements are the same in each college, but there are differences in the college requirements and policies. See the Undergraduate Education chapter college sections in this catalog for more information.

Student Services. Student affairs officers at the division's Dean's Office, 202 Life Sciences Addition, and advising staff in section offices provide information and counseling on the major programs and courses offered by the division.

The Biological Sciences Major

(Sections of Evolution and Ecology; Microbiology; Molecular and Cellular Biology; Neurobiology, Physiology, and Behavior; and Plant Biology)

The Program. The Biological Sciences major is broad in concept, spanning the numerous core disciplines of biology. The Bachelor of Science program includes mathematics, general and organic chemistry, physics, and biology. While emphasizing breadth, the B.S. degree program also features an area of emphasis requirement that provides concentrated attention on one facet of biology at the upper division level. Each area of emphasis coincides with one of the sections of the division. The Bachelor of Arts program emphasizes biological diversity, evolution, and ecology, all built on a foundation of general and organic chemistry, physics and biology. Research and internships are encouraged in both programs.

Career Alternatives. Both degree programs prepare students for admission to graduate schools or professional schools, leading to either a variety of professional health careers or further study in basic and applied areas of biology. They provide suitable preparation for careers in teaching, biological and biotechnological research with various governmental agencies or private companies, government regulatory agencies, environmental consulting, biological illustration and writing, pharmaceutical sales, biological/environmental law, and biomedical engineering.

The B.A. degree program is also appropriate for students interested in teaching biology at the secondary school level and for careers that bear on the ecological problems that require the development of public policy.

The Biological Sciences Major

A.B. Major Requirements:

	UNITS
Preparatory Subject Matter	40-53
Biological Sciences 1A-1B-1C	15
Chemistry 2A-2B	10
Chemistry 8A-8B or 118A-118B-118C ...	6-12
Physics 1A-1B or 7A-7B-7C	6-12
Statistics 13, 32, 100, or 102	3-4
Recommended: Chemistry 2C and Mathematics 16A-16B.	

Depth Subject Matter	38-42
Biological Sciences 101 and 102	7
Evolution: One from Evolution and Ecology 100, 140; Geology 107; or Plant Biology 116	3-5
Ecology: One from Environmental Science and Policy 100; Evolution and Ecology 101, 117, 121; or Plant Biology 117	4
Philosophy of Biological Science: One from History and Philosophy of Science 130A, 130B, 131, Nature and Culture 100, 120, 140, Philosophy 108, or Veterinary Medicine 170	4
Physiology: One from Environmental Horticulture 102; Entomology 101, 102; Neurobiology, Physiology, and Behavior 101; or Plant Biology 111, 112	3-5
One course each in animal, microbial and plant diversity	8-17
<i>Animal diversity:</i>	
Entomology 100, 107, 109; Evolution and Ecology 105, 112+112L, 134; Nematology 110; Wildlife, Fish, and Conservation Biology 110, 111, 120.	

Microbial diversity:
 Microbiology 105, 162; Pathology, Microbiology and Immunology 127, 128; Plant Biology 118, 148; Plant Pathology 148; Soil Science 111.

Plant diversity:
 Evolution and Ecology 108, 119, 140; Plant Biology 102, 108, 116, 119, 147.

Additional upper division course work in biological sciences to achieve a total of 38 or more units (see "Approved Biology Electives" list below).

Upper division course work must include at least 2 units (6 hours per week) of laboratory and/or fieldwork.

Note: Although a course may be listed in more than one category, that course may satisfy only one requirement.

Total units for the major	78-95
--	--------------

B.S. Major Requirements:

	UNITS
Preparatory Subject Matter	60-70
Mathematics 16A-16B-16C or 17A-17B-17C	9-12
Chemistry 2A-2B-2C	15
Chemistry 8A-8B or 118A-118B-118C ...	6-12
Biological Sciences 1A-1B-1C	15
Statistics 13, 32, 100, or 102	3-4
Physics 7A-7B-7C	12

Depth Subject Matter	45
Biological Sciences 101, 102, 103, 104 ...	13
Field Requirement, Area of Emphasis Requirement, and additional units (if necessary) to achieve a total of 45 units or more	32

Note: Although a course may be listed in more than one category, that course may satisfy only one requirement.

Biological Sciences

The intercollege Division of Biological Sciences coordinates campuswide programs in basic biology and administers undergraduate programs in the core dis-

Field Requirement: Breadth in biology is achieved by completing one course from each field course list (a) through (e) below. Check your area of emphasis for any specific field course requirements.

- (a) *Evolution:* Anthropology 151, 152, 154A; Evolution and Ecology 100; Geology 107; Plant Biology 1433-5
- (b) *Ecology:* Anthropology 154B; Biological Sciences 122; Entomology 104, 156; Environmental Science and Policy 100, 121; Evolution and Ecology 101; Microbiology 120; Wildlife, Fish, and Conservation Biology 1513-4
- (c) *Microbiology:* Food Science and Technology 104; Microbiology 102, 140, 150, 162; Pathology, Microbiology and Immunology 127, 128; Soil Science 1113-5
- (d) *Neurobiology, physiology, and behavior:* Anthropology 154A, 154B; Entomology 102, 104; Neurobiology, Physiology, and Behavior 100, 101, 102, 1413-5
- (e) *Plant biology:* Environmental Horticulture 102, 105; Evolution and Ecology 108, 117, 119, 140; Plant Biology 102, 105, 108, 111, 112, 113, 116, 117, 118, 119, 143, 144, 147, 148, 176; Plant Pathology 120, 130, 1483-5

Area of Emphasis Requirement: Depth in one area of biology is achieved by completing all requirements for one of the six areas of emphasis listed below. It will include at least 2 units (or 6 hours per week) of laboratory designated in the area of emphasis.

Evolution and Ecology emphasis.....13-18

Field requirement: Students must take Evolution and Ecology 100 to satisfy Field requirement (a), and Evolution and Ecology 101 to satisfy Field requirement (b). Evolution and Ecology 102 or 1034
 Biodiversity: Six or more units to include at least two units (or 6 hours per week) of laboratory from the following: Entomology 100, 100L, 107, 109; Evolution and Ecology 108, 112, 112L, 134, 134L, Geology 107, 107L; Microbiology 105; Nematology 110; Plant Biology 102, 108, 118, 147, 148; Wildlife, Fish, and Conservation Biology 110, 110L, 111, 111L, 120, 120L6-9
 Restricted electives.....3-5
 Select one course from: Biological Sciences 122, 122P; Entomology 103, 104, 156, 156L; Environmental Science and Policy 121, 123, 150A, 150B, 150C, 151, 151L; Evolution and Ecology 105, 117, 119, 138, 140, 141, 147, 149; Geology 107, 107L; Nematology 100; Neurobiology, Physiology, and Behavior 102; Philosophy 108; Plant Biology 116, 117, 119; Wildlife, Fish, and Conservation Biology 136.

Marine Biology emphasis.....15-17

- (1) *Field requirement:* Students must take Evolution and Ecology 100 to satisfy Field requirement (a), and Evolution and Ecology 101 to satisfy Field requirement (b), and Neurobiology, Physiology, and Behavior 102 or 141 to satisfy Field requirement (d).
- (2) *Ocean Processes:* At least 3 units from Environmental Science and Policy/Geology 116+116G; Environmental Science and Policy 150A, 150B, 151+151L; Evolution and Ecology 115, Wildlife, Fish and Conservation Biology 1573
- (3) *Marine Organismal Biology:* At least 4 units from Animal Science 118, 119, 131, 136, 136A; Evolution and Ecology 112+112L; Neurobiology, Physiology, and Behavior 141+141P; Plant Biology 118; Wildlife, Fish and Conservation Biology 120, 120L, 121, 1304

(4) *Immersion Requirement:* One field/research course or course combination; requires residence at Bodega Marine Lab for spring quarter or summer session: Biological Sciences 122+122P; Environmental Science and Policy 124; Neurobiology, Physiology, and Behavior 141+141P8-10

Microbiology emphasis13-18

Field requirement: Students must take Microbiology 102 to satisfy Field requirement (c).
 Laboratory requirement: Students must take Microbiology 102L to satisfy the area of emphasis lab requirement.
 Options: Complete one of the four options a-d below; or complete an individual option with approval from your faculty adviser.
 (a) *Microbial Physiology and Molecular Genetics option*.....14-16
 Microbiology 102L, 140, 1508
 Select one course from Microbiology 170; Molecular and Cellular Biology 121, 1613
 Select one course from: Microbiology 105, 155L, 160, 170; Pathology, Microbiology and Immunology 1273-5
 (b) *Microbial Diversity and Ecology option*13-15
 Microbiology 102L, 105, 12010
 Select one course from: Food Science and Technology 104; Microbiology 140, 150, 162, 170; Pathology, Microbiology and Immunology 127, 128; Plant Biology 148; Plant Pathology 148; Soil Science 1113-5
 (c) *Biotechnology and Applied Microbiology option*.....14-18
 Microbiology 102L2
 Select two courses from Microbiology 140, 150, 1706
 Select one course from: Food Science and Technology 102A, 104; Viticulture and Enology 1863-4
 Select one course from Microbiology 155L; Molecular and Cellular Biology 120L, 160L3-6
 (d) *Medical Microbiology option*14-18
 Microbiology 102L; Pathology, Microbiology and Immunology 1265
 Select one course from: Medical Microbiology and Immunology 115, 116; Pathology, Microbiology and Immunology 1273-5
 Select one course from: Microbiology 105, 162; Pathology, Microbiology and Immunology 1283-5
 Select one course from Microbiology 140, 150, 1703

Molecular and Cellular Biology emphasis....12-18

One course from Molecular and Cellular Biology 121, 141, or 1613-4
 Laboratory experience: One or more laboratory courses from Biological Sciences 120P; Molecular and Cellular Biology 120L, 140L, 160L; or other laboratory course to total 3 units (or 9 hours per week) that emphasizes cellular or molecular biology with approval of your adviser3-6
 Restricted electives.....6-8
 Select two or more courses from Biological Sciences 120; Molecular and Cellular Biology 122, 123, 126, 141, 142, 143, 144, 145, 150, 162, 163; Neurobiology, Physiology, and Behavior 103; Pathology, Microbiology and Immunology 126; Plant Biology 113, 126; or other courses with adviser's approval.

Neurobiology, Physiology, and Behavior emphasis.....15

Select courses from at least two of the following three areas and include one laboratory from Neurobiology, Physiology, and Behavior 101L, 104L, 141P, or 160L15
 (1) *Neurobiology:* Neurobiology, Physiology, and Behavior 100, 106, 112, 124, 125, 126, 160, 160L, 161, 162, 163, 168, 169; Psychology 121, 124, 128, 129.

(2) *Physiology:* Anatomy, Physiology, and Cell Biology 100; Entomology 102; Exercise Biology 101, 110, 111; Neurobiology, Physiology, and Behavior 101, 101L, 103, 104L, 105, 106, 111C, 111L, 113, 114, 117, 121, 121L, 123, 127, 128, 130, 131, 139, 140, 141, 141P; Pathology, Microbiology, and Immunology 126; Wildlife, Fish, and Conservation Biology 121.

(3) *Behavior:* Anthropology 154A, 154B; Entomology 104; Neurobiology, Physiology, and Behavior 102, 150, 152, 159; Psychology 122, 123, 129.

Note: Neurobiology, Physiology, and Behavior 106 may be used only once to satisfy Area of Emphasis requirements.

Plant Biology emphasis13-16

Select one course from each of the following four areas and include one laboratory course from Evolution and Ecology 108; Plant Biology 105, 108, 111L, 116, 118, 148, 161A, 161B; Plant Pathology 148; or two laboratory courses from Evolution and Ecology 140; Plant Biology 153, 158, 171, 172L.
 (1) *Anatomy and morphology:* Evolution and Ecology 140; Plant Biology 105, 116, 1184-5
 (2) *Physiology and development:* Plant Biology 111, 112, 113; Plant Pathology 1303
 (3) *Evolution and ecology:* Evolution and Ecology 100, 117; Plant Biology 117, 1433-4
 (4) *Applied plant biology:* Agricultural Systems and Environment 110A; Plant Biology 154, 160, 171, 172, 1753-4

Total Units for the Major105-115

Approved Biology Electives

These are courses which are accepted without petition for upper division units in the Biological Science major. Many other biologically related courses may be substituted with consent of your adviser.
 Agricultural Systems and Environment 110A, 135
 Anatomy, Physiology, and Cell Biology 100
 Anthropology 151, 152, 153, 154A, 154B, 155, 156, 157
 Avian Sciences 100, 150
 Biological Sciences—All upper division courses
 Cell Biology and Human Anatomy 101, 101L
 Chemistry 107A, 107B, 108, 150
 Entomology—All upper division courses
 Environmental Horticulture 102, 105
 Environmental Science and Policy 100, 110, 121, 123, 124, 150A, 150B, 150C, 151, 151L
 Evolution and Ecology—All upper division courses
 Exercise Biology 101, 110, 111, 113
 Food Science and Technology 102A, 104
 Geology 107, 107L, 150A, 150B, 150C
 History and Philosophy of Science 130A, 130B, 131
 Medical Microbiology 115, 116
 Microbiology—All upper division courses
 Molecular and Cellular Biology—All upper division courses
 Nature and Culture 100, 120, 140

154 Biological Sciences

Nematology 100, 110
 Neurobiology, Physiology, and Behavior—All upper division courses
 Nutrition 101, 111
 Pathology, Microbiology, and Immunology 101, 102, 126, 126L, 127, 128
 Philosophy 108
 Plant Biology—All upper division courses, except 188, 189
 Plant Pathology 120, 130
 Psychology 121, 122, 123, 124, 128
 Soil Science 111
 Veterinary Medicine 170
 Viticulture and Enology 186
 Wildlife, Fish, and Conservation Biology 110, 110L, 111, 111L, 120, 120L, 121, 122, 130, 136, 140, 151

Other Upper Division Courses

There is a limitation on variable-unit courses that may be counted toward the major. Of these courses, up to 4 units of 199 courses may be counted, and no units of 192 or 197T courses may be counted.

Minor Program Requirements:

UNITS

Biological Sciences18

Complete at least 3 units from each of the five numbered groups to total at least 18 units. Appropriate alternative courses may be used with approval of an adviser.

1) *Cell and Molecular Biology*: Biological Sciences 101, 102; Microbiology 1023-4

2) *Animal Biology*: Anthropology 151, Anatomy, Physiology, and Cell Biology 100/Neurobiology, Physiology, and Behavior 123; Entomology 100; Evolution and Ecology 105, 112+112L, 134; Nematology 100, 110; Neurobiology, Physiology, and Behavior 100, 101, 102, 117; Wildlife, Fish and Conservation Biology 110, 111, 1202-5

3) *Microbiology*: Microbiology 105, 162; Pathology, Microbiology and Immunology 128; Plant Biology/Plant Pathology 1483-5

4) *Plant Biology*: Environmental Horticulture/Environmental and Resource Sciences/Plant Biology 144; Plant Biology 105, 111, 112, 116, 118, 126, 141, 171; Plant Biology/Plant Pathology 1483-5

5) *Evolution and Ecology*: Anthropology 151, 152, 154; Entomology 100; Evolution and Ecology 100, 101, 108, 115, 117, 119, 138, 140, 147; Plant Biology 102, 108, 117, 119, 142, 143, 146; Plant Pathology 150; Wildlife, Fish and Conservation Biology 1513-5
 Additional courses (if necessary) from above numbered groups to reach 18 units.

Advisers and Advising: Information on the Biological Sciences major or minor can be obtained from the Undergraduate Academic Programs Office, 202 Life Sciences Addition.

Honors and Honors Programs. Students who have met the minimum grade point average and the units-completed criteria, and who have obtained a sponsoring faculty supervisor may elect to participate in the Division of Biological Sciences Honors Program. The program entails completion of a research project and honors thesis through enrollment in course 194H.

The division additionally recommends students to the College of Letters and Science for the purpose of awarding High and Highest Honors at graduation.

Citation for Outstanding Performance. The Division of Biological Sciences confers Citations for Outstanding Performance on undergraduates majoring in Biological Sciences who have demonstrated superior academic performance and individual achievement in research. Students who wish to be considered for a citation must first meet or exceed a specified grade point average and participate in an appropriate research project.

Teaching Credential Subject Representative. Associate Director of Teacher Education (Division of Education). See also the Teacher Education Program.

The Biochemistry and Molecular Biology Major Program

The Biochemistry and Molecular Biology major introduces students to the chemistry of living organisms and the experimental techniques that are used to probe the structures and functions of biologically important molecules. Students who enjoy both chemistry and biology and who are comfortable with quantitative approaches to problem solving will find this major a rewarding field of study.

The Program. The biochemistry and molecular biology program begins with the four-course, upper division common curriculum that provides an introduction to the principles of biochemistry, genetics, and cell biology. Majors then take a comprehensive and rigorous laboratory course to familiarize them with the most important aspects of biochemical research. Additional upper division courses in biochemistry and molecular biology examine detailed aspects of these subjects. Students are also required to take courses in other biological sciences and a full year of physical chemistry.

Career Alternatives. The biochemistry and molecular biology program provides a solid scientific background for students seeking a research, teaching, or service career in the life sciences. Positions are open to biochemists in biomedical, biotechnological, pharmaceutical, agricultural research and chemical industries. Also, university-affiliated research laboratories, hospital laboratories, and government-sponsored research facilities provide employment opportunities. The major provides excellent preparation for advanced study in graduate or professional schools.

B.S. Major Requirements:

UNITS

Preparatory Subject Matter54-58

Biological Sciences 1A-1B-1C15
 Chemistry 2A-2B-2C15
 Mathematics 16A-16B-16C or 21A-21B-21C9-12
 Physics 7A-7B-7C12
 Statistics 13, 32, 100 or 1023-4

Depth Subject Matter53-54

Biological Sciences 101, 102, 103, 10413
 Chemistry 118A-118B-118C or 128A-128B-128C, 129A-129B12-13
 Chemistry 107A-107B, 1089
 Molecular and Cellular Biology 120L, 121, 122, 12315
 Restricted Electives4
 Upper division courses in biological sciences or chemistry. Students are encouraged to obtain additional laboratory experience; however, no more than 3 units of 192, 193 or 199 may be counted toward Restricted Elective units.

Total Units for the Major107-112

Master Adviser. L.R. Sprechman (*Section of Molecular and Cellular Biology*), 126 Briggs Hall.

Advising Center for the major is located in 156 Briggs (530-752-9032).

Graduate Study. See Biochemistry and Molecular Biology (A Graduate Group); and the Graduate Studies chapter of this catalog.

The Cell Biology Major Program

The Cell Biology major program provides students with a comprehensive understanding of the cell, the

basic structural and functional unit of all living organisms.

The Program. To understand living organisms, the biologist must understand the cell. Hence, cell biology lies at the core of the biological sciences. Students taking this major gain a solid foundation in biological principles. The major emphasizes how cellular organization and function contribute to the development, maintenance and reproduction of adult organisms. The major illustrates the ways in which principles derived from the physical sciences, genetics, biochemistry, molecular biology and physiology are integrated in the study of living cells and emphasizes the experimental nature of the study of cell biology.

Career Alternatives. The major provides an excellent background for students wishing to enter post-graduate and professional programs in biological, health sciences or veterinary sciences; for students pursuing careers involving teaching or research in the biological sciences; for students interested in careers in the biotechnological or pharmaceutical industries; or for students interested in careers related to the administrative, legal or commercial aspects of biomedical science.

B.S. Major Requirements:

UNITS

Preparatory Subject Matter61-67

Biological Sciences 1A-1B-1C15
 Chemistry 2A-2B-2C15
 Mathematics 16A-16B-16C9
 Physics 7A-7B-7C12
 Statistics 13 or 100 (recommended)4
 Chemistry 8A-8B or 118A-118B-118C6-12

Depth Subject Matter45-47

Biological Sciences 101, 102, 103, 10413
 Molecular and Cellular Biology 140L, 150, 150L9
 Two courses from Molecular and Cellular Biology 143, 144, or 1456
 Molecular and Cellular Biology 121 or 1613
 One additional upper division laboratory course from: Molecular and Cellular Biology 120L, 160L; Pathology, Microbiology and Immunology 126 and 126L4-6
 Select at least 10 units from the following:
 Chemistry 107A, 107B, 108; Molecular and Cellular Biology 120L, 138, 142, 148, 158, 160L, 163, 178; Neurobiology, Physiology, and Behavior 103; Pathology, Microbiology, and Immunology 126, 126L; no more than 4 units of research (193, 194H, 199) can be used for credit in this category10

Total Units for the Major106-114

Master Adviser. D.G. Myles (*Molecular and Cellular Biology*), 3167 Life Sciences Addition.

Advising Center for the major is located in 156 Briggs (530-752-0202).

The Evolution and Ecology Major Program

The major in Evolution and Ecology offers the student a broad background in the theoretical and empirical basis of our understanding of the diversity and distribution of living organisms.

The Program. The program of study for the evolution and ecology major begins with a core of introductory courses in mathematics, physical sciences, and biology. These are followed by survey courses in evolution and ecology and various more specialized courses that allow the student to focus his or her studies. Evolution and Ecology majors may earn either a Bachelor of Science or a Bachelor of Arts degree. The requirements for the B.S. degree program include more science courses, such as biochemistry, whereas those for the A.B. degree program allow room for more electives within the humanities and social sciences. The A.B. degree is especially appropriate for those students who wish

to combine arts or languages with evolution and ecology for career preparation in such areas as scientific writing, translating or illustration.

Career Alternatives. A degree in evolution and ecology prepares the student for career opportunities in research, teaching, health professions, veterinary medicine, agriculture, environmental management, and industry. Many students gain some research experience while at UC Davis and choose to continue their training at the graduate level. This track offers careers in academics, government, or business.

A.B. Major Requirements:

	UNITS
Preparatory Subject Matter	41-43
Biological Sciences 1A-1B-1C	15
Chemistry 2A-2B, 8A-8B	16
Mathematics 16A-16B or Statistics 100 or 102	4-6
Physics 1A-1B	6
Depth Subject Matter	36
Biological Sciences 101	4
One course from Evolution and Ecology 100; Geology 107; Anthropology 151	3-4
One course from Evolution and Ecology 101; Environmental Science and Policy 100; Wildlife, Fish, and Conservation Biology 151	4
Additional upper division course work in biological science to achieve a total of 36 or more units	24-25
Include at least one course from each of the areas of study below.	
<i>(a) Biodiversity:</i> Entomology 100, 100L, 107, 109; Environmental Science and Policy 124; Evolution and Ecology 112, 112L, 134, 134L, 140; Plant Biology 102, 108, 118, 147, 148; Wildlife, Fish, and Conservation Biology 110, 110L, 111, 111L, 120, 120L.	
<i>(b) Physiology and functional morphology:</i> Anatomy, Physiology, and Cell Biology 100, Avian Sciences 100; Entomology 101, 102; Evolution and Ecology 105; Neurobiology, Physiology, and Behavior 101, 141, 141P; Plant Biology 111, 111L, 112, 116; Wildlife, Fish, and Conservation Biology 121.	
Note: A maximum of 4 units of variable-unit courses (numbered 192, 198, 199) may be applied to upper division elective requirements. Courses numbered 197T are not applicable to the upper division elective unit requirement.	
Total Units for the Major	77-79

B.S. Major Requirements:

	UNITS
Preparatory Subject Matter	57-66
Biological Sciences 1A-1B-1C	15
Chemistry 2A-2B-2C	15
Chemistry 8A-8B or 118A-118B-118C	6-12
Mathematics 16A-16B-16C or 21A-21B-21C	9-12
Physics 7A-7B-7C	12
Depth Subject Matter	49
Biological Sciences 101, 102, 103, 104	13
Evolution and Ecology 100, 101, and 102 or 103	12
Statistics 100 or 102 or 130A-130B	4-8
Additional upper division course work in biological science to achieve a total of 49 or more units	16-20
Include at least 2 units (6 hours per week) of laboratory and one course from each of the areas of study below (<i>a-b</i>).	
<i>(a) Biodiversity:</i> Entomology 100, 100L, 107, 109; Environmental Science and Policy 124; Evo-	

lution and Ecology 112, 112L, 134, 134L, 140; Plant Biology 102, 108, 118, 147, 148; Wildlife, Fish, and Conservation Biology 110, 110L, 111, 111L, 120, 120L.

(b) Physiology and functional morphology:

Anatomy, Physiology, and Cell Biology 100; Avian Sciences 100; Entomology 101, 102; Evolution and Ecology 105; Neurobiology, Physiology, and Behavior 101, 141, 141P; Plant Biology 111, 111L, 112, 116; Wildlife, Fish, and Conservation Biology 121.

Note: A maximum of 4 units of variable-unit courses (numbered 192, 198, 199) may be applied to upper division elective requirements. Evolution and ecology majors may not substitute course 192 for the upper division laboratory requirement. Courses numbered 197T are not applicable to the upper division elective unit requirement.

Total Units for the Major

Biological Sciences Electives

The following courses are acceptable toward the fulfillment of the upper division biological sciences requirement in the A.B. and B.S. major programs and may be selected without adviser approval. Other elective courses are approved on an individual basis by petition through an adviser.

- Anatomy, Physiology, and Cell Biology 100
- Anthropology 151, 152, 153, 154A, 154B, 155, 156
- Biological Sciences, all upper division courses
- Chemistry 107A, 107B
- Entomology, all upper division courses except 110
- Environmental Science and Policy 110, 116, 121, 123, 150C, 151, 151L
- Geology 107, 107L, 150C
- Microbiology, all upper division courses
- Molecular and Cellular Biology, all upper division courses
- Nematology 110
- Neurobiology, Physiology, and Behavior, all upper division courses
- Nutrition 101, 111
- Pathology, Microbiology, and Immunology 101, 126, 126L, 128
- Philosophy 108
- Plant Biology, all upper division courses
- Psychology 121, 122, 127, 129
- Wildlife, Fish, and Conservation Biology 120, 120L, 121

Major Advisers. Students transferring to Davis from another institution and majoring in evolution and ecology must consult an adviser immediately upon matriculation so that their transfer credits can be applied to the major requirements. All new students in the major should contact the Section of Evolution and Ecology Office for adviser assignment. Substitutions of courses not on the above list for major requirements are arranged through the adviser.

Advising Center for the major is located in 2320 Storer Hall (530-752-8523). Pre-professional students should establish contact with the Health Sciences Advising Office, 111 South Hall, to learn what specific courses are required on their transcripts.

Teaching Credential Subject Representative. Students planning for a teaching career should consult the Department of Education in regard to preparation for certification. See also the section on the Teacher Education Program.

The Exercise Biology Major Program

The Program. The focus is on both the acute and adaptive effects of physical activity (and inactivity). Exercise biology deals with the mechanisms and consequences of activity from the molecular to the organismal (human ecological) level. We examine these mechanisms and consequences during growth, development, aging, disease and in altered environmental conditions. The exercise biology

major encompasses the critical aspects of an integrative program in applied human biology. The Bachelor of Arts program provides a greater breadth of knowledge in the humanities and social sciences and is more appropriate for those who wish to apply their knowledge within the human community.

The Bachelor of Science program is appropriate for students who desire a strong preparation in human biology. It requires the same basic science preparation as the other majors in the Division of Biological Sciences.

Career Alternatives. Students with further academic or professional interests in medicine and other health sciences, community service, business, sales, communications, education or coaching might find the Bachelor of Arts program attractive. The Bachelor of Science could lead to further graduate study in any field related to human biology as well as careers in medicine and other health sciences (e.g., physical therapy), biomechanics and biomedical engineering and medical equipment and pharmaceutical development and sales.

A.B. Major Requirements:

	UNITS
Preparatory Subject Matter	38-41
Biological Sciences 1A-1B-1C	15
Chemistry 2A, 2B	10
Physics 1A-1B or 7A-7B	6-8
Psychology 1	4
Statistics 13, 32, 100, or 102	3-4
Psychology 41 recommended	
Depth Subject Matter	42-48
Biological Sciences 101	4
Neurobiology, Physiology, and Behavior 101	5
Cell Biology and Human Anatomy 101 and 101L	7
Exercise Biology 101, 102, 103, 104L	14
Two additional upper division courses in Exercise Biology	6-8
Select one additional course from two of the three content areas listed below	6-10
Sociology and Culture Option African American and African Studies 100; Anthropology 101; Communication 161; Community and Regional Development 176; Exercise Biology 120; History 178; History and Philosophy of Science 150; Science and Society 105, 120; Sociology 122, 154, 159, 172	
History and Philosophy Option Dramatic Art 141; History 135A, 135B, 136, 139A, 139B, 185A, History and Philosophy of Science 130A, 130B, 131; Philosophy 108	
Psychology and Communication Option Agricultural and Resource Economics 112, Communication 134, 136; Environmental Science and Policy 126; Exercise Biology 121, 122; Human Development 100C; Psychology 101, 121, 126, 140, 156	
No variable unit courses or Exercise Biology 146, 146L, 147L, 148, 148L or 149L may be used to fulfill these requirements. Consult your adviser regularly.	
Total Units for the Major	80-89

B.S. Major Requirements:

	UNITS
Preparatory Subject Matter	60-74
Biological Sciences 1A-1B-1C	15
Chemistry 2A-2B-2C	15
Chemistry 8A-8B or 118A-118B-118C	6-12
Mathematics 16A-16B-16C or 21A-21B-21C-21D	9-16
Physics 7A-7B-7C or 9A-9B-9C	12
Statistics 13, 32, 100, or 102	3-4
Psychology 1 is highly recommended.	
Mathematics 21A-21B-21C-21D, 22A-	

22B, Physics 9A-9B-9C-9D and Engineering 5, 35 are recommended for students interested in the Biomechanics option.

Depth Subject Matter48-51
 Biological Sciences 101, 102, 103, 104....13
 Neurobiology, Physiology, and Behavior 1015
 Cell Biology and Human Anatomy 101 and 101L7
 Exercise Biology 101, 102, 103, 104L.....14
 Completion of one Option listed below, or with adviser approval, one course from each option, including 2 units of laboratory9-12
Physiology Option
 Exercise Biology 110, 1116
 Select 1 course from Exercise Biology 113, 116; Neurobiology, Physiology, and Behavior 112, 113, 140.....3-4
Biomechanics Option
 Exercise Biology 115, 1266
 Select 1 course from Exercise Biology 113; Engineering 102; Engineering: Applied Science 115; Neurobiology, Physiology, and Behavior 112.....3-4
Applied Exercise Biology Option
 Exercise Biology 112 and 117, or 133 and 135.....6-7
 Select 1 course from Exercise Biology 116, 118; Nutrition 101, 111.....3-5
 No variable unit courses or Exercise Biology 146, 146L, 147L, 148, 148L or 149L may be used to fulfill these requirements. Consult your adviser regularly.

Total Units for the Major108-125

Major Advisers. W.C. Adams, E.M. Bernauer, D. Hawkins, R.G. Holly, P.B. Salitsky, K.R. Williams.

Graduate Adviser. D.A. Hawkins.

Minor Program Requirements:

UNITS

Exercise Biology18

At least 18 upper division units in exercise biology from one of three options18
 (a) *Biomechanics*

- 1) Exercise Biology 101, 103.
- 2) Minimum of two courses from Exercise Biology 113, 115, 126.
- 3) Additional courses to complete a total of 18 upper division units. None of the variable-unit courses or Physical Education 100, 128A, 128B, 143, 144, or Exercise Biology 146, 146L, 147L, 148, 148L or 149L may be used to fulfill these requirements. Consult your adviser regularly.

(b) *Exercise Physiology*

- 1) Exercise Biology 101 and one course from 102, 103.
- 2) Minimum of three courses from Exercise Biology 110, 111, 112, 113, 116, 117, 118.
- 3) Additional courses to complete a total of 18 upper division units. None of the variable-unit courses or Physical Education 100, 128A, 128B, 143, 144, or Exercise Biology 146, 146L, 147L, 148, 148L or 149L may be used to fulfill these requirements. Consult your adviser regularly.

(c) *Psychological Aspects*

- 1) Exercise Biology 102, and one course from 101, 103.
- 2) Minimum of two courses from Exercise Biology 120, 121, 122.
- 3) Additional courses to complete a total of 18 upper division units. None of the variable-unit courses or Physical Education 100, 128A, 128B, 143, 144, or Exercise Biology 146, 146L, 147L, 148, 148L or 149L

may be used to fulfill these requirements. Consult your adviser regularly.

Minor Advisers. Same as major advisers.

Honors Program. Those students with outstanding records in the major requirements may elect to enter the Honors Program with the consent of an adviser. A senior project must be completed, for which up to 10 units (minimum of 6 units) of Exercise Biology 199 (split over two quarters) may be earned. These units are taken in addition to the major requirements, and it should be realized that only a maximum of ten 199 units may be counted toward the B.S. degree total unit requirement.

Graduate Study. A program of study and research leading to the M.S. degree is available through the Graduate Group in Exercise Science. For detailed information regarding graduate study, write to the Graduate Adviser, Graduate Group in Exercise Science. See also the Graduate Studies chapter of this catalog.

Graduate Adviser. E.S. Schelegle, K.R. Williams.

The Genetics Major Program

The Genetics major provides a broad background in the biological, mathematical, and physical sciences basic to the study of heredity and evolution. The major is sufficiently flexible to accommodate students interested in the subject either as a basic discipline in the biological sciences or in terms of its applied aspects such as biotechnology, medicine, and agriculture.

The Program. The genetics program begins with the four-course, upper division common curriculum that provides an introduction to the principles of genetics, biochemistry, and cell biology. Students then take additional upper division courses in specialized areas of modern genetics including gene expression, evolution, development, and human genetics, as well as a laboratory course in the principles of genetics. Additional upper division courses in biological sciences are required, including a second laboratory course.

Career Alternatives. The genetics degree provides suitable preparation for a wide variety of careers, including teaching, research, work with biotechnology companies, medicine, and all the health sciences. It is also an excellent background for students wishing to enter a graduate program, a teacher-training program, medical school, veterinary school, or other professional schools.

B.S. Major Requirements:

UNITS

Preparatory Subject Matter60-70

Biological Sciences 1A-1B-1C15
 Chemistry 2A-2B-2C15
 Chemistry 8A-8B or 118A-118B-118C...6-12
 Mathematics 16A-16B-16C or 21A-21B-21C9-12
 Physics 7A-7B-7C12
 Statistics 13, 32, 100, or 102.....3-4

Depth Subject Matter50-51

Biological Sciences 101, 102, 103, 104....13
 Molecular and Cellular Biology 160L, 162, 163, 16413
 Evolution and Ecology 100.....4
 One course from Molecular and Cellular Biology 121, 141, or 161.....3-4
 One course from Microbiology 102-102L; Molecular and Cellular Biology 120L....6
 Restricted Electives.....11
 Upper division courses in genetics or other fields relevant to the student's interest chosen in consultation with the adviser. No more than 4 units of 192, 193, 198, or 199 can be used for credit in this category.

Total Units for the Major110-121

Master Adviser. Contact J.E. Natzle (Molecular and Cellular Biology), 344 Briggs Hall.

Advising Center for the major is located in 156 Briggs Hall (530-752-0202).

Graduate Study. The Graduate Group in Genetics offers study and research leading to the M.S. and Ph.D. degrees in Genetics.

The Microbiology Major Program

Microbiology is the branch of biology that deals with bacteria, yeasts and other fungi, algae, protozoa, and viruses. These microorganisms are ubiquitous in nature and play a crucial role in areas such as agriculture, biotechnology, ecology, medicine, and veterinary science. The field of microbiology contributes to areas of fundamental inquiry such as biochemistry, cell biology, evolution, genetics, molecular biology, pathogenesis, and physiology. The ease and power of simultaneous genetic and biochemical analysis of microbes led to the emergence of the new disciplines of molecular biology and molecular genetics, and spawned the new industry of biotechnology.

The Program. Both undergraduate major programs provide a balance of studies in microbiology, with appropriate courses in mathematics and physical sciences. The A.B. degree program emphasizes the biology of bacteria, while the B.S. degree program includes more biochemistry and related course work. Either program, with judicious course selection, is appropriate for students contemplating a career in medicine or various allied health professions including medical technology, or teaching. The B.S. program is especially well suited for students who want a professional career in microbiology, or who wish to pursue graduate education in a biological science discipline. The choice of a major program and its suitability for particular career options should be discussed with a major adviser.

Career Alternatives. A bachelor's degree in microbiology is excellent preparation for a career in biotechnology, pharmacology, agriculture, and the food industry. It also provides a strong background for students wishing to continue on to professional studies in medicine and the other health sciences.

A.B. Major Requirements:

UNITS

Preparatory Subject Matter43-57

Biological Sciences 1A-1B-1C15
 Chemistry 2A-2B10
 Chemistry 8A-8B or 118A-118B-118C...6-12
 Mathematics 16A-16B or 21A-21B6-8
 Physics 1A-1B or 7A-7B-7C.....6-12

Depth Subject Matter36-43

Biological Sciences 101, 102, 10310
 Microbiology 102, 102L, 105, 14014
 Microbiology 162 or Pathology, Microbiology and Immunology 1283-4
 Three additional courses from Food Science and Technology 104; Microbiology 120, 150, 155L, 160, 170; Molecular and Cellular Biology 120L; Pathology, Microbiology and Immunology 127; Soil Science 111; Statistics 100, 102.....9-15

Total Units for the Major79-100

B.S. Major Requirements:

UNITS

Preparatory Subject Matter60-67

Biological Sciences 1A-1B-1C15
 Chemistry 2A-2B-2C15
 Chemistry 8A-8B or 118A-118B-118C...6-12
 Mathematics 16A-16B-16C9
 Physics 7A-7B-7C12
 Statistics 13, 32, 100 or 102.....3-4

Depth Subject Matter45-49

Biological Sciences 101, 102, 103, 104....13
 Molecular and Cellular Biology 120L6
 Microbiology 102, 102L, 105.....11
 Two courses from Microbiology 140, 150, or 1706

Microbiology 162 or Pathology, Microbiology, and Immunology 1283-4
 Two courses from Food Science and Technology 104; Microbiology 120, 140, 150, 155L, 160, 170, Pathology, Microbiology and Immunology 127; Soil Science 1116-9

Total Units for the Major105-116

Master Adviser. M.L. Wheelis (*Section of Microbiology*), 2202 Storer Hall.

Honors and Honors Program. M.L. Wheelis.

Teaching Credential Subject Representative. M.L. Wheelis. See also the Teacher Education Program.

Graduate Study. The Graduate Group in Microbiology offers programs of study and research leading to the M.S. and Ph.D. degrees in microbiology.

For detailed information regarding graduate study in microbiology, address the Graduate Group Chairperson, Section of Microbiology.

Related Courses. The offerings of the Section of Microbiology are augmented by courses and faculty of Evolution and Ecology; Food Science and Technology; Land, Air, and Water Resources; Medical Microbiology; Medicine and Epidemiology; Molecular and Cellular Biology; Pathology, Microbiology and Immunology; Plant Biology; Plant Pathology; Viticulture and Enology.

Faculty of the Section of Microbiology also teach or participate in the following courses: Biological Sciences 1A, 10, 101 and 104.

The Neurobiology, Physiology, and Behavior Major Program

Neurobiology, Physiology, and Behavior is a major that emphasizes the understanding of vital functions common to all animals. All animals perform certain basic functions—they grow, reproduce, move, respond to stimuli, and maintain homeostasis. The physiological mechanisms upon which these functions depend are precisely regulated and highly integrated. Actions of the nervous and endocrine systems determine behavior and the interaction between organisms and their physical and social environments. Students in this major study functional mechanisms; the control, regulation, and integration of these mechanisms; and the behavior that relates to those mechanisms. They do so at the level of the cell, the organ system, and the organism.

The Program. In the freshman and sophomore years, students majoring in neurobiology, physiology, and behavior build a broad scientific background, taking courses in chemistry, biology, physics, and mathematics. As juniors or seniors, students can enroll in a variety of Neurobiology, Physiology and Behavior courses and related upper division courses. Students can participate in a number of advanced laboratory courses or may design an individual, independent project guided by a member of the faculty.

Career Alternatives. Completion of the neurobiology, physiology, and behavior major provides the foundation for advanced study leading to careers in high school teaching, college level teaching or research. It also serves as the basis for further training in the health professions, including but not limited to human and veterinary medicine, medical technology, physical therapy, pharmacy, dentistry and optometry. The major is also appropriate for those intending to seek careers in biotechnology or other biologically related industries.

B.S. Major Requirements:

UNITS

Preparatory Subject Matter60-70
 Biological Sciences 1A-1B-1C15
 Chemistry 2A-2B-2C15
 Chemistry 8A-8B or 118A-118B-118C...6-12
 Mathematics 16A-16B-16C or 21A-21B-21C9-12
 Physics 7A-7B-7C12
 Statistics 13, 32, 100 (recommended), or 1023-4

Depth Subject Matter50-51
 Biological Sciences 101, 102, 103, 104....13
 Neurobiology, Physiology, and Behavior 100, 101, 101L, 102, 104L19
 Select three or more units of laboratory course work from the following list.....3
 Neurobiology, Physiology, and Behavior 106, 111C, 111L, 160L, 194H; other courses with the approval of the master adviser.

Additional neurobiology, physiology, and behavior depth unit requirement12
 All other Neurobiology, Physiology, and Behavior courses not used in satisfaction of any other requirement; or Anthropology 154A, 154B; or Entomology 104; or Exercise Biology 101, 102, 111. Courses 192, 197T, 199 may not be used to satisfy the depth unit requirement.

One course from Anthropology 151, Evolution and Ecology 100, Geology 107 ..3-4

Total Units for Major110-121

Master Adviser. J. Goldberg (*Section of Neurobiology, Physiology, and Behavior*), 191 Briggs Hall.

Advising Center. 188 Briggs Hall (530-752-9696)

Graduate Study. Information on graduate study in neuroscience, physiology or behavior may be obtained by writing the Graduate Adviser, Graduate Group Complex. See also the graduate course offerings listed under Animal Behavior Graduate Group, Neuroscience Graduate Group, and Physiology Graduate Group. See also the Graduate Studies chapter of this catalog.

The Plant Biology Major Program

Plant Biology is the scientific study of plants as organisms. It includes the disciplines of cellular and molecular plant biology and the traditional areas of botany, such as anatomy, morphology, systematics, physiology, mycology, phycology, ecology, and evolution.

The Program. The plant biology major consists of core courses in applied plant biology, plant anatomy, plant physiology, and plant ecology, as well as biochemistry, cell biology, and genetics. In addition, students complete a set of courses in one of the following areas: (1) general botany; (2) applied plant biology; (3) plant evolution and ecology; (4) plant genetics and breeding; and (5) plant physiology, development, and molecular biology. The major provides breadth in diverse areas of plant biology and depth in one of several areas of specialization. Independent research opportunities in plant biology are available. Consult with an adviser.

Career Alternatives. A plant biology degree is an excellent credential for a wide range of career options, including domestic and international opportunities in business, research and teaching in both governmental and private sectors. Plant biologists can work in the field, in the forest, in the laboratory, in botanical gardens or nurseries, in food or seed companies, or in pharmaceutical, energy or chemical industries, and pursue rewarding careers in the areas of biotechnology, environmental protection, farming, or agribusiness. The program is also an excellent background for students wishing to enter graduate or other professional schools, including medicine, law or journalism.

A.B. Major Requirements:

UNITS

Preparatory Subject Matter35
 Biological Sciences 1A-1B-1C15
 Chemistry 2A-2B, 8A-8B16
 Agricultural Systems and Environment 120 or Statistics 13 or 100 or 1024
Depth Subject Matter41-43
 Biological Sciences 1014
 Evolution and Ecology 108 or Plant Biology 102 or 108.....5
 Evolution and Ecology 140 or Plant Biology 1164-5

Plant Biology 105, 111, 112, and Plant Biology 117/Evolution and Ecology 117 ...15
 Additional upper division units in Plant Biology or related natural science courses13-14

Total Units for the Major76-78

Recommended

Chemistry 2C; Evolution and Ecology 100; Plant Biology 118, and Plant Biology 148/Plant Pathology 148.

For students with interests in specialized areas of plant biology (e.g., agricultural botany, ecology, systematics and evolution, morphology, plant physiology, etc.), certain substitutions, including courses in other sections or departments, may be allowed upon prior consultation with a Plant Biology major adviser.

B.S. Major Requirements:

UNITS

Preparatory Subject Matter60-67
 Biological Sciences 1A-1B-1C15
 Chemistry 2A-2B-2C15
 Chemistry 8A-8B or 118A-118B-118C...6-12
 Mathematics 16A-16B-16C9
 Physics 7A-7B-7C12
 Agricultural Systems and Environment 120 or Statistics 13, 32, 100, or 1023-4

Depth Subject Matter45

Biological Sciences 101 or Plant Biology 152 (Students completing the Applied Plant Biology option or the Plant Genetics and Breeding option should take Plant Biology 152)4
 Biological Sciences 102, 103, 1049
 Plant Biology 105, 1118
 Completion of one option listed below24
 Research experience through internships or special studies is recommended.

General Botany option

Evolution and Ecology 100, Plant Biology 1127
 Plant Biology 117 or 1424
 One course from the Applied Plant Biology course list (Plant Biology 175 recommended)3-5
 One course from the Evolution and Diversity course list3-5
 Additional upper division course work from any of the five course lists, chosen in consultation with an adviser, to achieve a total of 24 or more units. At least one course chosen from the option course lists must include a formal laboratory or fieldwork section3-7

Applied Plant Biology option

Plant Biology 1123
 Plant Biology 142 or 1433-4
 Plant Biology 160, 1757
 Molecular and Cellular Biology 120L; Plant Biology 111L, 153, 158, 172L, 189; or Plant Pathology 1202-6
 Additional upper division course work from the Applied Plant Biology course list to achieve a total of 24 or more units4-9

Plant Evolution and Ecology option

Evolution and Ecology 1004
 Plant Biology 117 or 1424
 One course from the Applied Plant Biology course list (Plant Biology 175 recommended)3-5
 Additional upper division course work from the Ecology and/or Evolution and Diversity course lists to achieve a total of 24 or more units. At least one course chosen must include a formal laboratory or fieldwork section11-13

Plant Genetics and Breeding option

Plant Biology 108 or 1433-5
 Plant Biology 1544
 Plant Biology 112 or 113 or 1603
 Plant Biology 161A or 161B4

Additional upper division course work from the Plant Genetics and Breeding course list to achieve a total of 24 or more units8-10

Plant Physiology, Development and Molecular Biology option

Plant Biology 1123
 Molecular and Cellular Biology 120L, 170L; Plant Biology 111L or 1534-6
 One course from the Applied Plant Biology course list (Plant Biology 175 recommended)3-5
 One course from the Ecology course list (Plant Biology 117 recommended)3-4
 One course from the Evolution and Diversity course list3-5
 Additional upper division course work from the Plant Physiology, Development, and Molecular Biology course list to achieve a total of 24 or more units1-8

Total Units for the Major105-112

Course Lists

Applied Plant Biology

Agricultural Systems and Environment 107, 110A, 110B, 110C, 110L, 112, 118, 150, 170A, 170B, 195; Atmospheric Science 133; Entomology 100, 100L, 110, 119, 135; Environmental Horticulture 102, 105, 120, 125, 130, 133; Environmental Toxicology 101; Hydrologic Science 124; International Agricultural Development 160; Nematology 100, 110; Plant Biology 119, 141, 142, 143, 146, 151, 152, 153, 154, 157, 158, 160, 171, 172, 172L, 173, 174, 175, 176, 177, 178, 188, 196; Plant Pathology 120; Soil Science 100, 105, 109, 111; Viticulture and Enology 101A, 101B, 101C, 110, 115, 116, 118.

Ecology

Agricultural Systems and Environment 112; Environmental Science and Policy 121, 123, 124, 150C, 151, 151L, 155, 155L; Evolution and Ecology 121, 138; Hydrologic Science 122, 122L, 124; Plant Biology 117, 119, 142, 146; Plant Pathology 150.

Evolution and Diversity

Evolution and Ecology 100, 102, 140, 149; Plant Biology 102, 108, 116, 118, 143, 148.

Plant Genetics and Breeding

Agricultural Systems and Environment 118, 150; Entomology 110; Evolution and Ecology 100; Molecular and Cellular Biology 161, 164; Plant Biology 116, 117, 142, 151, 153, 157, 175; Plant Pathology 120, 130.

Plant Physiology, Development, and Molecular Biology

Molecular and Cellular Biology 126; Plant Biology 113, 125, 153, 157, 158, 160; Plant Pathology 130.

Master Adviser. A. Stemler, Plant Biology Section Office, 2220 Life Sciences Addition.

Minor Program Requirements:

UNITS

Plant Biology23

Biological Sciences 1C (or equivalent introductory plant biology course)5

Upper division units, including at least one course from each of the following four groups18

(a) *Anatomy and morphology:*

Evolution and Ecology 140; Plant Biology 105, 116, 118.

(b) *Physiology and development:*

Plant Biology 111, 112, 125; Plant Pathology 130.

(c) *Evolution and ecology:*

Evolution and Ecology 100; Plant Biology 102, 117, 143.

(d) *Applied plant biology:*

Agricultural Systems and Environment 110A, 110B; Plant Biology 154, 160, 171, 172, 175.

Minor Adviser. Same as for major above.

Honors and Honors Programs. Students on the honors list may elect to substitute a maximum of 5 units of 194H for 5 upper division units of the regular major; however, recommendations for high honors and highest honors at graduation are not dependent on the completion of 194H. Refer to the Academic Information chapter and the appropriate College section for Dean's Honors List information.

Teaching Credential Subject Representative. R.M. Thornton (*Section of Plant Biology*), 278 Robbins Hall. See also the Teacher Education Program.

Graduate Study. Consult the Plant Biology Graduate Group listing.

Divisionwide Programs and Courses

Bodega Marine Laboratory Program

A full quarter of undergraduate course work in marine biology is available each spring quarter at the Bodega Marine Laboratory, located in Bodega Bay, California. Course offerings include lecture and laboratory instruction in the developmental biology and physiological adaptation of marine organisms, and population biology and ecology; a weekly colloquium; and an intensive individual research experience under the direction of laboratory faculty (Biological Sciences courses 120, 120P, 122, 122P, 123; Neurobiology, Physiology, and Behavior 141, 141P). This is a 15 unit program and course offerings and instructors may vary from year to year.

The program is residential, with students housed on the laboratory grounds. Participants are assessed a room and board fee in addition to standard campus registration fees. An application is required. Obtain forms from the Division of Biological Sciences. Applications are due before RSVP Pass 1 registration begins for spring quarter. Additional information on the Bodega Marine Laboratory Program is available from the Undergraduate Programs Office, 202 Life Sciences Addition, or directly from Bodega Marine Laboratory, 707-875-2211, P.O. Box 247, Bodega Bay, CA 94923.

Courses in Biological Sciences (BIS)

Lower Division Courses

1A. Introductory Biology (5)

Lecture—4 hours; discussion—1 hour. Prerequisite: Chemistry 2B (may be taken concurrently). Introduction to biological molecules, bioenergetics, cell structure and function, elements of molecular biology and genetics, and viruses. Interdisciplinary course for majors in the biological sciences.—I, II, III. (I, II, III.)

1B. Introductory Biology (5)

Lecture—3 hours; laboratory—3 hours; discussion—1 hour. Introduction to evolution and animal diversity, including transmission and population genetics, micro and macroevolution, systematics, classification, and a survey of major animal groups.—I, II, III. (I, II, III.) Keen, Rosenheim, Kimsey, Stamps, Ward, Wainwright

1C. Introductory Biology (5)

Lecture—4 hours; laboratory—3 hours. Survey of diversity within the plant, protista, and fungi kingdoms, emphasizing flowering plant structure, function, evolution, and ecology. Ecological principles, including population dynamics, life history patterns, community interactions and composition, ecosystems, and world biomes. GE credit: SciEng, Wrt.—I, II, III. (I, II, III.)

10. General Biology (4)

Lecture—3 hours; discussion—1 hour. Concepts and issues in biology. Emphasis on composition and structure of organisms; regulation and signaling; heredity, evolution and the interaction and interdependence among life forms and their environments. Significant writing is required. Designed for students

not specializing in biology. Not open for credit to students who have completed course 1A or 10V. GE credit: SciEng, Wrt.—I, II, III.

10V. General Biology (4)

World Wide Web virtual lecture—3 hours; World Wide Web electronic discussion—1 hour. Concepts and issues in biology. Emphasis on composition and structure of organisms; regulation and signaling; heredity, evolution and the interaction and interdependence among life forms and their environments. Significant writing is required. Designed for students not specializing in biology. Not open for credit to students who have completed course 1A or 10. GE credit: SciEng, Wrt.—III.

11. Issues in the Life Sciences (2)

Lecture—1 hour; discussion—1 hour. Prerequisite: enrollment limited to BUSP students, consent of instructor. The range of subjects and approaches in the field of biology, including both basic and applied research topics.—I. (I.)

11L. Basic Life Sciences Laboratory (2)

Laboratory—6 hours. Prerequisite: enrollment limited to BUSP students, consent of instructor. Basic laboratory skills in life sciences research, including microbiology, molecular biology, and genetics.

15. Biology of Aging (3)

Lecture—3 hours. Biological basis of the aging process. Topics include the normal aging process, developmental influence on the rate of aging, diseases of the aged, theories of aging, and mechanisms for modifying aging. Designed for students with limited biology backgrounds.—I. (I.) McDonald

92. Internship in Biological Sciences (1-12)

Internship—3-36 hours. Prerequisite: lower division standing and consent of instructor. (P/NP grading only.)

98. Directed Group Study (1-5)

Prerequisite: consent of instructor. Primarily for lower division students. (P/NP grading only.)

99. Special Study for Undergraduates (1-5)

Prerequisite: lower division standing and consent of instructor. (P/NP grading only.)

Upper Division Courses

101. Genes and Gene Expression (4)

Lecture—4 hours. Prerequisite: course 1A and 1B, Chemistry 8B or 118B or 128B (may be taken concurrently). Nucleic acid structure and function; gene expression and its regulation; replication; transcription and translation; transmission genetics; molecular evolution.—I, II, III. (I, II, III.) Dvorak, Gottlieb, Heyer, Quiros, Rodriguez, L. Rose, Sanders

101D. Genes and Gene Expression Discussion (1)

Discussion—1 hour. Prerequisite: course 101 concurrently. Discussion and problem solving related to fundamental principles of classical and molecular genetics as presented in course 101. (P/NP grading only.)—I, II, III. (I, II, III.)

102. Structure and Function of Biomolecules (3)

Lecture—3 hours. Prerequisite: Chemistry 8B or 118B or 128B. Structure and function of macromolecules with emphasis on proteins; enzyme kinetics; supramolecular assemblies; membranes; cytoskeleton; cell motility and cell division.—I, II, III. (I, II, III.) Gasser, Hiit, Hjelmeland, Sprechman, Theg

103. Bioenergetics and Metabolism (3)

Lecture—3 hours. Prerequisite: course 102. Fundamentals of metabolism including glycolysis and oxidative pathways; photosynthesis; biosynthesis of amino acids, nucleic acids and proteins.—I, II, III. (I, II, III.) Abel, Callis, Doi, Mitchell, I. Segel, L. Segel

104. Regulation of Cell Function (3)

Lecture—3 hours. Prerequisite: course 101, 102. Membrane receptors and signal transduction; cell trafficking; cell cycle; cell growth and division; extracellular matrix and cell-cell junctions; cell development; immune system.—I, II, III. (I, II, III.) Baskin, Crowe, Edwards, Etzler, Kaplan, Myles, Shiozaki

120. Developmental Biology of Marine Invertebrates (4)

Lecture—30 hours total; laboratory—30 hours total. Prerequisite: Molecular and Cellular Biology 150-

150L, Biological Sciences 102 and 103; course 123 concurrently. Phylogenetic patterns of reproduction and development among the marine invertebrates. Emphasis on both modern and classical approaches to understanding gametogenesis, gamete interaction and fertilization, cleavage, cell differentiation, morphogenesis, and larval development and metamorphosis. Course offered at Bodega Marine Laboratory. (See above description for Bodega Marine Laboratory Program.)—III. (III.)

120P. Developmental Biology of Marine Invertebrates/Advanced Laboratory Topics (6)
Laboratory—150 hours total; discussion—10 hours total. Prerequisite: course 120 concurrently. Students pick a research topic for intense study. Research will be related to a topic covered in course 120 and will be conducted at the Bodega Marine Laboratory with close supervision of resident faculty. (See above description for Bodega Marine Laboratory Program.)—III. (III.)

122. Population Biology and Ecology (3)
Lecture—2 hours; laboratory—3 hours. Prerequisite: courses 1A, 1B, and 1C. Residence at Bodega Marine Laboratory required. Biological and physical processes affecting plant and animal populations in the rich array of habitats at the Bodega Marine Laboratory ecological preserve. Emphasis on field experience, with complementing lectures to address population and community processes. (See Bodega Marine Laboratory Program.)—III. (III.) Strong, Morgan

122P. Population Biology and Ecology/Advanced Laboratory Topics (5)
Laboratory—12 hours; discussion—1 hour. Prerequisite: course 122 concurrently. Residence at Bodega Marine Laboratory required. Training in scientific research, from hypothesis testing to publication, including methods of library research. Research related to topic covered in course 122. Final presentation both oral and written. (See Bodega Marine Laboratory Program.)—III. (III.) Strong, Morgan

123. Undergraduate Colloquium in Marine Science (1)
Seminar—1 hour. Prerequisite: enrolled student at the Bodega Marine Laboratory. Series of weekly seminars by recognized authorities in various disciplines of marine science from within and outside the UC system. Includes informal discussion with speaker. Course will be held at Bodega Marine Laboratory. (P/NP grading only.) (See above description for Bodega Marine Laboratory Program.)—III. (III.)

192. Internship in Biological Sciences (1-12)
Internship—3-36 hours. Prerequisite: upper division standing and consent of instructor. (P/NP grading only.)

194H. Research Honors (2)
Independent study—6 hours. Prerequisite: senior standing. Students majoring in Biological Sciences who have completed two quarters (3-5 units per quarter) of 199 and who qualify for the honors program as defined by the current catalog. Opportunity for Biological Sciences majors to pursue intensive research culminating in the writing of a senior thesis with the guidance of faculty advisers. (P/NP grading only.)

195A. Science Teaching Internship Program (4)
Lecture/discussion—2 hours; internship—6 hours. Prerequisite: upper division standing in a science major or consent of instructor. Basic teaching techniques including lesson planning, classroom management, and presentation skills. Interns spend time in K-12 science classrooms working with a master teacher observing, assisting with labs and activities, managing students, and teaching lessons. (P/NP grading only.)—I, II, III. (I, II, III.) Rost, Lusebrink

195B. Science Teaching Internship (1-5)
Internship—3-15 hours. Prerequisite: course 195A. Reinforcement of teaching techniques learned in 195A with additional classroom experiences in K-12 science classrooms working with a master teacher observing, assisting with labs and activities, managing students, and teaching lessons. May be repeated

once for credit with consent of instructor. (P/NP grading only.)—I, II, III. (I, II, III.) Rost, Lusebrink

197T. Tutoring in Biological Sciences (1-3)
Prerequisite: upper division standing; appropriate background in biological sciences. Assisting in courses in Biological Sciences under the direction of the faculty. (P/NP grading only.)

198. Directed Group Study (1-5)
Prerequisite: consent of instructor. (P/NP grading only.)

199. Special Study in Biological Sciences (1-5)
Prerequisite: upper division standing and consent of instructor. (P/NP grading only.)

Graduate Courses

298. Group Study (1-5)
Prerequisite: consent of instructor. Division of Biological Sciences staff members may offer group study courses under this number.

Professional Course

310. Effective Teaching of College Biology (2)
Informal lecture/discussion—2 hours. Teaching function of an academic career; objectives, nature, and methods of effective teaching; design of curricula and courses; lecturing and leading discussions; examinations and grading; evaluation; counseling; innovation. (S/U grading only.)—II. (II.)

Sections of the Division of Biological Sciences

Biological Sciences: Evolution and Ecology

Faculty

Primary Section Members

David J. Begun, Ph.D., Assistant Professor
Peter L. Chesson, Ph.D., Professor
James A. Doyle, Ph.D., Professor
John H. Gillespie, Ph.D., Professor
Leslie D. Gottlieb, Ph.D., Professor
Richard K. Grosberg, Ph.D., Professor
Charles H. Langley, Ph.D., Professor
Sergey V. Nuzhdin, Ph.D., Associate Professor
Robert W. Pearcy, Ph.D., Professor
Marcel Rejmanek, Ph.D., Professor
Michael J. Sanderson, Ph.D., Professor
Thomas W. Schoener, Ph.D., Professor
H. Bradley Shaffer, Ph.D., Professor
Arthur M. Shapiro, Ph.D., Professor, *Academic Senate Distinguished Teaching Award*
John J. Stachowicz, Ph.D., Assistant Professor
Judy A. Stamps, Ph.D., Professor
Maureen L. Stanton, Ph.D., Professor
Sharon Y. Strauss, Ph.D., Associate Professor
Donald R. Strong, Ph.D., Professor
Catherine A. Toft, Ph.D., Professor
Michael Turelli, Ph.D., Professor
Peter C. Wainwright, Ph.D., Associate Professor

Emeriti Faculty

Milton Hildebrand, Ph.D., Professor Emeritus,
Academic Senate Distinguished Teaching Award
Everett W. Jameson, Ph.D., Professor Emeritus
Peter R. Marler, Ph.D., Professor Emeritus
Timothy Prout, Ph.D., Professor Emeritus
Robert L. Rudd, Ph.D., Professor Emeritus
Kenneth E. F. Watt, Ph.D., LL.D., Professor Emeritus
Grady L. Webster, Ph.D., Professor Emeritus

Affiliated Faculty

Susan L. Keen, Ph.D., Lecturer

Courses in Evolution and Ecology (EVE)

Lower Division Courses

2. Biodiversity (3)

Lecture—2 hours; lecture/discussion—1 hour. Introduction to nature, scope and geographical distribution of biodiversity (the diversity of life, with emphasis on plants and animals, especially insects). Humans and biodiversity—domestication, aesthetics, ethics and valuation. Species richness and "success." Biodiversity through time; monitoring, evaluation and conservation. Biomes—global, continental and Californian. (Same course as Entomology 2.) GE credit: SciEng, Wrt.—I. (I.) Gullan, Cranston, Shaffer

92. Internship (1-12)

Internship—3-36 hours. Prerequisite: lower division standing and consent of instructor. Work experience off and on campus in all subject areas offered in the Section of Evolution and Ecology. Internships supervised by a member of the faculty. (P/NP grading only.)

99. Special Study for Lower Division Students (1-5)
(P/NP grading only.)

Upper Division Courses

100. Introduction to Evolution (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: Biological Sciences 1A, 1B, 1C, 101; Mathematics 16A, 16B, 16C or the equivalent; Statistics 13 or 100 (Statistics 100 recommended). A general survey of the origins of biological diversity and evolutionary mechanisms.—I, II, III. (I, II, III.) Nuzhdin, Begun, Stanton, Grosberg

101. Introduction to Ecology (4)

Lecture—3 hours; lecture/discussion—1 hour. Prerequisite: Biological Sciences 1A, 1B, 1C; Mathematics 16A, 16B, 16C or the equivalent. A general survey of the principles of ecology.—I, II, III. (I, II, III.) Schoener, Toft, Strong, Stachowicz, Chesson

102. Population and Quantitative Genetics (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: Biological Sciences 101, and Statistics 100 or 102, and course 100. Evolution as caused by random mating, genetic drift, natural selection, inbreeding, migration, and mutation in theory and actuality. The resemblance between relatives and consequences of selection for quantitative traits. Application of these ideas to topics such as the evolution of sex.—I. (I.) Langley

103. Phylogeny and Macroevolution (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 100. Patterns and processes of evolution above the species level. Homology, homoplasy, and character evolution. Adaptive radiation; modes and rates of diversification. Evolution of complexity, and macroevolution of the genome. Principles of phylogeny reconstruction and their application to macroevolutionary studies.—II. (II.) Sanderson

104. Community Ecology (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 101 or Environmental Science and Policy 100. Population growth and density dependence; predation; exploitative, interference and apparent competition; coexistence mechanisms; niches, spatial and temporal variation; stability, diversity, and productivity of food webs; applications to conservation and biological control. Emphasis on quantitative understanding through models, concepts, and empirical evidence.—II. (II.) Chesson

105. Phylogenetic Analysis of Vertebrate Structure (4)

Lecture—2 hours; laboratory—6 hours. Prerequisite: Biological Sciences 1A, 1B. The structure of the classes and subclasses of vertebrates is described and interpreted in terms of phylogeny.—II. Wainwright

108. Systematics and Evolution of Angiosperms (5)

Lecture—3 hours; laboratory—6 hours. Prerequisite: Biological Sciences 1A, 1B and 1C. Diversity and classification of angiosperms (flowering plants) on a world scale, and current understanding of the origin of angiosperms and evolutionary relationships and trends within them based on morphological and molecular evidence. (Same course as Plant Biology 108.) GE credit: SciEng.—III. (III.) Doyle

112. Invertebrate Zoology (4)

Lecture—4 hours. Prerequisite: Biological Sciences 1A, 1B; course 112L (concurrently); courses in systematics, ecology, and evolution recommended. Survey of the invertebrate phyla emphasizing aquatic forms and focusing on morphology, development, natural history, and phylogenetic relationships.—(II.) Grosberg, Stachowicz

112L. Laboratory for Invertebrate Zoology (3)

Discussion—1 hour; laboratory—6 hours. Prerequisite: Biological Sciences 1A, 1B; course 112 concurrently. Field and laboratory experience with representative members of the invertebrate phyla discussed in course 112. Emphasis on comparative morphology, natural history, ecology, and behavior of living invertebrates.—(II.) Grosberg, Stachowicz

115. Marine Ecology (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: Environmental Science and Policy 100 or course 101 or consent of instructor. Processes affecting the distribution, abundance, and diversity of plant and animal life in the sea. Introduction to marine habitat diversity and human impacts on marine ecosystems.—(I.) Stachowicz

117. Plant Ecology (4)

Lecture—3 hours; fieldwork—3 hours. Prerequisite: Biological Sciences 1A, 1B, 1C; Plant Biology 111 recommended. The study of the interactions between plants, plant populations or vegetation types and their physical and biological environment. Special emphasis on California. Four full-day field trips and brief write-up of class project required. (Same course as Plant Biology 117.)—(I.) Pearcy

119. Population Biology of Weeds (3)

Lecture—2 hours; laboratory—3 hours. Prerequisite: Biological Sciences 1A, 1B, 1C; introductory statistics recommended. Origin and evolution of weeds, reproduction and dispersal, seed ecology, modeling of population dynamics, interactions of weeds and crops, biological control. Laboratories emphasize design of competition experiments and identification of weedy species. (Same course as Plant Biology 119.) Not open for credit to students who have completed Plant Biology 121.—III. (III.) Rejmanek

134. Herpetology (3)

Lecture—2 hours; term paper. Prerequisite: Biological Sciences 1A, 1B; Evolution and Ecology 100 recommended. The world-wide diversity of amphibians and reptiles with emphasis on behavior, ecology, functional morphology, and evolutionary history. Offered in alternate years.—III. Shaffer

134F. Field Herpetology (2)

Fieldwork—5 hours; lecture/discussion—1 hour. Prerequisite: Biological Sciences 1A, 1B, concurrent enrollment in course 134 and 134L. Multi-day field trips to major California habitats focus on identification of, and ecological experiments on, amphibian and reptile species. Students work in teams to plan experiments, collect and analyze data, write up results and give oral presentations to the class. Offered in alternate years.—III. Shaffer

134L. Herpetology Laboratory (2)

Laboratory—6 hours. Prerequisite: Biological Sciences 1A, 1B, course 134 concurrently. The diagnostic characteristics and functional attributes of amphibians and reptiles, emphasizing ecological, biogeographic and phylogenetic patterns. Field experience with common species of reptiles and amphibians in the Davis area. Offered in alternate years.—III. Shaffer

138. Ecology of Tropical Latitudes (5)

Lecture—3 hours; discussion—1 hour; extensive writing. Prerequisite: one course in Biological Sci-

ences, Entomology, Wildlife, Fish and Conservation Biology, Geography, or tropical experience, or consent of instructor. Biological, physical, and human-related aspects of the ecology of low latitudes. Distribution, numbers, and relationships of tropical organisms. Problems of development and conservation in the context of ecological and evolutionary theory. Offered in alternate years. GE credit: SciEng, Wrt.—III. Shapiro

140. Paleobotany (4)

Lecture—3 hours; laboratory—3 hours. Prerequisite: Biological Sciences 1A, 1B, 1C. Introduction to plant fossil record, beginning with invasion of land in the Silurian, emphasizing origin and evolution of major groups and adaptations and changing composition and distribution of floras in relation to plate tectonics and climatic change.—(I.) Doyle

141. Principles of Systematics (3)

Lecture—2 hours; biweekly research projects. Prerequisite: Biological Sciences 1B or 1C; course 100 recommended. Historical background, philosophical rationale, contemporary approaches, and working rules of biosystematics, including International Code of Zoological Nomenclature. Offered in alternate years. GE credit: SciEng, Wrt.—(III.) Shapiro

147. Biogeography (4)

Lecture—3 hours; term paper. Prerequisite: Biological Sciences 1A, 1B. Movements of terrestrial organisms. The role of geologic, climatic, and biologic changes in the geographic distribution of organisms. Offered in alternate years.—(I.) Shapiro

149. Evolution of Ecological Systems (4)

Lecture—3 hours; term paper. Prerequisite: course 101 or Environmental Studies 100 (or the equivalent), and course 100 (or the equivalent). Evolution as an organizing force in natural communities. Coadaptation in trophic and competitive relationships. Ecology of polymorphisms, clines, and speciation. Offered in alternate years.—(I.) Shapiro

175. Computational Genetics (3)

Lecture—2 hours; discussion—1 hour. Prerequisite: Biological Sciences 101 and Statistics 100 or 102. The use of computers to solve problems in genetics and evolution. Introduction to a general purpose computer language (Python), computational statistical methods, and applications such as QTL mapping, linkage detection, estimation of rates of evolution, and gene finding.—(II.) Gillespie

180A-180B. Experimental Ecology and Evolution in the Field (4-4)

Lecture/laboratory—3 hours; fieldwork—3 hours. Prerequisite: course 100; course 101 or Environmental Science and Policy 100. Experimental design in field ecology. Students will critique primary literature, design project, gather and analyze data. Students required to write original research paper based on field experiments. Offered in alternate years. (Deferred grading only pending completion of sequence.)—II-III. Strauss, Stanton

189. Introduction to Biological Research (1)

Discussion—1 hour. Prerequisite: upper division standing in Evolution and Ecology or related biological science; consent of instructor. Introduction to research methods in biology. Presentation and discussion of research by faculty, graduate, and undergraduate students. May be repeated for credit up to a total of 3 units. (P/NP grading only.)—I, II, III. (I, II, III.)

190. Undergraduate Seminar (2)

Seminar—2 hours. Prerequisite: upper division standing in the biological sciences or a related discipline. Student reports on current topics with emphasis on integration of concepts, synthesis, and state-of-the-art research approaches. Reviews of literature and reports of undergraduate research may be included. May be repeated for credit. (P/NP grading only.)—I, II, III. (I, II, III.) Shapiro

192. Internship (1-12)

Internship—3-36 hours. Prerequisite: completion of 84 units and consent of instructor. Work experience off and on campus in all subject areas offered in the Section of Evolution and Ecology. Internships supervised by a member of the faculty. (P/NP grading only.)

194HA-194HB-194HC. Research Honors

Laboratory—6 hours. Prerequisite: Students who have completed 135 units and qualify for the honors program (as defined by the current catalog). Students pursue intensive research under the guidance of a faculty adviser. Students are expected to complete the full three-quarter sequence culminating in the writing of an honors thesis. (Deferred grading only, pending completion of sequence.)

197T. Tutoring (1-5)

Tutorial—1-5 hours. Prerequisite: upper division standing. Experience in teaching under guidance of the staff. (P/NP grading only.)

198. Directed Group Study (1-5)

(P/NP grading only.)

199. Special Study for Advanced Undergraduates (1-5)

(P/NP grading only.)

Graduate Courses**210. Molecular Phylogenetic Analysis (3)**

Lecture—2 hours; laboratory—3 hours. Theory and practice of inferring phylogenetic trees using molecular sequence data. Practical techniques for obtaining sequence data, advantages and disadvantages of common approaches for inferring trees, statistical methods for comparing alternative hypotheses. (Same course as Nematology 210.) Offered in alternate years.—III. Nadler, Sanderson

240. Paleobotany and Angiosperm Evolution (4)

Lecture—3 hours; laboratory—3 hours. Prerequisite: Plant Biology 108, 116, or course 140. Critical analysis of the plant fossil record as a source of evidence on origin, evolution, and phylogeny of the angiosperms, Cretaceous and Tertiary climates, geographic history of modern taxa, and origin of modern vegetation types. Offered in alternate years.—II. Doyle

290C. Research Conference (1)

Discussion—1 hour. Prerequisite: graduate standing and consent of instructor. Presentation and discussion of faculty and graduate student research in biology. May be repeated for credit. (S/U grading only.)—I, II, III. (I, II, III.)

298. Group Study (1-5)

(S/U grading only.)

299. Research (1-12)

(S/U grading only.)

Professional Course**390. Methods of Teaching (2)**

Lecture—1 hour; discussion—1 hour. Prerequisite: graduate standing and consent of instructor. Practical experience in the methods and problems of teaching. Includes analyses of texts and supporting material, discussion of teaching techniques and preparing and conducting of laboratory and discussion sections. May be repeated for credit for a maximum of 8 units. (S/U grading only.)—I, II, III. (I, II, III.)

Biological Sciences: Exercise Science

(College of Letters and Science)

Charles A. Fuller, Ph.D., Chairperson of the Department

Department Office, 264 Hickey Gymnasium
(530-752-0511)

Faculty

David Hawkins, Ph.D., Associate Professor
Robert G. Holly, Ph.D., Senior Lecturer
Melvin R. Ramey, Ph.D., Professor (*Civil and Environmental Engineering*)
Keith R. Williams, Ph.D., Associate Professor

Emeriti Faculty

William C. Adams, Ph.D., Professor Emeritus
Edmund M. Bernauer, Ph.D., Professor Emeritus
Willard S. Lotter, Ed.D., Senior Lecturer Emeritus
E. Dean Ryan, Ed.D., Professor Emeritus

Affiliated Faculty

Carol Meredith, Ph.D., Lecturer
Paul B. Salitsky, Ph.D., Lecturer
James D. Shaffrath, M.D., Lecturer

Courses in Exercise Biology (EXB)

(Formerly courses in Exercise Science.)

Lower Division Courses**45. Foundations of Physical Education and Exercise Science (3)**

Lecture—3 hours. An introduction to historical, biomechanical, physiological, psychological and sociological foundations of physical education and exercise science. Not open for credit to students who have taken Physical Education 45.

90X. Lower Division Seminar (1-2)

Lecture—1-2 hours. Prerequisite: lower division standing and consent of instructor. Gives freshman or sophomore level students the opportunity to study a special topic in the general area of Exercise Science in a small class setting. Not open for credit to students who have taken Physical Education 90X.

92. Exercise Science Internship (1-5)

Internship—3-15 hours. Prerequisite: consent of instructor; enrollment dependent on availability of intern positions, with priority given to Exercise Science majors. Work experience in the application of physical activity programs to teaching, recreational, clinical or research situations under department faculty supervision. May be repeated for credit once but no internship units will be counted toward Exercise Biology major. (P/NP grading only.)

97T. Tutoring in Exercise Science (1-5)

Tutorial—2-14 hours; discussion—1 hour. Prerequisite: lower division standing and consent of Department Chairperson. Tutoring of students in exercise science course-related projects. Regular meetings with instructor in charge and written report required. May be repeated for credit. (P/NP grading only.)

97TC. Tutoring Exercise Science in the Community (1-5)

Tutorial—2-15 hours; discussion—1 hour. Prerequisite: lower division standing and consent of Department Chairperson. Tutoring in the community in exercise science related projects under the guidance of the Exercise Science faculty. Regular meetings with instructor in charge and written report required. May be repeated once for credit. (P/NP grading only.)

98. Directed Group Study

Prerequisite: consent of instructor and Department Chairperson. (P/NP grading only.)

99. Special Study for Undergraduates (1-5)

Prerequisite: consent of instructor. (P/NP grading only.)

Upper Division Courses**101. Exercise Physiology (4)**

Lecture—4 hours. Prerequisite: Neurobiology, Physiology, and Behavior 101. Physiological responses to acute exercise, and physiologic adaptations to both chronic exercise (training) and selected environmental stresses. Emphasis on the muscular, metabolic, cardiovascular, respiratory and renal responses and adaptations to exercise. Only 1 unit of credit allowed to students who have completed Exercise Science 101. Only 3 units of credit allowed to students who have completed Exercise Science 102. Not open for credit to students who have completed Exercise Science 101 and 102 (Former Exercise Science 101 and 102).—I. (I.) Holly

102. Introduction to Motor Learning and the Psychology of Sport and Exercise (4)

Lecture—4 hours. Prerequisite: Psychology 1 recommended. Theoretical and practical issues in motor

learning, sport psychology, and exercise psychology. Emphasis on how motor skills are acquired and retained, and on the application of social psychology and human motivation studies to human performance. Only 2 units of credit allowed to students who have completed Exercise Science 104. Only 2 units of credit allowed to students who have completed Exercise Science 105. Not open for credit to students who have completed Exercise Science 104 and 105. (Former Exercise Science 104 and 105.) GE credit: SocSci.—I, II. (II.)

103. Analysis and Control of Human Movement (4)

Lecture—4 hours. Prerequisite: Cell Biology and Human Anatomy 101 and 101L, Physics 7A and 7B. Neurobiology, Physiology, and Behavior 101 recommended. Introduction to functional anatomy, neurophysiological basis of motor control, and biomechanics of human movement. Human movement understood in the context of body structures, basic principles of physics, and functional characteristics of nerve and muscle. Only 1 unit of credit allowed to students who have completed Exercise Science 103. Only 3 units of credit allowed to students who have completed Exercise Science 104. Not open for credit to students who have completed Exercise Science 103 and 104. (Former Exercise Science 103 and 104).—III. (III.) Williams

104L. Exercise Science Laboratory (2)

Laboratory—3 hours; discussion—1 hour. Prerequisite: course 101, 102, 103 (the last taken of the three courses may be taken concurrently). Basic principles and analytical procedures involved in the assessment of fundamental physiological, biomechanical, and motor learning and control factors which underlie human movement and performance. Only 1 unit of credit allowed to students who have completed Exercise Science 101L. Only 1 unit of credit allowed to students who have completed Exercise Science 103. Not open for credit to students who have completed Exercise Science 101L and 103. (Former Exercise Science 101L and 103).—I, III. (I, III.)

110. Exercise Metabolism (3)

Lecture—2 hours; laboratory—five 4-hour sessions. Prerequisite: courses 101, 102; Chemistry 2A. Focus on energy metabolic pathways and fuels used during different modes of exercise. Also, exercise-induced adaptations which affect metabolism and performance will be discussed. Experiments in laboratory will utilize a variety of techniques to characterize the metabolic responses to exercise. Not open for credit to students who have taken Physical Education 110. GE credit: SciEng, Wrt.—II. (II.)

111. Environmental Effects on Physical Performance (3)

Lecture—2 hours; laboratory—3 hours, with discussion—1 hour (alternate weeks). Prerequisite: courses 101 and 102, or consent of instructor. The effects of thermal, barometric and gravitational conditions on physiological function and physical performance of humans. Acute and chronic effects, emphasizing physiological adaptations and limitations, will be studied. Not open for credit to students who have taken Physical Education 111.—II. (II.)

112. Clinical Exercise Physiology (4)

Lecture—3 hours; laboratory—3 hours to alternate weekly with discussion—1 hour. Prerequisite: courses 101 and 102, or consent of instructor. Physical activity as a therapeutic modality is examined in normal and diseased populations (cardiovascular, pulmonary, diabetic). Assessment (graded exercise testing), exercise prescription and effects of exercise conditioning are examined in detail. Not open for credit to students who have taken Physical Education 112.—II. (II.) Holly

113. Growth and Development in Human Performance (3)

Lecture—3 hours. Prerequisite: Cell Biology and Human Anatomy 101, and Neurobiology, Physiology and Behavior 101. Development of human performance potential from conception to old age, including influence of exercise, athletic participation, and

preventive medicine. Alterations in motor skill patterns, morphology, and body composition, and physiological capacities with aging. Not open for credit to students who have taken Physical Education 113. GE credit: SciEng.—III. (III.) Adams

115. Biomechanical Bases of Movement (3)

Lecture—2 hours; laboratory—3 hours to alternate weekly with discussion—1 hour. Prerequisite: course 103 or consent of instructor. Biomechanical bases of human movement investigated; topics include musculo-skeletal mechanics, tissue mechanics, electromyography, and measurement and analysis techniques. Application made to sport, clinical, and work environments, including extensive analysis of locomotion. Not open for credit to students who have taken Physical Education 115. GE credit: SciEng.—I. (I.) K. Williams

116. Nutrition for Physically Active Persons (3)

Lecture—3 hours. Prerequisite: course 101, Neurobiology, Physiology and Behavior 101. The role of nutrition and exercise in modifying metabolism, body composition, performance and health of humans. Not open for credit to students who have taken Physical Education 116.—III. (III.)

117. Exercise and Aging in Health and Disease (3)

Lecture—2 hours; discussion—1 hour. Prerequisite: course 101 or 102 (concurrently) or 113 (concurrently). Etiology of and standard therapy for various diseases associated with aging (e.g., cardiovascular, pulmonary and renal diseases, diabetes, obesity, lipemias, etc.). Exercise will then be considered as a protective and/or therapeutic modality. Not open for credit to students who have taken Physical Education 117. GE credit: SciEng.—III. (III.) Holly

118. Bionomics of Work: Physical Performance and Standards in the Workplace (3)

Lecture—2 hours; discussion—1 hour. Explores principles and practices of physical performance in the workplace. Established assessment procedures including validation of job standards are presented. Cost of medical benefits are examined with respect to on-site and off-site programs of fitness maintenance and remediation. Not open for credit to students who have taken Physical Education 118. GE credit: SciEng, Wrt.—III. (III.) Bernauer

120. Sports in American Society (4)

Lecture—3 hours; discussion—1 hour. Historical development of sport in American society. Relationship and interaction of sport and politics, economics, religion, art, sexism, racism, and education; current trends and problems. Not open for credit to students who have taken Physical Education 120. GE credit: SocSci, Div.—I, III. (I, III.) Salitsky

121. Sport Psychology (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 105 and Psychology 145. Consideration of major theories, research findings and methods of data collection in sport psychology through a critical examination of relevant experimental, clinical, and field data. Not open for credit to students who have taken Physical Education 121.—III. (III.) Salitsky

122. Psychological Effects of Physical Activity (3)

Lecture—3 hours. Prerequisite: Psychology 1 or 15, and upper division standing. Physical activity is evaluated in terms of its ability to enhance the quality of life. Topics studied include: individual factors (self concept, type A); special populations (elderly, cardiovascular); and mental health changes (depression, anxiety). Not open for credit to students who have taken Physical Education 122.—II. (II.) Salitsky

125. Neuromuscular and Behavioral Aspects of Motor Control (3)

Lecture—2 hours; discussion—1 hour to alternate weekly with laboratory—2 hours. Prerequisite: course 104. Factors which affect control of movement from neuropsychological, physiological, behavioral, and mechanical viewpoints. Topics include central vs. peripheral control mechanisms, open and closed loop theories, motor programming, cognitive learning strategies, and the effects of biochemical and bio-

mechanical influences. Not open for credit to students who have taken Physical Education 125.

126. Tissue Mechanics (3)

Lecture—2 hours; laboratory/discussion—3 hours. Prerequisite: course 103 or Engineering 45 or consent of instructor. Structural and mechanical properties of biological tissues including bone, cartilage, ligaments, tendons, nerves, and skeletal muscle. (Same course as Biomedical Engineering 126.) Not open for credit to students who have taken Physical Education 126. GE credit: SciEng.—II. (II.) Hawkins

131. The Teaching of Physical Activity to Special Populations (4)

Lecture—3 hours; laboratory—3 hours. Prerequisite: course 103. The diverse and complex nature of the atypical individual, their disabilities, what caused those disabilities, how they adapt to their disability in daily living, and how physical activity/recreational programs play a role in their daily living.—I. (I.) J. Vochatzer

133. Prevention and Care of Sports Injuries (3)

Lecture—1 hour; laboratory—6 hours. Prerequisite: upper division standing; Cell Biology and Human Anatomy 101 (may be taken concurrently). Management of the prevention, care, and rehabilitation of injuries incurred by athletes. Laboratory on anatomy, emergency care, physical therapy methods, and taping techniques. Not open for credit to students who have taken Physical Education 133.—II. (II.)

135. Advanced Procedures in Evaluation and Management of Athletic Injuries (3)

Lecture—3 hours. Prerequisite: course 133, Cell Biology and Human Anatomy 101, and consent of instructor. Advanced study of the evaluation and management of athletic injuries, including mechanism of injury, biomechanics and pathophysiology. In-depth study of selected current topics in athletic training. Not open for credit to students who have taken Physical Education 135.—III. (III.)

146. Theory and Practice of Exercise Training (1)

Lecture/discussion—1 hour. Prerequisite: course 2 or 45 or 102. Physiological adaptations, exercise programming and behavioral techniques focusing on young and middle-aged adults. Topics include exercise prescription, nutrition, psychological effects of exercise, stress management techniques, and exercise adherence techniques. Not open for credit to students who have taken Physical Education 146. (P/NP grading only.)

146L. Shape-Up Testing and Training Laboratory (1)

Laboratory—3 hours. Prerequisite: course 146 (may be taken concurrently). Primary activities involve leading shape-up class, attending workshops, testing sessions, and completing final reports. May be repeated once for credit. (Former Physical Education 146L.) (P/NP grading only.)

147L. Adult Fitness Training Laboratory (1)

Laboratory—3 hours. Prerequisite: courses 146, 146L, and 102 (may be taken concurrently); current CPR. Involves attending and assisting with aerobic training sessions for older adults, and assisting with physiological testing sessions. Not open for credit to students who have taken Physical Education 147L. (P/NP grading only.)

148. Theory and Practice of Exercise Testing (1)

Lecture/discussion—1 hour. Prerequisite: courses 101, 102, 112 (may be taken concurrently), and 146; current CPR. Theory and practice of exercise testing applied to older adult populations. Physiological responses to and limitations of exercise testing.

Application of exercise testing and training to healthy and diseased populations. Not open for credit to students who have taken Physical Education 148. (P/NP grading only.)—I, II, III. (I, II, III.) Holly, Shaffrath

148L. Adult Fitness Testing Laboratory (1)

Laboratory—3 hours. Prerequisite: courses 146, 148 (concurrently); current CPR. Testing symptomatic and asymptomatic older adults for functional aerobic capacity, body composition, blood lipids, pulmonary function, and cardiovascular disease risk. Counseling adults in appropriate exercise programs and

lifestyle modifications. Two quarters minimum; third quarter permitted. (Former course Physical Education 148L.) (P/NP grading only.)—I, II, III. (I, II, III.) Holly, Shaffrath

149L. Cardiopulmonary Rehabilitation Laboratory (1)

Laboratory—3 hours. Prerequisite: courses 148 and 148L; current CPR certification. Testing and training of cardiac patients or individuals at high risk of developing heart disease. Present mini-lectures to program participants, maintain patient records, and present patients' cases in rounds. Two quarters minimum; third quarter permitted. (Former course Physical Education 149L.) (P/NP grading only.)

192. Exercise Science Internship (1-12)

Internship—3-36 hours. Prerequisite: upper division standing and consent of instructor; enrollment dependent on availability of intern positions, with priority given to Exercise Science majors. Work experience in the application of physical activity programs to teaching, recreational, clinical or research situations under department faculty supervision. May be repeated for credit for total of 12 units (including course 92), but no internship units will be counted toward Exercise Biology major. (P/NP grading only.)

197T. Tutoring in Exercise Science (1-5)

Tutorial—2-15 hours. Prerequisite: upper division standing and consent of chairperson. Tutoring of students in exercise science course-related projects. Regular meetings with instructor in charge and written report required. May be repeated for credit. (P/NP grading only.)

197TC. Tutoring Exercise Science in the Community (1-5)

Tutorial—2-15 hours; discussion—1 hour. Prerequisite: upper division standing and consent of chairperson. Tutoring in the community in exercise science related projects under the guidance of the Exercise Science faculty. Regular meetings with instructor in charge and written report required. May be repeated once for credit. (P/NP grading only.)

198. Directed Group Study (1-5)

Prerequisite: consent of instructor and Department Chairperson. (P/NP grading only.)

199. Special Study for Advanced Undergraduates (1-5)

Prerequisite: consent of Department Chairperson. (P/NP grading only.)

Biological Sciences: Microbiology

Douglas C. Nelson, Ph.D., Chairperson of the Section

Section Office, 357 Briggs Hall (530-752-0262)

Primary Section Members

Stanley W. Artz, Ph.D., Professor
Paul Baumann, Ph.D., Professor
Wolf-Dietrich Heyer, Ph.D., Professor
Michele M. Igo, Ph.D., Associate Professor
Stephen C. Kowalczykowski, Ph.D., Professor
JaRue S. Manning, Ph.D., Professor
John C. Meeks, Ph.D., Professor
Douglas C. Nelson, Ph.D., Professor
Martin L. Privalsky, Ph.D., Professor
Kazuhiro Shiozaki, Ph.D., Assistant Professor
Mitchell H. Singer, Ph.D., Associate Professor
Valley J. Stewart, Ph.D., Professor
Mark L. Wheelis, Ph.D., Senior Lecturer

Secondary Section Members

Sean Burgess, Ph.D., Assistant Professor
Jodi Nunnari, Ph.D., Associate Professor
Ted Powers, Ph.D., Assistant Professor
Irwin H. Segel, Ph.D., Professor

Emeriti Faculty

Robert E. Hungate, Ph.D., Professor Emeritus
John L. Ingraham, Ph.D., Professor Emeritus
Allen G. Marr, Ph.D., Professor Emeritus
David Pratt, Ph.D., Professor Emeritus
Merna R. Villarejo, Ph.D., Professor Emerita

Affiliated Faculty

Karen L. Gerhart, Ph.D., Lecturer
Eric D. Mann, Ph.D., Lecturer

Courses in Microbiology (MIC)

Lower Division Courses

10. Natural History of Infectious Diseases (4)

Lecture—3 hours; discussion—1 hour. Topics in the natural history of infectious diseases principally affecting humans. Introduction to infectious microbial agents, ecology, epidemiology, and induction of disease. Focus on diseases of a contemporary nature. Designed for students not majoring in the biological sciences. GE credit: SciEng, Wrt.—III. (III.) Mann

98. Directed Group Study (1-5)

Prerequisite: consent of instructor. Primarily for lower division students. (P/NP grading only.)

Upper Division Courses

102. General Bacteriology (4)

Lecture—4 hours. Prerequisite: Biological Sciences 1A and Chemistry 8B or Chemistry 118B (may be taken concurrently). Survey of the biology of bacteria and viruses, including bacterial structure, metabolism, physiology, genetics, and evolution; viral structure and replication; the role of bacteria in global element cycles; and the role of microbes in infectious disease.—I, II, III. (I, II, III.) Artz, Baumann, Mann, Wheelis

102L. General Bacteriology Laboratory (2)

Laboratory—6 hours. Prerequisite: course 102 (may be taken concurrently) and consent of instructor. Introduction to principles and laboratory methods employed in working with microorganisms. For students planning to continue study of microbiology, or use microorganisms as tools for study of genetics and biochemistry.—I, II, III. (I, II, III.) Mann

105. Bacterial Diversity (5)

Lecture—3 hours; laboratory—6 hours. Prerequisite: courses 102, 102L, Biological Sciences 102 and consent of instructor; Biological Sciences 103 recommended. Survey of the major groups of bacteria emphasizing diversity of energy metabolism, morphology and natural history. Includes methods for determination of evolutionary relationships among groups. Isolation and characterization of bacterial strains from various habitats.—II. (II.) Nelson, Wheelis

120. Microbial Ecology (3)

Lecture—3 hours. Prerequisite: course 105, Biological Sciences 102. Interactions between non-pathogenic microorganisms and their environment, emphasizing physiological and metabolic characteristics of various groups and their adaptation to and modification of specific habitats.—III. (III.) Meeks

120L. Microbial Ecology Laboratory (2)

Laboratory—6 hours; one optional overnight weekend field trip. Prerequisite: course 120 (may be taken concurrently); consent of instructor. Study of prokaryotic microorganisms from certain habitats. One-half of laboratory effort will consist of organized experiments on ecologically important microbial activities. For remaining one-half, research projects will be done on student selected specific habitats of microorganisms. Limited enrollment. Not offered every year.

140. Bacterial Physiology (3)

Lecture—3 hours. Prerequisite: Biological Sciences 101, 102, 103 (may be taken concurrently); course 102 recommended (may be taken concurrently). Fundamentals of bacterial growth and bacterial responses to environmental stresses. Topics will include carbon and nitrogen regulation, growth rate control, post-exponential growth, and motility and chemotaxis. Not open for credit to students who have completed course 130A.—I. (I.) Singer, Meeks

150. Bacterial Genetics (3)

Lecture—3 hours. Prerequisite: Biological Sciences 101, 102, Biological Sciences 103 or course 140; course 102 recommended (may be taken concurrently). Molecular genetics of enterobacteria and their viruses. Isolation of mutants; genetic exchange and mapping; complementation; suppression; transposons; gene expression and regulation; and genomics. Examples illustrate applications to molecular cloning of recombinant DNA, and to the study of bacterial pathogenesis.—II. Stewart

155L. Bacteriology Physiology Laboratory (3)

Laboratory—9 hours. Prerequisite: course 140 or 150; course 102L; consent of instructor. Physiology and genetics of bacteria. Isolation and characterization of mutant strains. Mapping of mutations by conjugation and transduction studies of control of enzyme synthesis by induction, repression, and catabolite repression. Former course 130L. Not open for credit to students who have taken course 130L.—III. (III.) Singer

160. Bacterial Regulatory Mechanisms (3)

Lecture—3 hours. Prerequisite: course 140 or 150 recommended. Fundamentals of bacterial regulatory mechanisms. Topics will include control of DNA, RNA, and protein synthesis, global regulatory mechanisms, recombination, DNA repair systems, and cell cycle control with emphasis on bacterial systems. Not open for credit to students who have taken course 130B. (Former course 130B.) Not offered every year.

162. General Virology (4)

Lecture—4 hours. Prerequisite: Biological Sciences 1A, 102. Integrated presentation of the nature of animal, bacterial, and plant viruses, including their structure, replication and genetics.—II. (II.) Manning, Falk

170. Yeast Molecular Genetics (3)

Lecture—3 hours. Prerequisite: Biological Sciences 101 and 102; course 102 or 140 (may be taken concurrently) strongly recommended. Survey of the genetics, cell biology and technologies in yeasts and related lower eukaryotes. Topics include diversity of yeasts; cell structure; metabolism; cell cycle; genetic approaches and genomics; gene expression; yeasts as models to study higher eukaryotes; and contemporary techniques.—III. (III.) Shiozaki

190C. Undergraduate Research Conference (1)

Discussion—1 hour. Prerequisite: upper division standing and consent of instructor, course 199 concurrently. Presentation and critical discussion of staff research activities: designed for advanced undergraduate students. May be repeated for credit. (P/NP grading only.)—I, II, III. (I, II, III.)

192. Internship (1-12)

Internship—3-36 hours. Technical and/or professional experience on or off campus. Supervised by a member of the Microbiology Section faculty. (P/NP grading only.)

194H. Microbiology Honors Research (2)

Independent study—6 hours. Prerequisite: senior standing; eligibility for college honors; completion of six units of 199 in microbiology; consent of section. Continuation of an individual microbiological research project culminating in writing of a senior thesis under a faculty director. (P/NP grading only.)

197T. Tutoring in Microbiology (1-5)

Tutoring—1-5 hours. Prerequisite: course 102L and 18 upper division units in Microbiology; consent of chairperson. Assist in undergraduate laboratory courses supervised by teaching assistants or faculty; in discussion sections supervised by faculty; and staffing "drop-in" offices for individual help. (P/NP grading only.)

198. Directed Group Study (1-5)

Prerequisite: consent of instructor. (P/NP grading only.)

199. Special Study for Advanced Undergraduates (1-5)

Prerequisite: consent of instructor. (P/NP grading only.)

Graduate Courses**200A. Biology of Prokaryotes (3)**

Lecture—3 hours. Prerequisite: course 102 or the equivalent. Intended for first year graduate students in microbiology and closely related fields. Overview of prokaryotic biology, with emphasis on phylogeny, physiology, and diversity of bacteria.—I. (I.) Stewart, Baumann

200B. Advanced Bacteriology (3)

Lecture—3 hours. Prerequisite: course 200A. Intended for first year graduate students in microbiology and closely related fields. Advanced topics in phylogeny, physiology, and diversity of bacteria. Not offered every year.—I.

201L. Advanced Microbiology Laboratory Rotations (5)

Laboratory—15 hours. Prerequisite: course 200A (may be taken concurrently). Two five-week assignments in microbiology research laboratories. Individual research problems with emphasis on methodological/procedural experience and experimental design. May be repeated twice for credit.—I, II. (I, II.)

210. Molecular Mechanisms in Microbial Pathogenesis (3)

Lecture—3 hours. Prerequisite: course 105 or Veterinary Microbiology 127 and course 162 or Veterinary Microbiology 128 or the equivalent. Study of the molecular mechanisms involved in cytopathogenesis of higher eukaryotic organisms. Emphasis on the alteration or inhibition of cellular metabolism and function by bacteria and animal viruses. Not offered every year.

215. Recombinant DNA (3)

Lecture—3 hours. Prerequisite: Biological Sciences 101, 102, 103 or the equivalent. Application of recombinant DNA technology to modern problems in biology, biochemistry, and genetics, emphasizing molecular cloning strategies, choice of vectors, preparation of insert DNA, and selection procedures.—I. (I.) Privalsky

250. Biology of Yeasts (5)

Lecture—3 hours; discussion—2 hours. Prerequisite: Biological Sciences 102, 103; course 102, 102L; course 215 recommended. Survey of the genetics, physiology, metabolism, regulatory mechanisms, structure, cell biology, ecology and diversity of yeasts and related organisms. Offered in alternate years.—II. (II.) Bisson

260. Bacterial Genetic Regulatory Mechanisms (3)

Lecture/discussion—3 hours. Prerequisite: general knowledge of nucleic acid biochemistry and bacterial genetics. Analysis at the molecular level of genetic regulation in selected bacterial systems. Specific systems discussed will include the following types of regulation: control of transcription initiation and termination; translational controls; tRNA modification effects; autoregulation; control circuits in bacterial viruses; supercontrols. Not offered every year.

262. Advanced General and Molecular Virology (3)

Lecture—3 hours. Prerequisite: graduate standing. Advanced integrated presentation of animal, bacterial, and plant viruses, including their structure, modes of regulation, expression and replication, and effects on host cells and organisms.—(III.) Luciw, Bruening

263. Principles of Protein–Nucleic Acid Interactions (3)

Lecture—3 hours. Prerequisite: advanced graduate standing and completion of one year of basic graduate course work in biochemistry, biophysics, chemistry, genetics, microbiology, or molecular biology. Physical basis of protein–nucleic acid interaction. Topics include nucleic acid recognition by proteins, thermodynamics of protein–nucleic acid stability, and kinetics of binding process for both non-specific and sequence-specific nucleic acid binding proteins. Emphasis on systems that represent paradigms in protein–nucleic acid interactions. Offered in alternate years.—(III.) Kowalczykowski

274. Seminar in Genetic Recombination (1)

Seminar—1 hour. Prerequisite: graduate standing; consent of instructor. Biochemical and genetic aspects of genetic recombination in prokaryotes and eukaryotes. Mechanisms of recombination and biochemical and genetic characteristics of recombination proteins. Proteins include DNA strand exchange, DNA helicases, and Holliday junction resolving proteins. May be repeated for credit. (S/U grading only.)—I, II, III. (I, II, III.) Kowalczykowski

275. Seminar in DNA Repair and Recombination (1)

Seminar—1 hour. Prerequisite: consent of instructor; graduate standing in Microbiology or closely related field. Review and discussion of current research and literature in DNA repair and recombination with presentations by individual students and invited speakers. May be repeated for credit. (S/U grading only.)—I, II, III. (I, II, III.) Heyer

290C. Advanced Research Conference (1)

Discussion/conference—1 hour. Prerequisite: graduate standing and/or consent of instructor. Presentation and critical discussion of staff research activities. Designed for advanced graduate students. May be repeated for credit. (S/U grading only.)—I, II, III. (I, II, III.)

291. Selected Topics in Microbiology (1)

Seminar—1 hour. Prerequisite: graduate standing and consent of instructor. Current progress in microbiology and cellular and molecular biology. May be repeated for credit. (S/U grading only.)—I, II, III. (I, II, III.)

292. Seminar in Bacterial Physiology and Genetics (1)

Seminar—1 hour. Prerequisite: consent of instructor, graduate standing in microbiology or closely related field. Review and discussion of current research and literature in bacterial physiology and genetics, with presentations by individual students. (S/U grading only.)—I, II, III. (I, II, III.)

296. Seminar in Animal Virology (1)

Seminar—1 hour. Prerequisite: consent of instructor. Discussion of current topics in animal virology. (Same course as Pathology, Microbiology and Immunology 292A.) May be repeated for credit. (S/U grading only.)—II. Manning

298. Group Study (1-5)

Prerequisite: consent of instructor. (S/U grading only.)

299. Research (1-12)

(S/U grading only.)

Professional Course**396. Teaching Assistant Training Practicum (1-4)**

Prerequisite: graduate standing. May be repeated for credit. (S/U grading only.)—I, II, III. (I, II, III.)

The section of Molecular and Cellular Biology offers three major programs: Biochemistry and Molecular Biology, Cell Biology, and Genetics.

Courses in Molecular and Cellular Biology (MCB)

Lower Division Courses

10. Introduction to Human Heredity (4)

Lecture—3 hours; discussion—1 hour. Topics in human heredity and human gene structure and function, including the genetic basis of human develop-

ment, causes of birth defects, mental retardation, genetic diseases, sexual determination, development and behavior. GE credit: SciEng, Wrt.—II. Sanders

99. Special Study (1-5)

Independent study—3-15 hours. Prerequisite: consent of instructor. (P/NP grading only.)

Upper Division Courses

120L. Biochemistry Laboratory (6)

Laboratory—10 hours; lecture—2 hours; laboratory/discussion—1 hour. Prerequisite: Biological Sciences 103 (may be taken concurrently). Introduction to laboratory methods and procedures employed in studying biochemical processes. Designed for students who need experience in the use of biochemical techniques as laboratory tools.—I, II, III. (I, II, III.) Fairclough, Hedrick, Hilt, J.C. Lagarias, Lindsay, L. Morand, Rubin, L. Segel, Sprechman

121. Molecular Biology of Eukaryotic Cells (3)

Lecture—3 hours. Prerequisite: Biological Sciences 101, 103, course 120L. Structure, expression and regulation of eukaryotic genes. Chromosome structure and replication; gene structure, transcription and RNA processing; protein synthesis and translation control; development, immune system and oncogenes. Not open for credit to students who have completed course 141 or 161.—II, III. (II, III.) Burgess, Dahmus, Gasser

122. Structure and Function of Proteins (3)

Lecture—3 hours. Prerequisite: course 120L, Biological Sciences 103. Correlation of structure and biological function. Molecular models of enzymes that explain their physiological functioning. Physical and chemical methods used in determining protein structure. Function as measured by kinetic and binding models and as affected by physiological considerations.—I, II. (I, II.) Baldwin, Sprechman

123. Behavior and Analysis of Enzyme and Receptor Systems (3)

Lecture—3 hours. Prerequisite: Biological Sciences 103. Introduction to the principles of enzyme kinetics and receptor-ligand interactions with emphasis on metabolic regulation and data analysis. Topics include simultaneous equilibria, chemical and steady-state kinetics, allosteric enzymes, multireactant systems, enzyme assays, membrane transport and computer-assisted simulations and analyses.—I, III. (I, III.) I. Segel, Wilson

126. Plant Biochemistry (3)

Lecture—3 hours. Prerequisite: Biological Sciences 1C or the equivalent, and Biological Sciences 103. The biochemistry of important plant processes and metabolic pathways. Discussion of methods used to understand plant processes, including use of transgenic plants. (Same course as Plant Biology 126.)—III. (III.) Abel, Callis

138. Undergraduate Seminar in Biochemistry (1)

Seminar—1 hour. Prerequisite: Biological Sciences 103. Discussion of the historical developments of modern biochemistry or current major research problems. May be repeated twice for credit when topic differs. (P/NP grading only.)—I, II, III. (I, II, III.) Baldwin, Callis, Gasser, Fairclough, Sprechman

140L. Cell Biology Laboratory (4)

Lecture—2 hours; laboratory—6 hours. Prerequisite: Biological Sciences 104 (may be taken concurrently). Exercises illustrating the principles of cell biology with emphasis on light microscopy.—II. (II.) Nunnari

141. Cellular Regulation of Gene Expression (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: Biological Sciences 101 and 102; Biological Sciences 104 recommended. Molecular and cellular mechanisms for regulating the flow of information from genome to the cytoplasm, and from one generation to the next in eukaryotes and prokaryotes. Various levels of regulation will be discussed from an experiment-based perspective. Not open for credit to students who have completed course 121 or 161.

142. Advanced Cell Biology: Contractile and Motile Systems (4)

Lecture—3 hours; term paper. Prerequisite: Biological Sciences 102, 104 (may be taken concurrently); Mathematics 16B. Advanced cell biology with emphasis on molecular, biophysical and cellular properties of contractile and motile systems.—Baskin

143. Cell Biophysics (3)

Lecture—3 hours. Prerequisite: Biological Sciences 101, 102, 103, 104. Organization of biomolecules into higher order subcellular structures that function as macromolecular machines. Examples include cytoskeletal elements, organelles and viruses.—I. Baskin, Scholey

144. Mechanisms of Cell Division (3)

Lecture—3 hours. Prerequisite: Biological Sciences 101, 102, 104. The molecules and mechanisms that allow eukaryotic cells to coordinate cell growth, DNA replication, segregation of chromosomes and cell division.—II. McNally

145. Assembly and Function of Cell Signaling Machinery (3)

Lecture—3 hours. Prerequisite: Biological Sciences 101, 102, 104. Molecular basis of cell signaling, including positioning of cellular machinery, components of various signaling pathways, and downstream effects of signaling on cell adhesion, cell differentiation, and programmed cell death.—III. Erickson, McNally

148. Undergraduate Seminar in Cell Biology (2)

Seminar—2 hours. Prerequisite: upper division standing in the biological sciences or a related discipline. Student reports on current topics in cell biology with emphasis on integration of concepts, synthesis, and state-of-the-art research approaches. Reviews of literature and reports of undergraduate research may be included. May be repeated for credit. (P/NP grading only.)—I. Baskin

150. Embryology (4)

Lecture—4 hours. Prerequisite: Biological Sciences 101 and concurrent enrollment in course 150L. The events and mechanisms of embryonic development, including fertilization, morphogenesis, cell differentiation and organogenesis, with emphasis on vertebrates.—I, III. (I, III.) Armstrong, Edwards, Erickson

150L. Laboratory in Vertebrate Embryology (1)

Laboratory—3 hours. Prerequisite: concurrent enrollment in course 150. The comparative analysis of the embryonic development of vertebrates. (P/NP grading only.)—I, III. (I, III.) Armstrong, Edwards, Erickson

158. Undergraduate Seminar in Developmental Biology (2)

Seminar—2 hours. Prerequisite: upper division standing in the biological sciences or a related discipline. Student reports on current topics in cell biology with emphasis on integration of concepts, synthesis, and state-of-the-art research approaches. Reviews of literature and reports of undergraduate research may be included. May be repeated for credit. (P/NP grading only.)

160L. Principles of Genetics Laboratory (4)

Laboratory—6 hours; lecture—2 hours. Prerequisite: Biological Sciences 101. Laboratory work in basic and molecular genetics including gene mapping and isolation of mutants. Not open for credit to students who have completed Genetics 100L.—I, II, III. (I, II, III.) Britt, Burtis, Jazbi, Kiger, Sanders

161. Molecular Genetics (3)

Lecture—3 hours. Prerequisite: Biological Sciences 101; Biological Sciences 103 (may be taken concurrently). Molecular genetics including DNA structure and replication, restriction analysis, sequencing, transcription, translation and gene regulation. Not open for credit to students who have completed course 121 or 141.—I. (I.) Powers

162. Human Genetics (3)

Lecture—3 hours. Prerequisite: Biological Sciences 101 or the equivalent. Human molecular genetic variation, molecular basis of metabolic disorders, chromosome aberrations and consequences, diseases associated with the immune system, and statistical

techniques for estimating genetic and environmental effects. GE credit: SciEng, Wrt.—III. (III.) Sanders

163. Developmental Genetics (3)

Lecture—3 hours. Prerequisite: Biological Sciences 101, 102; course 150 recommended. Current aspects of developmental genetics. Historical background and current genetic approaches to the study of development of higher animals.—II. (II.) Natzle

164. Advanced Eukaryotic Genetics (3)

Lecture—3 hours. Prerequisite: Biological Sciences 101. Concentration on the five basic operations of genetic analysis: mutation, segregation, recombination, complementation, and regulation. Special emphasis will be placed on the theory and practice both of isolating new mutations and of analyzing existing mutations.—II. (II.) Burgess

178. Undergraduate Seminar in Molecular Genetics (1)

Seminar—1 hour. Prerequisite: upper division standing, completion of Biological Sciences 101, course 160L, and completion or concurrent enrollment in course 161. Discussion of current topics in molecular genetics to show advanced applications of basic principles and to highlight professional career opportunities. May be repeated for credit. (P/NP grading only).—I. Rodriguez

190C. Undergraduate Research Conference (1)

Discussion—1 hour. Prerequisite: upper division standing and consent of instructor; concurrent enrollment in course 193 or 199. Presentation and discussion of current research by faculty and students. May be repeated for credit. (P/NP grading only).—I, II, III. (I, II, III.)

191. Introduction to Research (1)

Seminar—1 hour. Prerequisite: Biological Sciences 102 (may be taken concurrently) or consent of instructor. Various topics in molecular and cellular biology including biochemistry, genetics, and cell biology will be discussed, along with ways undergraduates can participate in research projects of faculty members. May be repeated for credit. (P/NP grading only).—I, III. (I, II, III.) L. Segel

192. Internship (1-12)

Internship—3-36 hours. Prerequisite: completion of 84 units and consent of instructor. Technical and/or practical experience on and off campus, supervised by a member of the Section of Molecular and Cellular Biology faculty. (P/NP grading only.)

193. Advanced Research (3)

Laboratory—6 hours; discussion—1 hour. Prerequisite: upper division standing, completion of an upper division Molecular and Cellular Biology laboratory course and consent of instructor. Research project carried out under the supervision of a faculty sponsor. Discussion and analysis of results and proposed experiments on a weekly basis with faculty sponsor. May include presentation of a seminar to a research group. May be repeated for credit. (P/NP grading only).—I, II, III. (I, II, III.)

194H. Research Honors (3)

Independent study—9 hours. Prerequisite: 6 units of course 193 and/or 199 with faculty director; senior standing; GPA of at least 3.25; consent of Section. Honors project. Continuation of an intensive, individual laboratory research project in biochemistry, genetics, or cell biology culminating with the presentation of the work in a written thesis and in a seminar. (P/NP grading only.)

197T. Tutoring (1-5)

Tutoring—1-5 hours. Prerequisite: upper division standing, completion of course to be tutored, and consent of instructor. To assist the instructor by tutoring students in one of the Section's regular courses. (P/NP grading only.)

198. Directed Group Study (1-5)

Variable—1-5 hours. Prerequisite: consent of instructor. (P/NP grading only.)

199. Special Study for Advanced Undergraduates (1-5)

Independent study—3-15 hours. Prerequisite: consent of instructor. (P/NP grading only.)

Graduate Courses

200A. Current Techniques in Cell Biology (2)

Lecture—2 hours. Prerequisite: graduate standing; Biological Sciences 104 and course 141 or the equivalent courses. Current techniques used in cell biology research including microscopy, spectroscopy, electrophysiology, immunochemistry, histology, organelle isolation, calorimetry, tissue culture and gel electrophoresis. Lectures are presented by experts on each technique, with an emphasis on pitfalls to avoid when using the technique. (Same course as Cell and Developmental Biology 200.) (S/U grading only).—I. (I.) Beck

200B. Current Techniques in Biochemistry (2)

Lecture—2 hours. Prerequisite: Biological Sciences 103 and course 120L or the equivalent courses. Current techniques used in biochemical research including protein and carbohydrate analyses, immunochemistry, recombinant DNA methods, electrophoretic and chromatographic methods.—II. (II.) Kaplan, Schmid

200C. Current Techniques in Biophysics (2)

Lecture—2 hours. Prerequisite: graduate standing; Biological Sciences 102 or 104 or the equivalent. Current techniques in biophysics research including diffraction, magnetic resonance spectroscopy, calorimetry, optical spectroscopy, and electrophysiology. (Same course as Biophysics Graduate Group 200.) (S/U grading only).—III. (III.) T-Y. Chen

220L. Advanced Biochemistry Laboratory Rotations (5)

Laboratory—15 hours. Prerequisite: course 221A (may be taken concurrently) and 120L or the equivalent. Two five-week assignments in biochemistry research laboratories. Individual research problems with emphasis on methodological/procedural experience and experimental design. May be repeated twice for credit.—I, II, III. (I, II, III.) Kaplan, Powers

221A. Physical Biochemistry (4)

Lecture—4 hours. Prerequisite: Biological Sciences 103; Chemistry 107B-108 and 128C, 129C or 118C or the equivalents. Biochemical thermodynamics and chemical and physical properties of biomacromolecules, including enzyme kinetics and methods for determining size and shape of macromolecules.—I. (I.) Baldwin, Dieckmann, Schmid, Wilson

221B. Integration of Metabolism and Regulatory Phenomena (3)

Lecture—3 hours. Prerequisite: course 221A or consent of instructor. Regulatory phenomena that occur in control of metabolism; e.g., regulation at enzyme level; integration of metabolic pathways including homeostasis, hormonal influences, turnover of enzymes, comparative aspects of metabolism, regulation of amino acids and lipid metabolism in living systems.

221C. Molecular Biology (4)

Lecture—4 hours. Prerequisite: course 221A or the equivalent. Pass 1 restricted to graduate students in biochemistry and molecular biology, microbiology, or genetics. Structure and organization of DNA and chromatin; DNA replication, repair and recombination; transcription and RNA processing; protein biosynthesis and turnover; transcriptional and post-transcriptional control mechanisms; examples from eukaryotic and eubacterial cells, and viruses. (Same course as Genetics 201C.)—III. (III.) Baldwin, Burgess, Hershey, Heyer, Privalsky, Singer

221D. Cellular Biochemistry (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 221A. Molecular structure and biochemical function of cell membranes, cytoplasmic organization, organelle trafficking, signaling, mechanisms of intracellular transport, chromosome segregation and cell division with emphasis on biochemical principles.—II. (II.) McNally, Nunnari, Privalsky, Voss

241. Membrane Biology (3)

Lecture—3 hours. Prerequisite: Biological Sciences 102, 104, or consent of instructor. Advanced topics on membrane biochemistry and biophysics. How the unique properties of biomembranes relate to various roles in cell biology and physiology.—III. (III.) Crowe, Voss

242. Muscle Biophysics (4)

Lecture—2 hours; discussion—1 hour; term paper. Prerequisite: Biological Sciences 102, 103 and Mathematics 16B or 21B; or consent of instructor. The physical and chemical aspects of muscle function.—(II.) Baskin

248. Seminar in Cell Biology (2)

Seminar—2 hours. Prerequisite: consent of instructor. Discussion of recent literature on the physical and chemical aspects of organization and function of living systems, topics of current interest in ultrastructure and function of cells. Organizational and functional properties of the molecular and cellular levels of biological systems. May be repeated for credit.—I. Myles

251. Biology of Fertilization (3)

Lecture—2 hours; term paper. Prerequisite: Biological Sciences 104 or the equivalent, and consent of instructor. The morphology, physiology, and biochemistry of gametes, and the mechanism and consequences of their union. Offered in alternate years.—I. Hedrick, Myles

252. Cellular Basis of Morphogenesis (4)

Lecture/discussion—3 hours; term paper. Prerequisite: course 150. Development of form and structure; morphogenetic movement, mechanisms of cellular motility, cell adhesion, intercellular invasion, interaction of cells and tissues in development. Offered in alternate years.—(II.) Armstrong

253. Pattern Formation (4)

Lecture—3 hours; term paper. Prerequisite: course 150, Biological Sciences 104 or the equivalent, and consent of instructor. Morphology and mechanism of pattern formation beginning with ooplasmic segregation. Emphasis will be on cell polarity, but some multicellular systems will also be covered. Offered in alternate years.

255. Molecular Mechanisms in Animal Development (3)

Lecture—1.5 hours; seminar—1.5 hours. Prerequisite: graduate standing or consent of instructor; introductory background in developmental biology and molecular genetics recommended. Analysis of the molecular mechanisms that control animal development, with a special focus on multiple levels of gene regulation. Experimental systems including *Drosophila*, amphibians, *C. elegans*, and mice will be discussed. Readings will be taken from current literature. Offered in alternate years.—I. Natzle, L. Rose

256. Cell and Molecular Biology of Cancer (2)

Lecture—1 hour; term paper. Prerequisite: course in cell or developmental biology (e.g., course 150, 141, 163, or Biological Sciences 104). Analysis at the cellular and molecular levels of the regulation of normal and neoplastic tissue growth; tumor dissemination; identification and characterization of oncogenic agents; characterization of oncogenes and tumor-suppressor genes.—I. (I.) Armstrong

257. Cellular Proliferation and Cancer Genes (5)

Lecture—3 hours; discussion—2 hours. Prerequisite: Biological Sciences 101, 103, 104 or the equivalents; Genetics 201C or course 221D recommended. Regulation of growth and division of animal cells. The cell cycle, oncogenes, retroviruses and growth factors discussed in the context of normal and cancerous growth. Critical reading and writing are emphasized.

258. Seminar in Development (2)

Seminar—2 hours. Prerequisite: consent of instructor. Reports and discussion on embryology, morphogenesis, and developmental mechanisms. May be repeated for credit.—II. (II.) Armstrong, Erickson

259. Literature in Developmental Biology (1)

Seminar—1 hour. Prerequisite: consent of instructor. Critical presentation and analysis of recent journal articles in developmental biology. May be repeated for credit. (S/U grading only).—I, II, III. (I, II, III.) Armstrong, Erickson, Myles

262. Transgenic Expression Systems (3)

Lecture—3 hours. Prerequisite: Biological Sciences 101 and course 161 or consent of instructor. The molecular biology underlying current transgenic expression systems. Strategies for achieving regulated expression and secretion of proteins. Survey of bacterial, yeast, insect cell, mammalian cell, plant and animal expression systems. Offered in alternate years.—(II.) Rodriguez

263. Biotechnology Fundamentals and Application (2)

Lecture—2 hours. Prerequisite: Biological Sciences 101, 102, Microbiology 102, graduate student in good standing. To train graduate students interested in a biotechnology career track; to learn recombinant DNA, rate processes of biological systems, optimization of bioreactor performance, practical issues in biotechnology, and some case studies of the development of biotechnology products and processes. Offered in alternate years.—II. Rodriguez, Ryu

282. Biotechnology Internship (1-12)

Internship/laboratory—3-36 hours. Prerequisite: graduate student in good academic standing or consent of instructor. Research at a biotechnology company for a minimum of three months as part of the Designated Emphasis in Biotechnology. (S/U grading only.)—I, II, III. (I, II, III.) Doi, Rodriguez, Ryu

290C. Research Conference (1)

Discussion—1 hour. Prerequisite: graduate standing and consent of instructor. Presentations and critical discussions of faculty and graduate student research in molecular and cellular biology including biochemistry, genetics, and cell biology. May be repeated for credit. (S/U grading only.)—I, II, III. (I, II, III.)

291. Current Progress in Molecular and Cellular Biology (1)

Seminar—1 hour. Prerequisite: graduate standing or consent of instructor. Seminars presented by guest lecturers on subject of their own research activities. May be repeated for credit. (S/U grading only.)—I, II, III. (I, II, III.) Burgess, Kaplan, Powers

294. Current Progress in Biotechnology (1)

Seminar—1 hour. Prerequisite: graduate standing or consent of instructor. Seminars presented by guest lecturers on subjects of their own research activities. May be repeated for credit. (Same course as Chemical Engineering 294.) (S/U grading only.)—I, II, III. (I, II, III.) Doi, Kjelstrom, Ryu

295. Literature in Molecular and Cellular Biology (1)

Seminar—1 hour. Prerequisite: graduate standing and consent of instructor. Critical reading and evaluation of current literature in molecular and cellular biology disciplines. Papers will be presented and discussed in detail. May be repeated for credit. (S/U grading only.)—I, II, III. (I, II, III.) Baldwin, Fisher, Hedrick, Myles, Privalsky, Radke, Wilson

298. Group Study (1-5)

Variable—1-5 hours. Prerequisite: consent of instructor. (S/U grading only.)

299. Research (1-12)

Independent study—3-36 hours. (S/U grading only.)

Professional Course**390. Methods of Teaching (1)**

Discussion—1 hour. Prerequisite: graduate standing and consent of instructor. Practical experience in the methods and problems of teaching biochemistry/genetics/cell biology. Includes analysis of texts and supporting material, discussion of teaching techniques, preparing for and conducting discussion and laboratory sections, formulating examinations under supervision of instructor. Participating in the teaching program required for Ph.D. May be repeated for credit. (S/U grading only.)—I, II, III. (I, II, III.)

Courses in Neurobiology, Physiology, and Behavior (NPB)

Lower Division Courses**10. Elementary Human Physiology (4)**

Lecture—3 hours; discussion—1 hour. Introduction to physiology for non-science majors. Includes basic cell physiology and survey of major organ systems and how they function in homeostasis and human health. Not open for credit to students who have completed course 101. GE credit: SciEng.—III. (III.)

12. Human Nervous System (3)

Lecture—3 hours. Organization and function of the human nervous system for non-science majors. Brain function discussed in relation to cognition, learning and memory, and neurological diseases. Not open for credit to students who have completed courses 100, 112 or Psychology 108. GE credit: SciEng.—III. (III.) Recanzone

12G. Understanding the Human Nervous System (1)

Discussion—1 hour. Prerequisite: concurrent enrollment in course 12. For non-science majors. Scientific studies of brain function will be discussed in relation to ethical considerations, social, economic, and political implications and current and future research. GE credit with concurrent enrollment in course 12: Wrt.—III. (III.) Recanzone

90A. Lower Division Seminar: Issues in Body Weight Regulation (2)

Seminar—2 hours. Prerequisite: lower division standing, consent of instructor. Critical examination of issues in body weight regulation through shared readings, discussions, written assignments, debates and oral presentations. Limited enrollment.—II. (II.) C. Warden, N. Warden

90B. Human Color Perception (2)

Seminar—2 hours; term paper. Prerequisite: lower division standing. The neural determinants of color appearance and why we see the world in the way we do. Demonstrations of color phenomena and what they tell us about the human brain. Limited enrollment. GE credit: ArtHum or SciEng, Wrt.—II. (II.) Werner

90C. Current Issues in Animal Behavior (2)

Seminar—2 hours. Prerequisite: lower division standing. The mechanisms and outcomes of sexual selection (mate choice and mate competition). Theory, current models and evidence that supports or refutes the models. Limited enrollment.—II. (II.) Hedrick

92. Internship (1-12)

Internship—3-36 hours. Prerequisite: lower division standing and consent of instructor. Work experience off and on campus in all subject areas offered in the section of Neurobiology, Physiology, and Behavior. Internships supervised by a member of the faculty. (P/NP grading only.)

98. Directed Group Study (1-5)

Prerequisite: lower division standing and consent of instructor. (P/NP grading only.)

99. Special Study for Undergraduates (1-5)

Prerequisite: undergraduate standing and consent of instructor. (P/NP grading only.)

Upper Division Courses**100. Neurobiology (4)**

Lecture—3 hours; discussion—1 hour. Prerequisite: Biological Sciences 1A, 1B; Physics 5C or 7C recommended. Brains and nervous systems, neurons and neural circuits. Vision, hearing, and feature extraction by the central nervous system. Development of nervous systems. Coordination of movement. The cell biology of learning and memory. Perception, cognition, and disorders of the brain. Not open for credit to students who have completed course 112, 160, 161 or 162, or Neuroscience 221 or 222.—I, III. (I, III.) Chapman, Sutter, Mulloney

101. Systemic Physiology (5)

Lecture—5 hours. Prerequisite: Biological Sciences 1B; Physics 1B or 7C strongly recommended. Systemic physiology with emphasis on aspects of human physiology. Functions of major organ systems, with the structure of those systems described as a basis for understanding the functions.—I, II, III. (I, II, III.) Adamson, DeBello, Furlow, Ishida, Goldberg, Sillman, Usrey, Weidner

101L. Systemic Physiology Laboratory (3)

Laboratory—3 hours; discussion—2 hours. Prerequisite: course 101 prior to taking 101L recommended, but 101 may be taken concurrently. Selected experiments to illustrate functional characteristics of organ systems discussed in course 101.—I, III. (I, III.) Adamson, Goldberg

102. Animal Behavior (3)

Lecture—3 hours. Prerequisite: Biological Sciences 1A, 1B, 1C. Basic principles of behavioral organization in vertebrate and invertebrate animals. Underlying physiological and ethological mechanisms. The evolution of behavior, with special emphasis on behavior under natural conditions. Not open for credit to students who have completed course 155. (Former course 155.)—II, III. (II, III.) Hahn, Nevitt

103. Cellular Physiology/Neurobiology (3)

Lecture—3 hours. Prerequisite: Biological Sciences 103 and 104; Physics 7C recommended. Cellular physiology with emphasis on membrane transport processes and neuronal physiology. Fundamental physical-chemical and biological mechanisms of membrane transport will be considered in relation to cytoplasmic homeostasis, communication between cells, and the cellular mechanisms of sensory and motor transduction. Not open for credit to students who have completed course 100B. (Former course 100B.)—II. (II.) Pappone

104L. Cellular Physiology/Neurobiology Laboratory (4)

Lecture—1 hour; laboratory—five 6-hour sessions and discussion—five 2-hour sessions to alternate weekly; extensive writing. Prerequisite: course 100 or 101 and Biological Sciences 103 and 104. Experiments in the physical and chemical processes of cells and tissues. GE credit: Wrt.—II. (II.)

105. Introduction to Computer Models (4)

Lecture—3 hours; lecture/laboratory—1 hour. Prerequisite: Mathematics 16C or the equivalent, Physics 7C, Chemistry 2C, and course 100 or 101. Introduction to the ideas, mathematical techniques and computer tools required for developing models of cellular processes in physiology and neurobiology. Applications include membrane transport, ionic channels, action potentials, Ca²⁺ oscillations, respiration, and muscle contraction. Offered in alternate years.—(III.)

106. Experiments in Neurobiology, Physiology, and Behavior: Design and Execution (3)

Laboratory—7.5 hours; discussion—0.5 hours. Prerequisite: course 100 or 101 or 102, and 199 and consent of instructor. Design and execution of experiments in neurobiology, physiology, and/or behavior. Students choose and design a project in consultation with the sponsoring faculty member. May be repeated once for credit to complete the project, with consent of instructor. An additional repeat is permitted for a different project under the guidance of another faculty member. (P/NP grading only.)—I, II, III. (I, II, III.) Rosenquist

111C. Advanced Systemic Physiology Laboratory (3)

Lecture—1 hour; laboratory—6 hours. Prerequisite: courses 101, 101L, Statistics 13; course 112, 113, or 114 recommended. Interfacing physiological recording equipment with microcomputers; data acquisition and analysis using the microcomputer; data interpretation within the framework of physiological concepts.—Sutter

111L. Advanced Systemic Physiology Laboratory (3)

Lecture—1 hour; laboratory—6 hours; discussion—2 hours (laboratory and discussion alternate weekly). Prerequisite: courses 101, 101L. Selected comprehensive experiments in the autonomic nervous system, the cardiovascular, respiratory, and neuromuscular systems. Emphasis on conceptual and methodological approaches using several species in demonstrating the physiology of organ systems. Not open for credit to students who have completed courses 111A or 111B. (Former courses 111A, 111B.) GE credit: Wrt.—I, III. (I, III.) Adamson

112. Neuroscience (3)

Lecture—3 hours. Prerequisite: course 100 or 101. Presentation of concepts in neuroscience including sensory systems, motor systems, and higher neural integration. Emphasis on mammalian nervous system.—I. (I.) Carstens

113. Cardiovascular, Respiratory, and Renal Physiology (4)

Lecture—4 hours. Prerequisite: course 101; Chemistry 8B, Physics 7B and 7C recommended. An intense and advanced presentation of concepts in cardiovascular, respiratory, and renal physiology including discussion of acid-base balance.—II. (II.) Goldberg

114. Gastrointestinal Physiology (3)

Lecture—3 hours; term paper. Prerequisite: course 101; Biological Sciences 103 recommended. Advanced gastrointestinal physiology covering absorption, secretion, motility, and special emphasis on endocrinology and innervation. Emphasis will be on physiology of the gastrointestinal tract; some pathology and nutritional items will be covered. GE credit: Wrt.—I. (I.) Horwitz

117. Avian Physiology (3)

Lecture—3 hours. Prerequisite: course 101 or Biological Sciences 1B. Physiology of the various systems of birds with emphasis on digestion, respiration, excretion, and endocrine systems.—III. (III.) Millam

121. Physiology of Reproduction (3)

Lecture—3 hours. Prerequisite: course 101. Physiological mechanisms related to reproduction, breeding efficiency, and fertility, with special reference to domestic animals.—II. (II.) Berger

121L. Physiology of Reproduction Laboratory (1)

Laboratory—3 hours. Prerequisite: course 121 recommended (may be taken concurrently). Experiments on the reproductive systems of domestic animals including male and female gametes. (P/NP grading only.)—II. (II.) Berger

123. Comparative Vertebrate Organology (4)

Lecture—3 hours; laboratory—3 hours. Prerequisite: Biological Sciences 1A and 1B. Functional anatomy of major organ systems in vertebrates. Each system examined from cellular to gross level in fish, birds, and mammals. Emphasis on how differentiated cell types are integrated into tissues and organs to perform diverse physiological functions. (Same course as Anatomy, Physiology, and Cell Biology 100.)—II. (II.) Guinan

124. Comparative Neuroanatomy (4)

Lecture—3 hours; laboratory—2 hours. Prerequisite: Psychology 101, or course 100 or 101. Overview of the neuroanatomy of the nervous system in a variety of mammalian and non-mammalian vertebrates. Examine changes or modifications to neural structures as a result of morphological or behavioral specializations. (Same course as Psychology 124.)—II. (II.) Krubitzer, Recanzone

125. Comparative Physiology: Neurointegrative Mechanisms (3)

Lecture—3 hours. Prerequisite: course 101. Comparisons of physiological functions in the animal kingdom: neurointegrative mechanisms of integration including aspects of phylogenetic development at both neuronal and systemic levels. Not open for credit to students who have completed course 120A. (Former course 120A.)—III. (III.) Woolley

126. Comparative Physiology: Sensory Systems (3)

Lecture—3 hours. Prerequisite: course 100 or 101. Basic physiological mechanisms involved in sensory systems. Comparative approach to considerations of mechanosensitive systems (audition, lateral lines, touch, echolocation, equilibrium), chemosensitive systems (olfaction, taste, pheromones), photosensitive systems (vision, infrared detection, UV detection), electroreception, and pain. Emphasis on receptors.—II. (II.) Sillman

127. Comparative Physiology: Circulation (3)

Lecture—3 hours. Prerequisite: course 101. Comparisons of physiological functions in the animal kingdom: circulation. Comparative approach to cardiovascular function in vertebrates and invertebrates.—II. (II.) Weidner

128. Comparative Physiology: Endocrinology (3)

Lecture—3 hours. Prerequisite: course 101. Comparisons of physiological functions in the animal kingdom: animal hormones and their functions.—II. (II.) Furlow, Chang

dom: animal hormones and their functions.—II. (II.) Furlow, Chang

129. Comparative Physiology: Respiration (3)

Lecture—3 hours. Prerequisite: course 101. Comparisons of physiological functions in the animal kingdom: respiration. Offered in alternate years.

130. Physiology of the Endocrine Glands (4)

Lecture—4 hours. Prerequisite: course 101. Advanced presentation of concepts in endocrinology with emphasis on the role of hormones in reproduction, metabolism, and disease.—I. (I.) Adams

131. Physiological Genomics (3)

Lecture—3 hours. Prerequisite: Biological Sciences 1A, 1B, 1C, and 101, upper division standing. Genomics and its role in elucidating physiological and pathophysiological mechanisms; bioinformatics.—I. (I.) Warden

139. Frontiers in Physiology (3)

Lecture—2 hours; discussion—1 hour. Prerequisite: courses 100 and 101; 102 (may be taken concurrently). Lectures by leading authorities and discussion of the latest research in newly emerging areas in physiology. Offered every third year.

140. Principles of Environmental Physiology (3)

Lecture—3 hours. Prerequisite: course 101; Biological Sciences 102 recommended. Physiological aspects of interactions of organisms and environmental, cellular, system, and organismal levels. Emphasis on regulatory responses/mechanisms to thermal, pressure, gravity and light environmental variables. Not open for credit to students who have completed course 148. (Former course 148.)—II. (II.) Fuller

141. Physiological Adaptation of Marine Organisms (3)

Lecture—2 hours; laboratory—3 hours. Prerequisite: Biological Sciences 103. Residence at Bodega Marine Laboratory required. Physiological adaptation to the environment among organisms in marine and estuarine habitats. (See Bodega Marine Laboratory Program.)—III. (III.) Chang, Clegg

141P. Physiological Adaptation of Marine Organisms/Advanced Laboratory Topics (5)

Laboratory—12 hours; discussion—1 hour. Prerequisite: course 141 concurrently. Residence at Bodega Marine Laboratory required. Scientific research from hypothesis to publication, including training in methods of library research. Research related to topic covered in course 141. Final presentation both oral and written. (See Bodega Marine Laboratory Program.)—III. (III.) Chang, Clegg

150. Advanced Animal Behavior (4)

Lecture—3 hours; laboratory—3 hours. Prerequisite: course 102 or Psychology 101. Advanced integrative survey of biological principles of behavioral organization, emphasizing historical roots, current research directions, conceptual issues and controversies. Laboratory exercises on the description and analysis of the behavior of captive and free-living animals. (Same course as Psychology 122.)—II. (II.) Owings

152. Hormones and Behavior (3)

Lecture—3 hours. Prerequisite: course 101, and either course 102 or Psychology 101. Endocrine physiology with an emphasis on the principles of behavior. Fundamental relationships between hormones and various behaviors engaged in by the organism during its lifetime. Role of hormones in behavioral homeostasis, social behavior, reproductive behavior, parental behavior, adaptation to stress. (Same course as Psychology 123.)—II. (II.) Hahn, Mendoza

159. Frontiers in Behavior (3)

Lecture—2 hours; discussion—1 hour. Prerequisite: courses 100, 101, 102. Lectures by leading authorities and discussion of the latest research in newly emerging areas in behavioral biology. Offered every third year.—III.

160. Molecular and Cellular Neurobiology (3)

Lecture—1.5 hours; discussion—1.5 hours. Prerequisite: course 100, Biological Sciences 101 and consent of instructor. Selected topics in neurobiology. Topics include channel biophysics, action potential propaga-

tion, intracellular signal transduction pathways, synaptic physiology and quantal analysis, cellular mechanisms of synaptic plasticity, and neuromodulation of synaptic circuitry. (Same course as Neuroscience 160.)—III. (III.) Burns, Chen, Mulloney

160L. Advanced Cellular Neurobiology Laboratory (4)

Laboratory—12 hours. Prerequisite: course 160, Physics 7C recommended. Students will learn to record neural activity, to interpret their recordings, and to label neurons with antibodies against neurotransmitters.—III. (III.) Mulloney

161. Developmental Neurobiology (3)

Lecture—3 hours. Prerequisite: course 100 or 101. Issues, theoretical concepts, and methodologies in developmental neurobiology. Topics include prenatal and postnatal differentiation of neurons, and plasticity in the mature and aging brain. Integration of neurochemical, structural, physiological and behavioral perspectives.—III. (III.) Chalupa, McAllister

162. Neural Mechanisms of Behavior (3)

Lecture—3 hours. Prerequisite: course 100 or 101. The relationship between brain and behavior. Identification and analysis of the relevant neural circuits involved. Examples of systems to be considered are birdsong, locomotion, echolocation.—III. (III.) Britten

163. Information Processing Models in Neuroscience and Psychology (4)

Lecture—3 hours; term paper. Prerequisite: Mathematics 16B, Physics 7B, course 100 or Psychology 101. Basic mathematical modeling techniques used in neuroscience and psychology. Specific topics include linear systems theory, Fourier transforms, neural networks, adaptive systems, probabilistic inference and information theory. Emphasis on understanding information processing in neural systems. (Same course as Psychology 128.)—II. (II.) Sutter, Olshausen

168. Neurobiology of Addictive Drugs (3)

Lecture—3 hours. Prerequisite: course 101; a neurobiology course recommended. Neurobiological basis for the effects and mechanisms of action of drugs with addictive potential, including opiates (morphine, heroin, methadone), amphetamines, cocaine, nicotine, marijuana (cannabinoids), alcohol, caffeine and mind-altering drugs such as LSD.—III. (III.) Woolley

169. Frontiers in Neurobiology (3)

Lecture—2 hours; discussion—1 hour. Prerequisite: courses 100 and 101, course 102 (may be taken concurrently). Lectures by leading authorities and discussion of the latest research in newly emerging areas in neurobiology. Offered every third year.—(III.)

190C. Research Conference (1)

Discussion—1 hour. Prerequisite: upper division standing in Neurobiology, Physiology, and Behavior or related biological science and consent of instructor; concurrent enrollment in course 199. Research findings and methods in neurobiology, physiology, and/or behavior. Presentation and discussion of research by faculty and students. May be repeated for credit. (P/NP grading only.)—I, II, III. (I, II, III.)

192. Internship (1-12)

Internship—3-36 hours. Prerequisite: completion of 84 units and consent of instructor. Work experience off and on campus in all subject areas offered in physiology. (P/NP grading only.)

194HA-194HB-194HC. Neurobiology, Physiology, and Behavior—Honors (1-1-4-2)

Laboratory—3-12 hours. Prerequisite: senior standing; minimum 3.5 GPA in courses counted toward major; approval by the Master Adviser. Honors project in Neurobiology, Physiology and Behavior. Laboratory research on a specific question. The project is developed with the sponsoring faculty member and approved by the student's Honors Thesis Committee. Honors thesis to be submitted upon completion of the project. Course 194HB may be repeated for credit for a total of 8 units. (P/NP grading only.)

197T. Tutoring in Neurobiology, Physiology, and Behavior (1-5)

Discussion—2-6 hours. Prerequisite: upper division standing and consent of instructor. Assisting in

courses in neurobiology, physiology and behavior under the direction of the faculty. (P/NP grading only.)

198. Directed Group Study (1-5)

(P/NP grading only.)

199. Special Study for Advanced Undergraduates (1-5)

(P/NP grading only.)

Graduate Courses

221. Cellular and Molecular Neuroscience (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: graduate standing or consent of instructor. Advanced course dealing with the cellular and sub-cellular organization of the nervous system. Membrane channels, sensory transduction, synaptic transmission and cellular aspects of development and learning will be covered. (Same course as Neuroscience 221.)—I. (I.) Wilson

222. Systems Neuroscience (6)

Lecture—5 hours; discussion—1 hour. Prerequisite: graduate standing or consent of instructor. Integrative and information-processing aspects of nervous system organization. Topics include sensory systems, motor function, sensorimotor integration, the limbic system, and the neurobiology of learning and memory. (Same course as Neuroscience 222.)—II. Usrey

245. Computational Models of Cellular Signaling (3)

Lecture—3 hours. Prerequisite: consent of instructor. Computational and mathematical techniques in modeling of regulatory and signaling phenomena in neurobiology and cell physiology, focusing on linear and nonlinear ordinary differential equation models. Applications include ion channel kinetics, electrical activity, signal transduction, calcium oscillations, and simple neural circuits.—II. (II.)

261A. Topics in Vision (2)

Lecture/discussion—2 hours. Prerequisite: course 100 and 112 or the equivalent, graduate standing. Visual system functions and underlying mechanisms. Emphasis on recent research and pertinent aspects of anatomy, biochemistry, electrophysiology, psychophysics, development and genetics. Topics may vary each year. (Same course as Neuroscience 261A and Physiology 261A.) (S/U grading only.)—I. Ishida

263. Modeling in Systems Neuroscience (4)

Lecture—3 hours; lecture/laboratory—1 hour. Prerequisite: consent of instructor. Modeling as a tool in systems neuroscience. Mathematical techniques will be introduced and used to explore advanced topics in echolocation, sound localization, electroreception, communications, and motor systems. Other topics include transforms, modeling assumptions, scales and linearity. Offered in alternate years.—Sutter

270. How to Write a Fundable Grant Proposal (3)

Lecture/discussion—3 hours. Prerequisite: graduate standing in a life science and consent of instructor. Familiarization with the skills required to craft a successful grant proposal submitted to extramural agencies such as NIH and NSF.—III. (III.) Chalupa

291. Auditory Neuroscience (1)

Seminar—0.5 hours; discussion—0.5 hours. Prerequisite: course 100 or 112 or Neuroscience 222 or the equivalent. Exploration of various important aspects of auditory physiology, behavior and psychophysics through review of original literature. New topic each quarter. May be repeated for credit with consent of instructor. (S/U grading only.)—I, II, III. (I, II, III.) Sutter, Recanzone

292. Cortical Plasticity and Perception (2)

Lecture/discussion—2 hours. Prerequisite: course 100 or 112 or equivalent or consent of instructor. Examination of research articles on cortical plasticity and changes in perception. Examples drawn from studies of the somatosensory, visual, auditory, and motor cortex. (Same course as Neuroscience 292.) Offered in alternate years. (S/U grading only.)—(II.) Recanzone

Biological Sciences: Plant Biology

Courses in Plant Biology (PLB)

Lower Division Courses

1. Plants for Garden, Orchard and Landscape (2)

Lecture—1 hour; laboratory—3 hours. For non-majors. Hands-on experience with plants cultivated for food, environmental enhancement and personal satisfaction. Topics include establishing a vegetable garden, pruning and propagating trees and vines, growing flowers and ornamental plants, and the role of plants in human health and well-being. Not open for credit to students who have completed Agricultural Systems and Environment 2 or Plant Science 1. (Former course Plant Science 1.) (P/NP grading.)—I, III. (I, III.) Marrush

11. Plants and the Biosphere (3)

Lecture—3 hours; one weekend field trip (half-day); term paper. Ethnobotanical and ecological themes are emphasized in examining our dependence on plants, the ecological roles of plants, and the development of botany as a contemporary science. Intended primarily for non-science majors. GE credit: SciEng, Wrt.—I. (I.) Potter

12. Plants and People (3)

Lecture—3 hours. Prerequisite: high school biology. Plants as a resource for food, recreation, and environmental enhancement. Emphasis on how our relationship to plants has changed through history and how the growth and development of plants affect their utility. Not open for credit to students who have completed Plant Science 10. (Former course Plant Science 10.) GE credit: SciEng, Div, Wrt.—I, II, III. (I, II, III.) Nevins, Michelmore, Fischer, Bradford

90X. Plant Science Seminar (1-4)

Prerequisite: consent of instructor. Examination of a special topic in a small group setting. Not open for credit to students who have completed course Plant Science 90X. (Former course Plant Science 90X.)

92. Internship (1-12)

Internship—3-36 hours. Prerequisite: consent of instructor. Technical and/or professional experience on or off campus. Supervised by a member of the Plant Biology faculty. (P/NP grading only.)

98. Directed Group Study (1-5)

Prerequisite: consent of instructor. Primarily for lower division students. (P/NP grading only.)

99. Special Study for Undergraduates (1-5)

Prerequisite: consent of instructor. (P/NP grading only.)

Upper Division Courses

For questions about courses numbered 102 through 125, see the Plant Biology Section Office, 1002 Life Sciences Addition. For questions concerning courses numbered 1, 12, 140 through 188 and 196, see the Plant Science Advising Center, 1144 Plant and Environmental Sciences.

102. California Floristics (5)

Lecture—2 hours; lecture/discussion—1 hour; laboratory—6 hours (includes three one-day, weekend field trips). Prerequisite: Biological Sciences 1A, 1B, 1C or the equivalent in plant science. Survey of the flora of California, with emphasis on field recognition and identification of important vascular plant families and genera characterizing the major floristic regions. Lectures review the taxonomic diversity, evolutionary relationships, and geographical patterns of California flora.—III. (III.) Potter, Dean

105. Developmental Plant Anatomy (5)

Lecture—3 hours; laboratory—6 hours. Prerequisite: introductory plant biology (for example, Biological Sciences 1C). Survey of vascular plant structure and development. Current ideas and experimental evidence for developmental concepts.—I. (I.) Canington

108. Systematics and Evolution of Angiosperms (5)

Lecture—3 hours; laboratory—6 hours. Prerequisite: Biological Sciences 1A, 1B and 1C. Diversity and classification of angiosperms (flowering plants) on a world scale, and current understanding of the origin of angiosperms and evolutionary relationships and

trends within them based on morphological and molecular evidence. (Same course as Evolution and Ecology 108.) GE credit: SciEng.—III. (III.) Doyle

111. Plant Physiology (3)

Lecture—3 hours. Prerequisite: Biological Sciences 1C; Chemistry 8B and Physics 7C (either may be taken concurrently); course 105 recommended. The plant cell as a functional unit. The processes of absorption, movement, and utilization of water and minerals. Water loss, translocation, photosynthesis, respiration.—I. (I.) Lucas, Stemler

111D. Problems in Plant Physiology (1)

Discussion—1 hour. Prerequisite: course 111 concurrently. Discussion of problems and applications relating to principles presented in course 111. Students will be assigned problems each week showing novel applications of principles described in course 111 and will prepare answers to be delivered orally during the class period. (P/NP grading only.)—I. (I.) Lucas, Stemler

111L. Introductory Plant Physiology Laboratory (5)

Lecture/discussion—1 hour; laboratory—9 hours; extensive writing. Prerequisite: course 111 (may be taken concurrently) or 112 or consent of instructor (both recommended). Introduction to basic experimental techniques and instruments used in the investigation of plant physiological processes, such as photosynthesis, water and solute transport, tissue cultures, and detection of hormones.—(III.) Murphy

112. Plant Growth and Development (3)

Lecture—3 hours. Prerequisite: Biological Sciences 1C, Chemistry 8B. Introduction to the mechanisms and control systems that govern plant growth and development and the responses of plants to the environment. Strong emphasis on vegetative development of flowering plants. GE credit: SciEng.—II. (II.)

112D. Problems in Plant Growth and Development (1)

Discussion—1 hour. Prerequisite: course 112 concurrently. Discussion of problems and applications relating to principles presented in course 112. Students will be assigned problems each week showing novel applications of the principles described in course 112 and will prepare answers to be delivered orally during class period. (P/NP grading only.)—II. (II.)

113. Molecular and Cellular Biology of Plants (3)

Lecture—3 hours. Prerequisite: Biological Sciences 1A, 1C, 101; Biological Sciences 102 recommended. Molecular and cellular aspects of the growth and development of plants and their response to biological and environmental stresses. Primary focus on processes unique to plants. Experimental approaches will be emphasized.—III. (III.)

113D. Problems in Molecular and Cellular Biology of Plants (1)

Discussion—1 hour. Prerequisite: course 113 concurrently. Discussion of topics and applications related to principles presented in course 113. Assigned topics each week show novel applications of the principles described in course 113; discussion of topics during class period. (P/NP grading only.)—III. (III.)

116. Plant Morphology and Evolution (5)

Lecture—3 hours; laboratory—6 hours. Prerequisite: introductory plant biology (e.g., Biological Sciences 1C); plant anatomy recommended (e.g., course 105). Introduction to the form, development and evolution of vascular plants. Emphasis given to the form and development of reproductive structures in ferns and seed-producing plants as a basis for determining evolutionary relationships. GE credit: SciEng.—II. (II.) Jernstedt

117. Plant Ecology (4)

Lecture—3 hours; fieldwork—3 hours. Prerequisite: Biological Sciences 1A, 1B, 1C; course 111 recommended. The study of the interactions between plants, plant populations or vegetation types and their physical and biological environment. Special emphasis on California. Four full-day field trips and

brief write-up of class project required. (Same course as Evolution and Ecology 117.)—I. (I.) Pearcy

118. Introductory Phycology and Bryology (5)

Lecture—3 hours; laboratory—6 hours. Prerequisite: Biological Sciences 1A and 1C. Comparative morphology, physiology, development and reproduction of cyanobacteria, the major algal groups, and the bryophytes. Focus on structure-function and evolutionary relationships. Ecological factors and commercial uses are considered. Laboratories include study of living organisms and identification exercises.—II. (II.) Canington

119. Population Biology of Weeds (3)

Lecture—2 hours; laboratory—3 hours. Prerequisite: Biological Sciences 1A, 1B, 1C; introductory statistics recommended. Origin and evolution of weeds, reproduction and dispersal, seed ecology, modeling of population dynamics, interactions of weeds and crops, biological control. Laboratories emphasize design of competition experiments and identification of weedy species. Not open for credit to students who have completed Plant Biology 121. (Same course as Evolution and Ecology 119.)—III. (III.) Rejmanek

123. Plant-Virus-Vector Interaction (3)

Lecture—3 hours. Prerequisite: Biological Sciences 1A, 1C, 101; course 105, Plant Pathology 120, and Entomology 100 recommended. Analysis of the interactions necessary for viruses to infect plants. Interactions among insect vectors and host plants involved in the plant-virus life cycle. Evolutionary aspects of the molecular components in viral infection and modern experimental approaches to the interdiction of viral movement. Offered alternate years. (Same course as Entomology 123/Plant Pathology 123.)—(I.) Lucas, Gilbertson, Ullman

126. Plant Biochemistry (3)

Lecture—3 hours. Prerequisite: Biological Sciences 1C or the equivalent, and Biological Sciences 103. The biochemistry of important plant processes and metabolic pathways. Discussion of methods used to understand plant processes, including use of transgenic plants. (Same course as Molecular and Cellular Biology 126.)—(I.) Callis, Abel

140. Culinary and Medicinal Herbs (3)

Lecture/discussion—3 hours. Prerequisite: Biological Sciences 1C. Growth, identification, cultivation, and use of common culinary and medicinal herbs; herbal plant families; effects of climate and soils on herbs; herbal medicine; ecology and geography of herbs; herb garden design; secondary chemistry of active compounds. (Same course as Environmental and Resource Sciences 140.)—III. (III.) Bledsoe

141. Principles and Methods of Ethnobotany (4)

Lecture—3 hours; laboratory/discussion—2 hours. Prerequisite: Biological Sciences 1C or Agricultural Management and Rangeland Resources 2 or the equivalent; course 108 recommended. Examination of concepts, questions, and methods in ethnobotany, the study of human-plant interactions. Specific topics include traditional and scientific classification systems, uses of specific plants, plant evolution under domestication, and ethical issues related to ethnobotany. Offered in alternate years. GE credit: SciEng or SocSci, Wrt.—(II.) Potter

142. Ecology of Crop Systems (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: Agricultural Management and Rangeland Resources 2 or Biological Sciences 1C; Mathematics 16A or Physics 1A, or consent of instructor. Ecological processes governing the structure and behavior of managed ecosystems. Emphasis on mechanistic and systems views of the physical environment, photosynthetic productivity, competition, adaptation, nutrient cycling, energy relations and contemporary issues such as climate change. GE credit: SciEng.—II. (II.) Denison

143. Evolution of Crop Plants (3)

Lecture—3 hours. Prerequisite: Biological Sciences 1C or the equivalent. Origins of crops and agriculture, including methodological approaches, center of origin and diversity, crop dissemination pathways, and differences between wild and cultivated plants.

Group studies of individual crops are published on the Internet. Not open for credit to students who have completed Plant Science 103. GE credit: Sci-Eng, Wrt.—III. (III.) Gepts

144. Trees and Forests (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: Biological Sciences 1C. Biological structure and function of trees as organisms; understanding of forests as communities and as ecosystems; use of forests by humans; tree phenology, photosynthesis, respiration, soil processes, life histories, dormancy, forest biodiversity, and agroforestry. (Same course as Environmental Horticulture 144 and Environmental and Resource Sciences 144.)—I. (I.) Barbour, Berry, Bledsoe

145. Sierra Nevada Flora (3)

Lecture/laboratory—30 hours (total); fieldwork—50 hours (total). Prerequisite: course 102 or 108 or Evolution and Ecology 121 or Environmental Horticulture 105. An introduction to the flora of the Sierra Nevada. Basic plant identification, the principle plant communities and species of the Sierra Nevada. Class offered the first two weeks in July in the Sierra Nevada. Offered in alternate years.—summer

146. Rhizosphere Ecology (3)

Lecture—2 hours; discussion—1 hour. Prerequisite: Agricultural Management and Rangeland Resources 2 or Biological Sciences 1C. Effects of plant-microbe interactions on plant growth, soil formation, and agricultural sustainability. Physical, chemical and biological processes that occur at the surface of plant roots. Evolution and modification of the biochemical and genetic bases of rhizosphere ecology. Offered in alternate years.—(III.) Phillips

147. Survey of Plant Communities of California (4)

Lecture/discussion—2 hours; fieldwork—3 hours; extensive writing. Prerequisite: Biological Sciences 1A or 1B or 1C or Molecular and Cellular Biology 10 recommended. Consent of instructor required quarter prior to course. Upper division standing required if enrollment must be limited. Selected plant communities analyzed for their structure and the relationship of their component species to the environment. Four weekend field trips required. GE credit: SciEng, Wrt.—III. (III.) Barbour, Jackson, Ronald

148. Introductory Mycology (4)

Lecture—2 hours; laboratory—6 hours. Prerequisite: Biological Sciences 1A, 1B, 1C. Systematics, ecology, evolution, and morphology of fungi. Importance of fungi to humans. (Same course as Plant Pathology 148.)—I. (I.) MacDonald, Rizzo

152. Plant Genetics (4)

Lecture—3 hours; discussion/laboratory—1 hour. Prerequisite: Biological Sciences 1A or consent of instructor. Basic principles of transmission genetics, cytogenetics, population and quantitative genetics, and molecular genetics. Practical aspects of genetic crosses and analysis of segregating populations. Not open for credit to students who have completed Plant Science 105. (Former course Plant Science 105.)—I. (I.) Wilkins

153. Plant, Cell, Tissue and Organ Culture (4)

Lecture—2 hours; discussion—1 hour; laboratory—3 hours. Prerequisite: Biological Sciences 1C or Agricultural Management and Rangeland Resources 2. Basic and applied aspects of plant tissue culture including media preparation, micropropagation, embryogenesis, anther culture, protoplast culture and transformation. Offered in alternate years. Not open for credit to students who have completed Plant Science 107. (Former course Plant Science 107.)—II. (II.) Sutter

154. Introduction to Plant Breeding (4)

Lecture—3 hours; laboratory—3 hours. Prerequisite: course 152, Biological Sciences 101 or consent of instructor. The principles, methods and applications of plant breeding and genetics to the improvement of crop plants. Illustration of how plant breeding is a dynamic, multidisciplinary, constantly-evolving science. Laboratory emphasizes hands-on experience in the basics of breeding through experiments. (Former course Plant Science 113.)—II. (II.) St. Clair

157. Physiology of Environmental Stresses in Plants (4)

Lecture—2 hours; discussion—2 hours. Prerequisite: course 112 (may be taken concurrently) or the equivalent. Stress concepts and principles; physiological, developmental and morphological characteristics enabling plants to avoid or tolerate environmental stresses; mechanisms of acclimation common to many stresses; responses of wild and cultivated species to drought, flooding, nutrient deficiencies, salinity, toxic ions, extreme temperatures. Offered in alternate years.—(II.) Lauchli, Richards

158. Mineral Nutrition of Plants (4)

Lecture—3 hours; laboratory—3 hours. Prerequisite: course 111 or the equivalent. Evolution and scope of plant nutrition; essential and other elements; mechanisms of absorption and translocation; mineral metabolism; deficiencies and toxicities; genetic and ecological aspects of plant nutrition. Not open for credit to students who have completed Plant Biology/Plant Science 135. (Former course Plant Biology/Plant Science 135.)—III. (III.) Richards, Brown

160. Principles of Plant Biotechnology (3)

Lecture—3 hours. Prerequisite: Biological Sciences 1A and 101. Principles and concepts of plant biotechnology including recombinant DNA technology, plant molecular biology, plant cell and tissue culture, and crop improvement. Not open for credit to students who have completed Plant Science 140. (Former course Plant Science 140.)—II. (II.) Dandekar

161A. Plant Genetics and Biotechnology Laboratory (4)

Lecture—2 hours; laboratory—6 hours. Prerequisite: course 152 and/or 160. Techniques of genetic analysis at the molecular and organismal levels, including segregation and linkage analysis, cytogenetics and recombinant DNA. Not open for credit to students who have completed Plant Science 141A. (Former course Plant Science 141A.)—I. (I.) Dandekar, Dubcovsky

161B. Plant Genetics and Biotechnology Laboratory (4)

Lecture—2 hours; laboratory—6 hours. Prerequisite: course 152 and/or 160. Advanced techniques of genetic analysis at the molecular and organismal levels, including transformation, gene expression, analysis of transgenic plants and QTL analysis. Not open for credit to students who have completed Plant Science 141B. (Former course Plant Science 141B.)—II. (II.)

171. Plant Propagation (4)

Lecture—2 hours; discussion—1 hour; laboratory—3 hours. Prerequisite: Agricultural Management and Rangeland Resources 2 or Biological Sciences 1C. Principles and practices of propagating plants covering anatomical, physiological, and practical aspects. Not open for credit to students who have completed Plant Science 109. (Former course Plant Science 109.)—III. (III.) Sutter

172. Postharvest Physiology and Handling of Horticultural Commodities (3)

Lecture—3 hours. Prerequisite: general plant science background recommended (e.g., Agricultural Management and Rangeland Resources 2, course 12 or Food Science and Technology 2); concurrent enrollment in course 172L recommended. Physiological processes related to the maturation and senescence of fruits, vegetables, and ornamentals; fundamentals involved in handling, transportation, storage, and marketing practices, e.g., temperature and humidity control, protective treatments, controlled atmospheres. Not open for credit to students who have completed Plant Science 112. (Former course Plant Science 112.)—I. (I.) Kader, Reid, Salveit

172L. Postharvest Physiology and Handling Laboratory (2)

Discussion—1 hour; laboratory—3 hours. Prerequisite: course 172 (may be taken concurrently). Demonstrations and exercises following the subject matter of course 172. Not open for credit to students who have completed Plant Science 112L. (Former course Plant Science 112L.)

173. Biological Applications in Fruit Tree Management (2)

Lecture—1 hour; laboratory—3 hours. Prerequisite: Biological Sciences 1C or Agricultural Management and Rangeland Resources 2 or the equivalents. Physiology, growth, development and environmental requirements of fruit trees and cultural practices used to maintain them. Emphasis on the application of biological principles in the culture of commercially important temperate zone fruit tree species. Not open for credit to students who have completed Plant Science 115. (Former course Plant Science 115.)—II. (II.) DeJong

174. Biological Applications in Fruit Production (2)

Lecture—1 hour; laboratory—3 hours. Prerequisite: Biological Sciences 1C or Agricultural Management and Rangeland Resources 2; course 173 recommended. Reproductive biology of tree-crop species. Biological principles of fruit production, tree nutrition and orchard management. Laboratories emphasize hands-on work with orchard tree systems.—III. (III.) DeJong, Polito

175. Applied Plant Biology (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 111, and Biological Sciences 101 or course 152. Advanced concepts of plant biology with reference to the uses of plants for food, fiber, and environmental enhancement. Current research, applications, and issues in crop improvement, production and biotechnology will be presented and discussed. Not open for credit to students who have completed Plant Science 145. (Former course Plant Science 145.)—II. (II.)

176. Introduction to Weed Science (3)

Lecture—2 hours; laboratory—3 hours. Prerequisite: Agricultural Management and Rangeland Resources 2 or Biological Sciences 1C. Principles of weed science including mechanical, biological, and chemical control methods. Weed control in crop, pasture, range, brush, forests, aquatic, and non-crop situations. Types of herbicides. Application of herbicides. Sight identification of common weeds and demonstrations to illustrate the principles. Not open for credit to students who have completed former course 120.—II. (II.) Bayer

177. Action of Herbicides (3)

Lecture—2 hours; laboratory—3 hours. Prerequisite: course 176; Soil Science 100; courses 111, 111D recommended. Influence of plants and soils on the action of herbicides. Absorption, translocation, fate, mechanism of action and symptoms of herbicides in plants. Effects of herbicides on plant populations. Physical and molecular fate of herbicides in soils. Not open for credit to students who have completed former course 122. (Former course 122.)

178. Biology and Management of Freshwater Macrophytes (3)

Lecture—3 hours; two field trips. Prerequisite: Biological Sciences 1A, 1B, 1C, Chemistry 8B; course 111 or Hydrologic Science 122 recommended. Brief survey of common fresh water macrophytes, their reproductive modes, physiology, growth (photosynthesis, nutrient utilization), development (hormonal interactions), ecology and management. Offered in alternate years. Not open for credit to students who have completed former course 150. (Former course 150.)—(I.) Anderson

188. Undergraduate Research: Proposal (3)

Lecture/discussion—3 hours. Prerequisite: upper division standing and consent of instructor. Through lectures, class discussion and individual mentoring, students will define a problem, identify objectives, conduct a literature survey, generate testable hypotheses, design experiments, plan data analysis, prepare an outline, and write a scientific proposal. (Same course as Biotechnology 188.) (P/NP grading only.)—III. (III.) Yoder, Powell

189. Experiments in Plant Biology: Design and Execution (3)

Laboratory/discussion—6 hours. Prerequisite: Biological Sciences 1A, 1B, 1C or the equivalent courses in plant sciences, and consent of the

instructor. Provides an opportunity for undergraduate students to formulate experimental approaches to current questions in plant biology and to carry out their proposed experiments. May be repeated for credit for a total of 12 units. (P/NP grading only.)—I, II, III. (I, II, III.)

190C. Research Conference in Botany (1)

Discussion—1 hour. Prerequisite: upper division standing in botany or related discipline; consent of instructor. Introduction to research methods in botany. Design of field or laboratory research projects, survey of appropriate literature, and discussion of research by faculty and students. May be repeated for credit. (P/NP grading only.)—I, II, III. (I, II, III.)

192. Internship (1-12)

Internship—3-36 hours. Prerequisite: upper division standing; consent of instructor. Technical and/or professional experience on or off campus. Supervised by a member of the Plant Biology Section faculty. (P/NP grading only.)

194H. Special Study for Honors Students (1-5)

Prerequisite: open only to majors of senior standing on honors list. Independent study of selected topics under the direction of a member or members of the staff. Completion will involve the writing of a senior thesis. (P/NP grading only.)

196. Postharvest Technology of Horticultural Crops (3)

Lecture/discussion/demonstration—5 days; field trip—5 days. Prerequisite: upper division or graduate student standing. Intensive study of current procedures for postharvest handling of fruits, nuts, vegetables, and ornamentals in California. Scheduled first two weeks immediately following last day of spring quarter. Considered a spring course for pre-enrollment. Not open for credit to students who have completed Plant Science 196. (Former course Plant Science 196.) (P/NP grading only.)—III. (III.) Mitcham

197T. Tutoring in Botany (1-5)

Tutoring—1-5 hours. Prerequisite: upper division standing and consent of instructor. Designed for undergraduate students who desire teaching experience. Student contact will be primarily in laboratory or discussion sections. (P/NP grading only.)

198. Directed Group Study (1-5)

Prerequisite: consent of instructor. (P/NP grading only.)

199. Special Study for Advanced Undergraduates (1-5)

Prerequisite: consent of instructor. (P/NP grading only.)

Biomedical Engineering (A Graduate Group)

Graduate Study. The Graduate Group in Biomedical Engineering offers programs of study and research leading to the M.S. and Ph.D. degrees. The programs of study prepare students for professional work in the effective integration of engineering with medical sciences. Research strengths lie in the areas of medical imaging, biosensors and microfab-

ricated electrical and mechanical systems, cellular and molecular mechanics, orthopedic biomechanics, biofluids and transport, and motor control and human movement. This broad interdepartmental program is best suited for students who are capable of and comfortable with considerable independence. Each student, together with an adviser, defines a specific course of study suited to individual goals.

Preparation. The Group regards strong competence in mathematics and engineering as necessary for successful completion of study. Prior course work in these areas is emphasized in the evaluation of applications. Some such training can be acquired after admission to the Group, but it may necessitate up to one additional year of study.

Courses. See Engineering: Biomedical Engineering for courses.

(Chemistry)

Frederic A. Troy, Ph.D., Professor (Biological
Chemistry)

John C. Voss, Ph.D., Assistant Professor (Biological
Chemistry)

David K. Wilson, Ph.D., Assistant Professor
(Molecular and Cellular Biology)

Yin Yeh, Ph.D., Professor (Applied Science)

Graduate Study. The Graduate Group in Biophysics offers programs of study leading to the Ph.D. degree. Biophysics is a broad interdepartmental program that is ideal for students who are comfortable with considerable independence. The emphasis is on molecular biophysics. The curriculum consists of certain core courses in biology, chemistry, and physics, followed by specialty courses related to research interests. Specific program requirements are decided in consultation with a research supervisor and the graduate adviser.

Graduate Adviser. J.H. Crowe (Molecular and Cellular Biology), W.H. Fink (Chemistry).

Courses in Biophysics (BPH)

Graduate Courses

200. Current Techniques in Biophysics (2)

Lecture—2 hours. Prerequisite: graduate standing; Biological Sciences 102 or 104 or the equivalent. Current techniques in biophysics research including diffraction, magnetic resonance spectroscopy, calorimetry, optical spectroscopy, and electrophysiology. (Same course as Molecular and Cellular Biology 200C.) (S/U grading only.)—III. (III.) Chen

200LA. Biophysics Laboratory (3)

Laboratory—18 hours. Prerequisite: course 200 (may be taken concurrently). One five-week laboratory assignment in the research laboratory of a Biophysics Graduate Group faculty member. Individual research problems with emphasis on methodological/procedural experience and experimental design. May be repeated for credit four times.—I, II, III. (I, II, III.)

200LB. Biophysics Laboratory (6)

Laboratory—two 18-hour rotations. Prerequisite: course 200 (may be taken concurrently). Two five-week laboratory assignments in the research laboratories of Biophysics Graduate Group faculty members. Individual research problems with emphasis on methodological/procedural experience and experimental design. May be repeated for credit two times.—I, II, III. (I, II, III.)

231. Biological Nuclear Magnetic Resonance (3)

Lecture—3 hours. Prerequisite: Molecular and Cellular Biology 221A or the equivalent or consent of instructor. Principles and applications of magnetic resonance in biomedicine. Fundamental concepts and the biophysical basis for magnetic resonance applications in areas of tissue characterization/imaging, metabolic regulation, and cellular bioenergetics. (Same course as Biological Chemistry 231.) Offered in alternate years.—(I.) Jue

290C. Research Conference in Biophysics (1)

Discussion—1 hour. Prerequisite: graduate standing in Biophysics and/or consent of instructor; course 299 concurrently. Presentation and discussion of faculty and graduate-student research in biophysics. May be repeated for credit. (S/U grading only.)—I, II, III. (I, II, III.)

298. Group Study (1-5)

(S/U grading only.)

299. Research (1-12)

(S/U grading only.)

Biostatistics (A Graduate Group)

Graduate Study. Biostatistics is a field of science that uses quantitative methods to study life sciences related problems that arise in a broad array of fields. The program provides students with, first, solid training in the biostatistical core disciplines and theory; second, with state-of-the-art knowledge and skills for biostatistical data analysis; third, substantial exposure to the biological and epidemiological sciences; and fourth, with a strong background in theoretical modeling, statistical techniques and quantitative as well as computational methods. Programs of study and research are offered leading to the M.S. and Ph.D. degrees. The program prepares students for interdisciplinary careers ranging from bioinformatics, environmental toxicology and stochastic modeling in biology and medicine to clinical trials, drug development, epidemiological and medical statistics. The program draws on the strengths of the Biostatistics faculty at UC Davis.

Preparation. Students should have one year of calculus; a course in linear algebra or one year of biological course work; facility with a programming language; and upper-division work in at least one of Mathematics, Statistics and Biology.

Graduate Adviser. R. Azari (Statistics).

Biotechnology

(College of Agricultural and Environmental Sciences)

Faculty. Faculty includes members of the Departments of Agronomy and Range Science; Animal Science, Environmental Horticulture; Food Science and Technology; Land, Air and Water Resources; Plant Pathology; Pomology; Vegetable Crops; Viticulture and Enology; and the Division of Biological Sciences.

The Major Program

Every living organism, from the smallest and most primitive bacteria to every plant, insect, animal or human being, contains DNA as the primary genetic material. DNA directs all cellular processes, creating the incredible variety and diversity of living organisms in the biosphere. Biotechnology focuses on the mechanics of life processes and their application. Biotechnology means "life technology" and represents an integrated, multidisciplinary field, with a profound impact today on almost every aspect of human endeavor.

The Program. In the first two years, students develop a strong and general background in biological science with an emphasis on fundamental concepts and basic principles of genetics, molecular biology and cell biology. Three options, *Animal Biotechnology*, *Plant Biotechnology*, and *Fermentation/Microbial Biotechnology*, provide in-depth training and specialized knowledge in an aspect of biotechnology. Each option has a strong laboratory component to reinforce the theoretical concepts. Students also do an internship in a biotechnology company or university or government laboratory.

Internships and Career Opportunities. In the last decade, more industries are turning to biotechnology to solve problems and improve products, creating a growing job market for individuals trained in biotechnology in the agricultural, food and beverage, health care, chemical, pharmaceutical and biochemical, and environmental and bioremediation industries. Graduates trained in the technologies designed for biotechnology will find their training applicable to advanced research in molecular biology, genetics, biochemistry, and the plant and animal sciences.

Fermentation/Microbiology Biotechnology
 Option30-33
 Microbiology 140, 150; Microbiology 102L or Food Science and Technology 104L; Molecular and Cellular Biology 160L or Plant Biology 161A; Viticulture and Enology 124 or 18615-18
 Restricted Electives15
 Select from Biotechnology 188, Chemical Engineering 161B, 161C, 161L, Chemistry 107A, 107B, Food Science and Technology 102A, 102B, 104, 104L, 110A, 110B, 123, 123L, 205, Microbiology 105, 155L, 170, Molecular and Cellular Biology 164, Viticulture and Enology 124, 124L, 126, 128, 128L, 135, 140.

Plant Biotechnology Option28
 Molecular and Cellular Biology 126, Plant Biology 152, 160, 161A, 161B18
 Restricted Electives10
 Select at least one course from each of the areas. Biotechnology 188 may be used in *a* or *b*.
 (a) *Pests, Pathogens and Production*
 Agricultural Management and Rangeland Resources 118, Entomology 110, Molecular and Cellular Biology 164, Nematology 100 or 110, Plant Pathology 120, Plant Biology 143, 146, 153, 154, 172
 (b) *Growth and Development*
 Plant Biology 105, 111, 112, 157, 158

Animal Biotechnology Option29
 Animal Genetics 111, Neurobiology, Physiology, and Behavior 101, Molecular and Cellular Biology 150, 150L, Veterinary Medicine 17018
 Restricted Electives11
 Select at least one course from each of the areas. Biotechnology 188 may be used in *a* or *b*.
 (a) *Animal cell biology/microbiology/immunology*
 Animal Genetics 101, Medical Microbiology 107, Microbiology 102L, Molecular and Cellular Biology 160L, Pathology, Microbiology, and Immunology 126, 126L, 128, Physiology 200L, Plant Biology 161A
 (b) *Animal reproduction and breeding*
 Animal Genetics 107, Animal Science 131, 140, Avian Sciences 103, 121, Evolution and Ecology 102, Molecular and Cellular Biology 164, Neurobiology, Physiology, and Behavior 121, 121L

Unrestricted Electives21-37
Total Units for the Major180

Major Adviser: J.I. Yoder (*Vegetable Crops*), 133 Asmundson Hall.

Advising Center for the major is located at 1144 Plant and Environmental Sciences.

Courses in Biotechnology (BIT)**Lower Division Courses**

92. Internship in Biotechnology (1-12)
 Internship—3-36 hours. Prerequisite: consent of instructor. Work experience on or off campus in subject area pertaining to biotechnology or in a business, industry or agency associated with biotechnology. Internship supervised by faculty member in the animal or plant sciences. (P/NP grading only.)

99. Special Study for Undergraduates (1-5)
 Prerequisite: consent of instructor. (P/NP grading only.)

Upper Division Courses**171. Professionalism and Ethics in Genomics and Biotechnology (3)**

Lecture—1 hour; discussion—2 hours. Prerequisite: upper division standing in a natural science major. Real and imaginary case studies to illustrate ethical issues in science. Training and practice in difficult ethical situations and evaluating personal and social consequences. Not open for credit to students who have completed course 193 or Plant Pathology 140.—I. Yoder

188. Undergraduate Research: Proposal (3)

Lecture/discussion—3 hours. Prerequisite: upper division standing and consent of instructor. Through lectures, class discussion and individual mentoring, students will define a problem, identify objectives, conduct a literature survey, generate testable hypotheses, design experiments, plan data analysis, prepare an outline, and write a scientific proposal. (Same course as Plant Biology 188.) (P/NP grading only.)—III. (III.) Yoder, Powell

189L. Laboratory Research in Genomics and Biotechnology (2-5)

Laboratory—3-12 hours; discussion—1 hour. Prerequisite: course 188 and consent of instructor. Formulating experimental approaches to current questions in biotechnology; performance of proposed experiments. May be repeated for credit up to 12 units. (P/NP grading only.)—I, II, III. (I, II, III.)

192. Internship in Biotechnology (1-12)

Internship—3-36 hours. Prerequisite: consent of instructor. Work experience on or off campus in a subject area pertaining to biotechnology or in a business, industry or agency associated with biotechnology. Internship supervised by faculty member in the animal or plant sciences. (P/NP grading only.)

194H. Honors Thesis in Biotechnology (1-5)
 Independent Study—3-15 hours. Prerequisite: senior standing in Biotechnology with 3.25 GPA or higher and completion of courses 188 and 189L. Independent study of selected topics under the direction of a member or members of the staff. Completion will involve the writing of a senior thesis. (Deferred grading only, pending completion of sequence. P/NP grading only.)

199. Special Study for Advanced Undergraduates (1-5)

Prerequisite: consent of instructor. (P/NP grading only.)

Graduate Study. The Graduate Group in Cell and Developmental Biology offers programs of study leading to the Ph.D. degree. Cell and Developmental Biology is a broad interdepartmental program. The curriculum consists of core courses in cell biology or developmental biology as well as courses jointly staffed with other graduate programs. Specific programs of study are decided upon by an advisory committee chaired by the student's research adviser, and the choice of major core courses will reflect the student's primary research interest.

Preparation. Appropriate preparation is an undergraduate degree in a biological or physical science. Preparation should include a year of calculus, physics, general chemistry and organic chemistry, and introductory courses in statistics, biochemistry, genetics and cell biology.

Graduate Advisers. J. Hedrick (*Molecular and Cellular Biology*)

Courses in Cell and Developmental Biology (CDB)

Graduate Courses

200. Current Techniques in Cell Biology (2)

Lecture—2 hours. Prerequisite: graduate standing; Biological Sciences 104 and Molecular and Cellular Biology 141 or the equivalent courses. Current techniques used in cell biology research including microscopy, spectroscopy, electrophysiology, immunochemistry, histology, organelle isolation, calorimetry, tissue culture and gel electrophoresis. Lectures are presented by experts on each technique, with an emphasis on pitfalls to avoid when using the technique. (Same course as Molecular and Cellular Biology 200A.) (S/U grading only.)—I. (I.)

200LA. Cell and Developmental Biology Laboratory (3)

Laboratory—18 hours. Prerequisite: course 200 (may be taken concurrently). One five-week assignment in the research laboratory of a Cell and Developmental Biology Graduate Group member. Individual research problems with emphasis on methodological/procedural experience and experimental design. May be repeated for credit four times.—I, II, III. (I, II, III.)

200LB. Cell and Developmental Biology Laboratory (6)

Laboratory—18 hours. Prerequisite: course 200 (may be taken concurrently). Two five-week assignments in research laboratories of Cell and Developmental Biology Graduate Group members. Individual research problems with emphasis on methodological/procedural experience and experimental design. May be repeated for credit.—I, II, III. (I, II, III.)

205. Topics in Cell Biology of the Cytoskeleton (2)

Lecture—0.4 hours; discussion—1 hour; seminar—0.6 hours. Prerequisite: graduate standing. Roles of individual proteins in regulating the organization and function of the actin, microtubule and intermediate filament cytoskeletal systems. Emphasis on primary literature. Topics may vary. May be repeated for credit when topic differs.—I. (I.) McNally

290. Current Topics in Cell and Developmental Biology (1)

Seminar—1 hour. Prerequisite: graduate standing and consent of instructor. Seminars presented by guest lecturers describing their research activities. May be repeated for credit. (S/U grading only.)—I, II, III. (I, II, III.)

290C. Research Conference in Cell and Developmental Biology (1)

Discussion—1 hour. Prerequisite: graduate standing in Cell and Developmental Biology and/or consent of instructor; course 299 concurrently. Presentation and discussion of faculty and graduate-student research

in cell and developmental biology. May be repeated for credit. (S/U grading only.)—I, II, III. (I, II, III.)

298. Group Study (1-5)

(S/U grading only.)

299. Research (1-12)

(S/U grading only.)

The Major Programs

Chemistry studies the composition of matter, its structure, and the means by which it is converted from one form to another.

The Program. Two programs in chemistry are available, one leading to the Bachelor of Arts and the other to the Bachelor of Science. Students who are interested in chemistry as a profession normally elect the program leading to the B.S. degree, which is accredited by the American Chemical Society. The curriculum leading to an A.B. degree offers a less intensive program in chemistry and is appropriate for a student with a strong interest in chemistry, but who also has another goal such as professional school preparation or secondary school teaching. Students following either degree track may consider taking advantage of the Education Abroad Program. Faculty advisers can assist students in planning a curriculum while abroad that assures regular progress in the major.

Career Alternatives. Chemistry graduates with bachelor's degrees are employed extensively throughout the industry in production supervision, quality control, technical marketing, and other areas of applied chemistry. Some of the firms employing these graduates are in the chemical industry, biotechnology, genetic engineering, food and beverage industry, petroleum and petrochemical industry, paper and textile production and processing, pharmaceuticals, photographic industry, and the electronics, semiconductors and computer industries. The bachelor programs also provide chemistry graduates with the rigorous preparation needed for the advanced degrees required for careers in research and higher education.

A.B. Major Requirements:

	UNITS
Preparatory Subject Matter	36-39
Chemistry 2A-2B-2C or 2AH-2BH-2CH	15
Physics 7A-7B-7C	12
Mathematics 21A-21B-21C or 16A-16B-16C	9-12
Depth Subject Matter	43
Chemistry 110A, 110B, 110C, 105, 124A, 128A, 128B, 128C, 129A, 129B	32
At least 11 additional upper division units in chemistry (except Chemistry 107A or 107B) or related areas, including one course with formal lectures. Courses in related areas must be approved <i>in advance</i> by the major adviser.	11
Total Units for the Major	79-82

B.S. Major Requirements:

	UNITS
Preparatory Subject Matter	53
Chemistry 2A-2B-2C or 2AH-2BH-2CH	15
Physics 9A, 9B, 9C, 9D	16
Mathematics 21A, 21B, 21C, 21D, 22A, 22B	22
Depth Subject Matter	54
Chemistry 110A, 110B, 110C, 105, 115, 124A, 124B or 124C, 124L, 125, 128A, 128B, 128C, 129A, 129B, 129C	47
At least 7 additional upper division units in chemistry (except Chemistry 107A, 107B), including one course with formal lectures	7
Total Units for the Major	107

Major Advisers. W.H. Fink, C.B. Lebrilla, K.P. Nambiar, M. Nantz, P. Power, N.E. Schore, D.S. Tinti, N. True, S. Tucker.

Honors and Honors Program. The student must take courses 194HA, 194HB, and 194HC.

Graduate Study. The Department of Chemistry offers programs of study and research leading to the M.S. and Ph.D. degrees in Chemistry. Detailed information regarding graduate study may be obtained by writing to the Graduate Adviser, Department of Chemistry. See also the Graduate Studies chapter of this catalog.

Courses in Chemistry (CHE)

Diagnostic Examinations. To enroll in Chemistry 2A or 2AH, all students (including those with Advanced Placement examination credit or transfer units for any courses in chemistry or mathematics) must pass **both** the *Chemistry Diagnostic Test* and the *Precalculus Qualifying Examination* with satisfactory scores. Both exams are administered during Summer Advising and Orientation and during the orientation week of any quarter in which Chemistry 2A or 2AH is offered. Students who have not passed both exams will be administratively dropped from Chemistry 2A and 2AH.

If you do not achieve a satisfactory score on the Chemistry Diagnostic Test, you have two options. First, you may retake the test. The Learning Skills Center will provide you with the results of your test and details regarding self-directed study materials you may use to prepare to retake the test. The second option is to enroll in Sacramento City College's Chemistry 41C (listed in the *Class Schedule and Registration Guide* as WLD 041C before the Chemistry courses). This course is given at UC Davis during fall quarter specifically for UC Davis students who require extra preparation for Chemistry 2A. WLD 41C provides 3 units of credit toward minimum progress and verification of full-time status, but provides **no units toward graduation or grade point average.** *You may not enroll in WLD 41C if you have passed the Chemistry Diagnostic Test or if you have not yet taken the Chemistry Diagnostic Test.*

Lower Division Courses

2A. General Chemistry (5)

Lecture—3 hours; laboratory/discussion—4 hours. Prerequisite: High school chemistry and physics strongly recommended; satisfactory score on diagnostic examinations. Periodic table, stoichiometry, chemical equations, physical properties and kinetic theory of gases, atomic and molecular structure and chemical bonding. Laboratory experiments in stoichiometric relations, properties and collection of gases, atomic spectroscopy, and introductory quantitative analysis. Only 3 units of credit allowed to students who have completed course 9. GE credit: SciEng.—I, II. (I, II.)

2AH. Honors General Chemistry (5)

Lecture—3 hours; laboratory/discussion—4 hours. Prerequisite: High school chemistry and physics; satisfactory score on diagnostic examinations; Mathematics 21A (may be taken concurrently) or consent of instructor. Limited enrollment course with a more rigorous treatment of material covered in course 2A. Students completing course 2AH can continue with course 2BH or 2B.—I. (I.)

2B. General Chemistry (5)

Lecture—3 hours; laboratory/discussion—4 hours. Prerequisite: course 2A or 2AH. Continuation of course 2A. Condensed phases and intermolecular forces, chemical thermodynamics, chemical equilibria, acids and bases, solubility. Laboratory experiments in thermochemistry, equilibria, and quantitative analysis using volumetric methods. GE credit: SciEng.—II, III. (II, III.)

2BH. Honors General Chemistry (5)

Lecture—3 hours; laboratory/discussion—4 hours. Prerequisite: course 2A with consent of instructor or course 2AH with a grade of C or better; and Mathematics 21B (maybe taken concurrently) or consent of instructor. Limited enrollment course with a more rig-

orous treatment of material covered in course 2B. Students completing course 2BH can continue with course 2CH or 2C.—II. (II.)

2C. General Chemistry (5)

Lecture—3 hours; laboratory/discussion—4 hours. Prerequisite: course 2B or 2BH. Continuation of course 2B. Kinetics, electrochemistry, spectroscopy, structure and bonding in transition metal compounds, application of principles to chemical reactions. Laboratory experiments in selected analytical methods and syntheses. GE credit: SciEng.—I, III. (I, III.)

2CH. Honors General Chemistry (5)

Lecture—3 hours; laboratory—6 hours. Prerequisite: course 2B with consent of instructor or course 2BH with a grade of C or better; and Mathematics 21C (maybe taken concurrently) or consent of instructor. Limited enrollment course with a more rigorous treatment of material covered in course 2C.—III. (III.)

8A. Organic Chemistry: Brief Course (2)

Lecture—2 hours. Prerequisite: course 2B with a grade of C– or higher. With course 8B, an introduction to the nomenclature, structure, chemistry, and reaction mechanisms of organic compounds. Intended for students majoring in areas other than organic chemistry.—I, III. (I, III.)

8B. Organic Chemistry: Brief Course (4)

Lecture—3 hours; laboratory—3 hours. Prerequisite: course 8A or 118A. Continuation of course 8A. Laboratory concerned primarily with organic laboratory techniques and the chemistry of the common classes of organic compounds.—I, II. (I, II.)

10. Concepts of Chemistry (4)

Lecture—4 hours. A survey of basic concepts and contemporary applications of chemistry. Designed for non-science majors and not as preparation for Chemistry 2A. Course Not open for credit to students who have had Chemistry 2A; but students with credit for course 10 may take Chemistry 2A for full credit. GE credit: SciEng. Wrt.—I. (I.) Wood

98. Directed Group Study (1-5)

Prerequisite: consent of instructor. Primarily for lower division students. (P/NP grading only.)

99. Special Study for Undergraduates (1-5)

Prerequisite: consent of instructor. (P/NP grading only.)

Upper Division Courses

105. Analytical and Physical Chemical Methods (4)

Lecture—2 hours; laboratory—6 hours. Prerequisite: course 110A (may be taken concurrently) or consent of instructor. Fundamental theory and laboratory techniques in analytical and physical chemistry. Errors and data analysis methods. Basic electrical circuits in instruments. Advanced solution equilibria. Potentiometric analysis. Chromatographic separations. UV-visible spectroscopy. Lasers.—I, III. (I, III.)

107A. Physical Chemistry for the Life Sciences (3)

Lecture—3 hours. Prerequisite: course 2C, Mathematics 16C or 21C, one year of college level physics. Physical chemistry intended for majors in the life science area. Introductory development of classical and statistical thermodynamics including equilibrium processes and solutions of both nonelectrolytes and electrolytes. The thermodynamic basis of electrochemistry and membrane potentials.—I. (I.)

107B. Physical Chemistry for the Life Sciences (3)

Lecture—3 hours. Prerequisite: course 107A. Continuation of course 107A. Kinetic theory of gases and transport processes in liquids. Chemical kinetics, enzyme kinetics and theories of reaction rates. Introduction to quantum theory, atomic and molecular structure, and spectroscopy. Application to problems in the biological sciences.—II. (II.)

108. Physical Chemistry of Macromolecules (3)

Lecture—3 hours. Prerequisite: course 107B or 110C. Physical properties and characterization of macromolecules with emphasis upon those of bio-

logical interest. Structural thermodynamic, optical and transport properties of polymers in bulk and in solution. Physical characterization methods. Special topics on the properties of polyelectrolyte systems.—III. (III.)

110A. Physical Chemistry: Introduction to Quantum Mechanics (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 2C, Mathematics 16C or 21C; one year of college physics. Introduction to the postulates and general principles of quantum mechanics. Approximations based on variational method and time independent perturbation theory. Application to harmonic oscillator, rigid rotor, one-electron and many-electron atoms, and homo- and hetero-nuclear diatomic molecules.—I, III. (I, III.)

110B. Physical Chemistry: Properties of Atoms and Molecules (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 110A. Group theory. Application of quantum mechanics to polyatomic molecules and molecular spectroscopy. Intermolecular forces and the gas, liquid and solid states. Distributions, ensembles and partition functions. Transport properties.—I, II. (I, II.)

110C. Physical Chemistry: Thermodynamics, Equilibria and Kinetics (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 110B. Development and application of the general principles of thermodynamics and statistical thermodynamics. Chemical kinetics, rate laws for chemical reactions and reaction mechanisms.—II, III. (II, III.)

115. Instrumental Analysis (4)

Lecture—2 hours; laboratory—6 hours. Prerequisite: course 105 and 110B (may be taken concurrently). Intermediate theory and laboratory techniques in analytical and physical chemistry. Advanced data analysis methods and goodness-of-fit criteria. Fourier-transform spectroscopic methods and instrumentation. Mass spectrometry. Electrochemistry. Liquid chromatography. GE credit: Wrt.—I, II. (I, II.)

118A. Organic Chemistry for Health and Life Sciences (4)

Lecture—3 hours; laboratory/discussion—1.5 hours. Prerequisite: course 2C with a grade of C– or higher. The 118A, 118B, 118C series is for students planning professional school studies in health and life sciences. A rigorous, in-depth presentation of basic principles with emphasis on stereochemistry and spectroscopy and preparations and reactions of nonaromatic hydrocarbons, haloalkanes, alcohols and ethers.—I, II. (I, II.)

118B. Organic Chemistry for Health and Life Sciences (4)

Lecture—3 hours; laboratory—3 hours. Prerequisite: course 118A. Continuation of course 118A, with emphasis on spectroscopy and the preparation and reactions of aromatic hydrocarbons, organometallic compounds, aldehydes and ketones.—II, III. (II, III.)

118C. Organic Chemistry for Health and Life Sciences (4)

Lecture—3 hours; laboratory—3 hours. Prerequisite: course 118B. Continuation of course 118B, with emphasis on the preparation, reactions and identification of carboxylic acids and their derivatives, alkyl and acyl amines, β-dicarbonyl compounds, and various classes of naturally occurring, biologically important compounds.—I, III. (I, III.)

120. Physical Chemistry Laboratory: Advanced Methods (3)

Lecture—1 hour; laboratory—6 hours. Prerequisite: courses 110C and 111. Design of experiments; experimental control and data acquisition using microcomputers. Laboratory emphasizes the use of microcomputers in advanced physical-chemical experiments. Offered in alternate years.—II.

121. Introduction to Molecular Structure and Spectra (4)

Lecture—4 hours. Prerequisite: course 110B. Modern theoretical and experimental methods used to study problems of molecular structure and bonding; emphasis on spectroscopic techniques.—III. (III.)

124A. Inorganic Chemistry: Fundamentals (3)

Lecture—3 hours. Prerequisite: course 2C. Symmetry, molecular geometry and structure, molecular orbital theory of bonding (polyatomic molecules and transition metals), solid state chemistry, energetics and spectroscopy of inorganic compounds.—I. (I.)

124B. Inorganic Chemistry: Main Group Elements (3)

Lecture—3 hours. Prerequisite: course 124A. Synthesis, structure and reactivity of inorganic and heteroorganic molecules containing the main group elements.—II. (II.)

124C. Inorganic Chemistry: d and f Block Elements (3)

Lecture—3 hours. Prerequisite: course 124A. Synthesis, structure and reactivity of transition metal complexes, organometallic and bioinorganic chemistry, the lanthanides and actinides.—III. (III.)

124L. Laboratory Methods in Inorganic Chemistry (2)

Laboratory—6 hours. Prerequisite: course 124B or 124C (may be taken concurrently). The preparation, purification and characterization of main group and transition metal inorganic and organometallic compounds.—III. (III.)

125. Advanced Methods in Physical Chemistry (4)

Lecture—2 hours; laboratory—6 hours. Prerequisite: course 110C (may be taken concurrently) and 115. Advanced theory and laboratory techniques in analytical and physical chemistry. Advanced spectroscopic methods. Thermodynamics. Kinetics. Chemical literature. Digital electronics and computer interfacing. Laboratory measurements and vacuum techniques. GE credit: Wrt.—II, III. (II, III.)

128A. Organic Chemistry (3)

Lecture—3 hours. Prerequisite: course 2C with a grade of C or higher; chemistry majors should enroll in course 129A concurrently. Introduction to the basic concepts of organic chemistry with emphasis on stereochemistry and the chemistry of hydrocarbons. Designed primarily for majors in chemistry.—I, II. (I, II.)

128B. Organic Chemistry (3)

Lecture—3 hours. Prerequisite: course 128A or consent of instructor, course 129A strongly recommended; chemistry majors should enroll in course 129B concurrently. Continuation of course 128A with emphasis on aromatic and aliphatic substitution reactions, elimination reactions, and the chemistry of carbonyl compounds. Introduction to the application of spectroscopic methods to organic chemistry.—II, III. (II, III.)

128C. Organic Chemistry (3)

Lecture—3 hours. Prerequisite: course 128B, chemistry majors should enroll in course 129C concurrently. Continuation of course 128B with emphasis on enolate condensations and the chemistry of amines, phenols, and sugars; selected biologically important compounds.—I, III. (I, III.)

129A. Organic Chemistry Laboratory (2)

Lecture—1 hour; laboratory—3 hours. Prerequisite: course 2C with a grade of C or higher; course 128A (may be taken concurrently). Introduction to laboratory techniques of organic chemistry. Emphasis is on methods used for separation and purification of organic compounds.—I, II. (I, II.)

129B. Organic Chemistry Laboratory (2)

Laboratory—6 hours. Prerequisite: courses 128B (may be taken concurrently) and 129A. Continuation of course 129A. Emphasis is on methods used for synthesis and isolation of organic compounds.—II, III. (II, III.)

129C. Organic Chemistry Laboratory (2)

Laboratory—6 hours. Prerequisite: courses 128C (may be taken concurrently) and 129B. Continuation of course 129B.—I, III. (I, III.)

131. Modern Methods of Organic Synthesis (3)

Lecture—3 hours. Prerequisite: course 128C. Introduction to modern synthetic methodology in organic chemistry with emphasis on stereoselective reactions and application to multistep syntheses of organic molecules containing multifunctionality.—II. (II.)

135. Advanced Organic Chemistry Laboratory (3)

Lecture—1 hour; laboratory—6 hours. Prerequisite: courses 115 and 129C. Separation, purification and identification of organic compounds using modern methods of synthesis and instrumentation.—III.

140. Synthetic Methods (4)

Lecture—1 hour; laboratory—9 hours. Prerequisite: courses 124A, 128C, 129C. Integrated inorganic-organic course in the preparation, purification and characterization of multifunctional organic, organometallic, and transition metal compounds using a wide range of methods. Offered in alternate years.—III.

150. Chemistry of Natural Products (3)

Lecture—3 hours. Prerequisite: course 128C. Chemistry of terpenes, steroids, acetogenins, and alkaloids: isolation, structure determination, biosynthesis, chemical transformations, and total synthesis. GE credit: SciEng, Wrt.—I. (I.)

192. Internship in Chemistry (1-6)

Internship—3-18 hours. Prerequisite: upper division standing; project approval by faculty sponsor prior to enrollment. Supervised internship in chemistry; requires a final written report. May be repeated for credit for a total of 6 units. (P/NP grading only.)

194HA-194HB-194HC. Undergraduate Honors Research (2-2-2)

Independent study—2 hours. Prerequisite: open only to chemistry majors who have completed 135 units and who qualify for the honors program. Original research under the guidance of a faculty adviser, culminating in the writing of an extensive report. (Deferred grading only, pending completion of sequence.)

195. Careers in Chemistry (1)

Seminar—2 hours. Prerequisite: junior or senior standing in Chemistry. Designed to give Chemistry undergraduate students an in-depth appreciation of career opportunities with a bachelors degree in chemistry. Professional chemists (and allied professionals) describe research and provide career insights. (P/NP grading only)—I.

197. Projects in Chemical Education (1-4)

Discussion and/or laboratory. Prerequisite: consent of instructor. Participation may include development of laboratory experiments, lecture demonstrations, autotutorial modules or assistance with laboratory sessions. May be repeated for credit for a total of 12 units. (P/NP grading only)—I, II, III. (I, II, III.)

198. Directed Group Study (1-5)

Prerequisite: consent of instructor based upon adequate preparation in chemistry, mathematics and physics. (P/NP grading only.)

199. Special Study for Advanced Undergraduates (1-5)

Prerequisite: consent of instructor based upon adequate preparation in chemistry, mathematics, and physics. (P/NP grading only.)

Graduate Courses**201. Chemical Uses of Symmetry and Group Theory (3)**

Lecture—3 hours. Prerequisite: course 124A and 110B, or consent of instructor. Symmetry elements and operations, point groups, representations of groups. Applications to molecular orbital theory, ligand field theory, molecular vibrations, and angular momentum. Crystallographic symmetry.—I. (I.)

205. Symmetry, Spectroscopy, and Structure (3)

Lecture—3 hours. Prerequisite: course 201 or the equivalent. Vibrational and rotational spectra; electronic spectra and photoelectron spectroscopy; magnetism; electron spin and nuclear quadrupole resonance spectroscopy; nuclear magnetic resonance spectroscopy; other spectroscopic methods.—II. (II.)

210A. Quantum Chemistry: Introduction and Stationary-State Properties (3)

Lecture—3 hours. Prerequisite: course 110B and 110C or consent of instructor. Stationary-state quan-

tum chemistry: postulates of quantum mechanics, simple solutions, central field problems and angular momenta, hydrogen atom, perturbation theory, variational theory, atoms and molecules.—II. (II.)

210B. Quantum Chemistry: Time-Dependent Systems (3)

Lecture—3 hours. Prerequisite: course 210A. Matrix mechanics and time-dependent quantum chemistry: matrix formulation of quantum mechanics, Heisenberg representation, time-dependent perturbation theory, selection rules, density matrices, and miscellaneous molecular properties.—III. (III.)

210C. Quantum Chemistry: Molecular Spectroscopy (3)

Lecture—3 hours. Prerequisite: course 210B. Molecular spectroscopy: Born-Oppenheimer approximation, rotational, vibrational and electronic spectroscopy, spin systems, and molecular photo-physics.—I. (I.)

211A. Advanced Physical Chemistry: Statistical Thermodynamics (3)

Lecture—3 hours. Prerequisite: consent of instructor. Principles and applications of statistical mechanics; ensemble theory; statistical thermodynamics of gases, solids, liquids, electrolyte solutions and polymers; chemical equilibrium.—I. (I.)

211B. Statistical Mechanics (3)

Lecture—3 hours. Prerequisite: course 211A. Statistical mechanics of nonequilibrium systems, including the rigorous kinetic theory of gases, continuum mechanics transport in dense fluids, stochastic processes, brownian motion and linear response theory. Offered in alternate years.—II.

212. Chemical Dynamics (3)

Lecture—3 hours. Prerequisite: consent of instructor. Introduction to modern concepts in chemical reaction dynamics for graduate students in chemistry. Emphasis will be placed on experimental techniques as well as emerging physical models for characterizing chemical reactivity at a microscopic level. Offered in alternate years.—II.

215. Theoretical and Computational Chemistry (3)

Lecture—3 hours. Prerequisite: courses 211A and 210B or consent of instructor. Mathematics of wide utility in chemistry, computational methods for guidance or alternative to experiment, and modern formulations of chemical theory. Emphasis will vary in successive years. May be repeated for credit when topic differs. Offered in alternate years.—(III.)

216. Magnetic Resonance Spectroscopy (3)

Lecture—3 hours. Prerequisite: courses 210A, 210B (may be taken concurrently). Quantum mechanics of spin and orbital angular momentum, nuclear magnetic resonance, theory of chemical shift and multiplet structures, electron spin resonance, theory of g-tensor in organic and transition ions, spin Hamiltonians, nuclear quadrupole resonance, spin relaxation processes. Offered in alternate years.—(III.)

217. X-Ray Structure Determination (3)

Lecture—3 hours. Prerequisite: consent of instructor. Introduction to x-ray structure determination; crystals, symmetry, diffraction geometry, sample preparation and handling, diffraction apparatus and data collection, methods of structure solution and refinement, presentation of results, text, tables and graphics, crystallographic literature.—III. (III.)

218. Macromolecules: Physical Principles (3)

Lecture—3 hours. Prerequisite: courses 110A, 110B, 110C or the equivalent. Relationship of higher order macromolecular structure to subunit composition; equilibrium properties and macromolecular dynamics; physical chemical determination of macromolecular structure. Offered in alternate years.—I.

219. Spectroscopy of Organic Compounds (4)

Lecture—3 hours; laboratory—2.5 hours. Prerequisite: course 128C or the equivalent. Identification of organic compounds and investigation of stereochemical and reaction mechanism phenomena using spectroscopic methods—principally NMR, IR and MS.—I.

221A-H. Special Topics in Organic Chemistry (3)

Lecture—3 hours. Selected topics of current interest in organic chemistry. Topics will vary each time the course is offered, and in general will emphasize the research interests of the staff member giving the course.—I. (I.)

226. Principles of Transition Metal Chemistry (3)

Lecture—3 hours. Prerequisite: course 124A or the equivalent. Electronic structures, bonding, and reactivity of transition metal compounds.—I. (I.) Balch

228A. Bio-inorganic Chemistry (3)

Lecture—3 hours. Prerequisite: course 226 or consent of instructor. Defines role of inorganic chemistry in the functioning of biological systems by identifying the functions of metal ions and main group compounds in biological systems and discussing the chemistry of model and isolated biological compounds. Offered every third year.

228B. Main Group Chemistry (3)

Lecture—3 hours. Prerequisite: course 226 or consent of instructor. Synthesis, physical properties, reactions and bonding of main group compounds. Discussions of concepts of electron deficiency, hypervalency, and non-classical bonding. Chemistry of the main group elements will be treated systematically. Offered every third year.—III.

228C. Solid-State Chemistry (3)

Lecture—3 hours. Prerequisite: courses 124A, 110B, 226, or the equivalent. Design and synthesis, structure and bonding of solid-state compounds; physical properties and characterization of solids; topics of current interest such as low-dimensional materials, inorganic polymers, materials for catalysis. Offered every third year.—III.

228D. Homogeneous Catalysis (3)

Lecture—3 hours. Prerequisite: course 226. Overview of homogeneous catalysis and related methods, with emphasis on kinetics, mechanisms, and applications for organic synthesis. The related methods may include cluster, colloid, phase transfer, enzymatic, heterogeneous and polymer-supported catalysis. Offered in alternate years.—III.

231. Organic Synthesis: Methods and Strategies (3)

Lecture—3 hours. Prerequisite: course 131 or the equivalent. Provides a broadly based discussion of current strategies in synthetic organic chemistry. Focus on methods for constructing carbon frameworks, controlling relative stereochemistry, and controlling absolute stereochemistry. Retrosynthetic strategies will be discussed throughout the lectures.—III. (III.)

233. Physical-Organic Chemistry (3)

Lecture—3 hours. Prerequisite: courses 128A-128B-128C and 110A-110B-110C or the equivalent. Introduction to elementary concepts in physical-organic chemistry including the application of simple numerical techniques in characterizing and modeling organic reactions.—II. (II.)

235. Organometallic Chemistry in Organic Synthesis (3)

Lecture—3 hours. Prerequisite: course 128C. Current trends in use of organometallics for organic synthesis; preparations, properties, applications, and limitations of organometallic reagents derived from transition and/or main group metals. Offered in alternate years.—(III.)

236. Chemistry of Natural Products (3)

Lecture—3 hours. Prerequisite: course 128C or the equivalent. Advanced treatment of chemistry of naturally occurring compounds isolated from a variety of sources. Topics will include isolation, structure determination, chemical transformations, total synthesis, biological activity, and biosynthesis. Biosynthetic origin will be used as a unifying theme.—II. (II.)

237. Bio-organic Chemistry (3)

Lecture—3 hours. Prerequisite: course 128C or the equivalent. Structure and function of biomolecules; molecular recognition; enzyme reaction mechanisms; design of suicide substrates for enzymes;

enzyme engineering; design of artificial enzymes and application of enzymes in organic synthesis. Offered in alternate years.—(I.)

240. Advanced Analytical Chemistry (3)

Lecture—3 hours. Prerequisite: courses 110A and 115 or the equivalent. Numerical treatment of experimental data; thermodynamics of electrolyte and non-electrolyte solutions; complex equilibria in aqueous and non-aqueous solutions; potentiometry and specific ion electrodes; mass transfer in liquid solutions; fundamentals of separation science, including column, gas and liquid chromatography.—I. (I.)

241A. Surface Analytical Chemistry (3)

Lecture—3 hours. Prerequisite: course 110C or the equivalent. Concepts of surfaces and interfaces: physical properties, unique chemistry and electronic effects. Focus on gas-solid interfaces, with some discussion of liquid-solid interfaces. Offered in alternate years.—I.

241B. Laser and X-ray Spectroscopy (3)

Lecture—3 hours. Prerequisite: course 110B or the equivalent. Concepts and mechanisms of light-matter interactions. Chemical applications of modern spectroscopic methods, including multiphoton spectroscopy, time-resolved laser and x-ray photolysis, and phase-contrast x-ray imaging. Offered in alternate years.—I.

241C. Mass Spectrometry (3)

Lecture—3 hours. Prerequisite: course 110C and 115 or the equivalent. Mass spectrometry and related methods with emphasis on ionization methods, mass analyzers, and detectors. Related methods may include ion-molecule reactions, unimolecular dissociation of organic and bio-organic compounds, and applications in biological and environmental analysis. Offered in alternate years.—II.

241D. Electroanalytical Chemistry (3)

Lecture—3 hours. Prerequisite: course 110C and 115 or the equivalent. Electroanalytical chemistry with consideration of mass transfer and electrode kinetics for polarizable electrodes. Current-potential curves for a variety of conditions, including both potentiostatic and galvanostatic control, and their application in chemical analysis. Offered in alternate years.—II.

261. Current Topics in Chemical Research (2)

Lecture—2 hours. Prerequisite: graduate standing in Chemistry or consent of instructor. Designed to help chemistry graduate students develop and maintain familiarity with the current and past literature in their immediate field of research and related areas. May be repeated for credit when topics differ.—I, II, III. (I, II, III.)

263. Introduction to Chemical Research Methodology (3)

Laboratory/discussion—9 hours. Prerequisite: course 293 and graduate student standing in Chemistry; consent of instructor. Introduction to identification, formulation, and solution of meaningful scientific problems including experimental design and/or theoretical analyses of new and prevailing techniques, theories and hypotheses. May be repeated for credit when topic differs. (S/U grading only.)—I, II, III. (I, II, III.)

264. Advanced Chemical Research Methodology (6)

Laboratory/discussion—18 hours. Prerequisite: course 263 or consent of instructor. Applications of the methodology developed in Chemistry 263 to experimental and theoretical studies. Advanced methods of interpretation of results are developed. Includes the preparation of manuscripts for publication. May be repeated for credit when topic differs. (S/U grading only.)—I, II, III. (I, II, III.)

290. Seminar (2)

Seminar—2 hours. Prerequisite: consent of instructor. (S/U grading only.)—I, II, III. (I, II, III.)

293. Introduction to Chemistry Research (1)

Discussion—2 hours. Designed for incoming graduate students preparing for higher degrees in chemistry. Group and individual discussion of research activities in the Department and research topic selection. (S/U grading only.)—I. (I.)

295. Careers in Chemistry (1)

Seminar—2 hours. Prerequisite: graduate standing in Chemistry. Designed to give Chemistry graduate students an in-depth appreciation of career opportunities with a M.S. or Ph.D. degree in chemistry. Professional chemists (and allied professionals) give seminars describing both research and career insights. May be repeated for credit 3 times. (S/U grading only.)—I.

298. Group Study (1-5)**299. Research (1-12)**

The laboratory is open to qualified graduate students who wish to pursue original investigation. Students wishing to enroll should communicate with the department well in advance of the quarter in which the work is to be undertaken. (S/U grading only.)

Professional Courses**390. Methods of Teaching Chemistry (2)**

Lecture—1 hour; discussion—1 hour. Prerequisite: graduate student standing in Chemistry and consent of instructor. Practical experience in methods and problems of teaching chemistry. Includes analyses of texts and supporting material, discussion of teaching techniques, preparing for and conducting of discussion sessions and student laboratories. Participation in the teaching program required for Ph.D. in chemistry. May be repeated for credit. (S/U grading only.)—I, II, III. (I, II, III.)

392. Advanced Methods of Teaching Chemistry (2)

Lecture—2 hours. Prerequisite: course 390. Advanced topics in teaching chemistry. Analysis and discussion of curricular design, curricula materials, teaching methods and evaluation. For students who are planning a career in teaching chemistry. (P/NP grading only.)—III. (III.)

Faculty

Angie C. Chabram-Dernersesian, Ph.D., Associate Professor
Miroslava Chávez-García, Ph.D., Assistant Professor
Sergio de la Mora, Ph.D., Assistant Professor
Adela de la Torre, Ph.D., Professor
Yvette Flores-Ortiz, Ph.D., Associate Professor
Malaquias Montoya, B.F.A., Professor
Beatriz Pesquera, Ph.D., Associate Professor

Emeriti Faculty

Refugio Rochin, Ph.D., Professor Emeritus
Adaljiza Sosa-Riddell, Ph.D., Senior Lecturer Emerita

The Major Program

The Chicana/Chicano Studies Program offers an interdisciplinary curriculum focusing on the Chicana/Chicano experience through an analysis of class, race, ethnicity, gender and sexuality, and cul-

tural expression. The program offers a major leading to the Bachelor of Arts degree and a minor that can satisfy breadth requirements for the College of Letters and Science. Both the major and minor frame an analysis within the historical and contemporary experiences of Chicanas/os in the Americas. The major gives students an opportunity to specialize in one of two emphases: *Cultural Studies* or *Social/Policy Studies*. Students in the major are expected to read, write, and speak Spanish at a level suitable for future study and work in Chicana/o and Latina/o settings. There are no language requirements for the minor, and all Chicana/Chicano Studies courses are open to students in any major.

The Program. At the lower division level, the major curriculum provides an interdisciplinary overview of various topics. Students are advised to take courses that serve as prerequisites for certain upper division courses. At the upper division level, majors pursue advanced interdisciplinary course work in both the humanities/arts and the social sciences. At this level, students will find courses in Chicana/Chicano history, theory, and several courses taught from a variety of disciplinary perspectives. Majors may specialize in one of two emphases for the A.B. degree. The Cultural Studies emphasis integrates literature, culture, and artistic expression. Social/Policy Studies emphasizes social theory, research methods, area studies in community/political economy, family, societal and health issues.

Career Alternatives. The Cultural Studies emphasis prepares students for professional work in cross-cultural education, cultural/art centers, artistic expression and communications. The Social/Policy Studies emphasis orients students towards professional work in human service delivery, community development, legal services assistance, health services, social welfare and education. Both emphases in the major prepare students for advanced graduate and/or professional studies in related fields.

Chicana/Chicano Studies

A.B. Major Requirements:

UNITS

Cultural Studies Emphasis:

Preparatory Subject Matter16-31

Chicana/o Studies 10, 508

Chicana/o Studies 21 or 304

One of Chicana/o Studies 60, 70, or 734

Spanish 1, 2, 3, or 28, 31, 32 or the equivalent0-15

Depth Subject Matter40

Chicana/o Studies 1004

History 169A or 169B4

Two courses from Chicana/o Studies 110, 111, 120, 122, 131, or 1328

Comparative ethnicity/gender: two upper division courses selected from two of the following areas: African American and African Studies, Asian American Studies, Native American Studies, or Women's Studies8

A minimum of 16 units from the following areas:16

Three courses from Chicana/o Studies 154, 155, 156, 171, 17212

One course from Anthropology 113, 130, 146, Linguistics 166, 167, Native American Studies 180, Women's Studies 160, 1804

Total Units for the Major56-71

UNITS

Social/Policy Studies Emphasis:

Preparatory Subject Matter20-35

Chicana/o Studies 10, 508

Chicana/o Studies 21 or 304

One of Chicana/o Studies 60, 70, or 734

Sociology 46A or Psychology 414

Spanish 1, 2, 3, or 28, 31, 32 or the equivalent0-15

Depth Subject Matter40

Chicana/o Studies 1004

History 169A or 169B4

Two courses from Chicana/o Studies 154, 155, 171, or 1728

Comparative ethnicity/gender: two upper division courses selected from two of the following areas: African American and African Studies, Asian American Studies, Native American Studies, or Women's Studies8

A minimum of 16 units from the following areas:16

Three courses from Chicana/o Studies 110, 111, 120, 121, 122, 130, 131, or 13212

One course from Anthropology 130, 144, 146, Education 151, Native American Studies 120, 133, Sociology 1344

Total Units for the Major60-75

Master Adviser. M. Montoya, B. Pesquera.

Major Advisers. *Humanities/Arts emphasis:* A.C. Chabram-Dernersesian, M. Montoya. *Social Science emphasis:* Y. Flores-Ortiz, B. Pesquera.

Minor Program Requirements:

This minor provides a broad overview of the historical, social, political, economic, ideological and cultural forces that shape the Chicana/o and Latina/o experience. The minor is open to all students with or without course work in Spanish. Students should contact the master adviser for a plan approval and verification of the minor.

UNITS

Chicana/o Studies24

Chicana/o Studies 10 or 504

History 169A or 169B4

Four courses from Chicana/o Studies 110, 111, 120, 121, 122, 130, 131, 132, 154, 155, 156, 171, 17216

Minor Adviser. S. de la Mora

Courses in Chicana/o Studies (CHI)

Lower Division Courses

10. Introduction to Chicana/o Studies (4)

Lecture—3 hours; discussion—1 hour. Analysis of the situation of the Chicana/o (Mexican-American) people, emphasizing their history, literature, political movements, education and related areas. GE credit: Div, Wrt.—I, II, III. (I, III.) Pesquera, Chávez-García

21. Chicana/o and Latina/o Health Care Issues (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 10. Overview of health issues of Chicanas/os and Latinas/os in the State of California; role of poverty/lack of education in limited access to health care. GE credit: Div.—I, III. (I, III.) Flores-Ortiz, de la Torre

30. United States Political Institutions and Chicanas/os (4)

Lecture/discussion—3 hours; term paper. Overview of the major political institutions and ideologies of the United States and the Chicana/o people's historical and contemporary role in, effects from, and responses to them. Theory, method and critical analysis. GE credit: Div.—II. (II.)

50. Chicana and Chicano Culture (4)

Lecture—3 hours; discussion—1 hour. Interdisciplinary survey of Chicana/o cultural representation in the 20th century. Examines Chicana/o culture within a national and transnational context. Explores how Chicano cultural forms and practices intersect with social/material forces, intellectual formations and cultural discourses. (Former course 20.) GE credit: Div.—II, III. (II, III.) Chabram-Dernersesian, de la Mora

60. Chicana and Chicano Representation in Cinema (4)

Lecture—8 hours. Introductory-level study of Chicana and Chicano representation. The depiction of Chicana and Chicano experience by Chicana/o filmmakers, as well as by non-Chicanos, including independent filmmakers and the commercial industry. Offered in alternate years.—I, III. (I, III.) de la Mora

70. Survey of Chicana/o Art (4)

Lecture—4 hours. Survey of contemporary Chicana/o art in context of the social turmoil from which it springs. Includes political use of the poster and the mural, the influence of the Mexican mural and graphic movement, and social responsibility of the artist. GE credit: Div.—I. (I.) Montoya

73. Chicana/o Art Expression Through Silk Screen (4)

Studio—8 hours; laboratory—4 hours. Introductory level studio course using silk screen and basic printing techniques to explore and develop images of Chicana/o cultural themes and expressions. Students will experiment with images and symbols from their immediate environment/culture. Integrated approach to Chicana/o philosophy of art.—I. (I.) Montoya

98. Directed Group Study (1-5)

(P/NP grading only.)

99. Special Study for Undergraduates (1-5)

(P/NP grading only.)

Upper Division Courses

100. Chicana/Chicano Theoretical Perspective (4)

Lecture/discussion—3 hours; term paper. Prerequisite: courses 10 and 50. Critical examination of emerging Chicana/o Studies theoretical perspectives in light of contemporary intellectual frameworks in the social sciences, arts, and humanities. Includes analysis of practices of self-representation, and socio-cultural developments in the Chicana/o community.—II. (II.) Pesquera

110. Sociology of the Chicana/o Experience (4)

Lecture/discussion—4 hours. Prerequisite: course 10 or Sociology 1. The Chicana/o experience in the American society and economy viewed from theoretical perspectives. Immigration, history of integration of Chicana/o labor into American class structure, education inequality, ethnicity, the family and Chicana/o politics. (Former course Sociology 110.) GE credit: SocSci, Div, Wrt.—I. (I.) Pesquera

111. Chicanas/Mexicanas in Contemporary Society (4)

Lecture/discussion—4 hours. Prerequisite: course 10 or 50, Women's Studies 50 or History 169B. Analysis of the role and status of Chicanas/Mexicanas in contemporary society. Special emphasis on their historical role, the political, economic and social institutions that have affected their status, and their contributions to society and their community. (Former course 102.) GE credit: ArtHum.—III. (III.) Pesquera

120. Chicana/o Psychology (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 21; introductory psychology course recommended. Introduction to the field of Chicana/o psychology. Analysis of socio-cultural context of Chicanas/os and Latinas/os. Special attention to issues of ethnic identity development, bilingualism, and development of self esteem. Impact of minority experience, migration, acculturation are examined. GE credit: SocSci, Div.—III. (III.) Flores-Ortiz

121. Chicana/o Community Mental Health (4)

Lecture—3 hours; term paper. Prerequisite: course 10 or 20. Mental health needs, problems, and service utilization patterns of Chicanas/os and Latinas/os will be analyzed. An analysis of social service policy, and the economic context of mental health programs. GE credit: SocSci, Div, Wrt.—II. (II.) Flores-Ortiz

122. Psychology Perspectives Chicana/o and Latina/o Family (4)

Lecture—4 hours. Prerequisite: course 10; introductory psychology course highly recommended, and/or consent of instructor. Role of migration and acculturation on family structure and functioning. From a psychological and Chicana/o Studies perspective, contemporary gender roles and variations in family structures are examined. Special topics include family violence, addiction, family resilience and coping strategies.—I. (I.) Flores-Ortiz

130. United States-Mexican Border Relations (4)

Lecture—3 hours; term paper. Prerequisite: upper division standing. Theories of U.S.-Mexican border relations, with an overview of the political, economic, and social relationships and an in-depth analysis of immigration issues, border industrialization, women's organizations, economic crises, and legal issues. GE credit: Div.—I. (I, III.) Chávez-García, de la Torre

131. Chicanas in Politics and Public Policy (4)

Lecture/discussion—4 hours. Prerequisite: course 30 or Political Science 1. Historical and political analysis of Chicana/Latina political involvement and activities in the general political system, women's movement, Chicano movement, and Chicana movement. Course also examines the public policy process and the relationship of Chicanas/Latinas to public policy formation. Offered in alternate years. GE credit: SocSci, Div.—II. (II.) Chávez-García

132. Political Economy of Chicana/o Communities (4)

Lecture—3 hours; term paper. Prerequisite: upper division standing; lower division Chicana/o Studies course recommended. Historical and contemporary study of political and economic forces which define and influence the development of Chicana/o communities. Includes critiques of traditional and Marxist theories and concepts applicable to Chicana/o communities, case studies of Chicana/o communities, especially in California and Texas.—III. (III.)

154. The Chicana/o Novel (4)

Lecture—4 hours. Prerequisite: intermediate Spanish or consent of instructor. Introduction to the forms and themes of the Chicana/o novel with special attention to the construction of gender, nationality, sexuality, social class, and the family by contemporary Chicana/o novelists. Bilingual readings, lectures, discussions, and writing in Spanish. (Former course Spanish 126A.) GE credit: ArtHum, Div.—III. (II.) Chabram-Dernersesian

155. Chicana/o Theater (4)

Lecture—4 hours. Prerequisite: intermediate Spanish or consent of instructor. Examination of the formal and thematic dimensions of Chicana/o theater in the contemporary period with special emphasis on El Teatro Campesino and Chicana Feminist Theater. Bilingual readings, lectures, discussions, and writing in Spanish. (Former course Spanish 126B.)—II. (I.) Chabram-Dernersesian

156. Chicana/o Poetry (4)

Lecture—4 hours. Prerequisite: intermediate Spanish or consent of instructor. Survey of Chicana/o poetry with special emphasis on its thematic and formal dimensions. Bilingual readings, lectures, discussions, and writing in Spanish. (Former course Spanish 126C.)—(III.) Chabram-Dernersesian

160. Mexican Film and Greater Mexican Identity (4)

Lecture/discussion—4 hours; film viewing—1 hour. Prerequisite: intermediate Spanish. Survey of the role Mexican cinema plays in consolidation and contestation of post-revolutionary Mexican state and in the formation of a greater Mexican cultural identity including Chicana/o identity. Showcases genres, periods, auteurs, movements, and emphasis on gendered and sexualized narratives. GE credit: ArtHum, Div.—II. (III.) de la Mora

165. Chicanas, Latinas and Mexicanas in Commercial Media (4)

Lecture/discussion—4 hours; laboratory—2 hours. Prerequisite: course 60 or other film or feminist theory course; conversational fluency in Spanish. The portrayal of Chicanas, Latinas and Mexicanas in commercial media. The relation between the representation of Chicana, Latina, and Mexicana women in commercial television and cinema and the role of women in Mexican and U.S. societies. Offered in alternate years.

171. Mexican and Chicano Mural Workshop (4)

Studio—8 hours; independent study—1 hour. Prerequisite: course 70 and/or written consent of instructor. The Mural: a collective art process that empowers students and people through design and execution of mural paintings in the tradition of the Mexican Mural Movement; introduces materials and techniques. May be repeated once for credit. (Same course as Art Studio 171.)—III. (III.) Montoya

172. Chicana/o Voice/Poster Silk Screen Workshop (4)

Studio—8 hours; independent study—1 hour. Prerequisite: course 70 and/or 73 and/or written consent of instructor. The poster as a voice art form used by Chicanas/os and other people of color to point to the defects of social and political existence and the possibility for change, from the Chicana/o artists' perspective. May be repeated once for credit.—II. (II.) Montoya

192. Internship in Chicana/o and Latina/o Community (4)

Discussion—1 hour; internship—11 hours. Prerequisite: one course from 10, 21, 50, Spanish 3, or the equivalent. Combines academic guidance with internship in community agencies serving Mexican/Latino/Chicano clients. Utilization of bilingual skills, knowledge of history, culture, economics, politics, social issues and work experience. Internship project required. May be repeated twice to a maximum of 12 units. (P/NP grading only.)

194HA-194HB-194HC. Senior Honors Research Project (2-5)

Independent study—6-15 hours. Prerequisite: senior standing in Chicana/o Studies major. Student is required to read, research, and write Honors Thesis on Chicana/o Studies topics. (Deferred grading only, pending completion of sequence.)

198. Directed Group Study (1-5)

Prerequisite: upper division standing and consent of Program Chairperson. (P/NP grading only.)

199. Special Study for Advanced Undergraduates (1-5)

Prerequisite: upper division standing and consent of Program Chairperson. (P/NP grading only.)

Graduate Courses**230. Chicano/Latino Hispanic Politics (4)**

Seminar—3 hours; term paper. Prerequisite: two undergraduate courses in Chicana/o Studies or consent of instructor. Examination of Chicano/Latino political experiences. Evaluate theories, ideology, and practice of Chicano politics. Brief history of Chicano/Latino/Hispanic political activity, comparisons among political modes, gendered politics, and understanding relationships among Chicano, Mexican, American and world politics.—III.

298. Group Study for Graduate Students (1-5)

Prerequisite: graduate standing, consent of instructor. May be repeated for credit when topic differs. (S/U grading only.)

299. Special Study for Graduate Students (1-12)

Prerequisite: graduate standing and consent of instructor. (S/U grading only.)

Graduate Study. The Graduate Group in Child Development offers a multidisciplinary program leading to an M.S. degree. The program provides students with an opportunity to pursue a coordinated course of postgraduate study in the field of child development which cuts across departmental boundaries. Students may work with children and families in the community, as well as the University's Center for Child and Family Studies. Recipients of the degree gain sufficient background to engage in professions that directly (e.g., preschool, 4-H) or indirectly (e.g., social policy) involve children and families, obtain positions in teaching or research settings, or pursue further study leading to a doctorate in child development, human development, clinical psychology, or related fields.

Applicants seeking consideration for early admission and fellowships must submit applications by December 1. The final application deadline is April 1.

The Major Programs

Classical Civilization is an interdisciplinary major that examines the ancient Mediterranean cultures of Greece, Rome and the Near East, with courses offered on the languages, history, literature, religions, myths, art and archaeology of these societies, their achievements in rhetoric and philosophy, and their political and social institutions. Minor programs in Classical Civilization, Greek, and Latin, and many General Education courses are offered also.

The Program. The major has two tracks: (1) *Classical and Mediterranean Civilizations*, and (2) *Classical Languages and Literatures*. The core of both major tracks consists of two years of Latin, Greek or Hebrew, the introductory sequence on the ancient Mediterranean world (Classics 1, 2, 3), the advanced seminar (Classics 190), and a number of electives. The *Classical and Mediterranean Civilization* track allows students to choose their electives from a broadly balanced program in history, art and archaeology, literature, philosophy and rhetoric. The *Classical Languages and Literatures* track focuses more intensively on language and literature, requiring the study of two languages and allowing fewer electives. Students planning to go on to graduate work in Classics should take Track 2 and choose Latin and Greek as their languages. They are also advised to acquire a reading knowledge of French or German.

Career Opportunities. A degree in Classical Civilization represents a solid liberal arts education that provides an excellent foundation for a wide variety of careers. In the last twenty-five years, many majors have applied to Law or Medical School and practically all have been accepted. Additional career options include library and museum work, teaching, journalism, and graduate study in classics, art, archaeology, history, philosophy and religion.

Classical Civilization

A. B. Major Requirements:

UNITS

Classical and Mediterranean Civilizations track

Preparatory Subject Matter26-27

Latin 1-2-3, or Greek 1-2-3, or Hebrew 1-2-315

Two courses from Classics 1, 2, 38
One additional course from: Art History 1A;
Classics courses 1 through 50 (except
30 and 31); Comparative Literature 1;
Philosophy 21; Religious Studies 21, 40
.....3-4

Depth Subject Matter40

Upper division courses in Latin, Greek or
Hebrew12
Classics 1904
Six additional courses selected from at least
three of the following groups24
Of these 24 units, at least 12 must be in
Latin, Greek, Hebrew, or Classics, and
one course must be selected from
group (c).

(a) Literature and Rhetoric:

Additional upper division courses in
Latin, Greek and Hebrew; Classics 102,
110, 140, 141, 142, 143

(b) History:

History 102A, 111A, 111B, 111C; Reli-
gious Studies 102, 125

(c) Art and Archaeology:

Classics 171, 172A, 172B, 173, 174, 175

(d) Philosophy and Religion:

Classics 150; Philosophy 143, 160, 161,
162; Political Science 118A; Religious
Studies 141A, 141B, 141C

Total Units for the Major66-67

(Classical and Mediterranean Civilizations track)

UNITS

Classical Languages and Literatures track

Preparatory Subject Matter34

Two of the following sequences: Latin 1-2-3;
Greek 1-2-3; Hebrew 1-2-330
Classics 1, 2, or 34

Depth Subject Matter36

Six upper division courses in the two chosen
languages, with at least two courses in
each language24
Classics 1904
Two additional courses selected from any of
the following groups8

(a) Literature and Rhetoric:

Additional upper division courses in
Latin, Greek and Hebrew; Classics 102,
110, 140, 141, 142, 143

(b) History:

History 102A, 111A, 111B, 111C; Reli-
gious Studies 102, 125

(c) Art and Archaeology:

Classics 171, 172A, 172B, 173, 174, 175

(d) Philosophy and Religion:

Classics 150; Philosophy 143, 160, 161,
162; Political Science 118A; Religious
Studies 141A, 141B, 141C

Total Units for the Major70

(Classical Languages and Literatures track)

Major Advisers. E.M. Abu, L.E. Roller, D.A. Traill.

Greek

Admission to the undergraduate major in Greek has been suspended. Courses in Greek continue to be offered and may be applied toward majors such as Classical Civilization.

A.B. Major Requirements:

UNITS

Preparatory Subject Matter0-15

Greek 1, 2, 3 (or the equivalent)15

Depth Subject Matter36

Upper division units in Greek (two courses
may be chosen from department-
approved courses in related fields).

Total Units for the Major36-51

Recommended

Latin 1, 2, 3.

Latin

Admission to the undergraduate major in Latin has been suspended. Courses in Latin continue to be offered and may be applied toward majors such as Classical Civilization.

A.B. Major Requirements:

UNITS

Preparatory Subject Matter15

Latin 1, 2, 3 (or the equivalent)15

Depth Subject Matter36

Latin 1215

At least 31 additional upper division units in

Latin31

Total Units for the Major36-51

Major Adviser. E. Abu

Minor Program Requirements:

The Department offers minors in Classical Civilization, Greek and Latin for those wishing to follow a shorter but formally recognized program of study in classics.

UNITS

Classical Civilization20

Classics 1, 2, or 34

One upper division course in Latin, Greek or

Hebrew4

Two additional upper division courses in

Classics, Latin, Greek or Hebrew8

One additional upper division course

selected from any of the groups (a)

through (d) in the Classical Civilization

major4

UNITS

Greek20

Classics 1 or 24

Three upper division courses in Greek12

One additional upper division course in

Classics, Latin, Greek or Hebrew4

UNITS

Latin20

Classics 34

Three upper division courses in Latin12

One additional upper division course in

Classics, Latin, Greek or Hebrew4

Graduate Study. The Department offers a master's degree in Classics with emphasis on either Greek or Latin; however, admission into the graduate program has been suspended.

Prerequisite credit. Credit will not normally be given for a lower division course in Latin or Greek if it is the prerequisite of a course already successfully completed. Exceptions can be made by the Program Director only.

Courses in Classics (CLA)

Lower Division Courses

1. The Ancient Near East and Early Greece: 3000-500 B.C.E. (4)

Lecture—3 hours; term paper. Introduction to the literature, art, and social and political institutions of ancient Mesopotamia, Egypt, Palestine, and early Greece from 3000 to 500 B.C.E. GE credit: ArtHum, Wrt.—I. Roller

2. Ancient Greece and the Near East: 500 to 146 B.C.E. (4)

Lecture—3 hours; term paper. Introduction to the literature, art and thought and the political and social institutions and values of Greece and its eastern Mediterranean neighbors—the Persians, Egyptians, and Judeans. GE credit: ArtHum, Wrt.—II. (II.) Traill

3. Rome and the Mediterranean: 1000 B.C.E. to 500 C.E. (4)

Lecture—3 hours; term paper. Introduction to the history, literature and art and the political and social institutions and values of Roman civilization, with emphasis on Rome's interactions with its Mediterranean neighbors—Etruscans, Carthaginians, Greeks, Egyptians, and Persians—and on the rise of Christianity. GE credit: ArtHum, Wrt.—III. (III.) Caston

10. Greek, Roman, and Near Eastern Mythology (3)

Lecture—3 hours. Examination of major myths of Greece, Rome, and the Ancient Near East; their place in the religion, literature and art of the societies that produced them; their subsequent development, influence and interpretation. GE credit: ArtHum.—I, II, III. (I, II, III.) Allan, Albu, Caston

15. Women in Classical Antiquity (4)

Lecture—3 hours; term paper. Lives and roles of women in ancient Greece and Rome. Readings from history, philosophy, medical and legal documents, literature and myth. GE credit: ArtHum, Div, Wrt.—III. (III.) Allan

20. Pompeii AD 79 (4)

Lecture—3 hours; term paper. Roman life in an urban community at the time of the eruption of Vesuvius. Slide presentations of the archeological evidence will be supplemented by selected readings from Petronius' *Satyricon* and other ancient authors. Offered in alternate years. GE credit: ArtHum, Wrt.—Traill

30. Greek and Latin Elements in English Vocabulary (3)

Lecture—3 hours. Knowledge of Latin and Greek not required. Elements of Greek and Latin vocabulary for increased understanding of English word formation and improved ability to understand and retain unfamiliar words. Emphasis on Greek and Latin elements but other languages not neglected.—(I.) Albu, Traill

31. Greek and Latin Elements in Technical Vocabulary (3)

Lecture—3 hours. Knowledge of Greek and Latin not required. Elements of Greek and Latin vocabulary to increase understanding of English word formation in medical, scientific and technical terminology and improve ability to understand and retain unfamiliar terms.—II. (II.) P. Schaeffer

50. The Rise of Science in Ancient Greece (4)

Lecture/discussion—3 hours; term paper. Prerequisite: Mathematics 16A or the equivalent. Study of the emergence of scientific rationality in ancient Greece and its political and social context; concentration on four areas: mathematics, medicine, cosmology, and psychology. Reading from the Presocratics, Hippocrates, Plato, Aristotle, and Hellenistic philosophers. GE credit: ArtHum, Wrt.

Upper Division Courses**102. Film and the Classical World (4)**

Lecture—3 hours; film viewing—2.5 hours. Prerequisite: any Classics course except 30 or 31. The Classical World as portrayed in films. Viewings and discussions of modern versions of ancient dramas, modern dramas set in the Ancient Mediterranean world, and films imbued with classical themes and allusions. Supplementary readings in ancient literature and mythology. GE credit: ArtHum, Wrt.—(II.) Albu

110. Origins of Rhetoric (4)

Lecture—3 hours; term paper. Prerequisite: one course in ancient history or consent of instructor. Issues in the development of rhetoric from its origins in ancient Greece to A.D. 430. Special attention to works of Plato, Aristotle, Cicero, and Quintilian. Role of grammar and rhetoric in schools of Roman Empire. The Christian rhetoric of Saint Augustine. Not open for credit to students who have completed Rhetoric and Communication 110 or Communication 110. (Former course Rhetoric and Communication 110.) GE credit: ArtHum, Wrt.—(III.)

140. Homer and Ancient Epic (4)

Lecture—3 hours; term paper. Prerequisite: course 4A or 10 or Comparative Literature 1. Reading of *Iliad*, *Odyssey*, and *Aeneid* in English. Discussion of Homer's and Vergil's techniques of composition, the beliefs and values of their respective societies and the influence of Homer on Vergil. Offered in alternate years. GE credit: ArtHum, Wrt.—II. Traill

141. Greek and Roman Comedy (4)

Lecture—3 hours; conference—1 hour. Readings in Aristophanes, Menander, Plautus, and Terence; lectures on the development of ancient comedy. Offered in alternate years. GE credit: ArtHum, Wrt.—Caston

142. Greek and Roman Novel (4)

Lecture—3 hours; term paper. Examination of the ancient Greek romances and their development into the grotesque realism of Petronius' *Satyricon*, and the religious mysticism of Apuleius' *The Golden Ass*. GE credit: ArtHum, Wrt.—Schein

143. Greek Tragedy (4)

Lecture—3 hours; term paper. Prerequisite: course 4A or 10. Reading in English of selected plays of Aeschylus, Sophocles and Euripides. Lectures on the development and influence of Athenian tragedy. Offered in alternate years. GE credit: ArtHum, Wrt.—(II.) Traill

150. Socrates and Classical Athens (4)

Lecture/discussion—3 hours; term paper. Prerequisite: course 4A. Study of the major sources of our knowledge of Socrates to assess his role in the politics and culture of ancient Athens; his method of teaching and its place in Western thought. GE credit: ArtHum, Wrt.—Traill

171. Mediterranean Bronze Age Archaeology (4)

Lecture—3 hours; extensive writing. Prerequisite: one of course 1, 2, 10, 15, Art History 1A, or Anthropology 3 recommended. Archaeological monuments of the ancient Near East, including Egypt and Mesopotamia, and of Greece and Crete during the Bronze Age. Special emphasis on the problems of state formation and on the co-existence and collapse of Bronze Age societies. Offered in alternate years. GE credit: ArtHum, Div, Wrt.—Roller

172A. Early Greek Art and Architecture (4)

Lecture—3 hours; term paper. Examination of the origin and development of the major monuments of Greek art and architecture from the eighth century to the mid-fifth century B.C. Not open for credit to students who have completed Art History 154A. (Same course as Art History 172A.) Offered in alternate years. GE credit: ArtHum, Wrt.—II. Roller

172B. Later Greek Art and Architecture (4)

Lecture—3 hours; term paper. Study of the art and architecture of later Classical and Hellenistic Greece, from the mid-fifth century to the first century B.C. Not open for credit to students who have completed Art History 154B. (Same course as Art History 172B.) Offered in alternate years. GE credit: ArtHum, Wrt.—II. Roller

173. Roman Art and Architecture (4)

Lecture—3 hours; term paper. The art and architecture of Rome and the Roman Empire, from the founding of Rome through the fourth century C.E. Not open for credit to students who have completed Art History 155. (Same course as Art History 173.) Offered in alternate years. GE credit: ArtHum, Wrt.—III. Roller

174. Greek Religion and Society (4)

Lecture—3 hours; term paper. Prerequisite: a lower division Classics course, except Classics 3, 20, 30, or 31. Cults, festivals, and rituals of Greek religious practice and their relationship to Greek social and political institutions, and to Greek private life. Includes discussion of major sanctuaries at Olympia, Delphi, Athens, and others. Offered in alternate years. GE credit: ArtHum, Wrt.—Roller

175. Architecture and Urbanism in Mediterranean Antiquity (4)

Lecture—3 hours; extensive writing. Prerequisite: a lower division course (except 30, 31); Art History 1A recommended. Architecture and urban development in the ancient Near East, Greece, and Rome. Special emphasis on the social structure of the ancient city as expressed in its architecture, and on the interaction between local traditions and the impact of Greco-Roman urbanism. (Same course as Art History 175.) Offered in alternate years. GE credit: ArtHum, Div, Wrt.—(II.) Roller

190. Senior Seminar (4)

Seminar—3 hours; term paper. Prerequisite: completion of one upper division course in Latin, Greek or Hebrew or consent of instructor. Advanced interdisciplinary study of a problem in the ancient Mediterranean world using the techniques of history, archaeology, art history and philology. May be

repeated for credit with consent of instructor. GE credit: ArtHum, Wrt.—II. Caston

197TC. Community Tutoring in Classical Languages (1-5)

Tutoring—1-5 hours. Prerequisite: consent of instructor. Supervised instruction of Greek or Latin in nearby schools by qualified students in department. May be repeated for credit up to 5 units. (P/NP grading only.)

198. Directed Group Study (1-5)

Prerequisite: upper division standing. (P/NP grading only.)

199. Special Study for Advanced Undergraduates (1-5)

Prerequisite: upper division standing and consent of instructor. (P/NP grading only.)

Graduate Courses**200A. Approaches to the Classical Past (4)**

Seminar—3 hours; term paper. Prerequisite: graduate student status. First half of two quarter seminar. Survey of major areas of classical scholarship, with special emphasis on the continuing impact of Mediterranean antiquity on later literature, history, art, and culture. (Deferred grading only pending completion of sequence.) Offered in alternate years.—Albu

200B. Approaches to the Classical Past (4)

Independent study—4 hours. Prerequisite: course 200A and graduate student status. Second half of two quarter seminar. Research project on major area of Classical scholarship, with special emphasis on the continuing impact of Mediterranean antiquity on later literature, history, art, and culture. Offered in alternate years.—III. Albu

201. Introduction to Classical Philology (4)

Seminar—3 hours; term paper. Survey of major contemporary areas of classical scholarship with special attention devoted to current problems in literary and textual criticism.—Traill

202. Homer (4)

Seminar—3 hours; term paper. Readings in the *Iliad* and *Odyssey*: the origins and transmission of the poems.—Roller

203. Vergil (4)

Seminar—3 hours; term paper. Reading of selected books of the *Bucolics*, *Georgics*, and *Aeneid*. Emphasis will be placed on the study of Vergilian poetic language.—Traill

204. Greek and Roman Comedy (4)

Seminar—3 hours; term paper. Historical and critical problems in Aristophanes or New Comedy. May be repeated for credit.

205. Latin Lyric and Elegy (4)

Seminar—3 hours; term paper. Critical examination of the works of Catullus, Horace, or Propertius. May be repeated for credit.—Traill

206. Greek Historiography (4)

Seminar—3 hours; term paper. Development of historical writing in Greece. May be repeated for credit.

207. Greek Drama (4)

Seminar—3 hours; term paper. Literary and philological analysis of the plays of Euripides, Sophocles, or Aeschylus. May be repeated for credit.

299. Research (1-12)

Prerequisite: consent of instructor. (S/U grading only.)

Courses in Greek (GRK)**Lower Division Courses****1. Elementary Greek (5)**

Lecture—5 hours. Introduction to the basic grammar and vocabulary of Classical and New Testament Greek. Development of translation skills with emphasis on Greek-English. (Students who have successfully completed Greek 2 or 3 in the 10th or higher grade in high school may receive unit credit for this course on a P/NP grading basis only. Although a passing grade will be charged to the student's P/NP option, no petition is required. All other students will receive a letter grade unless a P/NP petition is filed.)—I. (I.) Bulman

2. Elementary Greek (5)

Lecture—5 hours. Prerequisite: course 1. Continuation of course 1.—II. (II.) Bulman

2NT. Elementary New Testament Greek (1)

Lecture—1 hour. Prerequisite: course 2 (concurrently). Supplementary study of New Testament Greek.—II. (II.) Schaeffer

3. Intermediate Greek (5)

Lecture—5 hours. Prerequisite: course 2. Continuation of course 2. Selected readings from Greek authors.—III. (III.) Traill

3NT. Elementary New Testament Greek (1)

Lecture—1 hour. Prerequisite: course 3 (concurrently). Supplementary study of New Testament Greek.—III. (III.) Schaeffer

98. Directed Group Study (1-5)

Prerequisite: consent of instructor. (P/NP grading only.)

Upper Division Courses**100N. Readings in Greek Prose (4)**

Lecture—3 hours; recitation—1 hour. Prerequisite: course 3. Selected readings from pagan and Christian sources. May be repeated for credit with consent of instructor. GE credit: ArtHum, Wrt.—I. (I.) Albu

101. Plato (4)

Lecture—3 hours; term paper. Prerequisite: course 3. GE credit: ArtHum, Wrt.—II. Traill

102. Euripides (4)

Lecture—3 hours; term paper. Prerequisite: course 101. GE credit: ArtHum, Wrt.—(III.) Roller

103A. Homer: Iliad (4)

Recitation—3 hours; term paper. Prerequisite: course 3. GE credit: ArtHum, Wrt.—Schein

103B. Homer: Odyssey (4)

Recitation—3 hours; term paper. Prerequisite: course 3. GE credit: ArtHum, Wrt.—(II.) Roller

104. Menander (4)

Lecture—3 hours; term paper. Prerequisite: course 3. GE credit: ArtHum, Wrt.

105N. Attic Orators (4)

Lecture—3 hours; term paper. Prerequisite: course 3. Selected readings from the orators of 4th and 5th century Athens. May be repeated for credit with consent of instructor. Offered in alternate years. GE credit: ArtHum, Wrt.

111. Sophocles (4)

Lecture—3 hours; term paper. Prerequisite: course 103. GE credit: ArtHum, Wrt.—(II.) Schein

112. Aristophanes (4)

Lecture—3 hours; term paper. Prerequisite: course 103. GE credit: ArtHum, Wrt.

113. Thucydides (4)

Lecture—3 hours; term paper. Prerequisite: course 103. Offered in alternate years. GE credit: ArtHum, Wrt.—(III.) Roller

114. Lyric Poetry (4)

Lecture—3 hours; term paper. Prerequisite: course 103. Offered in alternate years. GE credit: ArtHum, Wrt.

115. Aeschylus (4)

Lecture—3 hours; term paper. Prerequisite: course 103. Offered in alternate years. GE credit: ArtHum, Wrt.—Schein

116. Herodotus (4)

Lecture—3 hours; term paper. Prerequisite: course 103. Offered in alternate years. GE credit: ArtHum, Wrt.—(III.) Traill

198. Directed Group Study (1-5)

(P/NP grading only.)

199. Special Study for Advanced Undergraduates (1-5)

(P/NP grading only.)

Courses in Latin (LAT)**Lower Division Courses****1. Elementary Latin (5)**

Lecture—5 hours. Introduction to basic grammar and vocabulary and development of translation skills with emphasis on Latin to English. (Students who have successfully completed Latin 2 or 3 in the 10th

or higher grade in high school may receive unit credit for this course on a P/NP grading basis only. Although a passing grade will be charged to the student's P/NP option, no petition is required. All other students will receive a letter grade unless a P/NP petition is filed.)—I. (I.) Allan, Bulman

2. Elementary Latin (5)

Lecture—5 hours. Prerequisite: course 1. Continuation of course 1.—II. (II.) Allan

3. Intermediate Latin (5)

Lecture—5 hours. Prerequisite: course 2. Continuation of course 2. Selected readings from Latin authors.—III. (III.) Allan

98. Directed Group Study (1-5)

Prerequisite: consent of instructor. (P/NP grading only.)

Upper Division Courses**100N. Readings in Latin Prose (4)**

Lecture/discussion—3 hours; term paper. Prerequisite: course 3. Review of basic forms, grammar, and vocabulary. Readings in prose authors, including Julius Caesar. Not open for credit to students who have completed course 110. GE credit: ArtHum, Wrt.—I. (I.) Albu

101. Livy (4)

Lecture—3 hours; term paper. Prerequisite: course 3. Offered in alternate years. GE credit: ArtHum, Wrt.—III. Traill

102. Roman Comedy (5)

Lecture—4 hours; term paper. Prerequisite: course 3. Offered in alternate years. GE credit: ArtHum, Wrt.—(II.) Caston

103. Vergil: Aeneid (4)

Lecture—3 hours; term paper. Prerequisite: course 3. Offered in alternate years. GE credit: ArtHum, Wrt.—(II.) Caston

104. Sallust (4)

Lecture—3 hours; term paper. Prerequisite: course 3. Offered in alternate years. GE credit: ArtHum, Wrt.

105. Catullus (4)

Lecture—3 hours; term paper. Prerequisite: course 3. Offered in alternate years. GE credit: ArtHum, Wrt.—(III.) Caston

106. Horace: Odes and Epodes (4)

Lecture—3 hours; term paper. Prerequisite: course 3. Offered in alternate years. GE credit: ArtHum, Wrt.—(III.) Albu

108. Horace: Satires and Epistles (4)

Lecture—3 hours; term paper. Prerequisite: course 3. Offered in alternate years. GE credit: ArtHum, Wrt.

109. Roman Elegy (4)

Lecture—3 hours; term paper. Prerequisite: course 3. Offered in alternate years. GE credit: ArtHum, Wrt.—Caston

110N. Ovid (4)

Lecture/discussion—3 hours; term paper. Prerequisite: course 3. Translation and discussion of selected readings from the works of Ovid. May be repeated once for credit when topic differs and with consent of instructor. Offered in alternate years. GE credit: ArtHum, Wrt.—II. Albu

111. Silver Age Latin (4)

Lecture—3 hours; term paper. Prerequisite: course 3. Selections from Tacitus, Pliny, Petronius, Juvenal, Martial, and other writers of the Silver Age. Offered in alternate years. GE credit: ArtHum, Wrt.—Albu

112. Cicero: Political Writings (4)

Recitation—3 hours; term paper. Prerequisite: course 3. GE credit: ArtHum, Wrt.—(III.) Traill

114. Cicero: Philosophical Works (4)

Lecture—3 hours; term paper. Prerequisite: course 3. Offered in alternate years. GE credit: ArtHum, Wrt.—Traill

115. Lucretius (4)

Lecture—3 hours; term paper. Prerequisite: course 3. Offered in alternate years. GE credit: ArtHum, Wrt.—(II.) Caston

116. Vergil: Eclogues and Georgics. (4)

Lecture—3 hours; term paper. Prerequisite: course 3. Offered in alternate years. GE credit: ArtHum, Wrt.—I. Caston

121. Prose Composition (5)

Lecture—4 hours; term paper.—(I.) Traill

125. Medieval Latin (4)

Lecture—3 hours; term paper. Prerequisite: course 3 and two upper division courses in Latin. Selected readings from the Vulgate and various medieval authors provide an introduction to the developments in the Latin Language and literature from the fourth to the fifteenth centuries. Offered in alternate years. GE credit: ArtHum, Wrt.—(III.) Albu

198. Directed Group Study (1-5)

(P/NP grading only.)

199. Special Study for Advanced Undergraduates (1-5)

(P/NP grading only.)

Clinical Nutrition

(College of Agricultural and Environmental Sciences)

Faculty

See the Department of Nutrition.

The Major Program

The Clinical Nutrition major provides students with training in normal and therapeutic nutrition, biological and social sciences, food science, communication, business management and food service management. This major fulfills the academic requirements for admission into a dietetics internship or the equivalent, which must be completed before qualifying for registration as a dietitian.

The Program. The Clinical Nutrition major (formerly Dietetics) includes the same basic core of nutrition classes as the Nutrition Science major, but includes additional courses such as food service management, education, sociology, and communication skills to prepare for work with the public. Clinical Nutrition students spend the first two years completing preparatory course work in the basic biological sciences, along with several of the social sciences. In the final two years, students take courses in normal and clinical nutrition, food science, biochemistry, and management techniques.

Entering freshman or transfer students are assumed to have basic computer skills and to demonstrate mathematics competency adequate to pass the Pre-calculus Qualifying Examination with a minimum score of 27, or have taken calculus at a community college or other four-year institution.

Career Alternatives. The Clinical Nutrition major qualifies students to apply for the American Dietetics Association "accredited internship," enabling them to become a Registered Dietitian, the professional credential necessary to work in a clinical setting. Once dietitians are registered, they generally seek employment in administrative, therapeutic, teaching, research, or public health/public service positions in clinics, hospitals, schools, or other similar institutions. There is a growing role for dietitians working in settings outside of the traditional hospital (for example, in state and federal nutrition programs, nutrition education, Peace Corps and Cooperative Extension work). Students who complete the undergraduate preparation in clinical nutrition are also qualified to enter graduate programs in dietetics, nutrition science, public health nutrition, and food service management.

B.S. Major Requirements:

UNITS

Written/Oral Expression8
 English 1 or 34
 Communication 14
 (Above courses simultaneously satisfy College requirement.)

Preparatory Subject Matter48-49
 Biological Sciences 1A, 1B10
 Chemistry 2A, 2B, 2C, 8A, 8B21
 Economics 1A or 1B5
 Psychology 14
 Sociology 1 or 3 or Anthropology 24-5
 Statistics 134

Breadth/General Education6-24
 Satisfaction of General Education requirement

Depth Subject Matter89-90
 Agricultural and Resource Economics 1124
 Community and Regional Development 173 or Education 1104
 Animal Biology 102 and 10310
 Biological Sciences 1014
 Food Science and Technology 100A, 100B, 101A, 101B, 10815
 Food Service Management 120, 120L, 1228
 Food Science and Technology 104-104L or Microbiology 102-102L6-7
 Nutrition 111, 112, 116A, 116AL, 116B 116BL, 118, 19024
 Neurobiology, Physiology, and Behavior 101, 101L8
 Additional upper division Nutrition electives6

Unrestricted Electives9-29
Total Units for the Major180

The Major Program

The major in communication focuses on the ways human beings produce and respond to verbal and nonverbal messages.

The Program. The program of study in communication examines communication processes at several different levels of analysis. Courses dealing with communication at the individual, interpersonal, organizational and societal levels of analysis are offered. Classes addressing such topics as communication and cognition, message systems, interpersonal communication, nonverbal communication, communication and persuasion, organizational communication, mass media effects and public communication campaigns explore communication at these levels of analysis. Related social science courses are also part of the major.

Preparatory Requirements. Before declaring a major in communication, students must complete the following courses with a combined grade point average of at least 2.50 at the University of California (at least 3.00 GPA may be required for similar courses taken at community college). All courses must be taken for a letter grade.

Anthropology 4 or Linguistics 14 units
 Psychology 14 units
 Sociology 15 units
 Statistics 134 units

Career Alternatives. Communication graduates have found careers in such fields as broadcast and print journalism, administration, sales, management, politics and government, education, social work, and public relations. A communication degree is also excellent preparation for law school or other graduate programs.

A.B. Major Requirements:

UNITS
Preparatory Subject Matter21
 Anthropology 4 or Linguistics 14
 Communication 1 or 34
 Psychology 14
 Sociology 15
 Statistics 134

Depth Subject Matter44
 Communication 1144
 Communication 115, 134, 14112
 Select one of Communication 103 or 105 or 1354
 Communication 130 or 1364
 Select one of Communication 143 or 145 or 1524

Select four of the following additional courses (the four courses must be other than those chosen to fulfill the above requirements)16
 Communication 103, 105, 130, 135, 136, 138, 140, 142, 143, 152, 160, 161, 165, 170, 172, 189A, 189B, 189C, 189D, Anthropology 117, 120, Linguistics 160, 163, 171, 173, Political Science 164, 165, Psychology 132, Sociology 126, 128, 135, 148.

Total Units for the Major65

Grading recommendation. Although not required, it is recommended that all courses offered in satisfaction of the major, except variable-unit courses, be taken for a letter grade.

Major Advisers. Faculty (contact department).

Advising Office. Staff adviser, Susie Johnson, 107 Sproul Hall.

Minor Program Requirements:

UNITS
Communication24
 One course from Communication 1, 34
 At least five upper division courses in communication20

Graduate Study. The Department of Communication offers programs of study and research leading to the M.A. degree in Communication. Detailed information may be obtained from the Graduate Adviser, Department of Communication.

Graduate Adviser. R. Bell.

Subject A. Students must have satisfied the Subject A requirement before taking any course in Communication.

Courses in Communication (CMN)

Lower Division Courses

1. Introduction to Public Speaking (4)

Lecture—1 hour; discussion—3 hours. Practice in the preparation and delivery of speeches based on contemporary principles and strategies of informing and persuading audiences. GE credit: Wrt (cannot be used to satisfy a college or university composition requirement and GE writing experience simultaneously).—I, II, III. (I, II, III.) Shubb

3. Interpersonal Communication Competence (4)

Lecture—2 hours; discussion—2 hours. Communication in interpersonal contexts. Sender, receiver, and message variables, and their interaction with communication competence. Participation in simulations and experiential exercises.—I, II, III. (I, II, III.) Duax

99. Special Study for Undergraduates (1-5)

Prerequisite: consent of instructor. (P/NP grading only.)

Upper Division Courses

103. Gender Differences in Communication (4)

Lecture—4 hours. Prerequisite: upper division standing in Communication. Examination of communication differences between men and women as sources of male/female stereotypes, misunderstandings, dilemmas, and difficulties (real and imagined). Treatment of genders as cultures. Topics include male/female differences in discursive practices and patterns, language attitudes, and relationship dynamics. GE credit: SocSci.—I, II, III.

105. Semantic and Pragmatic Functions of Language (4)

Lecture—4 hours. Prerequisite: course 115. The role of language in shaping attitudes and perceptions of self and others. The use and abuse of verbal symbols in communicative situations. Concepts of meaning in discourse. GE credit: SocSci.—I, II. (I, II.) Creveling

114. Contemporary Theories of Human Communication (4)

Lecture/discussion—4 hours. Rhetoric as a social science, characteristics of social theories, components of theories, development and testing of hypothesis, general models, theories, and research. GE credit: SocSci.—I, II, III. (I, II, III.) Creveling

115. Empirical Methods in Communication (4)

Lecture—4 hours. Prerequisite: course 114 and Statistics 13 or the equivalent. Survey of social scientific research methods commonly employed in the communication discipline. Topics include research design, measurement, sampling, questionnaire construction, survey research, experimental research, content analysis, and interaction analysis. GE credit: SocSci.—I, II, III. (I, II, III.) Bell

130. Group Communication Processes (4)

Lecture—4 hours. Examination of current theories of group formation, goals, structure, and leadership, as they relate to communication processes. GE credit: SocSci.—I. (I, II, III.) Vohs

134. Interpersonal Communication (4)

Lecture—4 hours. Prerequisite: course 1 or 3, or 10 or the equivalent. Communication between two individuals in social and task settings. One-to-one communication, verbal and nonverbal, in developing relationships. Consideration of theory and research on relevant variables such as shyness, self-disclosure, reciprocity, games, and conflict. GE credit: SocSci.—I, II, III. (I, II, III.) Berger, Motley

135. Nonverbal Communication (4)

Lecture—4 hours. Examination of the interaction between nonverbal communication and verbal communication channels in influencing outcomes in interpersonal and mass mediated communication contexts. Underlying functions served by nonverbal communication will also be considered. GE credit: SocSci, Div.—I, II, III. (I, II, III.) Berger

136. Organizational Communication (4)

Lecture—4 hours. Examines communication in various organizational situations. Focuses on the use of effective communication strategies for achieving organizational and individual goals. Emphasis is placed on identifying and amending ineffective communication within organizations. GE credit: SocSci.—I, II. (I, II, III.) Vohs

138. Communication and Cognition (4)

Lecture/discussion—4 hours. Prerequisite: upper division standing. Relationship between communication and cognition. Models of discourse comprehension and production, the influence of language attitudes on social judgments, and the effects of information processing on decision making are explored. GE credit: SocSci.—III. Berger

140. The Media Industry (4)

Lecture/discussion—4 hours. Pass 1 open only to majors. Examines the economic, social, and political forces that shape media content. Topics include the historical evolution of the print and broadcast media; emerging technologies, including the Internet and interactive media; the globalization of the industry; patterns of media ownership. GE credit: SocSci.—I, II, III.

141. Media Effects: Theory and Research (4)

Lecture/discussion—4 hours. Prerequisite: course 115 or the equivalent; course 140 recommended. Pass 1 open only to majors. Social scientific studies of the effects of mass media messages on audience members' actions, attitudes, beliefs, and emotions. Topics include the cognitive processing of media messages, television violence, political socialization, cultivation of beliefs, agenda-setting, and the impact of new technologies. GE credit: SocSci.—I, II, III. Berger, Alcalay

142. News Policies, Practices and Effects (4)

Lecture—4 hours. Exploration of processes and constraints in the gathering, editing, and reporting of news. Examination of studies on the effects of news, contemporary challenges to news reporting presented by new technologies, and the relationship of news to other social institutions. GE credit: SocSci.—I, II, III.

143. Analysis of Media Messages (4)

Lecture—1 hour; discussion—2 hours; term paper. Prerequisite: courses 140 and 141 recommended. Pass 1 open only to majors. Examination of alternative approaches to the analysis, interpretation, and evaluation of media messages, including those disseminated through broadcasting, print, and new technologies. Both content analytic and interpretive approaches covered. GE credit: SocSci, Wrt.—I, II, III. Theobald

152. Theories of Persuasion (4)

Lecture—4 hours. Prerequisite: course 115. Survey of communication and social psychological theories of persuasion. Examination of influence tactics and message design. Contexts of application include product advertising, propaganda campaigns, and health promotion. GE credit: SocSci.—I, II, III. (I, II, III.) Bell, Lee

160. Health Communication Campaigns (4)

Lecture/discussion—3 hours; term paper. Prerequisite: course 115 or the equivalent. Strategic uses of media and interpersonal channels to promote health

through communication campaigns. Topics include attitude and behavior change theories, social marketing, diffusion of innovations and campaign planning (formative research, message design and testing, audience segmentation, campaign evaluation, media advocacy). GE credit: SocSci.—Alcalay

161. Cultural Perspectives on Health Communication (4)

Lecture—4 hours. Prerequisite: upper division standing. Study of various cultures through health communication campaigns and representative media and cultural products (e.g., literary artifacts, films). Exploration of health promotion campaigns as manifestations of cultural values and beliefs about sexuality, human relations, religion, morality, illness, and health.—Alcalay

165. Media and Health (4)

Lecture/discussion—3 hours; term paper. Prerequisite: course 115 or the equivalent. Pass 1 open only to majors. Content and effects of messages in news, entertainment, and advertising. Topics include health news reporting; portrayals of disease, disability, death and health-related behaviors; representations of health professionals; promotion of drugs and other health products; tobacco and alcohol advertising. GE credit: SocSci.—Bell

170. Communication, Technology, and Society (4)

Lecture/discussion—4 hours. Prerequisite: course 114, 115, and upper division standing. Survey of how communication technologies transform our lives at the individual and society levels. Topics include human-computer interaction; the effects of communication technologies in education, health and business; and social and political implications of technological development. GE credit: SocSci.—I. (I.) Lee

172. Computer-Mediated Communication (4)

Lecture/discussion—4 hours. Prerequisite: course 114, 115, and upper division standing. Uses and impacts of computer-mediated communication. Theories and research findings pertaining to how computer-mediation affects various aspects of human interaction including impression formation, development of personal relationships, group decision making, collaborative work, and community building. GE credit: SocSci.—II. (II.) Lee

180. Current Topics in Communication (4)

Seminar—4 hours. Prerequisite: upper division standing with a major in Communication or consent of instructor. Group study of a special topic in communication. May be repeated once for credit. Enrollment limited.—II, III. (II, III)

189A. Proseminar in Social Interaction (4)

Seminar—3 hours; term paper. Prerequisite: course 114 and 115. Reading, discussion, research, and writing on a selected topic in the specialty of social interaction. Potential topics include relationship initiation, maintenance, and deterioration; communication failure; nonverbal communication; conversational management; semantics and pragmatics of language; and family/marital communication. May be repeated for credit when topic differs. Offered in alternate years. GE credit: SocSci, Wrt.—I. Berger, Motley

189B. Proseminar in Mass Communication (4)

Seminar—3 hours; term paper. Prerequisite: course 114 and 115. Reading, discussion, research, and writing on a selected topic in the specialty of mass communication. Potential topics include, agenda-setting, the cultivation of beliefs, television violence, media portrayals of underprivileged groups, mediated political discourse, interactive technologies, and international/global communications. May be repeated for credit when topic differs. Offered in alternate years. GE credit: SocSci, Wrt.—II. Alcalay, Berger

189C. Proseminar in Health Communication (4)

Seminar—3 hours; term paper. Prerequisite: course 114 and 115. Reading, discussion, research, and writing on a selected topic in health communication. Potential topics include health communication design and evaluation, media advocacy, physician-

patient interaction, uses of communication technologies in health settings, and health-related advertising. May be repeated for credit when topic differs. Offered in alternate years. GE credit: SocSci, Wrt.—III. Alcalay, Bell

189D. Proseminar in Organizational Communication (4)

Seminar—3 hours; term paper. Prerequisite: course 114 and 115. Reading, discussion, research, and writing on a selected topic in the specialty of organizational communication. Potential topics include power and influence, organizational conflict and its resolution, mediation, bargaining and negotiation, superior-subordinate interaction, leadership styles, and inter-organizational communication. May be repeated for credit when topic differs. Offered in alternate years. GE credit: SocSci, Wrt.—I. Vohs

192. Internship in Communication (1-6)

Internship—3-18 hours. Prerequisite: declared major in Communication and 20 units of upper division Communication courses. Work-research projects, usually at off-campus sites, under departmental supervision. May be repeated for credit up to 12 units. Units do not count toward major requirements. (P/NP grading only.)

194H. Senior Honors Thesis (4)

Seminar—1 hour; individual tutoring on research project—3 hours. Prerequisite: senior standing and approval by Honors Committee. Directed reading, research, and writing culminating in the preparation of honors thesis under direction of faculty adviser.

197T. Tutoring in Communication (2-4)

Seminar—1-2 hours; laboratory—1-2 hours. Prerequisite: upper division standing with major in Communication and consent of Department Chairperson. Tutoring in undergraduate Communication courses, including leadership of discussion groups affiliated with departmental courses. May be repeated for credit up to a total of six units. (P/NP grading only.)

198. Directed Group Study (1-5)

Prerequisite: consent of instructor. (P/NP grading only.)

199. Special Study for Advanced Undergraduates (1-5)

(P/NP grading only.)

Graduate Courses**213. Theory Development in Communication Inquiry (4)**

Seminar—4 hours. This course explores meta-theoretical approaches to developing social-scientific theories of human communication. Perspectives include covering-laws, systems, rules, axiomatic theory construction, causal modeling, scientific realism and grounded theory. Research design and measurement implications of these perspectives are examined.—Berger

214. Mass Communication Theory and Research (4)

Seminar—4 hours. Prerequisite: course 220 or the equivalent. Examines the basic theories, models, and assumptions of mass communication. Reviews the current state of this discipline and major research developments. Special emphasis on research regarding media and violence, women and minorities, political communication, and new technologies.—Alcalay

215. Mass Communication and Social Change (4)

Seminar—4 hours. Prerequisite: courses 220 and 214, or the equivalent. To gain an understanding of current theories and concepts in persuasion and mass communication. To explore how principles of persuasion are used in communication campaigns. To acquire skills in the planning, implementation, and evaluation of campaigns.—Alcalay

220. Empirical Methods in Communication (4)

Lecture—4 hours. Prerequisite: course 115 or consent of instructor. Introduction to the use of experimental and descriptive research methods in communication research. Topics include survey

research, interviewing, experimental and quasi-experimental design, and statistics.—Motley

240. Advocacy in Contemporary Society (4)

Seminar—4 hours. Prerequisite: course 151 or the equivalent. Rhetorical and communication theories of argumentation and advocative stance. Analysis of the persuasive impact of argumentation occurring in current public controversies.

242. Proseminar in Symbolic Behavior (4)

Seminar—4 hours. Prerequisite: course 220. Examination of language and/or other symbolic codes in communication. Investigated phenomena may include stylistic variation, speech arts, cognitive processing, communication rules, and audience effects.—Motley

243. Persuasion Theory (4)

Lecture/seminar—4 hours. Prerequisite: course 152 or consent of instructor. Major scientific theories of persuasion. Research programs related to persuasion theories.—Bell

244. Organizational Communication (4)

Seminar—4 hours. Prerequisite: graduate standing and consent of instructor. Theory and research on communication processes in organizations.—Vohs

246. Perspectives on Relational Communication (4)

Seminar—4 hours. Prerequisite: course 212. Critical survey of the current state of inquiry on communication in personal relationships, i.e., friendship, romantic, and marital relationships. Issues examined include the role of communication in constructing, maintaining, and dissolving relationships.

248. Media Criticism (4)

Seminar—4 hours. Prerequisite: a course in criticism. Examines broadcast, print, and visual media by means of rhetorical, psychological, semiological, sociological, and cultural studies and perspectives. Comparison of media and of critical theory scope in understanding media messages.

249. Interpersonal Communication Theory (4)

Lecture/seminar—4 hours. Prerequisite: course 134 and 212 or consent of instructor. Major theories of interpersonal communication and related research.—Bell

251. Special Topics in Interpersonal Communication (4)

Seminar—4 hours. Prerequisite: graduate standing and consent of instructor. Selected topics in interpersonal communication. May be repeated for credit when topic differs.—Berger

252. Special Topics in Mass Communication (4)

Seminar—4 hours. Prerequisite: graduate standing and consent of instructor. Selected topics in mass communication theory and research. May be repeated for credit when topic differs.—Alcalay

253. Negotiation (4)

Seminar—4 hours. Prerequisite: graduate standing and consent of instructor. Theory and research on negotiating.—Vohs

260. Communication Applications (2-4)

Discussion—1 hour; supervised field work—3-9 hours. Prerequisite: course 220. Fieldwork in communication. Organization and implementation of a research project for a specific application of a communication program. May be repeated once for credit. (S/U grading only.)

298. Group Study (1-5)

Lecture—3 hours. (S/U grading only.)

299. Individual Study (1-12)

(S/U grading only.)

299R. Thesis Research (1-12)

Independent study—3-36 hours. Prerequisite: graduate standing in Communication. (S/U grading only.)

Professional Course

396. Teaching Assistant Training Practicum (1-4)

Prerequisite: graduate standing. May be repeated for credit. (S/U grading only.)

Community and Regional Development

(College of Agricultural and Environmental Sciences)

Faculty. See the Department of Human and Community Development.

The Major Program

The Community and Regional Development major (formerly Applied Behavioral Sciences) is concerned with the study of communities and the people in them. The program focuses on community and organizational development, the role of culture and ethnicity in shaping community life, and the ways that knowledge can be used to solve social problems and improve the quality of life.

The Program. Principal subjects of study within the major are community and organizational development, social change processes, the role of culture and ethnicity in shaping community life, community research methodologies, the impacts of innovation and technology on community development, and the effects of social, economic and political systems on communities. The major is organized to allow students to develop fields of concentration that meet their career goals.

Internships and Career Alternatives. Community and Regional Development students are required to complete an internship in their field before graduation. Internships have been arranged with local, county, and state planning units, health departments, schools, housing offices, and community education programs. Community and Regional Development graduates are prepared for occupations in community development, social research, program evaluation, organizational and educational consulting, city and regional planning, and for-profit organizations. The major also provides effective preparation for graduate or professional study in the social and behavioral sciences, or for professional degrees.

B.S. Major Requirements:

	UNITS
English Composition Requirement.....	4-12
See College requirement	0-8
English 101, 102A, 102B, 102C, 102D, 102E, 102F, 102G, 104A, 104B, 104C, 104D, 104E, or 104F	4
Preparatory Subject Matter	22-25
Community and Regional Development 1 ...	4
Agricultural Systems and Environment 21 or Computer Science Engineering 15.....	3-4
Economics 1A or 1B.....	5
Community and Regional Development 2 ...	4
Anthropology 2 or Sociology 1.....	4-5
Statistics 13 or 32 or Sociology 46B	3-4
Breadth/General Education Requirement.....	24
Satisfaction of General Education requirement	
Depth Subject Matter	40
Two courses from Community and Regional Development 151, 151L, 160, 161, or 168	8
Community and Regional Development 142, 152, or 154	4
Two courses from Community and Regional Development 157, 158, 164, or 171.....	8
Two courses from Community and Regional Development 140, 141, 156, or 162.....	8
Community and Regional Development 172 or 176	4
Community and Regional Development 118, 173, or International Agricultural Development 103	4
Internship: Community and Regional Development 192	4

Areas of Specialization

Take 20 units from each of two options or 40 units from one option. The Areas of Specialization must include two Community and Regional Development courses. Up to 4 units of variable-unit course work may be counted toward this requirement (e.g., Community and Regional Development 192).

Community Groups Option.....40

Students must consult with a faculty adviser to identify an emphasis within the option and to select suitable courses.

General (Community and Regional Development 151, 152, 153, 154, 157, 160, 161, 172, 176, American Studies 156, Human Development 103)

African Americans (African American and African Studies 100, 123, 130, 145A, Sociology 128, 129, 130, 134)

Asian Americans (Asian American Studies 100, 110, 111, 112, 155)

Chicanas/os (Chicana/o Studies 100, 110, 111, 120, 121, 131, 132, 140, Political Science 168)

Native Americans (Native American Studies 115, 116, 117, 118, 122, 130A, 130B, 134, 156, 181B)

Youth (American Studies 152, Human Development 100A, 100B, 101, 102, 103, 130, 131, 140, 140L, 141, 142, 151, Psychology 112, Sociology 122, 152)

Aging (Community and International Health 180, Human Development 100C, 143, 160, 162, 191, Sociology 154)

Gender (American Studies 154, Anthropology 130, Political Science 166, Psychology 114, Sociology 132, 133, 145B, Women's Studies 103, 130, 140, 187)

Specialty Challenged Individuals (Education 115, Human Development 130, 131)

Class (Sociology 140, 185)

Organization and Management Option.....40

Students must consult with a faculty adviser to identify an emphasis within the option and to select suitable courses.

Administration (Community and Regional Development 157, 158, 168, Agricultural Economics 100A, 171A, Computer Science Engineering 167, Economics 104, 105, 115A, Political Science 100, 105, 142, 155, 181, 182, 183)

Communication (Communication 114, 130, 134, 136, 140, 152, Community and Regional Development 173, 175, Education 120, 163)

Human Resources (Community and Regional Development 151, 160, 161, 172, 176, Economics 151B, Food Service Management 123, Psychology 143, 144, 145, 183, Sociology 120, 128, 129)

Management (Community and Regional Development 118, 140, 141, 154, 161, 162, 164, 168, Agricultural Economics 112, 113, History 174A, Political Science 188, Sociology 138, 139, 158, 159, 180A, 180B)

Policy and Planning Option.....40

Students must consult with a faculty adviser to identify an emphasis within the option and to select suitable courses.

General (Community and Regional Development 118, 142, 151, 153, 154, 156, 160, 161, 162, 168, Environmental Science and Policy 165, Political Science 100, 103, 105, 108, 109, 142, 173, 183)

Environmental Policy (Political Science 107, 175, Environmental Science and Policy 110, 160, 161, 164, 166, 168A, 168B, 171, 172, 173, 179, Environmental and Resource Sciences 121)

Law and Policy (Sociology 120, 152, 155, Political Science 103, 105, 154, 155, 181, 182)

Urban and Regional Planning (Community and Regional Development 140, 141, 152, 157, 158, 159, 171, Economics 115A, Environmental Planning and Management 110, 134, Environmental Science and Policy 171, 173, Geography 155, Political Science 100, 101, 102)

Social Services Option40

Students must consult with a faculty adviser to identify an emphasis within the option and to select suitable courses.

Community Health (Community and Regional Development 164, Community Health 101, Environmental Science and Policy 126, Psychology 160, Sociology 154)

Aging (Community Health 180, Human Development 100C, 143, 160, 162)

Counseling (Communication 134, 135, Education 160, 163, Human Development 121, 130, Psychology 143, 145, 168)

Youth (American Studies 152, Human Development 100A, 100B, 101, 102, 103, 130, 131, 140, 140L, 141, 142, 151, Psychology 112, Sociology 122, 152)

The Family (Human Development 110, Sociology 131, 134, 135)

Education (Community and Regional Development 173, 175, Agricultural Education 100, 160, 163, Education 100, 110, 114, 120, Psychology 136, Sociology 124)

Bilingual Education (Education 151, 152, 153, Psychology 132)

Unrestricted Electives39-50

Total Units for the Degree180

Major Adviser. M. Kenney

Advising Center for the major is located in 1303 Hart Hall (530) 752-2244.

Minor Program Requirements:

The Community and Regional Development faculty offers the following minor program:

UNITS

Community Development24

Community and Regional Development 1, 151, 152, 16416
Two courses selected from Community and Regional Development 140, 157, 158, 162, 168, 171, 172, 173, 175, or 1768

Minor Adviser. M. Wells.

Graduate Study. Refer to the Graduate Studies chapter of this catalog.

Related Courses. See Environmental Science and Policy 10, 101, 133.

Courses in Community and Regional Development (CRD)

(Formerly courses in Applied Behavioral Sciences.)

Lower Division Courses

1. The Community (4)

Lecture—3 hours; discussion—1 hour. Basic concepts of community analysis and planned social change. The dynamics of community change through case studies of communities including peasant, urban ghetto, suburban mainline, and California farm workers. GE credit: SocSci, Div, Wrt.—I, II, III. (I, II, III.) Tarallo, Marcotte

2. Ethnicity and American Communities (4)

Lecture—3 hours; discussion—1 hour. Historical and cultural survey of the role of various ethnic groups in the development of American communities. Examines ethnicity as a cultural factor, ethnicity as power

and issues related to selected American ethnic groups. GE credit: SocSci, Div, Wrt.—I, II. (I, II.) Lip-pin, Guarnizo

17. Population and Community: Issues in Human Ecology (4)

Lecture/discussion—4 hours. Dynamics and challenges of demographic changes in California and the world community, solutions as well as problems, implications for individuals, their possible contributions towards resolving global problems through community action. GE credit: SocSci, Div, Wrt.

47A. Orientation to Community Resources—San Francisco (2)

Fieldwork—4 day field trip; seminar—three 2-hour sessions. Advance registration and orientation required. Intensive fieldwork in San Francisco. Interaction with agencies and individuals who address the range of human service, educational, and social needs in the city. (P/NP grading only.)—II, summer. Fujimoto

47B. Orientation to Community Resources—Central Valley (2)

Fieldwork—4 day field trip; seminar—three 2-hour sessions. Advance registration and orientation required. Intensive fieldwork in the California Central Valley. History of settlement and development of the world's most productive and diverse agricultural region. Housing, land use, development, immigration, and population growth. (P/NP grading only.)—III. (III.) Wiener

92. Internship (1-12)

Internship—3-36 hours. Prerequisite: consent of instructor. Supervised internship, off and on campus, in community and institutional settings. (P/NP grading only).

98. Directed Group Study for Undergraduates (1-5)

Prerequisite: consent of instructor. (P/NP grading only.)

99. Special Study for Undergraduates (1-5)

(P/NP grading only.)

Upper Division Courses

118. Technology and Society (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 18 or consent of instructor. Impact of technology on labor relations, employment, industrial development and international relations. The internal relations of technology development and deployment. GE credit: SocSci, Wrt.—I. (I.) Kenney

140. Dynamics of Regional Development (4)

Lecture—4 hours. Prerequisite: one undergraduate social science course or consent of instructor. Political economy of domestic regional development. Technology, labor relations and interfirm linkages. California and other regions as case studies. GE credit: SocSci, Wrt.—II. (II.) Kenney

141. Organization of Economic Space (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 1. The globalization of economic activity focusing on new spatial patterns of production and circulation and their implications for particular countries and regions.

142. Rural Change in the Industrialized World (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 1. Geography of rural environment with special emphasis on rural restructuring. The regional focus is on the developed world and comparisons are drawn between Europe (Eastern and Western) and North America.—III. (III.) Momsen

151. Community Field Research: Theory and Analysis (3)

Lecture—3 hours. Prerequisite: course 151L must be taken concurrently; course 1 and any upper division Community and Regional Development course are recommended. Design and analysis of research at the community level with a focus on the relationship between practice and theory. Focus will be on conducting community research using structural analysis, elite interviewing, ethnographic research, and other qualitative research methods. GE credit: SocSci, Div, Wrt.—III. Tarallo

151L. Laboratory in Community Research and Analysis: Field Experience (1-3)

Fieldwork—3-9 hours. Prerequisite: course 151 concurrently. Field research focused on community or organizational issues and their resolution. Includes assignment with local agencies or community-based organizations. The focus will be conducting community research using such methods as structural analysis, elite interviewing, ethnographic research, and comparative community studies.—III. Tarallo

152. Community Development (4)

Lecture—4 hours. Prerequisite: course 1 or 151, Sociology 2, Anthropology 2, Asian American Studies 100, Chicana/o Studies 132, Geography 5, or African American and African Studies 101 or consent of instructor. Introduction to principles and strategies of community organizing and development. Examination of non-profit organizations, citizen participation, approaches to reducing poverty, community needs assessment, and regional development strategies. GE credit: SocSci, Wrt.—I. Bradshaw

153. International Community Development (4)

Lecture—4 hours. Prerequisite: course 1, Anthropology 2, International Agricultural Development 10. Examination of community development efforts worldwide. Analysis of impact of global forces on community development in different settings. Alternative strategies with emphasis on self-reliance and locally controlled development.—(summer) Summer, Fujimoto

154. Social Theory and Community Change (4)

Lecture—4 hours. Prerequisite: course 1, Sociology 1, or Anthropology 2. A comparative overview of the dominant social science paradigms for the study of community development and change. Among the paradigms discussed are functionalism, conflict theory/Marxism, structuralism, and methodological individualism. GE credit: SocSci, Div, Wrt.—II. (II.) Hirtz

156. Community Economic Development (4)

Lecture—4 hours. Prerequisite: course 152 or consent of instructor. How government and community organizations help firms grow and create jobs through local economic development corporations, small business centers, revolving loan funds, incubators, and many other programs. Techniques to analyze community economic potential and identification of appropriate intervention tools. Group project.—III. Bradshaw

157. Politics and Community Development (4)

Lecture—4 hours. Prerequisite: prior course work in sociology or political science recommended. Analyzes political, economic and sociocultural forces shaping the form and function of local communities in the U.S. Considers theories of the state, the community and social change and case studies of actual community development in comparative historical perspective. GE credit: SocSci, Div, Wrt.—II. Smith

158. Small Community Governance (4)

Lecture/discussion—3 hours; fieldwork—3 hours. Prerequisite: course 151 or 160 or Political Science 100. Governing institutions and political processes in rural and small urban places. Local government organization, community autonomy, leadership, political change, policy development, and select policy issues including public finance. Field research on political processes or policy issues in select communities. Offered in alternate years.—III. Campbell

160. Research Design and Method in Community Studies (4)

Lecture—4 hours. Prerequisite: course 1; Statistics 13 or the equivalent. Application of behavioral science research methodology to multidisciplinary problems confronting communities and community organizations. Focuses on design, sampling, measurement and analysis.—I. (I.) Goldman

161. Ethnographic Research in America (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: completion of 8 units of course work in Anthropology, Sociology, or Community and Regional Development. Methodologies, ethics and goals of qualitative research. Emphasis on analyzing and conducting ethnographic research in American communities; problem formulation, analytic modes, data correction and interpretation. Offered in alternate years.

162. People, Work and Technology (4)

Lecture—4 hours. Prerequisite: course work in the social sciences (e.g., Sociology 1, 3, Anthropology 137, Economics 1A, 1B) or labor history. Relationship between work, technology, and people's lives. Such topics as industrialization, bureaucratization, automation, the structure of work-linked communities, education and the labor market, work and the economic system and the future of work.—III. (III.) Wells

164. Theories in Organizational Change (4)

Lecture—4 hours. Prerequisite: course 1 or 2. Development of approaches to planned change including normative re-educative, applied systems, and developmental strategies.—III. (III.) Hirtz

168. Program Evaluation and the Management of Organizations (4)

Lecture—4 hours. Prerequisite: courses 160, 161. Role of program evaluation in organizational and program management. Impact of internal evaluation in program planning, improvement, and accountability.—II. (II.) Goldman

171. Housing and Social Policy (4)

Lecture—4 hours. Social impact, economics, and politics of housing in the United States. Special attention given to alternative policy strategies at the national and local levels.—III. Wiener

172. Social Inequality: Issues and Innovations (4)

Lecture—4 hours. Prerequisite: upper division standing; 8 units of sociology or anthropology or combination. Study of the phenomenon of inequality in the U.S. Various approaches to inequality examined, including structural and historical explanations, prejudice and discrimination, the "culture of poverty," and arguments concerning race, sex, and genetic potential.—I. (I.) Wells

173. The Continuing Learner (4)

Lecture—4 hours. Prerequisite: upper division standing. Theories of adult learning and teaching emphasizing the role of adult education in the community. Designing of adult education programs.—II. (II.) Lippin

174. Communication for Community Change (4)

Lecture—4 hours. Prerequisite: course 1. Communication as a mechanism and method for creating change in communities. Theories and practices; impact of message on attitudes and behavior; ethics of change induced through communication. Offered in alternate years.

176. Comparative Ethnicity (4)

Lecture—4 hours. Prerequisite: upper division standing, 8 units of sociology or anthropology or combination. Exploration of the role of ethnicity in shaping social systems and interaction. Examination of analytical approaches to and issues arising from the study of ethnicity, through utilization of data from a range of different societies. GE credit: SocSci, Div, Wrt.—II. Guarnizo

192. Internship (1-12)

Internship—3-36 hours. Prerequisite: completion of 84 units and consent of instructor. Supervised internship, off and on campus, in community and institutional settings. (P/NP grading only.)

198. Directed Group Study (1-5)

(P/NP grading only.)

199. Special Study for Advanced Undergraduates (1-5)

(P/NP grading only.)

Graduate Courses**240. Community Development Theory (4)**

Lecture/discussion—4 hours. Introduction to theories of community development and different concepts of community, poverty, and development. Emphasis on building theory, linking applied development techniques to theory, evaluating development policy, and examining case studies of community development organizations and projects.—I. (I.) Bradshaw

241. The Economics of Community Development (4)

Seminar—4 hours. Prerequisite: graduate standing. Economic theories and methods of planning for com-

munities. Human resources, community services and infrastructure, industrialization and technological change, and regional growth. The community's role in the greater economy.—I. Kenney

242. Community Development: Program Management (4)

Seminar—4 hours. Prerequisite: course 241. Planning, organization, financing and administration of social change projects or programs at the community or city level.—III. Hirtz

245. The Political Economy of Urban and Regional Development (4)

Lecture—4 hours. Prerequisite: course 157, 244, or the equivalent. How global, political and economic restructuring and national and state policies are mediated by community politics; social production of urban form; role of the state in uneven development; dynamics of urban growth and decline; regional development in California.—III. (III.) Smith

246. The Political Economy of Transnational Migration (4)

Lecture—4 hours. Prerequisite: graduate standing. Theoretical perspectives and empirical research on social, cultural, political, and economic processes of transnational migration to the U.S. Discussion of conventional theories will precede contemporary comparative perspectives on class, race, ethnicity, citizenship, and the ethnic economy.—II. (II.) Guarnizo

247. Transformation of Work (4)

Lecture/discussion—4 hours. Prerequisite: graduate standing in history or social science degree program or consent of instructor. Exploration of the ways that the experience, organization, and systems of work are being reconfigured in the late twentieth century. The impacts of economic restructuring on local communities and workers.—III. (III.) Wells

290. Seminar (1)

Seminar—1 hour. Analysis of research in applied behavioral sciences. (S/U grading only.)—I, Hirtz

292. Graduate Internship (1-12)

Internship—3-36 hours. Individually designed supervised internship, off campus, in community or institutional setting. Developed with advice of faculty mentor. (S/U grading only.)

298. Group Study (1-5)**299. Research (1-12)**

(S/U grading only.)

Professional Course**440. Professional Skills for Community Development (4)**

Seminar—4 hours. Prerequisite: course 240. The intersection of theory and case studies to develop practical skills needed to work as a professional community developer, program administrator, and/or policy consultant.—II. (II.) Bradshaw

Graduate Study. The Graduate Group in Community Development offers a multidisciplinary program of study which leads to the M.S. degree. The program prepares students for professional roles as administrators, designers, planners, or researchers, with emphasis upon urban and rural communities and human service organizations. Graduate study in community development also prepares individuals to work within government or non-profit organizations in the realm of social and economic change. Students have the opportunity to specialize in (1) urban and rural development, (2) community economic and political development, (3) community design and planning, (4) racial and ethnic relations, (5) international migration and development, (6) gender and community development, and (7) social policy analysis.

Preparation. Applicants to this program can prepare themselves by enrolling for upper division courses in the social or behavioral sciences, e.g., anthropology, economics, sociology, psychology, cultural geography, or political science, and courses in community studies.

The Major Program

Comparative literature encourages students to read, think about, and compare books from different national languages and from different parts of the world. Comparative literature enlarges students' horizons by bridging the divisions between national cultures instead of concentrating on a single tradition.

The Program. Both the major and minor programs in comparative literature allow students to combine courses in one or more national literature departments with courses in comparative literature. The introductory course sequence, "Great Books of Western Culture" and "Major Books of the Contemporary World," provides both an overview of European literary culture from ancient times to the present and intensive practice in analytical thought and English composition. All readings in undergraduate comparative literature courses are in English, but majors take upper division courses in at least one foreign literature in the original language.

Career Alternatives. Careers directly related to comparative literature include teaching, journalism, publishing, and translating. Because many professional schools consider a literature major an excellent background for their graduate disciplines, comparative literature provides valuable preparation (supplemented with courses outside the major) for careers in business, government, medicine, or law.

A.B. Major Requirements:

	UNITS
Preparatory Subject Matter	15-46
Comparative Literature 1, 2, 3.....	12
One other lower division course in Comparative Literature	3-4
Foreign language: sufficient preparation to ensure satisfactory performance at the upper division level	0-30
Depth Subject Matter	40
Five upper division Comparative Literature courses including at least one course in a major period (such as 164A-164B-164C-164D), movement (such as 168A-168B, 169) or genre (such as 160A-160B, 161A-161B, 163, 166A-166B) and including Comparative Literature 141	20
Three upper division literature courses in a language other than English	12
Two additional upper division literature courses in Comparative Literature or in any other program including English or literature in translation	8
Total Units for the Major	55-86

Recommended

Anthropology 2; Classics 10; English 171A, 171B; French 114; History 4A-4B-4C, 101; Linguistics 1, 4, 163; Philosophy 24, 123; Religious Studies 2.

Major Adviser. _____

Minor Program Requirements:

The minor in Comparative Literature allows students to combine courses in Comparative Literature with courses in a national literature, including English or foreign literatures in translation. There is no foreign language requirement for the minor.

	UNITS
Comparative Literature	24
Comparative Literature 1, 2, 3, or 4.....	4
At least five upper division literature courses, at least four of which are in Comparative Literature (Comparative Literature 141 recommended).....	20
Courses should be chosen in consultation with, and with the approval of, the adviser.	

Minor Adviser. Same as Major Adviser.

Advising. All Comparative Literature majors and minors must consult with their adviser, individually, at least once at the beginning and once at the end of each academic year.

Honors Program. Candidates for high or highest honors in Comparative Literature must write a senior thesis under the direction of a faculty member approved by the Program Director. For this purpose, *in addition* to fulfilling all other major requirements, honors candidates must enroll in 6 units of Comparative Literature 194H during the first two quarters of

the senior year. Only students who have attained a cumulative GPA of 3.5 in all courses satisfying the major (except elementary foreign language courses) at the end of the junior year will be eligible for the honors program.

Teaching Credential Subject Representative. The Staff. See also the Teacher Education Program.

Graduate Study. Refer to Comparative Literature (A Graduate Group). See also the Graduate Studies chapter of this catalog.

Courses in Comparative Literature (COM)

Lower Division Courses

1. Great Books of Western Culture: The Ancient World (4)

Lecture/discussion—4 hours. Prerequisite: completion of Subject A requirement. An introduction, through class discussion and frequent written assignments, to some of the great books of western civilization from The Epic of Gilgamesh to St. Augustine's Confessions. GE credit: ArtHum, Wrt (cannot be used to satisfy a college or university composition requirement and GE writing experience simultaneously).—I, II, III. (I, II, III.)

2. Great Books of Western Culture: From the Middle Ages to the Enlightenment (4)

Lecture/discussion—4 hours. Prerequisite: completion of Subject A requirement. An introduction, through class discussion and frequent written assignments, to some of the great books of western civilization from Dante's *Inferno* to Swift's *Gulliver's Travels*. GE credit: ArtHum, Wrt (cannot be used to satisfy a college or university composition requirement and GE writing experience simultaneously).—I, II, III. (I, II, III.)

3. Great Books of Western Culture: The Modern Crisis (4)

Lecture/discussion—4 hours. Prerequisite: completion of Subject A requirement. An introduction, through class discussion and frequent written assignments, to some of the great books of western civilization from Goethe's *Faust* to Beckett's *Waiting for Godot*. GE credit: ArtHum, Wrt (cannot be used to satisfy a college or university composition requirement and GE writing experience simultaneously).—I, II, III. (I, II, III.)

4. Major Books of the Contemporary World (4)

Lecture/discussion—4 hours. Prerequisite: completion of Subject A requirement. Comparative study of selected major Western and non-Western texts composed in the period from 1945 to the present. Intensive focus on writing about these texts, with frequent papers written about these works. GE credit: ArtHum, Div, Wrt (cannot be used to satisfy a college or university composition requirement and GE writing experience simultaneously).—I, II, III. (I, II, III.)

5. Fairy Tales, Fables, and Parables (4)

Lecture—3 hours; discussion—1 hour. An introduction to fairy tales, fables, and parables as recurrent forms in literature, with such readings as tales from Aesop and Grimm, Chaucer and Shakespeare, Kafka and Borges, Buddhist and Taoist parables, the Arabian Nights, and African American folklore. GE credit: ArtHum, Div, Wrt.—I, II, III. (I, II, III.) Schildgen, Reed, Allosso

6. Myths and Legends (4)

Lecture—3 hours; discussion—1 hour. Introduction to the comparative study of myths and legends, excluding those of Greece and Rome, with readings from Near Eastern, Teutonic, Celtic, Indian, Japanese, Chinese, African and Central American literary sources. GE credit: ArtHum, Div, Wrt.—I, II. (I, II.) Schein, McLean

7. Literature of Fantasy and the Supernatural (4)

Lecture—3 hours; discussion—1 hour. The role of fantasy and the supernatural in literature: tales of magic, hallucination, ghosts, and metamorphosis, including diverse authors such as Shakespeare, P'u Sung-Ling, Kafka, Kawabata, Fuentes, and Morrison.

GE credit: ArtHum, Div, Wrt.—II, III. (II, III.) Allosso, Reed

8. Utopias and their Transformations (4)

Lecture/discussion—3 hours; term paper. Prerequisite: satisfaction of the Subject A requirement. A consideration, in literary works from different ages, of visionary and rational perceptions of a lost paradise, Golden Age, or Atlantis—and of the inhuman nightmares that can result from perversions of the utopian dream of perfection. GE credit: ArtHum, Wrt.—(I.)

9. The Short Story and Novella (4)

Lecture/discussion—3 hours; term paper. An introduction to shorter forms of prose fiction by major authors of different countries, with special emphasis on the modern period. GE credit: ArtHum, Div, Wrt.—(III.) Bulman

10A-N. Master Authors in World Literature (2)

Lecture/discussion—1 two-hour session. Designed primarily to acquaint the non-literature major with a cross-section of writings by the world's most important authors; readings in English translation. Content alternates among the following segments: **(A)** *Gilgamesh*, *Ramayana*, *Beowulf*, *Nibelungenlied*; **(B)** *Metamorphoses*, *Decameron*, *Arabian Nights*, *Canterbury Tales*; **(C)** *Chanson de Roland*, *El Cid*, *Igor's Campaign*, *Morte D'Arthur*; **(D)** *Sakuntala*, *Tristan and Isolde*, *Aucassin and Nicolette*, *Gawain and the Green Knight*; **(E)** Swift, Rabelais, *La Celestina*, *Simplicissimus*; **(F)** Cervantes, Saikaku, Fielding, Voltaire; **(G)** Machiavelli, Shakespeare, Lope de Vega/Calderón, Molière/Racine, Lessing/Schiller; **(H)** Goethe, Byron, Stendhal, Pushkin, Lermontov; **(I)** Hoffmann, Gogol, Poe, Hawthorne, Maupassant, Chekhov, Melville; **(J)** Flaubert, Twain, Turgenev, Galdós, Ibsen; **(K)** Balzac, Dostoevski/Tolstoi, Hardy, Shaw, Strindberg; **(L)** Unamuno, Svevo, Conrad, Gide, Kafka, Faulkner; **(M)** Rilke/Yeats, Joyce/Woolf, Mann/Céline, Bulgakov/Tanizaki, O'Neill/Brecht, Lorca/Pirandello; **(N)** Camus/Sartre, García Márquez/Grass, Borges/Sarraute, Bellow/Nabokov, Beckett/Pinter, Genet/Dürrenmatt. May be repeated for credit in different subject area. Limited enrollment. (P/NP grading only.)—I, II, III. (I, II, III.)

12. Introduction to Women Writers (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: completion of subject A requirement. Survey of fiction, drama, and poetry by women writers from all continents. Concerns of women compared in light of their varied social and cultural traditions. Literary analysis of voice, imagery, narrative strategies and diction. GE credit: ArtHum, Div, Wrt.—III. Lokke

13. Dramatic Literature (3)

Lecture—3 hours. Prerequisite: completion of Subject A requirement or the equivalent. Introduction, through careful reading of selected plays, to some of the major forms of Western drama, from the earliest tragedies of ancient Greece to the contemporary American theater. Offered in alternate years. GE credit: ArtHum, Wrt.—II. Bulman

14. Introduction to Poetry (3)

Lecture/discussion—3 hours. Prerequisite: completion of Subject A requirement. Comparative study of poetry in a variety of lyric and other poetic forms from different historical periods and different linguistic, national, and cultural traditions. Offered in alternate years. GE credit: ArtHum, Wrt.—(I.)

20. Man and the Natural World (4)

Lecture/discussion—3 hours; term paper. Examination of the changing relationship between the individual human being and his "natural" environment, whether cultivated or wild, as reflected in literary works from ancient times to the present by such authors as Hesiod, Virgil, Rousseau, Wordsworth, and Thoreau. GE credit: ArtHum, Wrt.—I. (II.) McLean

25. Ethnic Minority Writers in World Literature (4)

Lecture—3 hours; term paper. Consideration of a broad range of writers who speak from an ethnic perspective different from the nominally or politically dominant culture of their respective countries and who explore the challenges faced by characters significantly affected by their ethnic minority status. GE credit: ArtHum, Div, Wrt.—(I.) Blanchard

53A. Literature of China and Japan (3)

Lecture—2 hours; discussion—1 hour. Introduction to representative masterpieces of East Asia with readings from such works as *The Story of the Stone*, *The Peach Blossom Fan*, Tang and Sung poetry, classical Japanese poetry, drama, and travel diaries, and *The Tale of Genji*. GE credit: ArtHum, Div, Wrt.

53B. Literature of India and Southeast Asia (3)

Lecture—2 hours; discussion—1 hour. Introduction to representative masterpieces of South Asia with readings from such works as the *Mahabharata* and *Ramayana*, *The Cloud Messenger*, *Shakuntala*, *The Little Clay Cart*, and the stories and poems of both ancient and modern India and Southeast Asia. GE credit: ArtHum, Div, Wrt.—(III.) Schildgen

90X. Lower Division Seminar (1-2)

Seminar—1-4 hours. Prerequisite: consent of instructor. Examination of a special topic in a small group setting.

98. Directed Group Study (1-5) I, II, III. The Staff (Director in charge)

Restricted to lower division students. (P/NP grading only.)

99. Special Study for Undergraduates (1-5)

(P/NP grading only.)

Upper Division Courses

120. Writing Nature: 1750 to the Present (4)

Lecture/discussion—3 hours; term paper. Prerequisite: completion of Subject A requirement and at least one course in literature. Study of representations, descriptions, and discussions of humankind's problematical relationship with the non-human world in texts written in a variety of European and American traditions between 1750 and the present. Offered in alternate years. GE credit: ArtHum, Wrt.—(III.) McLean

135. Women Writers (4)

Lecture/discussion—3 hours; term paper. An exploration of women's differing views of self and society as revealed in major works by female authors of various times and cultures. Readings, principally of fiction, will include such writers as Lady Murasaki, Mme de Lafayette, and Charlotte Bronte. GE credit: ArtHum, Div, Wrt.—I, III. (I, II.) Lokke, Reed

138. Gender and Interpretation (4)

Lecture/discussion—3 hours; term paper. Prerequisite: completion of Subject A requirement and at least one course in literature. Study of the representation of gender roles and gender hierarchy in literary texts from various periods, societies, and cultures in light of research and theory on gender, with attention to gender as a topic for literary interpretation. GE credit: ArtHum, Div, Wrt.—II. Schiesari

139. Shakespeare and the Classical World (4)

Lecture/discussion—3 hours; term paper. Prerequisite: at least one course in literature. Shakespeare's representations of the classical world in the light of selected ancient texts and Renaissance conceptions of antiquity, with special attention to the depiction of politics and history. Offered in alternate years.—(II.) Schein

140. Thematic and Structural Study of Literature (4)

Lecture/discussion—3 hours; term paper. Interpretation of selected works illustrating the historical evolution of themes, as well as of formal and structural elements. May be repeated for credit when substance of course varies. GE credit: ArtHum, Wrt.—(II.)

141. Introduction to Critical Theoretical Approaches to Literature and Culture (4)

Lecture/discussion—3 hours; term paper. Prerequisite: one upper division literature course or consent of instructor. Introduction to critical theory and its use for interpreting literary texts, film, and media forms in our present global culture. (Same course as Critical Theory 101.) GE credit: ArtHum, Wrt.—III. (III.)

142. Critical Reading and Analysis (4)

Lecture/discussion—3 hours; term paper. Prerequisite: consent of instructor. Close reading of selected texts; scrutiny of very limited amount of material, with attention to the problems of texts in translation.

144. The Grotesque (4)

Lecture/discussion—3 hours; term paper. Prerequisite: completion of Subject A requirement and at least one course in literature. Study of the "grotesque" in selected texts from the Renaissance to the 20th century, with attention to the "grotesque" as a means of social, cultural, and political commentary, as well as of aesthetic innovation. Offered in alternate years. GE credit: ArtHum, Wrt.—(I.)

145. Representations of the City (4)

Lecture/discussion—3 hours; term paper. Examination of the portrayal of the modern city in 19th and 20th century western literature. Readings include works by Balzac, Dickens, Poe, Baudelaire, Dostoevsky, Whitman, Zola, T.S. Eliot, and William Carlos Williams. GE credit: ArtHum, Wrt.—(II.)

146. Myth in Literature (4)

Lecture—3 hours; term paper. Prerequisite: course 6 recommended. Comparative study of different versions of one or more central myths, with attention to their cultural settings, artistic and literary forms of representation, as well as to their psychological dimensions. GE credit: ArtHum, Wrt.—(II.)

147. Modern Jewish Writers (4)

Lecture/discussion—3 hours; term paper. Prerequisite: completion of the Subject A requirement and one lower division literature course. Problems of the modern Jewish experience from the perspective of the writer's construction of the self in relation to the future and to the non-Jew. Draws upon Russian, German, Yiddish, and American traditions. GE credit: ArtHum, Div, Wrt.—II. (III.) Schein, Murav

151. Colonial and Postcolonial Experience in Literature (4)

Lecture—3 hours; term paper. Prerequisite: completion of Subject A requirement and at least one course in literature. A literary introduction to the cultural issues of colonialism and postcolonialism through reading, discussing and writing on narratives which articulate diverse points of view. GE credit: ArtHum, Div, Wrt.—II. (III.) Blanchard, Larsen

152. Literature of the Americas (4)

Lecture/discussion—3 hours; term paper. Prerequisite: completion of Subject A requirement and at least one course in literature. Study of the various stylistic, historical, social and cultural factors that contribute to a hemispheric vision of American literature, encompassing works by Canadian, United States, Caribbean, Brazilian, and Spanish-American writers. Offered in alternate years. GE credit: ArtHum, Div, Wrt.—I. (I.) Blanchard

153. The Forms of Asian Literature (4)

Lecture/discussion—3 hours; term paper. Prerequisite: upper division standing. Introduction to distinctive Asian literary forms, such as *haiku*, *noh*, the Chinese novel and tale, through reading of major works. Comparison with Western genres and study of native and Western critical traditions. GE credit: ArtHum, Div, Wrt.

154. African Literature (4)

Lecture—3 hours; term paper. Prerequisite: completion of Subject A requirement and at least one course in literature. Pre- and post-colonial sub-Saharan African literature and the African oral traditions from which it emerged. Genres and themes of African literature in the 19th and 20th centuries. GE credit: ArtHum, Div, Wrt.—III. (I.) Schildgen

157. War and Peace in Literature (4)

Lecture/discussion—3 hours; term papers. Prerequisite: course 1, 2, or 3, or consent of instructor. Through study of a few major works from Western and non-Western literature the course seeks to illuminate the way in which literature from antiquity to the present has dealt with the antinomy peace/war through the ages. GE credit: ArtHum, Wrt.

158. The Detective Story as Literature (4)

Lecture—3 hours; term paper. Study of the origins, literary and social background, development and implications of the literature of detection in a comparative context. GE credit: ArtHum, Wrt.—I. Cannon

159. Women in Literature (4)

Lecture—3 hours; term paper. Prerequisite: course 1, 2, 3, or 4 or the equivalent recommended. Portrayals of women in literature, comparing selected heroines who represent a particular theme, period, or genre. Texts range around the globe and from ancient to modern works, such as *Lysistrata*, *Emma*, *Hedda Gabler*, *The Makioka Sisters*, and *Top Girls*. GE credit: ArtHum, Div, Wrt.

160A. The Modern Novel (4)

Lecture/discussion—3 hours; term paper. The changing image of man and his world as seen in novels by such writers as Joyce, Proust, and Mann. GE credit: ArtHum, Wrt.—III. (III.) Torrance

160B. The Modern Drama (4)

Lecture/discussion—3 hours; term paper. Readings in representative authors such as Ibsen, Strindberg, Chekhov, Pirandello and Brecht. GE credit: ArtHum, Wrt.—I. (II.) Finney

161A. Tragedy (4)

Lecture/discussion—3 hours; term paper. Persistent and changing aspects of the tragic vision in literature from ancient times to the present. GE credit: ArtHum, Wrt.

161B. Comedy (4)

Lecture/discussion—3 hours; term paper. Comic attitudes towards life in literary works of different ages. GE credit: ArtHum, Wrt.

163. Biography and Autobiography (4)

Lecture/discussion—3 hours; term paper. Portrayals of a human life in biographies and/or autobiographies of different countries and ages. Offered in alternate years. GE credit: ArtHum, Wrt.—II. (I.) Kuhn, Murav

164A. The Middle Ages (4)

Lecture/discussion—3 hours; term paper. Readings in heroic epics, chivalric romances, and such major authors as Dante and Chaucer, with emphasis on shared assumptions concerning man's place in the world. GE credit: ArtHum, Wrt.—I.

164B. The Renaissance (4)

Lecture/discussion—3 hours; term paper. Readings in major authors such as Petrarch, Machiavelli, Erasmus, Montaigne, Rabelais, Cervantes, and Shakespeare, with particular emphasis on changing conceptions of the possibilities and limitations of man. GE credit: ArtHum, Wrt.—(I.) Schiesari

164C. Baroque and Neoclassicism (4)

Lecture/discussion—3 hours; term paper. Readings in major authors such as Calderón, Corneille, Pascal, Racine, Milton, and Grimmelshausen, with consideration of the tension between the expansive energies of the "baroque" and the restraints of dogma and reason. GE credit: ArtHum, Wrt.

164D. The Enlightenment (4)

Lecture/discussion—3 hours; term paper. Readings in major authors such as Swift, Voltaire, Rousseau, Sterne, and Kant, with emphasis on philosophical ideas and literary forms. GE credit: ArtHum, Wrt.—III. (III.) Kusch

165. Caribbean Literatures (4)

Lecture/discussion—4 hours. A comparative approach to the multi-lingual and multi-cultural literatures of the Caribbean. Works from English, French and Spanish speaking regions with special attention given to problems of identity, diaspora and resistance, class, gender and race. GE credit: ArtHum, Div, Wrt.—II. (II.) Blanchard

166. Literatures of the Modern Middle East (4)

Lecture/discussion—4 hours. Study of major translated works in modern Middle East literature, including Turkish, Arabian, Palestinian-Arab, Israeli, and Persian contemporary writings. Discussion of social and historical formation, and special attention given to dissident and minority writers. GE credit: ArtHum, Div, Wrt.—I. (I.) Blanchard

166A. The Epic (4)

Lecture/discussion—3 hours; term paper. Study of various forms of epic poetry in both the oral and literary traditions. May be repeated for credit in different subject area. GE credit: ArtHum, Wrt.—(I.) Schein

166B. The Novel (4)

Lecture/discussion—3 hours; term paper. Readings in various forms of the novel such as the picaresque, the developmental, and the confessional, with emphasis on the evolution of the genre. May be repeated for credit in different subject area. GE credit: ArtHum, Wrt.—III. (III.)

167. Comparative Study of Major Authors (4)

Lecture/discussion—3 hours; term paper. Prerequisite: consent of instructor. Pivotal works of artists in the Western mainstream, such as Dante, Shakespeare, Cervantes, Goethe, Tolstoi, Proust, and Joyce. GE credit: ArtHum, Wrt.

168A. Romanticism (4)

Discussion—3 hours; term paper. Prerequisite: any introductory course in literature. Introduction to the Romantic movement with emphasis upon Romantic concepts of the self, irony, love, the imagination and artistic creativity, and the relationship of the individual to nature and society. GE credit: ArtHum, Wrt.—II. McLean

168B. Realism and Naturalism (4)

Discussion—3 hours; term paper. Prerequisite: consent of instructor. Novels and plays by Dickens, Zola, Flaubert, Dreiser, Ibsen, and Strindberg investigate marriage and adultery, the city and its perils, the hardships of industrialization, the war between the sexes, the New Woman, and other 19th-century themes. Offered in alternate years. GE credit: ArtHum, Wrt.

169. The Avant-Garde (4)

Lecture/discussion—3 hours; term paper. Studies in movements such as surrealism, expressionism and the absurd. GE credit: ArtHum, Wrt.

170. The Contemporary Novel (4)

Lecture—3 hours; term paper. Study of important novels from different parts of the world, including Asia, Africa, Latin America, Europe, and the United States, in the period from the Second World War to the present. GE credit: ArtHum, Wrt.

180. Selected Topics in Comparative Literature (4)

Lecture/discussion—3 hours; term paper. Prerequisite: completion of Subject A requirement and at least one course in literature. Study of a selected topic or topics appropriate to student and faculty interests and areas of specialization of the instructor. May be repeated once for credit when the topic differs. GE credit: ArtHum, Wrt.

194H. Special Study for Honors Students (1-5)

Independent study—1-5 hours. Prerequisite: open only to majors of senior standing who qualify for honors program. Guided research, under the direction of a faculty member approved by the Program Director, leading to a senior honors thesis on a comparative topic. May be repeated for credit. (P/NP grading only.)

195. Seminar in Comparative Literature (4)

Seminar—3 hours; term paper. Prerequisite: junior standing and major in Comparative Literature, or consent of instructor. Advanced comparative study of selected topics and texts, with explicit emphasis on the theoretical and interpretive approaches that define Comparative Literature as a discipline and distinguish it from other literary disciplines. May be repeated once for credit when topic differs. Offered in alternate years.—(III.)

197T. Tutoring in Comparative Literature (1-5)

Discussion—2-4 hours. Prerequisite: upper division standing with declared major in Comparative Literature. Tutoring in undergraduate courses including leadership in small voluntary discussion groups affiliated with current courses offered by Comparative Literature. May be repeated for credit for a total of 6 units. (P/NP grading only.)

198. Directed Group Study for Advanced Undergraduates (1-5)

(P/NP grading only.)

199. Special Study for Advanced Undergraduates (1-5)

(P/NP grading only.)

Graduate Courses**210. Topics and Themes in Comparative Literature (4)**

Discussion—3 hours; term paper. Prerequisite: graduate standing in Comparative Literature, English, or a foreign-language literature, or consent of instructor. Comparative, interpretive study of the treatment of specific topics and themes in literary works from various periods, societies, and cultures, in light of these works' historical and sociocultural contexts. May be repeated for credit when topic differs.—III. (II.) Finney

214. Approaches to Lyric Poetry (4)

Seminar—3 hours; term paper. Prerequisite: graduate standing or consent of instructor. Analysis and interpretation of poetic texts in different historical periods and national literatures, with consideration of major theoretical developments in the understanding of poetic discourse. Offered in alternate years.—(III.) Schiesari

215. Forms of the Spiritual Quest (4)

Seminar—3 hours; term paper. Prerequisite: graduate standing or consent of instructor; knowledge of at least one foreign language. An exploration, culminating in a research paper, of changing forms of the quest for transcendence in different cultures, mainly in major works of Western literature, but also in other traditions and from the perspectives of other disciplines.

220. Literary Genres (4)

Discussion—3 hours; term paper. Prerequisite: graduate standing in Comparative Literature, English, or a foreign-language literature, or consent of instructor. Comparative literature of major works in a particular genre from various linguistic, national, and cultural traditions, with particular attention to historical developments within the genre and to genre theory. May be repeated for credit when topic differs.—I. Schein

238. Gender and Interpretation (4)

Seminar—3 hours; term paper. Prerequisite: graduate standing or consent of instructor. Study of how literary texts from different periods, societies, and cultures represent gender roles and gender hierarchy, building on recent work on gender in anthropology, literature, psychology, and women's studies.

250A. Research in Comparative Literature (4)

Individual instruction—1 hour. Individually guided research, under the supervision of a faculty member, in a comparative topic culminating in a term paper. Required of M.A. and Ph.D. candidates.—I, II, III. (I, II, III.)

250B. Research in Comparative Study of Author, Period, or Genre (4)

Individual instruction—1 hour. Individually guided research, under the supervision of a faculty member, in the specialized study of an individual author, historical period, or literary genre culminating in a term paper. Required of Ph.D. candidates.—I, II, III. (I, II, III.)

250C. Basic Research for the Dissertation (4)

Individual instruction—1 hour. Individually guided research, under the supervision of a faculty member, in preparation for the dissertation in Comparative Literature. Required of Ph.D. candidates.—I, II, III. (I, II, III.)

255. Colloquium (2)

Lecture/discussion—2 hours. Prerequisite: graduate standing. Oral presentation and critique of research papers; discussion of current problems in teaching and research in Comparative Literature. May be repeated for credit. (S/U grading only.)—(II.)

260. Contexts of the 19th-Century Novel (4)

Seminar—3 hours; term paper. Prerequisite: graduate standing or consent of instructor. Development in 19th-century history, culture, and society in relation to major trends in the 19th-century novel. Offered in alternate years.—(III.) Murav

298. Directed Group Study (1-5)

Prerequisite: graduate standing. (S/U grading only.)

299. Individual Study (1-12)

(S/U grading only.)

299D. Special Study for the Doctoral Dissertation (1-12)

(S/U grading only.)

Professional Courses**390. Teaching Comparative Literature in College (3)**

Lecture—1 hour; discussion—2 hours. Methods of teaching Comparative Literature with specific application to the introductory courses 1, 2, and 3, in relation to major cultural and social developments. Discussion also of ways to teach analytical writing. (S/U grading only.)—I. (I.)

392. Teaching Internship in Comparative Literature (1)

Discussion—1 hour. Regular consultations between the student instructor teaching Comparative Literature courses and a supervisor. In-class evaluation of teaching. May be repeated for credit after consultation with supervisor. (S/U grading only.)—I, II, III. (I, II, III.)

396. Teaching Assistant Training Practicum (1-4)

Prerequisite: graduate standing. May be repeated for credit. (S/U grading only.)—I, II, III. (I, II, III.)

Comparative Literature (A Graduate Group)

Kari Lokke, Ph.D., Chairperson of the Group
Group Office, 522 Sproul Hall (530-752-2239)

Faculty

Marc Blanchard, Ph.D., Professor (*Comparative Literature, French*)
Margaret Ferguson, Ph.D., Professor (*English*)
Gail Finney, Ph.D., Professor (*Comparative Literature, German*)
Manfred Kusch, Ph.D., Senior Lecturer (*Comparative Literature, French*)
Neil Larsen, Ph.D., Professor (*Spanish*)
Kari Lokke, Ph.D., Associate Professor (*Comparative Literature, English*)
Harriet Murav, Ph.D., Professor (*Comparative Literature, Russian*)
Seth Schein, Ph.D., Professor (*Comparative Literature*)
Juliana Schiesari, Ph.D., Professor (*Comparative Literature, Italian*)
Robert Torrance, Ph.D., Professor (*Comparative Literature*)
Michelle Yeh, Ph.D., Professor (*East Asian Languages and Cultures*)

Graduate Study. The Comparative Literature Program offers the M.A. and Ph.D. degrees with a strong emphasis on individual research under the supervision of a faculty member. Candidates for the M.A. combine study of Comparative Literature with study of two literatures (one of which may be English or American) in the original languages. Ph.D. candidates, in addition to further research of a comparative nature, study three literatures (one of which may be English and/or American) in the original languages, acquiring an extensive knowledge of the overall development of one. Within this framework, each student's program will be tailored to individual interests, and may center on a major historical period, such as the Renaissance or the modern age; a genre, such as lyric poetry, epic, drama, or the novel; or any other special emphasis approved by the Graduate Adviser.

Preparation. For admission to the Program, M.A. candidates should have an undergraduate major in literature and reading ability in one foreign language. Ph.D. candidates should have an undergraduate major in literature and reading ability in two foreign languages. The Group requires three letters of recommendation and a sample of recent written work,

and it is recommended that students submit their GRE scores.

Graduate Adviser. S. Schein (*Comparative Literature*), J. Schiesari (*Comparative Literature*).

Comparative Pathology (A Graduate Group)

Clare R. Gregory, D.V.M., Professor (*Surgical and Radiological Sciences*)
Ronald P. Hedrick, Ph.D., Professor (*Medicine and Epidemiology*)
Andrew G. Hendrickx, Ph.D., Professor (*Human Anatomy*)
Robert J. Higgins, B.V.Sc., M.Sc., Ph.D., Professor (*Pathology, Microbiology, and Immunology*)
Susan V. Hildebrand, D.V.M., Professor (*Surgical and Radiological Sciences*)

David E. Hinton, Ph.D., Professor (*Anatomy, Physiology, and Cell Biology*)
Dwight C. Hirsch, D.V.M. Ph.D., Professor (*Pathology, Microbiology, and Immunology*)
Charles A. Holmberg, D.V.M. Ph.D. Professor (*Population Health and Reproduction*)
William J. Hornof, D.V.M., M.S., Professor (*Population Health and Reproduction*)
Dallas M. Hyde, Ph.D., Professor (*Anatomy, Physiology, and Cell Biology*)
Roslyn-Rivkah Isseroff, M.D., Professor (*Dermatology*)
James H. Jones, D.V.M., Ph.D., Professor (*Surgical and Radiological Sciences*)
Richard W. Katzberg, M.D., Professor (*Radiology*)
Mark D. Kittleson, D.V.M., M.S., Ph.D., Professor (*Medicine and Epidemiology*)
Gerald J. Kost, M.D., Professor (*Pathology and Oncology*)
Vijaya Kumari, M.D., Ph.D., Professor (*Human Anatomy*)
Kenneth M. Lam, Ph.D., Professor (*Population Health and Reproduction*)
Bill Lasley, Ph.D., Professor (*Population Health and Reproduction*)
Richard A. LeCouteur, BVSc., Ph.D., Professor (*Surgical and Radiological Sciences*)
Rance B. LeFebvre, Ph.D., Professor (*Pathology, Microbiology and Immunology*)
Irwin K. Liu, D.V.M., Ph.D., Professor (*Population Health and Reproduction*)
Linda J. Lowenstine, D.V.M., Ph.D., Professor (*Pathology, Microbiology, and Immunology*)
Paul A. Luciw, Ph.D., Associate Professor (*Pathology and Oncology*)
Melinda H. MacDonald, D.V.M., Ph.D., Assistant Professor (*Surgical and Radiological Sciences*)
N. James MacLachlan, BVSc., Ph.D., Professor (*Pathology, Microbiology and Immunology*)
Bruce R. Madewell, V.M.D., M.S., Professor (*Surgical and Radiological Sciences*)
John E. Madigan, M.S., D.V.M., Professor (*Medicine and Epidemiology*)
Sudesh P. Makker, M.D., Professor (*Pediatrics*)
Jarue S. Manning, Ph.D., Professor (*Microbiology*)
Michael B. McChesney, Ph.D., Associate Adjunct Professor (*Pathology and Oncology*)
Frederick J. Meyers, M.D., Professor (*Internal Medicine*)
Chris J. Miller, D.V.M., Ph.D., Acting Associate Professor (*Pathology, Microbiology, and Immunology*)
Joshue W. Miller, D.V.M., Ph.D., Assistant Adjunct Professor (*Pathology*)
F. Charles Mohr, D.V.M., Ph.D., Associate Professor (*Pathology, Microbiology, and Immunology*)
Peter F. Moore, BVSc., Ph.D., Professor (*Pathology, Microbiology, and Immunology*)
Michael E. Mount, D.V.M., Ph.D., Associate Professor (*Molecular Biosciences*)
Linda Munson, D.V.M. Ph.D., Associate Professor (*Pathology, Microbiology, and Immunology*)
Richard W. Nelson, D.V.M., Professor (*Medicine and Epidemiology*)
Bennie I. Osburn, D.V.M., Ph.D., Professor and Dean (*Pathology, Microbiology, and Immunology*)
James W. Overstreet, M.D., Ph.D. Professor (*Reproductive Biology*)
Demosthenes Pappagianis, M.D., Ph.D., Professor (*Microbiology*)
Niels C. Pedersen, D.V.M., Ph.D., Professor (*Medicine and Epidemiology*)
Neville Pimstone, M.D., Professor (*Internal Medicine*)
Kent E. Pinkerton, Ph.D., Professor in Residence (*Anatomy, Physiology, and Cell Biology*)
Charles G. Plopper, Ph.D., Professor (*Anatomy, Physiology, and Cell Biology*)
Jerry S. Powell, M.D., Professor (*Anatomy, Physiology, and Cell Biology*)
Thomas P. Prindiville, M.D., Associate Professor (*Internal Medicine*)
Dick L. Robbins, M.D., Professor (*Internal Medicine*)
Janet F. Roser, Ph.D., Professor (*Animal Science*)
Earl T. Sawai, Ph.D., Assistant Adjunct Professor (*Pathology*)

Kurt S. Schultz, D.V.M., M.S., Assistant Professor
(Surgical and Radiological Sciences)
William M. Sishco, D.V.M., Ph.D., Assistant Professor
(Population, Health and Reproduction)
Bradford P. Smith, D.V.M., Professor (Medicine and
Epidemiology)
Jack R. Snyder, D.V.M., Ph.D., Associate Professor
(Surgical and Radiological Sciences)
Eugene P. Steffey, V.M.D., Ph.D., Professor (Surgical
and Radiological Sciences)
Jeffrey L. Stott, Ph.D., Professor (Pathology,
Microbiology, and Immunology)
Susan M. Stover, D.V.M., Ph.D. (Anatomy, Physiology,
and Cell Biology)
Fern Tablin, V.M.D., Ph.D., Associate Professor
(Anatomy, Physiology, and Cell Biology)
Alice F. Tarantal, Ph.D., Assistant Adjunct Professor
(Pediatrics)
Jerold H. Theis, D.V.M., Ph.D., Professor
(Microbiology)
Alain P. Theon, D.M.V., Ph.D., Associate Professor
(Surgical and Radiological Sciences)
Jose V. Torres, Ph.D., Associate Professor
(Microbiology)
P. Richard Vulliet, D.V.M., Ph.D., Professor (Molecular
Biosciences)
Patricia S. Wakenell, D.V.M., Ph.D., Associate
Professor (Population Health and Reproduction)
Richard L. Walker, D.V.M., M.P.V.M., Ph.D., Professor
of Clinical Diagnostic Bacteriology (Pathology,
Microbiology, and Immunology)
Jean A. Wiedeman, M.D., Ph.D. Assistant Professor
(Pediatrics)
Dennis W. Wilson, D.V.M., Ph.D., Professor
(Pathology, Microbiology, and Immunology)
Reen W. Wu, Ph.D. Professor (Internal Medicine)
Tilahun Yilma, D.V.M., Ph.D., Professor (Pathology,
Microbiology, and Immunology)
Joseph G. Zinkl, D.V.M., Ph.D., Professor (Pathology,
Microbiology, and Immunology)

Emeriti Faculty

Dennis M. Meagher, D.V.M., Ph.D., Professor
Emeritus
Harvey J. Olander, D.V.M., Ph.D., Professor Emeritus
Hans P. Riemann, D.V.M., Ph.D., Professor Emeritus
Boris Ruebner, M.D., Professor Emeritus
Richard Yamamoto, Ph.D., Professor Emeritus

Affiliated Faculty

Dale L. Brooks, D.V.M., Ph.D., Lecturer (Medicine
and Epidemiology)
Gary N. Cherr, Ph.D., Lecturer (Environmental
Toxicology)
Carolyn S. Friedman, Ph.D., Assistant Adjunct
Professor (Medicine and Epidemiology)
Nicholas W. Lerche, D.V.M., M.P.V.M., Associate
Adjunct Professor (Medicine and Epidemiology)
Marta L. Marthas, Ph.D., Assistant Adjunct Professor
(Pathology, Microbiology, and Immunology)
Jeffery A. Roberts, D.V.M., Associate Clinical
Professor (Medicine and Epidemiology)
Edward S. Schelegle, Ph.D., Assistant Research
Physiologist (Anatomy, Physiology, and Cell
Biology)
Ellen E. Sparger, D.V.M., Ph.D., Assistant Adjunct
Professor (Medicine and Epidemiology)
Johanna L. Watson, D.V.M., Ph.D., Assistant Clinical
Professor (Medicine and Epidemiology)

Graduate Study. The Graduate Group in Comparative Pathology offers the M.S. and Ph.D. degrees for graduate study in disciplines concerned with disease processes. The group's focus is the study of the causes and nature of disease processes in animals and humans, with major emphasis on the mechanisms responsible for the development of diseases at the level of organ systems, the cell, or sub-cellular mechanisms. The group brings a wide array of scientific knowledge to this study, so that students with divergent interests can be accommodated in programs designed for individual needs. Beyond core courses selected from disciplines such as anatomy, bacteriology, genetics, immunology, parasitology, pathology, physiology, and virology, course programs are intentionally flexible.

Preparation. This program is primarily for students who have a professional medical degree, i.e., D.V.M., M.D., D.D.S. Students without a professional degree will be considered if they have an especially strong background in basic biomedical sciences.

Graduate Adviser. R.B. Le Febvre (Pathology, Microbiology, and Immunology), S.M. Stover (Anatomy, Physiology, and Cell Biology), J.G. Zinkl (Pathology, Microbiology, and Immunology).

Computer Science

(College of Letters and Science)

Daniel Gusfield, Ph.D., Chairperson of the Department

Department Office, 2063 Engineering II
(530-752-7004)

World Wide Web: <http://www.cs.ucdavis.edu>

Faculty. For complete faculty listing, please see Engineering: Computer Science.

The Major Program

The computer science major prepares students for careers involving the design of computer systems and their application to science, industry, and management.

The Program. Students taking this major receive solid grounding in fundamentals of computer languages, operating systems, computer architecture, and the mathematical abstraction required to use the computer in solving complex tasks. For students interested in the engineering aspects of computer science, see Engineering: Computer Science.

Preparatory Requirements. All continuing UC Davis students must meet the following requirements prior to requesting a change of major to computer science or double major with computer science:

1. Be a registered student at UC Davis at least one quarter prior to petitioning for change of major or double major.
2. Have completed the following courses or their equivalents:
Mathematics 21A, 21B, 21C, 22A 15 units
Computer Science Engineering 20, 30,
40, and either 50 or Electrical and
Computer Engineering 70 16 units
3. Have a UC Davis grade point average of 2.75 or better in the courses listed above. Students who have completed courses at another institution equivalent to those listed above must have a grade point average of 3.0 or better in the equivalent course work. All courses must be taken for a letter grade.

Career Alternatives. The computer science program prepares students for advanced work in computer science or in other disciplines requiring advanced knowledge of the use of computers.

B.S. Major Requirements:

	UNITS
Preparatory Subject Matter	52-53
Mathematics 21A-21B-21C, 22A-22B	18
Statistics 32	3
Computer Science Engineering 20, 40	8
Computer Science Engineering 30	4

Computer Science Engineering 50 or Electrical and Computer Engineering 70	4
One series from the following four	15-16
(a) Chemistry 2A-2B-2C	
(b) Chemistry 2A-2B and Biological Sciences 1A	
(c) Chemistry 2AH-2BH-2CH	
(d) Physics 9A-9B-9C and Mathematics 21D	

Depth Subject Matter **52-54**

Computer Science Engineering 110; 120 or 122B (completion of only 120 or 122B will satisfy the core requirement, but not a computer science elective simultaneously); 122A, 140A; 150 or 151A (completion of only 150 or 151A will satisfy the core requirement, but not a computer science elective simultaneously); 154A-154B	28
Computer science electives	13
Minimum of 4 courses and a minimum of 13 units from Computer Science Engineering 120, 122B (completion of only 120 or 122B will satisfy the core requirement, but not a computer science elective simultaneously); 130, 140B, 142, 150, 151A (completion of only 150 or 151A will satisfy the core requirement, but not a computer science elective simultaneously); 151B, 152A, 152B, 153, 158, 160, 163, 165A, 165B, 168, 170, 175, 177, 178, 188; one course (minimum of 3 units) from approved 192, 199; Electrical and Computer Engineering 180A, 180B, Mathematics 160 (completion of Mathematics 160 will satisfy either a computer science elective or a mathematics elective, but not both requirements simultaneously).	
Mathematics electives	10-12
Mathematics 108; and one course from Mathematics 115A, 115B, 115C, 127A, 127B, 127C, 131 (or Statistics 131A), 141, 145, 147, 149A, 149B, 150A, 150B, 150C; and one upper division Mathematics course numbered below 188.	

Total Units for the Major **103-106**

Major Advisers. M. Franklin, M. Gertz, K-L. Ma, N. Matloff, P. Rogaway.

Minor Program Requirements

	UNITS
Computer Science	24
Computer Science Engineering 50	4
Computer Science Engineering 110	4
Upper division Computer Science Engineering courses	16
Select from Computer Science Engineering 120, 122A, 122B, 130, 140A, 140B, 142, 150, 151A, 151B, 152A, 152B, 153, 154A, 154B, 158, 160, 163, 165A, 165B, 168, 170, 175, 177, 178, 189A-L, combined maximum of 3 units from approved 192 and 199 courses.	

Graduate Study. See the Graduate Studies chapter of this catalog.

Emeriti Faculty

Ralph Algazzi, Ph.D., Professor Emeritus
 Meera Blattner, Ph.D., Professor Emeritus
 S.L. Hakimi, Ph.D., Professor Emeritus
 Peter Linz, Ph.D., Professor Emeritus
 Manfred Ruschitzka, Ph.D., Professor Emeritus
 Michael Soderstrand, Ph.D., Professor Emeritus
 Richard Walters, Ph.D., Professor Emeritus

Graduate Study. The Graduate Group in Computer Science offers programs of study leading to the M.S.

and Ph.D. degrees in Computer Science. The varied nature of the faculty brings a wide variety of research interests to the program. Research strengths lie in algorithms, computational biology, computer architecture, computer graphics and visualization, computer systems design, database systems, computer security and cryptography, computer networks, fault tolerance, program specifications and verification, programming languages and compilers, parallel and distributed systems, performance evaluation, robotics, scientific computation, and software engineering. Interdisciplinary research in computer science is encouraged.

Preparation. Normal preparation for the program is a bachelor's degree in either computer science or in a closely related field (such as electrical engineering or mathematics, with substantial course work in computer science). Applications are also considered from students with outstanding records in other disciplines. M.S. students may either complete a thesis or pass a comprehensive examination. Ph.D. students must pass preliminary written examinations in three areas of specialization as defined by the Graduate Group. Ph.D. students must also pass a qualifying oral examination and complete a dissertation demonstrating original research in an area approved by the Graduate Group.

Graduate Advisers. P. Devanbu, D. Ghosal, R. Pandey, K. Wilkin.

Conservation Biology

See Ecology (A Graduate Group); Environmental Biology and Management; and Wildlife, Fish, and Conservation Biology

Consumer Science

(College of Agricultural and Environmental Sciences)

Faculty. See under the Division of Textiles and Clothing.

Major Programs. The Consumer Food Science option under the Food Science major is a related program. See also Food Science and Technology, Nutrition, and Textiles and Clothing.

Graduate Study. For graduate study, see the Graduate Studies chapter of this catalog.

Courses in Consumer Science (CNS)

Questions pertaining to the following courses should be directed to the Division of Textiles and Clothing Advising Office, 133 Everson Hall.

Lower Division Courses

92. Internship in Consumer Science (1-12)
 Internship—3-36 hours. Prerequisite: consent of instructor. Internship on and off campus in a consumer science related area. (P/NP grading only.)

Upper Division Courses

100. Consumer Behavior (3)
 Lecture—3 hours. Prerequisite: preparation in areas of psychology or sociology and economics recommended. Provides a set of behavioral concepts and theories useful in understanding consumer behavior on the part of the individual, business, and social organizations. Conceptual models to help guide and understand consumer research will be presented. GE credit: SocSci, Div, Wrt.

192. Internship in Consumer Science (1-12)
 Internship—3-36 hours. Prerequisite: completion of a minimum of 84 units; consent of instructor. Internship

on and off campus in a consumer science related area. (P/NP grading only.)

198. Directed Group Study (1-5)
 (P/NP grading only.)

199. Special Study for Advanced Undergraduates (1-5)
 (P/NP grading only.)

Graduate Course

299. Research (1-12)
 (S/U grading only.)

Professional Course

396. Teaching Assistant Training Practicum (1-4)

Prerequisite: graduate standing.—I, II, III. (I, II, III.)

Contemporary Leadership

(College of Agricultural and Environmental Sciences)

The Science and Society Program offers a minor in Contemporary Leadership, open to all undergraduate students regardless of major. The minor provides a broad overview of leadership theory and practice, and engages students in critical thinking, self-reflection, problem solving and multicultural education. Students should contact the minor adviser for course selection and plan approval.

UNITS

Contemporary Leadership	24
Science and Society 130	4
Science and Society 192 concurrent with an approved internship	2
Science and Society 190X	2
One upper division course from each of the following four areas:	
Computer Science 188, English 107, Environmental Science and Policy 164, Military Science 143, Native American Studies 156, Nature and Culture 120, Philosophy 115, Religious Studies 150, Science and Society 120, Veterinary Medicine 170	4
Anthropology 139AN, Communication 130, 134, Community and Regional Development 172, 174, English 104, Linguistics 163, Military Science 131, Psychology 145, Sociology 126	4
American Studies 15, Anthropology 123BN, Community and Regional Development 152, 164, 173, Psychology 156, Sociology 30A, 156, 183, Women's Studies 140	4
American Studies 156, Community and Regional Development 176, English 179, History 173, 178 Political Science 166, 176, Sociology 130, 134, Textiles and Clothing 174	4

Minor Adviser. Consult Program Office.

Critical Theory

Neil Larsen, Ph.D., Program Co-Director
 Blake Stimson, Ph.D., Program Co-Director
 Program Office, 611 Sproul Hall (530-752-5799)
 World Wide Web: <http://crittheory.ucdavis.edu>

Committee in Charge

Marc E. Blanchard, Agrégé de Lettres (*Comparative Literature, French*)
 Elizabeth Constable, Ph.D. (*French and Italian*)

Neil Larsen, Ph.D. (Spanish)
 Dean MacCannell, Ph.D. (Environmental Design)
 Karen Shimakawa, Ph.D., J.D. (English, Asian American Studies)
 David Simpson, Ph.D. (English)
 David Van Leer, Ph.D. (English)
 Evan Watkins, Ph.D. (English)
 George Wilson, Ph.D. (Philosophy)

Graduate Study. The program in Critical Theory offers study and research leading to the Ph.D. with a *designated emphasis* in Critical Theory. The program provides theoretical emphasis and interdisciplinary perspective to students already preparing for the Ph.D. in one of 13 participating departments (Anthropology, Comparative Literature, Education, English, French and Italian, German and Russian, History, Music, Philosophy, Psychology, Sociology, Spanish, and Theatre and Dance). Students complete all requirements for the Ph.D., including the dissertation, in one of the participating departments. Minimum coursework for the Critical Theory Designated Emphasis consists of four courses. The first three of these, Critical Theory 200A, 200B, and 200C form a coherent sequence and are normally taken in consecutive order. For the fourth course, students have the option of taking Critical Theory 201 or an approved course from their own department.

Graduate Adviser. Consult Critical Theory Program Office.

Courses in Critical Theory (CRI)

Upper Division Courses

101. Introduction to Critical Theoretical Approaches to Literature and Culture (4)

Lecture/discussion—3 hours; term paper. Prerequisite: one upper division literature course or consent of instructor. Introduction to critical theory and its use for interpreting literary texts, film, and media forms in our present global culture. (Same course as Comparative Literature 141.) GE credit: ArtHum, Wrt.—III. (III.)

Graduate Courses

200A. Approaches to Critical Theory (4)

Seminar—3 hours; term paper. Prerequisite: graduate standing in a participating program. The problem of interpretation in 20th-century thought with a critical overview of various theoretical approaches (e.g., semiotics, hermeneutics, deconstruction, social and cultural critique, feminist theory, psychoanalysis).—I, II, III. (I, II, III.)

200B. Problems in Critical Theory (4)

Seminar—3 hours; term paper. Prerequisite: course 200A with a grade of B+ or better. Focused study of a particular critical theoretical approach, school or perspective. Topics will vary. May be repeated for credit with consent of instructor when topic differs.—I, II, III. (I, II, III.)

200C. History of Critical Theory (4)

Seminar—3 hours; term paper. Prerequisite: graduate standing in a program participating in the critical theory designated emphasis and successful completion of course 200A with a B+ or better. Critical analysis and discussion of pre-twentieth century theories of literary and cultural criticism. Topics will vary. May be repeated for credit when topic differs.—II. (II.)

201. Critical Theory Special Topics (4)

Seminar—3 hours; term paper. Prerequisite: course 200A. Application of theoretical principles to one specific research topic. May be repeated for credit with consent of instructor when topic differs.—I, II, III. (I, II, III.)

202. Visual Culture (4)

Lecture/discussion—4 hours. Prerequisite: course 200A strongly recommended. Analysis of image production in the contemporary world (photography, film, television, advertising, etc.) and their effects on individual subjectivities and collective social identities.—II. (II.)

298. Directed Group Study (1-5)

299. Individual Study (1-12)

(S/U grading only.)

Crop Science and Management

(College of Agricultural and Environmental Sciences)

Faculty. See under Departments of Agronomy and Range Science; Agricultural and Resource Economics; Environmental Horticulture; Land, Air and Water Resources; Plant Pathology; Pomology; Vegetable Crops; and Viticulture and Enology.

Related Major Programs. The major relies on courses taught in conjunction with numerous other major programs, particularly Plant Biology, Agricultural Management and Rangeland Resources and Agricultural and Resource Economics.

The Major Program

The Crop Science and Management major trains students in biological and natural sciences and economics as they apply to the production, protection, and maintenance of crop plants, and their quality following harvest.

The Program. Students majoring in crop science and management spend the first two years of study developing the scientific and general background necessary for upper division work. The science courses include chemistry, biology, botany, physics, and mathematics. Management courses include economics and accounting. General background is provided by courses in the social sciences/humanities (English, rhetoric, and the general education program). At the upper division level, students take courses in areas supportive of crop science and farm management, such as entomology, weed science, water and soil science, plant pathology, nematology, plant physiology and agricultural economics. Students may specialize by electing courses pertinent to specific crop types (vegetables, fruits and nuts, small grains, or nursery crops).

Internships and Career Alternatives. This program prepares graduates for careers in farm management and various other technical and management positions in agricultural business and associated enterprises, such as banking and equipment and supply companies, as well as private, state and federal service in consulting and research. Graduates are also qualified to pursue graduate studies in sciences such as plant biology, horticulture, agronomy, agroecology, pest management, economics or business management. Internships are available in local companies involved in farm production and in extension work with farm advisers.

B.S. Major Requirements:

English Composition Requirement8
 See College Requirement

Preparatory Subject Matter62-64

Biological Sciences 1A, 1B, 1C 15

Chemistry 2A, 2B, 8A, 8B 16

Mathematics 16A, 16B 6

Physics 1A-1B or 7A-7B 6-8

Agricultural Management and Rangeland Resources 21 3

Economics 1A, 1B 10

Agricultural Management and Rangeland Resources 120, Statistics 13 or 102 4

Applied Biological Technology 49 2

Breadth/General Education24

See General Education Requirement and consult your adviser

Depth Subject Matter57-60

Crop and Soil Science Component22-24

Plant Biology 111 or Environmental Horticulture 102; Plant Biology 142; Soil Science 100; Hydrologic Science 110 or 124 14-16

In consultation with adviser select a minimum of 8 additional units from Agricultural Management and Rangeland

Resources 110A, 110B, 110C, 110L, Environmental Horticulture 125, Plant Biology 173, 174, Viticulture and Enology 115, 116 8

Pest Management Component 16

Entomology 110, Nematology 100, Plant Biology 176, Plant Pathology 120 ... 16

Economics and Business Management Component 19-20

Agricultural and Resource Economics 100A, 130, 112 or 140 12-13

In consultation with adviser select a minimum of 7 additional units from Agricultural and Resource Economics 100B, 112, 113, 120, 136, 145, 147M, 150 or 157; International Agricultural Development 110, 111 7

Restricted Electives10

In consultation with adviser select a minimum of 10 units from the following:

Agricultural Management and Rangeland Resources 101, 105, 107, 112, 118, 120, 121, 122, 150, 170A, 170B, 192, 194H; Applied Biological Technology 52; Entomology 119, 135; Environmental Horticulture 102, 105, 120, 125, 130; Plant Biology 111L, 112, 117, 121, 146, 152, 153, 154, 157, 158, 160, 171, 172, 172L, 175, 177, 196; Plant Pathology 125; Soil Science 109; Viticulture and Enology 101A, 101B, 101C, 110, 111, 118.

Unrestricted Electives14-19

(Internship and Spanish Recommended)

Total Units for the Major180

Major Adviser. T. DeJong.

Advising Center for the major is located in 1144 Plant and Environmental Sciences (530-752-1715).

Related Courses. See under Departments of Agronomy and Range Science, Agricultural and Resource Economics, Environmental Horticulture, Plant Biology, Plant Pathology, and Viticulture and Enology.

Courses in Crop Science and Management (CSM)

Lower Division Courses

92. Internship in Crop Science and Management (1-12)

Internship—3-36 hours. Prerequisite: consent of instructor. Supervised internship in crop production, research or management. (P/NP grading only.)

99. Special Study for Undergraduates (1-5)

Prerequisite: consent of instructor. (P/NP grading only.)

Upper Division Courses

192. Internship in Crop Science and Management (1-12)

Internship—3-36 hours. Prerequisite: consent of instructor. Supervised internship off or on campus in crop production, research or management; or in a business, industry, or agency associated with these or other crop science enterprises. (P/NP grading only.)

194H. Special Study for Honors Students (1-5)

Independent study—3-15 hours. Prerequisite: senior standing, Crop Science and Management major, overall GPA of 3.25 or higher, and consent of Master Adviser. Two or three successive quarters of guided research on crop science and management related subject of special interest to the student. (P/NP grading only; deferred grading only, pending completion of thesis.)

199. Special Study for Advanced Undergraduates (1-5)

Prerequisite: consent of instructor. (P/NP grading only.)

Cultural Studies (A Graduate Group)

Kent Ono, Ph.D., Chairperson of the Group
Group Office, 2201 Hart Hall, (530-754-7683)

Committee in Charge

Angie Chabram-Dernerseian, Ph.D. (*Chicana/o Studies*)
Susan Kaiser, Ph.D. (*Textiles and Clothing, Women and Gender Studies*)
Dean MacCannell, Ph.D. (*Environmental Design*)
Linda Morris, Ph.D. (*English*)
Judith Newton, Ph.D. (*Women and Gender Studies*)
Kent Ono, Ph.D. (*American Studies, Asian American Studies*)
Michele Praeger, Ph.D. (*French, Italian*)
Roger Rouse, Ph.D. (*Anthropology*)
Sophie Volpp, Ph.D. (*East Asian Languages and Cultures*)

Faculty

Moradewun Adejunmobi, Ph.D., Assistant Professor (*African American and African Studies*)
Carole Blair, Ph.D., Professor (*American Studies*)
Cynthia Brantley, Ph.D., Associate Professor (*History*)
Patrick Carroll-Burke, Ph.D., Assistant Professor (*Sociology, Science and Technology Studies*)
Katharine Burnett, Ph.D., Assistant Professor (*Art History*)
Angie Chabram-Dernerseian, Ph.D., Associate Professor (*Chicana/o Studies*)
Elizabeth Constable, Ph.D., Assistant Professor (*French, Italian*)
Sergio Delamora, Ph.D., Assistant Professor (*Chicana/o Studies*)
Carolyn de la Peña, Ph.D., Assistant Professor (*American Studies*)
Gail Finney, Ph.D., Professor (*Comparative Literature, German*)
Yvette Flores-Ortiz, Ph.D., Associate Professor (*Chicana/o Studies*)
Ruth Frankenberg, Ph.D., Associate Professor (*American Studies*)
Xiaoja Ge, Ph.D., Associate Professor (*Human and Community Development*)
Gayatri Gopinath, Ph.D., Assistant Professor (*Women and Gender Studies*)
Luis Guarnizo, Ph.D., Associate Professor (*Human and Community Development*)
Laura Grindstaff, Ph.D., Assistant Professor (*Sociology*)
William Hagen, Ph.D., Professor (*History*)
John R. Hall, Ph.D., Professor (*Sociology*)
Darrell Hamamoto, Ph.D., Professor (*Asian American Studies*)
Lynn Hershman, M.A., Professor (*Art Studio*)
Wendy Ho, Ph.D., Associate Professor (*Asian American Studies, Women and Gender Studies*)
Carole Joffe, Ph.D., Professor (*Sociology*)
Alessa Johns, Ph.D., Assistant Professor (*English*)
Suad Joseph, Ph.D., Professor (*Anthropology, Women and Gender Studies*)
Susan Kaiser, Ph.D., Professor (*Textiles and Clothing, Women and Gender Studies*)
Catherine Kudlick, Ph.D., Associate Professor (*History*)
Anna Kuhn, Ph.D., Professor (*Women and Gender Studies*)
Neil Larsen, Ph.D., Professor (*Spanish and Classics*)
Dean MacCannell, Ph.D., Professor (*Environmental Design*)
Ross MacDonald, Ph.D., (*Science and Society*)
Dianne Macleod, Ph.D., Professor (*Art History*)
Jay Mechling, Ph.D., Professor (*American Studies*)
Linda Morris, Ph.D., Professor (*English*)
Harriet Murav, Ph.D., Professor (*Comparative Literature, Russian*)
Judith Newton, Ph.D., Professor (*Women and Gender Studies*)

Jacob Olupona, Ph.D., Professor (*African American and African Studies*)
Kent Ono, Ph.D., Associate Professor (*American Studies, Asian American Studies*)
Beatriz Pesquera, Ph.D., Associate Professor (*Chicana/o Studies*)
Michele Praeger, Ph.D., Associate Professor (*French, Italian*)
Sarah Projansky, Ph.D., Associate Professor (*Women and Gender Studies*)
David Robertson, Ph.D., Professor (*English*)
Catherine Robson, Ph.D., Assistant Professor (*English*)
Roger Rouse, Ph.D., Assistant Professor (*Anthropology*)
Margaret Rucker, Ph.D., Professor (*Textiles and Clothing*)
Jeffrey Ruda, Ph.D., Professor (*Art History*)
Michael Saler, Ph.D., Associate Professor (*History*)
Suzana Sawyer, Ph.D., Assistant Professor (*Anthropology*)
Seth Schein, Ph.D., Professor (*Comparative Literature*)
Barbara Sellers Young, Ph.D., Associate Professor (*Theatre and Dance*)
Karen Shimakawa, Ph.D., Assistant Professor (*English, Asian American Studies*)
Carol A. Smith, Ph.D., Professor (*Anthropology*)
Michael L. Smith, Ph.D., Professor (*American Studies*)
Michael P. Smith, Ph.D., Professor (*Human and Community Development*)
Blake Stimson, Ph.D., Assistant Professor (*Art History*)
Kathleen Stuart, Ph.D., Associate Professor (*History*)
Stanley Sue, Ph.D., Professor (*Psychology, Asian American Studies*)
Lenora Timm, Ph.D., Professor (*Linguistics*)
Pat Turner, Ph.D., Professor (*African American and African Studies, American Studies*)
David Van Leer, Ph.D., Professor (*English*)
Sophie Volpp, Ph.D., Assistant Professor (*East Asian Languages and Cultures*)
Evan Watkins, Ph.D., Professor (*English*)
Karen Watson-Gegeo, Ph.D., Professor (*Education*)
Diane Wolf, Ph.D., Associate Professor (*Sociology*)
Michelle Yeh, Ph.D., Professor (*East Asian Languages and Cultures*)

Graduate Study. The Cultural Studies Graduate Program offers both M.A. and Ph.D. degrees in Cultural Studies. The program emphasizes an interdisciplinary approach to cultural inquiry that includes analyses of intersecting categories such as class, gender, race, ethnicity, sexuality, nationality, and the like. Students entering the program will use and develop methodologies from many fields to suit their objects of study. Students may pursue research in the following designated areas: 1) gender (including masculinity studies), 2) sexualities, 3) comparative race studies, 4) media and popular cultural representation, 5) science and society, 6) transnational and global studies, 7) religions, communities, and politics, and 8) rhetoric and critical theory. With the close guidance and supervision of a faculty committee, students may also create their own areas of emphasis.

Preparation. Normal preparation for the program is a bachelor's degree in a related field. M.A. students must pass an examination and write a significant scholarly essay. Ph.D. students must pass a qualifying examination, a comprehensive examination, and complete a dissertation demonstrating original research in an area approved by the Graduate Group. In addition to the standard UC Davis graduate application (which requires a statement of purpose), we also require three letters of recommendation, transcripts, GRE scores, a 10 page (minimum) writing sample, and a 250 word statement explaining the applicant's interest in pursuing a degree in Cultural Studies.

Graduate Adviser. K. Ono (*American Studies, Asian American Studies*).

Courses in Cultural Studies (CST)

200A. Histories of Cultural Studies (4)

Lecture/discussion—4 hours. Prerequisite: graduate standing or consent of instructor. Undergraduate coursework in the humanities or social sciences recommended. Histories and traditions of cultural studies internationally; multiple legacies of cultural studies as a field of inquiry in various geographical contexts; foregrounds important critical perspectives resulting from social and intellectual movements worldwide.—I. (I.) Ono

200B. Theories of Cultural Studies (4)

Lecture/discussion—4 hours. Prerequisite: course 200A or consent of instructor. Definitions of "critical" scholarship and examination of various contexts in which cultural studies theory has emerged worldwide. Both mainstream and alternative theoretical traditions, such as those developed by people of color and by other minoritized groups.—II. (II.) Kaiser

200C. Practices of Cultural Studies (4)

Lecture/discussion—4 hours. Prerequisite: courses 200A and 200B or consent of instructor. Methodological and practical applications of cultural studies research. Critical analyses of ethnography, textual analysis, social change, community development, and identity formation. Emphasis given to students' unique versions of cultural studies practices.—III. (III.) MacCannell

204. History and Theory of Sexualities (4)

Lecture/discussion—4 hours. Prerequisite: course 200A (may be taken concurrently) or consent of instructor. Studies of sexualities in feminist, literary, historical, and cultural studies research, specifically examining the emergence of "sexuality" as a field of research and the relationship of sexuality studies to cultural forms, subjectivity, and social relations generally. Not offered every year.—I. (I.) Gopinath

206. Studies in Race Theory (4)

Lecture/discussion—4 hours. Prerequisite: course 200A (may be taken concurrently) or consent of instructor. Theoretical framework for the critical study of race, drawing on contemporary cultural studies and postcolonial scholarship in order to understand the social production of "race" as a category for organizing social groups and determining group processes. Not offered every year.—II. (II.) Ho

208. Studies in Nationalism, Transnationalism, and Late Capitalism (4)

Lecture/discussion—4 hours. Prerequisite: course 200A (may be taken concurrently) or consent of instructor. Contemporary theories of nation, nationalism, postcolonialism, and transnationalism. Specific attention to the relationship between cultural production and the formation of ideas about nation and nationalism, including examination of both "legitimizing" and resistant discourses. Not offered every year.—III. (III.) Rouse

212. Studies in the Rhetorics of Culture (4)

Lecture/discussion—4 hours. Prerequisite: course 200A (may be taken concurrently) or consent of instructor. Survey of critical and analytical approaches to the study of texts. Examination of multi-mediated objects to understand their cultural import by focusing on discursive production, dispersal, and reception processes, and related shifts in power relations. Not offered every year.—I. (I.) Ono

214. Studies in Political and Cultural Representations (4)

Lecture/discussion—4 hours. Prerequisite: course 200A (may be taken concurrently) or consent of instructor. Framework for the analysis of political and popular cultural representations. Emphasis on concepts, theories, and methodologies illuminating dominant and vernacular cultural representation, appropriation, and innovation in transnational contexts. Not offered every year.—II. (II.) Projansky

250. Research Seminar (4)

Seminar—4 hours. Prerequisite: courses 200A, 200B, 200C or consent of instructor. Designed to facilitate student interaction and promote student

research by guiding students through the production of a publishable essay. Essays submitted, distributed, and discussed by seminar participants. May be repeated up to 12 units of credit.—I. (I.)

290. Colloquium (1)

Lecture—1 hour. Prerequisite: graduate standing or consent of instructor. Designed to provide cohort identity and faculty student exchange. Opportunity to present papers, hear guest lecturers, and see faculty presentations, gather for organizational and administrative news, exchange information, and make announcements. May be repeated up to 12 units of credit. (S/U grading only.)—I, II, III. (I, II, III.)

295. Special Topics (4)

Lecture/discussion—4 hours. Prerequisite: graduate standing or consent of instructor. Special topics courses offered according to faculty and student interests and demands. May be repeated for credit with consent of adviser.—I, II, III. (I, II, III.)

298. Group Research (1-5)

(S/U grading only.)

299. Directed Research (1-5)

(S/U grading only.)

299D. Dissertation Research (4)

Independent Study—4 hours. Prerequisite: advancement to doctoral candidacy. Directed research intended to facilitate completion of student's doctoral dissertation. May be repeated up to 12 units of credit. (S/U grading only.)—I, II, III. (I, II, III.)

three areas of emphasis to focus undergraduate study: *Textile and Costume Design, Interior Architecture, or Visual Communication and Presentation*. These areas can also be combined into a fourth area of emphasis, *Comprehensive Design*, through an individualized study plan developed with a faculty adviser. The selected emphasis determines the required core of courses; all emphases are complemented by classes in design history. A more detailed explanation is available through the Design Advising Office, 152 Walker Hall.

Portfolio. All students are required to submit a portfolio application to be admitted to the Design major. Portfolios are accepted once a year during February. Prospective students must contact the Advising Office at (530) 752-1165 for more information about the portfolio application process. In addition, students are required to keep a continuing portfolio of their creative work to be evaluated by faculty for the purposes of enrolling in overflow courses and requesting independent study, internship, or other similar courses.

Internships, Careers, and Study Abroad. As part of their preparation, design students are encouraged to supplement their education with internships in design firms, museums, art galleries, textile galleries, and in graphic designers', interior designers' and architects' offices. Design graduates go directly from this program into further graduate study, clothing, graphic design, interior design and architectural firms, exhibit and display work in galleries and museums, and theatrical and textile companies. In addition, students have become entrepreneurs through freelance and commissioned work in many related areas. The Design program encourages students to experience design abroad through a variety of sponsored programs. Contact the Education Abroad Program for more information.

B.S. Major Requirements:

	UNITS
English Composition Requirement	4-12
See College requirement	0-8
English 101, 102A, 102B, 102C, 102D, 102E, 102F, 102G, 104A, 104B, 104C, 104D, or 104E	4
Preparatory Subject Matter	18
Select one course from Art History 1A, 1B, 1C or 1D.....	4
Design 1, 14, 15, 16	14
Breadth/General Education	24
See General Education requirement	24
Depth Subject Matter	58-63
Design 100 (optional).....	4
Select from Design 40A, 40B, 142A, 142B, 143, 144, 145; Art History 25, 110, 168, 184, 188A, 188B, 189	16
Select one area of specialization (option) below	38-47
Interior Architecture option	47
Design 21 (or equivalent)	4
Design 134A-134B-134C, 138, 180A-180B	24
Senior project, Design 180C, 193A-193B (optional)	7
Two courses from Design 121, 135A, 135B, 136, 139, 150A, 150B	8
Textile and Costume Design option	40
Lower division courses selected with adviser approval from Design 18, 23, 24, 77A, 77B	12
Upper division courses selected with adviser approval from Design 122, 124, 125, 127, 131, 132A, 132B, 132C, 160A, 160B, 170A, 170B, 177	28
Visual Communication and Presentation option	38-40
Three courses from Design 13, 18, 21, 22	10-12
Design 156A, 156B, 156C.....	12
Design 152A, 152B, 153	12
One upper division course from Design	4

Comprehensive Design option	40
Lower division Design courses with adviser approval	12
Upper division Design courses with adviser approval	28
Restricted Electives	32
Two courses from American Studies 1A, Anthropology 2, Communication 1, 3, Geology 1, Psychology 1, Sociology 1, 25	8-9
Courses selected from the list of Restricted Electives with approval of adviser.....	23-24
Unrestricted Electives	31-44
Total Units for the Degree	180

Additional Requirement
Development of a course of study, in consultation with an adviser, upon completion of 90 units or prior to transferring into the major.

Major Adviser. V. Rivers.

Graduate Study. The graduate program in Textile Arts and Costume Design leading to the Master of Fine Arts degree offers students opportunities for independent, creative, innovative interdisciplinary study combining design with anthropology, critical theory, consumer issues, art, engineering, the sciences and theater. Faculty work closely with students to build individual programs based upon a student's specialized goals and interests in textile and costume design. Study in new technologies and experimental approaches are encouraged. Areas of emphasis include constructed textiles (off loom and woven), surface design, computer-integrated textile design, and functional, ethnographic, and aesthetic costumes. The Textile and Costume Study Collection, which houses over 8,500 artifacts, is a valuable resource in enriching studies emphasizing multi-cultural expression. For information about specific requirements, please contact the Advising Center at (530) 752-1165.

Graduate Adviser. Please contact department at (530) 752-1165.

Courses in Design (DES)

Questions pertaining to the following courses should be directed to the instructor or to the Advising Office for the major, 152 Walker Hall (530-752-1165). Scheduling of classes is subject to change; please contact the Advising Office to confirm when a course is offered. For more courses in Textiles, see Textiles and Clothing.

Lower Division Courses

1. Design and Visual Culture (4)

Lecture—4 hours. Introduction to design awareness; role of designer in contemporary culture; emphasis on visual literacy and perception, creative problem solving, and design vocabulary. GE credit: ArtHum, Wrt.—I, summer. (I, summer.)

13. Photographic Media Studio (2)

Studio—4 hours. Prerequisite: course 1 recommended. Priority enrollment to Design majors. Photographic processes for the documentation of creative work and as the basis of visual communication.—summer. (summer.)

14. Design Drawing (2)

Studio—4 hours. Priority enrollment to Design majors. Students with a background in drawing or Advanced Placement Art Studio units are encouraged to submit a portfolio for review to waive this course. Develop freehand drawing skills to graphically communicate ideas and form. Basic skills in objective observation and representation. Range of media used.—summer. (summer.)

15. Design Media (4)

Lecture—2 hours; studio—4 hours. Priority given to Design majors. Understand color, composition and form as ways of communicating design concepts and content. Media and photography as tools for all design students: color theory and mixing, variety of materials and media, introduction to the camera.—summer. (summer.)

The Major Program

The design program offers a creative, challenging, and flexible approach to the study of design. The philosophy of the program encourages self-direction and independent thinking, not only in design work but also in planning the overall undergraduate education.

The Program. Foundation courses, Design and Visual Culture; Design Drawing; Design Media; and Visual Use of Computers in Design, are required of all design majors. Several foundation courses are offered only during summer sessions. Beyond these, students take courses in their depth subject matter emphasizing their interests. Students select one of

16. Visual Use of Computers in Design (4)

Lecture—2 hours; studio—6 hours. Prerequisite: courses 14, 15. Introduction to the computer as a visual design tool. Use of the Macintosh platform and exploration of specific software used in design. Practical instruction combined with theoretical perspective to investigate the impact of visual computing on the design process.—I, II, summer. (I, II, summer.) Sylva

18. Three-Dimensional Design (4)

Studio—8 hours. Principles of three-dimensional design through creative experimentation in a variety of media. Exploration of structural, perceptual, and spatial properties of form.

21. Drafting and Perspective (4)

Studio—8 hours. Prerequisite: course in drawing recommended. Creation of three-dimensional designs on two-dimensional surfaces.—summer. (summer.) Olsen

22. Visual Communication: Image and Type (4)

Studio—8 hours. Prerequisite: courses 13, 14, 15, 16 or consent of instructor. Priority given to Design majors. Presentation of the fundamentals of design. Specific focus will be on gestalt principles of design; balance and visual hierarchy; integration of text and image on the two-dimensional page; and introduction to typographic exploration using Macintosh platform.—III, summer. (III, summer.)

23. Personal Adornment (4)

Studio—8 hours; field trip. Exploration of the human image altered through ornament and its relation to the human structure.—I.

24. Hand Constructed Textiles (4)

Studio—8 hours; one or two field trips. Prerequisite: courses 14, 15. Contemporary approach to textile techniques of construction such as netting, plaiting, knotting and basketry.—II. (I.) Laky

40A. History of Design: Ancient through Industrial Revolution (4)

Lecture—4 hours. Prerequisite: course 1. Priority to Design majors. A social and stylistic history of design (crafts and industrial products, costume, architecture, landscape, graphics) up to the 19th century. Emphasis on changing methods of design and production in the 19th century. Field trip required. Not open for credit to students who have completed course 40 or course 140. GE credit: ArtHum, Wrt.—I, summer. (I, summer)

40B. History of Modern Design (4)

Lecture—4 hours. Prerequisite: course 1; course 40A or art history through the 19th century recommended, or consent of instructor. Priority given to Design majors. Social and stylistic history of design (crafts and industrial products, costume, architecture, landscape, visual communication) from the mid-nineteenth century to the present. Emphasis on design reform and the growth of modernism in Europe and America. Field trip required. GE credit: ArtHum, Wrt.—II, summer. (II, summer)

77A. Soft Product Development (4)

Studio—8 hours. Prerequisite: courses 14, 15 recommended. Basic theories and principles of soft product development from two-dimensional shapes to three-dimensional forms. Approaches include flat pattern, draping, as well as processes of joining and building. Structural development of clothing in relation to bodies is emphasized.—II, summer. (II, summer.)

77B. Soft Product Development (4)

Studio—8 hours. Prerequisite: course 77A. Study and practice of designing clothing for the human body through pattern development, draping, and structural joining sequences. Problems emphasize advanced theories and principles of soft product development.—III. (III.)

99. Special Study for Undergraduates (1-5)

Prerequisite: consent of instructor. (P/NP grading only.)

Upper Division Courses**100. Design, Creativity, and Fantasy (4)**

Lecture—3 hours; discussion—1 hour. Prerequisite: course 1 and upper division standing or consent of

instructor. To explore and develop personal creativity and imagination utilizing fantasy as a methodology for design. Examples of fantasy as found in the designed environment. Use of fantasy as problem solving tool in design. GE credit: ArtHum, Wrt.—III. Gotelli

121. Design Delineation (4)

Studio—8 hours; field trip. Prerequisite: courses 14, 15, and 21. Exploration of the process of delineation, including principles of perspective drawing, rapid visualization techniques (the quick sketch), rendering, and graphic presentation methods.—III. (III.) Olsen

122. Textile Structures: Two- and Three-Dimensional Constructions (4)

Studio—8 hours. Prerequisite: course 1, 23 or 24, or consent of instructor. Priority to Design majors. Advanced sculptural projects in hand-constructing textiles using flexible materials. Studio projects in experimental two- and three-dimensional forms addressing issues such as space, volume, movement and scale. Linear elements, textile patterning and modular constructions also included. Field trip required. Not open for credit to students who have completed course 124 prior to fall 2002.—(II.) Laky

124. Textile Structures: Architectural Concepts (4)

Studio—8 hours. Prerequisite: course 1, 18, 23, 24, 100 or 126A or Art 5 or consent of instructor. Priority to Design majors. The art and science of hand building textile structures using flexible and semi-rigid materials related to traditional architectural forms and principles. Sculptural textiles, textile architecture, construction and structure and three-dimensional form. Field trip required.—III. Laky

125. Structures in the Landscape (4)

Studio—8 hours. Prerequisite: course 18 or consent of instructor. Pass 1 restricted to Design and Landscape Architecture majors. Concepts and methods of built constructions in symbiotic relationships with the scale of the landscape. Large-scale geometric structures, using basic principles of design, are created by students. Use of recycled materials explored in detail.—III. (III.) Shawcroft

127. Critical Issues in Design and Art: Environmental Consciousness (4)

Lecture—2 hours; studio—4 hours. Prerequisite: course 1, Art 5 or Landscape Architecture 1 or consent of instructor. Analysis of responsible and sustainable design and art practice. Projects in visual and environmental arts addressing issues in renewable resources; working with nature, reuse/recycling, post-consumer products, reclamation, endangered sources, and new/alternative uses of products and materials. Required field trip.—II. (III.) Laky

131. Ethnographic Inspired Costume Design(4)

Studio—8 hours. Prerequisite: course 77A or consent of instructor; course 23 or 24 recommended. Priority given to Design and Textile and Clothing majors. Exploration of surface embellishments and structural techniques derived from historic and contemporary world cultures. Emphasis on unique qualities of handmade textiles/costumes and individual expression. Topics include mola and applique, piecing and quilting, beadwork, embroidery, and dimensional surfaces. Offered in alternate years.—(III.) Rivers

132A. Loom-Constructed Textile Design (4)

Studio—8 hours. Prerequisite: course 23 or 24. Foundation course in handwoven textile structure and design, emphasizing yarn identification, basic drafting, basic weaves and their derivatives explored in context of original color effects and yarn combinations.—I. (I.) Shawcroft

132B. Loom-Constructed Textile Design (4)

Studio—8 hours. Prerequisite: course 132A. Intermediate level study of complex fabric structure with emphasis on pattern in relation to surface, dimension, and material.

132C. Computer-Aided Textile Design (4)

Studio—8 hours. Prerequisite: course 132B. Micro-computer applications to the structure, design, and weaving of fabrics, emphasizing advanced composi-

tions, drafting, and plotting of multi-dimensional, original weave structures.—II. (II.)

134A. Introduction to Interior Architecture (4)

Studio—8 hours; required field trips. Prerequisite: courses 14, 15, 21 and upper division standing. The design process through simple space planning problems focused on residential and small commercial spaces.—I. (I.) Olsen

134B. Introduction to Interior Architecture (4)

Studio—8 hours; required field trips. Prerequisite: course 134A. Problems in interior architecture emphasizing environmentally conscious design concepts and issues. Includes thermal comfort, issues in sustainable design, reduction of waste, "green materials," and resource recycling.—II. (II.) Berteaux

134C. Introduction to Interior Architecture (4)

Studio—8 hours; required field trips. Prerequisite: course 134B. Focus on technical environments such as laboratories, medical facilities, child care facilities, school facilities, computer installations. Includes instruction in model making and presentations in the form of models or photographic presentations derived from computer modeling.—III. (III.) Harrison

135A. Furniture Design (4)

Studio—8 hours; required field trip. Prerequisite: course 21; course 134A recommended. Development of designs for contemporary furniture. Consideration of behavioral and physical requirements, cultural and historic expression, and structural and aesthetic qualities. Process includes research, drawings, and construction of scale models.—II. (II.) Olsen

135B. Furniture Design (4)

Studio—8 hours; required field trip. Prerequisite: course 135A or consent of instructor. Design and construction of full size prototype furniture based on preliminary work completed in course 135A. Material technology, construction methods, and finishes discussed. Process includes development of shop drawings and furniture construction.—III. (III.)

136. Recording Historic Structures (4)

Studio—8 hours; field trip required. Prerequisite: courses 14, 15, and 21 or the equivalent. A studio course of individual and group projects that introduces students to historic preservation. A major component of the course is on-site study of a historic building and the production of measured drawings. Offered in alternate years.—(III.) Berteaux

138. Materials and Specifications for Interior Architecture (4)

Lecture/discussion—3 hours; fieldwork—1 hour; field trip required. Prerequisite: courses 1, 14, 15, or consent of instructor. Priority to Design majors. The range of construction and finish materials and specifications used in interior architecture, and their specific properties and limitations; provide base of supplemental information for use in studio courses. Offered in alternate years.—I.

139. Contemporary Furnishings (4)

Lecture—4 hours. Prerequisite: courses 1, 14 and 15 or consent of instructor. Priority to Design majors. Investigation of design principles in contemporary furniture for commercial and residential environments; development of contemporary design philosophy as represented in stylistic content; ergonomic and environmental design considerations in furnishings; furnishings for specialized environments. Two field trips required. Offered in alternate years.—(I.) Harrison

142A. World Textiles: Far East and Pacific (4)

Lecture—4 hours. Prerequisite: course 132A, 132B, 160A or 170A (may be taken concurrently); course 1, Art History 1A, 1B, or 1C recommended. Textile arts of Japan, China, Africa, India, Oceania, Indonesia, the Pacific Islands, and Central Asia with emphasis on the aesthetic and stylistic qualities of textiles from these cultures. GE credit: ArtHum, Wrt.—I. (I.) Rivers

142B. World Textiles: Middle East, Europe and the Americas (4)

Lecture—4 hours; two field trips. Prerequisite: course 1; a studio class highly recommended: course 24, 124, 131, 132A, 132B, 160A-160B-160C or 170A-

170B-170C (concurrently). Study of concepts and methods significant in the historical, social, aesthetic and stylistic development of the textile arts. GE credit: ArtHum, Wrt.—I. (III.)

143. History of Costume Design (4)

Lecture—4 hours; field trip. Prerequisite: Art History 1A or the equivalent; background in art or design history recommended. History of costume design from the earliest times to the present with emphasis on both aesthetic and functional aspects. GE credit: ArtHum, Wrt.—II. (II.)

144. History of Interior Design (4)

Lecture—4 hours. Prerequisite: course 40A or 40B; Art History 1C recommended. Priority to Design majors. History of interior design in Europe and America from the classical period to modern times. Emphasis on the dwelling in its cultural setting and the development of the theory of modern interior design. One all-day field trip required. GE credit: ArtHum, Wrt.—III. (III.)

145. History of Visual Communication (4)

Lecture—4 hours. Prerequisite: Art History 1A, 1B, or 1C, course 1; course 40 recommended. Priority given to Design majors. Historical developments of visual communication, concentrating on the technological and aesthetic development of graphic design; origins and manifestations of current issues in visual communication; provide framework for analysis of current and future trends in visual communication. Offered in alternate years.

150A. Computer-Assisted Drawing for Designers (4)

Lecture—2 hours; studio—4 hours. Prerequisite: course 21 or consent of instructor. Priority to Design majors. Computer assisted drawing and modeling using a mid-level, multi-use CAD program. Basic architectural drawing and modeling technique in both two-dimensional and three-dimensional CAD environments. Not open for credit to students who have completed course 150.—I, II, summer. (I, II, summer.) Xiques

150B. Computer-Assisted Presentations for Interior Architecture (4)

Lecture—2 hours; studio—4 hours. Prerequisite: course 16 and 150A or consent of instructor. Priority to Design majors. Computer-assisted architectural presentation including the development of complex 3D models, techniques of photo-realistic rendering and computer simulation of movement through architectural and interior space.—III. (III.) Xiques

152. Visual Communication: Graphic Design Production (4)

Studio—8 hours. Prerequisite: course 22 or consent of instructor. Priority given to Design majors. Symbolism and representation as essential to the development of effective logos and identity systems. The need to incorporate these design strategies within the context of computer-generated prepress limitations. Not open for credit to students who have completed course 152A.—I. (I.) Sylva

153. Visual Communication: Internet and Interactive Design (4)

Studio—8 hours. Prerequisite: course 22 or consent of instructor; course 152B highly recommended. Priority given to Design majors. Introduction to computer-based interactive design for World Wide Web, Intranet systems, CD-ROM, or kiosks. Emphasis in development of strategies for content development; visual cohesiveness between content and interface design; and graphic production techniques using Macintosh platform.—II, summer. (II, summer.)

154. Visual Communication: Message Campaign Design (4)

Studio—8 hours. Prerequisite: course 22 or consent of instructor; course 152 recommended. Priority to Design majors. Exploration of the power of visual media to change public opinion on issues of social concern and human rights through analysis and application of strategies used in advertising. Not open for credit to students who have completed course 152B.—III. (III.) Sylva

156A. Visual Presentation: Exhibition Design (4)

Studio—8 hours; field trips required. Prerequisite: course 14, 15, or consent of instructor. Priority to Design majors. Design and placement of objects in spatial relationships that enhance non-verbal communication. Three-dimensional design in the museum and gallery environment. Not open for credit to students who have completed course 126B.—II. (I.) Gotelli

156B. Visual Presentation: Visual Merchandising (4)

Studio—8 hours; field trips required. Prerequisite: course 14 and 15 or consent of instructor. Priority to Design majors. Design and placement of objects in spatial relationships that enhance non-verbal communication. Three-dimensional design as visual merchandising. Not open for credit to students who have completed course 126A.—I, summer. (II.) Gotelli

156C. Visual Presentation: Installation and Design (4)

Studio—8 hours; field trips. Prerequisite: course 156A and 156B or consent of instructor. Advanced principles and practice of visual communication of ideas through non-verbal presentations. The study of three-dimensional objects in a spatial context with an emphasis on self-expression and alternative exhibition spaces. Not open for credit to students who have completed course 126C.

160A. Textile Design: Patterning and Resists (4)

Studio—8 hours. Prerequisite: course 1, 14, 15 or the equivalent; course 77A recommended. Priority to Design and Textiles and Clothing majors. Exploration of the design, dyeing, and patterning of hand-printed textiles; emphasis on the unique qualities of the individual producer. Techniques include tie dye, direct dyeing and paste resist using indigo and fiber reactive dyes. Up to two field trips required.—I. (I.) Rivers

160B. Textile Design: Screen Printing and Advanced Technique (4)

Studio—8 hours. Prerequisite: course 160A. Priority to Design and Textiles and Clothing majors. Exploration of the designing, dyeing, and patterning of hand-printed textiles; emphasis on the unique qualities of the individual producer and entrepreneurship in textile design. Techniques include silk screen printing, photo silk screen, and advanced dyeing processes. Up to two field trips required.—III. (III.) Rivers

170A. Costume Design (4)

Studio—8 hours; required field trip. Prerequisite: courses 1, 14, 15, 77B (or the equivalent); course 142A taken concurrently recommended. Open to Design and Textiles and Clothing majors. Exploration of costume design as an expression of contemporary and projected individual image. Emphasis on one-of-a-kind garments in relationship to surface design and archetypal forms.—I. (I.)

170B. Apparel Design (4)

Studio—8 hours; required field trip. Prerequisite: courses 77B, 170A. Exploration of apparel design processes for industry within the social and physical context. Emphasis on two-dimensional conceptualization of ideas utilizing commercial textiles for ready-to-wear.—II. (II.)

177. Apparel Design for Consumer Cultures (4)

Studio—8 hours. Prerequisite: course 170B. Principles and processes of designing apparel for various user groups. The relationship among clothing, the body, and the environment is addressed in meeting functional and aesthetic concerns.

180A. Advanced Interior Architecture (4)

Studio—8 hours; field trip. Prerequisite: course 134C and senior standing. Advanced problems in interior architectural design emphasizing re-use of existing buildings. Focus is on commercial and retail environments, code requirements, color and lighting.—I. (I.) Berteaux

180B. Advanced Interior Architecture (4)

Studio—8 hours; field trip. Prerequisite: course 180A. Advanced problems in interior architectural design emphasizing space planning for corporate and institutional environments.—II. (II.) Harrison

180C. Senior Project in Interior Architecture (4)

Studio—8 hours. Prerequisite: course 180B, 193A; course 193B concurrently. A comprehensive design project defined and carried out individually by each student as a senior project, working from a detailed program developed winter quarter of a subject in interior architecture of special interest to the student.

190. Proseminar (1)

Seminar—1 hour. Prerequisite: design major or consent of instructor. Philosophies of design explored through discussion and presentation of research results. May be repeated three times for credit. (P/NP grading only.)

191A-D. Workshops in Design (4-12)

Seminar—1 hour; studio or field experience—3 hours per unit (units determined by instructor and student); field trip. Prerequisite: course 14, 15; upper division standing and consent of instructor. Faculty initiated workshops featuring advanced studies and applications of original work in Design: (A) Costume; (B) Environment; (C) Graphics; (D) Textiles. Credit limited to 12 units in one section or a combination of sections. Letter grading by contract.

192. Internship (1-6)

Internship—3-18 hours. Prerequisite: completion of 84 units and consent of instructor. Supervised internship, off and on campus, in areas of design including environmental, costume, textile, museum, display and interior design. Enrollment limited to 3 units per quarter or 6 units per summer session. (P/NP grading only.)

193A. Research for Senior Project in Interior Architecture (2)

Lecture/discussion—2 hours. Prerequisite: course 180A; course 180B concurrently. Problem-focused research for senior students in interior architecture. Selection and research of a topic for a senior project in course 180C and the development of a preliminary program for the selected project. (P/NP grading only.)

193B. Senior Project Documentation (1)

Lecture/discussion—1 hour. Prerequisite: course 193A, 180B; course 180C concurrently. Revision and completion of research begun in course 193A and the documentation of the completed senior project in course 180C. Documentation to be done on the computer and produced in tabloid-sized booklet. (P/NP grading only.)

197T. Tutoring in Design (1-5)

Discussion—3-15 hours. Prerequisite: upper division standing and consent of instructor. Leading of small discussion groups or studio meetings affiliated with one of the department's regular courses. (P/NP grading only.)

198. Directed Group Study (1-5)

Prerequisite: upper division standing and consent of instructor. (P/NP grading only.)

199. Special Study of Advanced Undergraduates (1-5)

(P/NP grading only.)

Graduate Courses

221. Experimental Approaches to Textile and Costume Design Media and Methods (4)

Lecture/discussion—2 hours; seminar—1 hour; term paper required. Prerequisite: graduate standing in Textile Arts and Costume Design or consent of instructor. Covers perspectives on theoretical and aesthetic issues such as methodology in historical, contemporary and ethnographic fiber/fabric media. Students apply theories to their creative explorations for presentation and discussion.

222. Seminar in Costume and Textile Design Criticism (4)

Seminar—3 hours; independent study. Prerequisite: course 221, graduate standing in Textile Arts and Costume Design or consent of instructor. Criticism and communication in relation to creative work in textile arts and costume design through seminar, readings, field trips and discussion. May be repeated twice for credit.—II.

224. Seminar in Textile and Costume Design Research (4)

Lecture—4 hours; discussion—1 hour. Prerequisite: course 222; to be taken concurrently with course 142A (fall), 142B (spring) or 143 (winter) with separate discussion section; graduate standing in Textile Arts and Costume Design or consent of instructor. Required of first-year students. Students utilize existing historical and ethnographic materials as a point of departure for creative work through research and examination of textile/costume specimens with oral and written presentation of findings. May be repeated for credit.—III. (I.) Rivers

290. Seminar in Design (4)

Seminar—4 hours. Prerequisite: graduate standing or consent of instructor. Selected topics in design methodology, research, communication, and education. May be repeated for credit.—III. (III.)

292. Practicum in Textile Arts/Costume Design (1-12)

Prerequisite: graduate standing in Textile Arts and Costume Design or consent of instructor. Interaction with a working professional in the student's field of interest to apply theories and concepts to working practice. (S/U grading only.)

298. Directed Group Study for Graduate Students (1-5)

Studio. Prerequisite: consent of instructor. (S/U grading only.)

299. Individual Focused Study (1-12)

Prerequisite: graduate standing in Textile Arts and Costume Design or consent of instructor. Advanced study in studio practice on independent projects with faculty consultation. May be repeated for credit.

299D. Project Concentration (1-12)

Prerequisite: graduate standing in Textile Arts and Costume Design or consent of instructor. A minimum of 22 units must be taken in Project Concentration and Individual Focused Study. Student creates a body of original work at a professional level, with written and visual documentation of process and concepts underlying the project, culminating in public presentation. May be repeated for credit. (S/U grading only.)—III. (III.)

Professional Course

396. Teaching Assistant Training Practicum (1-4)

Prerequisite: graduate standing. May be repeated for credit. (S/U grading only.)—I, II, III. (I, II, III.)

Affiliated Faculty

Kazue Chavez, Lecturer (*Japanese*)

David Fahy, Lecturer (*Japanese*)

Haruko Sakakibara, Lecturer (*Japanese*)

Ritsuko Shigeyama, Coordinator (*Japanese*)

Miyo Uchida, Lecturer (*Japanese*)

The Major Program

The department offers a core language program in both Chinese and Japanese and courses in literature and culture. The core language program in Chinese has two tracks: one for students who have no background whatsoever and one for students with prior language background.

The Program. A student elects to major in either Japanese or Chinese. Practical language skills are taught using the most modern methods so that upon entering the upper division a student will have attained substantial fluency in the spoken language (hearing and speaking) and the written language (reading and writing). Upper division courses balance the need to further language skills with the need to understand and appreciate the cultural richness of either Chinese or Japanese civilization. All students are encouraged to combine their study of Japan's or China's language and literature with courses in related fields, and to study abroad through the Education Abroad Program, the UC International Summer Session programs, or through internships.

Career Opportunities. UC Davis graduates have learned that a major in Chinese or Japanese is a genuine, earned distinction that facilitates entrance to graduate programs and professional schools. In addition, job opportunities abound in virtually all career paths, especially for those who have completed study abroad.

Chinese

A.B. Major Requirements:

Preparatory Subject Matter UNITS
.....19/34

Chinese 1, 2, 3, 4, 5, 6; or 1BL, 2BL, 3BL; or 1CN, 2CN, 3CN; and one 4-unit lower division Chinese literature course.

Recommended:

Chinese 10, 11, 50, Comparative Literature 14, Japanese 10, Linguistics 1, History 9A.

Depth Subject Matter36

Chinese 106, 107, 111, 112, 113, 11424
Three courses selected from Chinese 104, 105, 108, 109A-I, 110, 115, 116, 120, 130, 131, 132, 140, 160 12

Recommended:

Japanese 101, 102, 103, 104, 105, 106; Anthropology 148A-148B; Art History 163A-163B; East Asian Studies 113; History 191A-F; Religious Studies 172; or other advanced literature and culture courses selected in consultation with the undergraduate adviser.

Total Units for the Chinese Major55/70

Japanese

A.B. Major Requirements:

Preparatory Subject Matter15/30
Japanese 1, 2, 3, 4, 5, 6

Recommended:

Japanese 10, 15, 25, Chinese 10, 11, 50, Linguistics 1, History 9B.

Depth Subject Matter40

Japanese 101, 102, 103, 111, 112, 11324
Eight units selected from Japanese 104, 105, 106, 107, 108, 109, 115, 131, 132, 133, 134, 135, 136, 1418

Eight units selected from Chinese 104, 105, 106, 107, 108, 109A-I, 110; Anthropology 149A-149B; Art History 164; Comparative Literature 153; History 194A-194B-194C; Religious Studies 170, 172; or other advanced literature and culture courses selected in consultation with the undergraduate adviser8

Total Units for the Japanese Major55/70

Major Advisers. C.N. Chang, K. Kim (*Japanese*), S. Volpp, M. Yeh (*Chinese*).

Minor Program Requirements:

Minors are offered in Chinese and in Japanese for students wishing to follow a formally recognized program of study in those languages and their literatures.

UNITS

Chinese20

Japanese20

All upper division courses, including both language courses and literature in translation courses, may be used to meet this requirement. One approved lower division course (Chinese 10, 11, 50; Japanese 10, 25, 50) may also be used. In addition, students must demonstrate their language proficiency, normally through completion of Chinese 111 or Japanese 111. Only four units from 192, 197T, 198, and 199 may be applied to the minor. For details, consult the undergraduate advisers.

Education Abroad Program. The university maintains study abroad programs in China, Japan, Hong Kong, and Taiwan. They offer excellent opportunities for students to polish their language skills and experience Asian cultures firsthand. Students are encouraged to participate. Appropriate courses taken abroad can be applied toward the major or the minor. For details, see the department's undergraduate adviser and the Education Abroad Program office.

Related Courses. See East Asian Studies course list.

Prerequisite Credit. No student may repeat a course if that course is a prerequisite for a course that has already been completed with a grade of C- or better.

Placement. Chinese 1 and Japanese 1 are intended for beginning students with no prior knowledge of those languages. Students who do have some knowledge but wish to improve their skills should meet with one of the advisers to discuss appropriate placement. Students must follow departmental guidelines for placement in all language courses and instructor approval is required for enrollment.

Backtracking. Satisfactory completion of a language course is evidence that a student's language skills are beyond the level of those expected in its prerequisite courses. Accordingly, students who have completed a language course cannot go back and take its prerequisites. If the prerequisite courses are required for the major, students may substitute other courses. Students who are not sure how this requirement applies to them should speak to the undergraduate adviser.

Waived Language Courses. Students with exceptional language ability may waive required language course. If lower division courses have been waived, students will not have to take courses in their place. If upper division courses have been waived, students can use other appropriate courses to earn the units they need to complete the major. Consult the undergraduate adviser regarding selection of appropriate courses.

Courses in Chinese (CHN)

Lower Division Courses

1. Elementary Chinese (5)

Lecture/discussion—5 hours. Introduction to Chinese grammar and development of all language skills in a cultural context with special emphasis on communication. (Students who have successfully completed Chinese 2 or 3 in the 10th or higher grade in high school may receive unit credit for this course on a P/NP grading basis only. Although a passing grade will be charged to the student's P/NP option, no petition is required. All other students will receive a letter grade unless a P/NP petition is filed.)—I. (I.)

1BL. Accelerated Written Chinese I (5)

Lecture—5 hours. Prerequisite: ability to speak and understand oral Chinese (Mandarin or dialect). Designed for students who already have some degree of fluency in spoken Chinese, but who cannot read Chinese characters. Concentrates on developing reading ability and accelerates progress to upper division. Not open for credit to students who have completed course 8. (Former course 8.)—I. (I.)

1CN. Mandarin for Cantonese Speakers I (5)

Lecture—5 hours. Prerequisite: ability to read and write Chinese characters at the elementary school level. Accelerated training in spoken Mandarin, particularly in the phonetic transcription system known as pinyin, for students who already can read and write Chinese. Course assumes no knowledge of spoken Mandarin Chinese. Not open for credit to students who have completed course 7. (Former course 7.)—I. (I.)

2. Elementary Chinese (5)

Lecture/discussion—5 hours. Prerequisite: course 1. Continuation of course 1 in the areas of grammar and basic language skills.—II. (II.)

2BL. Accelerated Written Chinese II (5)

Lecture—5 hours. Prerequisite: course 1BL. Continuation of course 1BL. Designed to accelerate the progress of students who already know spoken Mandarin or a dialect but cannot read or write Chinese characters. Not open for credit to students who have completed course 18. (Former course 18.)—II. (II.)

2CN. Mandarin for Cantonese Speakers II (5)

Lecture—5 hours. Prerequisite: course 1CN. Continuation of course 1CN. Training in spoken Mandarin for students who already can read and write Chinese. Not open for credit to students who have completed course 17. (Former course 17.)—II. (II.)

3. Elementary Chinese (5)

Lecture/discussion—5 hours. Prerequisite: course 2. Continuation of course 2. Completion of grammar sequence and continuing practice of all language skills.—III. (III.)

3BL. Accelerated Written Chinese III (5)

Lecture—5 hours. Prerequisite: course 2BL. Advanced written styles and syntax in Chinese. Students completing this course proceed to course 111, which starts the third-year Chinese, or to some other appropriate upper-division course. Not open for credit to students who have completed course 28. (Former course 28.)—III. (III.)

3CN. Mandarin for Cantonese Speakers III (5)

Lecture—5 hours. Prerequisite: course 2CN. Continuation of course 2CN. Prepares students for entering upper division courses in Chinese. Not open for credit to students who have completed course 27. (Former course 27.)—III. (III.)

4. Intermediate Chinese (5)

Lecture/discussion—5 hours. Prerequisite: course 3 or the equivalent. Intermediate-level training in spoken and written Chinese in cultural contexts, based on language skills developed in course 3.—I. (I.)

5. Intermediate Chinese (5)

Lecture/discussion—5 hours. Prerequisite: course 4 or the equivalent. Intermediate-level training in spoken and written Chinese in cultural contexts, based on language skills developed in course 4.—II. (II.)

6. Intermediate Chinese (5)

Lecture/discussion—5 hours. Prerequisite: course 5 or the equivalent. Intermediate-level training in spoken and written Chinese in cultural contexts, based on language skills developed in course 5.—III. (III.)

10. Modern Chinese Literature (In English) (4)

Lecture—3 hours; discussion—1 hour. Introductory course requiring no knowledge of Chinese language or history. Reading and discussion of short stories and novels and viewing of two films. Designed to convey a feeling for what China has experienced in the twentieth century. GE credit: ArtHum, Div, Wrt.—II. (II.)

11. Great Books of China (in English) (4)

Lecture—3 hours; discussion—1 hour. Selected readings in English translation are supplemented with background information on periods, authors and the interrelationships of culture, literature and social change. Methods of analysis are introduced and applied in class discussions. GE credit: ArtHum, Div, Wrt.—II. (II.)

50. Introduction to the Literature of China and Japan (3)

Lecture—3 hours. Methods of literary analysis and their application to major works from the various genres of Chinese and Japanese literature (in translation), including film. East Asian cultural traditions will also be introduced. (Same course as Japanese 50.) GE credit: ArtHum, Div, Wrt.—II. (II.) Yeh

98. Directed Group Study (1-5)

(P/NP grading only.)

99. Special Study for Undergraduates (1-5)

(P/NP grading only.)

Upper Division Courses

104. Twentieth-Century Chinese Fiction (in English) (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 10 or a course in Chinese history recommended. English language survey of Chinese fiction as it evolved amidst the great historical, social and cultural changes of the twentieth century. Thorough study of the most influential writers and genres. GE credit: ArtHum, Div, Wrt.—I. (I.)

105. Western Influences on Twentieth-Century Chinese Literature (in English) (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 10 or History 9A recommended. Introduction of Western literary thought into modern China, the experimentation with Western literary forms and techniques, and the development of Marxism in contemporary literary writing. Offered in alternate years. GE credit: ArtHum, Div, Wrt.—III. (III.)

106. Chinese Poetry (in English) (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: History 9A or any course on traditional China recommended. Organized topically and chronologically, the lyric tradition is explored from the dawn of folk songs down to modern expressions of social protest. Topics include friendship, love, oppression, war, parting, death, ecstasy and beauty. All readings are in English. GE credit: ArtHum, Div, Wrt.—III. (III.) Yeh

107. Traditional Chinese Fiction (in English) (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 10 or a course in Chinese history. English-language course studying the dawn of Chinese fiction and its development down to modern times.

Combines survey history with close reading of representative works such as *The Story of the Stone* and famous Ming-Qing short stories. GE credit: ArtHum, Div, Wrt.—I. (I.)

108. Poetry of China and Japan (in English) (4)

Lecture—3 hours; discussion—1 hour. A comparative approach to Chinese and Japanese poetry, examining poetic practice in the two cultures; includes a general outline of the two traditions, plus study of poetic forms, techniques, and distinct treatments of universal themes: love, nature, war, etc. Offered in alternate years. (Same course as Japanese 108.) GE credit: ArtHum, Div, Wrt.—II. (II.) Yeh

109A-I. Topics in Chinese Literature (in English) (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: depending on topic, course 10, 11, 104, 106, 107, or a course in Chinese history. Topics in Chinese literature may include: (A) crime and punishment; (B) love in poetry; (C) women writers; (D) the knight-errant; (E) the city in fiction; (F) the recluse; (G) the literature of twentieth-century Taiwan; (H) popular literature; (I) the scholar and the courtesan. Offered in alternate years. GE credit: ArtHum, Div, Wrt.—III. (III.)

110. Great Writers of China: Texts and Context (in English) (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: any course from the General Education Literature Preparation List, or consent of instructor. Examination of major theoretical concepts and interpretive methods in the study of literature by using examples from the Chinese tradition; discussions of classical and modern works with an emphasis on the relations between literature, author, society, and culture. GE credit: ArtHum, Div, Wrt.—I, II. (I, II.)

111. Modern Chinese: Reading and Discussion (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 6 or the equivalent. Readings in modern Chinese newspaper articles, essays, and short stories, based on language skills developed in courses 1 through 6.—I. (I.)

112. Modern Chinese: Reading and Discussion (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 111. Readings in modern Chinese newspaper articles, essays, and short stories, based on language skills developed in course 111.—II. (II.)

113. Modern Chinese: Reading and Discussion (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 112. Readings in modern Chinese newspaper articles, essays, and short stories, based on language skills developed in course 112.—III. (III.)

114. Introduction to Classical Chinese: Confucius (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 6 or consent of instructor. Texts from the Confucian canon are read with the assistance of prepared word glossaries so that while learning to read classical Chinese, the students also experience the most influential books in the history of China in their original texts.—I. (I.)

115. Introduction to Classical Chinese: Mencius (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 114. Continues course 114 by reading selections from the text of the Mencius.—II. (II.)

116. Introduction to Classical Chinese: Narrative Styles (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 115. Continues course 115 by reading selections from the Records of the Grand Historian and other early, influential works.—III. (III.)

120. Advanced Chinese (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 113 or consent of instructor. Selected readings from all genres to develop advanced skills in reading, writing, aural comprehension, and translation. May be repeated once for credit.—I, III. (I, III.)

130. Readings in Traditional Chinese Fiction (4)

Lecture—1 hour; discussion—3 hours. Prerequisite: course 112 or the equivalent; course 114 recommended. Close reading in Chinese of representative works from the Tang Dynasty (618-907) to modern times. May be repeated once for credit when content varies.—II. (II.)

131. Readings in Traditional Chinese Poetry (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 6 or consent of instructor. Traditional Chinese poetry from its beginnings to the golden ages of Tang and Song, surveying forms and poets that best reveal the Chinese poetic sensibility and the genius of the language of Chinese poetry.—I. (I.)

132. Readings in Modern Chinese Poetry (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 6 or consent of instructor. Chinese poetry from the Literary Revolution of 1917 to the present, surveying works that embody exciting innovations and reflect the modernity of twentieth-century Chinese society and culture.—II. (II.) Yeh

140. Readings in Classical Chinese (4)

Lecture/discussion—3 hours; term paper. Prerequisite: consent of instructor. Study and philological analysis of selected texts from the first millennium of Imperial China. May be repeated twice for credit.—I, II, III. (I, II, III.)

160. The Chinese Language (4)

Lecture/discussion—4 hours. Prerequisite: course 6 (may be taken concurrently); Linguistics 1 recommended. The Chinese language viewed in its linguistic context, synchronically and diachronically. Historical phonology, classical and literary language, rise of written vernacular, descriptive grammar of modern standard Chinese, dialectal variation, and sociolinguistic factors.—III. (III.)

192. Chinese Internship (1-12)

Internship—3-36 hours to be arranged. Prerequisite: upper division standing and consent of instructor. Work experience in the Chinese language, with analytical term paper on a topic approved by instructor. (P/NP grading only.)

197T. Tutoring in Chinese (1-5)

Tutoring—1-5 hours. Prerequisite: consent of Department chairperson. Leading of small voluntary discussion groups affiliated with one of the Department's regular courses. May be repeated for credit, but only 2 units may be applied to the minor. (P/NP grading only.)

198. Directed Group Study (1-5)

(P/NP grading only.)

199. Special Study for Advanced Undergraduates (1-5)

(P/NP grading only.)

Graduate Course**299. Research (1-12)**

(S/U grading only.)

Courses in Japanese (JPN)**Lower Division Courses****1. Elementary Japanese (5)**

Lecture/discussion—5 hours. Introduction to spoken and written Japanese in cultural contexts, with emphasis on communication. (Students who have successfully completed Japanese 2 or 3 in the 10th or higher grade in high school may receive unit credit for this course on a P/NP grading basis only. Although a passing grade will be charged to the student's P/NP option, no petition is required. All other students will receive a letter grade unless a P/NP petition is filed.)—I. (I.)

2. Elementary Japanese (5)

Lecture/discussion—5 hours. Prerequisite: course 1 or the equivalent. Continuation of training in basic spoken and written skills.—II. (II.)

3. Elementary Japanese (5)

Lecture/discussion—5 hours. Prerequisite: course 2 or the equivalent. Continuation of training in basic spoken and written skills.—III. (III.)

4. Intermediate Japanese (5)

Lecture/discussion—5 hours. Prerequisite: course 3 or the equivalent. Intermediate-level training in spoken and written Japanese in cultural context, based on language skills developed in course 3.—I. (I.)

5. Intermediate Japanese (5)

Lecture/discussion—5 hours. Prerequisite: course 4 or the equivalent. Intermediate-level training in spoken and written Japanese in cultural context, based on language skills developed in course 4.—II. (II.)

6. Intermediate Japanese (5)

Lecture/discussion—5 hours. Prerequisite: successful completion (C- or better) of course 5 or the equivalent. Intermediate-level training in spoken and written Japanese in cultural context, based on language skills developed in course 5.—III. (III.)

10. Masterworks of Japanese Literature (in English) (4)

Lecture—3 hours; discussion—1 hour. An introduction to Japanese literature: readings and discussion in English of important works from earliest times to the present. GE credit: ArtHum, Div, Wrt.—III. (III.)

25. Japanese Language and Culture (in English) (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 1 or Linguistics 1 or Anthropology 4 recommended. Classification and communication of experience in Japanese culture; principles of language use in Japanese society. Speech levels and honorific language, language and gender, minority languages, literacy. Role of Japanese in artificial intelligence and computer science. Offered in alternate years.—I. (I.) Smith

50. Introduction to the Literature of China and Japan (3)

Lecture—3 hours. Methods of literary analysis and their application to major works from the various genres of Chinese and Japanese literature (in translation), including film. East Asian cultural traditions will also be introduced. (Same course as Chinese 50.) GE credit: ArtHum, Div, Wrt.—II. (II.) Borgen

98. Directed Group Study (1-5)

(P/NP grading only.)

99. Special Study for Undergraduates (1-5)

(P/NP grading only.)

Upper Division Courses**101. Japanese Literature in Translation: The Early Period (4)**

Lecture—3 hours; discussion—1 hour. Early Japanese literature from the Nara to the end of the Heian period through a broad survey of the major literary genres such as lyric poetry, court diaries, prose narratives, poem-tales, and classical Chinese writings. GE credit: ArtHum, Div, Wrt.—I. (I.) Borgen

102. Japanese Literature in Translation: The Middle Period (4)

Lecture—3 hours; discussion—1 hour. The major literary genres from the twelfth century to the second half of the nineteenth century including poetry, *renga*, military chronicles, *no* drama, Buddhist literature, *haiku*, *haibun*, *kabuki*, *bunraku*, plays and Edo prose narratives. GE credit: ArtHum, Div, Wrt.—II. (II.) Borgen

103. Japanese Literature in Translation: The Modern Period (4)

Lecture—3 hours; discussion—1 hour. Modern Japanese literature from the 1870s to the 1970s. Surveys representative literary works and ideas against the social and intellectual background of the Meiji, Taisho, and Showa periods. GE credit: ArtHum, Div, Wrt.—III. (III.) Chang

104. Modern Japanese Literature: War and Revolution (3)

Lecture/discussion—3 hours. Perspectives and sensibilities with which major modern Japanese writers have interpreted the traumatic and often poignant experiences of war and socio-political upheavals from the late nineteenth century to the 1970s. Lectures, discussions, and readings in English. Offered in alternate years. GE credit: ArtHum, Div, Wrt.—I. Chang

105. Modern Japanese Literature: Hero and Anti-hero (4)

Lecture/discussion—4 hours. The ways in which representative hero and anti-hero protagonists in modern Japanese literature perceive, confront, challenge, and resolve a wide array of social, political, and moral problems of their times. Course taught in English. GE credit: ArtHum, Div, Wrt.—I. (I.) Chang

106. Japanese Culture Through Film (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: upper division standing. Aspects of Japanese culture such as love, the family, position of women, growing up, death, and the supernatural as portrayed in films by Kurosawa, Mizoguchi, Ichikawa, Ozu, and Itami. Lectures, discussion, and readings in English. Films with English subtitles. GE credit: ArtHum, Div, Wrt.—II. (II.)

107. Modern Japanese Autobiographies (in English) (4)

Lecture—3 hours; term paper/discussion—1 hour. Prerequisite: upper division standing. Exploring the modern and contemporary Japanese social and cultural landscape through critical analysis of modern Japanese autobiographies by prominent and other authors in the 19th and 20th centuries. Offered in alternate years. GE credit: ArtHum, Div, Wrt.—I. Chang

108. Poetry of China and Japan (in English) (4)

Lecture—3 hours; discussion—1 hour. A comparative approach to Chinese and Japanese poetry, examining poetic practice in the two cultures; includes a general outline of the two traditions, plus study of poetic forms, techniques, and distinct treatments of universal themes: love, nature, war, etc. Offered in alternate years. (Same course as Chinese 108.) GE credit: ArtHum, Div, Wrt.—II. Borgen

109. Japanese Popular Culture (5)

Lecture—3 hours; discussion—1 hour; film viewing—3 hours. Japanese popular culture, from its medieval/early modern precedents to contemporary incarnations. Emphasis on the major forms of twentieth-century popular culture, including genre films, popular theater, TV manga (cartoons), animation and science fiction. GE credit: ArtHum, Div.—III. Kim

111. Modern Japanese: Reading and Discussion (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 6. Readings in modern Japanese short stories, newspaper articles, and essays; conversation practice based on these readings.—I. (I.)

112. Modern Japanese: Reading and Discussion (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 111. Continuation of course 111.—II. (II.)

113. Modern Japanese: Reading and Discussion (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 112. Continuation of course 112.—III. (III.)

114A. Spoken Japanese (2)

Discussion—2 hours. Prerequisite: course 6 or the equivalent. Training in spoken Japanese for students with a basic working knowledge of the language. (P/NP grading only.)—I. (I.)

114B. Spoken Japanese (2)

Discussion—2 hours. Prerequisite: course 114A or consent of instructor. Continuation of course 114A. Training in spoken Japanese for students with a basic working knowledge of the language. (P/NP grading only.)—II. (II.)

114C. Spoken Japanese (2)

Discussion—2 hours. Prerequisite: course 114B or consent of instructor. Continuation of course 114B. Training in spoken Japanese for students with a basic working knowledge of the language. (P/NP grading only.)—III. (III.)

115. Japanese Composition (2)

Lecture—2 hours. Prerequisite: course 6 or consent of instructor. Development of skills in the techniques of writing Japanese. Practice in short essay writing with an aim toward mastery of the vocabulary and syntax of written style Japanese.—I. (I.)

131. Readings in Modern Japanese Literature: 1920-1945 (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 113 or the equivalent. Fourth-year level reading of representative works of modern Japanese literature including short stories, novellas, diaries, memoirs, poetry and excerpts from novels and plays from 1920 through the militaristic era, to the end of the war years in 1945.—III. (III.) Chang

132. Readings in Modern Japanese Literature: 1945-1970 (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 113 or the equivalent. Continuation of course 131, but may be taken independently. Covers selected texts from the immediate post-war years beginning in 1945 down to 1970 and the post-war recovery.—III. (III.) Chang

133. Readings in Modern Japanese Literature: 1970 to Present (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 113 or the equivalent. Continuation of course 132, but may be taken independently. Covers selected texts from 1970 to the present. Offered in alternate years.—II. Chang

134. Readings in the Humanities: Traditional Culture (4)

Lecture—3 hours; discussion—1 hour or term paper. Prerequisite: course 113. Fourth-year level reading of modern works by major specialists on traditional Japanese culture: history, religion, thought, art, international relations, and literary history and criticism. Focus is equally on developing reading skills and learning about Japanese culture.—II. (II.) Borgen

135. Readings in the Humanities: The Modern Period (4)

Lecture—3 hours; term paper. Prerequisite: course 113. Fourth-year level reading of authentic modern writings on Japanese culture, history, philosophy, society, religion, law, politics, international relations, aesthetics, and comparative culture by prominent critics, commentators, and scholars.—III. (III.) Chang

136. Readings in Newspapers and Magazines (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 113 or the equivalent. Fourth-year level reading of newspaper and magazine reports, articles, and editorials on domestic and international affairs relating to contemporary Japan. Offered in alternate years.—(I.)

141. Introduction to Classical Japanese (4)

Lecture/discussion—4 hours. Prerequisite: one advanced Japanese reading course such as Japanese 131, 132, or the equivalent reading knowledge of Japanese. The basic features of classical Japanese grammar through careful reading of selected literary texts such as *Hojoki* or *Tsurezuregusa*. Offered in alternate years.—III. Borgen

192. Japanese Internship (1-12)

Internship—3-36 hours to be arranged. Prerequisite: upper division standing and consent of instructor. Work experience in Japanese language, with analytical term paper on a topic approved by instructor. (P/NP grading only.)

197T. Tutoring in Japanese (1-5)

Tutoring—1-5 hours. Prerequisite: consent of Department chairperson. Leading of small voluntary discussion groups affiliated with one of the Program's regular courses. May be repeated for credit, but only 2 units may be applied to the minor. (P/NP grading only.)

198. Directed Group Study (1-5)

(P/NP grading only.)

199. Special Study for Advanced Undergraduates (1-5)

(P/NP grading only.)

Graduate Courses**291. Seminar in Modern Japanese Literature: Major Writers (4)**

Seminar—4 hours. Prerequisite: any one of courses 131, 132, 133, 134, 135, or the equivalent. In-depth reading and critical analyses of major works by and critical literature on one or two prominent modern or

contemporary writers such as Natsume Soseki, Mori Ogai, Shimazaki Toson, Akutagawa Ryunosuke, Tanizaki Junichiro, Abe Kobo and Oe Kenzaburo. Offered in alternate years.—III. Chang

299. Research (1-12)

(S/U grading only.)

Kwang-Ching Liu, Ph.D., Professor Emeritus
Benjamin Wallacker, Ph.D., Professor Emeritus

The Major Program

The East Asian Studies major gives the student an understanding of East Asia (especially China and Japan) through interdisciplinary studies that combine sustained work in an East Asian language with courses on East Asian countries.

The Program. The program offers core courses in East Asian history, humanities, social sciences, and languages. After taking the core courses in conjunction with two years or more of either Chinese or Japanese language study, the student chooses additional courses focusing on a special field of interest, such as anthropology or history. Since six quarters of language work are required, students normally should apply to the East Asian studies program no later than their sophomore year.

Programs, Internships, and Career Alternatives.

One program of interest to East Asian Studies majors is the education abroad program, which gives students the opportunity to live and experience the culture of their focus country. At UC Davis, the Internship and Career Center helps students obtain legislative, legal, and business internships. Additionally, the UC Davis Washington Center arranges internships and runs a full-credit academic program in Washington D.C. with a full range of opportunities for East Asian Studies majors. East Asian Studies graduates are prepared for employment in government agencies (such as Foreign Service), state agencies, international or non-governmental (such as United Nations), foundations, journalism, teaching, counseling and companies having an interest in international business, trade, finance. The stringent language requirement of the major program enhances career prospects in jobs that demand knowledge of language and culture of the focus country.

A.B. Major Requirements:

	UNITS
Preparatory Subject Matter	41-42
History 9A, 9B	8
One course from Art History 1D, Chinese 10, 11, Comparative Literature 53A, Japanese 10, 25, Religious Studies 70, 75 ...	3-4
Two years (or the equivalent) of Chinese or Japanese language study (Chinese 1-2-3-4-5-6; Japanese 1-2-3-4-5-6)	30
Depth Subject Matter	36
Must include at least 8 units of core courses from each of the following three categories.	

History:

History 191A, 191B, 191C, 191D, 191E, 191F; 194A-194B or 194B-194C

Social Science:

Anthropology 148A, 148B, 149A, 149B; Economics 171; Geography 127; Political Science 148A, 148B; Sociology 147

Humanities:

Art History 163A, 163B, 163C, 164; Chinese 104, 106, 107, 109, 131, 132; Japanese 101, 102, 103; Religious Studies 172

At least 12 additional units must be selected from the above courses, or from the following: Anthropology 110, 112, 117, 119, 120, 122, 123, 124, 128; Chinese (any upper division course); Economics 115A, 115B, 116, 160A, 160B, 162; Geography 143; History 102G, 102H, 102N; Japanese (any upper division course); Linguistics 100; Political Science 127, 133, 138, 145, 148C; Sociology 118, 141, 170, 183 (or other appropriate courses, including individual and group study courses (198, 199), as approved by the Committee in charge).

Total Units for the Major

77-78

Recommended

Students are strongly urged to take a substantial number of courses in Euro-American civilization as a basis for comparison for a deeper understanding of America's relations with East Asia.

Major Adviser. Program Director.

Minor Program Requirements:

Courses taken for the minor are expected to reflect a predominant interest in either China or Japan, but also to provide some exposure to the other of the two countries. All courses counting towards the East Asian Studies major, including individual and group study courses (198, 199), may be used to fulfill the requirements for the minor program, as long as they deal predominantly with China, Japan, or both.

UNITS

East Asian Studies

22
History 9B and 18 upper division units, of which at least 12 must be in courses

focusing on China; OR History 9A and 18 upper division units, of which at least 12 must be in courses focusing on Japan

Courses in East Asian Studies. The following courses count toward the major and are open to students throughout the campus. Refer to departmental listings for course descriptions.

Anthropology

- 148A. Traditional Chinese Society
- 148B. Family, Gender, and Population in Contemporary China
- 149A. Traditional Japanese Society
- 149B. Contemporary Japanese Society

Art History

- 1D. Asian Art
- 163A. Chinese Art
- 163B. Chinese Painting
- 163C. Painting in the People's Republic of China
- 164. The Arts of Japan

Chinese

All courses

Comparative Literature

- 53A. Literature of China and Japan
- 153. Forms of Asian Literature

Economics

- 171. Economy of East Asia

History

- 9A. History of East Asian Civilization (China)
- 9B. History of East Asian Civilization (Japan)
- 102G. Undergraduate Proseminar: China to 1800
- 102H. Undergraduate Proseminar: China since 1800
- 102N. Undergraduate Proseminar: Japan
- 191A. Classical China
- 191B. High Imperial China
- 191C. Late Imperial China
- 191D. Nineteenth-Century China
- 191E. The Chinese Revolution
- 191F. History of the People's Republic of China, 1949 to the Present
- 194A. Aristocratic and Feudal Japan
- 194B. Early Modern Japan
- 194C. Modern Japan
- 194D. Business and Labor in Modern Japan
- 194E. Education and Technology in Modern Japan

Japanese

All courses.

Political Science

- 148A. Government and Politics in East Asia: China
- 148B. Government and Politics in East Asia: Pacific Rim
- 148C. Government and Politics in East Asia: Southeast Asia

Religious Studies

- 75. Chinese Philosophy: An Introduction
- 170. Introduction to Buddhism
- 172. Ch'an (Zen) Buddhism

Sociology

- 147. Sociological Perspectives on East Asia
- 188. Social Stratification in China

Courses in East Asian Studies (EAS)

Lower Division Courses

88. Korean Society: Late 19th Century to the Present (4)

Lecture/discussion—4 hours. Modern Korean society (late 19th Century to contemporary period), emphasizing the perseverance and transformations of traditional social and cultural patterns. GE credit: ArtHum, Div, Wrt.—II. Kim

Upper Division Courses

113. Cinema and Society in China (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: one course from History 190C, 193, or consent of instructor. Knowledge of Chinese not required. View-

ing and analysis of one Chinese film with English subtitles each week, followed by discussion and short essays. Cinematic technique, social values and film topics from 1930s to today. Not open for credit to students who have completed Chinese 113. GE credit: ArtHum, Div, Wrt.—III. (III.)

192. East Asian Studies Internship (1-12)

Internship—3-36 hours; term paper. Prerequisite: upper division standing and consent of instructor. Work experience in the East Asian Studies field, with analytical term paper on a topic approved by the instructor. (P/NP grading only.)

194H. Special Study for Honors Students (1-5)

Independent study—1-5 hours. Prerequisite: open only to majors of senior standing who qualify for honors program. Guided research, under the direction of a faculty member, leading to a senior honors thesis on a topic in East Asian Studies culture, society, or language. (P/NP grading only.)

196A-196B. Honors Seminar (4-4)

Seminar—2 hours; conference—2 hours. Prerequisite: a GPA of 3.5 in the major, senior standing, and consent of instructor. A two-quarter research project culminating in an Honors thesis. A grade of B or higher must be earned to qualify the student for honors distinction at graduation. (Deferred grading only, pending completion of sequence.)—I-II. (I-II.)

198. Directed Group Study (1-5)

Prerequisite: consent of instructor. (P/NP grading only.)

Ecology (A Graduate Group)

K.J. Rice, Ph.D., Chairperson of the Group
Group Office, 2148 Wickson Hall (530-752-6752)

 Desley Whisson, Ph.D., Assistant Vertebrate Pest Specialist (*Wildlife, Fish, and Conservation Biology*)

Graduate Study. The Graduate Group in Ecology offers the M.S. and Ph.D. degrees in several areas of specialization within the spectrum of ecology. The Ecology program is one of the most diverse on the Davis campus. In order to accommodate varied student interests, the Group depends on close consultation between students and faculty for program development. Several curricular plans are now available in the following areas of emphasis: agricultural ecology, conservation ecology, ecosystems and landscape ecology, ecotoxicology, environmental policy analysis, human ecology, integrative ecology, marine ecology, physiological ecology, and restoration ecology. For further details, contact the Group office.

Preparation. Appropriate preparation is undergraduate work in any of the biological, social or behavioral, and physical sciences, mathematics or engineering. Applicants will normally be expected to have completed two courses each in introductory biology and general chemistry and physical science; one course each in calculus, ecology and statistics, are also required. Applicants in the human ecology area may substitute quantitative social science courses for up to two courses of chemistry. Each of the three broad areas requires certain advanced preparation appropriate to the option. Details can be found in the Group Web page.

Graduate Advisers. K.J. Rice, E. Caswell-Chen.

Courses in Ecology (ECL)

Graduate Courses

200A. Principles and Application of Ecological Theory (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: first course in ecology; Statistics 102; Mathematics 16A, 16B. Critical evaluation of ecological theory and applications to ecological management. Historical development of ecological theory is emphasized. Critical evaluation of ecological principles pertaining to the structure and dynamic properties of ecological systems, their organization and evolution.—I. (I.) Holyoak

200B. Principles and Application of Ecological Theory (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 200A. Continuation of course 200A. Critical evaluation of theory and application in the areas of ecological adaptation and system plasticity, spatial and temporal scales, ecological energetics, and system dynamics. Synthesis of ecological theory into testable principles.—II. (II.) Foin

201. Ecosystems and Landscape Ecology (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 200A and 200B. Overview of ecosystem and landscape principles (structure, energy, nutrient flow, species diversity, landscape heterogeneity, change and stability), building on ecological principles and theory. Introduction to analysis tools (remote sensing, geographic information systems, modeling) applied to landscape systems. Offered in alternate years.—(III.) Greco

203. Physiological Ecology (3)

Lecture—3 hours. Prerequisite: Evolution and Ecology 101 or Environmental Studies 100; Neurobiology, Physiology and Behavior 110 or Plant Biology 111 or

Environmental Studies 129; elementary calculus. A comparative examination of several animal groups addressing fundamental physiological mechanisms that shape the ecology of each animal group.—III. (III.) Wainwright, Cech

204. Population and Community Ecology (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: Environmental Studies 100 or Evolution and Ecology 101, Mathematics 21A-21B or consent of instructor; Mathematics 22B recommended. Review of major concepts of population ecology and community ecology, with emphasis on the rationale of theory and use of theory as applied in the ecology of natural and managed systems. Offered in alternate years.—I. Caswell-Chen

205. Community Ecology (4)

Lecture—2 hours; discussion—2 hours. Prerequisite: Environmental Studies 100, Evolution and Ecology 101, or Plant Biology 117. Introduction to literature and contemporary research into processes structuring ecological communities.—II. (II.) Karban, Lawler

206. Concepts and Methods in Plant Community Ecology (4)

Lecture—3 hours; laboratory—4 hours. Prerequisite: introductory courses in statistics and plant ecology; consent of instructor. Principles and techniques of vegetation analysis, including structure, composition, and dynamics. Emphasis given to sampling procedures, association analysis, ordination, processes and mechanisms of succession, and classification. Most techniques are demonstrated or conducted during field trips and laboratories.—I. (I.) Rejmanek, Barbour

207. Plant Population Biology (3)

Lecture—2 hours; laboratory/discussion—1 hour. Prerequisite: advanced undergraduate ecology course (e.g., Environmental Science and Policy 100, Evolution and Ecology 101, Entomology 104 or Plant Biology 117), and advanced undergraduate course in genetics and/or evolution (e.g., Biological Sciences 101 or Evolution and Ecology 100). Introduction to theoretical and empirical research in plant population biology. Emphasis placed on linking ecological and genetic approaches to plant population biology. (Same course as Population Biology 207.) Offered in alternate years.—(II.) Rice

208. Issues in Conservation Biology (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: one of Environmental Studies 100, Zoology 125, Botany 117, or Entomology 106. Graduate-level introduction to current research in conservation biology. Course will emphasize reading and discussing primary literature. Specific topics will reflect the research interests of UCD conservation biology faculty.—II. (II.) Harrison

210. Advanced Topics in Human Ecology (4)

Lecture—2 hours; discussion—2 hours. Prerequisite: graduate standing. Course stresses the commonalities that human ecologists have as social scientists who specialize in problems relating human populations and environmental variables. General epistemological issues and theoretical models are reviewed. Similarities and differences of human and biological ecology are examined. Offered in alternate years.—(II.) Richerson

211. Advanced Topics in Cultural Ecology (4)

Lecture/discussion—3 hours; term paper. Prerequisite: Environmental Science and Policy 133/Anthropology 133 and graduate standing in Ecology or Anthropology. Topics of current analytical and methodological importance in cultural ecology. Examination of general issues in cultural ecology through study of human response to and influences on climate. (Same course as Anthropology 211.) Offered in alternate years.—(I.) Orlove

212A. Environmental Policy Process (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course in public policy (e.g., Environmental Studies 160) or environmental law (e.g., Environmental Studies 161); course in bureaucratic theory (e.g., Political Science 187 or Environmental Studies 166); course in statistics (e.g., Sociology 106 or Agricultural and Resource Economics 106). Introduction to selected

topics in the policy process, applications to the field of environmental policy. Develops critical reading skills, understanding of frameworks of the policy process and political behavior, and an ability to apply multiple frameworks to the same phenomena. Offered in alternate years. (Same course as Environmental Science and Policy 212A.)—(III.) Sabatier

212B. Environmental Policy Evaluation (4)

Lecture—1 hour; discussion—1 hour; seminar—2 hours. Prerequisite: intermediate microeconomics (e.g., Economics 100); Statistics 108 or Agricultural and Resource Economics 106; policy analysis (e.g., Environmental Studies 168A or the equivalent); Agricultural and Resource Economics 176. Methods and practices of policy analysis; philosophical and intellectual bases of policy analysis and the political role of policy analysis. (Same course as Environmental Science and Policy 212B.)—II. (II.) Schwartz

213. Population, Environment, and Social Structure (4)

Seminar—3 hours; term paper. Prerequisite: at least one course in population or human ecology, or in environment and resources. Relationships among population dynamics, resource scarcity and environmental problems, and social structure; focus on demographic content of global ecological models and simulations, ecological content of modern demographic theories, and debates about scarcity, inequality, and social conflict and change. Offered in alternate years.—III. Cramer

216. Ecology and Agriculture (3)

Lecture/discussion—3 hours. Prerequisite: Plant Biology 142 or consent of instructor. Ecological principles and relationships as applied to agriculture. Integration of ecological approaches into agricultural research to develop environmentally sound management practices. Topics include crop autoecology, biotic interactions among crops and pests, and crop systems ecology. (Same course as Vegetable Crops 216.)—I. (I.) Jackson

217. Conservation and Sustainable Development in Third World Nations (4)

Lecture/discussion—3 hours; fieldwork—2 hours. Prerequisite: at least one course from two of these three groups: (a) Environmental Studies 160, 161, 168A, 168B; (b) Environmental Studies 101, 133, International Agricultural Development 103, Geography 142; (c) Anthropology 126, 131, Geography 141, Sociology 144, 145A, 145B. Examination of the patterns of resource ownership, control and management in agricultural lands, extractive zones (fisheries, forests) and wildlands, with emphases on conservation and sustainability. Comparison of industrial democracies and poorer nations. (Same course as International Agricultural Development 217.) Offered in alternate years.—Orlove

219. Ecosystem Biogeochemistry (4)

Lecture—3 hours; laboratory/discussion—2 hours. Prerequisite: introductory courses in ecology/biology and soils are recommended; undergraduates accepted with consent of instructor. Multi-disciplinary analysis of energy and nutrient transfers within terrestrial ecosystems. Examination of processes and inter- and intra-system interactions between the atmosphere, biosphere, lithosphere, and hydrosphere. Laboratory section uses biogeochemical simulation models to examine case studies. (Same course as Soil Science 219.) Offered in alternate years.—III. Dahlgren

220. Spatio-Temporal Ecology (4)

Lecture/discussion—3 hours; discussion—1 hour. Prerequisite: Population Biology 200B or course 204 or Evolution and Ecology 104 or Environmental Science and Policy 121 or consent of instructor. Spatio-temporal ecological theory and its application to questions of population persistence and stability, predator-prey and host-parasitoid interactions, species coexistence and diversity maintenance, including effects of environmental variation, spatial and temporal scale, life-history traits and nonlinear dynamics. Emphasis on recent research. (Same course as Population Biology 220.) Offered in alternate years.—II. Chesson

222. Human Ecology of Agriculture (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: upper division course work in environmental sciences, cultural anthropology, economics, international agricultural development or sociology, or consent of instructor. Social and cultural factors relating to agricultural adaptation and evolution. Ethnobiological knowledge systems, rules and customs of resource allocation, impact of population growth, technological change, states and markets. Social and cultural contexts of biological diversity and agricultural resource conservation.—I. Brush

225. Terrestrial Field Ecology (4)

Seminar—1 hour; field work—12 hours. Prerequisite: introductory ecology and introductory statistics or consent of instructor. A field course conducted over spring break and four weekends at Bodega Bay, emphasizing student projects. Ecological hypothesis testing, data gathering, analysis, and written and oral presentation of results will be stressed. (Same course as Entomology 225/Population Biology 225.)—III. (III.) Karban

231. Mathematical Methods in Population Biology (3)

Lecture—3 hours. Prerequisite: Mathematics 16C or 21C or the equivalent. Mathematical methods used in population biology. Linear and nonlinear difference equation and differential equation models are studied, using stability analysis and qualitative methods. Partial differential equation models are introduced. Applications to population biology models are stressed. (Same course as Population Biology 231.)—I. (I.) Hastings

232. Theoretical Ecology (3)

Lecture—3 hours. Prerequisite: course 204 or the equivalent, and Mathematics 16C or 21C; or one of courses 100 or 121 or Evolution and Ecology 101, and a strong mathematics background (Mathematics 22A-22B-22C or the equivalent). Examination of major conceptual and methodological issues in theoretical ecology. Model formulation and development will be emphasized. Topics will vary from year to year. May be repeated for credit. Offered in alternate years.—(II.) Hastings

280. Current Anthropology Journal Editorial Workshop (4)

Workshop—1 hour; independent study—3 hours. Students must enroll for all three quarters. Reading and offering workshop critiques of manuscripts submitted for publication, and reading and discussion of other relevant work in anthropology and human ecology. Track and edit published comments and authors' replies that accompany major features. Participation in the development of new sections for the electronic edition of the journal, including a "news and views" section and a debate section. (Same course as Anthropology 280.) May be repeated for 12 units of credit with consent of instructor. (S/U grading only)—I, II, III. Orlove

290. Seminar in Ecology (1-4)

Seminar—1-4 hours. Prerequisite: consent of instructor. Topics in biological, human, physical, and chemical ecology. Students are expected to present an oral seminar on a particular aspect of the general topic under consideration. (S/U grading only.)—I, II, III. (I, II, III.)

296. Topics in Ecology and Evolution (1)

Seminar—1 hour. Prerequisite: graduate standing. Seminars presented by visiting lecturers, UCD faculty, and graduate students. May be repeated for credit. (Same course as Population Biology 292.) (S/U grading only.)—I, II, III. (I, II, III.)

297T. Tutoring in Ecology (1-4)

Lecture—1 hour; discussion—1 hour. Prerequisite: graduate standing in ecology; consent of instructor. Teaching ecology including conducting discussion groups for regular departmental courses under direct guidance of staff. May be repeated for credit. (S/U grading only.)

298. Group Study (1-5)

(S/U grading only.)

299. Research (1-12)

Prerequisite: graduate standing. (S/U grading only.)

Economics

(College of Letters and Science)

Leon L. Wegge, Ph.D., Professor Emeritus

The Major Program

Economics is the study of how individuals, organizations, and societies choose among alternative uses of resources and how these resources are turned into the things people want.

The Program. Economics majors complete an introductory course sequence in economics, in addition to several courses in quantitative methods. Intermediate theory and economic history are taken on the upper division level and then students are free to concentrate the remainder of their units in various areas of interest, including more courses in economic theory or history, international economics, labor, industry, alternative economic systems, economic development, public finance, econometrics, or mathematical economics.

Internships and Career Alternatives. Internships for economics majors have been arranged at banks, brokerages, other business enterprises, and governmental units. The internships must complement the student's course work. A degree in economics is excellent preparation for students who want to go on to law school, business school, advanced work in economics, or graduate work in international relations. It is also a good background for careers in management and positions with the government.

A.B. Major Requirements:

UNITS

Preparatory Subject Matter	19-22
Economics 1A-1B	10
Statistics 13, 32, or 102	3-4
Mathematics 16A-16B or 21A-21B	6-8

Depth Subject Matter42
 Economics 100, 101.....10
 One course from Economics 110A, 110B, 111A, 111B4
 Select 16 units from Economics 103, 116, 121A, 121B, 122, 130, 131, 132, 134 (or Agriculture and Resource Economics 171A), 135, 136, 137, 140, 145, 151A, 151B, 160A, 160B, 194HA, 194HB, Agricultural and Resource Economics 106, 139, 156, 175, 17616
 Additional upper division Economics courses12
Total Units for the Major61–64

Recommended

Students considering graduate study in economics are strongly urged to take Mathematics 21A-21B-21C and 22A.

The Economics Department suggests that Economics 100 and 101 be taken as soon as possible after the introductory courses.

Major Advisers. Contact Department Office.

Minor Program Requirements:

UNITS

Economics22
 Economics 100, 101.....10
 Select 8 units from Economics 103, 116, 121A, 121B, 122, 130, 131, 132, 134 (or Agriculture and Resource Economics 171A), 135, 136, 137, 140, 145, 151A, 151B, 160A, 160B; Agricultural and Resource Economics 106, 139, 156, 175, 1768
 Select 4 units from upper division Economics courses 4

Preparation. Economics 1A and 1B; Statistics 13, 32, or 102; Mathematics 16A and 16B or 21A and 21B. Mathematics 16A and 16B or 21A and 21B should be completed before taking Economics 100 and 101. Students need to complete Economics 100 and 101 before taking the advanced courses.

Course Limits. Except under extraordinary circumstances, not more than three economics courses may be taken in any one quarter. In special cases, the department will accept a limited number of related upper division courses from other departments in satisfaction of the economics upper division course requirements. Approval from a departmental adviser is required in all such cases.

Graduation with High or Highest Honors. To be eligible for departmental recommendation for High or Highest Honors in Economics at graduation, a student must take all upper division courses in Economics for a letter grade, earn at least a 3.5 grade-point average in those courses, and complete at least eight units of course work that result in the submission of an Honors project. Consult the College of Letters and Science section of this catalog and contact the Department for more information.

Study Abroad. The economics department wishes to accommodate students who would like to complement their economics degree with a study abroad experience. Up to 20 units of upper division credit from foreign campuses (excluding Economics 100 and 101) may be used towards the completion of the degree. To ensure that foreign courses will apply towards the economics degree, students need to select courses from the pre-approved list at EAP or seek pre-approval in the economics department for the foreign courses they wish to complete.

Graduate Study. Students who meet the admission requirements of Graduate Studies and the Department of Economics may pursue studies leading to the M.A. and Ph.D. degrees. Fields of emphasis for graduate study include: Economic Theory, Monetary Economics, Economic Development, Economic History, International Economics, Labor Economics, Industrial Organization, Economic Systems, Public Finance, Mathematical Economics, and Quantitative Methods (Econometrics). For information on admis-

sion to graduate study, degree requirements, and financial aid, consult the *Graduate Announcement* and the following Web page: www.econ.ucdavis.edu.

Graduate Advisers. Contact Department Office.

American History and Institutions. This University requirement can be satisfied by completion of Economics 111A, 111B. (See also under University requirements.)

Courses in Economics (ECN)

Lower Division Courses

1A. Principles of Microeconomics (5)

Lecture—3 hours; discussion—2 hours. Courses 1A and 1B may be taken in either order. Analysis of the allocation of resources and the distribution of income through a price system; competition and monopoly; the role of public policy; comparative economic systems. GE credit: SocSci.—I, II, III. (I, II, III.)

1B. Principles of Macroeconomics (5)

Lecture—3 hours; discussion—2 hours. Courses 1A and 1B may be taken in either order. Analysis of the economy as a whole; determinants of the level of income, employment, and prices; money and banking, economic fluctuations, international trade, economic development; the role of public policy. GE credit: SocSci.—I, II, III. (I, II, III.)

90X. Lower Division Seminar (1-2)

Seminar—1-2 hours. Prerequisite: lower division standing and consent of instructor. Examination of a special topic in Economics through shared readings, discussions, and written assignments. May not be repeated for credit. Limited enrollment.

92. Internship and Field Work (1-12)

Internship—3-36 hours; term paper. Prerequisite: junior or senior standing; availability of internship position or approved field work project; stock-brokerage interns must have completed Management 11A-11B; consent of instructor. Intensive study of practical application of concepts in economics, stressing research methods and empirical analysis. (P/NP grading only.)

98. Group Study for Undergraduates (1-5)

Prerequisite: consent of instructor. Primarily for lower division students. (P/NP grading only.)

99. Individual Study for Undergraduates (1-5)

Prerequisite: consent of instructor. (P/NP grading only.)

Upper Division Courses

100. Intermediate Micro Theory (5)

Lecture—4 hours; discussion—1 hour. Prerequisite: courses 1A, 1B; Mathematics 16A-16B or 21A-21B with a grade of a C– or better in each course. Price and distribution theory under conditions of perfect and imperfect competition. General equilibrium and welfare economics. Not open for credit to students who have completed Agricultural and Resource Economics 100A or 100B. Only 2 units of credit will be allowed to students who have credit for course 104.—I, II, III. (I, II, III.)

101. Intermediate Macro Theory (5)

Lecture—4 hours; discussion 1 hour. Prerequisite: courses 1A, 1B; Mathematics 16A-16B or 21A-21B with a grade of a C– or better in each course. Theory of income, employment and prices under static and dynamic conditions, and long term growth. Only 2 units of credit will be allowed to students who have credit for course 105.—I, II, III. (I, II, III.)

102. Analysis of Economic Data (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 1A and 1B, Statistics 13 or 32, Mathematics 16A and 16B, or consent of instructor. Analysis of economic data to investigate the key relationships emphasized in introductory microeconomics and macroeconomics. A standard spreadsheet program rather than specialized statistical software is used. Only 2 units of credit allowed to students who have completed course 140 or Agricultural and Resource Economics 106.—II. (I.) Cameron

103. Economics of Uncertainty and Information (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 100 or 104, Mathematics 16A and 16B or Mathematics 21A and 21B. Optimal decisions under uncertainty, expected utility theory, economics of insurance, asymmetric information, signalling in the job market, incentives and Principal-Agent theory, optimal search strategies and the reservation price principle.—II. (II.) Quinzii

104. Intermediate Microeconomics (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: courses 1A, 1B and Mathematics 16A or 21A. Price and distribution theory under conditions of perfect and imperfect competition. Not open for credit to students who have completed course 100 or Agricultural and Resource Economics 100A or 100B. Intended for non-majors. GE credit: SocSci.

105. Intermediate Macroeconomics (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: courses 1A, 1B and Mathematics 16A or 21A. Theory of income, employment and prices, with policy implications. Not open for credit to students who have completed course 101. Intended for non-majors. GE credit: SocSci.—I, II, III. (I, II, III.) Bergin

110A. World Economic History Before the Industrial Revolution (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 1A and 1B. Development and application of analytical models to explain the nature and functioning of economies before the Industrial Revolution. Examples will be drawn from a variety of societies, including England, China, Polynesia, and Pre-Columbian America. GE credit: SocSci.—II. (I.) Clark

110B. World Economic History Since the Industrial Revolution (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 1A, 1B and 110A. Development and application of analytical models to explain the nature and functioning of economies since the Industrial Revolution. Examples will be drawn from a variety of societies, including England, China, Germany, and India. GE credit: SocSci.—III. (II.) Clark

111A. Economic History (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: courses 1A-1B or consent of instructor. Survey of economic change in the United States from Colonial times to 1865; reference to other regions in the Western Hemisphere. GE credit: SocSci.—II. (II.) Walton

111B. Economic History (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: courses 1A-1B, or consent of instructor. Survey of economic change in the United States from 1865 to the post World War II era. GE credit: SocSci.—I. (III.)

115A. Economic Development (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: courses 1A and 1B. Major issues encountered in emerging from international poverty, including problems of growth and structural change, human welfare, population growth and health, labor markets and internal migration. Important issues of policy concerning international trade and industrialization. (Same course as Agricultural and Resource Economics 115A.) GE credit: SocSci, Div.—I, II. (I, II.) Rozelle

115B. Economic Development (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: courses 1A and 1B. Major macroeconomic issues of developing countries. Issues include problems in generating capital, conduct of monetary and fiscal policies, foreign aid and investment. Important issues of policy concerning international borrowing and external debt of developing countries. (Same course as Agricultural and Resource Economics 115B.) GE credit: SocSci.—II, III. (II, III.) Woo

116. Comparative Economic Systems (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 100 or 104, Mathematics 16A and 16B, or 21A and 21B. Economic analysis of the relative virtues of capitalism and socialism, including welfare economics. Marxian exploitation theory, the socialist calculation debate (Hayek and Lange), alternative capitalist systems (Japan, Germany, U.S.) and contemporary models of market socialism. GE credit: SocSci.

121A. Industrial Organization (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: courses 1A-1B, 100 or 104, or consent of instructor. An appraisal of the role of competition and monopoly in the American economy; market structure, conduct, and economic performance of a variety of industries. GE credit: SocSci.—II, III. (I.) Bonanno

121B. Industrial Organization (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 1A, 1B, 100, or 104, or consent of instructor. The study of antitrust and economic regulation. Emphasis on applying theoretical models to U.S. industries and case studies, including telecommunications, software, and electricity markets. Topics include natural monopoly, optimal and actual regulatory mechanisms, deregulation, mergers, predatory pricing, and monopolization. GE credit: SocSci.—III. Prieger

122. Theory of Games and Strategic Behavior (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 100 or 104, Mathematics 16B or 21B or consent of instructor. Introduction to game theory. Explanation of the behavior of rational individuals with interacting and often conflicting interests. Non-cooperative and cooperative theory. Applications to economics, political science and other fields.—II. (II.) Bonanno

130. Public Microeconomics (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 100 or 104, or consent of instructor. Public expenditures; theory and applications. Efficiency and equity of competitive markets; externalities, public goods, and market failures; positive and normative aspects of public policy for expenditure, including benefit-cost analysis. Topics include consumer protection, pollution, education, poverty and crime.—I, III. (I.) Hoynes, Helms, Silvestre

131. Public Finance (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 100 or 104. Assessing the economic burden of taxation; equity and efficiency considerations in tax design; structure and economic effects of the U.S. tax system (including personal income tax, corporation income tax, and property tax); tax loopholes; recent developments; tax reform proposals.—I. (II.) Helms

132. Health Economics (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 100 or consent of instructor. The health care market, emphasizing the role and use of economics. Individual demand, provision of services by doctors and hospitals, health insurance, managed care and competition, the role of government access to health care.—III. (II.) Cameron

134. Financial Economics (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: courses 1A, 1B, and 100 or 104; Mathematics 16A; Statistics 13. General background and rationale of corporation; finance as resource allocation over time; decision making under uncertainty and the role of information; capital market and interest rate structure; financial decisions. Students who have completed Agricultural and Resource Economics 171A may not receive credit for this course.—I. (I, III.) Nehring

135. Money, Banks and Financial Institutions (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 101 or 105. Monetary institutions, the banking system, money creation, the Federal Reserve System, the tools of monetary policy.—III. (III.)

136. Topics in Macroeconomic Theory (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 101 or 105. Advanced topics in macroeconomic theory. Possible topics include money demand, financial intermediation, rational expectations, growth theory.—I. (I.) Makowski

137. Macroeconomic Policy (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 101 or 105. Theory and practice of macroeconomic policy, both monetary and fiscal.—III. (III.) Salyer

140. Econometrics (4)

Lecture—2 hours; discussion—2 hours. Prerequisite: course 100 or 104 and course 101 or 105, Mathematics 16A and 16B or 21A and 21B, Statistics 13, course 102 or any upper division statistics course. Introduction of problems of observation, estimation and hypotheses testing in economics through the study of the theory and application of linear regression models, critical evaluation of selected examples of empirical research and exercises in applied economics. Not open for credit to students who have completed Agricultural and Resource Economics 106.—III. (III.) Jorda

145. Transportation Economics (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 100, Mathematics 16A, 16B, Statistics 13 or consent of instructor. Intended for advanced economics undergraduates. Examination of fundamental problems of planning and financing transportation "infrastructure" (roads, ports, airports). The economics of the automobile industry, as well as the impact of government regulation and deregulation in the airlines and trucking industries.—II. (II.) Feenstra

151A. Economics of the Labor Market (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 100 or 104. Theory of labor supply and demand; determination of wages and employment in the labor market. Economic theories of labor unions. Policy issues: labor force participation by married women; minimum wages and youth unemployment; effect of unions on wages.—I, II. (I.) Hoynes

151B. Economics of Human Resources (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 151A. Human resource analysis; introduction to human capital theory and economics of education; the basic theory of wage differentials, including theories of labor market discrimination; income distribution; poverty. Policy issues; negative income tax; manpower training programs; incomes policy.—II. (II.) Page

160A. International Microeconomics (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: courses 1A, 1B, 100 or 104, or consent of instructor. International trade theory: impact of trade on the domestic and world economies; public policy toward external trade. Only 2 units of credit allowed to students who have completed course 162.—I, II. (I, II.) Swenson

160B. International Macroeconomics (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: courses 1A, 1B, and 100 or 104, and course 101 or 105, or consent of instructor. Macroeconomic theory of an open economy. Balance of payments adjustment mechanism, international monetary economics issues; international financial institutions and their policies. Only 2 units of credit allowed to students who have completed course 162.—I, III. (I, III.) Bergin, Taylor

162. International Economic Relations (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: courses 1A-1B or consent of instructor. International trade and monetary relations, trade policy, exchange rate policy, policies toward international capital migration and investment. Emphasis on current policy issues. Course intended especially for non-majors. Not open for credit to students who have completed course 160A or 160B. GE credit: SocSci.—I, III. (I, II.) Swenson

171. Economy of East Asia (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: courses 1A-1B or consent of instructor. Intensive reading, discussion and research on selected topics from the economies of the countries of East Asia. Consult department for course scheduling.

190. Topics in Economics (4)

Lecture/discussion-seminar—4 hours. Selected topics in economic analysis and public policy. Variable content. May be repeated for credit.—I, III. (I, II, III.)

190X. Upper Division Seminar (1-4)

Seminar—1-4 hours. Prerequisite: courses 100 or 104; and 101 or 105; and consent of instructor. In-depth examination at an upper division level of a special topic in Economics. Emphasis on focused

analytical work. May not be repeated for credit. Limited enrollment.

192W. Internship in the Davis-in-Washington Program (6-8)

Internship—18-24 hours. Prerequisite: junior or senior standing in Economics; completion of 84 units of credits with a minimum grade-point average of 3.00; admission to the Davis-in-Washington Program. Internship in Washington, DC with associated research project. Students must arrange for a faculty sponsor before embarking on the internship. Maximum of 3 units will count toward satisfying Economics major requirements. (P/NP grading only.)

194HA-194HB. Special Study for Honors Students (4-4)

Independent study—3 hours; seminar—1 hour. Prerequisite: major in Economics with senior standing; consent of instructor and completion of 135 units with a minimum GPA of 3.5 in courses counted toward the major. A program of research culminating in the writing of a senior honors thesis under the direction of a faculty adviser. (Deferred grading only, pending completion of course.)

197T. Tutoring in Economics (1-5)

Tutoring—3-15 hours. Prerequisite: consent of instructor and chairperson. Undergraduates assist the instructor by tutoring students in one of the department's regularly scheduled courses. Units may not be counted toward satisfaction of major requirements. (P/NP grading only.)

198. Directed Group Study (1-5)

Prerequisite: consent of instructor. (P/NP grading only.)

199. Special Study for Advanced Undergraduates (1-5)

Prerequisite: consent of instructor. (P/NP grading only.)

Graduate Courses**200A. Microeconomic Theory (5)**

Lecture—4 hours; discussion—1 hour. Prerequisite: graduate standing. Linear and non-linear optimization theory applied to develop the theory of the profit-maximizing firm and the utility-maximizing consumer. (Same course as Agricultural and Resource Economics 200A.)—I. (I.) Silvestre

200B. Microeconomic Theory (5)

Lecture—4 hours; discussion—1 hour. Prerequisite: course 200A. Characteristics of market equilibrium under perfect competition, simple monopoly and monopsony. Emphasis on general equilibrium and welfare economics; the sources of market success and market failure. (Same course as Agricultural and Resource Economics 200B.)—II. (II.) Quinzii

200C. Microeconomic Theory (5)

Lecture—4 hours; discussion—1 hour. Prerequisite: course 200B. Uncertainty and information economics. Individual decision making under uncertainty. Introduction to game theory, with emphasis on applications to markets with firms that are imperfect competitors or consumers that are imperfectly informed. (Same course as Agricultural and Resource Economics 200C.)—III. (III.) Makowski

200D. Macroeconomic Theory (5)

Lecture—4 hours; discussion—1 hour. Prerequisite: course 101, Mathematics 21A, 21B, and 21C. Macrostatic theory of income, employment, and prices.—II. (II.) Peri

200E. Macroeconomic Theory (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 200B (may be taken concurrently) and 200D. Macrodynamics theory of income, employment, and prices.—III. (III.) Salyer

201A. History of Economic Thought (4)

Lecture—3 hours; discussion—1 hour. Economic thought from the classical Greece era to modern times. Offered in alternate years.—I. (I.) Hoover

201B. History of Economic Thought II (4)

Lecture—3 hours; discussion—1 hour. Origins and emergence of modern economic analysis. Offered in alternate years.

203A. Advanced Economic Theory (4)

Lecture—4 hours. Prerequisite: course 200A, 200B. Advanced topics in general equilibrium theory and

welfare economics: existence, determinateness and efficiency; intertemporal economies; uncertainty.

203B. Advanced Economic Theory: Game Theory (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 200A, 200B, 200C. Covers the most recent developments in game theory, with the focus changing from year to year. Main topics are: refinements of Nash equilibrium, repeated games, evolution, social situations, bounded rationality, and bargaining theory.

203C. Topics in Economic Theory (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 200A, 200B, 200C. Selected topics in contemporary microeconomic theory. May be repeated for credit with the consent of the Graduate Studies Committee.

204. Microeconomic Analysis (5)

Lecture—4 hours; discussion—1 hour. Prerequisite: course 100 or Agricultural and Resource Economics 100A-100B; Mathematics 21A, 21B and 21C (or Mathematics 16A, 16B and 16C); open to advanced undergraduates with consent of instructor. Economic reasoning and social choice: behavior of firms and households, theory of markets, partial and general equilibrium analysis, welfare economics, illustrations and applications. (Same course as Agricultural and Resource Economics 204.)—I. (I.) Sexton

207. Contemporary Economics Seminar (1)

Seminar—1 hour. Prerequisite: graduate standing in Economics. Seminar series on topics of current interest. May be repeated for credit. (S/U grading only.)—I, II, III. (I, II, III.)

209A. Economics of Distributive Justice (4)

Lecture—4 hours. Prerequisite: course 200B. Introduction to social choice theory; envy-free allocations; axiomatic bargaining theory; axiomatic characterizations of resource allocation. Applications to modeling of the distributive theories of political philosophers J. Rawls, R. Dworkin, R. Nozick, and G.A. Cohen. Offered in alternate years.

209B. Public Ownership Economics (4)

Lecture—4 hours. Prerequisite: course 200B. Public ownership from the viewpoint of microeconomics, in particular general equilibrium and welfare economics. Topics include returns to scale and firm ownership, common-pool resources, externalities, and solution concepts for economies with public and private ownership. Offered in alternate years.

209C. Foundations of Decision Theory (4)

Lecture—4 hours. Prerequisite: course 200B. Rigorous exposition of subjective expected utility theory; foundations, normative and empirical challenges. Topics include intertemporal decision; learning; incompleteness and ambiguity; individual and social choice; game theory as interactive decision theory; bounded rationality. Offered in alternate years.

210A. Economic History (4)

Lecture/discussion—4 hours. Economic history of the eastern hemisphere in the modern period. Medieval Europe or other regions may be studied, depending on student interest.—II. (I.) Clark

210B. Economic History (4)

Lecture/discussion—4 hours. The United States from Colonial times to the present. Other areas of the western hemisphere may be studied, according to student interest.—I. (I.) Olmstead

210C. Economic History (4)

Seminar—4 hours. Prerequisite: a graduate course in economic history. Selected topics and issues, emphasis on current research. (Quarter offered to be flexible.)—III. (III.) Lindert

214. Development Economics (4)

Lecture—4 hours. Prerequisite: Agricultural and Resource Economics 100A, 100B, course 101; Agricultural and Resource Economics/Economics 204 and course 160A-160B recommended. Review of the principal theoretical and empirical issues whose analysis has formed development economics. Analysis of economic development theories and development strategies and their application to specific policy issues in developing country contexts. (Same

course as Agricultural and Resource Economics 214.)—II. (II.) Rozelle

215A. Microdevelopment Theory and Methods I (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 200A or 204; course 240A recommended. Agricultural development theory, with a focus on microeconomics. Agricultural household behavior with and without market imperfections and uncertainty. Analysis of rural land, labor, credit and insurance markets, institutions, and contracts. (Same course as Agricultural and Resource Economics 215A.)—I. (I.) Taylor

215B. Open Macroeconomics of Development (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: Agricultural and Resource Economics/Economics 200A or 204, 200D or 205, and 214 or 215A. Models and policy approaches regarding trade, monetary and fiscal issues, capital flows and debt are discussed in the macroeconomic framework of an open developing country. The basic analytical focus is real exchange rate and its impact on sectoral allocation of resources. (Same course as Agricultural and Resource Economics 215B.)

215C. Microdevelopment Theory and Methods II (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 215A. Extension of development theory and microeconomic methods. Agricultural growth and technological change; poverty and income inequality; multisectoral, including village and regional models. Computable general equilibrium methods and applications. (Same course as Agricultural and Resource Economics 215C.)—III. (III.) Rozelle

215D. Environment and Economic Development (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: courses 200A, 204 or Agricultural and Resource Economics 275. Interdisciplinary course drawing on theoretical and empirical research on interactions between environmental resource use and economic development processes. Analysis of issues emerging at the interface of environmental and development economics. (Same course as Agricultural and Resource Economics 215D.)—II. (II.) Farzin

221A. The Theory of Industrial Organization (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 200A, 200B, 200C. Game theory is used to analyze strategic interaction of firms in industries. Topics include models of competition, product differentiation, entry-detering strategies, contractual arrangements, vertical control and antitrust issues.—I. (I.) Bonanno

221B. Empirical Analysis in Industrial Organization (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 221A and 240B. Recent empirical work in industrial organization. Topics include empirical analysis of cartels, product differentiation, innovation and technological change, and imperfect competition in international markets.

221C. Industrial Organization and Regulation (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 221A and 240B. Optimal regulation of natural monopoly. Topics include regulatory mechanisms for single and multiple output firms under symmetric and asymmetric information, optimality without regulation, the economic theory of regulation, and empirical studies of regulation and deregulation.—III. (III.) Prieger

230A. Public Economics (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 200C. Measures of deadweight loss and consumer surplus; optimal commodity and income taxation; tax incidence; policy issues in personal taxation, corporate taxation, and social insurance; the evaluation of effective tax rates.—I. (I.) Helms

230B. Public Economics (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 230A, 240A, 240B. Effects of government policies on economic behavior; labor supply, program participation, investment, consumption and savings.—II. (II.) Page

230C. Public Economics (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 200C and 240B. Advanced topics in economics of the public sector, with emphasis on current research. Topics may vary from year to year.—III. (III.) Hoynes

235A. Alternative Approaches to Monetary Analysis (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 200D (may be taken concurrently). Focuses on relation between changes in money supply and changes in nominal GNP. Also discusses the effect of changes in money supply on interest rates.—II. (II.) Salyer

235B. Monetary Theory (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 235A. Emphasizes problem of finding an appropriate place for money in microeconomic/general equilibrium models. Consideration given to meaning of money, its relation to inflation and the real economy and to its role in models of finance.—III. (III.) Jorda

235C. Monetary Policy (4)

Lecture—3 hours; discussion—1 hour. Organization of the Federal Reserve Bank, the definition of money, goals and tools of monetary policy, alternative targets for monetary policy, impact of monetary policy, the problem of lags, alternative policies.

240A. Econometric Methods (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: Statistics 133 and a course in linear algebra or the equivalent. Least squares, instrumental variables, and maximum likelihood estimation and inference for single equation linear regression model; linear restrictions; heteroskedasticity; autocorrelation; lagged dependent variables. (Same course as Agricultural and Resource Economics 240A.)—II. (II.) Chalfant

240B. Econometric Methods (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 240A. Topics include asymptotic theory and instrumental variables, pooled time-series cross-section estimation, seemingly unrelated regression, classical hypothesis tests, identification and estimation of simultaneous equation models, cointegration, error-correction models, and qualitative and limited dependent variable models. (Same course as Agricultural and Resource Economics 240B.)—III. (III.) Chalfant

240C. Econometric Theory (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 240B. Finite sampling theory; nonlinear and dynamic econometric models; asymptotic distribution theory. (Same course as Agricultural and Resource Economics 240C.)—I. (II.) Jorda

240D. Topics in Econometrics (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 240B. Advanced topics in nonlinear econometric modelling. Contents may vary from year to year. (Same course as Agricultural and Resource Economics 240D.)—II. (I.) Cameron

240E. Topics in Applied Econometrics (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: courses 240A and 240B. Examination of modern econometric techniques used in applied fields of economic research, such as demand analysis, environmental economics, macroeconomics/finance, etc. Emphasis on selection of appropriate tools for individual fields. Course focus will expand topics covered in Economics 240A and 240B. (Same course as Agricultural and Resource Economics 240E.)—III. (III.)

250A. Labor Economics (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: courses 150A-150B or the equivalent. Philosophy, theory and history of American and foreign labor movements; union structure, organization and collective bargaining under changing labor market conditions; current labor market issues.

250B. Labor Economics (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 151A or consent of instructor; course 204 or 200A recommended. Microeconomic theory of labor supply and labor demand, estimation of labor supply

and demand functions; human capital theory; labor market analysis.

256. Applied Econometrics (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: Agricultural and Resource Economics 106 or Economics 140, or the equivalent. Application of statistical tools to economic and business analysis. Emphasis on regression analysis, problems of specification, and model development. (Same course as Agricultural and Resource Economics 256.)—II. (II.) Heien

260A. International Economics (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 200A or 204. Theory of trade determinants; gains from trade; tariffs and effective protection; economic unions.—I. (I.) Feenstra

260B. International Economics (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: courses 200D and 200E. Balance of payments adjustment mechanisms; foreign exchange markets' theories of balance of payments policy and international monetary mechanisms.—II. (II.) Woo

260CN. International Investment and Trade (4)

Seminar—4 hours. Prerequisite: course 260A. Analysis of foreign investment and its links to trade; theories of the firm as they relate to firm's export and investment decisions; and an introduction to the political economy of trade policies.—II. (III.) Swenson

260D. Topics in International Macroeconomics (4)

Seminar—4 hours. Prerequisite: course 260B or consent of instructor. Survey of current literature in international macroeconomic theory.—III. (III.) Bergin

260E. Topics in International Trade (4)

Seminar—4 hours. Prerequisite: course 260A, 260B. Current literature in international trade theory.

280. Orientation to Economic Research (2)

Discussion—2 hours. Course tries to bridge the gap between students' classwork and their subsequent research. It deals with topics such as the origination of a research project, some mechanics of empirical research and hints on the submission of research papers. (S/U grading only.)—I. (I.)

290. Topics in Economics (4)

Seminar—4 hours. Prerequisite: consent of instructor. Selected topics in economic analysis and public policy, focusing on current research. May be repeated for credit.—I, II, III. (I, II, III.) Peri, Woo, Taylor

298. Group Study (1-5)

Discussion—1-5 hours. Prerequisite: graduate standing and consent of instructor. (S/U grading only.)

299. Individual Study (1-12)

Prerequisite: consent of instructor and graduate standing. (S/U grading only.)

299D. Dissertation Research (1-12)

(S/U grading only.)

Professional Course

397. Teaching of Economics (2)

Lecture/discussion—2 hours. Prerequisite: graduate standing in economics. Teaching of economics: methods of instruction, organization of courses, examination and evaluation procedures. (S/U grading only.)—I. (I.) Salyer

Economy, Justice, and Society

Joaquim Silvestre, Ph.D., Program Director
Program Office, 1135 Social Sciences and
Humanities Building (530-752-0743)
World Wide Web: <http://ejs.ucdavis.edu>

Committee in Charge

Giacomo Bonnano, Ph.D. (*Economics*)
Scott S. Gartner, Ph.D. (*Political Science*)
Hilary W. Hoynes, Ph.D. (*Economics*)

Robert W. Jackman, Ph.D. (*Political Science*)

Marianne E. Page, Ph.D. (*Economics*)

Kimberlee A. Shauman, Ph.D. (*Sociology*)

Xiaoling Shu, Ph.D. (*Sociology*)

Programs of Study. Undergraduates may elect the minor in Economy, Justice, and Society. The Program on Economy, Justice, and Society also offers a *designated emphasis* in Economy, Justice, and Society open to students pursuing a doctoral degree in philosophy, political science, or economics (see below).

Minor Program Requirements:

A central concern of many citizens in modern societies is the inequality of income and life chances characteristic of them. In the United States, this concern has recently deepened, as income inequality has worsened substantially. The minor in Economy, Justice, and Society studies economic, political, sociological, and philosophical perspectives on such inequality.

UNITS

Economy, Justice, and Society24

Six upper division courses selected from
Economics 116, 122, 130, 151A, 151B,
Philosophy 116, 117, 118, Political Science
116, 120, 121, 123, 124, 142, 174,
Sociology 118, 138, 140.

No more than two courses from a single department may count toward satisfaction of the minor requirements.

When a listed course has prerequisites, they must be taken, although they do not count toward the six-course requirement.

Graduate Study. The Program on Economy, Justice, and Society offers a *designated emphasis* in Economy, Justice, and Society open to students pursuing a doctoral degree in philosophy, political science, or economics. The designated emphasis provides interdisciplinary training in related aspects of economic theory, political theory, and political philosophy. Students take one or two core courses offered by the program, a designated field in their home department, a choice of two designated courses in the other two departments, and attend an advanced workshop/seminar run by the program. For students choosing the emphasis, these requirements will be in lieu of some requirements for the Ph.D. in the participating departments. Upon graduation, students receive a Ph.D. in their major with a designated emphasis in Economy, Justice, and Society.

Graduate Adviser. Consult program office or a program graduate adviser in one of the three departments listed above.

Courses in Economy, Justice, and Society (EJS)

Upper Division Course

100. Microeconomic Theory (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: Economics 1A or graduate standing. Basic concepts, modes of reasoning and fundamental results in modern microeconomics. Emphasis on, first, Utility Theory; second, the logic of the equilibrium method; third, welfare economics and public policy.

Graduate Courses

207. Interdisciplinary Social Analysis (3)

Lecture—2 hours; term paper. Prerequisite: graduate standing in Economics, Philosophy, or Political Science; course 100, Philosophy 117, or the equivalents. Analysis of practical and theoretical social problems with tools of economic theory, philosophy, and political theory, e.g., the welfare state, risk and public policy, equality of opportunity, individual rationality and cooperation.

209A. Economic Models of Distributive Justice (4)

Lecture—4 hours. Prerequisite: course 100 or the equivalent, and graduate standing. Introduction to social choice theory; envy-free allocations; axiomatic bargaining theory; axiomatic characterizations of

resource allocation. Applications to modeling of the distributive theories of political philosophers. Offered in alternate years.

209B. Economic Models of Public Ownership (4)

Lecture—4 hours. Prerequisite: course 100 or the equivalent and graduate standing. Public ownership from the viewpoint of microeconomics, in particular, general equilibrium and welfare economics. Topics include returns to scale and firm ownership, common-pool resources, externalities, and solution concepts for economies with public and private ownership. Offered in alternate years.

209C. Foundations of Decision Theory (4)

Lecture—4 hours. Prerequisite: course 100 or the equivalent and graduate standing. Rigorous exposition of subjective expected utility theory; foundations, normative and empirical challenges. Topics include intertemporal decision; learning; incompleteness and ambiguity; individual and social choice; game theory as interactive decision theory; bounded rationality. Offered in alternate years.

Major Program and Graduate Study. The School of Education offers a minor and programs of graduate study described below. There is no undergraduate major in education.

Minor Program Requirements:

Education theory is considered to be the foundation for undergraduates to elect as a minor if they wish to (1) major in an allied program, (2) obtain a teaching credential, (3) obtain a master's degree in education or related field, (4) obtain a Ph.D. degree in education, (5) enter a profession that focuses on work with people, (6) seek employment in a governmental or industrial training program, or (7) obtain a better understanding of the issues and concerns of public and private education.

At least 16 units of the 20-unit minimum for the minor must be in Education. One course in a related field is acceptable for the minor.

	UNITS
Education	20

Education 100, 110, 120	12
Elective courses	8

The remaining 8 units may be taken from the following courses in Education, with the option of selecting one course from the list of approved elective courses outside of Education:

- Education:*
 Education 115, 130, 151, 152, 153, 163, 192
Approved courses outside of Education:
 African American and African Studies 130, American Studies 152, Asian American Studies 101, Human Development 100A, 100B, 101, Linguistics 173, Psychology 130, 132, Sociology 124, Spanish 116, 117

Minor Advisers. A designated faculty member in the Division of Education may advise students and give final approval on the minor. For additional advising and information, contact P. Gandara, or the Student Services Office, 2078 Academic Surge.

Graduate Study

The Division of Education, in conjunction with the Graduate Group in Education, offers programs of

study and research leading to the M.A. and Ph.D. degree in Education. The Ph.D. is offered by the Education Graduate Group. Detailed information regarding graduate study may be obtained by writing the Graduate Coordinator, Division of Education, 2078 Academic Surge.

Program Advisers. K. Bray, C. Kosmitzki, J. MacDonald.

Teacher Education—Credentialing

For a statement of complete requirements and appointments with credential advisers, contact the Student Services and Advising office, 2078 Academic Surge. Interested students are urged to do this as early as possible in their academic career.

Applicants to the elementary or secondary teaching credential programs should contact Student Services for forms and procedural information early in the fall quarter of their senior year.

Program Advisers. K. Bray, C. Kosmitzki, J. MacDonald

Teacher Education Faculty Advisers—Elementary. J. Galli-Banducci, A. Kato.

Bilingual Emphasis. B.J. Merino.

Teacher Education Faculty Advisers—Secondary. A. Bellman, P. Holmes, J.R. Pomeroy.

Graduate Adviser. B. Merino, B. Goldman (Teaching Credential Program).

UCD/CSU Sacramento Collaborative Elementary Credential Program

Barbara Goldman (UC Davis) and Harold Murai (CSU Sacramento), Program Directors
 Program Office, 2078 Academic Surge
 (530) 1-888-smr-2-lrn;
 e-mail: smrtolrn@ucdavis.edu

The Collaborative Elementary Credential Program offers accelerated course work for the CLAD or BCLAD elementary credential during the summers; the supervised field experience is completed during the academic year. This program is designed to meet the needs of emergency credential holders and working professionals who are changing careers.

Collaborative Adviser. C. Johnson

UCD/CSU Fresno Joint Doctoral Program (Ed.D.)

Sharon Brown-Welty, (CSU Fresno) and Philip Young (UC Davis), Program Co-Directors

The joint (UCD/CSU Fresno) doctoral program leads to the Doctorate in Education (Ed.D.) in Educational Leadership. Contact the CSU Fresno Program Office for information and application materials.

Courses in Education (EDU)

Lower Division Course

92. Internship (1-3)

Internship—3-9 hours. Prerequisite: consent of instructor. Enrollment dependent on availability of intern placements. Internship as a teacher's aide or tutor in K-12 classrooms under the supervision of a faculty member. May be repeated for credit. (P/NP grading only.)

98. Directed Group Study (1-5)

Prerequisite: consent of instructor. Primarily for lower division students. (P/NP grading only.)

Upper Division Courses

100. Introduction to Schools (4)

Lecture—3 hours; field work—3 hours. Prerequisite: upper division standing. Study of occupational concerns of teachers; skills for observing classroom activities; school organization and finance; school

reform movement; observing, aiding, and tutoring in schools.—I, II, III. (I, II, III.) Galli Banducci

110. Educational Psychology: General (4)

Lecture/discussion—4 hours. Prerequisite: Psychology 1; upper division standing. Learning processes, cognitive development, individual differences, testing and evaluation. GE credit: SocSci, Wrt.—I, II, III. (I, II, III.) Romualdi, Gandara

114. Quantitative Methods in Educational Research (4)

Lecture/discussion—4 hours. Prerequisite: two years of high school algebra. Problems and methods in data analysis. Design of research projects. Some consideration of procedures suited to digital computers.—I. (I.) Sandoval

115. Educating Children with Disabilities (2)

Lecture—2 hours. Prerequisite: upper division standing. Educational issues and processes involved in teaching children with disabilities. The course will focus on the structure of special education, with an emphasis on meeting the educational needs of children who are mainstreamed in regular classes.—I, II, III. (II, III.) Figueroa

120. Philosophical and Social Foundations of Education (4)

Lecture—2 hours; discussion—2 hours. Prerequisite: upper division standing. Philosophical, historical, and sociological study of education and the school in our society. GE credit: SocSci, Wrt.—III. (I, II, III.) Rodney, Wagner

130. Issues in Higher Education (4)

Discussion—3 hours; field work—3 hours. Prerequisite: upper division standing or consent of instructor. Analysis of current issues in higher education and of some practical implications of varying philosophical approaches to the role of the university.—III.

151. Language Development in the Chicano Child (3)

Lecture—3 hours. Prerequisite: some knowledge of Spanish and linguistics recommended. Bilingualism, first and second language acquisition, bilingual education, language assessment, Chicano Spanish, and the role of dialect varieties in the classroom.—I. (I.) Merino

152. Communication Skills for Bilingual Teachers (3)

Lecture—2 hours; field work—3 hours. Prerequisite: course 151; Spanish 2, 8A-8B. The development of communication skills of prospective educators with an emphasis on the study and use of standard Spanish and Southwest Spanish dialects in teaching science, mathematics, social science, music, art, and language arts to bilingual elementary school pupils.—III. (III.)

153. Cultural Diversity and Education (2)

Lecture/discussion—2 hours. Prerequisite: upper division standing. Analysis of research on learning styles among culturally-diverse students with review and evaluation of responsive curricula and classroom teaching techniques. The ethnographic interview as a research tool.—III. (III.) Athanases

160A. Introduction to Peer Counseling (2)

Lecture/discussion—2 hours. Prerequisite: upper division standing and consent of instructor. Introduction to peer counseling techniques and development of peer counseling skills. (P/NP grading only.)—I, II. (I, II.) Zeh

160B. Issues in Peer Counseling (2)

Lecture/discussion—2 hours. Prerequisite: upper division standing and consent of instructor; course 160A recommended. In-depth review and development of skills for specific counseling topics. May be repeated once for credit when topic differs. (P/NP grading only.)—I, II, III. (I, II, III.)

163. Guidance and Counseling (4)

Lecture—4 hours. Prerequisite: course 110 (may be taken concurrently). Nature and scope of pupil personnel services; basic tools and techniques of guidance; theory and practice of counseling psychology, with emphasis on educational and vocational adjustment.—III. (III.) Figueroa

180. Computers in Education (3)

Lecture—1 hour; seminar—1 hour; laboratory—1 hour. Prerequisite: upper division standing or graduate student. Applications of computers in education as instructional, intellectual, and communication tools. Not open for credit to students who have taken course 181 or 182.—I, II, III. (I, II, III.) Pomeroy

182. Computer Project for Curricular Integration (1)

Seminar—1 hour. Prerequisite: Agricultural Systems and Environment 21 or appropriate microcomputer course, experience with instructional computing and consent of instructor. Design and implementation of a curricular unit to integrate computer technology into a K-12 classroom setting. A project-based seminar intended for students with substantial prior experience with instructional use of computers and related technologies. Not open for credit to students who have completed course 180 or 181.

192. Internship (1-3)

Internship—2-8 hours; discussion—1 hour. Prerequisite: upper division standing and consent of instructor. Internship as a tutor, teacher's aide, or peer counselor in a school or educational counseling setting under the supervision of a faculty member. May be repeated for credit. (P/NP grading only.)

197T. Tutoring in Education (1-2)

Tutoring—1-2 hours. Prerequisite: upper division standing and consent of instructor. Leading of small voluntary discussion groups affiliated with the Division's upper division courses under the supervision of, and at the option of, the course instructor, who will submit a written evaluation of the student's work. May be repeated once for credit for a total of 4 units. (P/NP grading only.)

198. Directed Group Study (1-5)

Prerequisite: consent of instructor. (P/NP grading only.)

199. Special Study for Advanced Undergraduates (1-5)

Prerequisite: upper division standing and consent of instructor. (P/NP grading only.)

Graduate Courses**200. Educational Research (4)**

Lecture—2 hours; discussion—2 hours. Prerequisite: introductory statistics and graduate standing in education or consent of instructor. Defining educational research questions, reviewing relevant literature, developing research designs, developing research instruments, selecting appropriate data analysis procedures, and writing research projects. A case problem will provide practice in designing and reporting research.—III. (III.) Young

201. Qualitative Research in Education (4)

Seminar—2 hours; lecture—2 hours. Prerequisite: graduate standing or consent of instructor. Examines the design and conduct of educational research using non-numerical data (e.g., text, discourse, imagery and artifacts). Focuses on issues (e.g., validity, reliability, generalizability, ethics) and reporting genres (e.g., narrative accounts, case studies, and arguments). (Former course 203.)—III. (III.) Wagner

202N. Computer Analysis of Qualitative Data (4)

Seminar—3 hours; laboratory—2 hours. Prerequisite: graduate standing or upper division standing with consent of instructor. Critical and practical understanding of how to use computer software programs to analyze qualitative data (text, images, and videotape) in conducting social research. Offered in alternate years.—III. (III.) Wagner

203. Educational Testing and Evaluation (4)

Lecture/discussion—4 hours. Prerequisite: graduate standing or consent of instructor. Introduces the theoretical assumptions underlying traditional test construction, as well as the basic statistical principles involved in the design, evaluation, and interpretation of standardized tests. Also introduces the debates surrounding the uses of different kinds of tests and evaluation tools.—II. (III.) Figueroa

205A. Ethnographic Research in Schools I: Current Theory and Practice (4)

Lecture—4 hours. Prerequisite: graduate standing. Current literature from anthropology and society

related to schools. Emphasis on the organizational structure of institutions, and the analysis of face-to-face interaction. Will explore the relationship between field-based research and theory development on the acquisition of knowledge in specific social and cultural contexts. (Former course 201A.)—I. (I.) Watson-Gegeo

205B. Ethnographic Research in Schools II: Field-Based Research Projects (4)

Discussion—4 hours. Prerequisite: graduate standing and course 205A. Student research projects in specific schools with cooperative critical analysis of the design, data collection, and inferring by researchers. Students will continue to meet with instructor as a group throughout the quarter to discuss specific projects. (Former course 201B.)—II. (II.) Watson-Gegeo

207. Concepts of the Curriculum (4)

Lecture—2 hours; discussion—2 hours. Prerequisite: graduate standing or consent of instructor. Development of the skills of philosophical analysis and argument for the establishment of a point of view, in the consideration of curriculum theory and practice. Classical and contemporary approaches to subject matter and activity emphases, hidden curriculum, and moral education.—I. (I.)

208. Presenting Educational Research in Written Reports (4)

Seminar—3 hours; extensive writing. Prerequisite: graduate standing or consent of instructor. Rhetorical and substantive challenges of presenting educational research through written reports; research rhetoric and genres; competing discourse conventions of educational research, policy, and practice; the social organization of publishing educational research. May be repeated once for credit. Offered in alternate years.—(III.) Wagner

209. Image-based Field Research (4)

Lecture/discussion—3 hours; fieldwork—2 hours. Prerequisite: graduate standing or upper division standing with consent of instructor. Critical and practical understanding of video tape and still photography as resources for enhancing field research in schools and other social setting. Offered in alternate years.—I. (I.) Wagner

210. The Psychology of School Learning (4)

Lecture/discussion—4 hours. Study of human learning theory and research related to learning in school. Classical approaches of scholars such as Ausubel, Bruner, Gagne, Piaget, Vygotsky, Skinner. Review of contemporary issues of constructivism, metacognition, problem solving, learning strategies, science and mathematics learning.—I. (I.) Sandoval

213. Individual Assessment (4)

Lecture—4 hours. Prerequisite: courses 114 and 219, admission to school psychology credential program. Theories of intellectual functioning and the measurement of cognitive abilities in school-aged children. Supervised practice in administration and scoring of contemporary tests for children including the WISC-R, the WAIS-R, the Stanford Binet, the McCarthy Scales of Children's Ability.—III. (III.) Sandoval

215. Research on Achievement Motivation in Education (4)

Seminar—3 hours; term paper. Prerequisite: graduate standing in Education or consent of instructor. Analysis and critique of recent research on cognitive processes related to achievement motivation in school settings. Topics include self-determination theory, attribution theory, goal theory, intrinsic and extrinsic motivation, learned helplessness, psychological reactance, gender and culture, and research design.—II. (II.) Spring

216. School-Based Prevention Programs (4)

Seminar—3 hours; term paper. Prerequisite: graduate standing or consent of instructor. Promotion of health and mental health in schools. Topics include the theoretical base, prevention models, specific examples of techniques and programs designed to prevent learning and adjustment problems, and evaluation issues. Offered in alternate years.—III. Sandoval

218. Testing Minority Children (4)

Lecture—3 hours; field work—3 hours. Prerequisite: admission to school psychology program or to M.A. bilingual education program or consent of instructor. Emphasizing tests and techniques that are appropriate for use with Hispanic students. The use of multicultural pluralistic assessment. Review studies and guidelines on use of tests with minority children. Offered in alternate years.—I. Figueroa

221. Culture and Social Organization of Schools (4)

Seminar—4 hours. Prerequisite: graduate standing or consent of instructor. Culture and social organization of schools. Examines perspectives of social researchers, educational policy-makers, and school members and their implications for educational research, policy and practice.—I. (I.) Wagner, Gandara

222. School Change and Educational Reform (4)

Lecture/discussion—2 hours; seminar—2 hours. Prerequisite: graduate standing in Education with course 120 or the equivalent. Analysis of models, processes, and case studies of school change and educational reform with respect to variable characteristics of schools and schooling, planned and unplanned change, the moral evaluation of school change, and the role of educational research. (Former course 204.)—II. (II.) Wagner

223. Education and Social Policy (4)

Seminar—4 hours. Prerequisite: graduate standing in Education or consent of instructor. Focuses on understanding the social and political context of education in the U.S. and California and how education policy is formed in the broader public arena. Develops skills in educational policy analysis. Offered in alternate years. (Former course 237.)—III. Gandara

226. Culture and Social Organization of Higher Education (4)

Seminar—3 hours; field work—1 hour. Prerequisite: graduate standing or consent of instructor. Critical study of culture and social organization of higher education institutions policies and functions in the U.S., with some attention to other countries. Offered in alternate years.—(III.) Wagner, Gandara

231. Culture and Learning (4)

Seminar—4 hours. Prerequisite: graduate standing in Education with course 120 or the equivalent, or consent of instructor. Analysis of major theories of relationships between learning and the sociocultural context in which learning takes place, issues related to the academic achievement of different language groups, and implications for research and pedagogical reform.—II. (II.)

233. Anthropology of Education (4)

Seminar—3 hours; term paper. Prerequisite: one of the following courses: Anthropology 117, 127, 129, or 222, or course 231, 201A, or 201B, or consent of instructor. Uses concepts of anthropology to examine education in such settings as family, community, and formal institutions of schooling. Course goal is to raise questions about educational issues often taken for granted and provide a perspective from which problems may be analyzed. Offered in alternate years. (P/NP grading only.)—I.

235. Critical Pedagogy (4)

Seminar—4 hours. Prerequisite: Critical Theory 200A and graduate standing. A sociocultural critique, from an interdisciplinary perspective, of educational reform and change. The critique will include an analysis of the influence of text content on the perpetuation of social power differences.—III. (III.)

242. Research on Text Comprehension (4)

Seminar—3 hours; term paper. Prerequisite: graduate standing or consent of instructor. Analysis of recent research related to cognitive processing of written texts. Topics include word decoding, schema theory, background knowledge, assimilation, accommodation, working memory, processing depth, vocabulary acquisition, sentence-level processes, text-level processes, text structure, implications for curriculum and instruction.—III. (I.)

243. Research on the Teaching and Learning of Writing (4)

Seminar—4 hours. Prerequisite: graduate standing in Education or consent of instructor. Study of issues in research on composition; history of composition studies; data analysis techniques; product and process approaches; cognitive and social perspectives. Offered in alternate years.—III. Murphy

244. Topical Seminar in Language, Literacy and Culture (4)

Seminar—3 hours; project—1 hour. Prerequisite: graduate standing. Critical study of selected issues of language, literacy, and culture as they relate to education. May be repeated twice for credit when topic differs.—II. (II.) Athanases

249. Discourse Analysis in Educational Settings (4)

Seminar—3 hours; term paper. Prerequisite: graduate standing and at least one previous course in linguistics or sociolinguistics, or consent of instructor. Examines form and type in discourse (e.g., narration, conversation, routines), approaches to discourse analysis, and research on classroom discourse (lessons, teaching/learning interactional sequences). Final term paper is an analysis of discourse data tape-recorded by student in a field setting. (Former course 239.)—II. (II.)

251. Research in Bilingual and Second Language Education (3)

Seminar—3 hours. Prerequisite: course 151; knowledge of a foreign language. Discussion and analysis of recent research in bilingual and second language education. Topics include: language acquisition in second language learners and bilinguals, second language teaching methods, language-use models in bilingual education, interaction analysis in bilingual/cross-cultural classrooms, use of the vernacular in classrooms. Offered in alternate years.—III. Merino

252. Multicultural Teaching and Curriculum (3)

Seminar—2 hours; field work—3 hours. Prerequisite: graduate standing or consent of instructor. Cross-cultural research on socialization, motivation, language acquisition and cognition and its application to effective classroom strategies and curriculum development for minority students. Students will develop and implement multicultural curriculum as well as use ethnographic research techniques in an educational setting. Offered in alternate years.—III. Merino

253. Language and Literacy in Linguistic Minorities (3)

Seminar—2 hours; field work—3 hours. Prerequisite: familiarity with another language and culture; graduate standing. Analysis and application of research on oral language development and literacy in language minority students, through the development, implementation, and evaluation of research-based language arts curriculum.—II. (II.) Merino, Watson-Gege

255. Curriculum Development and Evaluation in Mathematics (4)

Seminar—4 hours. Prerequisite: graduate standing in Education with upper division course work in mathematics or consent of instructor. Analysis of curricular issues and goals in mathematics education, including long-term trends, current status and influences, proposed changes, and evaluation issues. Selected curriculum projects will be examined.—I. (I.) Dugdale

256A. Research in Mathematics Education (4)

Seminar—4 hours. Prerequisite: graduate standing in Education with upper division course work in mathematics, or consent of instructor. Examination of research process in mathematics education; review of critical productive problems identified by researchers; evolution of trends, issues, theories and hypotheses in various areas of mathematics education research. Course emphasizes foundations. Offered in alternate years.—II. Dugdale

256B. Research in Mathematics Education (4)

Seminar—4 hours. Prerequisite: graduate standing in Education with upper division course work in mathematics, or consent of instructor. Current research issues and activities in mathematics education: sta-

tus, trends, theories and hypotheses. Formulation of research questions and design of studies. Projection of future directions for research. Offered in alternate years.—(II.) Dugdale

257. Computer Technology in Mathematics Education (4)

Seminar—4 hours. Prerequisite: graduate standing in Education with mathematics course work; or consent of instructor. The roles of calculators, computers, and graphing calculators in mathematics education will be addressed, with emphasis on the impact of these technologies on curriculum reform. Selected efforts to integrate technology into mathematics instruction will be examined. Offered in alternate years.—(III.) Dugdale

260. The Modern History of Science Education (4)

Seminar—4 hours. Prerequisite: graduate standing in Education with upper division coursework in science, or consent of instructor. History of curricular issues and goals in science education from the late 19th century forward, including long-term trends, current status and influences, proposed changes, and evaluation issues. National science standards and curriculum projects. Offered in alternate years.—(I.)

262A. Research Topics in Science Education I (4)

Seminar—4 hours. Prerequisite: graduate standing in Education with upper division coursework in science, or consent of instructor. Research process and product in science education; review of critical science education issues; evolution of trends, theories and hypotheses in various areas of science education research. Survey of current major research in science education. Offered in alternate years.—(I.)

262B. Research Topics in Science Education II (4)

Seminar—4 hours. Prerequisite: course 262A and graduate standing in Education with upper division coursework in science. Current research issues and activities in science education: status, trends, theories and hypotheses. Formulation of research questions, design of studies and critical, in-depth review of literature related to the student's research interests. Offered in alternate years.—(II.)

264. Scientific Literacy and Science Education Reform (4)

Seminar—4 hours. Prerequisite: graduate standing in Education with upper division coursework in science, or consent of instructor. Current trends in science education reform locally, regionally, and nationally focusing on scientific literacy. Equity, access and "science for all." Offered in alternate years.—(III.)

270. Research on Teacher Education and Development (4)

Seminar—3 hours; project. Prerequisite: graduate standing. Experience with formal or informal teaching recommended. Research on teacher preparation in university credential programs and on professional development of in-service teachers, with special attention to teacher preparation for work with culturally and linguistically diverse youth.—III. (III.) Athanases

275. Effective Teaching (4)

Seminar—4 hours. Review of research on the relationship of effective teacher behavior and student learning. Use of research on teacher effectiveness to develop teaching strategies. Ways to decide on the most appropriate instructional strategies in specific teaching situations.—I. (I.)

290C. Research Conference in Education (1)

Discussion—1 hour. Prerequisite: graduate standing. Presentations and critical discussions of research in education by graduate students with their major professor. May be repeated twice for credit. (S/U grading only.)—I, II, III. (I, II, III.)

291. Proseminar in Education (3)

Seminar—3 hours. Prerequisite: admission to the Ph.D. graduate program in Education. Seminar for first-year education doctoral students. The study of multi-disciplinary research approaches to educational issues. Reports and discussions of recent advances in education. Speakers from the graduate

group faculty in Education. May be taken twice for credit.—I, II. (I, II.) Dugdale

292. Special Topics in Education (2-4)

Variable—2-4 hours. Prerequisite: completion of doctoral core courses in Education or consent of instructor. Selected topics in education. Designed to facilitate preparation for the qualifying examination or dissertation. Students will critically analyze scholarly work including their own works in progress. May be repeated for credit.—(I, II, III.)

293. Topical Seminar in School Psychology (3)

Seminar—3 hours. Prerequisite: graduate standing in Education and consent of instructor. Critical study of selected issues in education and school psychology related to the learning and mental health of children and adolescents in schools. May be repeated once for credit.—I, III. Sandoval

298. Group Study (1-5)

(S/U grading only.)

299. Individual Study (1-6)

Independent study—3-18 hours. Individual study under the direction of a faculty member. (S/U grading only.)

299D. Research (1-12)

Independent study—3-36 hours. Research for individual graduate students. (S/U grading only.)

Professional Courses

300. Reading in the Elementary School (4)

Lecture—3 hours; field work—3 hours. Prerequisite: graduate standing. Principles, procedures, and curriculum materials for teaching of reading. Includes decoding skills with a special emphasis on phonics, comprehension skills, study skills, and reading in the content areas.—III. (I.) Galli Banducci

301. Reading in the Secondary School (4)

Discussion—4 hours. Prerequisite: graduate standing, enrollment in the secondary credential program, or consent of instructor. Principles, procedures, and materials to help secondary school teachers improve the reading competence of students. Strategies for enhancing learning through reading and writing in all disciplines, with special attention to linguistically diverse populations.—I, II. (I, II.) Murphy

302. Language Arts in the Elementary School (2)

Lecture—2 hours. Prerequisite: graduate standing. Principles, procedures, and materials for the teaching of oral and written expression, listening skills, drama, and children's literature in elementary schools.—I. (I.) Galli Banducci, Fortes

303. Art Education (3)

Lecture/discussion—2 hours; laboratory—2 hours. Prerequisite: admission to multiple subject credential program. Understanding the principles of education in the arts through participation. Development of concepts, introduction to media, and techniques suitable for the elementary school with emphasis on cross-discipline exploration.—III. (III.)

304A. Teaching in the Elementary Schools (2-18)

Lecture/discussion—2 hours; fieldwork—9-48 hours. Prerequisite: acceptance into a teacher education program. Supervised teaching in regular classrooms in elementary schools. Selection and organization of teaching materials. Introduction to techniques of diagnosing school achievement of children.—I. (I.)

304B. Teaching in the Elementary Schools (2-18)

Lecture/discussion—2 hours; fieldwork—9-48 hours. Prerequisite: acceptance into a teacher education program. Supervised teaching in regular classrooms in elementary schools. Current conceptions of elementary school curriculum, emphasis on contributions from the social, biological, and physical sciences. Emphasis on effective teaching methods.—II. (II.)

304C. Teaching in the Elementary Schools (2-18)

Lecture/discussion—2 hours; fieldwork—9-48 hours. Prerequisite: acceptance into a teacher education program. Supervised teaching in regular classrooms

in elementary schools. Evaluation of teaching materials including instructional technology. Current elementary school curriculum with emphasis on contributions from fine arts and humanities.—III. (III.)

305A. Teaching in the Middle Grades (5-8)
Lecture—2 hours; seminar—2 hours; student teaching—15-30 hours. Prerequisite: acceptance into a teacher education program. Supervised teaching in regular or special education classrooms in middle grades. Current conceptions of the middle-grades curriculum with emphasis on social, biological, and physical sciences. Effective teaching methods.—I. (I.)

306A–306B–306C. Teaching in the Secondary Schools (2-18)
Lecture/discussion—2 hours; fieldwork—9-48 hours. Prerequisite: acceptance into a teacher education program. Supervised teaching in regular secondary classrooms. Techniques for classroom communications; constructing goals and objectives; assessment of learning; special problems of adolescents; instructional technology.—I-II-III. (I-II-III.)

307. Methods in Elementary Science (2)
Lecture/discussion—2 hours. Prerequisite: acceptance into teacher education program. Principles, procedures, and materials for teaching the biological and physical sciences in elementary schools.—III. (III.)

308. Methods in Elementary Social Studies (2)
Lecture/discussion—2 hours. Prerequisite: acceptance into a teacher education program. Principles, procedures, and materials for teaching history and the social sciences in elementary schools.—III. (III.)

309. The Teaching of Mathematics, K-9 (3)
Lecture/discussion—3 hours. Prerequisite: acceptance into a teacher education program. Mathematics curriculum and teaching methods for K-9 reflecting the needs of California's diverse student populations.—I. (I.) Mendle

323A. Physical Science in the Secondary School (3)
Laboratory/discussion—2 hours; discussion/laboratory—1 hour. Prerequisite: acceptance into a teacher education program. Activity-based overview of concepts and processes in secondary school physical sciences. Emphasis upon philosophy, appropriate teaching methods, materials, assessment and evaluation of learning.—I. (I.) Pomeroy

323B. Life Sciences in the Secondary School (3)
Laboratory/discussion—2 hours; discussion/laboratory—1 hour. Prerequisite: acceptance into a teacher education program. Activity-based overview of concepts and processes in secondary school biology and life sciences. Emphasis on philosophy, appropriate teaching methods, materials, assessment and evaluation of learning, and issues.—II. (II.) Pomeroy

324A. Methods and Technology in Secondary Mathematics I (4)
Lecture/discussion—4 hours. Prerequisite: admission into a teacher education program or consent of instructor. Introduction to methods and curriculum for teaching mathematics at the secondary level. Introduction to applications of computer technology as instructional, intellectual, and communication tools for mathematics teachers.—I. (I.) Dugdale, Bellman

324B. Methods and Technology in Secondary Mathematics II (4)
Lecture/discussion—4 hours. Prerequisite: admission into a teacher education program or consent of instructor. Expansion of methods and curriculum for teaching mathematics at the secondary level. Intermediate applications of computer technology as instructional, intellectual, and communication tools in mathematics teaching.—II. (II.) Dugdale, Bellman

325. Research and Methods in Secondary English Language Arts (4)
Discussion—4 hours. Prerequisite: admission to graduate standing or credential program in Education or consent of instructor. Research on teaching and learning in the language arts. Principles, procedures and materials for improving the writing, reading and oral language of secondary students, with special attention to students from culturally and linguistically diverse populations.—III. (III.) Holmes

326. Teaching Language Minority Students in Secondary Schools: Methods and Research (4)
Seminar—3 hours; field work—3 hours. Prerequisite: graduate standing in Education of consent of instructor. Research on principles, procedures and curricula for teaching discipline-specific concepts to language-minority students in secondary schools. Second-language acquisition principles and instructional strategies.—II. (II.) Holmes

398. Group Study (1-5)
(S/U grading only.)

399. Individual Study (1-5)
(S/U grading only.)

Faculty

Steven Athanases, Ph.D., Assistant Professor
(*Education*)
Robert Blake, Ph.D., Professor (*Spanish*)
Alan Blakely, Ph.D., Education Program Specialist
(*Medical Education Opportunities Program*)
Marc Blanchard, Ph.D., Professor (*French, Comparative Literature*)
Brenda Bryant, Ph.D., Professor (*Human Development*)
Ann Cavallo, Ph.D., Assistant Professor (*Education*)
Sharon S. Dugdale, Ph.D., Professor (*Education*)
Richard A. Figueroa, Ph.D., Professor (*Education*)
Patricia Gandara, Ph.D., Professor (*Education*)
Barbara Goldman, Ph.D., Associate Director of
Teacher Education
Suad Joseph, Ph.D., Professor (*Anthropology*)
Ross MacDonald, Ph.D., Director, Special Projects
Maureen McMahon, Ph.D., Assistant Professor
(*Education*)
Barbara J. Merino, Ph.D., Professor (*Education*)
Jay Mechling, Ph.D., Professor (*American Studies*)
Sandra M. Murphy, Ph.D., Professor (*Education*)
Wendell Potter, Ph.D., Lecturer (*Physics*)
Tom Sallee, Ph.D., Professor (*Mathematics*)
Jonathan Sandoval, Ph.D., Professor (*Education*)
Evelyn Silvia, Ph.D., Professor (*Mathematics*)
Mary Schleppegrell, Ph.D., Associate Professor
(*Linguistics*)
Kenneth Verosub, Ph.D., Professor (*Geology*)
Jon Wagner, Ph.D., Professor (*Education*)
Karen Watson-Gegeo, Ph.D., Professor (*Education*)
Fred Wood, Ph.D., Lecturer (*Chemistry*)

Emeriti Faculty

Donald G. Arnstine, Professor Emeritus
Concha Delgado-Gaitan, Professor Emeritus
Kurt Kreith, Professor Emeritus
Douglas L. Minnis, Lecturer Emeritus
Susan A. Ostergard, Lecturer Emeritus
Julius M. Sassenrath, Professor Emeritus
Carl J. Spring, Professor Emeritus
David R. Wampler, Ph.D., Lecturer Emeritus
George Yonge, Professor Emeritus

Graduate Study. The Graduate Group in Education offers programs of study and research leading to the Ph.D. degree. Students may concentrate in educational psychology; language, literacy and culture; mathematics education; school organization and educational policy; and science education. Students may also combine these fields of study with designated emphasis areas such as critical theory, second language acquisition, and women's studies. Detailed information regarding graduate study may be obtained from the program Web page at <http://education.ucdavis.edu/gradgroup>, or by writing the group coordinator.

Preparation. Students should have earned an M.A. degree or the equivalent in a discipline relevant to their proposed emphasis program. For example, students applying for the mathematics education emphasis should have earned the M.A. or M.A.T. degree in mathematics or mathematics education; students applying to the educational psychology program should have an M.A. in psychology or educational psychology.

Graduate Adviser. P. Gandara, J. Wagner

Graduate Coordinator. K. Bray

Courses. See Education for courses.

Education Abroad Program

Programs of Study

The Education Abroad Program (EAP) is one of the premiere study abroad programs in the nation. Celebrating its 40th anniversary in 2002, EAP offers international study programs in association with nearly 140 host universities and colleges in some 35 countries around the world. More than 3,000 UC students will take part in this program in 2002-2003. Participating students remain registered at UC Davis while studying abroad and receive full academic credit for their work. EAP students maintain their financial aid and scholarship eligibility while abroad. Students may apply as early as their freshman year and participate during their senior year. EAP opportunities are also available to qualified graduate students who have completed at least one full year of graduate work and have support of their graduate program and graduate dean.

Academic Programs. EAP offers study programs for all majors. Some programs are for a full year, some are for a quarter or semester, and some are for the summer. Half of the programs are offered in English, not only in English-speaking countries such as the United Kingdom, Australia, New Zealand, and South Africa, but also at universities in Hong Kong, Budapest, the Netherlands, and Japan, among many others. Several programs make it possible for students to learn a language while experiencing the culture first hand (e.g., Spain, Italy, France, Germany, China, and Israel). Most programs include the possibility of internships. There are field research programs in Australia and Mexico, as well as two tropical biology programs in Costa Rica, a marine biology program in Australia, and a design program in Denmark. We also offer a Global Security and Economic Development Studies and a spring quarter engineering program in Japan. In most situations, students from the University of California live as the students of the host country do, and in some cases students attend the same courses, taught by the faculty of the host country. Language skills are only required for about half of the countries.

Because new programs are added every year, it is important to consult the Education Abroad Center Web site located at <http://eac.ucdavis.edu>. Additionally, country and discipline specific brochures are available at the Education Abroad Center.

UC faculty serve as directors at most Study Centers, providing academic advising to students while abroad. Full UC credit is granted for courses satisfactorily completed, and courses and grades are recorded on official UC transcripts. With careful planning, most EAP students make normal progress toward their UC degrees, even those students who study abroad for a full year. With approval of their major or college advisers, students may earn credit

towards their major, minor and general education requirements.

Finances. Participants pay the same fees as at UC Davis. Estimated budgets include room and board, books, round-trip transportation, on-site orientation, intensive language program (where applicable), and miscellaneous expenses. The cost of studying abroad is often comparable to that of studying at UC Davis, although living costs vary from country to country. In many cases, studying abroad is less expensive than studying at UC Davis.

Financial assistance is available to EAP students. Those already receiving UC financial aid maintain their eligibility for grants, loans and scholarships while studying on EAP. Financial aid is based on the cost of studying at each EAP location. Students who might not normally be eligible for financial aid may qualify for the period they are in EAP. In addition to UC financial aid, EAP provides support through various scholarships and grants. Campus scholarships may also be available based on the country, academic merit, or academic field of study. Students should contact the Education Abroad Center and Financial Aid Office for additional information.

Courses in Education Abroad Program (EAP)

Lower Division Course

90X. International Education Seminar (1)

Seminar—1 hour. Prerequisite: open to lower division applicants for EAP or UC Davis study abroad and international internship programs. Seminar examines the academic, cultural, and personal issues of study abroad, including academic programs abroad, country-specific history and culture, cross-cultural experiences, culture shock, racial and gender issues. May be repeated for credit. (P/NP grading only).—I. (I.) Dutschke

Upper Division Course

190X. International Education Seminar (1)

Seminar—1 hour. Prerequisite: open to upper division applicants for EAP or UC Davis study abroad and international internship programs. Seminar examines the academic, cultural, and personal issues of study abroad, including academic programs abroad, country-specific history and culture, cross-cultural experiences, culture shock, racial and gender issues. May be repeated for credit. (P/NP grading only).—I. (I.) Dutschke

Courses in Endocrinology (EDO)

Graduate Courses

218. Mammalian Endocrinology and Homeostasis (4)

Lecture—4 hours. Prerequisite: Biological Sciences 102 and 103, Neurobiology, Physiology and Behavior 101, and consent of instructor. Biochemical, physiological, and regulatory properties of the mammalian endocrine system, at the molecular, cellular and systemic level. Signal transduction mechanisms and hormonal actions. Principles that regulate homeostasis, especially in organ-organ interrelationships, metabolism and minerals, fluids and electrolytes. Reproductive endocrinology.—III. (III.) Turgeon

220. Endocrinology Literature Critique (1)

Discussion—1 hour. Prerequisite: consent of instructor. Critical reading and evaluation of current original publications in endocrinology. Selected papers will be presented and discussed in detail by faculty and students. May be repeated for credit. (S/U grading only).—I, II. (I, II.) Turgeon

240. Biochemical Endocrinology (3)

Lecture—3 hours. Prerequisite: graduate standing or consent of instructor. Examination of recent advances in biochemical endocrinology and molecular and cell biology of endocrine systems with emphasis on processes of hormone and receptor synthesis, second messenger phenomena, and hormonal control of gene expression.—III. (III.) Adams

298. Group Study (1-5)

Prerequisite: consent of instructor.

299. Research (1-12)

(S/U grading only.)

Undergraduate Study

The four-year undergraduate program is divided into two parts: the **Lower Division Program** and the **Upper Division Program**. If you enter the College of Engineering with fewer than 90 quarter units of

credit, follow the lower division program specified for your major.

If you enter the College with 90 or more quarter units of credit, you must fulfill the upper division requirements outlined in the Undergraduate Education chapter of this catalog, under "College of Engineering, Unit Requirements."

Graduate Study

Graduate degrees are offered in the following engineering disciplines:

**Applied Science
Biological and Agricultural Engineering
Chemical Engineering
Civil and Environmental Engineering
Electrical and Computer Engineering
Materials Science and Engineering
Mechanical and Aeronautical Engineering**

For additional information, refer to the *College of Engineering Bulletin*, obtainable from the UCD Bookstore, or phone the Graduate Study Office (530-752-0592). See also the Graduate Studies chapter of this catalog.

The Major Programs

The college has eight departments: Applied Science Engineering, Biological and Agricultural Engineering, Biomedical Engineering, Chemical Engineering and Materials Science, Civil and Environmental Engineering, Computer Science Engineering, Electrical and Computer Engineering, Mechanical and Aeronautical Engineering.

Twelve majors, leading to the B.S. degree, are open to students

**Aeronautical Science and Engineering
Biological Systems Engineering
Biomedical Engineering
Chemical Engineering
Chemical/Biochemical Engineering
Civil Engineering
Computer Engineering
Computer Science and Engineering
Electrical Engineering
Materials Science and Engineering
Mechanical Engineering
Optical Science and Engineering**

Four double majors are offered leading to the B.S. degree:

**Chemical Engineering/Materials Science
and Engineering
Civil Engineering/Materials Science and
Engineering
Electrical Engineering/Materials Science
and Engineering
Mechanical Engineering/Materials Science
and Engineering**

Courses in Engineering (ENG)

Lower Division Courses

4. Engineering Graphics in Design (3)

Lecture—2 hours; laboratory—3 hours. Introduction to engineering design, descriptive geometry, pictorial sketching, computer-aided graphics, and their application in the solution of engineering problems.—I. (I, III.) Schaaf, Yamazaki

5. Applications of Computers (3)

Lecture—2 hours; discussion—1 hour. Prerequisite: Mathematics 16A or 21A. Digital computation and computer programming in FORTRAN. Algorithms and their description. Basic programming; debugging of programs; approximate computing-accuracy and significance; solving simple numerical and non-numerical problems.—I, II, III. (I, II, III.)

6. Engineering Problem Solving (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: Mathematics 16B or 21B (may be taken concurrently). Methodology for solving engineering problems. Engineering computing and visualization based on MATLAB. Engineering examples and applications.—I, II, III. (I, II, III.)

7. Technology and Culture of the Internet (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: basic computer experience recommended. Technology and culture of networked computing and the Internet. Topics include the history and development of networked computing; Internet architecture and services; basics of Web page design and hypertext markup language; political, social, cultural, economic and ethical issues related to the Internet. GE credit: SciEng.—II, III. Lagerstrom

10. The Science Behind the Technology in Our Lives (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: high school algebra. Understanding of how the technology in our lives works using only basic concepts and rudimentary mathematics. GE credit: SciEng, Wrt.—I, II, III. Freeman

11. Issues in Engineering (1)

Lecture—1 hour. Prerequisite: Participation in the MESA Engineering Program or consent of instructor. Designed to broaden student's understanding of the engineering profession, its methods, principles, design and development process, career opportunities, and professional resources.—I. (I.) Ford

17. Circuits I (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: Mathematics 22B (may be taken concurrently); Physics 9C. Basic electric circuit analysis techniques, including electrical quantities and elements, resistive circuits, transient and steady-state responses of RLC circuits, sinusoidal excitation and phasors, and complex frequency and network functions.—I, II, III. (I, II, III.)

35. Statics (3)

Lecture—2 hours; laboratory—3 hours. Prerequisite: Physics 9A, Mathematics 21D (may be taken concurrently); Engineering 6 recommended. Force systems and equilibrium conditions with emphasis on engineering problems.—I, II, III. (I, II, III.)

45. Properties of Materials (4)

Lecture—3 hours; laboratory—3 hours. Prerequisite: Mathematics 16C or 21C and Chemistry 2A. Introductory course on the properties of engineering materials and their relation to the internal structure of materials. GE credit: Wrt.—I, II, III. (I, II, III.)

98. Directed Group Study (1-4)

Restricted to College of Engineering students only. (P/NP grading only.) May be repeated for credit up to 3 times.

Upper Division Courses**100. Electronic Circuits and Systems (3)**

Laboratory—3 hours; lecture—1 hour; discussion—1 hour. Prerequisite: course 17. Introduction to analog and digital circuit and system design through hands-on laboratory design projects. Students who have completed Electrical and Computer Engineering 100 may receive only 1.5 units of credit.—II, III. (II, III.)

102. Dynamics (4)

Lecture—4 hours. Prerequisite: course 35, Mathematics 22B; open to College of Engineering students only. Kinematics and kinetics of particles, of systems of particles, and of rigid bodies applied to engineering problems. Only 2 units of credit allowed to students who have previously taken Engineering 36.—I, II, III. (I, II, III.) Hess, Schaaf, Velinsky

103. Fluid Mechanics (4)

Lecture—4 hours. Prerequisite: course 102 (may be taken concurrently). Open to majors in hydrology or the College of Engineering. Fluid properties, fluid statics, continuity and linear momentum equations for control volumes, flow of incompressible fluids in pipes, dimensional analysis and boundary-layer flows. Not open for credit to students who have completed Chemical Engineering 150A.—I, II, III. (I, II, III.)

104. Mechanics of Materials (4)

Lecture—4 hours. Prerequisite: course 35, Mathematics 22B. Open to Engineering majors only. Uniaxial loading and deformation. General concepts of stress-strain-temperature relations and yield criteria. Torsion of shafts. Bending of beams. Deflections due to bending. Introduction to stability and buckling.—I, II, III. (I, II, III.)

104L. Mechanics of Materials Laboratory (1)

Laboratory—3 hours. Prerequisite: course 104. Experiments which illustrate the basic principles and verify the analysis procedures used in the mechanics of materials are performed using the basic tools and techniques of experimental stress analysis.—II, III. (II, III.) Chai

105. Thermodynamics (4)

Lecture—4 hours. Prerequisite: Mathematics 22B and Physics 9B. Open to Engineering majors only. Fundamentals of thermodynamics: heat energy and work, properties of pure substances, First and Second Law for closed and open systems, reversibility, entropy, thermodynamic temperature scales. Applications of thermodynamics to engineering systems.—I, II, III. (I, II, III.)

106. Engineering Economics (3)

Lecture—3 hours. Prerequisite: upper division standing in Engineering. The analysis of problems in engineering economy; the selection of alternatives; replacement decisions. Compounding, tax, origins and cost of capital, economic life, and risk and uncertainty are applied to methods of selecting most economic alternatives.—II. (II.) Hartsough, Slaughter

111. Electric Power Equipment (3)

Lecture—2 hours; laboratory—3 hours. Prerequisite: course 17. Principles of AC and DC electric motors and generators, their control systems and power sources. Selection of electric power equipment components based on their construction features and performance characteristics.—I. (II.) Delwiche Hartsough

122. Introduction to Mechanical Vibrations (4)

Lecture—4 hours. Prerequisite: course 102. Free and forced vibrations in lumped-parameter systems with and without damping; vibrations in coupled systems; electromechanical analogs; use of energy conservation principles.—I. (I.) Frank

160. Environmental Physics and Society (3)

Lecture—3 hours. Prerequisite: Physics 9D, 5C, or 10 or 1B and Mathematics 16B or the equivalent. Impact of humankind on the environment will be discussed from the point of view of the physical sciences. Calculations based on physical principles will be made, and the resulting policy implications will be considered. (In the College of Engineering, students may receive only one unit of credit towards the Technical Electives requirement.) (Same course as Physics 160.) GE credit: SciEng or SocSci.—I. (I.) Jungerman, Craig

180. Engineering Analysis (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: Mathematics 21D, 22B, and course 5 or 6. Solutions of systems of linear and nonlinear algebraic equations; approximation methods; solutions of ordinary differential equations; initial and boundary value problems; solutions of partial differential equations of elliptic, parabolic and hyperbolic types; Eigen value problems.—I. (I.) Hafez

190. Professional Responsibilities of Engineers (3)

Lecture—3 hours; laboratory—1 hour. Prerequisite: upper division standing. Organization of the engineering profession; introduction to contracts, specifications, business law, patents, and liability; discussion of professional and ethical issues; oral presentations on the interactions between engineering and society.—II, III. (II, III.) Sanders

191. Effective Communication Strategies in Engineering (1)

Lecture—1.5 hours. Prerequisite: upper division standing in an engineering major. Interpersonal communication strategies in various organizational situations. Topics include leadership theory, conflict resolution, ethics, and negotiating strategies. (P/NP grading only.)—II. (II.)

198. Directed Group Study (1-5)

May be repeated for credit up to 3 times. (P/NP grading only.)

Graduate Courses**250. Technology Management (3)**

Lecture—3 hours. Prerequisite: consent of instructor. Management of the engineering and technology

activity. Functions of design, planning, production, marketing, sales, and maintenance. Technological product life cycle. Research and development activity. Project planning and organization. Manufacturing issues. Case studies.—I. (I.)

The Major Program

The Department of Applied Science administers the Optical Science and Engineering curriculum in the College of Engineering.

Description. Optical Science and Engineering encompasses the physical phenomena and technologies associated with the generation, transmis-

sion, manipulation, detection, and applications of light. The Optical Science and Engineering curriculum prepares students to design, analyze, and fabricate effective optical systems. Much of the nation's high-technology infrastructure is based upon optics and its applications, the most prominent being optical digital information transmission. Optical systems play a central role in nearly all aspects of modern life, including health care and the life sciences, remote optical sensing, lighting, cameras, space, and national defense.

Students who complete the Optical Science and Engineering curriculum will receive a Bachelor of Science degree in Optical Science and Engineering.

Mission. The mission of the Department of Applied Science is to foster the use of fundamental mathematical and scientific knowledge to improve the quality of life. We provide the profession and academia with outstanding Optical Science and Engineering graduates who advance both engineering practice and fundamental knowledge.

Objectives. Our fundamental program objective is to educate students in the basics required for optical science and engineering: mathematics, sciences, and engineering. We educate students in the fundamentals of the analysis and design of optical systems. We challenge students to develop attributes that lead to professional growth throughout their careers: a sense of community, ethical responsibility, an expectation for lifelong learning and continuing education, the ability to think independently and perform creatively and effectively in teams; and the ability to communicate effectively both orally and in written media.

Outcomes. Upon graduation, we challenge our students to understand the fundamentals and the application of mathematics and sciences; and to have an ability to design and conduct experiments, as well as to analyze and interpret data; a proficiency in the design of components and systems to meet desired performance specifications; an ability to function effectively on multi-disciplinary teams; proficiency in the use of techniques, skills, and modern engineering tools to identify, formulate, and solve engineering problems; an understanding of professional and ethical responsibility; a proficiency in oral and written communication; the broad education necessary to understand the impact of engineering solutions in a global and societal context; an ability to engage in graduate education and life-long learning; and a knowledge of contemporary issues impacting society and the profession.

Total Lower Division Units.....	86	

Areas of Specialization

Areas of specialization within Optical Science and Engineering are (1) imaging, (2) lasers and spectroscopy, and (3) opto-electronics and opto-communications. You may specialize in one or more of these areas by selecting appropriate technical electives, but such specialization is not required. You are

urged to consult an adviser when developing your individual program.

Imaging. Creating and manipulating images is the oldest activity in the optical sciences, since it deals so intimately with human vision and the perception of the world around us. Lenses, prisms, mirrors, and a host of other elements can all be a part of a modern imaging system. This program emphasizes the analysis and design of optical imaging systems, and, in conjunction with other basic courses in relevant areas, will prepare students to contribute to many branches of industry and science that require the preparation, modification, projection, and analysis of optical images.

Suggested technical electives:

Applied Science Engineering 167, 169; Electrical and Computer Engineering 100, 106, 136, 150A, 150B.

Suggested Advisers: R. R. Freeman and B. H. Kolner.

Lasers and Spectroscopy. The unique properties of laser light have been widely used in science and technology. Lasers are quickly forming the backbone of our communication system, where light signals are transmitted through optical fibers carrying extremely wide information bandwidths. Lasers are used in surveying, guided missiles, and astronomy, because laser light projects long distances in very narrow beams. Lasers are widely used as a diagnostic tool in the sciences because laser light is coherent and has a narrow bandwidth. Students will understand these properties of laser light, as well as the potential for future applications.

Suggested technical electives:

Applied Science Engineering 116, 169, 170, 172; Electrical and Computer Engineering 133.

Suggested Advisers: H. A. Baldis, R. R. Freeman, B. H. Kolner, D. M. Krol, and Y. Yeh.

Opto-electronics and Opto-communications.

Opto-electronics and opto-communications are the enabling technologies that drive the development of the Internet, telephony, optical switching, next-generation computers, and secure data transmission. This program emphasizes the analysis and design of opto-communication and opto-electronics systems, and, in conjunction with other basic courses in relevant areas, will prepare students for many branches of industry and science.

Suggested technical electives:

Applied Science Engineering 169
Electrical and Computer Engineering 100, 133, 136, 140B, 150A, 150B.

Suggested Advisers: R. R. Freeman, J. P. Heritage, and B. H. Kolner.

Upper Division Program

UNITS

Required Courses

Applied Science Engineering/Physics 108A and 108B	8
Applied Science Engineering 115, 161, 165, and 166	16
Electrical and Computer Engineering 130A, 130B, 135, 140A	15
Physics 104A or Engineering 180	4
Physics 112	4
Chemistry 110A	4
Optics Electives: 28 units from the following:	
Applied Science Engineering 116, 167, 169, 170, 172; Electrical and Computer Engineering 100, 106, 133, 136, 140B, 150A, 150B	28
Applied Science Engineering 137 or Engineering 190	3
English 101 or any 102 or any 104	4
General Education Electives	8
Total Upper Division Units	94
Minimum Units Required for Major	180

Courses in Engineering: Applied Science—Davis (EAD)

Lower Division Courses

1. Introduction to Optical Science and Engineering (4)

Lecture—3 hours; laboratory—3 hours. Introduction to the field of optical science and engineering. Discussion and demonstration of optical science and engineering principles and applications. Laboratory exercises emphasize basic principles. Discussion of the opportunities and professional practice in the field including ethics and responsibilities.—I. (I.) Freeman

2. Introduction to Applied Computational Science and Engineering (4)

Lecture—3 hours; laboratory—3 hours. Prerequisite: Mathematics 21C (may be taken concurrently), Physics 9A (may be taken concurrently), Computer Science Engineering 30. Role of mathematics in modeling physical, biological, and engineering phenomena. Pitfalls in computation. Limitations of models, numerical implementations, and quality assessment of computational data. Interactions among mathematics, algorithms, computer hardware and software, and selected scientific and engineering applications.—III. (III.)

90C. Research Group Conference for Lower Division Students (1)

Discussion—1 hour. Prerequisite: lower division standing; consent of instructor. May be repeated for credit. (P/NP grading only)—I, II, III. (I, II, III.)

98. Directed Group Study (1-5)

Prerequisite: consent of instructor and lower division standing. (P/NP grading only.)

99. Special Study for Lower Division Students (1-5)

Prerequisite: consent of instructor. (P/NP grading only.)

Upper Division Courses

108A. Optics I (4)

Lecture—3 hours; laboratory—3 hours. Prerequisite: Physics 9D and Mathematics 21D. Optical properties of matter, the nature of light, reflection, refraction, and other properties of light. Basic optical components, reflecting systems, and dispersive components. Geometrical optics, ray tracing, and optical aberrations. Optical instruments. The color of light. Not open for credit to students who have completed Physics 108 and 108L.—I. (I.) Baldis, Zhu

108B. Optics II (4)

Lecture—3 hours; laboratory—3 hours. Prerequisite: course 108A or Physics 108A. Wave theory of optics, including Maxwell's equations and boundary condition, reflection and transmission coefficients, interference, diffraction, polarization, thin film and ultrathin film optics, and radiation from extended distributions of oscillating electrical dipoles. Applications of wave optics. Not open for credit to students who have completed Physics 108 and 108L.—II. (II.) Baldis, Zhu

115. Numerical Solution of Engineering and Scientific Problems (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: Engineering 5, 6 or Computer Science Engineering 30 and Mathematics 22B. Computer problem solving including: error analysis, roots of equations, systems of equations, interpolation and data fitting, integration; initial value, boundary value, and eigenvalue ordinary differential equations. Emphasis on robust methods to solve realistic problems.—I, II, III. (I, II, III.) Jensen

116. Computer Solution of Physical Problems (4)

Lecture—3 hours; laboratory—3 hours. Prerequisite: course 115. Application of computers to the solution of physical problems. Numerical solution of elliptic, parabolic, and hyperbolic partial differential equations. Eigenvalue problems. Monte Carlo methods.—III. Jensen, Cramer, Miller

117A. Simulation and Modeling of Real Time Systems (5)

Lecture—3 hours; laboratory—3 hours; extensive problem solving. Prerequisite: course 2, 116, Physics 9D, Engineering 180 or Physics 104A or the equivalent. Application of numerical techniques for simulation and modeling of nonlinear deterministic systems. Examples taken from fluid, continuum, and molecular mechanics, and from low dimensional nonlinear systems. Emphasis given to error and stability control through adaptive methods, and evaluation of relationships between the physical system, the model equations, and the numerical implementation.—I. (I.)

117B. Simulation and Modeling of Statistical Systems (5)

Lecture—3 hours; laboratory—3 hours; extensive problem solving. Prerequisite: Statistics 131A or Civil and Environmental Engineering 114 or Mathematics 131 and course 117A. Simulation of stochastic systems, maps, and deterministic chaos. Stability and error control in stochastic modeling. Fluctuations and dissipation; dynamics of complex and disordered systems; Monte Carlo techniques, Brownian, Langevin, and molecular dynamics. Simulation of meaningful statistical sampling in stochastic and disordered systems.—II. (II.)

117C. Topics in Simulation and Modeling (5)

Lecture—3 hours; laboratory—3 hours; extensive problem solving. Prerequisite: course 117B. Topics may include algorithms in electromagnetics, materials, biology, and economics. Fast multipole and resummation techniques, algorithms for integral transforms, mesh generation, combinatorics, encryption; data mining, handling, and compression of large data sets; optimization.—III. (III.)

118. High Performance Computing (4)

Lecture—3 hours; laboratory—3 hours. Prerequisite: course 117B (may be taken concurrently). Algorithms for efficient scientific computing on modern high-performance computers; influence on algorithms of distributed computing, memory management, networking, and information flow; managing relationships among computer architecture, software, and algorithms.—II. (II.)

137. Science and Technology of Nuclear Arms Effects and Control (3)

Lecture—3 hours. Prerequisite: upper division standing; one course from Physics 1B, 5C, 9C, or 10. Scientific and technical aspects of nuclear arms effects and nuclear arms control including the nuclear physics of atomic and hydrogen bombs, blast and radiation effects, radioactivity, electromagnetic pulse, ICBM accuracy, laser weapons, verification safeguards, biological and ecological effects. Emphasis on order of magnitude calculations. (In the College of Engineering, students may receive only one unit of credit towards the Technical Electives requirement.) (Same course as Physics 137.) GE credit: SciEng or SocSci.—I. (I.) Freeman

161. Optical Design (4)

Lecture—3 hours; laboratory—3 hours. Prerequisite: course 108A or Physics 108A. Capstone optical engineering design course. Knowledge and skills acquired in earlier coursework combined with engineering standards and realistic constraints. Optical materials and lens design, element aberrations, optical system design and construction, element and system testing.—III. (III.) Thomas

165. Statistical and Quantum Optics (4)

Lecture—3 hours; laboratory—3 hours. Prerequisite: Chemistry 110A, Electrical and Computer Engineering 130B, Physics 112 (may be taken concurrently). Waves and photons; photon number and fluctuations; field and number fluctuations; properties of single-mode, coherent, and statistical mixture states of the radiation field; photon bunching and antibunching; photoelectric counting distributions for chaotic and coherent light; the squeezed state. Not open for credit to students who have completed course 165A.—I. (I.) Yeh

166. Lasers and Nonlinear Optics (4)

Lecture—3 hours; laboratory—3 hours. Prerequisite: course 165. Theory of simple optical processes,

population inversion, stimulated emission, laser threshold conditions, line broadening mechanisms, saturation, coherence, laser resonator optics, Q-switching, mode locking, harmonic and sum-frequency generation, parametric conversion, stimulated scattering processes, four-wave mixing, phase conjugation, frequency chirping, ultrashort pulse generation.—II. (II.) Yeh

167. Fourier Optics (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: Physics 104B and Electrical and Computer Engineering 130B. Linear systems analysis of two-dimensional optical systems, 2D Fourier transforms, scalar diffraction theory, Fresnel and Fraunhofer diffraction, coherent and incoherent optical systems, spatial frequency analysis, analog optical information processing, spatial light modulators, film, holography, character recognition, and image restoration.—II. (II.) Kolner

169. Optical Properties of Materials (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: Engineering 45, course 108B or Physics 108B, Chemistry 110A. Relations among structure, composition and optical properties of laser materials, nonlinear optical materials, photorefractives, fiber optics, semiconductors, liquid crystals, and thin films.—III. (III.) Krol

170. Optical Spectroscopy: Concepts and Instrumentation (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: Chemistry 110A and course 166. Fundamentals of absorption and emission, spectrometers, interferometers, light sources and detectors, UV, Visible, and IR spectroscopy, fluorescence spectroscopy, Raman and Brillouin scattering, high-resolution laser spectroscopy.

171. Scanning Probe Microscopy (4)

Lecture—3 hours; laboratory—3 hours. Prerequisite: Electrical and Computer Engineering 130A, Engineering 102, Chemistry 110B or the equivalent. Physics of scanning microprobe techniques, scanning tunneling microscope and atomic force microscope will be studied, as will their applications to surfaces and structural biology. Operational STM and AFM will further students' experience in nanoscale science and technology.—III. (III.) Yeh

172. Optical Methods for Biological Research (3)

Lecture—3 hours. Prerequisite: Biological Sciences 1 and course 108B or Physics 108B. Current problems in biology using the available and emerging optical tools for quantitative data acquisition, analysis, and interpretation. Significant research areas in biology are identified; optical techniques to resolve the problems.—III. (III.) Yeh, LaSalle

190C. Research Group Conference for Advanced Undergraduates (1)

Discussion—1 hour. Prerequisite: advanced standing; consent of instructor. Weekly conference on research problems, progress and techniques in applied science. May be repeated for credit. (P/NP grading only.)—I, II, III. (I, II, III.)

198. Group Study (1-5)

Prerequisite: consent of instructor. (P/NP grading only.)

199. Special Study for Advanced Undergraduates (1-5)

Prerequisite: consent of instructor. (P/NP grading only.)

Graduate Courses**205A. Mathematical Methods (3)**

Lecture—3 hours. Prerequisite: Mathematics 22B. Complex variables, theory of convergence, evaluation of definite integrals, factorial function (gamma function), asymptotic expansions, Fourier analysis.—I. Jensen, Orel, Rodrigue

205B. Mathematical Methods (3)

Lecture—3 hours. Prerequisite: course 205A. Laplace transforms, Sturm-Liouville theory, solution of 2nd order linear ODE, approximate solutions of ODE, calculus of variations, characteristics.—II. Jensen, Orel, Rodrigue

205C. Mathematical Methods (3)

Lecture—3 hours. Prerequisite: course 205B. Spherical harmonics, Bessel functions, conformal mapping, hypergeometric functions, elliptic functions.—III. Jensen, Orel, Rodrigue

209. Linear Modeling Techniques (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: Mathematics 167 or the equivalent strongly recommended. Matrix theory and linear algebra with emphasis on applications in engineered systems; geometric aspects of linear algebra; matrix factorizations; analysis and design techniques for discrete- and continuous-time lumped parameter models.—I. (I.) Laub

217A. Applied Computational Science (3)

Lecture—3 hours. Prerequisite: course 210A, Mathematics 229A or the equivalent (may be taken concurrently). Applied modular programming in low level language (c or fortran). Direct implementations and integrated applications of algorithms applied to computational science problems, which are exemplified through projects. Emphasis on the practical use and implementation of theory taught in course 210A.—I. Rodrigue, Miller, Orel, Jensen

217B. Applied Computational Science (3)

Lecture—3 hours. Prerequisite: course 210B or the equivalent (may be taken concurrently). Applied modular programming in low level language (c or fortran). Direct implementations of the theory taught in course 210B and integrated applications of algorithms for computational science problems, exemplified through projects including partial differential equations; initial/boundary value problems.—II. Rodrigue, Miller, Orel, Jensen

228A-228B-228C. Properties of Matter (3-3-3)

Lecture—3 hours. Prerequisite: Mathematics 22B and Physics 112B. Microscopic and macroscopic descriptions of matter; thermodynamics and kinetics; constitutive, electrical, mechanical and thermal properties.—I, II, III. (I, II, III.) Luhmann, Yeh, Baldis, McCurdy

229. Computational Molecular Modeling (4)

Lecture—3 hours; project. Prerequisite: course 210A and 228A or consent of instructor. Theory and hands-on implementation of algorithm in computational statistical mechanics. Temporal integrators, molecular dynamics, force fields, constrained dynamics, Monte Carlo techniques, fluctuation-dissipation theorem, and parallel vs. serial computing.—II. (II.) Jensen

262A. Atomic and Molecular Interactions (3)

Lecture—3 hours. Prerequisite: Physics 215A-215B-215C or the equivalent. Atomic structure and spectra. Offered in alternate years.—(I.) Orel, Freeman

262B. Atomic and Molecular Interactions (3)

Lecture—3 hours. Prerequisite: Physics 215A-215B-215C. Molecular structure and spectra. Offered in alternate years.—(II.) Orel, Freeman

262C. Atomic and Molecular Interactions (3)

Lecture—3 hours. Prerequisite: course 262B. Classical and quantum mechanical collision theory of electron and heavy particle scattering. Offered in alternate years.—(III.) Orel, Freeman

263A. Quantum Statistics of Light (3)

Lecture—3 hours. Prerequisite: Physics 200B-200C and Physics 215A-215B-215C or the equivalent. Classical susceptibilities, single quantization of light/matter interactions, resonance phenomena, second quantization of electromagnetic fields, number representation and operators.—II. (II.) Freeman

264A. Classical Optics I (3)

Lecture—3 hours. Prerequisite: course 108B and Electrical and Computer Engineering 130B or Physics 110B. Crystal optics; anisotropic wave propagation, dispersion relations, phase and group velocity surfaces. Polarization, Stokes parameters, Poincare sphere. Optical crystallography; interference figures, optical activity, crystal symmetry and point groups. Piezoelectricity, electro-optic, magneto-optic effects. Geometrical optics; eikonal equation, Lagrange's integral invariant, Fermat's principle.—I. (I.) Kolner

264B. Classical Optics II (3)

Lecture—3 hours. Prerequisite: course 264A. Dielectric waveguide theory; slab waveguides, integrated optics waveguides, optical fibers. Guided, radiation, and leaky-wave modes. Dispersion, compensation, and communications bit rates. Coupled-mode theory, waveguide perturbations, directional couplers, fiber gratings. Dielectric microcavities. Self- and cross-phase modulation. Solitons.—II. (II.) Kolner

264C. Classical Optics III (3)

Lecture—3 hours. Prerequisite: course 264B. Huygens-Fresnel principle, Kirchoff's diffraction theory. Fresnel and Fraunhofer diffraction. Phase and amplitude gratings, apertures, lenses, two-dimensional linear systems. Spatial filtering. Holography. Coherence theory; spatial/temporal coherence, partial coherence, mutual intensity, degree of coherence, van Cittert-Zernike theorem, coherency matrix.—III. (III.) Kolner

271. Optical Methods in Biophysics (3)

Lecture—3 hours. Prerequisite: Physics 110A-110B-110C, Chemistry 110A, 110B, or the equivalent. Physics of light-matter interactions used in biophysical research. Techniques of absorption, ellipsometry, fluorescence, phosphorescence, elastic and inelastic scattering, diffraction, and nonlinear optics are applied to the studies of proteins, nucleic acids, lipids, and supra-molecular organizations in biological systems. Offered in alternate years.—(I.) Yeh, Matthews

273. X-Ray Spectroscopy and Synchrotron Radiation (4)

Lecture—3 hours; discussion—1 hour. Fundamentals of x-ray absorption, emission, and inelastic scattering; x-ray imaging and microscopy; synchrotron radiation from bend magnets, wigglers, undulators, and free electron lasers; x-ray optics and storage ring design; visits to the synchrotron radiation facilities SSRL and ALS; optional experiments. Offered in alternate years.—III. Cramer

280A-280B-280C. Plasma Physics and Controlled Fusion (3-3-3)

Lecture—3 hours. Prerequisite: course 234B or consent of instructor. Equilibrium plasma properties; single particle motion; fluid equations; waves and instabilities in a fluid plasma; plasma kinetic theory and transport coefficients; linear and nonlinear Vlasov theory; fluctuations, correlations and radiation; inertial and magnetic confinement systems in controlled fusion.—I-II-III. (I-II-III.) Luhmann, Hwang

285A. Physics and Technology of Microwave Vacuum Electron Beam Devices I (4)

Lecture—4 hours. Prerequisite: B.S. degree in physics or electrical engineering or the equivalent background. Physics and technology of electron beam emissions, flow and transport, electron gun design, space charge waves and klystrons. Offered in alternate years.—(III.) Luhmann

285B. Physics and Technology of Microwave Vacuum Electron Beam Devices II (4)

Lecture—4 hours. Prerequisite: 285A. Theory and experimental design of traveling wave tubes, backward wave oscillators, and extended interaction oscillators. Offered in alternate years.—(I.) Luhmann

285C. Physics and Technology of Microwave Vacuum Electron Beam Devices III (4)

Lecture—4 hours. Prerequisite: 285B. Physics and technology of gyrotrons, gyro-amplifiers, free electron lasers, magnetrons, crossfield amplifiers and relativistic devices. Offered in alternate years.—(II.) Luhmann

285D. Physics and Technology of Microwave Vacuum Electron Beam Devices IV (4)

Lecture—4 hours. Prerequisite: 285C. Computational models of vacuum electron beam devices. Offered in alternate years.—(III.) Luhmann

289A-K. Special Topics in Applied Science (1-5)

Lecture, laboratory, or combination. Prerequisite: consent of instructor. Special topics in the following areas: (A) Atomic and Molecular Physics; (B) Chemical Physics; (C) Computational Physics; (D) Digital Media; (E) Materials Science; (F) Imaging Science

and Photonics; (G) Nonlinear Optics; (H) Plasma Physics; (I) Quantum Electronics; (J) Solid State; (K) Microwave and Millimeter Wave Technology. May be repeated for credit up to a total of 5 units per segment when topic differs.—I, II, III. (I, II, III.)

290. Seminar (1-2)

Seminar—1-2 hours. (S/U grading only.)

290C. Graduate Research Group Conference (1)

Discussion—1 hour. Prerequisite: consent of instructor. May be repeated for credit. (S/U grading only.)

298. Group Study (1-5)

(S/U grading only.)

299. Research (1-12)

(S/U grading only.)

Courses in Engineering: Applied Science—Livermore (EAL)

Upper Division Course**199. Special Study for Advanced Undergraduates (1-5)**

Prerequisite: consent of instructor. (P/NP grading only.)

Graduate Courses**205A. Mathematical Methods (3)**

Lecture—3 hours. Prerequisite: calculus. Complex variables, theory of convergence, evaluation of definite integrals, factorial function (gamma function), asymptotic expansions, fourier analysis.—I. (I.) Orel, Rodrigue, Miller

205B. Mathematical Methods (3)

Lecture—3 hours. Prerequisite: course 205A. Laplace transforms, Sturm-Liouville theory, solution of second order linear ODE, approximate solutions of ODE, calculus of variations, characteristics.—II. (II.) Orel, Rodrigue, Miller

205C. Mathematical Methods (3)

Lecture—3 hours. Prerequisite: course 205B. Spherical harmonics, Bessel functions, conformal mapping, hypergeometric functions, elliptic functions.—III. (III.) Orel, Rodrigue, Miller

210A. Numerical Methods in Applied Science (3)

Lecture—3 hours. Prerequisite: calculus through differential equations and vector analysis. Numerical techniques used in a wide variety of applications of digital computers to problems in applied science. Emphasis placed on the common mathematical elements of the techniques developed.—I. (I.) Rodrigue, Miller, Jensen

210B. Numerical Methods in Applied Science (3)

Lecture—3 hours. Prerequisite: course 210A. Numerical methods applicable to the solution of partial differential equations. Emphasis on finite-difference, finite-element, and spectral methods for linear hyperbolic, parabolic, and elliptic systems and nonlinear hyperbolic systems.—II. (II.) Rodrigue, Miller, Jensen

210C. Numerical Methods in Applied Science (3)

Lecture—3 hours. Prerequisite: course 210B. Computational methods in various fields including: fluid mechanics, kinetic theory, solid mechanics, quantum mechanics.—III. (III.) Rodrigue, Vemuri

211A. Numerical Solution of Partial Differential Equations I (3)

Lecture—3 hours. Prerequisite: course 210A, 210B. Fundamentals of parallel computers, grid generation, domain decomposition, Poisson's equation, elliptic PDEs, Galerkin methods, numerical linear algebra, iterative acceleration.—I. (I.) Rodrigue, Miller, Orel, Jensen

211B. Numerical Solution of Partial Differential Equations II (3)

Lecture—3 hours. Prerequisite: course 211A. Parabolic PDEs, stability, preconditioned time differencing, hyperbolic PDEs, modified differential equation, advection-diffusion equations, wave equation, Burg-

ers' equation, reaction-diffusion equations.—II. (II.) Rodrigue, Miller, Orel, Jensen

211C. Numerical Solution of Partial Differential Equations III (3)

Lecture—3 hours. Prerequisite: course 211B. Conservation laws, fluid equations, turbulence, elasticity equations, electromagnetic equations, transport equations.—III. (III.) Rodrigue, Miller, Orel, Jensen

213A. Computer Graphics (3)

Lecture—3 hours. Prerequisite: consent of instructor. Development of algorithms for perspective line drawings of three-dimensional objects, as defined by polygons or bicubic patches.—(II.) Max

213B. Computer Graphics (3)

Lecture—3 hours. Prerequisite: course 213A or Computer Science Engineering 175. Algorithms to produce color raster renderings of three-dimensional models.—(III.) Max

214. Scientific Visualization (3)

Lecture—3 hours. Prerequisite: Computer Science Engineering 175 or consent of instructor. Visualization of 3D data, including scalar fields, vector fields, and molecular structures. Primary emphasis on volume visualization algorithm.—(II.) Max

215. Computer Animation (4)

Lecture—3 hours; laboratory—3 hours. Prerequisite: Computer Science Engineering 175 or 177 or 178. Control of camera and object motion necessary to produce computer animation, modeling of articulated objects made from jointed segments, and of deformable objects. Students will complete a final animation project. (Same course as Computer Science Engineering 279). Offered in alternate years.—(III.) Max

216A-G. Special Topics in Computer Science (1-5)

Lecture, laboratory, or combination. Prerequisite: consent of instructor. Special topics in the following areas: (A) Architecture; (B) Software Systems; (C) Language Translation; (D) Language Design; (E) Operating Systems; (F) Foundations of Computing; (G) Computational Mathematics. May be repeated for credit for a total of 5 units per segment if topic differs.—(I, II, III.)

217A. Applied Computational Science (3)

Lecture—3 hours. Prerequisite: course 210A, Mathematics 229A, or the equivalent (may be taken concurrently). Applied modular programming in low level language (C or Fortran). Direct implementations and integrated applications of algorithms applied to computational science problems, which are exemplified through projects.—(I.) Rodrigue, Miller, Orel, Jensen

217B. Applied Computational Science (3)

Lecture—3 hours. Prerequisite: course 210B or the equivalent (may be taken concurrently). Applied modular programming in low level language (C or Fortran). Direct implementations and integrated applications of algorithms applied to computational science problems, which are exemplified through projects.—(II.) Rodrigue, Miller, Orel, Jensen

218. Signal Processing (3)

Lecture—3 hours. Prerequisite: Mathematics 121A, 121B or the equivalent. Discrete-time and continuous-time signal processing. Fourier transforms, Laplace transforms, sampling and reconstruction. LTI systems: convolution. Discrete-time transforms: DFT, FFT, and Discrete wavelet transforms. Filters and filter designs.—I. (I.) Dowla

219. Wavelets and Their Applications (3)

Lecture—3 hours. Prerequisite: Electrical and Computer Engineering 150A, Mathematics 167. Fourier transforms and digital filters; sampling theorem and analog-to-digital conversion, multirate signal processing; wavelet transforms and filter banks; fast algorithms: FFT, DWT, and pyramid; data compression with wavelets; spectral factorization; designing application-specific wavelets. Offered in alternate years.—(II.) Dowla

220A. Artificial Neural Nets-I (3)

Lecture—3 hours. Prerequisite: Mathematics 167; ability to use computers to solve problems using a traditional language or via tools like Matlab or Mathe-

matica. Biological and Computational motivations. Models of neurons. Supervised and unsupervised learning. Correlation matrix memories. Discrete and continuous Hopfield nets. Self organization. Kohonen Net. Counter propagation. Perceptron. LMS methods. Back propagation. Offered in alternate years.—(I.) Vemuri

220B. Artificial Neural Nets—II (3)

Lecture—3 hours. Prerequisite: course 220A. Growing and pruning algorithms for multi-layer perceptrons, acceleration of convergence, conjugate gradient methods. RBF networks. Temporal processing. Modular networks. Reinforcement learning. Neurodynamics. Case studies. Offered in alternate years.—(II.) Vemuri

221. Genetic Algorithms and Optimization (3)

Lecture—3 hours. Prerequisite: Mathematics 145 or the equivalent; graduate standing; ability to program in one of the modern programming languages. Introduction to genetic algorithms. Fundamental theorem; schema processing; genetic operators; applications to function optimization, scheduling, VLSI circuit layout. Implementation on parallel computers; genetic programming; evolutionary algorithms.—(III.) Vemuri

225. Computational Structures for Signal and Image Processing and Graphics (3)

Lecture—3 hours. Prerequisite: Computer Science Engineering 40; course 210A. Tools for research in digital media. Relevant computer architectures, algorithms and languages for signal processing, image processing and graphics. Hardware and software issues in parallelism. Programming in SISAL. Parallel C and Parallel Fortran. Parallel algorithms using SISAL on parallel computers. Offered in alternate years.—(III.) Vemuri

226. Practical Data Communications in Digital Media (3)

Lecture—3 hours. Prerequisite: Computer Science Engineering 152. Tools for research in digital media. Communication protocols, algorithms and architectures suitable in modern networked environment. Transmission of digital data over voice-grade channels, telecommunications networks for data transport. Broadband multimedia communications, ATM, and Broadband ISDN. Offered in alternate years.—(II.) Vemuri, Dowl

228A-228B-228C. Statistical Mechanics (3-3-3)

Lecture—3 hours. Prerequisite: Mathematics 22B and Physics 112B. Microscopic and macroscopic descriptions of matter; thermodynamics and kinetics; constitutive, electrical, mechanical and thermal properties.—II-III. (I-II-III.) Luhmann, Yeh, Baldis, McCurdy

230. Topics in Computational Fluid Dynamics (3)

Lecture—3 hours. Prerequisite: course 210A, 210B or consent of instructor. A hands-on approach to numerical methods for compressible fluid flow. Readings and discussions of solution strategies complemented with programming exercises and projects to give first hand experience with performance and accuracy of several computational methods; from upwind differencing to Godunov methods.—III. (III.) Miller

233A-233B-233C. Theory and Applications of Solid-State Physics (3-3-3)

Lecture—3 hours. Prerequisite: course 230C or the equivalent. Structure and properties of crystals; theory of dielectrics, metals and alloys; magnetism, superconductivity, and semiconductors. Applications to various solid-state devices.—I-II-III. (I-II-III.) Freeman, Termino

262A-262B-262C. Atomic and Molecular Interactions (3-3-3)

Lecture—3 hours. Prerequisite: course 230A-230B-230C or the equivalent. Atomic structure and spectra, molecular structure and spectra, classical and quantum mechanical collision theory of electron and heavy particle scattering.—I-II-III. (I-II-III.) Orel, Freeman

263A. Quantum Statistics of Light (3)

Lecture—3 hours. Prerequisite: Physics 200B-200C and Physics 215A-215B-215C or the equivalent.

Investigation of the quantum nature of light using second quantization for the interaction of photons with matter. Offered in alternate years.—(II.) Freeman

263B. Quantum Theory of Optics (3)

Lecture—3 hours. Prerequisite: course 263A. Statistics of photon fluctuations are derived, resulting in the fundamental theory of "lasing." Offered in alternate years.—(III.) Freeman

265A. Laser Physics I (3)

Lecture—3 hours. Prerequisite: Physics 200C and Physics 215B-215C or the equivalent. Classical theory of lasers. Classical electron oscillator, atomic susceptibility, line broadening mechanisms, rate equations, stimulated transitions, radiative/nonradiative relaxations, multilevel systems, population inversion, saturation, oscillation, Schawlow-Townes limit, paraxial wave propagation, dispersion, pulse compression, resonators, modes, stability, Q-switching, modelocking.—I. (I.) Kolner

265B. Laser Physics II (3)

Lecture—3 hours. Prerequisite: course 265A. Beam propagation, resonators and laser dynamics. Threshold dynamics and cavity modes. Ray optics and matrices, wave optics and Gaussian beams. Resonator stability. Linear pulse propagation, dispersion and pulse compression. Spiking, relaxation, Q-switching, injection locking and modelocking.—II. (II.) Kolner

267. Nonlinear Optics (3)

Lecture—3 hours. Prerequisite: course 265A-265B. Theory of the nonlinear interaction of radiation and matter. Nonlinear optical properties of materials. Crystal optics, electro-optics, and acousto-optics. Parametric oscillation and amplification. Harmonic conversion. Stimulated Raman and Brillouin scattering, self-focusing, four-wave mixing, phase conjugation and spectroscopy.—III. (III.) Krol

270A-270B. Advanced Laser Plasma Physics (3)

Lecture—3 hours. Prerequisite: course 205A, 205B, 234. Laser-produced plasmas and advanced applications of high power lasers. Plasma formation with lasers, ponderomotive force, kinetic theory, waves in unmagnetized plasmas, non-linear effects, parametric instabilities, hydrodynamic instabilities, and radiation transport. Applications include ICF, X-ray lasers.—II-III. (II-III.) Baldis

280A-280B-280C. Plasma Physics and Controlled Fusion (3-3-3)

Lecture—3 hours. Prerequisite: course 234B or consent of instructor. Equilibrium plasma properties; single particle motion; fluid equations; waves and instabilities in a fluid plasma; plasma kinetic theory and transport coefficients; linear and nonlinear Vlasov theory; fluctuations, correlations and radiation; inertial and magnetic confinement systems in controlled fusion.—I-II-III. (I-II-III.) Hwang, Baldis

289A-K. Special Topics in Applied Science (1-5)

Lecture, laboratory, or combination. Prerequisite: consent of instructor. Special topics in the following areas: **(A)** Atomic and Molecular Physics; **(B)** Chemical Physics; **(C)** Computational Physics; **(D)** Digital Media; **(E)** Materials Science; **(F)** Imaging Science and Photonics; **(G)** Nonlinear Optics; **(H)** Plasma Physics; **(I)** Quantum Electronics; **(J)** Solid State; **(K)** Microwave and Millimeter Wave Technology. May be repeated up to a total of 5 units per segment when topic differs.—I, II, III. (I, II, III.)

290. Seminar. (1-2)

Seminar—1-2 hours. (S/U grading only.)

290C. Graduate Research Group Conference (1)

Discussion—1 hour. Prerequisite: consent of instructor. May be repeated for credit. (S/U grading only.)

298. Group Study (1-5)

(S/U grading only.)

299. Research (1-12)

(S/U grading only.)

Mission. The Department of Biological and Agricultural Engineering is dedicated to the advancement of engineering for biological systems. Specifically, our goals are to advance the science, teach the principles and application, and disseminate the knowledge of engineering needed to efficiently produce, distribute, and process biological products, such as food, feed, and fiber, while conserving natural resources, preserving environmental quality, and ensuring the health and safety of people.

Objectives. We educate students in the fundamentals of mathematics, physical and biological sciences, and engineering, balanced with the application of principles to practical problems. We teach students to develop skills for solving engineer-

ing problems in biological systems through use of appropriate analysis, synthesis, and engineering design techniques. We prepare students for entry into engineering practice and graduate education, as well as engagement in life-long learning. We foster the ability of our students to collaborate and communicate effectively, and provide an awareness of the importance of economics, professional responsibility, and the environment.

The Biological Systems Engineering Major Program

Biological Systems Engineering is the branch of engineering that builds strongly on biology as a scientific base. In the coming age of biology and biotechnology, engineers will be needed to work side by side with life scientists to bring laboratory developments into commercial production. Industries in plant and animal production, tissue culture, bioprocessing, biotechnology, food processing, aquaculture, agriculture, and forest production will all need engineers with strong training in biology. Concern for our environment is opening new engineering opportunities as society strives to maintain a balance within the biosphere.

In the freshman and sophomore years, the Biological Systems Engineering major requires sequences of courses usual in all engineering programs, including mathematics, physics, chemistry, engineering science, and humanities. Unlike other majors, the Biological Systems Engineering major also requires fundamental courses in the biological sciences and the integration of engineering with biology.

Biological Systems Engineering Curriculum

The Biological Systems Engineering curriculum is accredited by the Engineering Accreditation Commission of the Accreditation Board for Engineering and Technology, Inc.

Lower Division Program

	QUARTER USUALLY TAKEN
Required Courses	
Mathematics 21A-21B-21C-21D16	1-2-3-4
Mathematics 22A-22B.....6 or 7	5-6
Physics 9A-9B-9C15	3-4-5
Chemistry 2A-2B10	2-3
Chemistry 8A or 118A2 or 4	6
Biological Sciences 1A.....5	4
Biological Systems Engineering 15	1
Engineering 6 or Computer Science Engineering 30*4	2
Engineering 174	6
Engineering 353	4
Biological Systems Engineering 75..4	5
English 1 or 3, or Comparative Literature 1, 2, 3, or 4, or Native American Studies 54	1
Communication 1 or 3 (or an acceptable substitute as approved by the Undergraduate Study Committee of the College of Engineering)4	2
General Education electives12	1, 5, 6
Total Lower Division Units.....94-97	

* Mathematics 22AL is required concurrently with Mathematics 22A if you opt to take Computer Science Engineering 30 rather than Engineering 6.

Upper Division Program

In the junior and senior years, the Biological Systems Engineering major requires courses that focus on the integration of biology and physical sciences with engineering. Depending on your area of interest, you may select elective courses from seven specializations:

- Agricultural Engineering
- Aquacultural Engineering
- Biotechnical Engineering
- Ecological Systems Engineering
- Food Engineering
- Forest Engineering
- Premedical/Biomedical Engineering

You may also develop your own specialization in consultation with your adviser. The upper division requirements are listed following the areas of specialization.

Areas of Specialization

Agricultural Engineering. Students specializing in agricultural engineering integrate engineering analysis and design with applied biology to solve problems in producing, transporting and processing agricultural products. Agricultural engineers design machinery, processes, and systems for managing a productive plant and animal culture, including environment, nutrient, and waste. The recommended electives provide students with the fundamental principles of agricultural production and a broad background in engineering. Agricultural engineers are employed as practicing professionals and managers with large and small agricultural producers, equipment manufacturers, food processors, consulting engineering firms, and government agencies.

Recommended biological science electives:

- Plant Emphasis*
- Plant Biology 111
- Soil Science 100
- Select one course from Agricultural Systems and Environment 110A, Entomology 100, Plant Biology 174, Environmental Horticulture 102

- Animal Emphasis*
- Neurobiology, Physiology, and Behavior 101
- Soil Science 100

Select one course from Avian Sciences 100, Animal Science 143, 144, 146

Recommended engineering electives:

- Biological Systems Engineering 114, 132, 145
- Civil and Environmental Engineering 141, 141L
- Engineering 180

Suggested Advisers: M. Delwiche, K. Giles, M. Grismer, D. Hills, B. Jenkins, J. Rumsey, D. Slaughter, S. Upadhyaya, W. Wallender, R. Zhang.

Aquacultural Engineering. Aquacultural engineers design, build, and manage equipment and systems for the production of aquatic plants and animals. Aquacultural engineers must have a solid understanding of biology, especially processes related to water quality, to be able to work with the wide variety of systems used for aquaculture production. Systems range from sophisticated indoor plants with water treatment and recirculation to low-input earthen ponds. Employment opportunities for aquacultural engineers include engineering consulting companies and government agencies. The aquaculture industry is expanding rapidly in various areas around the world, creating international employment opportunities for aquacultural engineers.

Recommended biological science electives:

- Applied Biological Systems Technology 161
- Animal Science 118
- Wildlife, Fish, and Conservation Biology 121

Recommended engineering electives:

- Applied Biological Systems Technology 163
- Civil and Environmental Engineering 140, 140L, 141, 141L, 148A, 148B

Suggested advisers: R. Piedrahita

Biotechnical Engineering. This specialization is for students interested in working with biotechnology industries. Core engineering courses are combined with training in genetics, biochemistry, microbiology, and molecular biology. Modern laboratory techniques in biochemistry are also included in the specialization to provide hands-on skills. Biotechnology is an emerging area of industrial growth in the U.S. and will increasingly need engineers to transfer laboratory developments to large scale production. Present

industrial activities include the production of genetically altered plants, plant materials and food products, production and packaging of biocontrol agents for plant pests and diseases; microbial production of biological products; tissue culture; and bioremediation.

Recommended biological science electives:

- Biological Sciences 101, 102, 103
- Microbiology 102
- Molecular and Cellular Biology 120L

Recommended engineering electives:

- Biological Systems Engineering 132, 160, 175
- Chemical Engineering 161B, 161L
- Engineering 180

Suggested advisers: M. Delwiche, K. Giles, M. Grismer, J. VanderGheynst, R. Zhang.

Ecological Systems Engineering. Specialists in ecological systems engineering are concerned with the design, development, and management of ecosystems. Typical applications include the rehabilitation of disturbed ecosystems, the design of mitigation areas, the incorporation of ecologically sustainable features into land developments, and the design and management of public and private landscapes. An understanding of ecology and the interaction of ecological communities, coupled with knowledge of engineering design and economics, are stressed in this specialization. Employment opportunities include environmental consulting firms, government regulatory agencies, and agencies involved in wildland resource management.

Recommended biological science electives:

- Entomology 100
- Environmental Science and Policy 100
- Soil Science 100
- Select one course from Atmospheric Science 133, Plant Biology 121, Environmental Toxicology 101 or 112A

Recommended engineering electives:

- Applied Biological Systems Technology 180
- Biological Systems Engineering 115, 135, 145
- Civil and Environmental Engineering 148A or 149, 152
- Environmental and Resource Sciences 100

Recommended course:

- Landscape Architecture 40 (no technical elective credit will be granted for this course in any engineering major)

Suggested advisers: K. Giles, M. Grismer, B. Jenkins, R. Piedrahita, R. Plant, J. VanderGheynst, R. Zhang.

Food Engineering. The food industry is the largest industrial sector of the U. S. economy. Food engineers conceive, design, and operate food processes, equipment, and plants for efficient food production with minimal impact on the environment. Students specializing in food engineering learn to apply engineering principles and concepts to handling, storing, processing, packaging, and distributing food and related products. In addition to engineering principles, the food engineering specialization is intended to provide an understanding of the chemical, biochemical, microbiological, and physical characteristics of foods. In the junior and senior years, students take courses that focus on the integration of biological and food science with engineering. Concepts of food refrigeration, freezing, thermal processing, drying, and other food operations are studied.

Recommended biological sciences electives:

- Biological Sciences 101, 103; Environmental Science and Policy 110; Environmental Toxicology 101, 131; Food Science and Technology 104L, 119, 120, 121, 128; Plant Biology 152, 172.

Recommended engineering electives:

- Biological Systems Engineering 175; Chemical Engineering 157, 159.

Suggested advisers: J. Krochta, K. McCarthy, M. McCarthy, T. Rumsey, R. P. Singh, D. Slaughter.

Forest Engineering. Forest engineers apply engineering principles to solve problems in managing forest lands. Forestry has evolved from an emphasis

on wood production toward multiple use, ecosystem management and consideration of noneconomic objectives such as retaining biodiversity. Forest engineers help to develop the equipment and techniques for reforestation, harvesting, forest residue management, and development of roads and recreation facilities.

Following the sophomore year, students are encouraged to attend an eight-week field course, followed by a semester at UC Berkeley taking forestry courses, and forest ecology, planning, and operations. Students complete their engineering programs at UC Davis, taking courses in planning methods, equipment development, and road design. Forest engineers are employed by the US Forest Service and other public agencies, the forest industry, consulting firms, and equipment manufacturers.

Recommended biological science electives:

ESPM 129* (Forest and Range Soils, 3 units)
or Soil Science 100

ESPM 182* (Forest Harvest Systems, 4.5 units)

ESPM 185* (Silviculture, 6 units)

Recommended engineering electives:

Applied Biological Systems Technology 180
Biological Systems Engineering 114, 115, 116
Civil and Environmental Engineering 141, 141L, 145

Recommended Courses:

ESPM 101* (Forestry Summer Program, 15 units)

ESPM 172* (Forest Photogrammetry and Photo Interpretation, 4.5 units)
or Environmental and Resource Sciences 185

ESPM 175* (Forest Influences, 4 units)

Plant Biology 120

*ESPM courses are offered at UC Berkeley campus.

Suggested advisers: B. Hartsough, J. Miles.

Pre-Medical/Biomedical Engineering. The pre-medical/biomedical specialization is for students planning to attend medical school after graduation or to work in the biomedical industries. Course work in biology, chemistry, organic chemistry, biochemistry, microbiology, and physiology satisfies typical entrance requirements for medical school. Early in their academic programs, pre-medical engineering students should consult with an adviser from the School of Medicine to plan for successful admission, including appropriate summer experience. Biomedical engineering is primarily a field of study at the graduate level, and may have a chemical, mechanical, or electrical emphasis. The core Biological Systems Engineering program—plus additional course work in ergonomics, fluid mechanics, rheology, and dynamics—provides a broad foundation for graduate specialization.

Recommended biological science electives—
Biomedical:

Biological Sciences 102
Microbiology 102
Neurobiology, Physiology, and Behavior 101

Recommended biological science electives—
Premedical:

Biological Sciences 101, 102
Molecular and Cellular Biology 150, 150L

Recommended engineering electives:

Biological Systems Engineering 128, 132, 175
Engineering 102, 122, 180

Recommended for medical school:

Chemistry 2C, 118C

Suggested advisers: M. Delwiche, F. Fathallah, J. Miles, J. VanderGheynst, R. Zhang.

Upper Division Requirements

UNITS

Subject Areas and Courses

Chemistry 8B or 118B (recommended for Aquacultural, Biotechnical, Food, and Pre-Medical/Biomedical Engineering specializations) or Civil and Environmental Engineering 10 (recommended for Agricultural, Ecological, and Forest Engineering specializations)4

Biological Sciences 1B and 1C or Food Science and Technology 100A, Food Science and Technology 104, 131, and Biological Sciences 102 (recommended for Food Engineering specialization)10 or 14

Engineering 100, 102, 103, 105, 10618

Engineering 104 (recommended for Agricultural, Pre-Medical/Biomedical, Ecological and Forest Engineering specializations) or Chemical Engineering 161A (recommended for Aquacultural and Biotechnical Engineering specializations)3-4

Biological Systems Engineering 125, 130, 165, 170A, 170B, 170BL, 170C, 170CL21

Biological Systems Engineering electives. Select one course from the following: Biological Systems Engineering 115, 120, 128, 132, 135, 1603 or 4

Statistics 1004

Engineering electives—Select a minimum of 3 units. All upper division courses offered by the College of Engineering may be taken as engineering electives with the exception of the following: Applied Science Engineering 137, Engineering 160, all courses offered by the College of Engineering numbered 190-197 and 199 (except Engineering 190, which may be taken for 2 units of engineering elective credit). The following courses may also be taken as engineering electives:

Applied Biological Systems Technology 163, 175, 180, 181; Environmental and Resource Sciences 100, 100L3

Biological science electives—Select a minimum of 5 or 9 units (for a combined lower and upper division total of 24 units of biological sciences). All courses in the Division of Biological Sciences (with the exception of Exercise Biology 104, 105, 112, 115, 118 through 149L and all courses numbered 190-199) may be used as biological science electives. The following courses may also be taken as biological science electives:

Applied Biological Systems Technology 161; Animal Science 118, 143, 144, 146; Agricultural Systems and Environment 110A; Atmospheric Science 133; Avian Sciences 100; Cell Biology and Human Anatomy 101, 101L; Entomology 100; Environmental Horticulture 102; ESPM 129, 182, 185 (offered at UC Berkeley); Environmental Science and Policy 100; Environmental Toxicology 101, 112A; Food Science and Technology 119, 120, 121, 128; Soil Science 100; Wildlife, Fish, and Conservation Biology 121. Students may choose other upper division courses with substantial biological content offered by the College of Agricultural and Environmental Sciences; consultation with a faculty adviser and approval by petition is required5 or 9

General Education electives12

Total Upper Division Units.....87-89

Minimum Units Required for Major181-186

Master Undergraduate Adviser: T. Rumsey.

Courses in Engineering: Biological Systems (EBS)

Lower Division Courses

1. Foundations of Biological Systems Engineering (5)

Lecture—2 hours; laboratory—6 hours; project. Open only to students in Biological Systems Engineering. Introduction to engineering and the engineering design process with examples drawn from fields of biological, agricultural and food engineering. Relationship of engineering principles to biological systems. Small group design projects and

presentations, use of engineering software, and fabrication of designs.—I. (I.) Hartsough, Piedrahita

75. Properties of Materials in Biological Systems (4)

Lecture—3 hours; laboratory—3 hours. Prerequisite: Biological Sciences 1A; Physics 9C (may be taken concurrently). Properties of typical biological materials; composition and structure with emphasis on the effects of physical and biochemical properties on design of engineered systems; interactions of biological materials with typical engineering materials. GE credit: SciEng.—II. (II.) Singh, Slaughter

90C. Research Group Conference in Biological Systems Engineering (1)

Discussion—1 hour. Prerequisite: lower division standing in Biological Systems Engineering or Food Engineering; consent of instructor. Research group conference. May be repeated for credit. (P/NP grading only.)—I, II, III. (I, II, III.)

92. Internship in Biological Systems Engineering (1-5)

Internship. Prerequisite: lower division standing; project approval prior to period of internship. Supervised work experience in biological systems engineering. May be repeated for credit. (P/NP grading only.)

98. Directed Group Study (1-5)

Prerequisite: consent of instructor. Group study of selected topics; restricted to lower division students. (P/NP grading only.)

99. Special Study for Lower Division Students (1-5)

(P/NP grading only.)

Upper Division Courses

114. Principles of Field Machinery Design (3)

Lecture—2 hours; laboratory—3 hours. Prerequisite: Engineering 102, 104. Traction and stability of vehicles with wheels or tracks. Operating principles of field machines and basic mechanisms used in their design.—(III.) Chen

115. Forest Engineering (3)

Lecture—3 hours. Prerequisite: Engineering 104, Biological Sciences 1C. Applications of engineering principles to problems in forestry including those in forest regeneration, harvesting, residue utilization, and transportation.—(III.) Hartsough

120. Power Systems Design (4)

Lecture—3 hours; laboratory—3 hours. Prerequisite: Engineering 17, 102, 103, 105. Design and performance of power devices and systems including combustion engines, electric generators and motors, fluid power systems, fuels, and emerging technologies. Selection of units for power matching and optimum performance.—I. (I.) Jenkins

125. Heat and Mass Transfer in Biological Systems (4)

Lecture—3 hours; laboratory—3 hours. Prerequisite: course 75 and Engineering 105. Heat and mass transfer and psychrometrics with principal applications to biological, food, and environmental processes. Steady and transient heat and mass transfer. Analysis of heat conduction, convection and radiation, and material diffusion and convection. Analysis of heat and mass transfer with non-Newtonian fluid flow.—III. (III.) Jenkins, VanderGheynst

128. Biomechanics and Ergonomics (4)

Lecture—3 hours; laboratory—3 hours. Prerequisite: Statistics 100, Engineering 102. Anatomical, physiological, and biomechanical bases of physical ergonomics. Human motor capabilities, body mechanics, kinematics and anthropometry. Use of bioinstrumentation, industrial surveillance techniques and the NIOSH lifting guide. Cumulative trauma disorders. Static and dynamic biomechanical modeling. Emphasis on low back, shoulder, and hand/wrist biomechanics.—III. (III.) Fathallah

130. Modeling of Dynamic Processes in Biological Systems (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 75, Engineering 6 or Computer Science Engineering 30, Mathematics 22B. Techniques for model-

ing processes through mass and energy balance, rate equations, and equations of state. Computer problem solution of models. Example models include package design, evaporation, respiration heating, thermal processing of foods, and plant growth.—II. (II.) Rumsey, Upadhyaya

132. Unit Operations in Biological and Food Engineering (4)

Lecture—3 hours; laboratory—3 hours. Prerequisite: course 130, course 125 and Engineering 103 (may be taken concurrently). Mechanical unit operations which involve non-Newtonian flow, size reduction and mixing. Thermal operations related to drying, sterilization, freezing, and refrigeration. Mass transfer operations applied to membrane separations, adsorption, and absorption processes.—III. (III.) VanderGheynst, Singh

135. Bioenvironmental Engineering (4)

Lecture—3 hours; laboratory—3 hours. Prerequisite: courses 125, 130. Biological responses to environmental conditions. Principles and engineering design of environmental control systems. Overview of environmental pollution problems and legal restrictions for biological systems, introduction of environmental quality assessment techniques, and environmental pollution control technologies.—III. (III.) Jenkins, Zhang

144. Groundwater Hydrology (3)

Lecture—3 hours. Prerequisite: Mathematics 16B or 21A; Hydrologic Science 103 or Engineering 103 recommended. Fundamentals of groundwater hydrology—occurrence, movement and distribution of groundwater; well-flow systems—well construction, operation and maintenance; groundwater contamination—exploration and quality assessment. (Same course as Hydrologic Science 144.) Not open for credit to students who have completed Hydrologic Science 145A.—I. (I.) Marino

145. Irrigation and Drainage Systems (4)

Lecture—4 hours. Prerequisite: Engineering 103 or Hydrologic Science 103. Engineering and scientific principles applied to the design of surface, sprinkle and micro irrigation systems and drainage systems within economic, biological, and environmental constraints. Interaction between irrigation and drainage. (Same course as Hydrologic Science 115.)—II. Walender, Grismer, Hills

160. Biotechnical Systems Engineering (4)

Lecture—3 hours; laboratory—3 hours. Prerequisite: course 75, Biological Sciences 101 or Microbiology 102. Microbial and enzyme kinetics. Biomass conversion. Production and recovery of biochemicals from plants and animals. Delivery and detection of microorganisms for bioremediation and biological control.—II. VanderGheynst

165. Bioinstrumentation and Control (4)

Lecture—3 hours; laboratory—3 hours. Prerequisite: Engineering 100. Instrumentation and control for biological production systems. Measurement system concepts, instrumentation and transducers for sensing physical and biological parameters, data acquisition and control.—I. (I.) Delwiche, Ha

170A. Engineering Design and Professional Responsibilities (3)

Lecture—2 hours; laboratory—3 hours. Prerequisite: course 1, Engineering 102, 104. Engineering design including professional responsibilities. Emphasis on project selection, data sources, specifications, human factors, biological materials, safety systems, and professionalism. Detailed design proposals will be developed for courses 170B and 170BL.—III. (III.) Giles, Miles

170B. Engineering Projects: Design (2)

Discussion—2 hours. Prerequisite: course 170A, course 170BL required concurrently. Individual or group projects involving the design of devices, structures, or systems to solve specific engineering problems in biological systems. Project for study is jointly selected by student and instructor. (Deferred grading only, pending completion of course 170C.)—I, II. (I.) Giles, Miles

170BL. Engineering Projects: Design Laboratory (1)

Laboratory—3 hours. Prerequisite: course 170B required concurrently. Individual or group projects involving the design of devices, structures, or systems to solve specific engineering problems in biological systems. (Deferred grading only, pending completion of course 170CL.)—I. (I.)

170C. Engineering Projects: Design Evaluation (1)

Discussion—1 hour. Prerequisite: course 170B; required to enroll in course 170CL concurrently. Individual or group projects involving the fabrication, assembly and testing of components, devices, structures, or systems designed to solve specific engineering problems in biological systems. Project for study previously selected by student and instructor in course 170B.—II. (II.) Giles, Miles

170CL. Engineering Projects: Design Evaluation (2)

Laboratory—6 hours. Prerequisite: required to enroll in course 170C concurrently. Individual or group projects involving the fabrication, assembly and testing of components, devices, structures, or systems designed to solve specific engineering problems in biological systems.—II. (II.)

175. Rheology of Biological Materials (3)

Lecture—3 hours. Prerequisite: Engineering 103 or Chemical Engineering 150A. Fluid and solid rheology, viscoelastic behavior of foods and other biological materials, and application of rheological properties to food and biological systems (i.e., pipeline design, extrusion, mixing, coating).—II. (II.) McCarthy

189A-G. Special Topics in Biological Systems Engineering (1-5)

Variable—3-15 hours. Prerequisite: upper division standing in engineering; consent of instructor. Special topics in: (A) Agricultural Engineering; (B) Aquacultural Engineering; (C) Biomedical Engineering; (D) Biotechnical Engineering; (E) Ecological Systems Engineering; (F) Food Engineering; and (G) Forest Engineering. May be repeated for credit when topic differs.—I, II, III. (I, II, III.)

190C. Research Group Conference in Biological Systems Engineering (1)

Discussion—1 hour. Prerequisite: upper division standing in Biological Systems Engineering or Food Engineering; consent of instructor. Research group conference. May be repeated for credit. (P/NP grading only.)—I, II, III. (I, II, III.)

192. Internship in Biological Systems Engineering (1-5)

Internship. Prerequisite: upper division standing; approval of project prior to period of internship. Supervised work experience in biological systems engineering. May be repeated for credit. (P/NP grading only.)

197T. Tutoring in Biological Systems Engineering (1-5)

Tutorial—1-5 hours. Prerequisite: upper division standing in engineering; consent of instructor. Tutoring of students in undergraduate biological systems engineering courses. May be repeated for credit. (P/NP grading only.)

198. Directed Group Study (1-5)

Prerequisite: consent of instructor. (P/NP grading only.)

199. Special Study for Advanced Undergraduates (1-5)

(P/NP grading only.)

Graduate Courses

200. Research Methods in Biological Systems Engineering (2)

Lecture—2 hours. Prerequisite: graduate standing. Planning, execution and reporting of research projects. Literature review techniques and proposal preparation. Record keeping and patents. Uncertainty analysis in experiments and computations. Graphic analysis. Oral and written presentation of research results, manuscript preparation, submission and review.—I. (I.) Zhang, Giles

215. Soil-Machine Relations in Tillage and Traction (3)

Lecture—3 hours. Prerequisite: course 114. Mechanics of interactions between agricultural soils and tillage and traction devices; determination of relevant physical properties of soil; analyses of stress and strains in soil due to machine-applied loads; experimental and analytical methods for synthesizing characteristics of overall systems. Offered in alternate years.—(I.) Upadhyaya

216. Energy Systems (3)

Lecture—3 hours. Prerequisite: Engineering 105. Theory and application of energy systems. System analysis including input-output analysis, energy balances, thermodynamic availability, economics, environmental considerations. Energy conversion systems and devices including cogeneration, heat pump, fuel cell, hydroelectric, wind, photovoltaic, and biomass conversion processes. Offered in alternate years.—II. Jenkins

218. Solar Thermal Engineering (3)

Lecture—3 hours. Prerequisite: course in heat transfer. Familiarity with FORTRAN language. Analysis and design of solar energy collection systems. Sun-earth geometry and estimation of solar radiation. Steady state and dynamic models of solar collectors. Modeling of thermal energy storage devices. Computer simulation. Offered in alternate years.—(I.) T. Rumsey

220. Pilot Plant Operations in Aquacultural Engineering (3)

Lecture—1 hour; laboratory—6 hours. Prerequisite: Civil Engineering 243A-243B or Applied Biological Systems Technology 161, 163. Topics in water treatment as they apply to aquaculture operations. Laboratory study of unit operations in aquaculture. Offered in alternate years.—(I.) Piedrahita

228. Occupational Musculoskeletal Disorders (3)

Lecture—2 hours; laboratory—3 hours. Prerequisite: graduate standing and consent of instructor. Epidemiology and etiology of occupational musculoskeletal disorders (MSDs) with focus on low back and upper extremities disorders; anatomical and biomechanical functions of lower back and upper extremities; MSDs risk factors assessment and control; research opportunities related to MSDs.—III. (III.) Fathallah

231. Mass Transfer in Food and Biological Systems (3)

Lecture/discussion—3 hours. Prerequisite: graduate standing. Application of mass transfer principles to food and biological systems. Study of mass transfer affecting food quality and shelf life. Analysis of mass transfer in polymer films used for coating and packaging foods and controlling release of biologically active compounds. Offered in alternate years.—II. Krochta

233. Analysis of Processing Operations: Drying and Evaporation (3)

Lecture—3 hours. Prerequisite: course in food or process engineering, familiarity with FORTRAN. Diffusion theory in drying of solids. Analysis of fixed-bed and continuous-flow dryers. Steady-state and dynamic models to predict performance evaporators: multiple effects, mechanical and thermal recompression, control systems. Offered in alternate years.—II. T. Rumsey

235. Advanced Analysis of Unit Operations in Food and Biological Engineering (3)

Lecture—3 hours. Prerequisite: course 132. Analysis and design of food processing operations. Steady state and dynamic heat and mass transfer models for operations involving phase change such as freezing and frying. Separation processes including membrane applications in food and fermentation systems.—(III.) Singh

237. Thermal Process Design (3)

Lecture—2 hours; discussion—1 hour. Prerequisite: course in heat transfer. Heat transfer and biological basis for design of heat sterilization of foods and other biological materials in containers or in bulk. Offered in alternate years.—(III.) T. Rumsey

239. Magnetic Resonance Imaging in Biological Systems (3)

Lecture—3 hours. Prerequisite: graduate standing. Theory and applications of magnetic resonance imaging to biological systems. Classical Bloch model of magnetic resonance. Applications to be studied are drying of fruits, flow of food suspensions, diffusion of moisture, and structure of foods. Offered in alternate years.—I. McCarthy

240. Infiltration and Drainage (3)

Lecture—3 hours. Prerequisite: Soil Science 107, Engineering 103. Aspects of multi-phase flow in soils and their application to infiltration and immiscible displacement problems. Gas phase transport and entrapment during infiltration, and oil-water-gas displacement will be considered. Offered in alternate years.—II. Grismer

241. Sprinkle and Trickle Irrigation Systems (3)

Lecture—2 hours; laboratory—3 hours. Prerequisite: course 145/Hydrologic Science 115. Computerized design of sprinkle and trickle irrigation systems. Consideration of emitter mechanics, distribution functions and water yield functions. Offered in alternate years.—III. Hills

242. Hydraulics of Surface Irrigation (3)

Lecture—3 hours. Prerequisite: course 145, Hydrologic Science 115. Mathematical models of surface-irrigation systems for prediction of the ultimate disposition of water flowing onto a field. Quantity of runoff and distribution of infiltrated water over field length as a function of slope, roughness, infiltration and inflow rates. Offered in alternate years.—(III.) Wallender

243. Water Resource Planning and Management (3)

Lecture—3 hours. Prerequisite: Hydrologic Science 141 or the equivalent. Applications of deterministic and stochastic mathematical programming techniques to water resource planning, analysis, design, and management. Water allocation, capacity expansion, and reservoir operation. Conjunctive use of surface water and groundwater. Water quality management. Irrigation planning and operation models. (Same course as Hydrologic Science 243.) Offered in alternate years.—(II.) Marino

245. Waste Management for Biological Production Systems (3)

Lecture—3 hours. Prerequisite: graduate standing or consent of instructor. Characterization of solid and liquid wastes from animal, crop, and food production systems. Study of methods and system design for handling, treatment, and disposal/utilization of these materials.—II. (II.) Zhang

260. Analog Instrumentation (4)

Lecture—3 hours; laboratory—3 hours. Prerequisite: Engineering 100. Instrument characteristics: generalized instrument models, calibration, and frequency response. Signal conditioning: operational amplifier circuits, filtering, and noise. Transducers: motion, force, pressure, flow, temperature, and photoelectric. Offered in alternate years.—II. Delwiche

262. Computer Interfacing and Control (4)

Lecture—3 hours; laboratory—3 hours. Prerequisite: Engineering 100, course 165. Procedural and object-oriented programming in C++, analog and digital signal conversion, data acquisition and computer control. Offered in alternate years.—(II.) Delwiche

265. Design and Analysis of Engineering Experiments (5)

Lecture—3 hours; lecture/discussion—2 hours. Prerequisite: Statistics 100, Agricultural Systems and Environment 120, or an introductory course in statistics. Simple linear, multiple, and polynomial regression, correlation, residuals, model selection, one-way ANOVA, fixed and random effect models, sample size, multiple comparisons, randomized block, repeated measures, and Latin square designs, factorial experiments, nested design and subsampling, split-plot design, statistical software packages.—III. (III.) Upadhyaya, Plant

270. Modeling and Analysis of Biological and Physical Systems (3)

Lecture—3 hours. Prerequisite: familiarity with a programming language. Mathematical modeling of biological systems: model development; analytical and numerical solutions. Case studies from various specializations within biological and agricultural engineering. Offered in alternate years.—III. Rumsey

275. Physical Properties of Biological Materials (3)

Lecture—2 hours; laboratory—3 hours. Prerequisite: consent of instructor. Selected topics on physical properties, such as mechanical, optical, rheological, and aerodynamic properties, as related to the design of harvesting, handling, sorting, and processing equipment. Techniques for measuring and recording physical properties of biological materials. Offered in alternate years.—(I.) Chen

289A-K. Selected Topics in Biological Systems Engineering (1-5)

Variable—1-5 hours. Prerequisite: consent of instructor. Special topics in: (A) Animal Systems Engineering; (B) Aquacultural Engineering; (C) Biological Engineering; (D) Energy Systems; (E) Environmental Quality; (F) Food Engineering; (G) Forest Engineering; (H) Irrigation and Drainage; (I) Plant Production and Harvest; (J) Postharvest Engineering; (K) Sensors and Actuators. May be repeated for credit when topic differs.—I, II, III. (I, II, III.)

290. Seminar (1)

Seminar—1 hour. Prerequisite: graduate standing. Weekly seminars on recent advances and selected topics in biological systems engineering. Course theme will change from quarter to quarter. May be repeated for credit. (S/U grading only.)

290C. Graduate Research Conference (1)

Discussion—1 hour. Prerequisite: consent of instructor. Research problems, progress and techniques in biological systems engineering. May be repeated for credit. (S/U grading only.)—I, II, III. (I, II, III.)

298. Group Study (1-5)

299. Research (1-2)

(S/U grading only.)

Professional Course

390. Supervised Teaching in Biological and Agricultural Engineering (1-3)

Laboratory—3 hours; tutorial—3-9 hours. Prerequisite: graduate standing; consent of instructor. Tutoring and teaching students in undergraduate courses offered in the Department of Biological and Agricultural Engineering. Weekly conferences with instructor; evaluation of teaching. Preparing for and conducting demonstrations, laboratories and discussions. Preparing and grading exams. May be repeated for a total of 6 units. (S/U grading only.)—I, II, III. (I, II, III.)

The Biomedical Engineering Major

Biomedical Engineering advances fundamental medical concepts; creates knowledge from the molecular to the organ systems levels; and develops innovative biologics, materials, processes, implants, devices, and informatics approaches. These approaches are applied to the prevention, diagnosis, and treatment of disease. The objective is to prepare students for employment in companies that manu-

facture medical assist devices, human tissue products, and therapeutics. This program also prepares students to enter a graduate program in Biomedical Engineering or pursue professional degrees in medicine and related health fields.

Biomedical Engineering Curriculum

Lower Division Program

	UNITS	QUARTER USUALLY TAKEN
Mathematics 21A-21B-21C-21D	16	1-2-3-4
Mathematics 22A-22B	6	5-6
Physics 9A-9B-9C	15	3-4-5
Chemistry 2A-2B-2C, 8A-8B	21	1-2-3-4-5
Engineering 6, 35, 45	11	2-6-4
English 1 or 3, or Comparative Literature 1, 2, 3, or 4, or Native American Studies 5	4	2 or 3
Communication 1 or 3	4	2 or 3
Biological Sciences 1A	5	5
Biomedical Engineering 1	1	5
General Education electives	12	
Total Lower Division Units	95	

Upper Division Program

Biomolecular Specialization

The recent sequencing of 3.1 billion base pairs of the human genome is revolutionizing our understanding of living systems and the nature of various disease processes. However, elucidation of the genetic code introduces a new set of challenges. These include developing an understanding of the process of gene expression, approaches to characterize physiological and pathological changes that involve large numbers of genes and environmental factors, and apply this new information in effective therapeutic strategies. Students who wish to work at this exciting interface between engineering and genomics must gain a background in the biological sciences, mathematics, physics, chemistry, engineering, and bioinstrumentation.

Upper Division Requirements

	UNITS
Engineering 17, 100, 104, 105, 190	18
Neurobiology, Physiology, and Behavior 101	5
Statistics 120 or 130A or 131A	4
Biomedical Engineering 106, 107, 108, 109, 110, 111	24
Life Sciences electives	8
Choose 8 units from the following courses: Biological Sciences 1B, 101*, 103**, 104; Molecular and Cellular Biology 120L, 140L, 141, 142, 161, 162, 164; Neurobiology, Physiology, and Behavior 100, 101L.	
Bioengineering electives	19
Choose 19 units from the following courses: Biomedical Engineering 115, 126, 140*, 141*; Chemistry 118A, 118B, 118C; Biological Systems Engineering 175; Materials Science Engineering 180; Mechanical Engineering 150A, 171; Chemical Engineering 150C, 151, 153, 161A*, 161L*, 161B, 161C, 170; Computer Science Engineering 124**; Electrical and Computer Engineering 106, 150B.	
General Education electives	12
Total Upper Division Units	90
Minimum Units Required for Major	185

* Elective required for Genomics specialization.

** Elective that may be replaced within the Biomolecular specialization.

Courses in Biomedical Engineering (BIM)

Lower Division Courses

1. Introduction to Biomedical Engineering (1)

Lecture—1 hour. Introduction to the field of biomedical engineering with examples taken from the various areas of specialization within the discipline. Areas include cellular and molecular engineering; biomedical imaging; biofluids and transport; musculoskeletal biomechanics; and instrumentation. (P/NP grading only.)—I. Hull

Upper Division Courses

106. Biotransport Phenomena (4)

Lecture—4 hours. Prerequisite: Neurobiology, Physiology, and Behavior 101, Physics 9B, course 107 (may be taken concurrently). Principles of heat and mass transfer with applications to biomedical systems; emphasis on heat exchange between the biomedical system and its environment, mass transfer across cell membranes and the design and analysis of artificial human organs.—III.

107. Mathematical Methods for Biological Systems (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: Mathematics 22A-22B. Restricted to upper division Engineering majors. Essential mathematical and numerical techniques for engineering problems in medicine and biology. Contents include boundary value problems, the calculus of linear transforms, ordinary and partial differential equations, and an introduction to probability and stochastic processes.—I. Abbey, Insana

108. Biomedical Signals and Control (4)

Lecture—2 hours; discussion—2 hours. Prerequisite: Mathematics 22A-22B, Engineering 100 (may be taken concurrently). Restricted to upper division Engineering students. Systems and control theory applied to bioengineering problems. Topics include modeling, linearization, transfer functions, Laplace and Fourier transforms, closed-loop systems, design and dynamic behavior and control of first and second order processes, stability, Bode design, and features of biological control systems.—II. Ferrara

109. Biomaterials (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: Engineering 45, course 106, Biological Sciences 1A, Neurobiology, Physiology, and Behavior 101. Mechanical and chemical properties of metallic, ceramic, and polymeric implant materials. The properties of bones, joints, and blood vessels. The cellular response to implants, including inflammation, blood coagulation, and wound and fracture healing. Biocompatibility of orthopaedic and cardiovascular materials.—I. Shackelford

110. Capstone Biomedical Engineering Design (4)

Lecture—2 hours; discussion—2 hours. Prerequisite: course 107, 108, 109. Restricted to senior Biomedical Engineering majors. Application of bioengineering theory and experimental analysis culminating in the design of a unique solution to a problem. The design may be geared towards current applications in applied biomechanics, bio- or medical technology.—III.

111. Biomedical Instrumentation Laboratory (4)

Lecture—1 hour; laboratory—9 hours. Prerequisite: Biological Sciences 1A, course 107, Statistics 120, 131A, or 130A, Engineering 100. Basic biomedical signals and sensors. Topics include analog and digital records using electronic, hydrodynamic, and optical sensors, and measurements made at cellular, tissue and whole organism level.—I.

126. Tissue Mechanics (3)

Lecture—2 hours; laboratory/discussion—3 hours. Prerequisite: Exercise Science 103 and/or Engineering 45 and/or consent of instructor. Structural and mechanical properties of biological tissues, including bone, cartilage, ligaments, tendons, nerves, and skeletal muscle. (Same course as Exercise Science 126.)—II. (II.) Hawkins

140. Protein Engineering (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: Biological Sciences 1A and Chemistry 8B. Restricted to upper division majors in sciences or engineering. Introduction to protein structure and function. Modern methods for designing, producing, and characterizing novel proteins and peptides. Design strategies, computer modeling, heterologous expression, in vitro mutagenesis. Protein crystallography, spectroscopic and calorimetric methods for characterization, and other techniques.—I. Kuhl

141. Cell and Tissue Mechanics (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: Physics 9C, Engineering 35, Neurobiology, Physiology, and Behavior 101. Mechanical properties that govern blood flow in the microcirculation. Concepts in blood rheology and cell and tissue viscoelasticity, biophysical aspects of cell migration, adhesion, and motility.—III. Simon

199. Special Study for Advanced Undergraduates (1-5)

Prerequisite: consent of instructor. (P/NP grading only.)

Graduate Courses

202. Cell and Molecular Biology for Engineers (4)

Lecture/discussion—4 hours. Prerequisite: Biological Sciences 104 or Molecular and Cellular Biology 121, course in eukaryotic cell biology. Preparation for research and critical review in the field of cell and molecular biology for biomedical or applied science engineers. Emphasis on biophysical and engineering concepts intrinsic to specific topics including receptor-ligand dynamics in cell signaling and function, cell motility, DNA replication and RNA processing, cellular energetics and protein sorting. Modern topics in bioinformatics and proteomics.—I. (I.) Simon

210. Introduction to Biomaterials (4)

Lecture—4 hours. Prerequisite: Engineering 45 or consent of instructor. Mechanical and atomic properties of metallic, ceramic, and polymeric implant materials; corrosion, degradation, and failure of implants; inflammation, wound and fracture healing, blood coagulation; properties of bones, joints, and blood vessels; biocompatibility of orthopaedic and cardiovascular materials. Offered in alternate years.—(II.) Shackelford

212. Biomedical Heat and Mass Transport Processes (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: Mechanical Engineering 165, Biological Systems Engineering 125, Chemical Engineering 153 or the equivalent. Application of principles of heat and mass transfer to biomedical systems related to heat exchange between the biomedical system and its environment, mass transfer across cell membranes and the design and analysis of artificial human organs. (Same course as Mechanical and Aeronautical Engineering 212.) Offered in alternate years.—(II.)

214. Blood Cell Biomechanics (4)

Lecture—4 hours. Prerequisite: Engineering 102. Mechanical properties that govern blood flow in the microcirculation and cell adhesion and motility. Constitutive equations of vasculature tissue and blood. Blood rheology and viscoelasticity. Red and white blood cell mechanics. Remodeling of blood vessels in disease and engineering of blood vessels and cells.—II. (II.) Simon

215. Biomedical Fluid Mechanics and Transport Phenomena (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: Engineering 103 or Chemical Engineering 150B or Civil and Environmental Engineering 141. Application of fluid mechanics and transport to biomedical systems. Flow in normal physiological function and pathological conditions. Topics include circulatory and respiratory flows, effect of flow on cellular processes, transport in the arterial wall and in tumors, and tissue engineering. (Same course as Mechanical and Aeronautical Engineering 215.)—III. (III.) Barakat

216. Advanced Topics in Cellular Engineering (4)

Lecture—4 hours. Prerequisite: course 214 or consent of instructor. Advanced research strategies and technologies used in the study of immune function and inflammation. Static and dynamic measurements of stress, strain, and molecular scale forces in blood and vascular cells, as well as genetic approaches to the study of disease.—III. (III.) Simon

220. Research Topics in Biomechanics (3)

Lecture—2 hours; seminar—1 hour. Prerequisite: graduate standing and consent of instructor; Exercise Science 115 recommended. Survey of current research into diverse areas of the biomechanics of human movement. Topics will include locomotion, sport biomechanics, electromyography, musculoskeletal and tissue mechanics, advances in measurement technology, clinical biomechanics. (Same course as Exercise Science 220.) Offered in alternate years.—III. Williams

223. Multibody Dynamics (4)

Lecture—4 hours. Prerequisite: Engineering 102. Coupled rigid-body kinematics/dynamics; reference frames; vector differentiation; configuration and motion constraints; holonomicity; generalized speeds; partial velocities; mass; inertia tensor/theorems; angular momentum; generalized forces; comparing Newton/Euler, Lagrange's, Kane's methods; computer-aided equation derivation; orientation; Euler; Rodrigues parameters. (Same course as Mechanical and Aeronautical Engineering 223.)—II. (II.) Eke, Hubbard

225. Spatial Kinematics and Robotics (4)

Lecture—3 hours; laboratory—3 hours. Prerequisite: C Language and course 222. Spatial kinematics, screw theory, spatial mechanisms analysis and synthesis, robot kinematics and dynamics, robot workspace, path planning, robot programming, real-time architecture and software implementation. (Same course as Mechanical and Aeronautical Engineering 225.) Offered in alternate years.—II. Cheng

227. Research Techniques in Biomechanics (4)

Lecture—2 hours; laboratory—4 hours; term paper/discussion—1 hour. Prerequisite: consent of instructor, Mathematics 22B; Exercise Science 115 recommended. Experimental techniques for biomechanical analysis of human movement are examined. Techniques evaluated include data acquisition and analysis by computer, force platform analysis, strength assessment, planar and three-dimensional videography, data reduction and smoothing, body segment parameter determination, electromyography, and biomechanical modeling. (Same course as Mechanical and Aeronautical Engineering 227/Exercise Science 227.)—II. (II.) Williams, Hawkins

228. Skeletal Muscle Mechanics: Form, Function, Adaptability (4)

Lecture—4 hours. Prerequisite: basic background in biology, physiology, and engineering; Engineering 35 and 45, Mathematics 21D; Neurobiology, Physiology and Behavior 101 recommended. Basic structure and function of skeletal muscle examined at the microscopic and macroscopic level. Muscle adaptation in response to aging, disease, injury, exercise, and disuse. Analytic models of muscle function are discussed. (Same course as Exercise Science 228.)—I. (I.) Hawkins

231. Musculo-Skeletal System Biomechanics (4)

Lecture—4 hours. Prerequisite: Engineering 102. Mechanics of skeletal muscle and mechanical models of muscle, solution of the inverse dynamics problem, theoretical and experimental methods of kinematic and kinetic analysis, computation of intersegmental load and muscle forces, applications to gait analysis and sports biomechanics. (Same course as Mechanical and Aeronautical Engineering 231.)—III. (III.) Hull

232. Skeletal Tissue Mechanics (3)

Lecture—3 hours; laboratory—1 hour. Prerequisite: Engineering 104. Overview of the mechanical properties of the various tissues of the musculoskeletal system, the relationship of these properties to ana-

tomic and histologic structure, and the changes in these properties caused by aging and disuse. The tissues covered include bone, cartilage and synovial fluid, ligament and tendon. (Same course as Mechanical and Aeronautical Engineering 232.)—III. (III.) Martin

240. Computational Methods in Nonlinear Mechanics (4)

Lecture—4 hours. Prerequisite: Applied Science Engineering 115 or Mathematics 128B or Engineering 180. Deformation of solids and the motion of fluids treated with state-of-the-art computational methods. Numerical treatment of nonlinear dynamics; classification of coupled problems; applications of finite element methods to mechanical, aeronautical, and biological systems. Offered in alternate years. (Same course as Mechanical and Aeronautical Engineering 240.)—II. Sarigul-Klign

241. Introduction to Magnetic Resonance Imaging (3)

Lecture—3 hours. Prerequisite: Physics 9D, Mathematics 22B. Equipment, methods, medical applications of MRI. Lectures review basic, advanced pulse sequences, image reconstruction, display and technology and how these are applied clinically. Lecture complements a more technical course. (course 246 can be taken concurrently.)—I. (I.) Buonocore

242. Introduction to Biomedical Imaging (4)

Lecture—4 hours. Prerequisite: Physics 9D and Electrical and Computer Engineering 106 or consent of instructor. Introduction to the basic physics and engineering principles of image science with emphasis on ionizing and nonionizing radiation production and interactions with the body and detectors. Description of major imaging systems: radiography, computed tomography, magnetic resonance, ultrasound and optical microscopy.—I. (I.) Insana, Boone, Seibert

246. Magnetic Resonance Technology (3)

Lecture—3 hours. Prerequisite: Physics 9D, Mathematics 22B. Course covers MRI technology at an advanced level with emphasis on mathematical descriptions and problem solving. Topics include spin dynamics, signal generation, image reconstruction, pulse sequences, biophysical basis of T1, T2, RF, gradient coil design, signal to noise, image artifacts.—I. (I.) Buonocore

247. Current Concepts in Magnetic Resonance Imaging I (3)

Lecture—3 hours. Prerequisite: course 241 or 246 or consent of instructor. Modern pulse sequences, pulse sequence options, and biomedical/industrial applications; velocity encoded phase imaging and angiography, echo planar imaging, spiral imaging, computer simulation of MRI, fast spin echo, other topics.—II. (II.) Buonocore

248. Current Concepts in Magnetic Resonance Imaging II (3)

Lecture—3 hours. Prerequisite: course 247 or consent of instructor. Continuation of lecture coverage of modern pulse sequences, pulse sequence options, and biomedical/industrial applications: Control of tissue contrast by magnetization refocusing and spoiling, RF pulse sequence, diffusion and perfusion imaging, image artifact reduction methods, others.—III. (III.) Buonocore

249. Microsensor Design and Fabrication (3)

Lecture—3 hours. Prerequisite: graduate standing. Design and fabrication of sensors. Topics include transduction principles, fabrication technologies specific to microsensors, and design of microsensor systems, including packaging. (Same course as Electrical and Computer Engineering 248.) Not open for credit to students who have completed Electrical and Computer Engineering 248. Offered in alternate years.—(I.) Smith

250. Mathematical Methods of Biomedical Imaging (4)

Lecture—4 hours. Prerequisite: graduate standing or consent of instructor. Advanced mathematical techniques with emphasis on imaging systems. Matrices and vector spaces, Fourier analysis, integral transforms, signal representations, probability and random processes.—I. (I.) Insana

251. Medical Image Analysis (4)

Lecture—4 hours. Prerequisite: Electrical and Computer Engineering 106. Techniques for assessing the performance of medical imaging systems. Principles of digital image formation and processing. Measurements that summarize diagnostic image quality and the performance of human observers viewing those images. Definition of ideal observer and other mathematical observers that may be used to predict performance from system design features.—III. (III.) Insana

281. Acquisition and Analysis of Biomedical Signals (4)

Lecture—3 hours; laboratory—3 hours. Prerequisite: Engineering 100, Statistics 130A. Basic concepts of digital signal recording and analysis; sampling; empirical modeling; Fourier analysis, random processes, spectral analysis, and correlation applied to biomedical signals.—II. (II.) Ferrara

282. Biomedical Signal Processing (4)

Lecture—4 hours. Prerequisite: Electrical and Computer Engineering 150A, 150B. Characterization and analysis of continuous- and discrete-time signals from linear systems. Examples drawn from physiology illustrate the use of Laplace, Z, and Fourier transforms to model biological and bioengineered systems and instruments. Filter design and stochastic signal modeling. Genomic signal processing.—II. (II.) Insana

284. Mathematical Methods for Biomedical Engineers (4)

Lecture—4 hours. Prerequisite: Mathematics 22B, Statistics 130A. Theoretical and computational applications of linear systems, random processes, and differential equations that describe biological systems and instruments that measure them.—III. (III.) Abbey

289A-E. Selected Topics in Biomedical Engineering (1-5)

Variable. Prerequisite: consent of instructor. Selected topics in (A) Bioinstrumentation and Signal Processing; (B) Biomedical Imaging; (C) Biofluids and Transport; (D) Orthopedic Biomechanics; (E) Analysis of Human Movement. May be repeated for credit.—I, II, III. (I, II, III.)

290. Seminar (1)

Seminar—1 hour. Seminar in biomedical engineering. (S/U grading only.)

290C. Graduate Research Conference (1)

Discussion—1 hour. Prerequisite: consent of instructor. Individual and/or group conference on problems, progress, and techniques in biomedical engineering research. May be repeated for credit. (S/U grading only.)—I, II, III. (I, II, III.)

299. Research (1-12)

(S/U grading only.)

Professional Course

396. Teaching Assistant Training Practicum (1-4)

Prerequisite: graduate standing. May be repeated for credit. (S/U grading only.)—I, II, III. (I, II, III.)

Engineering: Chemical Engineering and Materials Science

Mission. The mission of the Department of Chemical Engineering and Materials Science is to advance the frontiers of the discipline through teaching and research programs in the areas of chemical, biochemical and materials engineering; to educate students with a sense of professionalism and citizenship; and to serve the general public through outreach efforts.

The Chemical Engineering Major Programs

Chemical engineers apply the principles of chemistry and engineering to produce useful commodities, ranging from antibiotics to zirconium. Chemical engineers are increasingly concerned with chemical and engineering processes related to the environment, food and pharmaceutical production, and medicine, working in areas as diverse as integrated circuits and integrated waste management. Preparation for a career in chemical engineering requires an understanding of both engineering and chemical principles to develop proficiency in conceiving, designing, and operating new processes.

The Chemical Engineering curriculum has been planned to provide a sound knowledge of engineering and chemical sciences so that you may achieve competence in treating not only current technical problems but also those that will arise in the technologies of the future.

Objectives. The objectives of the program in chemical engineering are to educate students in the fundamentals of chemical engineering, balanced with the application of these principles to practical problems; to train students with a sense of community, ethical responsibility and professionalism; to prepare students for careers in industry, government and academia; to instill in students the necessity of continuing education and self-learning; to graduate students who can think independently but who can function effectively as part of a team; and to train students who can communicate their accomplishments proficiently in written and oral form.

Chemical Engineering Curriculum

The Chemical Engineering curriculum is accredited by the Engineering Accreditation Commission of the Accreditation Board for Engineering and Technology, Inc.

Lower Division Program

Requirements for majors in Chemical Engineering and the double majors, Chemical Engineering/Materials Science and Engineering and Chemical Engineering/Biochemical Engineering.

	UNITS	QUARTER USUALLY TAKEN
Required Courses		
Mathematics 21A-21B-21C-21D16	1-2-3-4	
Mathematics 22A-22B6	5-6	
Physics 9A-9B-9C15	3-4-5	
Chemistry 2A, 2B, 2C (Chemistry 2AH, 2BH, 2CH strongly recommended).....15	1-2-3	
Chemistry 128A, 128B.....6	4-5	
Chemistry 129A4	4	
Biological Sciences 1A0 or 5 (required only for Chemical/Biochemical majors)	6	
Chemical Engineering 801	6	
Engineering 64	2 or 5	
Engineering 174	6	
Engineering 353	5	
Engineering 45 (required only for Materials Science and Chemical Engineering/Materials Science and Engineering majors).....0 or 4	6	
English 1 or 3, or Comparative Literature 1, 2, 3 or 4, or Native American Studies 54	2 or 3	
Communication 1 or 3 (or an acceptable substitute as approved by the Undergraduate Study Committee of the College of Engineering)4	2 or 3	
General Education electives16		
Total Lower Division Units.....96-101		

Upper Division Program

In your junior year, you focus on basic engineering courses, particularly thermodynamics, fluid mechanics, and energy transfer. In your senior year, you draw these fundamentals together and apply them in a study of mass transfer phenomena, process design, and process dynamics and control. The program is strengthened and broadened with introductory courses in the electrical and mechanical sciences.

The curriculum includes 12 units of technical electives and 6 units of advanced chemistry electives that allow you to strengthen specific areas in chemical engineering, explore new areas, or pursue areas of specialization. The most popular areas of specialization, together with lists of **suggested** technical electives, are identified and discussed in the following paragraphs. Please talk to the instructors of the courses listed about possible prerequisites before enrolling.

The *premedical* and *prebiomedical engineering* areas of specialization have been specifically designed to prepare the student for graduate work in biomedical engineering or to meet the undergraduate requirements for entrance into medical school. Because of the emphasis on the natural sciences and the application of fluid mechanics, mass transport, heat transfer, thermodynamics, reaction kinetics, and process dynamics to problems in natural science, you are well prepared to understand problems in living systems. Many biological phenomena, such as blood flow, solute transport, and energy exchange, can be dealt with using the theoretical tools you learned as an undergraduate.

Areas of Specialization

Advanced Materials Processing. Because the manufacture of semiconductor devices, integrated circuits, magnetic memories, tapes, disks, and other devices involves the application of chemical and engineering principles, chemical engineers are finding productive careers in the electronics industry. The electronics processing specialization introduces you to the analysis and design of modern circuits and devices and provides a strong background in the layout and fabrication of such devices.

Suggested technical electives:

Electrical and Computer Engineering 140A, 140B, 145A, 145B, 146A, 146B
Physics 140A, 140B
Materials Science and Engineering 172, 180, 181

Applied Chemistry. Build a strong program in chemistry by choosing electives from among advanced undergraduate chemistry courses.

Suggested technical electives:

Chemistry 110C, 111, 115, 121, 128C, 129B, 129C, 130, 131, 150
Fiber and Polymer Science 100, 110, 150

Applied Mathematics. Courses in abstract algebra, advanced calculus, and the theory of differential equations provide a sound theoretical background, while courses in analytical and numerical analysis provide the techniques for solving a wide range of engineering problems.

Suggested technical electives:

Applied Science Engineering 115, 116
Mathematics 118A, 118B, 118C, 119A, 119B, 121A, 121B, 128A, 128B, 128C, 131, 132A, 132B, 185A, 185B

Biochemical Engineering. Courses in this area prepare you to do graduate work in biochemical engineering and to find employment in the biotechnology, pharmaceutical, and food industries.

Suggested technical electives:

Strongly recommended
Microbiology 102, 102L
Biological Sciences 1A, 102
Chemical Engineering 161A, 161B, 161C, 161L

Also recommended

Biological Sciences 1B, 101, 103, 104
Biological Systems Engineering 175
Chemical Engineering 170
Food Science and Technology 123, 123L
Microbiology 140, 150, 155L, 160
Molecular and Cellular Biology 120L, 123, 160L, 161, 170L
Neurobiology, Physiology, and Behavior 103, 104L
Plant Biology 160
Viticulture and Enology 140, 186

Computers and Automation. This specialization offers you the opportunity to master various computational techniques to formulate, solve, and analyze chemical engineering problems. In addition, you are exposed to the theory and practice of monitoring and operating chemical processes using microprocessor-based control systems. The suggested elective courses help you obtain the necessary background in these areas.

Suggested technical electives:

Artificial Intelligence and Computer Graphics:
Computer Science Engineering 170, 175
Numerical Analysis and Optimization:
Applied Science Engineering 115, 116
Mathematics 128B-128C, 168
Civil and Environmental Engineering 153
Automatic Control:
Biological Systems Engineering 165
Electrical and Computer Engineering 150B, 157B, 174
Mechanical Engineering 172

Energy Conversion and Fuels Processing. These courses introduce you to energy sources, energy conversion methods, and the manufacture of fuels.

Suggested technical electives:

Biological Systems Engineering 120
Engineering 111
Environmental Science and Policy 167
Mechanical Engineering 161, 162

Environmental Engineering. This option prepares you to deal with environmental issues and to seek employment with industry or government. For this specialization, select six courses from the following list:

Suggested technical electives:

Air Environment:
Strongly recommended
Civil and Environmental Engineering 149
Recommended
Atmospheric Science 121A, 121B, 158
Civil and Environmental Engineering 150
Environmental Science and Policy 110
Environmental Toxicology 101, 112A, 112B, 131

Water Environment:

Strongly recommended
Chemical Engineering 161A, 161B, 161L
Civil and Environmental Engineering 140, 140L, 148A, 148B
Microbiology 102
Recommended
Biological Sciences 102, 103
Civil and Environmental Engineering 147
Environmental Science and Policy 110, 150A, 151
Environmental Toxicology 101, 112A, 112B
Hydrological Science 124
Soil Science 100, 102, 107

Food Process Engineering. This area of specialization prepares you to do graduate work in food science and technology and to work in the food processing industry.

Suggested technical electives:

Strongly recommended
Microbiology 102
Biological Sciences 102, 103, 104
Chemical Engineering 161A, 161B, 161L
Biological Systems Engineering 132
Food Science and Technology 100A, 104, 104L

Recommended

Food Science and Technology 100B

Marketing. Manufacturers need chemical engineers who have training in market management, which involves the application of economics, psychology, and statistics in market planning and forecasting and in strategically developing and promoting new products.

Suggested technical electives:

Management 250, 251
Agricultural and Resource Economics 113, 130, 136
Statistics 103

Polymer Science. These courses prepare you for employment in polymer manufacturing and processing, and also prepare you for graduate work in the interdisciplinary field of polymer science and engineering.

Suggested technical electives:

Chemistry 108, 128C, 129B, 129C
Fiber and Polymer Science 100, 150
Chemical Engineering 150C
Materials Science and Engineering 147

Prebiomedical Engineering. This area of specialization prepares you for graduate work in biomedical engineering. Early planning of a complete course schedule in consultation with a Chemical Engineering adviser is important to schedule necessary Biological Sciences courses into your program.

Suggested technical electives:

Four to six courses from
Anatomy, Physiology, and Cell Biology 100,
Biological Sciences 1A, 1B, 1C, 101, 102, 103,

104, Molecular and Cellular Biology 140L, 141, 142, Neurobiology, Physiology, and Behavior 101, 112, 113, 114

Premedical. Inclusion of both organic and physical chemistry in the curriculum allows you to complete the premedical requirements while satisfying the requirements of the Chemical Engineering major. If you elect the premedical (including preveterinary) area of specialization, you should verify the specific preparation requirements with the Health Sciences Advising Office before making a final decision on your electives. To ensure that you have provided room in your program for the necessary biology courses, prepare a course schedule with a Chemical Engineering adviser early in your freshman year.

Suggested technical electives:

Anatomy, Physiology, and Cell Biology 100

Chemistry 128C, 129B, 129C

Six biology or biochemistry courses, such as

Biological Sciences 1A, 1B, 1C, 101, 102, 103, 104, Microbiology 102, Molecular and Cellular Biology 140L, 141, 142, 150, Neurobiology, Physiology, and Behavior 101, 112, 113, 114

Subject Areas and Courses

Chemical Engineering 150A, 150B, 151, 152A, 152B, 153, 154A, 155A, 156A, 157, 157L, 158A, 158C, 15947
Biological Sciences 102, Microbiology 102, Chemical Engineering 161A, 161B, 161C, 161L21
Chemistry 110A, 110B8
Biochemical Engineering electives10

Choose two laboratory courses from the laboratory electives list and choose additional courses from the lecture elective list to provide at least 10 units total.

Laboratory elective list:

Food Science and Technology 123L;

Microbiology 102L, 155L; Molecular and

Cellular Biology 120L (this course counts

as two laboratory electives and completely

satisfies the laboratory requirement),

160L; Neurobiology, Physiology, and

Behavior 104L; Plant Biology 111L,

153, 161A, 161B; two units of an internship

(192), independent study (199), or

Biotechnology 189L taken for 2 or more

units can be used to satisfy one biochemical

engineering laboratory elective require-

ment with the approval of a petition,

provided that the course is a laboratory-

based experimental project, related to the

biological and/or biochemical engineering

sciences, and the student submits a written

report that demonstrates proficiency in

laboratory skills, techniques, or method.

Lecture elective list:

Biological Sciences 1B, 1C, 101, 103,

104; Biological Systems Engineering 175;

Biotechnology 188; Chemical Engineer-

ing 170; Food Science and Technology

123; Microbiology 140, 150; Molecular

and Cellular Biology 122, 123; Neurobiol-

ogy, Physiology, and Behavior 103; Plant

Biology 111, 112, 152, 160.

Minimum Units Required for Major195

The Materials Science and Engineering Major Programs

Materials science and engineering is directed toward an understanding of the structure, properties, and behavior of materials. Society demands new and improved materials with capabilities far superior to common metals, alloys, and ceramics. New materials are needed for high-speed transportation systems, surgical and dental implants, new generations of power plants, and solid-state electronic devices in computer and communication technology.

Both the development of new materials and the understanding of present-day materials demand a thorough knowledge of basic engineering and scientific principles including crystal structure, elastic and plastic behavior, thermodynamics, phase equilibria and reaction rates, and physical and chemical behavior of engineering materials.

Materials engineers study phenomena found in many different engineering operations, from fracture behavior in automobiles to fatigue behavior in aircraft frames; from corrosion behavior in petro-chemical refineries to radiation-induced damage in nuclear power plants; and from fabrication of steel to design of semiconductors. Materials engineers are also increasingly involved in developing the new materials needed to attain higher efficiencies in existing and proposed energy conversion schemes, and will play a central role in the development of new technologies based on composites and high temperature superconductivity.

The undergraduate program in Materials Science and Engineering provides the background for activi-

ties in research, processing, and the design of materials. A common core of courses basic to engineering are taken during your first two years and provide a strong foundation in fundamental engineering concepts.

Objectives. We educate students in the fundamentals of materials science and engineering, balanced with the application of these principles to practical problems; train students with a sense of community, ethical responsibility and professionalism; prepare students for careers in industry, government and academia; instill in students the necessity of continuing education and self-learning; graduate students who can think independently, but who can function effectively as part of a team; train students who can communicate their accomplishments proficiently in written and oral form.

Materials Science Curriculum

The Materials Science and Engineering curriculum is accredited by the Engineering Accreditation Commission of the Accreditation Board for Engineering and Technology, Inc.

Lower Division Program

	UNITS	QUARTER USUALLY TAKEN
Required Courses		
Mathematics 21A-21B-21C-21D	16	1-2-3-4
Mathematics 22A-22B	6	5-6
Physics 9A-9B-9C-9D	19	3-4-5-6
Chemistry 2A, 2B or 2AH, 2BH	10	2-3 or 4-5
Engineering 6	4	2
Engineering 17	4	6
Engineering 35	3	4
Engineering 45	4	5
English 1 or 3 or Comparative Literature 1, 2, 3 or 4, or Native American Studies 5	4	2 or 3
Communication 1 or 3 (or an acceptable substitute as approved by the Undergraduate Study Committee of the College of Engineering)	4	2 or 3

Upper Division Program

In your third and fourth years, you will take "fundamentals" courses (Materials Science and Engineering 160, 162, 164, 174). With this background, you are then ready for the "applications" courses (Materials Science and Engineering 147, 180, 181, 182, 188) during the fourth year.

Technical electives, selected from other engineering or physical and natural science disciplines, give you some degree of specialization at the bachelor's degree level. They also provide preparation for research in a selected area at the graduate level. You may select 4 technical elective units to complete the undergraduate Materials Science and Engineering program. By selecting the appropriate technical electives and Humanities and Social Science/General Education electives, you may orient the program to suit your interests and career objectives: production and development, applied research, basic research, teaching, and/or management.

Upper division courses in engineering, chemistry, physics, mathematics, and biological sciences are generally acceptable as technical electives in Materials Science and Engineering.

The following list of suggested areas of specialization is given to assist you and your adviser in the preparation of study lists.

Suggested technical electives:

Aerospace Structures:

Aeronautical Science and Engineering
130, 133, 135, 137, 139

Automatic Control and Systems Analysis:

Mechanical Engineering 171, 172, 185,
187, 188

- Electrical and Computer Engineering
157A, 157B, 174
- Biomedical Engineering:
Chemistry 107A, 107B
Biological Sciences 1A, 1B
Neurobiology, Physiology, and Behavior
111L, 112, 113
Exercise Science 101, 102
- Chemical Corrosion:
Chemistry 110A, 110B, 110C or 107A,
107B
Chemical Engineering 151, 152A, 152B
- Computers:
Applied Science Engineering 115
Computer Science Engineering 110,
122A, 122B, 142, 151A, 151B
Electrical and Computer Engineering
170, 172, 180A, 180B
Mathematics 128A, 128B, 168
Statistics 130A, 130B
- Electronic Materials:
Electrical and Computer Engineering
140A, 140B, 145A, 145B, 146A, 146B,
148
Materials Science and Engineering 172,
181
Physics 121, 140A, 140B
- Environmental Engineering:
Engineering 160 (only one unit of credit
towards Technical Elective requirement)
Atmospheric Science 120
Biological Sciences 102, 103
Hydrologic Science 21
Chemistry 8A, 8B
Civil and Environmental Engineering 149
- Heat Transfer:
Engineering 105B
Mechanical Engineering 165
Chemical Engineering 150A, 153
- Materials Design and Processing:
Aeronautical Science and Engineering
137
Engineering 106
Materials Science and Engineering 172,
180, 181, 182
Mechanical Engineering 50, 150, 150A,
150B, 151, 152, 185A, 185B
Civil and Environmental Engineering 135
- Physics of Solids:
Physics 115A, 115B, 140A, 140B
Electrical and Computer Engineering
145A, 145B, 148

Suggested advisers: J.C. Gibeling, J.R. Groza, D.G. Howitt, J.F. Löffler, A.K. Mukherjee, Z.A. Munir, A. Navrotsky, S.H. Risbud, J. F. Shackelford.

Courses in Engineering: Chemical (ECH)

(Courses in Chemical Engineering (ECH) are listed below; courses in Materials Science and Engineering (EMS) are listed immediately following.)

Lower Division Courses

- 80. Chemical Engineering Profession (1)**
Lecture/discussion—1 hour. Professional opportunities and professional responsibilities of chemical engineers. Opportunities and needs for post-baccalaureate education. Relationship of chemical engineering to contemporary issues.—III. (III.)
- 98. Directed Group Study (1-5)**
Prerequisite: consent of instructor and lower division standing. (P/NP grading only.)
- 99. Special Study for Undergraduates (1-5)**
Prerequisite: consent of instructor. (P/NP grading only.)

Upper Division Courses

- 150A. Chemical Engineering Fluid Mechanics (4)**
Lecture—3 hours; discussion—1 hour. Prerequisite: courses 151 and 159, Engineering 35. Fluid statics and one-dimensional laminar flows. Kinematics of point and integral functions. The stress vector-stress tensor relation. Newton's law of viscosity and application of the Navier-Stokes equations to laminar flow and dimensional analysis. Flow of non-Newtonian fluids. Not open for credit to students who have completed Engineering 103 or 103A.—II. (II.)
- 150B. Chemical Engineering Fluid Mechanics (4)**
Lecture—3 hours; discussion—1 hour. Prerequisite: course 150A. Turbulent flows and time averaging. Application of Bernoulli's equation and the macroscopic mass, momentum, and mechanical energy balances to a variety of practical problems. Introduction to compressible flow. The entropy equation and isentropic processes. Shock waves and choke flow. Not open for credit to students who have completed Engineering 103B or Civil Engineering 141.—III. (III.)
- 150C. Rheology and Polymer Processing (4)**
Lecture—4 hours. Prerequisite: course 150A. Fundamentals of rheology. Introduction to polymer processing unit operations.—III. (III.)
- 151. Material Balances (3)**
Lecture—3 hours. Prerequisite: Chemistry 110A, Chemistry 128B (may be taken concurrently), Engineering 5. Application of the principles of conservation of mass to single and multi-component systems in chemical process calculations. Studies of batch, semi-batch, and continuous processes involving mass transfer, change of phase, and chemical reaction.—I. (I.)
- 152A. Chemical Engineering Thermodynamics (3)**
Lecture—3 hours. Prerequisite: course 151. Application of principles of thermodynamics to chemical processes. Not open for credit to students who have completed Engineering 105 or Engineering 105A.—II. (II.)
- 152B. Chemical Engineering Thermodynamics (4)**
Lecture—3 hours; discussion—1 hour. Prerequisite: course 152A. Continuation of course 152A. Not open for credit to students who have completed Engineering 105B.—III. (III.)
- 153. Chemical Engineering Heat Transfer (4)**
Lecture—4 hours. Prerequisite: course 150A. Steady and transient heat conduction. The thermal energy equation, analysis of forced and free convective heat transfer. Turbulence, macroscopic balances, and heat transfer coefficients. The photon transport equation and radiant energy exchange. The design of heat exchangers.—III. (III.)
- 154A. Mass Transfer (4)**
Lecture—3 hours; discussion—1 hour. Prerequisite: course 152B and 153. Fundamental concepts of mass transfer in fluids. Problems in pure diffusion and convective mass transfer.—I. (I.)

- 154B. Applications of Mass Transfer (3)**
Lecture—3 hours. Prerequisite: course 154A. Application of the principles of mass transfer and thermodynamic equilibrium to absorption, extraction, distillation, and other separation processes.—II. (II.)
- 155A. Chemical Engineering Laboratory (4)**
Laboratory—6 hours; discussion—1 hour; term paper. Prerequisite: course 150B, 153, and 154A (may be taken concurrently), satisfaction of the upper division English composition requirement. Open only to majors in Chemical Engineering, Chemical Engineering/Materials Science, Chemical Engineering/Biochemical Engineering, Biomedical Engineering, and Biological Systems Engineering. Laboratory experiments in transport phenomena, chemical kinetics, and thermodynamics. GE credit: Wrt.—I, II.
- 155B. Chemical Engineering Laboratory (4)**
Laboratory—6 hours; discussion—1 hour; extensive writing. Prerequisite: courses 154B (may be taken concurrently), 155A, and satisfaction of the Engineering upper division English composition requirement. Open only to majors in Chemical Engineering, Chemical Engineering and Materials Science, Materials Science, Chemical/Biochemical Engineering, Biomedical Engineering, Food Engineering or Biosystems Engineering. Continuation of 155A. Laboratory experiments in transport phenomena, chemical kinetics, and thermodynamics. GE credit: Wrt.—II, III. (II, III.)
- 156A. Chemical Engineering Kinetics (4)**
Lecture—3 hours; discussion—1 hour. Prerequisite: course 152B and 154A. Chemical kinetics and introduction to homogeneous and heterogeneous reactor design.—II. (II.)
- 156B. Chemical Engineering Kinetics (4)**
Lecture—3 hours; discussion—1 hour. Prerequisite: course 156A. Continuation of course 156A.—III. (III.)
- 157. Process Dynamics and Control (3)**
Lecture—3 hours. Prerequisite: course 159. Fundamentals of dynamic modelling of chemical processes. Design and analysis of classical feedback control of chemical processes.—I. (I.) McDonald
- 157L. Process Control Laboratory (1)**
Laboratory—3 hours; discussion—1 hour. Prerequisite: course 157. Open only to majors in Chemical Engineering, Chemical Engineering/Materials Science, Materials Science, Chemical/Biochemical Engineering, Biomedical Engineering, and Food Engineering. Laboratory experiments in control system design and analysis.—II, III. (II, III.)
- 158A. Economics and Optimization of Chemical Processes (3)**
Lecture—3 hours. Prerequisite: senior standing. Fundamentals of economics, interest calculations, depreciation, taxes. Economic analysis of chemical plant designs. Optimization methods. Linear and non linear programming.—I. (I.) Palazoglu
- 158B. Process Equipment Design (3)**
Lecture—3 hours. Prerequisite: course 158A. Design of chemical process equipment. Equipment cost estimation techniques.—II. (II.) Palazoglu
- 158C. Plant Design (3)**
Lecture—1.5 hours; discussion—1.5 hours. Prerequisite: course 158B or 161C. Open only to majors in Chemical Engineering, Chemical Engineering/Materials Science, Materials Science, Chemical/Biochemical Engineering, Biomedical Engineering, Food Engineering, Biosystems Engineering. Conceptual design of chemical and biochemical processes. Design, costing, and profitability analysis of complete plants. Use of computer-aided design techniques.—III. (III.) Palazoglu
- 159. Chemical Engineering Analysis (3)**
Lecture—3 hours. Prerequisite: Mathematics 22B. Chemical engineering applications of partial differential equations, tensors, systems of linear equations, and operational calculus.—I. (I.)
- 161A. Biochemical Engineering Fundamentals (3)**
Lecture—3 hours. Prerequisite: Chemistry 128A, Mathematics 22B, Microbiology 102 (or consent of

instructor). Biokinetics; bioreactor design and operation; transport phenomena in bioreactors; microbial, plant, and animal cell cultures. Not open for credit to students who have completed course 161.—II. (II.)

161B. Bioseparations (3)

Lecture—3 hours. Prerequisite: course 154A. Product recovery and purification of biochemicals. Cell disruption, centrifugation, filtration, membrane separations, extraction, and chromatographic separation processes.—II. (II.)

161C. Biotechnology Facility Design and Regulatory Compliance (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 161A, 161B (may be taken concurrently). Design of biotechnology manufacturing facilities. Fermentation and purification equipment, and utility systems. Introduction to current good manufacturing practices, regulatory compliance, and documentation.—II. (II.) Block

161L. Bioprocess Engineering Laboratory (4)

Laboratory—9 hours; discussion—1 hour; term paper. Prerequisite: course 161A and 161B, or Viticulture and Enology 186, or Biological Sciences 103 and Molecular and Cellular Biology 120L. Restricted to chemical/biochemical engineering majors during pass 1. Laboratory experiments in the operation and analysis of bioreactors; determination of oxygen mass transfer coefficients in bioreactors and ion exchange chromatography. GE credit: Wrt.—III.

166. Catalysis (3)

Lecture—3 hours. Prerequisite: course 156A (may be taken concurrently) or consent of instructor. Principles of catalysis based on an integration of principles of physical, organic, and inorganic chemistry and chemical kinetics and chemical reaction engineering. Catalysis in solution; catalysis by enzymes; catalysis in swellable polymers; catalysis in microscopic cages (zeolites); catalysis on surfaces.—II. (II.) Gates

170. Introduction to Colloid and Surface Phenomena (3)

Lecture—3 hours. Prerequisite: Chemistry 110A. Introduction to the behavior of surfaces and disperse systems. The fundamentals will be applied to the solution of practical problems in colloid science. The course should be of value to engineers, chemists, biologists, soil scientists, and related disciplines.—III. (III.) Stroeve

190C. Research Group Conferences (1)

Discussion—1 hour. Prerequisite: upper division standing in Chemical Engineering; consent of instructor. Research group conferences. May be repeated for credit. (P/NP grading only.)—I, II, III. (I, II, III.)

190X. Upper Division Seminar (1)

Seminar—1 hour. Prerequisite: upper division standing. In-depth examination of a special topic in a small group setting.

198. Group Study (1-5)

Prerequisite: consent of instructor. (P/NP grading only.)

199. Special Study for Advanced Undergraduates (1-5)

Prerequisite: consent of instructor. (P/NP grading only.)

Graduate Courses

206. Biochemical Engineering (3)

Lecture—3 hours. Prerequisite: Microbiology 102 and 102L, Biological Sciences 101, 102, 103, Molecular and Cellular Biology 120L, 200A; Food Science and Technology 205 recommended; or consent of instructor. Interaction of chemical engineering, biochemistry, and microbiology. Mathematical representations of microbial systems. Kinetics of growth, death, and metabolism. Continuous fermentation, agitation, mass transfer and scale-up in fermentation systems, product recovery, enzyme technology. Offered in alternate years.—(II.) Ryu

226. Enzyme Engineering (3)

Lecture—3 hours. Prerequisite: Microbiology 102 and 102L, Biological Sciences 102, 103, Molecular and Cellular Biology 122, 120L, 200A; or consent of instructor. Application of basic biochemical and

engineering principles of practical enzymatic processes. Lectures cover large scale production and separation of enzymes, immobilized enzyme systems, enzyme reactor design and optimization, and new application of enzymes in genetic engineering related biotechnology. Offered in alternate years.—II. Ryu

246. Advanced Biochemical Engineering (2)

Lecture—2 hours. Prerequisite: course 206 or consent of instructor. Advances in the field of biotechnology including genetic engineering, enzyme engineering, fermentation science, and renewable resources development. The important results of original research will be evaluated for understanding of the fundamental principles and for potential practical application.—II. (II.) Ryu

252. Statistical Thermodynamics (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 152B, Engineering 105B, or the equivalent. A treatment of the statistical basis of thermodynamics; introduction to statistical mechanics; discussion of the laws of thermodynamics; application of thermodynamic relationships to phase and chemical reaction equilibrium; introduction to molecular simulations and the evaluation of thermodynamic properties from molecular simulations.—I. (I.)

253A. Advanced Fluid Mechanics (4)

Lecture—4 hours. Prerequisite: courses 150A, 150B and 259. Kinematics and basic principles of fluid flow. Principles of constitutive equations. Navier-Stokes equations for Newtonian fluids. Survey or recitilinear creeping flow, lubrication flow, and boundary layer theory.—I. (I.)

253B. Advanced Heat Transport (4)

Lecture—4 hours. Prerequisite: courses 153 and 259 or the equivalent. Fundamental energy postulates and derivation of microscopic and macroscopic energy equations. Mechanisms of conduction. Isotropic, thermoelastic and anisotropic materials solution problems using Green's functions and perturbation theory. Photon transport, black and gray body radiation, radiant energy. Free and forced convection.—II. (II.)

253C. Advanced Mass Transfer (4)

Lecture—4 hours. Prerequisite: courses 154A, 154B, and 259 (may be taken concurrently) or the equivalents. Kinematics and basic conservation principles for multicomponent systems. Constitutive equations for momentum, heat and mass transfer. Applications to binary and ternary systems. Details of diffusion with reaction, and the effects of concentration.—I. (I.)

254. Colloid and Surface Phenomena (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: graduate standing in science or engineering or consent of instructor. Thermodynamics and rate processes at interfaces. These fundamental processes will be applied to determine the collective properties of thin films and membranes, self-assembled systems, liquid crystals and colloidal systems. Experimental techniques in surface analysis.—III. (III.) Stroeve, Longo

256. Chemical Kinetics and Reaction Engineering (4)

Lecture—4 hours. Prerequisite: courses 156A and 156B or the equivalent. Analysis of the performance of chemical reactors and design of chemical reactors based on the principles of chemical kinetics and transport phenomena. Consideration of noncatalytic and catalytic reactions in single fluid phases and emphasis on reactions in multiphase mixtures, especially gas-solid reactors.—II. (II.)

259. Advanced Engineering Mathematics (4)

Lecture—4 hours. Prerequisite: Mathematics 22A, 22B, 21D. Applications of methods of applied mathematics to the analytical and numerical solution of linear and nonlinear ordinary and partial differential equations arising in the study of transport phenomena.—I. (I.)

262. Transport Phenomena in Multiphase Systems (3)

Lecture—3 hours. Prerequisite: course 253C. Heat, mass, and momentum transfer in multiphase, multicomponent systems with special emphasis on trans-

port processes in porous media. Derivation of the averaging theorem and application of the method of volume averaging to multicomponent, reacting systems.—III. (III.) Whitaker

263. Rheology and Mechanics of Non-Newtonian Fluids (3)

Lecture—3 hours. Prerequisite: courses 253A and 259 or consent of instructor. Mechanics of polymer solutions and suspension, especially the development of properly invariant constitutive equations. Topics include: viscometry, linear and nonlinear viscoelasticity, continuum mechanics, kinetic theory. Offered in alternate years.—II. Powell

265. Emulsions, Microemulsions and Bilayers (3)

Lecture—3 hours. Prerequisite: an undergraduate course in physical chemistry. Thermodynamic and mechanical descriptions of surfactant-laden interfaces. Forces between and within interfaces. Physics of micelle and microemulsion formation. Structure and stability of emulsions. Properties of phospholipid bilayers, with emphasis on vesicles.—II. (II.) Dungan

267. Advanced Process Control (3)

Lecture—3 hours. Prerequisite: course 157 or the equivalent. Advanced course in analysis and synthesis of linear multivariable systems. Emphasis on frequency domain techniques and applications to chemical processes. Topics include singular value analysis, internal model control, robust controller design methods as well as self-tuning control techniques. Offered in alternate years.—III.

289A-L. Special Topics in Chemical Engineering (1-5)

Lecture and/or laboratory. Prerequisite: consent of instructor. Special topics in (A) Fluid Mechanics; (B) Nonlinear Analysis and Numerical Methods; (C) Process Control; (D) Chemistry of Catalytic Processes; (E) Biotechnology; (F) Interfacial Engineering; (G) Molecular Thermodynamics; (H) Membrane Separations; (I) Advanced Materials Processing; (J) Novel Experimental Methods; (K) Advanced Transport Phenomena; (L) Biomolecular Engineering. May be repeated for credit when topic differs.—I, II, III. (I, II, III.)

290. Seminar (1)

Seminar—1 hour. (S/U grading only.)

290C. Graduate Research Group Conference (1)

Discussion—1 hour. Prerequisite: consent of instructor. Research problems, progress and techniques in chemical engineering. May be repeated for credit. (S/U grading only.)—I, II, III. (I, II, III.)

293. Graduate Student Seminar (1)

Seminar—1 hour. Prerequisite: graduate standing. Presentation by graduate students of research in progress. May be repeated for credit. (S/U grading only.)—I, II, III. (I, II, III.)

294. Current Progress in Biotechnology (1)

Seminar—1 hour. Prerequisite: graduate standing. Seminars presented by guest lecturers on subjects of their own research activities. May be repeated for credit. (Same course as Molecular and Cellular Biology 294.) (S/U grading only.)—I, II, III. (I, II, III.) Ryu, Doi

298. Group Study (1-5)

Prerequisite: consent of instructor. (S/U grading only.)

299. Research (1-12)

(S/U grading only.)

Professional Course

390. Teaching of Chemical Engineering (1)

Discussion—1 hour. Prerequisite: qualifications and acceptance as teaching assistant and/or associate-in in chemical engineering. Participation as a teaching assistant or associate-in in a designated engineering course. Methods of leading discussion groups or laboratory sections, writing and grading quizzes, use of laboratory equipment, and grading laboratory reports. May be repeated twice for credit. (S/U grading only.)—I, II, III. (I, II, III.)

Courses in Materials Science and Engineering (EMS)

Upper Division Courses

147. Principles of Polymer Materials Science (3)

Lecture—3 hours. Prerequisite: chemistry through organic or Engineering 45; introductory physics sequence. Basic principles of polymer science presented including polymer structure and synthesis; polymerization mechanisms, polymer classes, properties, and reactions; polymer morphology, rheology, and characterization; polymer processing. (Same course as Fiber and Polymer Science 100.)—II. (II.)

160. Thermodynamics of Materials Processes and Phase Stability (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: Engineering 45. Review of thermodynamic principles of interest to materials scientists and engineers. Application of thermodynamics to material processing, phase stability, corrosion and oxidation reactions, and environmental issues. Specific examples from molten metallurgy, glass melting, and solid state materials will be used. Only 1 unit of credit allowed to students who have completed course 130. Only 3 units of credit allowed to students who have completed course 144. Not open for credit to students who have completed both courses 130 and 144.—I.

162. Structure and Characterization of Engineering Materials (4)

Lecture—4 hours. Prerequisite: Engineering 45. Description of the structure of engineering materials on the atomic scale by exploring the fundamentals of crystallography. The importance of this structure to materials' properties. Description of experimental determination using x-ray diffraction techniques. Only 2 units of credit allowed to students who have completed course 132. Only 3 units of credit allowed to students who have completed course 142. Only 1 unit of credit allowed to students who have completed both courses 132 and 142.—II.

162L. Structure and Characterization of Materials Laboratory (2)

Laboratory—3 hours; discussion—1 hour. Prerequisite: course 162 (concurrent enrollment recommended). Experimental investigations of structure of solid materials are combined with techniques for characterization of materials. Laboratory exercises emphasize methods used to study structure of solids at the atomic and microstructural levels. Methods focus on optical, x-ray and electron techniques. Only 2 units of credit allowed to students who have completed course 134L. Not open for credit to students who have completed course 132L. GE credit: Wrt.—II.

164. Rate Processes in Materials Science (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: Engineering 45 and course 160. Basic kinetic laws and the principles governing phase transformations. Applications in diffusion, oxidation, nucleation, growth, and spinodal transformations. Only 1 unit of credit allowed to students who have completed course 134. Only 3 units of credit allowed to students who have completed course 144. Not open for credit to students who have completed both courses 134 and 144.—III.

172. Electronic, Optical and Magnetic Properties of Materials (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: Engineering 45, upper division standing in engineering, physics, chemistry, or geology. Electronic, optical, and magnetic properties of materials as related to structure and processing of solid state materials. Physical principles for understanding the properties of metals, semiconductors, ceramics, and amorphous solids and the applications of these materials in engineering.—I.

172L. Electronic, Optical and Magnetic Properties Laboratory (2)

Laboratory—3 hours; lecture/laboratory—1 hour. Prerequisite: course 172 (concurrent enrollment recommended). Experimental investigation of electronic, optical and magnetic properties of engineering materials, emphasizing the fundamental relationship between microstructure and properties as well as the

influence of rate processes on the evolution of the microstructure and properties. GE credit: Wrt.—I.

174. Mechanical Behavior of Materials (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: Engineering 45 and course 162. The microscopic and macroscopic aspects of the mechanical behavior of engineering materials, with emphasis on recent development in materials characterization by nondestructive testing. The fundamental aspects of plasticity in engineering materials, strengthening mechanisms and mechanical failure modes of materials systems. Only 1 unit of credit allowed to students who have completed course 138. Only 3 units of credit allowed to students who have completed course 142. Not open for credit to students who have completed both courses 138 and 142. GE credit: Wrt.—I.

174L. Mechanical Behavior Laboratory (2)

Laboratory—3 hours; lecture/laboratory—1 hour. Prerequisite: course 174 (concurrent enrollment recommended). Experimental investigation of mechanical behavior of engineering materials. Laboratory exercises emphasize the fundamental relationship between microstructure and mechanical properties, and the evolution of the microstructure as a consequence of rate process. Not open for credit to students who have completed course 138L. GE credit: Wrt.—I.

180. Materials in Engineering Design (4)

Lecture—3 hours; lecture/discussion—1 hour. Prerequisite: Engineering 45 and upper division standing in Engineering. Quantitative treatment of materials selection for engineering applications. Discussion of the relationship between design parameters and materials properties. Emphasis on the influence of processing and fabrication on the properties of metals, ceramics, polymers and composites as related to the overall design process. Not open for credit to students who have completed course 140. (Former course 140.) GE credit: Wrt.—III.

181. Materials Processing (4)

Lecture—3 hours; lecture/discussion—1 hour. Prerequisite: Engineering 45 and upper division standing in engineering, physics, chemistry, or geology. Principles of phase equilibria, thermodynamics and reaction kinetics applied to materials processing. Effects of processing variables on the structure-property relationship. Fundamentals of the manufacturing processes for electronic, optical, functional and structural materials. Only 2 units of credit allowed to students who have completed course 146 or 155. Not open for credit to students who have completed both courses 146 and 155. GE credit: Wrt.—II.

182. Failure Analysis (4)

Lecture—3 hours; laboratory—3 hours. Prerequisite: Engineering 45, upper division standing in science or engineering. Analysis of the way materials fail. Effects of temperature, mechanical deformation and corrosion on the properties of materials. Forensics and methodologies for investigating failures of materials including optical microscopy, x-ray analysis and scanning electron microscopy. Investigation of practical problems. Only 1 unit of credit to students who have completed course 148. Only 3 units of credit to students who have completed course 142 or course 144. Not open for credit to students who have completed both courses 142 and 148 or both courses 144 and 148. GE credit: Wrt.—II.

188. Materials Design Project (4)

Laboratory—6 hours; discussion—2 hours. Prerequisite: courses 160, 162, 164, 172, 174. A capstone materials design experience involving analysis of real materials processing and applications including economic, manufacturing, and ethical constraints. Various principles of materials science introduced in other courses in the curriculum are integrated into a team design project. Only 1 unit of credit allowed to students who have completed course 149. GE credit: Wrt.—III.

190C. Research Group Conferences (1)

Discussion—1 hour. Prerequisite: consent of instructor; upper division standing. Individual and/or group

conference on problems, progress and techniques in materials research. May be repeated for credit.

(P/NP grading only.)—I, II, III. (I, II, III.)

198. Directed Group Study (1-5)

Lecture—1-5 hours. Prerequisite: consent of instructor. Group study of selected topics. (P/NP grading only.)

199. Special Study for Advanced Undergraduates (1-5)

Prerequisite: consent of instructor. (P/NP grading only.)

Graduate Courses

230. Fundamentals of Electron Microscopy (3)

Lecture—2 hours; discussion—1 hour. Prerequisite: Engineering 132. Principles and techniques of scanning and transmission of electron microscopy used in the study of materials. Emphasis upon practical applications. Offered in alternate years.—(II.) Howitt

230L. Laboratory for Electron Microscopy (2)

Laboratory—6 hours. Prerequisite: course 230 concurrently. Practical application of techniques of electron scanning and transmission microscopy including x-ray microanalysis. Offered in alternate years.—(II.) Jones

232. Advanced Topics in Transmission Electron Microscopy (3)

Lecture—1 hour; discussion—2 hours. Prerequisite: course 230. Advanced course in the techniques of electron microscopy including analytical techniques, probe diffraction methods, and high resolution imaging. Offered in alternate years.—II. Howitt

232L. Laboratory for Advanced Transmission Electron Microscopy (2)

Discussion—1 hour; laboratory—3 hours. Prerequisite: course 230L. Laboratory in advanced transmission electron microscopy techniques relevant to specific graduate research projects in materials science. Offered in alternate years.—II.

240. Transport Phenomena in Materials Processes (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: graduate standing in Engineering. Phenomenological and atomistic mechanisms in transport processes in condensed and noncondensed phases. Application to heat treatment, chemical and physical vapor deposition, crystal growth, bonding, sintering and joining of metals. Offered in alternate years.—III.

241. Principles and Applications of Dislocation Mechanics (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: graduate standing in Engineering; consent of instructor. Concepts in dislocation theory are applied to explain plasticity of crystalline solids. Glide and climb of dislocations, strain hardening, recrystallization, theories of creep processes and interaction of dislocation with solute atoms, precipitates and impurity clouds are discussed. Offered in alternate years.—(II.) Mukherjee

242. Advanced Mechanical Properties of Materials (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 138. Strength and structure of engineering materials. The dependence of their mechanical properties on time, stress, and temperature. Generalized concepts of dislocation theory in plastic deformation, including creep, superplasticity, and cavitation. Influence of microstructure in optimizing the mechanical strength properties. Offered in alternate years.—II. Mukherjee

243. Kinetics of Phase Transformation in Engineering Materials (3)

Lecture—3 hours. Prerequisite: graduate standing in Engineering and consent of instructor; course 130 recommended. Theory of alloying, kinetics of phase changes, homogeneous and heterogeneous transformation, transformation by shear, order-disorder reactions. Offered in alternate years.—III. Groza

244. Interaction of Materials and their Environment (3)

Lecture—3 hours. Prerequisite: Engineering 45 and 105A, or consent of instructor. Thermodynamic and

kinetic foundations of the corrosion and oxidation processes. Practical aspects of corrosion control and prevention. Stress-corrosion and gas-embrittlement phenomena. Special topics in corrosion; micro-biological and atmospheric corrosion. Offered in alternate years.—I. Munir

245. Advanced Topics in Structure of Materials (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 132 and graduate standing in Engineering or consent of instructor; courses 138 and 142 recommended. Nature of microstructure in engineering materials will be explored. Crystalline and non-crystalline structures will be studied with special emphasis on grain boundary segregation in development of polycrystalline microstructure and the radial distribution function of amorphous materials. Offered in alternate years.—III. Shackelford

247. Advanced Thermodynamics of Solids (3)

Lecture—3 hours. Prerequisite: course 130 or the equivalent. Thermodynamics of gas-solid reactions and solutions; criteria for phase stability, thermodynamics of surfaces and interfaces; thermodynamics of defects in compounds, their influence on transport processes; thermodynamics of EMF cells and application to solid-state electrolytes. Offered in alternate years.—(I.) Munir

248. Fracture of Engineering Materials (3)

Lecture—3 hours. Prerequisite: course 138. Description of failure of materials by crack propagation. Topics include the stress fields about elastic cracks, the Griffith-Irwin analysis, descriptions of plastic zones, fracture toughness testing, microstructural aspects of fracture and failure at elevated temperatures. Offered in alternate years.—(I.) Gibeling

249. Mechanisms of Fatigue (3)

Lecture—3 hours. Prerequisite: course 138 or consent of instructor; course 248 recommended. Microstructural description of mechanisms of fatigue in metals. Topics include a phenomenological treatment of cyclic deformation, dislocation processes in cyclic deformation, fatigue crack nucleation, stage I crack growth, threshold effects and high temperature cyclic deformation. Offered in alternate years.—I.

250A-F. Special Topics in Polymer and Fiber Science (3)

Lecture—3 hours. Prerequisite: course 147 or consent of instructor. Selected topics of current interest in polymer and fiber sciences. Topics will vary each time the course is offered. (Same course as Textiles and Clothing 250A-F)—II. (II.)

251. Applications of Solid State Nuclear Magnetic Resonance Spectroscopy (3)

Lecture—3 hours. Prerequisite: graduate standing in chemistry, physics or engineering, or consent of instructor. Fundamentals of solid state NMR spectroscopy and principles of advanced NMR techniques for analyzing structure of solid materials.—III. (III.) Risbud

289A-G. Special Topics in Materials Science (1-5)

Lecture and/or laboratory. Prerequisite: consent of instructor. Special topics in: (A) Electronic Materials; (B) Ceramics and Minerals; (C) Physics and Chemistry of Materials; (D) Materials Processing; (E) Materials Science and Forensics; (F) Biomaterials; (G) Surface Chemistry of Metal Oxides. May be repeated for credit when topic differs.—I, II, III. (I, II, III.)

290C. Graduate Research Conference (1)

Discussion—1 hour. Prerequisite: consent of instructor. Individual and/or group conference on problems, progress, and techniques in materials science and engineering research. May be repeated for credit. (S/U grading only)—I, II, III. (I, II, III.)

294. Materials Science Seminar (1)

Seminar—1 hour. Current literature and developments in materials science with presentations by individual students. May be repeated for credit. (S/U grading only)—I, II, III. (I, II, III.) Shackelford, Mukherjee, Munir, Howitt, Gibeling, Groza, Risbud

298. Group Study (1-5)

(S/U grading only.)

299. Research (1-12)

Prerequisite: consent of instructor. (S/U grading only.)

Professional Course

390. The Teaching of Materials Science (1)

Discussion—1 hour. Prerequisite: meet qualifications for teaching assistant and/or associate-in in materials science and engineering. Participation as a teaching assistant or associate-in in a designated engineering course. Methods of leading discussion groups or laboratory sections, writing and grading quizzes, use of laboratory equipment, and grading laboratory reports. May be repeated twice for credit. (S/U grading only)—I, II, III. (I, II, III.)

The Civil and Environmental Engineering Programs

Mission. The Department of Civil and Environmental Engineering integrates research, education, and professional service in areas related to civil infrastructure and the environment. We provide the profession and academia with outstanding graduates who advance both engineering practice and fundamental knowledge.

Program Educational Objectives. Fundamentals: To educate students in the fundamental principles needed for civil and environmental engineering: mathematics, basic sciences, and engineering sciences. **Application:** To educate students in the application of fundamental principles for solving civil and environmental engineering problems; provide proficiency in at least four of the environmental, geotechnical, structural, transportation, and water resource areas; and expose students to current research. **Professionalism:** To imbue students with attributes that lead to professional growth throughout their careers: a sense of community and ethical responsibility; an awareness of business practices; a recognition of the need for life-long learning, continuing education, and participation in professional societies; a preparedness for graduate education; an appreciation for diversity in the engineering profession; the ability to think independently and perform effectively in multidisciplinary teams; and the ability to communicate effectively. **Service to State and Profession:** To provide an educational program that serves the needs of the state and profession; recruit and retain a diverse student population that is representative of the state; engage in outreach activities; provide an efficient program that minimizes the time-to-degree and maximizes enrollment opportunities; and prepare students for entry into post-graduate education or practice.

Civil Engineering Curriculum

The Civil Engineering curriculum is accredited by the Engineering Accreditation Commission of the Accreditation Board for Engineering and Technology, Inc.

Lower Division Program

Requirements for Civil Engineering and the double major, Civil Engineering/Materials Science and Engineering.

	QUARTER USUALLY TAKEN
Required Courses	
Mathematics 21A-21B-21C-21D16	1-2-3-4
Mathematics 22A-22B6	5-6
Physics 9A-9B-9C and choice of Physics 9D, Chemistry 2C, Biological Science 1A or Geology 50-50L.....19	3-4-5-6

232 Engineering: Civil and Environmental

Chemistry 2A-2B or 2AH-2BH.....10	2-3 or 4-5
Civil and Environmental Engineering 3.....3	1
(Civil and Environmental Engineering 3 is designed for freshman students and is not open to upper division students. Students who do not take this course will substitute 3 units of additional upper division civil engineering coursework as technical elective units.)	
Engineering 6.....4	2
Civil and Environmental Engineering 10.....4	6
Engineering 17.....4	6
Engineering 35.....3	6
Engineering 45.....4	5
English 1 or 3, or Comparative Literature 1, 2, 3 or 4, or Native American Studies 5.....4	1 or 2
Communication 1 or 3 (or an acceptable substitute as approved by the Undergraduate Study Committee of the College of Engineering).....4	5
General Education electives.....12	
Total Lower Division Units.....93	

Upper Division Program

Areas of Specialization

Undergraduates may emphasize one or more of the following areas of specialization, or generalize across all areas. You are urged to consult a faculty adviser when developing your individual program. Additional information on areas of specialization and potential faculty advisers can be obtained from the College of Engineering *Bulletin* and the departmental web page.

Environmental Engineering. The focus of this area is on the management and improvement of air, land, and water quality in the face of increasing population and expanding industrialization. Examples of environmental engineering problems include innovative analysis and design of air, water, wastewater, and solid waste treatment systems; mathematical modeling of natural and engineered systems; sampling, analysis, and transport and transformation of natural and anthropogenic pollutants; and modeling of air pollutant emissions.

Suggested technical electives:

Applied Science Engineering 116; Atmospheric Science 120, 121A, 121B, 124, 158, 160; Biological Sciences 101, 102, 103, 122; Chemical Engineering 154A, 154B, 156A, 156B, 161A, 161B, 170; Chemistry 107A, 107B, 128A, 128B; Civil and Environmental Engineering 140, 140L, 142, 144, 145, 146, 147, 148A, 148B, 149, 150, 153, 163; Engineering 180; Environmental Science and Policy 150A, 150B, 150C, 151, 155, 161, 166; Mathematics 128A, 128B, 128C; Mechanical Engineering 161, 163, 167B; Microbiology 102, 105, 120, 140, 150; Soil Science 111, 112; Statistics 130A, 130B

Suggested advisers: D. Chang, J. L. Darby, T. R. Ginn, B. A. Holmén, M. J. Kleeman, D. Niemeier, S. G. Schladow, T. M. Young.

Geotechnical Engineering. This area deals with civil infrastructure and environmental problems that require quantifying the behavior of geologic materials (e.g., soils and rocks). Examples of geotechnical engineering problems include foundations for buildings and bridges, earthwork (e.g., dams, tunnels, highways), earthquake hazards (e.g., ground motions, liquefaction, soil-structure interaction), and geo-environmental problems (ground water flow, subsurface contaminant transport and remediation).

Suggested technical electives:

Civil and Environmental Engineering 121, 130, 131, 132, 134, 135, 137, 138, 139, 140, 140L, 144, 171, 171L, 173, 174; Engineering 180; Geology 17, 50, 50L, 134, 161; Hydrology 146; Mathematics 128A, 128B, 128C

Suggested advisers: K. Arulanandan, R. W. Boulanger, Y. F. Dafalias, I. M. Idriss, B. Jeremic, B. L. Kutter.

Structural Engineering and Structural Mechanics.

The focus of this area is the conception, design, analysis, construction, and life-cycle modeling of all types of civil infrastructure, including buildings, bridges, dams, ports, highways, and industrial facilities. Structural materials include metals, reinforced concrete, timber, and advanced composites. Loads range from earthquakes to adverse environmental conditions. Structural mechanics emphasizes theoretical and computational tools that may be used in structural engineering.

Suggested technical electives:

Civil and Environmental Engineering 130, 131, 132, 134, 135, 136, 137, 138, 139, 171, 171L, 173; Engineering 122, 180; Materials Science Engineering 174; Mathematics 128A, 128B, 128C

Suggested advisers: J. E. Bolander, Y. K. Chai, Y. F. Dafalias, R. A. Imbsen, S. Kunnath, B. Maroney, M. R. Ramey, M. M. Rashid, N. Sukumar.

Transportation Planning and Engineering. This area deals with the movement of people and goods in a manner consistent with society's environmental (e.g. air and water quality) and socio-economic goals (e.g. equity and mobility). Transportation engineering applies engineering, economic, and behavioral science principles to the planning, analysis, design, and operation of transportation systems such as highways and public transit. Transportation planning involves the formulation and analysis of transportation policy, program, and project alternatives in consideration of societal goals, budgetary constraints, economic objectives, and technological feasibility.

Suggested technical electives: Civil and Environmental Engineering 137, 149, 153, 161, 162, 163, 165; Engineering 160; Environmental Science and Policy 167, 168A, 168B, 171, 173, 178, 179

Suggested advisers: P. L. Mokhtarian, D. Niemeier, D. Sperling, H. M. Zhang.

Water Resources Engineering. This area includes hydrology, hydraulics, fluid mechanics, and water resources systems planning and design. Hydrology deals with quantifying and understanding all aspects of the hydrologic cycle, including the relationships between precipitation, runoff, groundwater, and surface water. Water quality and contaminant transport issues are linked to hydrologic conditions. Hydraulics and fluid mechanics deal with flows in pipes, open-channel water-distribution systems, and natural systems, such as lakes and estuaries. Water resources systems planning and design deals with the comprehensive development of water resources to meet the multiple needs of industry, agriculture, municipalities, recreation, and other activities.

Suggested technical electives:

Agricultural and Resource Economics 176; Atmospheric Science 120, 121A, 121B; Biological and Agricultural Engineering 145; Civil and Environmental Engineering 141, 141L, 142, 144, 145, 148B, 153, 155; Environmental Science and Policy 128, 150A, 151; Hydrology 110; Mechanical Engineering 167B.

Suggested advisers: J. DeVries, T. R. Ginn, B. L. Kavvas, B. E. Larock, J. R. Lund, M. A. Mariño, S. G. Schladow, B.A. Younis.

Civil Engineering Upper Division Requirements

UNITS

Subject Areas and Courses

Engineering 102, 103, 104, 104L, 105, 106...20
 Applied Science Engineering 115.....4
 Civil and Environmental Engineering 1144
 One course from Applied Science Engineering 116, Civil and Environmental Engineering 153, Mathematics 118A, 121A, or Statistics 1084
 A minimum of four of the following group options (a minimum of two courses in each of the four areas and a minimum of

19 design units from group option selections and technical electives is required. The design unit content of each course is noted on the civil engineering degree requirement advising sheet, available from the department or on the department's undergraduate Web site.).....28

Environment: Civil and Environmental Engineering 148A or 149 and at least one from Civil and Environmental Engineering 140, 147, 148B, 150

Geotechnical: Civil and Environmental Engineering 171 and 171L and at least one from Civil and Environmental Engineering 173, 174

Structures: Civil and Environmental Engineering 135 and at least one from Civil and Environmental Engineering 130, 131, 132, 134, 136, 137, 138, 139

Transportation: Civil and Environmental Engineering 161 or 163 and at least one from 162, 165

Water Resources: Civil and Environmental Engineering 141 and 141L and at least one from Civil and Environmental Engineering 142, 144, 145, 146, 155

Technical electives.....18

Fourteen units must be selected from upper division engineering courses; of these units, seven units must be selected from Civil and Environmental Engineering courses other than Civil and Environmental Engineering 192 or 199.

General Education electives.....12

Total Upper Division Units.....90

Minimum Units Required for Major183

Civil Engineering/Materials Science and Engineering Upper Division Requirements

UNITS

Subject Areas and Courses

Engineering 100, 102, 103, 104, 104L, 105, 10623
 Applied Science Engineering 115.....4
 Civil and Environmental Engineering 1144
 One course from Applied Science Engineering 116, Civil and Environmental Engineering 153, Mathematics 118A, 121A, or Statistics 1084
 Civil and Environmental Engineering 130, 135, 141, 141L, 148A, 171, 171L21
 Three courses from Civil and Environmental Engineering 132, 134, 136, 145, 147, 148B, 150, 155, 162, 173 (and must include one of Civil and Environmental Engineering 134, 136, 145, 148B, 150, 162, or 173)9
 Materials Science and Engineering 160, 162, 162L, 164, 174, and one course from Materials Science and Engineering 172, 180, 181, 182, 18822
 General Education electives12
 (Civil and Environmental Engineering 137 recommended.)

Total Upper Division Units.....99

Minimum Units Required for Major192

Courses in Engineering: Civil and Environmental (ECI)

Lower Division Courses

3. Introduction to Civil and Environmental Engineering Systems (3)

Lecture—2 hours; laboratory—3 hours. Prerequisite: trigonometry. An introduction to civil engineering systems. A general view of the engineering process as obtained by participation in laboratory experiments illustrative of the solution of representative, but greatly simplified, engineering problems. Not open for credit to upper division engineering students.—I. (I.)

10. Introduction to Surveying (4)

Lecture—2 hours; laboratory—6 hours. Prerequisite: Physics 9A. Restricted to Civil Engineering, Civil Engineering/Materials Science and Engineering, and Biological Systems Engineering majors. Non-majors accommodated on a space available basis. Theory and practice of civil engineering surveying. Modern methods of land surveying and computer-aided design in civil engineering practice.—III. (III.) Ramey

90X. Lower Division Seminar (1-4)

Seminar—1-4 hours. Prerequisite: consent of instructor. Examination of a special topic in a small group setting. May be repeated for credit.

92. Internship in Engineering (1-5)

Internship. Prerequisite: lower division standing; approval of project prior to period of internship. Supervised work experience in civil engineering. May be repeated for credit. (P/NP grading only.)

98. Directed Group Study (1-5)

Prerequisite: consent of instructor and lower division standing. (P/NP grading only.)

99. Special Study for Undergraduates (1-5)

Prerequisite: consent of instructor; lower division standing. (P/NP grading only.)

Upper Division Courses**114. Probabilistic Systems Analysis for Civil Engineers (4)**

Lecture—4 hours. Prerequisite: Mathematics 21C. Probabilistic concepts and models in engineering. Statistical analysis of engineering experimental and field data. Introduction to stochastic processes and models of engineering systems. Not open for credit to students who have completed Statistics 120.—I, II. Mokhtarian

119A. C/FORTRAN Programming for Engineers (4)

Lecture—3 hours; laboratory—3 hours. Prerequisite: Engineering 6, any two of Engineering 102, 103, 104, 105, or the equivalent, upper division standing. Computational problem solving techniques for engineering applications using C/FORTRAN structured programming; algorithm design applied to realistic problems.—II. (II.) Jeremic, Kleeman

119B. Parallel Processing for Engineering Applications (4)

Lecture—3 hours; laboratory—3 hours. Prerequisite: course 119A or consent of instructor, upper division standing. Fundamental skills in parallel computing for engineering applications; emphasis on structured parallel programming for distributed memory parallel clusters.—III. (III.) Kleeman, Jeremic

121. Information Technology: Sensors and Data (3)

Lecture—2 hours; laboratory—3 hours. Prerequisite: Engineering 5 or 6, 17, 104L, course 141 or 171. Information technology with geotechnical, structural, environmental, water resources and transportation applications. Theory and techniques for acquiring data: sensors, instrumentation, data acquisition systems. Processing and using data: digital signal processing, transfer functions, control systems. Archiving, sharing and visualizing complex data sets.—I. (I.) Kutter

130. Structural Analysis (4)

Lecture—4 hours. Prerequisite: Mathematics 22A, Engineering 104. Elastic structural analysis of determinate and indeterminate trusses, beams and frames. Plastic bending and limit analysis.—III. (III.) Romstad

131. Matrix Structural Analysis and Introduction to Finite Element (3)

Lecture—2 hours; laboratory—3 hours. Prerequisite: Engineering 5 (or the equivalent) and 104. Open to Engineering majors only. Matrix formulation and computer analysis of statically indeterminate structures. Introduction to finite element methods for elasticity and bending problems. (Former course 131B).—I. (I.) Ramey

132. Structural Design: Metallic Elements (4)

Lecture—4 hours. Prerequisite: Engineering 104. Design of metallic beams, columns, and other mem-

bers for various types of loading and boundary conditions; design of connections between members; member performance within structural systems.—II. (II.) Bolander

134. Analysis and Design of Bridges (4)

Lecture—3 hours; laboratory—3 hours; field trip. Prerequisite: courses 130 or 131; 135. Bridge design using state-of-the-art programs. Overview of Caltrans and American Association of State Highway and Transportation Officials (AASHTO) codes and principles. Seismic analysis/retrofitting of bridges. Bridge design details, final plans, specifications and estimate. Field Trip.—II. (II.) Imbsen

135. Structural Design: Concrete Elements (4)

Lecture—3 hours; laboratory—3 hours. Prerequisite: Engineering 104. Restricted to majors in Civil Engineering, Civil Engineering/Materials Science and Engineering, or Materials Science and Engineering only. Strength design procedures for columns, rectangular beams, T-beams and beams of general cross-section. Building code requirements for bending, shear, axial load, combined stresses and bond. Introduction to prestressed concrete.—I, III. (I, III.) Ramey

136. Building Design: Wood, Steel, and Concrete Applications (4)

Lecture—3 hours; laboratory—3 hours. Prerequisite: courses 130 or 131, course 135; course 132 recommended. Horizontal and lateral load paths; dead and live loading; earthquake and wind forces. Approximate analyses of building frames; wood engineering for buildings. Steel, concrete and wood building design.—III. (III.) Ramey

137. Construction Principles (3)

Lecture—2 hours; laboratory—3 hours. Prerequisite: senior standing in Engineering. A study of the construction industry; its form, evolution, and methods of operation; fundamental principles underlying construction practices; economic factors in planning, organizing, and operating a construction force. Field trips and analysis of local construction projects.—III. (III.)

138. Earthquake Loads on Structures (3)

Lecture—3 hours. Prerequisite: Engineering 102, course 130 or 131. Determination of loads on structures due to base motions. Methods of static lateral forces, approximate dynamic analysis (response spectrum), and time history. Concepts of mass, damping, and stiffness for typical structures. Design for inelastic behavior. Consideration of wind and blast loading.—II. (II.) Romstad

139. Advanced Structural Mechanics (3)

Lecture—3 hours. Prerequisite: Engineering 104 or the equivalent. Review of stress, strain, equilibrium, compatibility, and elastic material behavior. Plane stress and plane strain problems in elasticity theory; stress function. Theories for straight, tapered, composite, and curved beams. Beams on elastic foundations. Introduction to plates, curved membranes, and cables.—I. (I.) Rashid

140. Environmental Analysis of Aqueous Systems (3)

Lecture—3 hours. Prerequisite: Chemistry 2B; course 148A recommended. Introduction to chemical principles underlying current practices in sampling and analysis of water and wastewater.—I. (I.) Darby

140L. Environmental Analysis of Aqueous Systems Laboratory (1)

Laboratory—3 hours. Prerequisite: Chemistry 2B or the equivalent; course 140 (may be taken concurrently). Restricted to Civil Engineering undergraduate and graduate students. Introduction to "wet chemical" and instrumental techniques commonly used in the examination of water and wastewater and associated data analysis.—I. (I.) Darby

141. Engineering Hydraulics (3)

Lecture—3 hours. Prerequisite: Engineering 103. Nature of flow of a real fluid; flow in pipes; open channel flow; turbomachinery; fluid forces on objects: boundary layers, lift and drag.—I, III. (I, III.) Larock

141L. Engineering Hydraulics Laboratory (1)

Laboratory—3 hours. Prerequisite: course 141 (may be taken concurrently). Open to Engineering students only. Laboratory experiments and demonstrations on flow measurement, sluice gates, hydraulic jump, flow characteristics, and centrifugal pumps.—I, III. (I, III.) Larock

142. Engineering Hydrology (4)

Lecture—4 hours. Prerequisite: courses 141 (may be taken concurrently); course 114 recommended. The hydrologic cycle. Evapotranspiration, interception, depression storage and infiltration. Streamflow analysis and modeling. Flood routing through channels and reservoirs. Frequency analysis of hydrologic variables. Precipitation analysis for hydrologic design. Hydrologic design.—I. (I.) Kavvas

144. Groundwater Systems Design (4)

Lecture—4 hours. Prerequisite: courses 141 and 148A. Groundwater occurrence, distribution, and movement; groundwater flow systems; aquifer management; groundwater quality and contamination; solute transport by groundwater; fate and transport of subsurface contaminants. Introduction to groundwater supply and transport modeling.—I. (I.) Ginn

145. Hydraulic Structure Design (3)

Lecture—2 hours; laboratory—3 hours. Prerequisite: courses 141 and 141L; course 142 recommended. Principles of project design. Methods of analysis and hydraulic design of storage systems, conveyance and regulation systems, and hydraulic structures. Emphasis is on application of principles of open channel hydraulics in these systems.—III. (III.) DeVries

146. Water Resources Simulation (3)

Lecture—3 hours. Prerequisite: courses 141; 114 and 142 recommended. Simulation techniques in the analysis, design and operation of surface water systems; introduction to modeling concepts with particular application to surface runoff; water quality in rivers and streams; and management of reservoirs. GE credit: Wrt.—II. (II.) Schladow

147. Solid Waste Management (3)

Lecture—2 hours; laboratory—3 hours. Characteristics and amounts of solid wastes; collection systems; introduction to waste treatment processes and return of treated wastes to the environment.—I. (I.) Tchobanoglous

148A. Water Quality Management (4)

Lecture—4 hours. Prerequisite: Engineering 103. Basic concepts of water quality. Fundamentals of water and wastewater treatment processes. Analysis of treatment process flowsheets. Analysis of water quality management alternatives.—II. (II.) Young

148B. Water Quality Management Systems Design (4)

Lecture—3 hours; laboratory—3 hours. Prerequisite: course 148A. Application of the principles of fluid mechanics to the analysis and design of flow measuring devices, pumps and pump station design, water distribution systems, wastewater collection systems, water and wastewater treatment plant headloss analysis, and bioremediation systems.—III. (III.) Schroeder

149. Air Pollution (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: Mathematics 21D, 22B, Chemistry 2B, Atmospheric Science 121A or Engineering 103. Physical and technical aspects of air pollution. Emphasis on geophysical processes and air pollution meteorology as well as physical and chemical properties of pollutants. (Same course as Atmospheric Science 149).—I. (I.) Chang

150. Air Pollution Control System Design (4)

Lecture—2 hours; laboratory—3 hours; discussion—1 hour. Prerequisite: Engineering 103, 105, 106, course 149. Design and evaluation of air pollution control devices and systems.—II. (II.) Chang

153. Deterministic Optimization and Design (4)

Lecture—4 hours. Prerequisite: Mathematics 21C, 22A, Engineering 5 or 6, upper division standing; Applied Science Engineering 115 recommended. Operations research. Optimization techniques such

as linear programming, dynamic programming, and non-linear programming. Applications in water, transportation, environmental, infrastructure systems, and other civil engineering disciplines through computer-based design projects.—II. (II.) Lund

155. Water Resources Engineering Planning (4)

Lecture—4 hours. Prerequisite: Engineering 106 or Economics 1A, course 114, 142; course 153 recommended. Basic engineering planning concepts; role of engineering, economic, environmental and social information and analysis; institutional, political and legal aspects. Case studies and computer models illustrate the planning of water resource systems. GE credit: Wrt.—III. (III.) Lund

161. Transportation System Operations (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: Engineering 6 (or the equivalent) and 102. Principles of transportation system operations; traffic characteristics and methods of measurement; models of transportation operations and congestion applied to urban streets and freeways.—I. (I.) Zhang

162. Transportation System Design (4)

Lecture—3 hours; laboratory—3 hours. Prerequisite: course 161 or 163. Driver, vehicle and roadway factors and their relationship to transportation planning and system design. Generalized design paradigm; group problem solving.—III. (III.) Niemeier

163. Energy and Environmental Aspects of Transportation (4)

Lecture—3 hours; extensive writing. Prerequisite: Economics 1A and course 162. Engineering, economic, and systems planning concepts. Analysis and evaluation of energy, air quality and selected environmental attributes of transportation technologies. Strategies for reducing pollution and petroleum consumption in light of institutional and political constraints. Evaluation of vehicle emission models. (Same course as Environmental Science and Policy 163.) Offered in alternate years. GE credit: Wrt.—I. Sperling

165. Transportation Policy (3)

Lecture—3 hours. Prerequisite: Economics 1A and Engineering 106 recommended. Transportation and associated environmental problems confronting urban areas, and prospective technological and institutional solutions. Draws upon concepts and methods from economics, engineering, political science and environmental studies. Offered in alternate years. GE credit: SocSci, Wrt.—(I.) Sperling

171. Soil Mechanics (4)

Lecture—4 hours. Prerequisite: Engineering 103, 104 (may be taken concurrently), course 10, and course 171L concurrently. Restricted to Civil Engineering, Civil Engineering/Materials Science, and Engineering majors only. Soil formations, mass-volume relationships, soil classification, effective stress, soil-water-void relationships, compaction, seepage, capillarity, compressibility, consolidation, strength, states of stress and failure, lateral earth pressures, and slope stability.—II, III. (II, III.) Kutter

171L. Soil Mechanics Laboratory (1)

Laboratory—3 hours. Prerequisite: course 171 must be taken concurrently. Laboratory studies utilizing standard testing methods to determine physical, mechanical and hydraulic properties of soil and demonstration of basic principles of soil behavior.—II, III. (II, III.) Kutter

173. Foundation Design (4)

Lecture—4 hours. Prerequisite: courses 135 (may be taken concurrently) and 171. Soil exploration and determination of soil properties for design; consolidation and elastic settlements of foundations; bearing capacity of soils and footing design; lateral earth pressures and retaining wall design; pile foundations; excavations and de-watering.—I. (I.) Idriss

174. Environmental Geotechnology (3)

Lecture—3 hours. Prerequisite: courses 148A and 171. Soil and site characterization in relation to natural and man-made hazards, waste containment, and waste site remediation techniques.—III. (III.) Arulanandan

189A-J. Selected Topics in Civil Engineering (1-5)

Prerequisite: consent of instructor. Directed group study of selected topics with separate sections in (A) Environmental Engineering; (B) Hydraulics and Hydrologic Engineering; (C) Engineering Planning; (D) Geotechnical Engineering; (E) Structural Engineering; (F) Structural Mechanics; (G) Transportation Engineering; (H) Transportation Planning; (I) Water Resources Engineering; (J) Water Resources Planning. May be repeated for credit when the topic is different.—I, II, III. (I, II, III.)

190C. Research Group Conferences in Civil and Environmental Engineering (1)

Discussion—1 hour. Prerequisite: upper division standing in Civil and Environmental Engineering; consent of instructor. Research group conferences. May be repeated for credit. (P/NP grading only.)—I, II, III. (I, II, III.)

192. Internship in Engineering (1-5)

Internship. Prerequisite: upper division standing; approval of project prior to the period of the internship. Supervised work experience in civil engineering. May be repeated for credit. (P/NP grading only.)

198. Directed Group Study (1-5)

Prerequisite: consent of instructor. (P/NP grading only.)

199. Special Study for Advanced Undergraduates (1-5)

Prerequisite: senior standing in engineering and at least a B average. (P/NP grading only.)

Graduate Courses

201. Introduction to Theory of Elasticity (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: Engineering 104. Fundamental equations of elasticity in three dimensions; plane stress and plane strain; flexure and torsion of bars of various shapes. Introduction to variational and approximate methods.—I. (I.)

203. Inelastic Behavior of Solids (3)

Lecture—3 hours. Prerequisite: course 201. Fundamentals of theories of plasticity, viscoelasticity and viscoplasticity for solids. Macroscopic constitutive modelling for engineering materials, e.g., metals, polymers, soils, etc., and microscopic motivation. Offered in alternate years.—III. Dafalias

205. Continuum Mechanics (3)

Lecture—3 hours. Prerequisite: course 201. Tensor formulation of the field equations for continuum mechanics, including large deformation effects. Invariance and symmetry requirements. Introduction to nonlinear thermoelasticity and thermodynamics. Solution of three-dimensional problems. Selected topics. Offered in alternate years.—II. Dafalias

206. Fracture Mechanics (3)

Lecture—3 hours. Prerequisite: Engineering 104; course 201. Linear and nonlinear fracture mechanics, stress analysis, energy concepts, brittle fracture criteria, path independent integrals, Dugdale-Barenblatt model, general cohesive zone models, ductile fracture criteria, crack tip fields for stationary and propagating cracks, fatigue. Application of numerical methods for fracture mechanics.—II. (II.) Paulino

211. Advanced Matrix Structural Analysis (3)

Lecture—3 hours. Prerequisite: course 131. Analysis of complex frameworks by the displacement method; treatment of tapered beams, curved beams, and beams on elastic foundations; partially rigid connections; geometric and material nonlinearities; buckling.—II. (II.) Romstad

212A. Finite Element Procedures in Applied Mechanics (3)

Lecture—3 hours. Prerequisite: Applied Science Engineering 115 or Mathematics 128A-128B (128B may be taken concurrently), or consent of instructor. Approximate analysis procedures; Galerkin and stationary principle methods. Construction of approximate solutions by the finite element method. Applications to one- and two-dimensional problems in engineering. Introduction to time dependent, nonlinear and three-dimensional problems, and other approximation procedures.—II. (II.) Rashid

212B. Finite Elements: Application to Linear and Nonlinear Structural Mechanics Problems (3)

Lecture—3 hours. Prerequisite: course 212A. Application of the finite element method to linear and nonlinear, one-, two-, and three-dimensional problems in continuum mechanics, soil mechanics, and plate and shell theories.—III. (III.) Herrmann

212C. Finite Elements: Application to Fluid Problems (3)

Lecture—3 hours. Prerequisite: courses 141, 212A. Application of the finite element method to two- and three-dimensional fluid flow problems, including inviscid and viscous flow, convection-diffusion problems, the shallow water equations, and flow through porous media. Class lectures and independent study and projects. Offered in alternate years.—III. Larock

213. Analysis of Structures Subjected to Dynamic Loads (3)

Lecture—3 hours. Prerequisite: courses 138, 211. Analysis of structures subjected to earthquake, wind, and blast loading; distributed, consistent and lumped mass techniques; development of a computer program for complex structures; nonlinear response spectrum analysis; frequency and time domain analysis.—III. (III.) Romstad

221. Theory of Plates and Introduction to Shells (3)

Lecture—3 hours. Prerequisite: course 201 (may be taken concurrently). Development of classical and refined plate theories. Application to isotropic, orthotropic and composite plates. Solutions for rectangular and circular plates. Membrane theory for axisymmetric shells and bending of circular shells.—I. (I.) Herrmann

232. Advanced Topics in Concrete Structures (4)

Lecture—4 hours. Prerequisite: course 130, 135, 138 and graduate standing. Ductility of reinforced concrete; strength of two-way slabs; modified compression field theory.—I. (I.) Chai

233. Advanced Design of Steel Structures (3)

Lecture—3 hours. Prerequisite: courses 130 and 132. Design considerations for steel column and frame buckling; steel-plate girder design; steel-concrete composite design; design of connections. Design basis follows AISC, LRFD, and ASD specifications.—II. (II.) Ramey

234. Prestressed Concrete (3)

Lecture—3 hours. Prerequisite: course 130 or 131; 135. Survey of methods and applications; prestressing materials and systems; estimation of prestress losses; flexural design; design for shear and torsion; deflection and crack control; continuous beams and indeterminate structures; floor systems; introduction to partial prestressing. Offered in alternate years. (Not open to students who have taken course 139 prior to spring 96.)—(I.) Bolander

235. Cement Composites (4)

Lecture—3 hours; laboratory—3 hours. Prerequisite: Engineering 104. Applications of cement composites; materials selection and proportioning; component and composite properties; hydration reactions and microstructure development; mechanisms of failure; nondestructive test methods; fiber reinforcement; concrete durability; novel reinforcing materials; ferrocement; repair and retrofit technologies; applications to structural design. Offered in alternate years.—I. Bolander

240. Water Quality (4)

Lecture—4 hours. Prerequisite: courses 141 and 142. Quality requirements for beneficial uses of water. Hydrologic cycle of quality. Hydromechanics in relation to quality of surface and groundwaters; transport and fate of waterborne pollutants. Heat budget for surface waters; predictive methods; introduction to water quality modeling.—II. (II.) Schladow

241. Air Quality Modeling (4)

Lecture—4 hours. Prerequisite: Applied Science Engineering 115, course 119A, 149, 150, one from course 242 or 247, or the equivalent, graduate standing. Modeling of urban and regional air quality problems including gas-phase chemical reactions,

aqueous-phase chemical reactions, phase partitioning, and numerical solution schemes. Offered in alternate years.—III. Kleeman

242. Air Quality (4)

Lecture—4 hours. Prerequisite: Engineering 105, course 141, 149 or the equivalent. Factors determining air quality. Effects of air pollutants. Physical and chemical fundamentals of atmospheric transport and reaction. Introduction to dispersion modeling. Offered in alternate years.—III. Kleeman

243A. Water and Waste Treatment (4)

Lecture—4 hours. Prerequisite: course 148A or the equivalent. Characteristics of water and airborne wastes; treatment processes and process kinetics; treatment system design.—I. (I.) Darby

243B. Water and Waste Treatment (4)

Lecture—4 hours. Prerequisite: course 243A. Continuation of course 243A. Aeration, thickening, biological processes, design of biological treatment systems.—II. (II.) Schroeder

244. Environmental Quality Modeling (3)

Lecture—2 hours; laboratory—3 hours. Prerequisite: course 240 or 242A. Mathematical modeling of environmental quality, with emphasis on mathematical models of water quality, their structure, capabilities and limitations, sensitivity and reliability as analytical and/or predictive tools. Offered in alternate years.—III.

245A. Applied Environmental Chemistry: Inorganic (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: Engineering 105, Chemistry 2B or the equivalent, course 140; Chemistry 2C or 107A recommended. Chemistry of natural and polluted waters. Topics include chemical, kinetic and equilibrium principles, redox reactions, gas solution and solid-solution equilibria, thermodynamics, carbonate systems, coordination chemistry, interfacial phenomena. Offered in alternate years.—(III.) Young

245B. Applied Environmental Chemistry: Organic (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: Chemistry 128A, 128B, 128C, or the equivalent; Chemistry 2C or 107A recommended. Transport and transformation of organic chemicals in the environment. Topics include application of thermodynamics to predict solubility and activity coefficients; distribution of organic chemicals between the aqueous phase and air, solvent, or solid phases; chemical, photochemical and biological transformation reactions. Offered in alternate years.—(III.) Young

246. Pilot Plant Laboratory (4)

Lecture—1 hour; discussion—1 hour; laboratory—6 hours. Prerequisite: course 243A, 243B (may be taken concurrently) or consent of instructor, graduate standing. Laboratory investigation of physical, chemical, and biological processes for water and wastewater treatment.—II. (II.) Darby

247. Aerosols (4)

Lecture—4 hours. Prerequisite: Engineering 103, 105, course 141, 149. Behavior of airborne particles including particle formation, modification, and removal processes. Offered in alternate years.—I. Kleeman

247L. Aerosols Laboratory (4)

Lecture—2 hours; laboratory—6 hours. Prerequisite: course 247. Methods of generation and characterization of aerosols. Detailed topics may include flow rate measurement, aerosol generation, aerosol collection, ions measurement, metals measurement, and carbon measurement. May be repeated once for credit.—I. (I.) Kleeman

249. Probabilistic Design and Optimization (3)

Lecture—3 hours. Prerequisite: Engineering 106; courses 114 and 153 or the equivalent. Design by optimization for probabilistic systems, decision theory, the value of information, probabilistic linear programming, probabilistic dynamic programming, nonlinear probabilistic optimization. Applications in civil engineering design, project evaluation, and risk management. Offered in alternate years.—III. Lund

251. Transportation Demand Analysis (4)

Lecture—4 hours. Prerequisite: course 114 or the equivalent. Procedures used in urban travel demand

forecasting. Principles and assumptions of model components (trip generation, trip distribution, model split). New methods of estimating travel demand. Computer exercises using empirical data to calibrate models and forecast travel demand.—I. (I.) Niemeier

252. Sustainable Transportation Technology and Policy (3)

Lecture—2 hours; discussion—1 hour. Prerequisite: course 160 or the equivalent. Role of technical fixes and demand management in creating a sustainable transportation system. Emphasis on technology options, including alternative fuels, electric propulsion, and IVHS. Analysis of market demand and travel behavior, environmental impacts, economics and politics. (Same course as Environmental Science and Policy 252.)—III. (III.) Sperling

254. Discrete Choice Analysis of Travel Demand (4)

Lecture—4 hours. Prerequisite: course 114. Behavioral and statistical principles underlying the formulation and estimation of discrete choice models. Practical application of discrete choice models to characterization of choice behavior, hypothesis testing, and forecasting. Emphasis on computer exercises using real-world data sets.—III. (III.) Mokhtarian

256. Urban Traffic Management and Control (4)

Lecture—4 hours. Prerequisite: course 114. Basic concepts, models, and methods related to the branch of traffic science that deals with the movement of vehicles on a road network, including travel speed, travel time, congestion concepts, car-following and hydrodynamic traffic models.—I. (I.) Zhang

257. Flow in Transportation Networks (4)

Lecture—4 hours. Prerequisite: course 153; 161 or 256 recommended. Elements of graph theory, a survey of pertinent optimization techniques, extremal principles in network flow problems, deterministic equilibrium assignment, stochastic equilibrium assignment, extensions of equilibrium assignments and dynamic transportation network assignment.—II. (II.) Zhang

258. Transportation Planning in Developing Countries (3)

Lecture—3 hours. Prerequisite: course 160 or consent of instructor. Investigation of the role that transportation investments and policies play in the development of regions and countries. Emphasis is on identifying appropriate technologies, policies, and planning methods for designing transportation systems in regions of differing socioeconomic, geographic, and institutional settings. Offered in alternate years.—III. Sperling

260. Noncohesive Sediment Transportation (3)

Lecture—3 hours. Prerequisite: course 141. Sediment materials. Particle suspension by currents, waves, and winds. Modes of transport. Bed load relations and suspended load relations. Calculation of total loads in streams. Similarity criteria for movable bed models. Stable channel design. Offered in alternate years.—(II.)

261. Cohesive Particle Transportation (3)

Lecture—3 hours. Prerequisite: course 141. Cohesion; cohesive particulate materials; processes of aggregation and dispersion; aggregate properties; deposition and scour, channel and harbor design and maintenance. Offered in alternate years.—(III.)

262. Transit Systems Analysis (3)

Lecture—3 hours. Prerequisite: course 251. Theoretical presentation of transit planning and analysis techniques. Five modules: policy and funding; management and operations; design standard and issues; planning and forecasting methods for performance evaluation. Review of transit studies from other regions. Offered in alternate years.—I. Niemeier

264A. Transport, Mixing and Water Quality in Rivers and Lakes (4)

Lecture—4 hours. Prerequisite: course 141 and 240. Principal causes of mixing and transport in rivers, lakes and reservoirs, and their impacts on water quality. Case studies of specific lakes and rivers. Offered in alternate years.—III. Schladow

264B. Transport, Mixing and Water Quality in Estuaries and Wetlands (4)

Lecture—4 hours. Prerequisite: courses 141 and 240. Principal causes of mixing and transport in estuaries and wetlands, and their impacts on water quality. Topics include advection/diffusion; tides; transverse mixing; longitudinal dispersion; sediment transport; nutrient cycling; computer modeling of estuaries. Case studies of specific systems. Offered in alternate years.—(III.) Schladow

265. Stochastic Contaminant Transport (4)

Lecture—4 hours. Prerequisite: course 266. Stochastic theory of molecular diffusion covered by means of Taylor-Chandrasekhar theory. Turbulence diffusion covered in the Lagrangian-Eulerian frameworks. Application of theory to contaminant transport in groundwater aquifers, atmosphere, river and oceanic environments. Offered in alternate years.—I. Kavvas

266. Applied Stochastic Methods in Engineering (4)

Lecture—4 hours. Prerequisite: course 114 or Mathematics 131 or Statistics 130A or 131A; Mathematics 118A (may be taken concurrently). Stochastic processes classification; Gaussian random fields; stochastic calculus in mean square; Ito and Stratonovich stochastic differential equations; Fokker-Planck equation; stochastic differential equations with random coefficients. Offered in alternate years.—(I.) Kavvas

267. Water Resources Management (3)

Lecture—3 hours. Prerequisite: courses 114, 141 and 142; course 153 recommended. Engineering, institutional, economic, and social basis for managing local and regional water resources. Examples in the context of California's water development and management. Uses of computer modeling to improve water management.—I. (I.) Lund

268. Infrastructure Economics (3)

Lecture—3 hours. Prerequisite: Economics 1A, Engineering 106 or the equivalent. Economics applied to infrastructure engineering planning, operations, maintenance, and management problems; micro-economic and macroeconomic theories; benefit-cost analysis; effect of uncertainty; optimization economics; non-classical economics; public finance. Offered in alternate years.—II. (II.) Lund

269. Transportation-Air Quality: Theory and Practice (4)

Lecture—3 hours; laboratory—3 hours. Prerequisite: course 149 or the equivalent. Health and regulatory aspects of airborne pollutants. Principles of modeling vehicle emissions. Conformity issues and the regulatory framework. Regional and micro-scale modeling.—III. (III.) Niemeier

270. Advanced Water Resources Management (3)

Lecture—3 hours. Prerequisite: courses 153 and 267 or the equivalent. Discussion of technical papers related to planning theory, system maintenance, regionalization, multi-objective methods, risk analysis, institutional issues, pricing model application, economic development, forecasting, operations, and other topics. Offered in alternate years.—(III.) Lund

272A. Advanced Hydrogeology (4)

Lecture—4 hours. Prerequisite: course 144; Mathematics 118A recommended. Flow in confined, unconfined, and leaky aquifers. Geological aspects of aquifers. Regional groundwater flow and hydraulics of pumping and recharging wells. Identification of aquifer parameters. Isotope hydrogeology and recharge estimation.—II. (II.) Ginn

272B. Advanced Hydrogeology (4)

Lecture—4 hours. Prerequisite: courses 212A and 272A. Processes of subsurface flows and transport. Numerical methods of subsurface fluid flow and transport systems. Flow in the unsaturated zone. Fresh water/salt water interface in coastal aquifers. Macrodispersion. Identification of regional aquifer parameters. Modeling of aquifer systems. Offered in alternate years.—III. Ginn

272C. Subsurface Reactive Transport (4)

Lecture—4 hours. Prerequisite: course 272A, exposure to solution chemistry and fluid mechanics. Multi-

component reactive subsurface transport. Fundamentals of advective/dispersive kinematics and mass transformation kinetics. Survey of chemical/microbiological processes including sorption, precipitation/dissolution, complexation, biodegradation, and diffusive mass transfer with respective mathematical formulations. Upscaling groundwater contaminant fate, transport and remediation models. Offered in alternate years.—(III.) Ginn

273. Water Resource Systems Engineering (3)
Lecture—3 hours. Prerequisite: courses 114 and 153 or the equivalent. Planning, design, and management of water resource systems. Application of deterministic and stochastic optimization techniques. Water allocation, capacity expansion, and design and operation of reservoir systems. Surface water and groundwater management. Offered in alternate years.—I. Marino

274. Hydraulics of Pipe Lines (3)
Lecture—3 hours. Prerequisite: course 141 and some knowledge of FORTRAN. Mechanics of liquid flow in pipes and pipe network systems. Steady flow, unsteady flow, surge and waterhammer problems. Manifold flow. Offered in alternate years.—(II.) Larock

275. Hydrologic Time-Series Analysis (3)
Lecture—3 hours. Prerequisite: Engineering 118 and course 142 or the equivalent. Application of statistical methods for analysis and modeling of hydrologic series. Statistical simulation and prediction of hydrologic sequences using time series methodology. Offered in alternate years.—III. Kavvas

276. Watershed Hydrology (4)
Lecture—4 hours. Prerequisite: course 142 or the equivalent. Analysis and mathematical modeling of hydrologic processes taking place in a watershed. Precipitation analysis and modeling. Theory of overland flow and its kinematic wave approximation. Analysis and modeling of saturated and unsaturated subsurface flow processes taking place on a hill slope.—II. (II.) Kavvas

277. Unsteady Flow in Surface Waters (3)
Lecture—3 hours. Prerequisite: course 141; Applied Science Engineering 115 (may be taken concurrently). Long waves in surface flow. Shallow water equations. Saint Venant equations. Method of characteristics. Explicit and implicit finite element methods; stability of numerical schemes. Flood routing. Bores. Dam break.—I. (I.) King

278. Hydrodynamics (3)
Lecture—3 hours. Prerequisite: course 141. Perturbation methods. Basic water waves. Governing equations for fluid motion on a rotating earth. Rotation effects, vorticity dynamics, Ekman layer. Stratification effects, internal waves and turbulent mixing. Combined effects. Offered in alternate years.—II. Larock

279. Advanced Mechanics of Fluids (4)
Lecture—4 hours. Prerequisite: course 141. Rotational flows. Navier-Stokes equations and solutions for laminar flow; boundary layer equations and solution techniques. Nature of turbulence. Reynolds equations. Introduction to turbulence modeling. Offered in alternate years.—I. Larock

281A. Advanced Soil Mechanics (3)
Lecture—3 hours. Prerequisite: course 171. Consolidation and secondary compression. Seepage and seepage pressures. Shear strength: friction, cohesion, dilatancy, and critical states.—I. (I.) Idriss

281B. Advanced Soil Mechanics (3)
Lecture—2 hours; laboratory—3 hours. Prerequisite: course 281A. Site investigation methods: CPT, SPT, pressuremeter, vane, seismic investigation, electrical properties. Slope stability, including seepage pressures and earthquake effects. Centrifuge modeling.—II. (II.) Kutter

283. Physico-Chemical Influences and In Situ Evaluation of Soil Behavior (3)
Lecture—2 hours; laboratory—3 hours. Prerequisite: course 171. Analysis of the mechanical behavior of soils from consideration of clay mineralogy, colloidal phenomena, ion-exchange. Soil-water-electrolyte characteristics and soil structure. Laboratory includes methods of characterization of soils, quan-

tification of soil structure, and rotating cylinder tests to evaluate soil erosion.—I. (I.) Arulanandan

284. Theoretical Soil Mechanics (3)
Lecture—3 hours. Prerequisite: courses 171, 281A. Elasticity, plasticity, and critical state soil mechanics. Prediction of stress-strain-volume change behavior of soils. Monotonic and cyclic loading, anisotropy, and strain-rate effects. Numerical implementation of constitutive models.—II. (II.) Kutter

285. Soil Modification (3)
Lecture—3 hours. Prerequisite: course 171. Purposes, principles, and methods of soil modification for various geotechnical applications. Offered in alternate years.—I. Boulanger

286. Advanced Foundation Design (3)
Lecture—3 hours. Prerequisite: course 173. Design and analysis of bulkheads; deep excavation; tie-back systems; coffer dams; loads on buried conduits; lateral pile loading capacity; pier foundations; and other related topics.—III. (III.) Idriss

287. Geotechnical Earthquake Engineering (3)
Lecture—3 hours. Prerequisite: course 138; course 281A or consent of instructor. Characteristics of earthquake ground motions; empirical and simulation procedures for estimating these motions; local site response; liquefaction potential; residual strength and stability considerations; generation and dissipation of pore water pressures; settlement.—III. (III.) Idriss

288. Earth and Rockfill Dams (3)
Lecture—3 hours. Prerequisite: courses 281A, 281B. Site selection; preliminary design considerations; layout; seismic effects including considerations of fault movements; construction; instrumentation; maintenance.—II. (II.) Idriss

289A-I. Selected Topics in Civil Engineering (1-5)
Lecture, laboratory, or combination. Prerequisite: consent of instructor. Directed group study of special topics with separate sections in (A) Environmental Engineering; (B) Hydraulics and Hydrologic Engineering; (C) Engineering Planning; (D) Geotechnical Engineering; (E) Structural Engineering; (F) Structural Mechanics; (G) Transportation Engineering; (H) Transportation Planning; (I) Water Resources Engineering. May be repeated for credit.—I, II, III. (I, II, III.)

290. Seminar (1)
Seminar—1 hour. Discussion of current graduate research, and guest lectures on recent advances. Oral presentation of individual study. Course required of graduate degree candidates. (S/U grading only.)

290C. Graduate Research Group Conference (1)
Discussion—1 hour. Research problems, progress, and techniques in civil engineering. May be repeated for credit. (S/U grading only.)—I, II, III. (I, II, III.)

296. Topics in Water and Environmental Engineering (1)
Seminar—2 hours. Seminars presented by visiting lecturers, UC Davis faculty and, graduate students. May be repeated for credit. (S/U grading only.)—I, II, III. (I, II, III.)

298. Group Study (1-5)
Prerequisite: consent of instructor. (S/U grading only.)

299. Research (1-12)
(S/U grading only.)

Professional Course

390. The Teaching of Civil Engineering (1)
Discussion—1 hour. Prerequisite: meet qualifications for teaching assistant and/or associate-in in Civil Engineering. Participation as teaching assistant or associate-in in a designated engineering course. Methods of leading discussion groups or laboratory sections, writing and grading quizzes, use of laboratory equipment, and grading laboratory reports. May be repeated for total of 9 units. (S/U grading only.)—I, II, III. (I, II, III.)

Nancy E. Reed, Ph.D., Adjunct Assistant Professor

The Computer Science and Engineering Major Program

The Department of Computer Science administers two curricula: Computer Science and Engineering in the College of Engineering, and Computer Science in the College of Letters and Science. It also administers a minor in the College of Letters and Science. For information on the Computer Science curriculum and minor, see "Computer Science" in this catalog.

The field of Computer Science and Engineering encompasses the organization, design, analysis, theory, programming, and application of digital computers and computing systems. It develops versatile engineers with backgrounds spanning a broad computer hardware/software spectrum.

The Computer Science and Engineering major provides students with a solid background in mathematics, physics, chemistry, and electronic circuits and systems, all supporting the computer hardware and computer software courses which form the focus of the curriculum.

Mission. The University of California, Davis, is first and foremost, an institution of learning and teaching, committed to serving the needs of society. The Department of Computer Science contributes to the mission of the University in three ways. First, its undergraduate and graduate education programs seek to educate students in the fundamental princi-

ples of computer science and the skills needed to solve the complex technological problems of modern society; the breadth of course work provides a framework for life-long learning and an appreciation for multidisciplinary activities. Second, through its research programs, the department contributes to the development and progress of computer science, and software and information technology, to provide innovative, creative solutions for societal needs. Finally, the department disseminates its research—to enhance collaborations with the public sector, further interdisciplinary interests that benefit society, and educate the public—through publications, public service, and professional activities.

Department Objectives. *Teaching*—To provide undergraduate students with a thorough understanding of the key principles and practices of computing, which include a strong theoretical background in mathematics, basic sciences, and engineering fundamentals and an ability to apply this knowledge to practical problems. To provide students with sufficient breadth to work creatively and productively in multi-disciplinary work teams; this breadth, in its broadest context, will form the basis for an appreciation and interest in life-long learning. To provide students with the ability to design and conduct experiments, and to collect and analyze data in core, as well as more specialized, areas of computer science. To provide students with breadth in the humanities and social sciences so they learn to communicate effectively, understand professional and ethical issues in society, and appreciate the interrelatedness between computing and society. To educate graduate students to be our next generation of teachers or leaders in industry, or to pursue meaningful, creative research in industry, government, or academia. *Research*—To develop and maintain research programs that produce fundamental scientific advances, as well as useful technological innovations, while simultaneously training the next generation of researchers and leaders in the field of computer science.

Program Objectives. The Computer Science and Engineering program has adopted the following objectives to serve the long-term interests of our students and society. *Foundation*—To provide graduates with a solid foundation in the principles and practices of computer science, including mathematics, physical sciences, and basic engineering. This foundation is necessary to succeed in more advanced computer science and engineering coursework, where students will apply these principles and practices to a variety of complex problems, and which will further develop their analytical and creative problem-solving skills and enable them to work successfully on multidisciplinary teams, in both classroom and laboratory settings. *Breadth*—To provide graduates with sufficient breadth in computer science and related technical disciplines. This breadth is required not only to understand engineering trade-offs that cross disciplines (for example hardware and software boundaries), but also to participate effectively in multi-disciplinary teams. To provide students with breadth in the humanities and social sciences to develop their awareness of societal issues; to develop effective oral and written communication skills; and to develop an understanding of professional and ethical issues related to computing. *Depth*—To provide our graduates with advanced training in focused areas of their choice. This depth is necessary to solve complex real-world engineering problems and to prepare them to contribute to a specific discipline within computer science and possibly pursue advanced study or research.

Integrated Degree Program. An integrated B.S./M.S. plan in Computer Science allows Davis students in Computer Science, Computer Science Engineering, or Computer Engineering to complete a master's degree in Computer Science in one year. Formal course work for the master's degree is reduced by 6 units for students. Students can begin graduate studies immediately after completing their B.S. degree. More information is available in the graduate section of the College of Engineering *Bulletin*, or on the Internet at <http://www.cs.ucdavis.edu/graduate/bs-ms.html>.

Computer Science and Engineering Curriculum

The Computer Science and Engineering curriculum is accredited by the Engineering Accreditation Commission of the Accreditation Board for Engineering and Technology and the Computer Science Accreditation Commission of the Computing Science Accreditation Board.

Lower Division Program

Required Courses	UNITS	QUARTER USUALLY TAKEN
Mathematics 21A, 21B, 21C, 21D ..16		1-2-3-4
Mathematics 22A-22B	6	5-6
Physics 9A, 9B, 9C, 9D	19	3-4-5-6
Chemistry 2A	5	1 or 2
Computer Science Engineering 20 ..4		3
Computer Science Engineering 30 ..4		1 or 2
Computer Science Engineering 40 ..4		2 or 3
Computer Science Engineering 50 or Electrical and Computer Engineering 70	4	3, 4 or 5
Engineering 17	4	6
English 1 or 3, or Comparative Literature 1, 2, 3 or 4, or Native American Studies 5	4	1 or 2
Communication 1	4	7
General Education Electives	12	
Unrestricted electives	4	1-4-5
Total Lower Division Units	90	

Upper Division Program

A key theme of this curriculum is the hardware/software interaction in today's computer systems design, a theme reflected in the balance between computer hardware and computer software aspects in the course requirements. The key theme of hardware/software interaction is also reflected in the orientation of the courses themselves. The Computer Science and Engineering major also requires additional general education electives, helping to develop the verbal skills and intellectual breadth demanded by today's employers.

The Computer Science and Engineering program prepares students to do further work in hardware, software, or electronics, either in industry or post-graduate study.

Upper Division Requirements

Subject Area and Courses	UNITS
Computer Science Engineering 188 or Engineering 190	3
Electrical and Computer Engineering 100 and 180A	10
Mathematics 131 or Statistics 131A	4
Computer Science Engineering 110	4
Computer Science Engineering 120† or 122A†	4
Computer Science Engineering 152A, 154A, 154B, and Electrical and Computer Engineering 172	15
Computer Science Engineering 140A, 150‡ or 151A‡, and 160	12
Computer electives—a minimum of 4 courses and a minimum of 13 units chosen from Computer Science Engineering 120†, 122A†, 122B, 130, 140B, 142, 150‡, 151A‡, 151B, 152B, 153, 158, 163, 165A, 165B, 168, 170, 175, 177, 178; one course (minimum 3 units from one single course) from approved 192 or 199, or Electrical and Computer Engineering 194; Electrical and Computer Engineering 180B	13
General Education electives	21
Unrestricted elective	4
Total Upper Division Units	90
Minimum Units Required for Major	180

† Completion of both Computer Science Engineering 120 and 122A will satisfy the computer science theory requirement and a computer elective requirement.

‡ Completion of both Computer Science Engineering 150 and 151A will satisfy a portion of the computer software operative system requirement and a computer elective requirement.

Courses in Engineering: Computer Science (ECS)

Lower Division Courses

10. Basic Concepts of Computing (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: two years of high school algebra. Introduction to principles of computing. Methods and algorithms for solving problems by use of a digital computer. Not intended for students in physical sciences, engineering, or mathematics. Not open for credit to students who have completed course 30, Engineering 5, or former course 30H.—II. (II.)

15. Introduction to Computers (4)

Lecture—3 hours; laboratory—3 hours. Computer uses in modern society. Emphasis on uses in non-scientific disciplines. Includes word processing, other applications, elementary programming concepts, overview of current/projected computer uses. Intended for Letters and Science and other non-computer majors. Not open for credit to students who have completed course 15AT, 30, Engineering 5 or former course 30H. Only 2 units of credit allowed to students who have completed Agricultural Systems and Environment 21. GE credit: SciEng, Wrt.—I, II, III. (I, II, III.)

15AT. Introduction to Computers (4)

Independent study—4 hours. Prerequisite: consent of instructor. Computer uses in modern society. Includes word processing, spreadsheet, DOS, networks and programming concepts. Independent study course paralleling course 15 lectures. Not open to students who have completed course 15, 30, or Engineering 5. Only 2 units of credit allowed to students who have completed Agricultural Systems and Environment 21. GE credit: SciEng, Wrt.—I. (I.)

20. Discrete Mathematics for Computer Science (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: Mathematics 21A. Discrete structures and applications in computer science. Proofs, particularly induction. Introduction to propositional logic, logic circuit design, combinatorics, recursion and solution of recurrence relations, analysis of algorithms, graph theory and trees, finite state machines. Not open for credit to students who have completed course 100.—I, II, III Gusfield, Rogaway, Bai, Laub

30. Introduction to Programming and Problem Solving (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: Mathematics 16A or 21A (may be taken concurrently); prior experience with basic programming concepts (variable, loops, conditional statements) recommended. Introduction to computers and computer programming, algorithm design, and debugging. Elements of good programming style. Programming in the C language. Use of basic UNIX tools.—I, II, III. (I, II, III.)

40. Introduction to Software Development and Object-Oriented Programming (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 30 or the equivalent with a grade of C- or better. Elements of program design, style, documentation, efficiency. Methods for debugging and verification. Operating system tools. Principles and use of object-oriented programming in C++. Basic data structures and their use.—I, II, III. (I, II, III.)

50. Computer Organization and Machine-Dependent Programming (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 40. Comparative study of different hardware

architectures via programming in the assembly languages of various machines. Role of system software in producing an abstract machine. Only one unit of credit allowed for students who have taken Electrical and Computer Engineering 70.—II, III. (II, III.) Farrens, Matloff

89A-L. Special Topics in Computer Science (1-5)

Lecture, laboratory or combination. Prerequisite: consent of instructor. Special topics in (A) Computer Science Theory; (B) Architecture; (C) Programming Languages and Compilers; (D) Operating Systems; (E) Software Engineering; (F) Databases; (G) Artificial Intelligence; (H) Computer Graphics; (I) Networks; (J) Computer-Aided Design; (K) Scientific Computing; (L) Computer Science. May be repeated for credit when the topic is different.—I, II, III. (I, II, III.)

92. Internship in Computer Science (1-5)

Internship. Prerequisite: lower division standing; project approval prior to period of internship. Supervised work experience in computer science. May be repeated for credit. (P/NP grading only.)

98. Directed Group Study (1-5)

(P/NP grading only.)

99. Special Study for Lower Division Students (1-5)

(P/NP grading only.)

Upper Division Courses

110. Data Structures and Programming (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 20 and 40 with a grade of C- or better. Design and analysis of data structures for a variety of applications. Trees, heaps, searching, sorting, hashing, graphs. Extensive programming.—I, II, III. Joy

120. Introduction to the Theory of Computation (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 20; Mathematics 108 recommended. Fundamental ideas in the theory of computation, including formal languages, computability and complexity. Reducibility among computational problems.—I, II. (I, II.) Rogaway, Gusfield, Martel, Bai, Franklin

122A. Algorithm Design and Analysis (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: courses 20, 110. Complexity of algorithms, bounds on complexity, algorithms for searching, sorting, pattern matching, graph manipulation, combinatorial problems, introduction to NP-complete problems. Not open for credit to students who have taken course 122.—II, III. (II, III.) Rogaway, Gusfield, Martel, Bai, Franklin

122B. Algorithm Design and Analysis (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 122A. Theory and practice of hard problems, and problems with complex algorithm solutions. NP-completeness, approximation algorithms, randomized algorithms, dynamic programming and branch and bound. Students do theoretical analysis, implementation and practical evaluations. Examples from parallel, string, graph, and geometric algorithms.—I. (I.) Rogaway, Gusfield, Martel

124. Theory and Practice of Bioinformatics (4)

Lecture—3 hours; laboratory—1 hour. Prerequisite: course 10 or 30 or Engineering 5 or 6, Statistics 12 or 13 or 32 or 100 or Mathematics 131/Statistics 131A, Biological Sciences 1A or Molecular and Cellular Biology 10. Fundamental biological, mathematical and algorithmic models underlying bioinformatics, sequence analysis, database search, gene prediction, molecular structure comparison and prediction, phylogenetic trees, high throughput biology, massive datasets; applications in molecular biology and genetics; use and extension of common bioinformatics tools.—III. (III.) Gusfield

130. Scientific Computation (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 110, Mathematics 22A. Matrix-vector approach using MATLAB for floating point arithmetics, error analysis, interpolations, numerical integration, matrix computations, nonlinear equations and optimization. Parallel computing for matrix multi-

plication and the Cholesky factorization.—III. Bai, Hamann, Joy, Laub

140A. Programming Languages (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 50 or Electrical and Computer Engineering 70; course 110. Syntactic definition of programming languages. Introduction to programming language features including variables, data types, data abstraction, scoping, parameter disciplines, exception handling. Comparative study of several high-level programming languages. Not open for credit to students who have taken course 140.—I, II. (I, II.) Olsson, Pandey

140B. Programming Languages (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 140A. Continuation of programming language principles. Further study of programming language paradigms such as functional and logic; additional programming language paradigms such as concurrent (parallel), dataflow, and constraint; and implementation issues for those paradigms; and programming language semantics.—II. (II.) Olsson, Levitt, Pandey

142. Compilers (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: courses 20, 140A; course 120 recommended. Principles and techniques of lexical analysis, parsing, semantic analysis, and code generation. Implementation of compilers.—III. (III.) Pandey

150. Operating Systems and System Programming (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 40; course 154A or Electrical and Computer Engineering 70; course 154B or Electrical and Computer Engineering 170 strongly recommended. Basic concepts of operating systems and system programming. Processes and interprocess communication/synchronization; virtual memory, program loading and linking; file and I/O subsystems; utility programs. Study of a real operating system.—I, III. (I, III.) Levitt, Matloff, Olsson

151A. Operating System Design (4)

Lecture—3 hours; laboratory—3 hours. Prerequisite: course 154A or Electrical and Computer Engineering 170. Architectural support of operating system concepts. Systems programming. Major components of an operating system, their functions, and their interactions. Lecture material is closely coupled with a project that involves a machine simulator and the implementation of a matching multi-programming system. Not open to students who have taken Electrical and Computer Engineering 182A.—II. (II.)

151B. Operating System Design (3)

Lecture—3 hours. Prerequisite: course 151A and an introductory probability course. Contemporary architectures: virtual memory and operating system support functions. Concurrent processes and the problems of determinacy, mutual exclusion, deadlocks, and synchronization. Management of physical and virtual resources. Protection mechanisms. User interface and ease-of-use considerations. Not open to students who have taken Electrical and Computer Engineering 182B.—II. (II.)

152A. Computer Networks (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 154A or Electrical and Computer Engineering 170, course 110 or Electrical and Computer Engineering 73, Mathematics 131 or Statistics 131A or 120 or 32. Overview of local and wide-area computer networks, ISO seven-layer model, physical aspects of data transmission, data-link protocols multiplexing, switched networks, local and wide area networks, internetworking.—I, II, III. Mukherjee, Matloff, Ghosal, Mohapatra

152B. Computer Networks (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: courses 152A, 150 or 151A. TCP/IP protocol suite, network layer protocols, transport layer protocols, transport layer interfaces, sockets, UNIX network programming, computer networking applications, remote procedure calls and network management.—I, II, III. Mukherjee, Ghosal, Matloff, Mohapatra

153. Introduction to Computer Security (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 150 or 151A-151B. Study of the principles, mechanisms, and implementation of computer security and data protection. Policy, encryption and authentication, access control and integrity models and mechanisms; network security; secure systems; programming and vulnerabilities analysis. An existing operating system will be studied.—III. (III.) Bishop

154A. Computer Architecture (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 50 or Electrical and Computer Engineering 70, and course 110. Introduction to digital design. Interfacing of devices for I/O, memory and memory management. Input/output programming, via wait loops, hardware interrupts and calls to operating system services. Hardware support for operating systems software. Only one unit of credit allowed for students who have taken Electrical and Computer Engineering 170.—I, II. (I, II.) Farrens, Mukherjee, Chong

154B. Computer Architecture (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 154A or Electrical and Computer Engineering 170, and course 110. Hardwired and microprogrammed CPU design. Memory hierarchies. Uniprocessor performance analysis under varying program mixes. Introduction to pipelining and multiprocessors.—II, III. (II, III.) Farrens, Chong

158. Programming on Parallel Architectures (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 154B or Electrical and Computer Engineering 170, course 150 or 151A. Techniques for software development using the shared-memory and message-passing paradigms on parallel architectures and networks of workstations. Locks, barriers and other techniques for synchronization. Introduction to parallel algorithms.—III. Chong, Farrens, Matloff, Pandey, Ma

160. Introduction to Software Engineering (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 140A. Requirements, specification, design, implementation, testing, and verification of large software systems. Study and use of software engineering methodologies. Team programming.—II, III. (II, III.) Levitt, Devanbu

163. User/Computer Interfaces (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: courses 20, 110. Study of the principles of user/computer interaction. User interface management system architectures; semantics of input devices; transition network and event-based systems, models of interaction, graphical interfaces; implementations; and performance issues and tradeoffs.—III. (III.) Bishop

165A. Database Systems (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 110. Database design, entity-relationship and relational models, relational algebra, query language SQL, storage and file structures, query processing, system architectures.—II. (II.) Gertz

165B. Database Systems (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 165A. Advanced database systems: object-oriented and object-relational database systems; distributed and multidatabase systems; advanced database applications: web-based database access, data warehouses.—III. (III.) Gertz

167. Databases in Humanities and Sciences (4)

Lecture—3 hours; laboratory—3 hours. Prerequisite: course 15 or the equivalent. Introduction for non-majors to basic principles of database management systems; overview of typical commercial database packages; use of database systems in various fields in humanities and sciences; design and implementation of individual database applications. Not open for credit to College of Engineering students. GE credit: SciEng, Wrt.—III. (III.)

168. Information Systems (3)

Lecture—3 hours. Prerequisite: course 40 or the equivalent; upper division standing. Design, creation, implementation, and case study evaluation of

information systems. Project-oriented, self-paced implementation of actual information including survey collection of data, input design, and development of components to edit, sort, and retrieve data. Case study of typical information systems problems. Offered in alternate years.—I.

170. Introduction to Artificial Intelligence (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 140A. Design and implementation of intelligent computer systems. Knowledge representation and organization. Memory and inference. Problem solving. Natural language processing.—II. (II.) Levitt

175. Introduction to Computer Graphics (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 110 or Electrical and Computer Engineering 73; Mathematics 22A. Principles of computer graphics. Current graphics hardware, elementary operations in two- and three-dimensional space, transformational geometry, clipping, graphics system design, standard graphics systems. Individual projects.—I, II. (I, II.) Joy, Hamann, Ma, Staadt

177. Introduction to Visualization (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 175. Graphics techniques for generating images of various types of measured or computer-simulated data. Typical applications for these graphics techniques include study of air flows around car bodies, medical data, and molecular structures.—II. (II.) Joy, Hamann, Ma, Staadt

178. Introduction to Geometric Modeling (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 175. Interactive graphics techniques for defining and manipulating geometrical shapes used in computer animation, car body design, aircraft design, and architectural design.—III. (III.) Joy, Hamann, Max, Staadt

188. Ethics and the Information Age (3)
Seminar—2 hours; term paper. Prerequisite: upper division standing. Responsibilities of computer scientists as influenced by growth in computer use and networks.—I, II, III. (I, II, III.)

189A-L. Special Topics in Computer Science (1-5)
Lecture, laboratory or combination. Prerequisite: consent of instructor. Special topics in (A) Computer Science Theory; (B) Architecture; (C) Programming Languages and Compilers; (D) Operating Systems; (E) Software Engineering; (F) Data Bases; (G) Artificial Intelligence; (H) Computer Graphics; (I) Networks; (J) Computer-Aided Design; (K) Scientific Computing; (L) Computer Science. May be repeated for credit when topic differs.—I, II, III. (I, II, III.)

190C. Research Group Conferences in Computer Science (1)
Discussion—1 hour. Prerequisite: upper division standing in Computer Science and Engineering; consent of instructor. Research group conferences. May be repeated for credit. (P/NP grading only)—I, II, III. (I, II, III.)

190X. Senior Seminar (2)
Seminar—2 hours. Prerequisite: senior standing. Examination of a special topic in a small group setting.

192. Internship in Computer Science (1-5)
Internship. Prerequisite: completion of a minimum of 84 units; project approval prior to period of internship. Supervised work experience in computer science. May be repeated for credit. (P/NP grading only.)

197T. Tutoring in Computer Science (2-3)
Discussion—1 hour; laboratory—3-6 hours. Prerequisite: upper division standing and consent of instructor. Tutoring in computer science courses, especially introductory computing. For upper division undergraduate students who will provide tutorial assistance. May be repeated for credit. (P/NP grading only.)

198. Directed Group Study (1-5)
Prerequisite: consent of instructor. (P/NP grading only.)

199. Special Study for Advanced Undergraduates (1-5)
(P/NP grading only.)

Graduate Courses

220. Theory of Computation (3)
Lecture—3 hours. Prerequisite: course 120 and 122A. Time and space complexity classes. Reductions, completeness, and the role of randomness. Logic and undecidability.—III. (III.) Rogaway

222A. Design and Analysis of Algorithms (4)
Lecture—3 hours; discussion—1 hour. Prerequisite: course 122A; Statistics 131A recommended. Techniques for designing efficient algorithms, analyzing their complexity and applying these algorithms to a broad range of applications. Methods for recognizing and dealing with difficult problems.—I. (I.) Franklin, Gusfield, Martel, Rogaway

222B. Advanced Design and Analysis of Algorithms (3)
Lecture—3 hours. Prerequisite: course 222A. Advanced topics in complexity theory. Problem classification. The classes P, NP, P-space, co-NP. Matching and network flow algorithms. Matrix multiplication. Approximation algorithms.—II. (II.) Gusfield, Martel, Rogaway

223. Parallel Algorithms (3)
Lecture—3 hours. Prerequisite: course 222A. Models of parallel computer systems including PRAMs, loosely coupled systems and interconnection networks. Parallel algorithms for classical problems are studied as well as general techniques for their design and analysis. Lower bounds on parallel computation are proved in several settings.—II. (II.) Martel

224. String Algorithms and Applications in Computational Biology (3)
Lecture—3 hours. Prerequisite: course 122A. Algorithms that operate on strings. Pattern matching, sets of patterns, regular expression pattern matching, suffix trees and application, inexact similarity, parametric sequence alignment, applications to DNA sequencing and protein database searching. Offered in alternate years.—III. (III.) Gusfield

225. Graph Theory (3)
Lecture—3 hours. Prerequisite: graduate standing in electrical engineering or computer science or consent of instructor. Fundamental concepts. Vector spaces and graphs. Planar graphs: Whitney's and Kuratowski's theorems. Topological parameters: packings and coverings. Connectivity: Menger's theorem. Hamilton graphs: Posa's and Chvatal's theorems. Graph factorization: Tutte's theorem. Graph coloring: Brooks; and Vizing's theorem.—II. (II.) Hakimi

227. Modern Cryptography (3)
Lecture—3 hours. Prerequisite: course 220 or 222A. Modern cryptography, as a discipline emphasizing formal definitions and proofs of security. One-way functions, pseudo-randomness, encryption, digital signatures, zero-knowledge, secure protocols.—II. (II.) Rogaway

240. Programming Languages (4)
Lecture—3 hours; discussion—1 hour. Prerequisites: courses 140A, 142. Advanced topics in programming languages, including formal syntax and semantics, the relation between formal semantics and verification, an introduction to the lambda calculus. Additional topics will include language design principles, alternative programming languages, in-depth semantic theory and models of language implementation.—II. (II.) Pandey

242. Translation of Programming Languages (4)
Lecture—3 hours; laboratory—3 hours. Prerequisite: course 240. Lexical analysis, parsing, storage management, symbol table design, semantic analysis and code generation. LR, LALR grammars. Compiler-compilers.—III. (III.) Pandey

243. Code Generation and Optimization (3)
Lecture—3 hours. Prerequisite: course 242. Advanced code generation techniques. Representation of intermediate code. Data flow analysis, code movement, loop optimization, common subexpression elimination, and peephole optimization. Optimization by program transformation.—I. (I.) Pandey, Wilken

244. Principles of Concurrent Programming (4)
Lecture—3 hours; laboratory—3 hours. Prerequisite: course 20; and course 150 or 151B. Fundamental concepts and applications of concurrent programs; concurrent program verification and derivation; synchronization mechanisms in programming languages; distributed programming techniques; case studies of languages.—I. (I.) Olsson, Pandey

247. Concurrent Programming Languages (4)
Lecture—3 hours; laboratory—3 hours. Prerequisite: course 140A, 150. Language design parameters. Models of parallel machines. Load balancing. Scalability. Portability. Efficiency measures. Design and implementation techniques for several classes of concurrent programming languages (such as object-oriented, functional, logic, and constraint programming languages)—I. (I.) Pandey, Olsson

250A. Advanced Computer Architecture (4)
Lecture—3 hours; term paper. Prerequisite: course 154B or Electrical and Computer Engineering 170; course 150 or 151A. Introduction to modern research topics and methods in computer architecture. Design implications of memory latency and bandwidth limitations. Performance enhancement via within-processor and between-processor parallelism. Term project involving student-proposed extensions/modifications of work in the research literature.—I. (I.) Matloff

250B. High-Performance Uniprocessing (3)
Lecture—3 hours. Prerequisite: course 250A. Maximizing uniprocessor performance. Barriers to high performance; solutions to the problems; historical and current processor designs.—II. (II.) Farnes

250C. Parallel Processing (3)
Lecture—3 hours. Prerequisite: course 250A. Parallel architectures have evolved from special-purpose machines to commodity servers. Emphasis on recent machines and applications that drive them. Readings of current research papers. Final paper and presentation critiquing three related readings and extending their area with a small project.—III. (III.) Chong

251. Operating System Models (4)
Lecture—3 hours; laboratory—3 hours. Prerequisite: course 151B; introductory probability theory course. A survey of formal models for the study of operating systems. Modeling of parallel processes and their synchronization in terms of partial orderings and procedure relations. Deterministic and probabilistic models for the evaluation of system performance. Pertinent programming project.—III. (III.) Ruschitzka

252. Local and Metropolitan Area Networks (4)
Lecture—3 hours; laboratory—3 hours. Prerequisite: course 152A. Local and metropolitan area networks, technologies, functions, structures, access protocols. Performance modeling and analysis of multi-access techniques in polling, ring, and random access networks. Standards, example products, high-speed LANs (FDDI), MANs (IEEE 802.6 DQDB), local lightwave networks.—III. (III.) Mukherjee

253. Cryptography and Data Security (4)
Lecture—3 hours; laboratory—3 hours. Prerequisite: course 150; consent of instructor. Methods of protecting data in computer and communication systems from unauthorized disclosure and modification. Introduction to mathematical principles of security with applications to operating systems, database systems, and computer networks.—I. (I.) Levitt, Bishop

256A. Analytic Methods for Computer Systems Design (3)
Lecture—3 hours. Prerequisite: course 20; courses 154A-154B or Electrical and Computer Engineering 170; and Statistics 131A or the equivalent; course 150 or 151A-151B recommended. Use of simulation and queueing theory in computer design. Applications to memory hierarchies; file storage; computer networks; fault-tolerance; scheduling.—I. (I.) Mukherjee, Matloff, Ghosal

256B. High Speed Networks (4)
Lecture—3 hours; laboratory—3 hours. Prerequisite: course 152A. Various issues in emerging high speed networks. Topics include network modeling, analysis, and optimization; routing; design of high speed switching fabrics; congestion control; traffic charac-

terization; and broadband ISDN and ATM networks.—III. (III.) Ghosal, Mukherjee

259. Optical Networks (4)

Lecture—3 hours; independent study—1 hour. Prerequisite: course 152A. Optical networks. Enabling technologies. Multiplexing techniques. WDM. Broadcast networks. Wavelength-routed networks. Network architectures. Protocols. Network algorithms. Device-network interface. Optimization problems.—I. (I.) Mukherjee

260. Software Engineering (4)

Lecture—3 hours; project. Prerequisite: course 142; course 160 recommended. Advanced techniques for domain-specific software reuse.—I. Devanbu

261. Program Verification (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: Mathematics 125 or Philosophy 112 or familiarity with first-order logic; knowledge of an iterative and functional programming language. Methods of proving correctness of programs with respect to formal specifications, with attention to those suited for employing automated deduction. Logic background, symbolic execution, techniques suited to iterative programming, methods from denotational semantics, termination, dynamic logic and proofs of concurrent programs.—I. (I.) Levitt

262. Formal Specification (3)

Lecture—3 hours. Prerequisite: course 261. Formal specification of modules, and its relationship to top-down programming development and verification. Abstract data types, together with methods for specifying them. Implementations and proofs of implementation. Using specifications to reason about programs. Parameterized types. Constructing good formal specifications. Offered in alternate years.—II. Levitt

265. Distributed Database Systems (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 165A. Concepts of distributed database systems and architectures, distributed database design, distributed query processing and optimization, transaction management and concurrency control, heterogeneous and multidatabase systems.—I. (I.) Gertz

270. Artificial Intelligence (3)

Lecture—3 hours. Prerequisite: courses 140A, 172. Concepts and techniques underlying the design and implementation of models of human performance on intelligent tasks. Representation of high-level knowledge structures. Models of memory and inference. Natural language and story understanding. Common sense planning and problem solving.—II. (II.)

271. Machine Learning and Discovery (3)

Lecture—3 hours. Prerequisite: course 170 or the equivalent. Artificial intelligence techniques for knowledge acquisition by computers. Fundamental problems in machine learning and discovery. Systems that learn from examples, analogies, and solved problems. Systems that discover numerical laws and qualitative relationships. Projects centering on implementation and evaluation.—III. (III.)

273. Applied Visual Computing (4)

Lecture—3 hours; laboratory—3 hours. Prerequisite: graduate standing. Visual computing paradigms, current visualization technologies, principles of 3-D graphics, user interface designs, and exploratory visualization. Offered in alternate years.—I. Hamann, Joy, Ma, Max

274. Automated Deduction (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: Mathematics 125 or Philosophy 112 or familiarity with first-order logic. Techniques of mechanical theorem proving. Methods based on resolution and term-rewriting. Decision procedures. Induction. Applications to program verification, question/answering and plan generation. Study existing mechanical theorem provers. Offered in alternate years.—III. Levitt

275A. Advanced Computer Graphics (4)

Lecture—3 hours; laboratory—3 hours. Prerequisite: course 175 or 177 or 178. Advanced topics in computer graphics. Hidden surface models, rendering of various surface types, subdivision methods, shading

techniques, anti-aliasing, modeling techniques.—II. (II.) Joy, Hamann, Ma

275B. Advanced Computer Graphics (4)

Lecture—3 hours; laboratory—3 hours. Prerequisite: course 175 or 177 or 178. Advanced topics in computer graphics and geometric modeling. Topics taken from advanced research papers in computer graphics, image synthesis, visualization and geometric modeling. Discussion of current research in the field. Offered in alternate years.—(II.) Joy, Hamann, Ma

276. Advanced Volume Visualization (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 177. Applications, available tools and techniques, the challenges confronting the field of volume visualization, and some of the advanced topics in the field. Primary emphasis on advanced software and hardware techniques to achieve interactive visualization.—II. (II.) Hamann, Joy, Ma, Max

277. Advanced Visualization (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 177. Visualization of 3D data, including scalar fields, vector fields, and medical data.—II. (II.) Hamann, Joy

278. Computer-Aided Geometric Design (4)

Lecture—3 hours; laboratory—3 hours. Prerequisite: course 175 or 177 or 178. Mathematical techniques for the definition and manipulation of curves and surfaces. Coon's patches, Bezier curves and surfaces. B-spline curves and surfaces, beta-splines, box-splines. Integration into various computer graphics rendering models, and computer-aided design systems. Offered in alternate years.—III.) Joy, Hamann

279. Computer Animation (4)

Lecture—3 hours; laboratory—3 hours. Prerequisite: course 175 or 177 or 178, or Applied Science 213A. Control of camera and object motion necessary to produce computer animation, modeling of articulated objects made from jointed segments, and of deformable objects. Students will complete a final animation project. (Same course as Applied Science Engineering 215.)—III. (III.) Joy, Hamann, Max

289A-M. Special Topics in Computer Science (1-5)

Lecture, laboratory, or combination. Prerequisite: consent of instructor. Special topics in (A) Computer Science Theory; (B) Architecture; (C) Programming Languages and Compilers; (D) Operating Systems; (E) Software Engineering; (F) Data Bases; (G) Artificial Intelligence; (H) Computer Graphics; (I) Networks; (J) Computer-Aided Design; (K) Scientific Computing; (L) Computer Science; (M) Security. May be repeated for credit when topic differs.—I, II, III. (I, II, III.)

290. Seminar in Computer Science (1)

Seminar—1 hour. Participating seminar; discussion and presentation of current research and development in computer science. (S/U grading only.)—I, II, III. (I, II, III.)

290C. Graduate Research Group Conference (1)

Discussion—1 hour. Research problems, progress and techniques in computer science. May be repeated for credit. (S/U grading only.)—I, II, III. (I, II, III.)

298. Group Study (1-5)

Lecture, laboratory, or combination. Prerequisite: consent of instructor. (S/U grading only.)

299. Research (1-12)

(S/U grading only.)

Professional Courses**315. Teaching Computer Science (3)**

Lecture—2 hours; discussion/laboratory—1 hour. Prerequisite: course 110. Fundamentals of instructional methodology applied to teaching computer science, especially at the introductory level. Behavioral objectives, testing methods, course design, evaluation, technology in instruction.—I. (I.)

390. The Teaching of Computer Science (1)

Discussion—1 hour. Prerequisite: meet qualifications for teaching assistant and/or associate-in in Computer Science. Participation as a teaching assistant or associate-in in a designated engineering course.

Methods of leading discussion groups or laboratory sections, writing and grading quizzes, use of laboratory equipment, and grading laboratory reports. May be repeated for credit. (S/U grading only.)—I, II, III. (I, II, III.)

396. Teaching Assistant Training Practicum (1-4)

Prerequisite: graduate standing. May be repeated for credit. (S/U grading only.)

The Electrical and Computer Engineering Major Programs

The department administers three curricula in the College of Engineering: (1) the Electrical Engineering curriculum, (2) the Computer Engineering curriculum, and (3) the Electrical Engineering/Materials Science and Engineering curriculum.

The Electrical Engineering, Computer Engineering, and Electrical Engineering/Materials Science and Engineering curricula are all accredited by the Engineering Accreditation Commission of the Accreditation Board for Engineering and Technology.

Integrated Degree Program. The IDP leads to both the Bachelor of Science and the Master of Science degrees. The program provides a student the opportunity to obtain superior breadth and depth of technical material. The IDP program in the Department of Electrical and Computer Engineering is available only to UC Davis undergraduates with strong academic records enrolled in the Electrical Engineering, Computer Engineering, or Electrical Engineering/Materials Science curricula. Applicants in their junior year must apply for the IDP by March 31. Further information on IDP is listed in the *College of Engineering Bulletin*.

Mission. Under its land grant status, the University of California has a mission to provide the state with the trained workforce it needs and to advance knowledge and research in directions that contribute to the general welfare of the state and the nation. The Department of Electrical and Computer Engineering contributes to the mission of the University in three ways: First, its undergraduate and graduate education programs seek to provide students with an understanding of the fundamental principles of electrical and a computer engineering, the skills needed to solve the complex technological problems of modern society and the ability to continue to learn and develop throughout their careers. Second, through its research programs, the department contributes to the development and progress of electronics, communications, and computer technology. Finally, the department helps to transfer research results to the industry through publication, public service and professional activities.

Objectives. *Teaching*—To provide undergraduate students with sufficient breadth to allow them to participate in teams, continue their own education after graduation and select a focus area intelligently; to provide undergraduate students with sufficient depth in a narrower discipline to allow them to develop the ability to solve complex engineering problems; to educate the students in the graduate program to be able to be leaders in industry or to do meaningful research in industry, government or academia. *Research*—To develop and maintain research programs that produce useful technological advances while simultaneously training the next generation of researchers and leaders; to update and/or shift the foci of these programs frequently in response to the needs of our constituency and the nation; to provide a stimulating environment that encourages our graduate students to develop their abilities as far as possible.

Electrical Engineering Curriculum

Electrical Engineering involves the design, analysis, and effective use of electrical systems including electronic computers. Electrical systems and com-

puters play a central role in nearly all aspects of modern life, including communication, medicine, education, environmental protection, space exploration, defense, and home entertainment.

Students who complete the Electrical Engineering curriculum will obtain a Bachelor of Science in Electrical Engineering, one of the engineering degrees recognized in all fifty states as eligible for registration as a Professional Engineer.

Objectives. The Electrical Engineering program has adopted the following objectives to serve the long-term interests of our students and the industries of Northern California and the nation. *Foundation*—To provide our graduates with a solid foundation in engineering science, including mathematics, physical science, and the fundamentals of electrical engineering. This foundation is necessary to succeed in more advanced engineering courses and to be able to continue learning throughout a career. *Breadth*—To provide our graduates with sufficient breadth in electrical engineering. This breadth is required for students to understand engineering tradeoffs that cross disciplines, for them to contribute effectively to multidisciplinary projects and for them to make an informed decision about their area of specialization. *Depth*—To provide our graduates with sufficient depth in a specific area of electrical engineering. This depth is necessary to solve complex real-world engineering problems and to prepare to contribute to a specific discipline within electrical engineering.

Lower Division Program

	UNITS	QUARTER USUALLY TAKEN
Required Courses		
Mathematics 21A, 21B, 21C, 21D ..16		1-2-3-4
Mathematics 22A-22B	6	5-6

Upper Division Program

Electrical Engineering Curriculum

The Electrical Engineering curriculum prepares students for careers in electrical engineering or for graduate studies by providing a solid background in mathematics, physical sciences, and traditional electrical engineering subjects of (1) physical electronics, (2) electromagnetics, (3) analog electronics, (4) digital electronics, and (5) signal processing and communication. Through the proper choice of 29 units of flexible design and technical electives, you may focus on any of these five specialty areas or distribute the 29 units of electives among these areas.

Areas of Specialization

Physical Electronics: devices, solid-state circuits and fabrication and the theory courses supporting those subjects.

Recommended elective courses:

Core electives: Electrical and Computer Engineering 130B, 140B

Design electives: Electrical and Computer Engineering 110B, 118, 135, 146A, 146B, 218A

Technical electives: Electrical and Computer Engineering 112, 114, 145A, 145B, 148, 150B, 240

Suggested advisers: J.P. Colinge, C.E. Hunt, R.L. Smith, N. Tien.

Electromagnetics: microwave circuits and systems, and fiber optical systems.

Recommended elective courses:

Core electives: Electrical and Computer Engineering 130B, 140B

Design electives: Electrical and Computer Engineering 110B, 132A, 132B, 132C, 135, 136

Technical electives: Electrical and Computer Engineering 112, 133, 145A, 145B, 150B, 195A-195B-195C

Suggested advisers: G.R. Branner, J. Heritage, A. Knoesen, B. Yoo.

Analog Electronics: transistor-level analog circuit design.

Recommended elective courses:

Core electives: Electrical and Computer Engineering 140B, 150B

Design electives: Electrical and Computer Engineering 110B, 112, 114, 118, 160 or 195A-195B-195C, 210

Technical electives: Electrical and Computer Engineering 130B and 146A, or 157A or 194A-194B-194C or 146B or 218A

Suggested advisers: K.W. Current, P.J. Hurst, S.H. Lewis, R.R. Spencer.

Digital Electronics: transistor-level digital circuit design.

Recommended elective courses:

Core electives: Electrical and Computer Engineering 140B, 150B

Design electives: Electrical and Computer Engineering 110B, 114 or 194A-194B-194C or 195A-195B-195C; 118, 170, 180B, 218A

Technical electives: Electrical and Computer Engineering 130B and 146A, or 112 or 146B or 157A or 160 or 210

Suggested advisers: K.W. Current, P.J. Hurst, S.H. Lewis, V.G. Oklobzija.

Signal Processing and Communications: digital communication, robotics, classical controls and communication, wireless and cellular digital communication systems, signal and image processing, and computer vision.

Recommended elective courses:

Core electives: Electrical and Computer Engineering 130B, 150B

Design electives: Electrical and Computer Engineering 106, 110B, 157A, 157B, 160, 180B

Technical electives: Electrical and Computer Engineering 112, 114, 135, 140B, 166, 167, 172, 194A-194B-194C, 195A-195B-195C

Suggested advisers: K.A. Abdel-Ghaffar, T.S. Chang, Z. Ding, K. Feher, G.E. Ford, A.N. Gündes, B.C. Levy, T. R. Reed, J. Tuqan, S. Wang.

Electrical Engineering Upper Division Requirements

UNITS

Required Courses

Electrical and Computer Engineering 100, 101, 110A, 130A, 140A, 150A, 180A, plus two courses from 110B [†] , 130B, 140B, 150B	36
Statistics 120, 131A, Mathematics 131, or Civil and Environmental Engineering 114	4
Engineering 160, 190 or Applied Science Engineering 137 or Computer Science Engineering 188	3

242 Engineering: Electrical and Computer Engineering

Design electives 18

Select 6 courses the following list:

Select at least 2 laboratory courses[†] from Electrical and Computer Engineering 106, 112, 114, 118, 132A, 132B, 132C, 136, 146A, 146B, 151, 157A, 157B, 165, 172, 180B, 183, 194A-194B-194C (must be taken together to count as one design elective), 195A-195B-195C (must be taken together to count as one design elective).

Select at least 1 project course[‡] from Electrical and Computer Engineering 114, 132B, 133, 135, 136, 146A, 151, 157B, 165, 183, 194A-194B-194C (must be taken together to count as one design elective) and Electrical and Computer Engineering 195A-195B-195C (must be taken together to count as one design elective).

The remaining 4 courses may be chosen from the lists above, or chosen from the following courses: Electrical and Computer Engineering 110B¹, 158, 160, 166, 167, 170¹, 171, approved 192 and 199 courses^{**}; Computer Science Engineering 110, 150, 152B, 158, 163, 175, 177 & 178, approved 192 and 199 courses^{**}

Technical electives—Select courses from the College of Engineering Technical Electives list, plus Engineering 35 and 45, with at least 4 units from courses in Electrical and Computer Engineering 9

General Education electives 12

Unrestricted electives 8

Total Upper Division Units 90

Minimum Units Required for Major 180

[†] Electrical and Computer Engineering 110B may not be counted toward both the Electrical Engineering Core requirement and the Electrical Engineering Design Electives.

[‡] Courses appearing on both the laboratory elective list and on the project elective list may be counted toward both the laboratory requirement and the project requirement simultaneously.

* Electrical Engineering students may substitute Computer Science Engineering 154B for Electrical and Computer Engineering 170.

** A maximum of two distinctly different approved 192 or 199 projects may be counted toward the design elective requirement.

Computer Engineering Curriculum

The program in Computer Engineering provides the student with a broad and well-integrated background in the concepts and methodologies that are needed for the analysis, design, development, organization, theory, programming, and applications of information processing systems. Although such systems are popularly called "computers," they involve a far wider range of disciplines than merely computation, and the Computer Engineering curriculum is correspondingly broad. The program presents the essential material in electronic circuits, digital logic, discrete mathematics, computer programming, data structures, and other topics. Students who complete the Computer Engineering curriculum receive a Bachelor of Science in Computer Engineering.

Objectives. The Computer Engineering program has adopted the following objectives to serve the long-term interests of our students and the industries of Northern California and the nation. *Foundation*—To provide our graduates with a solid foundation in engineering science, including mathematics, physical science, and the fundamentals of computer engi-

neering. This foundation is necessary to succeed in more advanced engineering courses and to be able to continue learning throughout a career. *Breadth*—To provide our graduates with sufficient breadth in computer engineering. This breadth is required for students to understand engineering tradeoffs that cross disciplines, for them to contribute effectively to multi-disciplinary projects and for them to make an informed decision about their area of specialization. *Depth*—To provide our graduates with sufficient depth in a specific area of computer engineering. This depth is necessary to solve complex real-world engineering problems and to prepare to contribute to a specific discipline within computer engineering.

Upper Division Program

The Computer Engineering curriculum prepares students for careers in computer engineering or for graduate studies by providing a solid background in mathematics, physical sciences, and the traditional computer engineering subjects: electronics, computer hardware, and computer software. Here electronics refers to the five Electrical Engineering specialty areas: (1) physical electronics, (2) electromagnetics, (3) analog electronics, (4) digital electronics, and (5) signal processing and communication. The 63 upper division units in electronics, computer hardware and computer software consist of 13 units in electronics courses, 18 units in computer hardware courses, and 12 units in computer software courses. The remaining 20 units consist of 9 units of design electives and 11 units of technical electives. By carefully selecting these 20 design and technical electives, students can focus on electronics, computer hardware, or computer software, or can distribute these units among the three areas.

Areas of Specialization

Computer Systems and Software involves computer architecture, computer design, computer interfacing, and computer software.

Recommended elective courses:

Design electives: Electrical and Computer Engineering 183, Computer Science Engineering 140A, 160

Technical electives: Electrical and Computer Engineering 106, 150B, 171, 194A-194B-194C, 195A-195B-195C, Computer Science Engineering 122B, 140B, 142, 152A, 152B, 153, 158, 163, 165A, 165B, 168, 175, 177

Suggested advisers: V. Akella, H. Al-Asaad, C. Chuah, V.G. Oklobdzija, G.R. Redinbo, K.D. Wilken.

Logic Design involves the design of computer circuits at various levels, including the use of CAD systems, VHDL, and the design and fabrication of transistor-level digital circuits.

Recommended elective courses:

Design electives: Electrical and Computer Engineering 110B, 118, 183

Technical electives: Electrical and Computer Engineering 112, 140B, 171, 194A-194B-194C, 195A-195B-195C, 218A

Suggested advisers: V. Akella, H. Al-Asaad, V.G. Oklobdzija, G.R. Redinbo, K.D. Wilken.

Computer Engineering Upper Division Requirements

Select 3 courses from the following list. At least one course must have a project:	
1 project course from Electrical and Computer Engineering 114, 132B, 133, 135, 136, 146A, 157B, 165, 183, 194A-194B-194C (must be taken together to count as one design elective), 195A-195B-195C (must be taken together to count as one design elective).	
The remaining 2 courses may be taken from the list above or chosen from the following courses: Electrical and Computer Engineering 106, 110B, 112, 118, 132A, 132C, 146B, 151, 157A, 158, 160, 166, 167, 171, approved 192 and 199 courses ^{**} ; Computer Science Engineering 122B, 140A, 140B, 142, 151B, 152B, 153, 158, 160, 163, 165A, 165B, 168, 175, 177, 178, approved 192 and 199 courses ^{**}	
Technical electives—select courses from the College of Engineering Technical Electives list, plus Engineering 35 and 45 ..	9
General Education electives ..	12
Unrestricted electives ..	7
Total Upper Division Units ..	89
Minimum Units Required for Major ..	180

* Computer Science Engineering 154B may be substituted for the Electrical and Computer Engineering 170 requirement.

** A maximum of two distinctly different approved 192 or 199 projects may be counted toward the design elective requirement.

Electrical Engineering/Materials Science and Engineering Curriculum

The Electrical Engineering/Materials Science curriculum is a combined major, including portions of the Electrical Engineering curriculum in the Department of Electrical and Computer Engineering and the Materials Science curriculum in the Department of Chemical Engineering and Materials Science. In the past decade, the fields of solid-state electronics, opto-electronics, magnetics, and superconductors have developed to the point that demand for new materials now sets the pace for progress in these fields. Materials scientists with an electronics background are key to continued progress in these areas. The Electrical Engineering/Materials Science curricu-

lum provides students with the background necessary to pursue careers in electrical engineering or materials science or to go on to graduate study. Students who complete the Electrical Engineering/Materials Science curriculum will receive a Bachelor of Science in Electrical Engineering/Materials Science.

Lower Division Program

	UNITS	QUARTER USUALLY TAKEN
Required Courses		
Mathematics 21A, 21B, 21C, 21D.....16		1-2-3-4
Mathematics 22A-22B.....6		5-6
Physics 9A, 9B, 9C, 9D.....19		3-4-5-6
Chemistry 2A, 2B.....10		2-3

Engineering 160, 190, Applied Science Engi-	
neering 137, or Computer Science Engi-	
neering 188.....3	
Design electives.....7	
Select two courses, at least one of which	
must be a Materials Science and Engi-	
neering course, from the following:	
Electrical and Computer Engineering	
106, 112, 114, 118, 132A, 133, 135, 136,	
146B, 151, 157A, 160, 166, 170, 172,	
180B, 194A-194B-194C (taken together	
may count as one design elective), 195A-	
195B-195C (must be taken together to	
count as one design elective).	
Materials Science and Engineering 180,	
181, 182, 188.	
May also include approved Electrical	
and Computer Engineering 192 or 199,	
or Materials Science Engineering 199	
courses.*	
Laboratory courses—Materials Science and	
Engineering 162L or 172L, Electrical and	
Computer Engineering 146A.....5	
Advanced science electives—Geology 161	
and 162N; or Physics 140A and 140B; or	
Physics 121 and 122; or Chemistry 110A	
and 110C.....6	
General Education electives.....12	
Total Upper Division Units.....97	
Minimum Units Required for Major.....196	

* A maximum of two distinctly different approved 192 or 199 projects may be counted toward the design elective requirement.

Courses in Engineering: Electrical and Computer Engineering (EEC)

Lower Division Courses

1. Introduction to Electrical and Computer Engineering (1)

Lecture—1 hour. Electrical and computer engineering as a professional activity. What electrical engineers know and how they use their knowledge. Problems they are concerned with and how they go about solving them. Presentation of basic ideas and their applications. Examination of some case studies. (P/NP grading only.)—III. (III.)

70. Computer Structure and Assembly Language (4)

Lecture—3 hours; workshop—3 hours. Prerequisite: Computer Science Engineering 30 or 35. Restricted during Pass 1 registration to Electrical Engineering, Computer Engineering, Computer Science, Computer Science and Engineering, and Electrical Engineering/Material Science majors. Introduction to computer architecture; machine language; assembly language; macros and conditional macros; subroutine/parameter passing; input-output programming, interrupt and trap; direct-memory-access; absolute and relocatable code; re-entrant code; program development in an operating system.—I, II. (I, II.) Redinbo, Wilken

73. Applications of Object-Oriented Programming (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: Computer Science Engineering 30. Restricted to the following majors: Electrical Engineering, Computer Engineering, Electrical/Material Science Engineering, and Electrical Engineering graduate students. Non-majors accommodated on a space-available basis. Introduction to the modern programming paradigms of data abstraction and object-oriented programming for engineering applications. Introduction to object-oriented programming in C++/Java language. The technique of modeling an application by defining new types that match the concepts in the language. Not open for credit to students who have taken course 173.—III. (III.) Wang

90C. Research Group Conference in Electrical and Computer Engineering (1)

Discussion—1 hour. Prerequisite: consent of instructor; lower division standing. Research group conferences. May be repeated for credit. (P/NP grading only.)—I, II, III. (I, II, III.)

90X. Lower Division Seminar (1-4)

Seminar—1-4 hours. Prerequisite: consent of instructor. Examination of a special topic in a small group setting. May be repeated for credit.

92. Internship in Electrical and Computer Engineering (1-5)

Internship—3-15 hours. Prerequisite: lower division standing; project approval prior to period of internship. Supervised work experience in Electrical and Computer Engineering. May be repeated for credit. (P/NP grading only.)

98. Directed Group Study (1-5)

Prerequisite: consent of instructor. (P/NP grading only.)

99. Special Study for Lower Division Students (1-5)

(P/NP grading only.)

Upper Division Courses

100. Circuits II (5)

Laboratory—3 hours; lecture—3 hours; discussion—1 hour. Prerequisite: Engineering 17, course 101 (may be taken concurrently). Restricted to the following majors: Electrical Engineering, Computer Engineering, Computer Science/Engineering, Electrical Engineering/Materials Science, Applied Science/Optical Science Engineering, Electrical

Engineering graduate students. Theory, application and design of analog circuits. Methods of analysis including frequency response, SPICE simulation, and Laplace transform. Operational amplifiers and design of active filters. Students who have completed Engineering 100 may receive 3.5 units of credit.—I, II. (I, II.)

101. Gateway to Electrical Engineering, Computer Engineering, and Electrical Engineering/Materials Science and Engineering (2)

Lecture—2 hours. Prerequisite: Mathematics 21A-21B-21C-21D, 22A-22B, Physics 9A-9B-9C-9D, Computer Science Engineering 30, Engineering 6, 17 or the equivalents with a grade of C or better. Gateway to the upper-division curricula in electrical and computer engineering. Applications of mathematics and physics to electrical and computer engineering. How to be a successful engineer. Laboratory notebooks and safety. Choosing your focus area. Compiling your portfolio. (P/NP grading only.)—I. (I.)

106. Introduction to Image Processing and Computer Vision (4)

Lecture—3 hours; laboratory—3 hours. Prerequisite: course 150B. Imaging geometry; transforms and sampling; enhancement, restoration, and conversion; image compression; time-varying image analysis; elementary pattern recognition; segmentation; multi-resolution analysis.—I. (I.) Reed, Ford, Levy

110A. Electronic Circuits I (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 100, 140A (may be taken concurrently). Operation of bipolar and field-effect transistors. Use and modeling of nonlinear solid-state electronic devices in basic analog and digital circuits. Introduction to the design of transistor amplifiers and logic gates.—II. (II.) Spencer, Lewis, Current, Hurst

110B. Electronic Circuits II (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 110A. Frequency response of amplifiers using open- and short-circuit time constraints. Analysis and design of multistage and feedback amplifiers. Stability and compensation of feedback systems. Introduction to oscillators and data converters (analog-to-digital and digital-to-analog converters).—I, III. (I, III.) Spencer, Lewis, Current, Hurst

112. Communication Electronics (4)

Lecture—3 hours; laboratory—3 hours. Prerequisite: courses 110B and 150A. Electronic circuits for analog and digital communication, including oscillators, mixers, tuned amplifiers, modulators, demodulators, and phase-locked loops. Circuits for amplitude modulation (AM) and frequency modulation (FM) are emphasized.—II. (II.) Lewis

114. Analog Integrated Circuits (3)

Lecture—2 hours; laboratory—3 hours. Prerequisite: courses 110B and 140B. Analysis and design of analog integrated circuits. Emphasis on bipolar transistor circuits. Single-stage amplifiers, cascaded amplifier stages, current sources, differential pair, frequency response, and feedback amplifiers.—I. (I.) Spencer, Lewis, Current, Hurst

118. Digital Integrated Circuits (3)

Lecture—2 hours; laboratory—3 hours. Prerequisite: courses 110A, 180A. Analysis and design of digital integrated circuits. Emphasis on MOS logic circuit families. Logic gate construction, voltage transfer characteristics, and propagation delay. Regenerative circuits, RAMs, ROMs, and PLAs.—III. (III.) Hurst, Current

130A. Introductory Electromagnetics I (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: Mathematics 21D, Physics 9D, Engineering 17, course 101 (may be taken concurrently). Basics of static electric and magnetic fields and fields in materials. Work and scalar potential. Maxwell's equations in integral and differential form. Plane waves in lossless media. Lossless transmission lines.—I, II. (I, II.) Heritage, Knoesen, Yoo

130B. Introductory Electromagnetics II (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 130A. Plane wave propagation in lossy

media, reflections, guided waves, simple modulated waves and dispersion, and basic antennas.—I, III. (I, III.) Heritage, Knoesen, Yoo

132A. High-Frequency Systems, Circuits and Devices (4)

Lecture—3 hours; laboratory—3 hours. Prerequisite: courses 110B, 130B, and 140B. Application of electromagnetic theory to analysis and design of practical devices, circuits and systems operating at radio frequencies. Energy transfer at high frequencies, transmission lines, microwave integrated circuits, circuit analysis of electromagnetic energy transfer systems, the scattering parameters.—I. (I.) Branner

132B. High-Frequency Systems, Circuits and Devices (5)

Lecture—3 hours; laboratory—3 hours; discussion—1 hour. Prerequisite: course 132A. Passive high frequency device analysis, design. Microwave circuit and filter design. Introduction to analysis and design of microwave transistor and tunnel diode amplifiers.—II. (II.) Branner

132C. RF Amplifiers, Oscillators, Mixers and Antennas (5)

Lecture—3 hours; laboratory—3 hours; discussion—1 hour. Prerequisite: course 132B. Microwave amplifier theory and design, including transistor circuit models, stability considerations, noise models and low noise design. Theory and design of microwave transistor oscillators and mixers. Analysis and design of linear, loop, waveguide and horn radiators.—III. (III.) Branner

133. Electromagnetic Radiation and Antenna Analysis (4)

Lecture—3 hours; discussion—1 hour. Prerequisites: course 130B. Properties of electromagnetic radiation; analysis and design of antennas: ideal cylindrical, small loop, aperture, and arrays; antenna field measurements.—I. (I.) Knoesen, Heritage

135. Optical Communications I: Fibers (3)

Lecture—3 hours. Prerequisite: course 130B. Principles of optical communication systems. Dispersion broadening of pulses. Planar dielectric guides. Optical fibers: single-mode, multi-mode, step and graded index. Attenuation and dispersion limitations. Design of zero dispersion fibers.—II. (II.) Knoesen, Yoo

136. Opto-Electronics and Fiber-Optics Laboratory (3)

Lecture—1 hour; discussion—1 hour; laboratory—3 hours. Prerequisite: course 130B or consent of instructor; course 135 recommended. Characteristics and applications of state-of-the-art optoelectronic components (semiconductor detectors, optical modulators and optical fibers) and fiber-optic communication systems.—III. (III.) Knoesen, Yoo

140A. Principles of Device Physics I (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: Engineering 17, Physics 9D, course 101 (may be taken concurrently). Semiconductor device fundamentals, equilibrium and non-equilibrium statistical mechanics, conductivity, diffusion, density of states, electrons and holes, p-n junctions, Schottky junctions, and junction field effect transistors.—I, II. (I, II.) Haley, Hunt, Smith, Colinge

140B. Principles of Device Physics II (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 140A. Electrical properties, design, and models for Bipolar and MOS devices.—III. (III.) Hunt, Smith

145A. Solid-State Electronics (3)

Lecture—3 hours. Prerequisite: course 140B. Semiconductor device physics, the principal techniques employed in creating device structures, materials for thin film devices, and heterostructure devices.—I. (I.) Hunt

145B. Solid-State Electronics (3)

Lecture—3 hours. Prerequisite: course 140A. Magnetism and superconductivity. Design of devices and their associated circuits utilizing the magnetic and superconducting properties of solids. Magnetic devices studied include masers and magnetic media: disk, tape and bubbles. Superconducting

devices studied include Josephson junctions, SQUIDS, and SC microcircuits.—II. (II.)

146A. Integrated Circuits Fabrication (3)

Lecture—2 hours; laboratory—3 hours. Prerequisite: course 140B. Restricted to Electrical, Computer, and Electrical/Materials Science majors and Electrical Engineering graduate students. Non-majors accommodated when space available. Basic fabrication processes for metal oxide semiconductor (MOS) integrated circuits. Laboratory assignments covering oxidation, photolithography, impurity diffusion, metallization, wet chemical etching, and characterization work together in producing metal-gate PMOS test chips which will undergo parametric and functional testing.—I. (I.) Hunt, Smith

146B. Advanced Integrated Circuits Fabrication (3)

Lecture—2 hours; laboratory—3 hours. Prerequisite: course 146A. Restricted to Electrical, Computer, and Electrical/Materials Science majors and Electrical Engineering graduate students. Non-majors accommodated when space available. Fabrication processes for CMOS VLSI. Laboratory projects examine deposition of thin films, ion implantation, process simulation, anisotropic plasma etching, sputter metallization, and C-V analysis. Topics include isolation, projection alignment, epilayer growth, thin gate oxidation, and rapid thermal annealing.—II. (II.) Hunt, Smith

150A. Introduction to Signals and Systems I (4)

Lecture—4 hours. Prerequisite: Engineering 6 (may be taken concurrently), course 100. Characterization and analysis of continuous-time linear systems. Fourier series and transforms with applications. Introduction to communication systems. Transfer functions and block diagrams. Elements of feedback systems. Stability of linear systems.—II, III. (II, III.) Abdel-Ghaffer, Ford, Levy

150B. Introduction to Signals and Systems II (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 150A. Characterization and analysis of discrete time systems. Difference equation models. Z-transform analysis methods. Discrete and fast Fourier transforms. Introduction to digital filter design.—III. (III.) Ford, Levy, Reed

151. Instrumentation Interfacing, Signals and Systems (4)

Lecture—2 hours; laboratory—4 hours. Prerequisite: courses 100, 150A, 180A. Study of instrumentation interfacing systems, including software development, hardware interfacing, transducers, dynamic response, signal conditioning, A/D conversion, and data transmission.—III. (III.) Knoesen, Ford

157A. Control Systems (4)

Lecture—3 hours; laboratory—3 hours. Prerequisite: course 150A. Analysis and design of feedback control systems. Examples are drawn from electrical and mechanical systems as well as other engineering fields. Mathematical modeling of systems, stability criteria, root-locus and frequency domain design methods.—I. (I.) Gundes, Wang, Chang, Hsia

157B. Control Systems (4)

Lecture—3 hours; laboratory—3 hours. Prerequisite: course 157A. Control system design; transfer-function and state-space methods; sampled-data implementation, digital control. Laboratory includes feedback system experiments and simulation studies.—II. (II.) Chang, Gundes, Hsia, Wang

158. Control System Design Methods (4)

Lecture—3 hours; project—1 hour. Prerequisite: course 157A. Design methods for feedback control systems, including quantitative feedback theory, linear quadratic regulators, and fuzzy control systems.—III. (III.) Chang, Wang

160. Signal Analysis and Communications (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 150A. Signal analysis based on Fourier methods. Fourier series and transforms; time-sampling, convolution, and filtering; spectral density; modulation: carrier-amplitude, carrier-frequency, and pulse-amplitude.—I. (I.) Feher, Ford, Gardner, Levy

165. Statistical and Digital Communication (4)

Lecture—3 hours; project—3 hours. Prerequisite: course 160, Statistics 120. Random process models of modulated signals and noise, and analysis of receiver performance. Analog and digitally modulated signals. Signal-to-noise ratio, probability of error, matched filters. Intersymbol interference, pulse shaping and equalization. Carrier and clock synchronization.—II. (II.) Feher

166. Digital Communication Design Techniques (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 160. Baseband digital signal processing for digital MODEMS (modulators-demodulators). Digital modulation techniques including BPSK, QPSK, MSK and QAM. Spread spectrum, TDMA and FDMA access methods. Satellite, cellular-mobile, microwave and personal communications systems (PCS) applications. Computer-aided and hardware design projects.—II. (II.) Feher

167. Telecommunications Measurements and Instrumentation (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 160. Design of hardware- and software-based instrumentation components for digital communications and wireless/cellular systems. Analysis and design of spectrum, interference, bit error rate, eye and constellation diagram instrumentation. Test, evaluation and design of noise and jitter measurement test sets. Expert applications (artificial intelligence). Design project of new instrumentation subsystems.—III. (III.) Feher

170. Introduction to Computer Architecture (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 180A; course 70 or Computer Science Engineering 50. Introduces basic aspects of computer architecture, including computer performance measurement, instruction set design, computer arithmetic, pipelined/non-pipelined implementation, and memory hierarchies (cache and virtual memory). Presents a simplified Reduced Instruction Set Computer using logic design methods from the prerequisite course.—I. (I.) Oklobdzija, Redinbo, Wilken, Akella

171. Parallel Computer Architecture (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 170. Organization and design of parallel processors including shared-memory multiprocessors, cache coherence, memory consistency, snooping protocols, synchronization, scalable multiprocessors, message passing protocols, distributed shared memory and interconnection networks.—III. (III.) Akella, Oklobdzija, Redinbo, Wilken

172. Microcomputer-Based System Design (4)

Lecture—2 hours; laboratory—6 hours. Prerequisite: course 170 or Computer Science Engineering 154B, course 180A; course 180B recommended. Microprocessor architecture and its software conventions. I/O interface design with emphasis on devices such as transceivers, A-D/D-A converters and timers. System design using polling, interrupts, and DMA as I/O techniques. Programming in both assembly and high-level languages.—I, II. (I, II.) Akella, Al-Asaad, Oklobdzija, Redinbo, Wilken

180A. Digital Systems I (5)

Lecture—3 hours; laboratory—6 hours. Prerequisite: course 70 or Computer Science Engineering 50, course 100, 101 (may be taken concurrently). Restricted to Electrical Engineering, Computer Engineering, Computer Science Engineering, Computer Science and Electrical Engineering/Materials Science Engineering majors and Electrical Engineering graduate students. Introduction to digital system design including combinational logic design, sequential and asynchronous circuits, computer arithmetic, memory systems and algorithmic state machine design; computer aided design (CAD) methodologies and tools.—I, II, III. (I, II, III.) Akella, Al-Asaad, Oklobdzija, Redinbo, Wilken

180B. Digital Systems II (5)

Lecture—3 hours; laboratory—6 hours. Prerequisite: course 110A, 180A. Restricted to majors in Electrical Engineering, Computer Engineering, Computer Science

ence and Engineering, Electrical Engineering/Materials Science, Engineering, and Electrical Engineering and Computer Science graduate students. Computer aided design of digital systems with emphasis on hardware description languages (VHDL), logic synthesis, and field programmable gate arrays (FPGA). The pipelining, memory system design, and testing digital circuits.—I, II, III.

183. Testing and Verification of Digital Systems (5)

Lecture—3 hours; laboratory—4 hours. Prerequisite: courses 170 and 180B. Computer aided testing and design verification techniques for digital systems; physical fault testing; simulation-based design verification; formal verification; timing analysis.—III. (III.) Al-Asaad

189A-U. Special Topics in Electrical Engineering and Computer Science (1-5)

Lecture, laboratory, or combination. Prerequisite: course 101, consent of instructor. Special topics in (A) Computer Science; (B) Programming Systems; (C) Digital Systems; (D) Communications; (E) Signal Transmission; (F) Digital Communication; (G) Control Systems; (H) Robotics; (I) Signal Processing; (J) Image Processing; (K) High-Frequency Phenomena and Devices; (L) Solid-State Devices and Physical Electronics; (M) Systems Theory; (N) Active and Passive Circuits; (O) Integrated Circuits; (P) Computer Software; (Q) Computer Engineering; (R) Microprocessing; (S) Electronics; (T) Electromagnetics; (U) Opto-Electronics. May be repeated for credit when topic differs.—I, II, III. (I, II, III.)

190C. Research Group Conferences in Electrical and Computer Engineering (1)

Discussion—1 hour. Prerequisite: upper division standing in Electrical and Computer Engineering, course 101, consent of instructor. Research group conferences. May be repeated for credit. (P/NP grading only.)—I, II, III. (I, II, III.)

192. Internship in Electrical and Computer Engineering (1-5)

Internship—3-15 hours. Prerequisite: course 101, completion of a minimum of 84 units; project approval prior to period of internship. Supervised work experience in electrical and computer engineering. May be repeated for credit. (P/NP grading only.)

194A-194B-194C. Micromouse Design Project (2-2-1)

Workshop—3 hours (194A and 194B only); laboratory—3 hours. Prerequisite: course 70 or Computer Science Engineering 50; Engineering 17 (may be taken concurrently); course 100 or Engineering 100 recommended (may be taken concurrently); course 180A recommended (may be taken concurrently). Enrollment in course 194A automatically enrolls student in 194B and 194C. Design of a robotic mouse for the IEEE Micromouse competition. Limited enrollment. May be repeated for credit. (Deferred grading only, pending completion of three-course sequence.)—I-II-III. (I-II-III.)

195A-195B-195C. Student Design Project (2-2-1)

Lecture—1 hour; laboratory—3 hours. Prerequisite: course 110A. Design projects and/or contests sponsored by industry. Topics vary; check with department for availability. Course offering subject to demand/availability of resources. Limited enrollment. May be repeated twice for credit if project is different. (Deferred grading only pending completion of sequence.)—I-II-III.

197T. Tutoring in Electrical and Computer Engineering (1-3)

Discussion—1 hour; discussion/laboratory—2-8 hours. Prerequisite: course 101, upper division standing, consent of instructor. Tutoring in Electrical and Computer Engineering courses, especially introductory circuits. For upper division undergraduate students who will provide tutorial assistance. (P/NP grading only.)

198. Directed Group Study (1-5)

Prerequisite: course 101, consent of instructor. (P/NP grading only.)

199. Special Study for Advanced Undergraduates (1-5)

Prerequisite: course 101. (P/NP grading only.)

Graduate Courses

201. Digital Processing of Signals (4)

Lecture—4 hours. Prerequisite: course 150B. Theory and applications of digital processing of signals. Z-transform analysis of discrete-time systems, filter design techniques, structures for discrete-time systems, discrete Fourier transform, and Hilbert transforms.—II. (II.) Ford

206. Digital Image Processing (4)

Lecture—3 hours; laboratory—3 hours. Prerequisite: course 150B. Two-dimensional systems theory, image perception, sampling and quantization, transform theory and applications, enhancement, filtering and restoration, image analysis, and image processing systems.—II. (II.) Ford, Levy, Reed

207. Pattern Recognition and Classification (3)

Lecture—3 hours. Prerequisite: Statistics 120. Topics in statistical pattern recognition and classification: linear decision functions and minimum distance classification, Bayes decision theory, clustering algorithms, the generalized perceptron, multi-layer neural networks, and feature extraction. Offered in alternate years.—III. (III.) Ford, Reed

208. Image Analysis and Computer Vision (3)

Lecture—3 hours. Prerequisite: course 150B. Geometry of two-dimensional objects. Edge detection and image segmentation. Image formation and fundamental principles of computer vision. Recovery of three-dimensional structure from shading or stereo information. Analysis of motion and estimation of motion parameters. Geometry and representation of three-dimensional objects. Offered in alternate years.—III. (III.) Levy, Reed

209. Image Sequence Processing (3)

Lecture—3 hours. Prerequisite: course 106. Basic video concepts and image sequences as spatio-temporal data; three-dimensional linear systems; perception of visual motion; enhancement of image sequences; image sequence representation; resolution issues; the computation of motion; image sequence compression. Offered in alternate years.—III. Reed

210. MOS Analog Circuit Design (3)

Lecture—3 hours. Prerequisite: courses 110B, 111B and 140B. Analysis and design of MOS amplifiers, bias circuits, voltage references and other analog circuits. Stability and compensation of feedback amplifiers. Introduction to noise analysis in MOS circuits.—I. (I.) Lewis, Current, Hurst, Spencer

211. Advanced Analog Circuit Design (3)

Lecture—3 hours. Prerequisite: course 210; Statistics 131A and course 112 recommended. Noise and distortion in electronic circuits and systems. Application to communication circuits. Specific applications include mixers, low-noise amplifiers, power amplifiers, phase-locked loops, oscillators and receiver architectures.—II. Spencer

212. Analog MOS IC Design for Signal Processing (3)

Lecture—3 hours. Prerequisite: course 210. Analysis and design of analog MOS integrated circuits. Passive components, single-ended and fully differential op amps, sampled-data and continuous-time filters.—II. (II.) Hurst, Lewis

213. Data-Conversion Techniques and Circuits (3)

Lecture—3 hours. Prerequisite: course 210. Digital-to-analog and analog-to-digital conversion; component characteristics and matching; sample-and-hold, comparator, amplifier, and reference circuits.—III. (III.) Lewis, Current, Hurst, Spencer

214. Computer-Aided Circuit Analysis and Design (3)

Lecture—3 hours. Prerequisite: courses 110A, 110B and knowledge of FORTRAN or C. Network equation formulations. Nonlinear DC, linear AC, time-domain (both linear and nonlinear), steady-state (nonlinear) and harmonic analysis. DC, AC, and time-domain sensitivities of linear and nonlinear circuits. Gradient-

based design optimization. Behavioral simulations. Extensive CAD project.—II. (II.) Current

215. Circuits for Digital Communications (3)

Lecture—3 hours. Prerequisite: courses 150B and 210 (may be taken concurrently); course 165, 166 or 265 recommended. Analog, digital, and mixed-signal CMOS implementations of communication-circuit blocks; gain control, adaptive equalizers, sampling detectors, clock recovery. Offered in alternate years.—I. Hurst, Spencer

218A. Introduction to VLSI Circuits (3)

Lecture—3 hours. Prerequisite: courses 110A and 110B. Theory and practice of VLSI circuit and system design. Extensive use of VLSI computer-aided design aids to undertake a VLSI design example.—I. (I.) Current, Hurst, Oklobdzija, Spencer

218B. Multiproject Chip Design (1)

Laboratory—3 hours. Prerequisite: course 218A. CMOS and NMOS multiproject chip layouts of projects begun in courses 218A, 212, and 219 are assembled and submitted to the DARPA/NSF MOSIS program for fabrication.—II. (II.) Current, Hurst, Oklobdzija, Spencer

218C. IC Testing and Evaluation (1)

Laboratory—3 hours. Prerequisite: courses 218A and 218B. Chips submitted in course 218B are tested and evaluated. Issues involving design of ICs for testability are discussed.—III. (III.) Current, Hurst, Oklobdzija, Spencer

219. Advanced Digital Circuit Design (3)

Lecture—3 hours. Prerequisite: course 118 or 218A. Analysis and design of digital circuits. Both bipolar and MOS circuits are covered. Dynamic and static RAM cells and sense amplifiers. Advanced MOS families. Multi-valued logic.—III. (III.) Hurst, Current, Spencer

221. Analog Filter Design (3)

Lecture—3 hours. Prerequisite: courses 100 and 150A. Design of active and passive filters including filter specification and approximation theory. Passive LC filter design will cover doubly-terminated reactance two-port synthesis. Active filter design will include sensitivity, op-amp building blocks, cascade, multi-loop, ladder and active-R filter design. Offered in alternate years.—I.

228. Advanced Microwave and Antenna Design Techniques (4)

Lecture—3 hours; laboratory—3 hours. Prerequisite: course 132B. Theory, design, fabrication, analysis of advanced microwave devices, antennas. Includes wideband transformers, tapered networks, stripline and microstripline broadband, couplers, and hybrids. Lumped and distributed filter synthesis. Broadband matching theory applied to microwave devices. FET amplifiers. Antenna design, analysis of horns, microstrip, log periodic, arrays, spirals, and reflectors. Offered in alternate years.—III. Branner

230. Electromagnetics (3)

Lecture—3 hours. Prerequisite: course 130B. Maxwell's equations, plane waves, reflection and refraction, complex waves, waveguides, resonant cavities, and basic antennas.—I.

232A. Advanced Applied Electromagnetics I (3)

Lecture—3 hours. Prerequisite: course 132B. The exact formulation of applied electromagnetic problems using Green's functions. Applications of these techniques to transmission circuits. Offered in alternate years.—II. Branner

232B. Advanced Applied Electromagnetics II (4)

Lecture—3 hours; laboratory—3 hours. Prerequisite: course 132B. Advanced treatment of electromagnetics with applications to passive microwave devices and antennas. Offered in alternate years.—III. Branner

235. Photonics (4)

Lecture—3 hours; project—1 hour. Prerequisite: course 230. Optical propagation of electromagnetic waves and beams in photonic components and the design of such devices using numerical techniques.—III. Knoesen

236. Nonlinear Optical Applications (3)

Lecture—3 hours. Prerequisite: course 130B, course 230 (may be taken concurrently). Nonlinear optical

interactions in optical communication, optical information processing and integrated optics. Basic concepts underlying optical nonlinear interactions in materials and guided media. Not open for credit to students who have completed course 233. Offered in alternate years.—I. Knoesen, Heritage

237A. Lasers (3)

Lecture—3 hours. Prerequisite: course 130B or the equivalent and course 235. Theoretical and practical description of lasers. Theory of population inversion, amplification and oscillation using semiclassical oscillator model and rate equations. Description and design of real laser systems (Not open for credit to students who have completed course 226A.) Offered in alternate years.—I. Heritage

237B. Advanced Lasers (3)

Lecture—3 hours. Prerequisite: course 237A. Quantum mechanical description of lasers and interactions of materials with laser light. Relationship to rate equation approach. Optical Bloch equations and coherent effects. Theory and practice of active and passive mode-locking of lasers. Injection locking. Not open for credit to students who have completed course 226B. Offered in alternate years.—(II.) Heritage

238. Semiconductor Diode Lasers (3)

Lecture—3 hours. Prerequisite: course 245A. Understanding of fundamental optical transitions in semiconductor and quantum-confined systems are applied to diode lasers and selected photonic devices. The importance of radiative and non-radiative recombination, simulated emission, excitons in quantum wells, and strained quantum layers are considered. Offered in alternate years.—III. Heritage

239. Optical Communications and Networking (4)

Lecture—4 hours. Prerequisite: course 130B. Physical layer network elements found in network architectures and protocols. Sources of physical layer impairments and limitations in network scalability. Enabling technologies for wavelength-division-multiplexing and time-division-multiplexing networks. Optical amplifiers and their impact in optical networks (signal-to-noise ratio, gain-equalization, and cascading). Offered in alternate years.—II. Yoo

240. Semiconductor Devices Physics (3)

Lecture—3 hours. Prerequisite: course 140B. Physical principles, characteristics and models of fundamental semiconductor device types, including P-N and Schottky diodes, MOSFETs and MESFETs Bipolar Junction Transistors, and light emitters/detectors.—II. (II.) Bower, Colinge, Haley, Hunt, Smith

241. Advanced Silicon Devices (3)

Lecture—3 hours. Prerequisite: course 140B; course 240 recommended. Use of modern electron device design to enhance performance of basic device architectures to satisfy specific requirements in circuits. High-performance field-effect, and bipolar transistors, high-frequency devices, solid-state power devices and field-emission triodes are considered. Offered in alternate years.—II. Bower, Colinge, Hunt, Smith

242. Heterojunction Semiconductor Devices (3)

Lecture—3 hours. Prerequisite: course 140B; course 240 recommended. Use of materials engineering and device design/fabrication techniques to emphasize particular performance issues in electron devices. Particular emphasis on compound semiconductors and column-IV elemental alloy heterostructures and their applications in quantum, microwave, and photonic devices. Offered in alternate years.—II. Colinge, Hunt, Smith

243. Silicon-on-Insulator (SOI) Technology (3)

Lecture—3 hours. Prerequisite: course 140B or 240 recommended. SOI (Silicon-on-Insulator) technology from all major points of view: materials fabrication, processing technology, device physics, and circuit basics. Offered in alternate years.—III. Colinge

244A. Design of Microelectromechanical Systems (MEMS) (3)

Lecture—3 hours. Prerequisite: course 140A, 140B or consent of instructor. Theory and practice of MEMS design. Micromechanical fundamentals, CAD tools, and case studies. A MEMS design project is

required. The designs will be fabricated in a commercial foundry and tested in course 244B. Offered in alternate years.—(I.)

244B. Design of Microelectromechanical Systems (MEMS) (1)

Laboratory—3 hours. Prerequisite: course 244A. Testing of surface micromachined MEMS devices including post-processing, design of test fixtures and test methodology, measurements, and data analysis. (S/U grading only.) Offered in alternate years.—(III.)

245. Applied Solid-State Physics (3)

Lecture—3 hours. Prerequisite: course 140A and Physics 115A. Physics of solids relevant to device applications. Topics include atomic structure of solids, quantum theory of electronic and vibrational states in crystals and heterostructures, electron dynamics, and quantum transport theory.—II.

246. Advanced Projects in IC Fabrication (3)

Discussion—1 hour; laboratory—6 hours. Prerequisite: course 146B. Individualized projects in the fabrication of analog or digital integrated circuits. Offered in alternate years.—III. Hunt, Smith

247. Advanced Semiconductor Devices (3)

Lecture—3 hours. Prerequisite: course 240. Physics of various semiconductor devices, including metal-oxide-semiconductor field-effect transistors (MOSFETs), IMPATT and related transit-time diodes, transferred-electron devices, light-emitting diodes, semiconductor lasers, photodetectors, and solar cells. Offered in alternate years.—I. Hunt

248. Microsensor Design and Fabrication (3)

Lecture—3 hours. Prerequisite: graduate standing in engineering. Design and fabrication of sensors using microfabrication techniques. Topics include transduction principles, fabrication technologies specific to microsensors, and design of microsensor systems, including packaging. Offered in alternate years. Same course as Biomedical Engineering 249.—II. Smith

249. Microfabrication (3)

Lecture—3 hours. Prerequisite: course 140B. Theory and practices of several major technologies of microfabrication, used for producing integrated circuits, sensors, and microstructures. Major topics include sputtering, chemical vapor deposition, plasma processing, micromachining, and ion implantation. Offered in alternate years.—(II.) Hunt

250. Linear Systems and Signals (4)

Lecture—4 hours. Prerequisite: course 150A. Mathematical description of systems. Selected topics in linear algebra. Solution of the state equations and an analysis of stability, controllability, observability, realizations, state feedback and state estimation. Discrete-time signals and systems, and the Z-transform.—I. (I.) Chang, Gundes, Levy, Wang

251. Nonlinear Systems (3)

Lecture—3 hours. Prerequisite: course 250. Nonlinear differential equations, second-order systems, approximation methods, Lyapunov stability, absolute stability, Popov criterion, circle criterion, feedback linearization techniques. Offered in alternate years.—III. Gundes

252. Multivariable Control System Design (3)

Lecture—3 hours. Prerequisite: course 250. Review of single-loop feedback design. Stability, performance and robustness of multivariable control systems. LQG design. H_∞ design. Frequency response methods. Optimization-based design.—II. (II.) Wang

253. Adaptive Systems (3)

Lecture—3 hours. Prerequisite: course 150B; course 250 (may be taken concurrently.) Theory and practice of adaptive systems. Concepts of learning and adaptation. Structure of adaptive filters and the related parameter adaptive algorithms. Applications to system identification, adaptive signal processing and adaptive control.—I. Hsia

254. Optimization (3)

Lecture—3 hours. Prerequisite: Mathematics 22A, knowledge of FORTRAN or C. Modeling optimization problems in engineering design and other applications; optimality conditions; unconstrained optimization (gradient, Newton, conjugate gradient and

quasi-Newton methods); duality and Lagrangian relaxation constrained optimization. (Primal method and an introduction to penalty and augmented Lagrangian methods.) Offered in alternate years.—II. Chang

255. Robotic Systems (3)

Lecture—3 hours. Prerequisite: course 157A. Introduction to robotic systems. Mechanical manipulators, kinematics, manipulator positioning and path planning. Dynamics of manipulators. Robot motion programming and control algorithm design.—(I.) Hsia, Wang

256. Multivariable Feedback Systems (3)

Lecture—3 hours. Prerequisite: course 250. Analysis and synthesis of feedback control systems using a factorization approach. Q-parameterization, all stabilizing controllers, all achievable input-output maps. Robustness, asymptotic tracking and disturbance rejection. Offered alternate years.—(III.) Gundes

257. Topics in Optimization (3)

Lecture—3 hours. Prerequisite: Computer Science Engineering 30 or 40 or the equivalent or familiarity with MATLAB as a programming language; Mathematics 22A; Mathematics 131 or course 150A. Advanced topics in the theoretical foundations of optimization and its applications, such as, semi-infinite and nondifferentiable optimization in engineering design, optimal control, global optimization, convex analysis and optimization, linear and integer programming, VLSI physical design automation. May be repeated for credit when topic differs. Offered in alternate years.—(II.) Chang

259. Fuzzy Systems and Control (3)

Lecture—3 hours. Prerequisite: course 157A. Fuzzy sets and relations, fuzzy logic and approximate reasoning. Fuzzy systems and properties. Design of fuzzy systems from input/output data. Fuzzy control systems. Fuzzy logic and soft computing. Offered in alternate years.—(III.) Wang

260. Random Signals and Noise (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: Statistics 120, course 150A; course 250 recommended. Random processes as probabilistic models for signals and noise. Review of probability, random variables, and expectation. Study of correlation function and spectral density, ergodicity and duality between time averages and expected values, filters and dynamical systems. Applications.—II. (II.) Levy, Redinbo

261. Signal Processing for Communications (4)

Lecture—4 hours. Prerequisite: course 165, 260 or consent of instructor. Signal processing in wireless and wireline communication systems. Characterization and distortion of wireless and wireline channels. Channel equalization and maximum likelihood sequence estimation. Channel precoding and pre-equalization. OFDM and transmit diversity. Array processing. Offered in alternate years.—III. Ding

263. Optimal and Adaptive Filtering (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 260. Geometric formulation of least-squares estimation problems. Theory and applications of optimum Wiener and Kalman filtering. MAP and maximum likelihood estimation of hidden Markov models, Viterbi algorithm. Adaptive filtering algorithms, properties and applications. Offered in alternate years.—(III.) Ding, Levy

264. Estimation and Detection of Signals in Noise (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 260. Introduction to parameter estimation and detection of signals in noise. Bayes and Neyman-Pearson likelihood-ratio tests for signal detection. Maximum-likelihood parameter estimation. Detection of known and Gaussian signals in white or colored noise. Applications to communications, radar, signal processing. Offered in alternate years.—I. Levy

265. Principles of Digital Communications (4)

Lecture—4 hours. Prerequisite: courses 165 and 260, or consent of instructor. Introduction to digital communications. Coding for analog sources. Characterization of signals and systems. Modulation and

demodulation for the additive Gaussian channel. Digital signaling over bandwidth-constrained linear filter channels and over fading multipath channels. Spread spectrum signals.—I. (I.) Levy, Abdel-Ghaffar

266. Information Theory and Coding (3)

Lecture—3 hours. Prerequisite: Statistics 120. Information theory and coding. Measure of information. Redundancy reduction encoding of an information source. Capacity of a communication channel, error-free communications. Offered in alternate years.—II. Abdel-Ghaffar

267. Cellular Digital Mobile Communications (3)

Lecture—3 hours. Prerequisite: courses 150A, 160, and Statistics 120 (or the equivalent). Wireless cellular, digital mobile and personal communication systems (PCS). Radio propagation, digital modulation and error control. Access methods: spread spectrum, FDMA and TDMA. Antenna diversity. Computer-aided system and hardware design.—I. (I.) Feher

268. Digital Modulation Techniques (3)

Lecture—3 hours. Prerequisite: course 267. MODEM (modulator–demodulator) signal processing and complete radio transmitter/receiver analysis, design and application for digital cellular mobile radio satellite, microwave, and cable systems. Study of advanced $\pi/4$ -QPSK, GMSK, coded QAM and of correlative/coded modems. Computer-aided and hardware design of advanced communications and synchronization systems. Offered in alternate years.—III. Feher

269A. Error Correcting Codes I (3)

Lecture—3 hours. Prerequisite: Mathematics 22A and course 160. Introduction to the theory and practice of block codes, linear block codes, cyclic codes, decoding algorithms, coding techniques.—I. (I.) Abdel-Ghaffer, Lin

269B. Error Correcting Codes II (3)

Lecture—3 hours. Prerequisite: course 165 and 269A. Introduction to convolutional codes, turbo codes, trellis and block coded modulation codes, soft-decision decoding algorithms, the Viterbi algorithm, reliability-based decoding, trellis-based decoding, multistage decoding. Offered in alternate years.—III. Abdel-Ghaffer, Lin

270. Computer Architecture (3)

Lecture—3 hours. Prerequisite: course 170 or Computer Science Engineering 154B. Introduction to modern techniques for high-performance single and multiple processor systems. Topics include advanced pipeline design, advanced memory hierarchy design, optimizing pipeline and memory use, and memory sharing among multiprocessors. Case studies of recent single and multiple processor systems.—II. (II.) Akella, Redinbo, Oklobdzija, Wilken

272. High-Performance Computer Architecture and Implementation (3)

Lecture—3 hours. Prerequisite: course 170 or Computer Science Engineering 154A, 154B and course 270 or Computer Science Engineering 250A. Architectural issues in achieving high-performance via concurrent execution of instructions and associated problems and limitations. Specialized architectures. Offered in alternate years.—(III.) Oklobdzija, Wilken

275. Advanced Object-Oriented Programming (3)

Lecture—3 hours. Prerequisite: course 73. Object-oriented analysis, design and implementation of complex software systems. Topics include fundamental concepts of object models, the notation and process of object-oriented analysis and design, creating graphical user interface, application of object-oriented development across different application domains.—III. (III.) Wang

276. Fault-Tolerant Computer Systems: Design and Analysis (3)

Lecture—3 hours. Prerequisite: courses 170, 180A. Introduces fault-tolerant digital system theory and practice. Covers recent and classic fault-tolerant techniques based on hardware redundancy, time redundancy, information redundancy, and software redundancy. Examines hardware and software reliability analysis, and example fault-tolerant designs. Not open for credit to students who have completed course 276A. Offered in alternate years.—(II.) Redinbo, Wilken

278. Computer Arithmetic for Digital Implementation (3)

Lecture—3 hours. Prerequisite: courses 170, 180A. The design and implementation of computer arithmetic logic units are studied with particular emphasis on high-speed performance requirements. Addition (subtraction), multiplication and division operations are covered, and fixed and floating-point representations are examined. Offered in alternate years.—III. Oklobdzija, Redinbo

280. Advanced Logic Design (3)

Lecture—3 hours. Prerequisite: course 180B. Logic design of complex and high-performance systems. Timing, clock generation and distribution. High performance latch design. Pipelining, pipeline conflicts and hazard resolution. Complex control unit design. Use of FPGAs. Design methodology and CAD tools.—I. (I.) Oklobdzija

282. Digital Systems Modeling and Design (3)

Lecture—2 hour; discussion—1 hour. Prerequisite: Computer Science Engineering 40, course 173, 180B or the equivalent or consent of instructor. Modeling of digital systems using hardware description languages, such as VHDL or Verilog. Introduction to application-specific integrated circuit (ASIC) design using commercial synthesis and simulation tools.—III. Akella, Bakshi

283. Advanced Design Verification of Digital Systems (4)

Lecture—3 hours; project. Prerequisite: courses 170 and 180A. Design verification techniques for digital systems; simulation-based design verification techniques; formal verification techniques, including equivalence checking, model checking, and theorem proving; timing analysis and verification; application of design certification techniques to microprocessors. Offered in alternate years.—II. Al-Asaad

286. Introduction to Digital System Testing (3)

Lecture—3 hours. Prerequisite: course 180A; Statistics 120 or 131A. A review of several current techniques used to diagnose faults in both combinational and sequential circuits. Topics include path sensitization procedures, Boolean difference, D-algorithm random test generation, TC testing and an analysis of the effects of intermittent faults. Not open for credit to students who have completed course 276A. Offered in alternate years.—II. Redinbo

289A-U. Special Topics in Electrical Engineering and Computer Science (1-5)

Lecture, laboratory, or combination. Prerequisite: consent of instructor. Special topics in (A) Computer Science, (B) Programming Systems, (C) Digital Systems, (D) Communications, (E) Signal Transmission, (F) Digital Communication, (G) Control Systems, (H) Robotics, (I) Signal Processing, (J) Image Processing, (K) High Frequency Phenomena and Devices, (L) Solid-State Devices and Physical Electronics, (M) Systems Theory, (N) Active and Passive Circuits, (O) Integrated Circuits, (P) Computer Software, (Q) Computer Engineering, (R) Microprocessing, (S) Electronics, (T) Electromagnetics, (U) Opto-Electronics. May be repeated for credit when topic differs.—I, II, III. (I, II, III.)

290. Seminar in Electrical and Computer Engineering (1)

Seminar—1 hour. Discussion and presentation of current research and development in Electrical and Computer Engineering. May be repeated for credit. (S/U grading only).—I. (I.)

290C. Graduate Research Group Conference in Electrical and Computer Engineering (1)

Discussion—1 hour. Prerequisite: consent of instructor. Research problems, progress, and techniques in electrical and computer engineering. May be repeated for credit. (S/U grading only).—I, II, III. (I, II, III.)

291. Solid-State Circuit Research Laboratory Seminar (1)

Seminar—1 hour. Prerequisite: graduate standing. Lectures on solid-state circuit and system design by various visiting experts in the field. May be repeated for credit. (S/U grading only).—III. (III.)

292. Seminar in Solid-State Technology (1)

Seminar—1 hour. Prerequisite: graduate standing. Lectures on solid-state technology by various visiting experts in the field. May be repeated for credit. (S/U grading only).—III. (III.)

293. Computer Engineering Research Seminar (1)

Seminar—1 hour. Prerequisite: graduate standing or consent of instructor. Lectures, tutorials, and seminars on topics in computer engineering. May be repeated for credit up to four times. (S/U grading only).—II, III. (II, III.)

294. Image, Video, and Computer Vision Research Seminar (1)

Seminar—1 hour. Prerequisite: graduate standing. Lectures, tutorials, and seminars on image processing, video engineering, and computer vision. May be repeated for credit. (S/U grading only).—I, II, III. (I, II, III.)

295. Systems, Control and Robotics Seminar (1)

Seminar—1 hour. Prerequisite: graduate standing. Seminars on current research in systems and control by faculty and visiting experts. Technical presentations and lectures on current topics in robotics research and robotics technology. May be repeated for credit. (S/U grading only).—II. (II.) Hsia, Gundes, Chang, Wang

296. Photonics Research Seminar (1)

Seminar—1 hour. Prerequisite: graduate standing. Lectures on photonics and related areas by faculty and visiting experts. May be repeated for credit. (S/U grading only).—II, III. (II, III.) Heritage, Knoesen

298. Group Study (1-5)

Prerequisite: consent of instructor. (S/U grading only.)

299. Research (1-12)

(S/U grading only.)

Professional Course

390. The Teaching of Electrical Engineering (1)

Discussion—1 hour. Prerequisite: meet qualifications for teaching assistant and/or associate-in in Electrical Engineering. Participation as a teaching assistant or associate-in in a designated engineering course. Methods of leading discussion groups or laboratory sections, writing and grading laboratory reports, use of laboratory equipment, and grading laboratory reports. May be repeated for credit. (S/U grading only).—I. (I.)

396. Teaching Assistant Training Practicum (1-4)

Prerequisite: graduate standing. May be repeated for credit. (S/U grading only).—I, II, III. (I, II, III.)

Mission. The Department of Mechanical and Aeronautical Engineering is committed to educating future engineers so they may contribute to the economic growth and well-being of both the state and the nation and to the advancement of knowledge in the mechanical and aeronautical sciences.

Objectives. We provide a background in the mathematical and physical sciences appropriate for the solution of engineering problems; engineering design experiences in a competitive environment that emphasizes written and oral communication skills and team decision making; an approach to the requisite engineering disciplines that allows and encourages life-long learning; the basic computational, experimental, and manufacturing skills neces-

sary for the conduct and assessment of engineering tasks; and an awareness of the ethical and social responsibilities that accompany the practice of engineering

The Aeronautical Science and Engineering Major Program

Aeronautical Science and Engineering is the branch of engineering that applies scientific knowledge to the design, manufacture and operation of aircraft. Our Bachelor of Science degree in Aeronautical Science and Engineering provides a broad background and fundamental education in mathematics, the physical sciences, and the engineering sciences. These fundamentals, when complemented by the required technical courses, prepare you for employment in government or industry, while simultaneously establishing an excellent foundation for graduate studies.

The fundamental disciplines of this branch of engineering apply to all bodies and vehicles whose applied loads are influenced by aerodynamic forces.

Courses in fundamental engineering principles are supplemented with courses in aircraft propulsion, aerodynamics, performance, stability and control, aircraft preliminary design, aeronautical structures, and aeroelasticity.

Aeronautical Science and Engineering Curriculum

The Aeronautical Science and Engineering curriculum is accredited by the Engineering Accreditation Commission of the Accreditation Board for Engineering and Technology.

Lower Division Program

	UNITS	QUARTER USUALLY TAKEN
Required Courses		
Mathematics 21A-21B-21C-21D	16	1-2-3-4
Mathematics 22A-22B	6	5-6
Physics 9A-9B-9C-9D	19	3-4-5-6
Chemistry 2A-2B or 2AH-2BH	10	2-3 or 4-5
Engineering 4	3	1 or 2
Engineering 6	4	2 or 5
Engineering 17	4	6
Engineering 35	3	4 or 5
Engineering 45	4	4 or 6
English 1 or 3, or Comparative Literature 1, 2, 3 or 4, or Native American Studies 5	4	1 or 2
Communication 1 or 3 (or an acceptable substitute as approved by the Undergraduate Study Committee of the College of Engineering)	4	4
General Education electives	16	
Total Lower Division Units	93	

Upper Division Program

A broad range of technical elective courses is available. Some students choose these electives from one area of study in order to begin developing a specialty. Others choose from several areas in order to broaden their background in the sciences and engineering. Typical aeronautical science and engineering specialties include aero-thermodynamics, propulsion systems, aircraft performance, stability and control, aeronautical structures, aeroelasticity, flight testing, or component and mechanism design. There are a number of electives that could be recommended to all aeronautical science and engineering students regardless of their chosen area of specialization.

Suggested technical electives:

Aeronautical Science and Engineering 131, 137, 139

Suggested advisers: J.J. Chattot, M.M. Hafez, R.A. Hess, L.W. Rehfield, N. Sarigul-Klijn, C.P. van Dam, B.R. White.

Upper Division Requirements

UNITS

Subject Areas and Courses

Engineering 100, 102, 103, 104, 105	19
Mechanical Engineering 106, 107, 165, 171, 172	20
Aeronautical Science and Engineering 126, 127, 129, 130A, 130B, or 130C, 133, 135, 138	32
Select one course from Applied Science Engineering 115, Engineering 180 or Mathematics 128C	4
Engineering 190	3
Technical electives	7
A combined maximum of four units may be selected from project/independent study courses (184A, 184B, 192, 199) not used in satisfaction of core degree requirements.	
General Education electives	8
Total Upper Division Units	93
Minimum Units Required for Major	186

The Mechanical Engineering Major Programs

The mechanical engineer uses basic science in the design and manufacture of complex engineering systems requiring the application of physical and mechanical principles to the development of machines, energy conversion systems, materials, and equipment for guidance and control.

Work in this broad field of engineering requires a thorough knowledge of mathematics, physics, chemistry, fluid mechanics, thermodynamics, heat transfer, mass transfer, electricity, manufacturing processes, and economics.

Mechanical Engineering Curriculum

The Mechanical Engineering curriculum is accredited by the Engineering Accreditation Commission of the Accreditation Board for Engineering and Technology.

Lower Division Program

Requirements for Mechanical Engineering and the double major Mechanical Engineering/Materials Science.

	UNITS	QUARTER USUALLY TAKEN
Required Courses		
Mathematics 21A-21B-21C-21D	16	1-2-3-4
Mathematics 22A-22B	6	5-6
Physics 9A-9B-9C-9D	19	3-4-5-6
Chemistry 2A-2B or 2AH-2BH	10	2-3 or 4-5
Engineering 4	3	1 or 3
Engineering 6	4	2 or 5
Engineering 17	4	5 or 6
Engineering 35	3	4 or 5
Engineering 45	4	4 or 6
Mechanical Engineering 50 (Required for Mechanical Engineering and Mechanical/Materials Science and Engineering majors)	4	4 or 5
English 1 or 3, or Comparative Literature 1, 2, 3 or 4, or Native American Studies 5	4	1 or 2
Communication 1 or 3 (or an acceptable substitute as approved by the Undergraduate Study Committee of the College of Engineering)	4	4
General Education electives	12	
Total Lower Division Units	93	

Upper Division Programs

You spend your third year in further study of fundamental courses, and in the fourth year you may tailor your studies to your own interests by selecting courses in controls and systems analysis, fluid

mechanics, heat transfer, mechanical design or thermodynamics. You can either prepare for graduate study in Mechanical Engineering or obtain a broad background for entering engineering practice at the bachelor's level.

You are encouraged to select elective courses from among the areas of specialization listed below.

Areas of Specialization

Mechanical Design. The creation and improvement of products, processes, or systems that are mechanical in nature are the primary activities of a professional mechanical engineer. The development of a product from concept generation to detailed design, manufacturing process selection and planning, quality control and assurance, and life cycle considerations are areas of study and specialization in the area of mechanical design.

Solutions to such major social problems as environmental pollution, the lack of mass transportation, the lack of raw materials, and energy shortages, will depend heavily on the engineer's ability to create new types of machinery and mechanical systems. The engineer-designer must have a solid and relatively broad background in the basic physical and engineering sciences and have the ability to synthesize the information from such a background in creative problem solving. In addition to having technical competence, the designer must be able to consider the socioeconomic consequences of a design and its possible impact on the environment. Product safety, reliability, and economics are other considerations.

Suggested technical electives:

Aeronautical Science and Engineering 130A, 130B, 130C, 133, 137, 139

Biological Systems Engineering 165

Applied Science Engineering 115

Engineering 111, 122, 160 (only one unit of credit towards Technical Electives requirement)

Materials Science and Engineering 180, 181, 182

Mechanical Engineering 124, 134, 150B, 151, 152, 161, 162, 184A with 184B (both courses must be taken), 185A with 185B (both courses must be taken)

Suggested advisers: H.H. Cheng, R.T. Farouki, A.A. Frank, M.R. Hill, M.L. Hull, B. Ravani, S. Velinsky, K. Yamazaki.

Biomedical and Engineering Fluid Mechanics.

This field of study is based on the fundamentals of fluid mechanics and their broad range of applications in the biomedical and engineering areas. Areas of current research include blood circulation and its potential role in the regulation of normal physiological function and in the development of disease; groundwater and atmospheric flows and their implications for pollutant transport and environmental concerns; aerodynamic flow around transportation vehicles and its impact on vehicle performance; and flow in combustion engines and other energy systems with considerations of efficiency and environmental impact. These areas are investigated both experimentally and computationally.

Suggested technical electives:

Aeronautical Science and Engineering 138

Engineering 160 (only one unit of credit towards technical requirements); Engineering 180

Chemical Engineering 161A, 161B

Civil and Environmental Engineering 144, 149

Mechanical Engineering 161, 162, 163

Suggested advisers: R.C. Aldredge, A.I. Barakat, J.W. Baughn, J.-J. Chattot, H.A. Dwyer, M.M. Hafez, I.M. Kennedy, W. Kollmann, L.W. Rehfield, B.D. Shaw, C.P. van Dam, B.R. White.

Combustion and the Environment. Combustion is widely used for energy generation, propulsion, heating, and waste disposal, as well as for many other applications. Mechanical engineers are often heavily involved with the design of combustion systems (internal combustion engines, gas turbines, furnaces, etc.) and deal with aspects of combustion ranging from increasing efficiencies to reducing pollutant

emissions. This specialization is for those who would like to work in fields that use combustion, or that deal with pollution related to combustion. With the current increased emphasis on reducing pollutants while maintaining or increasing efficiency, the efforts of mechanical engineers in designing and improving combustion systems are becoming more important.

Suggested technical electives:

Mechanical Engineering 161, 163, 184A with 184B (both courses must be taken)

Civil and Environmental Engineering 149, 150

Suggested advisers: R.C. Aldredge, H.A. Dwyer, I.M. Kennedy, W. Kollmann, B.D. Shaw.

Heat Transfer, Thermodynamics, and Energy Systems.

This specialization emphasizes the fundamentals of heat transfer and thermodynamics, and their application to the design of advanced engineering systems. The objective of the program is to introduce you to the fundamental processes of heat transfer and thermodynamics in complex engineering systems so that you are able to design more efficient, cost effective, and reliable systems with less environmental pollution and impact. An understanding of heat transfer and thermodynamics is required for the design of efficient, cost effective systems for power generation, propulsion, heat exchangers, industrial processes, refining, and chemical processing. This area of specialization is important to many industries— aerospace, defense, automotive—as well as to the thermal design of electronic and computer packages.

Suggested technical electives:

Aeronautical Science and Engineering 138

Engineering 111; Mechanical Engineering 161, 162, 163, 165

Suggested advisers: R.C. Aldredge, J.W. Baughn, R. Davis, H.A. Dwyer, H.A. Hoffman, I.M. Kennedy, W. Kollman, B.D. Shaw

Manufacturing. Manufacturing is concerned with the conversion of raw materials into finished products by a variety of processes, such as machining, forming, casting, and molding. Modern manufacturing technology is increasingly dependent upon integration with computer-aided design systems and precision computer controls. State-of-the-art laboratories offer the opportunity for hands-on experience with a wide spectrum of manufacturing equipment. Manufacturing engineers must have expertise in design, materials, controls, statistical methods, computer software, and microprocessor applications.

Suggested technical electives:

Electrical and Computer Engineering 160, 174

Materials Science and Engineering 180, 181

Mechanical Engineering 124, 151, 154

Suggested advisers: H.H. Cheng, R.T. Farouki, B. Ravani, K. Yamazaki.

Systems Dynamics and Control. Engineers are increasingly concerned with the performance of integrated dynamics systems in which it is not possible to optimize component parts without considering the overall system.

Systems Dynamics and Control specialists are concerned with the modeling, analysis, and simulation of all types of dynamic systems and with the use of automatic control techniques to change the dynamic characteristics of systems in useful ways. The emphasis in this program is on the physical systems that are closely related to mechanical engineering, but the techniques for studying these systems apply to social, economic, and other dynamic systems.

Ongoing research includes projects on continuously variable transmissions, active and semi-active suspension systems, modeling and control of vehicle dynamics, electromechanical actuator design, electronically controlled steering, the analysis of fuel management systems, and the design of flight-control systems with humans in the loop.

An Automotive System Dynamics Laboratory is being used for testing components such as engines, transmissions, brakes, and steering systems as well as testing complete vehicles.

Suggested technical electives:

Aeronautical Science and Engineering 129, 131, 139 Engineering 122

Mechanical Engineering 134, 152, 184A with 184B (both courses must be taken)

Suggested advisers: F.O. Eke, A.A. Frank, R.A. Hess, M. Hubbard, S. Joshi, D.C. Karnopp, D.L. Margolis.

Ground Vehicle Systems. An important aspect of mechanical engineering is the design of more environmentally benign surface vehicles that provide efficient individual and public transportation. Innovations in the field require competence in vehicle dynamics, control of vehicle dynamics, power sources and power transmission, lightweight structures and systems, alternatively fueled power systems, including electrical drives and fuel cells, and mechanical systems.

Transportation Systems. As society recognizes the increasing importance of optimizing transportation systems to minimize environmental degradation and energy expenditure, engineers will need to consider major innovations in the way people and goods are moved. Such innovations will require competence in vehicle dynamics, propulsion and control, and an understanding of the problems caused by present-day modes of transportation. Vehicle control requires an understanding of sensors and actuator, and the integration of yet-to-be-proposed concepts into overall vehicular dynamics. Competence in these areas allows for the development of alternative propulsion concepts, such as electric, hybrid, and fuel cell.

Suggested technical electives:

Aeronautical Science and Engineering 127, 129

Civil and Environmental Engineering 131A, 149 Engineering 122, 160 (only one unit of credit towards

Technical Electives requirement)

Mechanical Engineering 134, 150B, 161, 162, 163

Suggested advisers: A.A. Frank, M. Hubbard, D.C. Karnopp, D.L. Margolis, S. Velinsky.

Mechanical Engineering Upper Division Requirements

UNITS

Subject Areas and Courses

Engineering 100, 102, 103, 104, 105.....19

Mechanical Engineering 150A and 172; and one course chosen from 185A with 185B (both courses must be taken in consecutive quarters), or Aeronautical Science and Engineering 130A.....12

Mechanical Engineering 106, 107, 165, 171.....16

Engineering 190.....3

Select one course from Applied Science Engineering 115; Engineering 180; Mathematics 128C, 131; Statistics 120, 131A.....4

Technical electives.....24

Eighteen of the 24 units must be

selected from upper division courses in engineering; of these units, at least one course must be chosen from the following: Engineering 122, Mechanical Engineering 150B, 154 (Mechanical Engineering/Aeronautical Engineering double majors may petition to substitute Aeronautical Science and Engineering 133 or 139).

An additional two courses must be chosen from the following design courses: Aeronautical Science and Engineering 129, 130B, 130C, 137, 138, 139, Materials Science and Engineering 180, 182; Mechanical Engineering 134, 151, 152, 154, 161, 162, 163, 184A with 184B (both courses must be taken in consecutive quarters).

You may also choose from Engineering 122, Mechanical Engineering 150B, 154, 185A with 185B (both courses must be taken in consecutive quarters), or Aeronautical Engineering 130A, if these courses are not used in satisfaction of the core design requirement above.

250 Engineering: Mechanical and Aeronautical

A combined maximum of 4 units may be selected from project/independent study courses (184A, 184B, 185A, 185B, 192, 199) not used in satisfaction of core degree requirements.

Total Upper Division Units.....90
Minimum Units Required for Major183

Mechanical Engineering/Materials Science and Engineering Upper Division Requirements

UNITS

Subject Areas and Courses

Engineering 100, 102, 103, 104, 105.....19
Mechanical Engineering 106, 107, 165, 171
.....16
Mechanical Engineering 150A, 172; and one
course chosen from 185A with 185B (both
courses must be taken in consecutive
quarters), or Aeronautical Science and
Engineering 130A.....12
Materials Science and Engineering 160, 162,
164, 17416
One course chosen from Materials Science
and Engineering 172, 180, 181, 182, 188;
and one laboratory courses chosen from
Materials Science and Engineering 162L,
174L6
Select one course from: Applied Science
Engineering 115; Engineering 180; Mathe-
matics 128C, 131; Statistics 120, 131A4
Engineering 1903
Technical electives7

In order to satisfy design requirements,
one course must be chosen from the fol-
lowing: Engineering 122, Mechanical
Engineering 150B, 154. An additional
course must be chosen from Aeronauti-
cal Science and Engineering 129, 130B,
130C, 137, 138, 139, Materials Science
and Engineering 147, 180, 181, 182;
Mechanical Engineering 134, 151, 152,
154, 161, 162, 163, 184A with 184B
(both courses must be taken in consecu-
tive quarters).

You may also choose from Engineering
122, Mechanical Engineering 150B, 154,
185A with 185B (both courses must be
taken in consecutive quarters), if these
courses are not used for a core design
requirement above.

A maximum of 4 units of courses num-
bered 184A, 184B, 186 may be applied
to the technical elective degree require-
ment.

Minimum Units Required for Major191

Courses in Engineering: Mechanical (EME)

(Courses in Mechanical Engineering (EME) are listed
below; courses in Aeronautical Science and Engi-
neering (EAE) are listed immediately following; grad-
uate courses in Mechanical and Aeronautical
Engineering (MAE) follow.)

Lower Division Courses

1. Mechanical Engineering (1)

Lecture—1 hour. Description of the field of mechani-
cal engineering with examples taken from industrial
applications, discussions of the practice with respect
to engineering principles, ethics, and responsibili-
ties. (P/NP grading only).—I.

50. Manufacturing Processes (4)

Discussion—3 hours; laboratory—3 hours. Prerequisi-
te: Engineering 4. Restricted to Mechanical, Aero-
nautical and Materials Science Engineering majors,
consent of instructor. Introduction to and experience
with modern manufacturing methods, manufacturing

instructions and computer-aided manufacturing and
their role in the engineering design and development
process.—I, II. (I, II.) Yamazaki, Schaaf

92. Internship in Mechanical Engineering (1-5)
Internship. Prerequisite: lower division standing;
approval of project prior to period of internship.
Supervised work experience in engineering. May be
repeated for credit. (P/NP grading only.)

99. Special Study for Undergraduates (1-5)

Prerequisite: consent of instructor; lower division
standing. (P/NP grading only.)

Upper Division Courses

106. Thermo-Fluid Dynamics (4)

Lecture—4 hours. Prerequisite: Engineering 103 and
105. Restricted to Mechanical Engineering, Aeronau-
tical Engineering and Mechanical Engineering/Mate-
rials Science Engineering majors. Inviscid
incompressible flow, compressible flow, thermody-
namic relations, ideal gas mixtures, psychrometrics,
reacting mixtures and combustion.—I, II, III. (I, II, III.)

107. Thermo Fluids Laboratory (4)

Lecture/discussion—3 hours; laboratory—3 hours.
Prerequisite: Engineering 103, 105, course 106.
Restricted to Mechanical Engineering, Aeronautical
Engineering and Mechanical Engineering/Materials
Science Engineering majors. Experiments to illus-
trate the first and second laws of thermodynamics,
thermodynamic cycles, combustion, fluid dynamic
and compressible flows, and principles of thermal
and flow measurements.—I, II, III. (I, II, III.)

124. Information Technology in Design and Manufacturing (4)

Lecture—3 hours; laboratory—3 hours. Prerequisite:
Engineering 6 and 102. Introduction to the latest
information technology such as object-oriented soft-
ware design and Web technology with applications
in design and manufacturing of mechanical systems.
Design and implementation of different software pro-
grams for solving problems related to mechanical
systems. Only 2 units of credit allowed to students
who have completed course 30.—II. Cheng

134. Vehicle Stability (4)

Lecture—3 hours; laboratory—3 hours. Prerequisite:
course 171. Introduction to the static and dynamic
stability characteristics of transportation vehicles
with examples drawn from aircraft, high-performance
automobiles, rail cars and boats. Laboratory experi-
ments illustrate the dynamic behavior of automo-
biles, race cars, bicycles, etc.—III. (III.) Hubbard

150A. Mechanical Design (4)

Lecture—3 hours; discussion—1 hour. Prerequisite:
Engineering 45 and 104, course 50 (may be taken
concurrently). Restricted to Aeronautical, Materials
Science, Mechanical Engineering and Biological
Systems majors only. The principles of engineering
mechanics applied to mechanical design. Theories
of static and fatigue failure of metals. Design projects
emphasizing the progression from conceptualization
to hardware. Experimental stress analysis and
mechanical measurements using strain gages.—I,
III. Ravani

150B. Mechanical Design (4)

Lecture—3 hours; discussion—1 hour. Prerequisite:
course 150A. Principles of engineering mechanics
applied to the design and selection of mechanical
components. Design projects concentrate on con-
ceptual design, engineering analysis, methods of
manufacture, material selection, and cost. Introduc-
tion to Computer-Aided Design.—II. (II.)

151. Statistical Methods in Design and Manufacturing (3)

Lecture—3 hours. Prerequisite: course 150A. Meth-
ods of statistical analysis with emphasis on applica-
tions in mechanical design and manufacturing
quality control. Applications include product evalua-
tion and decision making, probabilistic design, meth-
ods of sampling inspections and control charts.—II.
(II.) Hull

152. Computer-Aided Mechanism Design (4)

Lecture—3 hours; discussion—1 hour. Prerequisite:
course 5 or 6, 102. Principles of computer-aided
mechanism design. Computer-aided kinematic, sta-

tic, and dynamic analysis and design of planar
mechanisms such as multiple-loop linkages and
geared linkages. Introduction to kinematic synthesis
of mechanisms.—I. (I.) Cheng

154. Mechatronics (4)

Lecture—3 hours; laboratory—3 hours. Prerequisite:
Engineering 100, 102, course 50. Mechatronics sys-
tem concept and overview, control system design
overview, control software architecture, control hard-
ware architecture, microcontroller and interface tech-
nology for mechatronics control, sensor for
mechatronics systems, actuator drives.—III. (III.)
Yamazaki

161. Combustion and the Environment (4)

Lecture—3 hours; discussion—1 hour. Prerequisite:
Engineering 103 and 105. Introduction to combus-
tion kinetics; the theory of premixed flames and diffu-
sion flames; turbulent combustion; formation of air
pollutants in combustion systems; examples of com-
bustion devices which include internal combustion
engines, gas turbines, furnaces and waste incinerat-
ors; alternative fuel sources.—III. (III.) Kennedy

162. Modern Power Plants (4)

Lecture—3 hours; discussion—1 hour. Prerequisite:
Engineering 103 and 105. Modern powerplants for
electric power generation and cogeneration. Ther-
modynamic analysis of different concepts of power-
plants using fossil fuels and nuclear fuels. Design
studies of specific powerplants.—II. (II.) Hoffman

163. Internal Combustion Engines and Future Alternatives (4)

Lecture—3 hours; laboratory—3 hours. Prerequisite:
Engineering 103 and 105. Fundamentals of internal
combustion engine design and performance. Future
needs to adapt to environmental concerns, and the
feasibility of better alternatives in the future.—I. (III.)
Dwyer

165. Heat Transfer (4)

Lecture—3 hours; laboratory—3 hours. Prerequisite:
Engineering 5 or 6, 103 and 105. Conduction, con-
vection and radiation heat transfer, applications to
engineering equipment with the use of digital com-
puters.—I, II, III. (I, II, III.) Baughn

171. Analysis, Simulation and Design of Mechatronic Systems (4)

Lecture—3 hours; laboratory—3 hours. Prerequisite:
Engineering 100, 102, upper division standing.
Restricted to Aeronautical, Materials Science,
Mechanical and Biological Systems Engineering
majors. Modeling of dynamic engineering systems in
various energy domains. Analysis and design of
dynamic systems. Response of linear systems. Dig-
ital computer simulation and physical experiments.—
I, II. (I, II.) Karnopp, Margolis

172. Automatic Control of Engineering Systems (4)

Lecture—3 hours; discussion—1 hour. Prerequisite:
course 171. Classical feedback control; block dia-
grams; control systems performance specifications;
steady state errors; rise and settling times; root
locus; PID controllers; control design with Bode and
Nyquist plots; stability; phase and gain margin; lead
and lag compensators; state variable feedback con-
trollers. Only 2 units of credit allowed to students
who have taken course 176.—II, III. (II, III.) Hubbard,
Eke

184A. Senior Design Project (2)

Laboratory—6 hours. Prerequisite: courses 150B,
165, and 172, consent of instructor, senior standing
in Mechanical Engineering. Performance of practical
mechanical engineering projects which include one
or more of the following: analysis, design, develop-
ment and evaluation of mechanism engineering sys-
tem. (Deferred grading only, pending completion of
sequence.)—I, II, III. (I, II, III.)

184B. Senior Design Project (2)

Laboratory—6 hours. Prerequisite: course 184A in a
previous quarter from the same instructor; consent of
instructor. Performance of practical mechanical engi-
neering projects which include one or more of the
following: analysis, design, development, and evalua-
tion of a mechanical engineering system.—I, II, III.
(I, II, III.)

185A-185B. Mechanical Engineering Systems Design Project (2-2)

Lecture—1 hour; laboratory—3 hours. Prerequisite: course 150A, 165, senior standing in Mechanical Engineering or Aeronautical Science and Engineering. Capstone mechanical engineering design course; the mechanical engineering design process and its use in the design of engineering systems. (Deferred grading only, pending completion of sequence.)—I-II, II-III. (I-II, II-III.)

189A-B. Selected Topics in Mechanical Engineering (1)

Lecture/discussion—1 hour biweekly; laboratory—3 hours biweekly. Prerequisite: consent of instructor. Directed group study of selected topics with separate sections in (A) Fluid Mechanics Laboratory; (B) Thermodynamics Laboratory.—II, III. (II, III.)

192. Internship in Engineering (1-5)

Internship. Prerequisite: upper division standing; approval of project prior to period of internship. Supervised work experience in mechanical engineering. May be repeated for credit. (P/NP grading only.)

198. Directed Group Study (1-5)

Prerequisite: consent of instructor. (P/NP grading only.)

199. Special Study for Advanced Undergraduates (1-5)

Prerequisite: consent of instructor. (P/NP grading only.)

Courses in Aeronautical Science and Engineering (EAE)**Lower Division Courses****1. Introduction to Aerospace Science Engineering (1)**

Lecture—1 hour. Description of the field of aerospace engineering with examples from industry, government, and research. Aerospace engineering principles, ethics, and responsibilities. (P/NP grading only.)—I. (I.)

99. Special Study for Undergraduates (1-5)

Prerequisite: consent of instructor and lower division standing. (P/NP grading only.)

Upper Division Courses**126. Theoretical and Computational Aerodynamics (4)**

Lecture—3 hours; discussion—1 hour. Prerequisite: Mechanical Engineering 106, Engineering 180, Applied Science Engineering—Davis 115, or Mathematics 128C. Development of general equations of fluid motion. Study of flow field kinematics and dynamics. Flow about a body. Thin airfoil theory. Viscous effects. Applications of numerical methods to wing analysis and design.—III. (III.) Hafez

127. Applied Aircraft Aerodynamics (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 126. Experimental characteristics of wing sections. High-lift devices. Lift and drag at high Mach numbers. Drag aerodynamics. Total aircraft drag estimation. Aerodynamic design procedures.—I. (I.) Chattot

129. Stability and Control of Aerospace Vehicles (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: Engineering 102. Aircraft and spacecraft stability and control. Derivation of fundamental equations of motion for aircraft/spacecraft. Specialization of equations for aircraft. Fundamentals of feedback. Aircraft flight control systems. Specialization of equations of motion for orbiting spacecraft. Spacecraft attitude control systems.—II. (II.) Hess

130A. Aircraft Performance and Design (4)

Lecture—2 hours; discussion—1 hour; laboratory—3 hours. Prerequisite: course 127. Aircraft design including aerodynamics, performance analysis, weight estimation, and stability and control.—II. (II.) van Dam

130B. Aircraft Performance and Design (4)

Lecture—2 hours; discussion—1 hour; laboratory—3 hours. Prerequisite: course 130A. Aircraft design including refinement and iteration of initial design;

cost analysis, detailed design, and analysis of aircraft structure; propulsion system; aerodynamics, stability, and control/handling qualities; or manufacturing. Offered in alternate years.—III. van Dam

131. Flight Test Engineering (4)

Lecture—2 hours; discussion—1 hour; laboratory—3 hours. Prerequisite: course 128. Flight testing of aircraft performance and flying qualities in flight and with flight simulator.—III. (III.)

133. Finite Element Methods in Structures (4)

Lecture—3 hours; laboratory—3 hours. Prerequisites: Engineering 104. Open to Engineering students only. An introduction to the aerospace structural design process. History of aircraft materials. Effects of loading beyond elastic limit. Deflections and stresses due to combined loading. Virtual work principles, and finite element methods. Applications to aerospace structures.—III. (III.) Sarigul-Klign

135. Aerospace Structures (4)

Lecture—4 hours. Prerequisite: course 133. Analysis and design methods used in aerospace structures. Shear flow in open, closed and multicell beam cross-sections, buckling of flat and curved sheets, tension field beams, local buckling.—I. (I.) Sarigul-Klign

137. Structural Composites (4)

Lecture—3 hours; laboratory—1 hour. Prerequisite: Engineering 104. Overview of materials and technology for creating structures from fiber reinforced resin matrix composite material systems. Elementary design analysis and case studies emphasizing aeronautical applications.—II. (II.) Rehfield

138. Aircraft Propulsion (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: Engineering 45, 103 and 105. Analysis and design of modern aircraft gas turbine engines. Development and application of cycle performance prediction techniques for important engine configurations. Introduction to the operation and design of inlets, compressors, burners, turbines, and nozzles. Cycle design studies for specific applications.—II. (II.) Baughn

139. Structural Dynamics and Aeroelasticity (4)

Lecture—3 hours; laboratory—3 hours. Prerequisite: Engineering 103 and 102. Structural dynamics of flexible structures. Introduction to fluid-structure interaction. Design of subsystems or systems under aeroelastic constraints. Dynamics instabilities. Control effectiveness. Unsteady aerodynamics. Flutter. Aeroelastic tailoring in design. Applications to aerospace, mechanical and biomedical systems.—III. (III.) Sarigul-Klign

189A. Rocket Propulsion (4)

Lecture—4 hours. Prerequisite: Engineering 103 and 105, upper division standing. Fluid and thermodynamics of rocket engines, liquid and solid rocket propulsion. Space propulsion concepts and space mission requirements.—White

189B. Orbital Mechanics (4)

Lecture—4 hours. Prerequisite: course 102, upper division standing. Satellite orbits, multistage rockets, current global boosters, and new technologies. Design application problems include satellites, trajectory optimizations, and interplanetary trajectories.—N. Sarigul-Klign, M. Sarigul-Klign

198. Directed Group Study (1-5)

Prerequisite: consent of instructor. (P/NP grading only.)

199. Special Study for Advanced Undergraduates (1-5)

Prerequisite: consent of instructor. (P/NP grading only.)

Courses in Mechanical and Aeronautical Engineering (MAE)

(Formerly courses in Aeronautical Science and Engineering and Mechanical Engineering.)

Graduate Courses**207. Engineering Experimentation and Uncertainty Analysis (4)**

Lecture—3 hours; term paper. Prerequisite: Engineering 107. Design and analysis of engineering experiments with an emphasis on measurement

standards, data analysis, regressions and general and detailed uncertainty analysis, including statistical intervals, propagation of bias and precision errors, correlated bias approximations, and using jitter programs.—II. (II.) Baughn

208. Measurement Methods in Fluid Mechanics and Combustion (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 165 and Engineering 103. Application of shadow, schlieren and other flow visualization methods. Introduction to optics and lasers. Measurement of velocity and concentrations in reacting and non-reacting flows with laser diagnostic techniques including LDV, Rayleigh, Raman and fluorescence scattering and CARS. Offered in alternate years.—III. Kennedy

210A. Advanced Fluid Mechanics and Heat Transfer (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: Engineering 103, 105 and Mechanical Engineering 165. Development of differential equations governing continuity, momentum and energy transfer. Solutions in laminar flow for exact cases, low and high Reynolds numbers and lubrication theory. Dynamics of inviscid flow.—I. (I.) White

210B. Advanced Fluid Mechanics and Heat Transfer (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 210A. Study of stability and transition to turbulence. Introduction to the physics of turbulence. Modeling of turbulence for numerical determination of momentum and heat transfer.—II. (II.) Kollmann

211. Fluid Flow and Heat Transfer (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: Engineering 103, 105 and Mechanical Engineering 165 or the equivalent. Design aspects of selected topics; heat conduction, fins; heat transport in ducts, boundary layers and separated flows; heat exchangers.—I. (I.) Hoffman, Baughn

212. Biomedical Heat and Mass Transport Processes (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: Mechanical Engineering 165, Biological Systems Engineering 125, Chemical Engineering 153 or the equivalent. Application of principles of heat and mass transfer to biomedical systems related to heat exchange between the biomedical system and its environment, mass transfer across cell membranes and the design and analysis of artificial human organs. (Same course as Biomedical Engineering 212.) Offered in alternate years.—(II.)

213. Advanced Turbulence Modeling (4)

Lecture—4 hours. Prerequisite: course 210B. Methods of analyzing turbulence; kinematics and dynamics of homogeneous turbulence; Reynolds stress and heat-flux equations; second order closures and their simplification; numerical methods; application to boundary layer-type flows; two-dimensional and three-dimensional hydraulic and environmental flows. Offered in alternate years.—(III.) Aldredge, Kollman

215. Biomedical Fluid Mechanics and Transport Phenomena (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: Engineering 103 or Chemical Engineering 150B or Civil and Environmental Engineering 141. Application of fluid mechanics and transport to biomedical systems. Flow in normal physiological function and pathological conditions. Topics include circulatory and respiratory flows, effect of flow on cellular processes, transport in the arterial wall and in tumors, and tissue engineering. (Same course as Biomedical Engineering 215.)—(III.) Barakat

216. Advanced Thermodynamics (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: Engineering 105. Study of topics important to energy conversion systems, propulsion and other systems using high temperature gases. Classical thermodynamics and quantum statistical mechanics of non-reacting and chemically reacting gases, gas mixtures, and other substances.—I.

217. Combustion (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: Engineering 103 and 105. Review of chemical ther-

modynamics and chemical kinetics. Discussions of reacting flows, their governing equations and transport phenomena; detonations; laminar flame structure and turbulent combustion. Offered in alternate years.—II. Shaw

218. Advanced Energy Systems (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: Engineering 103 and 105, or the equivalent. Review of options available for advanced power generation. Detailed study of basic power balances, component efficiencies, and overall powerplant performance for one advanced concept such as a fusion, magneto-hydrodynamic, or solar electric powerplant. Offered in alternate years.—(I.) Hoffman

219. Introduction to Scientific Computing in Solid and Fluid Dynamics (4)

Lecture—3 hours; laboratory—3 hours. Prerequisite: Engineering 103 and 104. Scientific calculations with finite element and finite difference methods for multi-dimensional problems in solid and fluid dynamics are performed with examples in C, C++, FORTRAN, and MATLAB script files. Derivation of the basic equations of motion in finite volume form with applications to elasticity, waves. Offered in alternate years.—(III.)

220. Mechanical Vibrations (4)

Lecture—4 hours. Prerequisite: Engineering 122. Multiple degrees of freedom; damping measures; Rayleigh's method; vibration absorbers; eigenvalues and modeshapes; modal coordinates; forced vibrations; random processes and vibrations; autocorrelation; spectral density; first passage and fatigue failure; nonlinear systems; phase plane.—(III.) Margolis

222. Advanced Dynamics (4)

Lecture—4 hours. Prerequisite: Engineering 102. Dynamics of particles, rigid bodies and distributed systems with engineering applications; generalized coordinates; Hamilton's principle; Lagrange's equations; Hamilton-Jacobi theory; modal dynamics orthogonality; wave dynamics; dispersion.—(I.) Eke

223. Multibody Dynamics (4)

Lecture—4 hours. Prerequisite: Engineering 102. Coupled rigid-body kinematics/dynamics; reference frames; vector differentiation; configuration and motion constraints; holonomicity; generalized speeds; partial velocities; mass; inertia tensor/theorems; angular momentum; generalized forces; comparing Newton/Euler, Lagrange's, Kane's methods; computer-aided equation derivation; orientation; Euler; Rodrigues parameters. (Same course as Biomedical Engineering 223.)—(II.) Eke, Hubbard

225. Spatial Kinematics and Robotics (4)

Lecture—3 hours; laboratory—3 hours. Prerequisite: C Language and course 222. Spatial kinematics, screw theory, spatial mechanisms analysis and synthesis, robot kinematics and dynamics, robot workspace, path planning, robot programming, real-time architecture and software implementation. (Same course as Biomedical Engineering 225.) Offered in alternate years.—(II.) Ravani

226. Acoustics and Noise Control (4)

Lecture—4 hours. Prerequisite: Engineering 122. Description of sound using normal modes and waves; interaction between vibrating solids and sound fields; sound absorption in enclosed spaces; sound transmission through barriers; applications in design, acoustic enclosures and sound walls, room acoustics, design of quiet machinery. Offered in alternate years.—III. Karnopp, Sarigul-Klijn

227. Research Techniques in Biomechanics (4)

Lecture—2 hours; laboratory—4 hours; term paper or discussion—1 hour. Prerequisite: Mathematics 22B and consent of instructor; Exercise Science 115 recommended. Experimental techniques for biomechanical analysis of human movement. Techniques evaluated include data acquisition and analysis by computer, force platform analysis, strength assessment, planar and three-dimensional videography, data reduction and smoothing, body segment parameter determination, electromyography, and biomechanical modeling. (Same course as Biomedical

Engineering 227/Exercise Science 227.)—II. (II.) William, Hawkins

231. Musculo-Skeletal System Biomechanics (4)

Lecture—4 hours. Prerequisite: Engineering 102. Mechanics of skeletal muscle and mechanical models of muscle, solution of the inverse dynamics problem, theoretical and experimental methods of kinematic and kinetic analysis, computation of inter-segmental load and muscle forces, applications to gait analysis and sports biomechanics. (Same course as Biomedical Engineering 231.)—III. (III.) Hull

232. Skeletal Tissue Mechanics (3)

Lecture—3 hours; laboratory—1 hour. Prerequisite: Engineering 104B. Overview of the mechanical properties of the various tissues in the musculoskeletal system, the relationship of these properties to anatomic and histologic structure, and the changes in these properties caused by aging and disease. The tissues covered include bone, cartilage and synovial fluid, ligament and tendon. (Same course as Biomedical Engineering 232.)—III. (III.) Martin

234. Design and Dynamics of Road Vehicles (4)

Lecture—4 hours. Prerequisite: Mechanical Engineering 134. Analysis and numerical simulation of road vehicles with on design applications. Offered in alternate years.—(III.) Velinsky

236. Aerodynamics in Nature and Technology (4)

Lecture—4 hours. Prerequisite: Engineering 103. Introduction to aerodynamics in nature, fundamentals of turbulence in atmospheric flows, planetary boundary layers, pedestrian-level winds in urban areas. Criteria for laboratory modeling of atmospheric flows, wind-tunnel testing. Offered in alternate years.—(III.) White

237. Analysis and Design of Composite Structures (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: Aeronautical Science and Engineering 137. Modeling and analysis methodology for composite structures including response and failure. Laminated plate bending theory. Introduction to failure processes. Offered in alternate years.—(III.) Rehfield

238. Advanced Aerodynamic Design and Optimization (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: consent of instructor. Application of aerodynamic theory to obtain optimum aerodynamic shapes. Both analytic solutions and solutions obtained with numerical optimization techniques will be examined. Includes introduction to the calculus of variations and numerical optimization techniques. Offered in alternate years.—I. van Dam

240. Computational Methods in Nonlinear Mechanics (4)

Lecture—4 hours. Prerequisite: Applied Science Engineering 115 or Mathematics 128B or Engineering 180. Deformation of solids and the motion of fluids treated with state-of-the-art computational methods. Numerical treatment of nonlinear dynamics; classification of coupled problems; applications of finite element methods to mechanical, aeronautical, and biological systems. Offered in alternate years. (Same course as Biomedical Engineering 240.)—(II.) Sarigul-Klijn

241. Advances in Finite Elements and Optimization (4)

Lecture—4 hours. Prerequisite: Engineering 180 or Applied Science 115 or Mathematics 128C. Advanced formulations for new finite elements. Transfinite elements and transition elements for steep gradient problems. State-of-the-art in finite element and optimization methods as applied to control of flow induced vibrations and noise. Multi-disciplinary optimization methods. Offered in alternate years.—I. Sarigul-Klijn, Rehfield

242. Stability of Thin-Walled Structures (4)

Lecture—4 hours. Prerequisite: Civil and Environmental Engineering 202 or consent of instructor. Static stability of thin-walled aerospace structures treated from both theoretical and practical design

perspectives. Both monolithic and composite construction considered. Buckling of stiffened panels, shells, and thin-walled beams, experimental methods and failure/crippling processes. Offered in alternate years.—(III.) Rehfield

248. Advanced Turbomachinery (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: Engineering 103 and 105. Preliminary aerodynamic design of axial and radial flow compressors and turbines. Design of diffusers. Selection of turbomachine and configurations and approximations to optimum dimensions and flow angles. Introduction to through flow analysis. Rotating stall and surge, and aeromechanical considerations. Offered in alternate years.—I.

250A. Advanced Methods in Mechanical Design (4)

Lecture—4 hours. Prerequisite: Mechanical Engineering 150A and 150B or the equivalents, or consent of instructor. Applications of advanced techniques of solid mechanics to mechanical design problems. Coverage of advanced topics in stress analysis and static failure theories with emphasis in design of machine elements. Design projects emphasizing advanced analysis tools for life cycle evaluation.—(I.) (I.) Farouki

250B. Advanced Methods in Mechanical Design (4)

Lecture—4 hours. Prerequisite: course 250A. Applications of advanced techniques of solid mechanics to mechanical design problems. Coverage of advanced topics in variational methods of mechanics with emphasis in design of machine elements. Design projects emphasizing advanced analysis tools.—II. (II.) Hill

250C. Mechanical Performance of Materials (4)

Lecture—4 hours. Prerequisite: undergraduate course in stress analysis and mechanical behavior of materials. Occurrence, mechanisms, and prediction of fatigue and fracture phenomenon. Use of stress and strain to predict crack initiation. Use of fracture mechanics to predict failure and crack propagation. Effects of stress concentration, manufacturing, load sequence, irregular loading, and multi-axial loading. Offered in alternate years.—III. (III.) Hill

251. Mechatronics System Design (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: Mechanical Engineering 154 and 172 or Electrical and Computer Engineering 157A, 157B. Motion mechanism design, electric actuator, power electronics motion control, sensor technologies, personal computer-based control systems design, motion control general operating system and real time operating systems, motion control software design, discrete event control software design. Offered in alternate years.—I. Yamazaki

254. Engineering Software Design (4)

Lecture—3 hours; laboratory—3 hours. Prerequisite: C Language, Engineering 180. Principle and design of engineering software. Advanced topics in engineering software design, including object oriented programming, programming in very high-level languages, real-time multi-thread computing and sensor fusion, web-based network computing, graphic user interface and multimedia with applications in engineering. Offered in alternate years.—(III.) Cheng

255. Computer-Aided Design and Manufacturing (4)

Lecture—3 hours; laboratory—3 hours. Prerequisite: consent of instructor. Representation and processing of geometrical information in design and manufacturing. Numeric and symbolic computations. Coordinate systems and transformations. Bezier and B-spline curves and surfaces. Interpolation and approximation methods. Intersections, offsets, and blends. Path planning for machining, inspection, and robotics applications. Offered in alternate years.—III. Farouki, Ravani

258. Hybrid Electric Vehicle System Theory and Design (4)

Lecture—3 hours; laboratory—3 hours. Prerequisite: Mechanical Engineering 150B, graduate standing in Mechanical and Aeronautical Engineering.

Advanced vehicle design for fuel economy, performance, and low emissions, considering regulations, societal demands and manufacturability. Analysis and verification of computer design and control of vehicle systems in real vehicle tests. Advanced engine concepts. Offered in alternate years.—(III.) Frank

261. Gas Dynamics (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: Engineering 103 or the equivalent. Flow of compressible fluids. Isentropic flow. Flow with friction, heat transfer, chemically reacting gas and particle mixtures. Normal and oblique shock waves, combustion, blast and expansion waves. Method of characteristics. Offered in alternate years.—(II.)

262. Advanced Aerodynamics (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: Aeronautical Engineering 126. Study of inviscid and viscous flows about aerodynamic shapes at subsonic, transonic and supersonic conditions. Application of aerodynamic theory to design for reduced drag and increased lift. Offered in alternate years.—(II.) van Dam, Hafez, Chattot, White

263. Introduction to Computational Aerodynamics and Fluid Dynamics (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: Engineering 103 or consent of instructor. Introduction to numerical methods for solution of fluid flow problems. Discretization techniques and solution algorithms. Finite difference solutions to classical model equations pertinent to wave phenomena, diffusion phenomena, or equilibrium. Application to the incompressible Navier-Stokes equation. Offered in alternate years.—(II.) Chattot

264. Computational Aerodynamics (4)

Lecture—4 hours. Prerequisite: Aeronautical Science and Engineering 126, Engineering 180, or consent of instructor. Numerical methods for aerodynamics flow simulation in the transonic regime. Solutions of steady and unsteady potential and compressible boundary layer equations. Numerical schemes for mixed type equations and shock waves/numerical grid generation. Viscous/inviscid interaction and coupling procedures. Offered in alternate years.—(III.)

266. Advanced Wind-Tunnel Testing (4)

Lecture—2 hours; discussion—1 hour; laboratory—3 hours. Prerequisite: undergraduate course in fluid dynamics. Aspects of low-speed wind-tunnel testing for solving aeronautical and non-aeronautical problems including tunnel corrections, scale effects, force and moment measurements, and flow visualization. Offered in alternate years.—(III.) van Dam

271. Modeling and Simulation of Engineering Systems (4)

Lecture—3 hours; laboratory—3 hours. Prerequisite: Mechanical Engineering 172 or the equivalent. Multiport models of mechanical, electrical, hydraulic, and thermal devices; bond graphs, block diagrams and state space equations; modeling of multiple energy domain systems; 3-dimensional mechanics; digital simulation laboratory.—I. (I.) Karnopp, Margolis

272. Theory and Design of Control Systems (4)

Lecture—4 hours. Prerequisite: Mechanical Engineering 172 or the equivalent. Mathematical representations of linear dynamical systems. Feedback principles; benefits and cost of feedback. Analysis and design of control systems based on classical and modern approaches, with emphasis on applications to mechanical and aeronautical systems.—II. (II.) Eke, Margolis

274. Analysis and Design of Digital Control Systems (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: Mechanical Engineering 172. Discrete systems analysis; digital filtering; sample data systems; state space and transform design techniques; quantization effects; multi-input, multi-output systems.—III. (III.) Hess

275. Advance Aircraft Stability and Control (4)

Lecture—3 hours; discussion—1 hour. Development and analysis of aircraft equations of motion. Flexible modes. Response to control actuation. Random inputs and disturbances. Stability and control aug-

mentation system design. Handling qualities. Offered in alternate years.—(III.) Hess

276. Data Acquisition and Analysis (4)

Lecture—3 hours; discussion—1 hour. Application of computers for data acquisition and control. Topics include computer architecture, characteristics of transducers, hardware for laboratory applications of computers, fundamentals of interfaces between computers and experimental equipment, programming techniques for data acquisition and control, basic data analysis. Offered in alternate years.—I.

290C. Graduate Research Conference (1)

Discussion—1 hour. Prerequisite: consent of instructor. Individual and/or group conference on problems, progress, and techniques in mechanical and aeronautical engineering research. May be repeated for credit. (S/U grading only.)—I, II, III. (I, II, III.)

297. Seminar (1)

Discussion—1 hour. Prerequisite: consent of instructor. Current topics in engineering including developments in mechanical and aeronautical engineering with presentations by students, faculty, and visitors. May be repeated for credit. (S/U grading only.)—I, II, III. (I, II, III.)

298. Group Study (1-5)

299. Research (1-12)

Prerequisite: consent of instructor. (S/U grading only.)

Professional Course

390. The Teaching of Aeronautical Science and Engineering (1)

Discussion—1 hour. Prerequisite: meet qualifications for teaching assistant and/or associate-in in Aeronautical Science and Engineering. Methods of leading discussion groups or laboratory sections, writing and grading quizzes, use of laboratory equipment, and grading laboratory reports. May be repeated for credit. (S/U grading only.)—I, II, III. (I, II, III.)

396. Teaching Assistant Training Practicum (1-4)

Prerequisite: graduate standing. May be repeated for credit. (S/U grading only.)—I, II, III. (I, II, III.)

Jayne L. Walker, Ph.D., Lecturer

The Major Program

The study of English develops skills in reading analytically and perceptively and in writing clearly and effectively.

The Program. The English department offers three kinds of courses: composition courses, undergraduate courses, and graduate courses. Composition courses develop skills in reading analytically and in writing persuasively. Undergraduate and graduate courses cover the entire range of English and American literature, as well as creative writing. Students majoring in English may elect a *teaching* emphasis, a *creative writing* emphasis, or a *general literature* emphasis. The teaching emphasis focuses on the study of composition and of language. The writing emphasis focuses on fiction, poetry, and article writing. Creative writing majors have an opportunity to work with distinguished professional writers of fiction and poetry. The general literature emphasis focuses on a series of related courses in various historical periods of English and American literature.

Career Alternatives. Graduates have found the major excellent pre-professional training for graduate study in English, as well as for careers in teaching, writing, law, medicine, and library work. Many graduates are employed in journalism, publishing, advertising, and public information. Others have worked in

local, state, and federal government agencies, as well as in industry and agriculture. Some have established their own businesses.

A.B. Degree Requirements:

	UNITS
Preparatory Subject Matter	20
English 1 or 3	4
English 42, 43, 44, 45.....	16
Depth Subject Matter	44
English 110A or 110B.....	4
English 117A, 117B, or 117C	4
One course from five of the following six historical fields	20
(a) Medieval: English 111, 113A, 113B	
(b) Renaissance: English 115, 122	
(c) British Literature—Restoration through Romantic period: English 123, 130, 155A	
(d) British Literature—Victorian or Twentieth Century: English 133, 137, 155B, 155C	
(e) American Literature pre-1865: English 142, 143, 158A	
(f) American Literature post-1865: English 144, 146, 158B, 166, 167, 181B, 182	
The following courses may be used to satisfy the above requirement if they into that category for subject, time period, etc. (Please refer to quarterly expanded course descriptions.): English 150A, 150B, 152, 159, 165, 178, 179, 181A, 185A, 185B, 186	
Senior Seminar, one course selected from English 187, 188, 189, 194H.....	4
Area of Emphasis (choose one)	12

General Emphasis

Three upper division English electives

Creative Writing Emphasis

Three sections of English 100F, 100P and/or 100NF

(Students pursuing the Creative Writing Emphasis may replace the senior seminar portion of the core requirement with an upper division English elective.)

Teaching Emphasis

English 101 or 104A, 104B, 104C, 104D, or 104E.....

English 105 or 106/Linguistics 106 ...

One course selected from English 178, 179, 181A, 181B, or an upper division ethnic literature course from outside the English department.....

Total Units for the Major

English Majors. Up to four upper division units in a national literature other than English or American, or in Comparative Literature, may count toward the requirements of the major.

Major Advisers. D. P. Abbott, M. Byrd, S. Chaganti, P. Dale, J.F. Diehl, M. Ferguson, L. Freed, E. Freeman, B. Ghosh, S.M. Gilbert, P.L. Hays, W.J. Hicks, P. Houston, A. Johns, R.A. Levin, K.E. Lokke, C. Major, S.J. McPherson, P.L. Moran, L.A. Morris, M. Osborn, L. Owens, R. Richardson, D.A. Robertson, C.M. Robson, W. Schleiner, K. Shimakawa, D. Simpson, D. Van Leer, R.B. Waddington, C. Waters, E. Watkins, A.B. Williamson, K.F. Zender.

Meeting for Majors. All new and prospective English majors are invited to attend a general meeting for majors at the beginning of each year; all English majors should see their advisers, individually, in the spring quarters of their sophomore and junior years.

Foreign Languages. Students who contemplate advanced study in English should prepare for foreign language requirements for higher degrees and should consult with the graduate adviser.

Undergraduate Adviser: P. Moran.

Minor Program Requirements:

	UNITS
English	20
Five upper division courses, at least four of which will be literature courses	20

Honors and Honors Program. A Senior Honors Program is available to an invited group of English majors, who prepare and write a Senior Thesis (either a research paper or creative writing) in their final year. The honors program consists of four units of 194H and four units of 195H, normally taken during the fall and winter quarters of the senior year. Completion of the program is a prerequisite for High or Highest Honors at graduation. Eligibility criteria and application materials may be obtained at the Undergraduate Office, 176 Voorhies Hall. Refer to the Academic Information chapter for Dean's Honors List information.

Education Abroad options. The department strongly encourages interested students to pursue their studies abroad. It is possible for students to complete significant portions of the English major provided that the course is evaluated as at least four UC Davis units by the Office of the University Registrar; the course is considered upper division by the standards set forth by the Education Abroad Center; the student presents copies of the coursework, syllabus, and writing assignments to the department's advising staff.

Campus Writing Center. The Campus Writing Center, an affiliate of the English Department, provides writing instruction across the curriculum. Of special interest to students are its courses in writing in the disciplines, which are offered to students who are majors in or are simultaneously enrolled in specified courses in other disciplines. Topics of instruction and writing assignments in each course all relate to the subject matter of the discipline or the companion course(s). These are credit bearing advanced writing courses that satisfy composition requirements in agriculture, engineering, and letters and sciences. Interested students should call the Campus Writing Center, 530-752-2257, for the current schedule of courses.

Teaching Credential Subject Representative. P. Moran. See also under Teacher Education Program.

Graduate Study. The Department of English offers programs of study and research leading to the M.A. and Ph.D. degrees. Detailed information may be obtained from the graduate adviser or the Chairperson of the Department.

The department's affiliation with the Critical Theory Program also provides the opportunity for students in English to prepare for the designated emphasis in Critical Theory (an interdisciplinary program in theories and methodologies in the humanities and social sciences).

Graduate Director. D. Abbott.

Subject A. Students must have met the Subject A requirement before taking any course in English.

Prerequisites. English 1 or 3 is required for admission into courses 18, 19, 30A, 30B, 42, 43, 44, 45, 46A, 46B, 46C, and all upper division courses, unless otherwise stated in the course listings. Course 45 is recommended as preparation for the 46 series and all upper division literature courses. Comparative Literature 1, 2, 3, or 4 may normally be substituted for English 1 or 3.

Courses in English (ENL)

Lower Division Courses

1. Expository Writing (4)
Lecture/discussion—4 hours. Prerequisite: completion of Subject A requirement. Composition, the essay, paragraph structure, diction, and related topics. Frequent writing assignments will be made. GE credit: Wrt (cannot be used to satisfy a college or university composition requirement and GE writing experience simultaneously).—I, II, III. (I, II, III.)

3. Introduction to Literature (4)

Lecture—2 hours; discussion—2 hours. Prerequisite: completion of Subject A requirement. Introductory study of several genres of English literature, emphasizing both analysis of particular works and the range of forms and styles in English prose and poetry. Frequent writing assignments will be made. GE credit: ArtHum, Wrt (cannot be used to satisfy a college or university composition requirement and GE writing experience simultaneously).—I, II, III. (I, II, III.)

4. Critical Inquiry and Literature: Freshman Seminar (4)

Seminar—4 hours. Prerequisite: completion of Subject A requirement and consent of instructor; enrollment limited to freshmen. Critical inquiry into significant literary texts. Emphasis on close reading, classroom dialogue, and the writing of several papers or a longer seminar paper. GE credit: ArtHum, Wrt.

5F. Introduction to Creative Writing: Fiction (4)

Lecture/discussion—4 hours. Prerequisite: completion of Subject A requirement. The elementary principles of writing fiction. Students will write both in prescribed forms and in experimental forms of their own choosing. No final examination. GE credit: Wrt.—I, II, III. (I, II, III.)

5P. Introduction to Creative Writing: Poetry (4)

Lecture/discussion—4 hours. Prerequisite: completion of Subject A requirement. The elementary principles of writing poetry. Students will write both in prescribed forms and in experimental forms of their own choosing. No final examination.—I, II, III. (I, II, III.)

18. Style in the Essay (4)

Lecture/discussion—4 hours. Prerequisite: course 1 or 3 or the equivalent. Style, language, and structure in the essay. Instruction in analyzing style, developing a written voice, revising sentences, developing effective paragraphs and arguments, and writing with force and clarity. GE credit: Wrt (cannot be used to satisfy a college or university composition requirement and GE writing experience simultaneously).—I, II, III. (I, II, III.)

19. Writing Research Papers (4)

Lecture/discussion—4 hours. Prerequisite: course 1 or 3 or the equivalent. Development of skills in critical reading, analysis, documentation, and writing needed for research-based assignments. Instruction provided in formulating research topics and in developing effective arguments. Reading and writing assignments may focus on a single theme. GE credit: Wrt (cannot be used to satisfy a college or university composition requirement and GE writing experience simultaneously).—I, II. (I, II.)

30A. Survey of American Literature (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 1 or 3. American literature from the seventeenth century to 1865. GE credit: ArtHum, Div, Wrt.

30B. Survey of American Literature (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 1 or 3. American literature from 1865 to the present. GE credit: ArtHum, Div, Wrt.

42. Approaches to Reading (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 1 or 3 or the equivalent. Close reading and interpretation of literature from a variety of traditional and contemporary approaches. Topics include textual and historical approaches; new criticism; formalism; psychological criticism; feminism and gender; reader-response; materialist approaches. Frequent written assignments. GE credit: Wrt.—I, II, III. (I, II, III.)

43. Introduction to the Study of Drama (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 1 or 3 or the equivalent. Close reading of selected works of British and American drama from a range of historical periods. Introduction to critical terminology and dramatic genres. Frequent written assignments. GE credit: Wrt.—I, II, III. (I, II, III.)

44. Introduction to the Study of Fiction (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 1 or 3 or the equivalent. Close reading of British and American fictional forms (short stories,

novellas, novels). Frequent written exercises. GE credit: Wrt.—I, II, III. (I, II, III.)

45. Introduction to the Study of Poetry (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 1 or 3 or the equivalent. Close reading of selections from English and American poetry. Frequent written exercises. GE credit: Wrt.—I, II, III. (I, II, III.)

46A. Masterpieces of English Literature (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 1 or 3. Selected works of principal writers to 1640. History of literary conventions and backgrounds in religious thought, intellectual and social history, and related art forms. GE credit: Wrt.

46B. Masterpieces of English Literature (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 1 or 3. Selected works of principal writers from 1640 to 1832. History of literary conventions and backgrounds in religious thought, intellectual and social history, and related art forms. GE credit: Wrt.

46C. Masterpieces of English Literature (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 1 or 3. Selected works of principal writers from 1832 to present. The history of literary conventions and backgrounds in religious thought, intellectual and social history, and related art forms. GE credit: Wrt.

92. Internship in English (1-12)

Internship—3-36 hours. Prerequisite: course 1 or 3. Internships in fields where students can practice their skills. May be repeated for credit for a total of 12 units. (P/NP grading only.)

98. Directed Group Study (1-5)

Prerequisite: course 1 or 3. (P/NP grading only.)

99. Special Study for Undergraduates (1-5)

(P/NP grading only.)

Upper Division Courses

100F. Creative Writing: Fiction (4)

Discussion—4 hours; development and evaluation of written materials, and conferences with individual students. Prerequisite: course 5F or 5P, or consent of instructor; priority given to English (Creative Writing) majors. Writing of fiction. May be repeated for credit with consent of instructor. No final examination.—I, II, III. (I, II, III.)

100NF. Creative Writing: Non-Fiction (4)

Discussion—4 hours; development and evaluation of written materials, and conferences with individual students. Prerequisite: course 1 or 3, or consent of instructor; priority given to English (Creative Writing) majors. Writing of non-fiction. May be repeated for credit with consent of instructor. No final examination.—(II.)

100P. Creative Writing: Poetry (4)

Discussion—4 hours; development and evaluation of written materials, and conferences with individual students. Prerequisite: course 5F or 5P, or consent of instructor; priority given to English (Creative Writing) majors. Writing of poetry. May be repeated for credit with consent of instructor. No final examination.—I, II, III. (I, II, III.)

101. Advanced Composition (4)

Lecture/discussion—3 hours. Prerequisite: course 1 or 3 or the equivalent and upper division standing. Instruction for students in all disciplines in advanced principles of expository writing. Focus on writing tasks both within and beyond the academy. Assignments provide practice in a variety of modes of writing: narrative, analysis, explanation, argument, critique. GE credit: Wrt (cannot be used to satisfy a college or university composition requirement and GE writing experience simultaneously).—I, II, III. (I, II, III.)

102A. Writing in the Disciplines (4)

Lecture/discussion—3 hours; extensive writing. Prerequisite: course 1 or 3 or the equivalent; concurrent enrollment in a specified course in a subject-matter discipline, acceptance into a specified major, or consent of instructor. Advanced instruction in the elements of expository writing, with special emphasis on their application to writing projects in a specified academic discipline. May be repeated once for

credit if taken in conjunction with a different subject-matter course. GE credit: Wrt (cannot be used to satisfy a college or university composition requirement and GE writing experience simultaneously).—I, II, III. (I, II, III.)

102B. Writing in the Disciplines: Biological Sciences (4)

Lecture/discussion—3 hours; extensive writing. Prerequisite: course 1 or 3 or the equivalent, upper division standing. Open to majors in a biological science or to students concurrently enrolled in an upper division biological science course. Advanced instruction in writing in the discipline of biology. GE credit: Wrt (cannot be used to satisfy a college or university composition requirement and GE writing experience simultaneously).—I, II, III.

102C. Writing in History (4)

Lecture/discussion—3 hours; extensive writing. Prerequisite: course 1 or 3 or the equivalent, upper division standing. Open to majors in history or to students concurrently enrolled in an upper division course accepted for the major. Advanced instruction in writing in the discipline of history. GE credit: Wrt (cannot be used to satisfy a college or university composition requirement and GE writing experience simultaneously).—II, III. (II, III.)

102D. Writing in International Relations (4)

Lecture/discussion—3 hours; extensive writing. Prerequisite: course 1 or 3 or the equivalent, upper division standing. Open to majors in international relations or to students concurrently enrolled in an upper division course accepted for the major. Advanced instruction in writing in the discipline of international relations. GE credit: Wrt (cannot be used to satisfy a college or university composition requirement and GE writing experience simultaneously).—III. (III.)

102E. Writing in Engineering (4)

Lecture/discussion—3 hours; extensive writing. Prerequisite: course 1 or 3 or the equivalent, upper division standing. Open to upper division students in the College of Engineering and to student enrolled in an upper division engineering or computer science course. Advanced instruction in writing in the discipline of engineering. GE credit: Wrt (cannot be used to satisfy a college or university composition requirement and GE writing experience simultaneously).—I, II, III. (I, II, III.)

102F. Writing in Food Science and Technology (4)

Lecture/discussion—3 hours; extensive writing. Prerequisite: course 1 or 3 or the equivalent, upper division standing. Open to majors in food science and technology or to students concurrently enrolled in an upper division course in food science and technology. Advanced instruction in writing in the discipline of food science and technology. GE credit: Wrt (cannot be used to satisfy a college or university composition requirement and GE writing experience simultaneously).—II. (II.)

102G. Writing: Bioregion (4)

Lecture/discussion—3 hours; extensive writing. Prerequisite: course 1 or 3 or the equivalent, upper division standing. Open to majors in Land, Air and Water Resources, Nature and Culture, Wildlife, Fish, and Conservation Biology or concurrent enrollment in an upper division course that focuses to some extent on the bioregion (e.g., botany, geology, or literature of California). Advanced instruction in writing in those disciplines that focus on the intertwined human and non-human communities of the Putah and Cache Creek watersheds in which the university is located. GE credit: Wrt (cannot be used to satisfy a college or university composition requirement and GE writing experience simultaneously).—II, III. (II, III.)

104A. Writing in the Professions: Business Reports and Technical Communication (4)

Lecture/discussion—3 hours. Prerequisite: course 1 or 3 or the equivalent, and upper division standing. Instruction designing, writing, and documenting formal and informal reports directed toward a variety of work-related audiences. Instruction in presenting data graphically. Suitable for students planning

careers in science, government, business, engineering, or industry. GE credit: Wrt (cannot be used to satisfy a college or university composition requirement and GE writing experience simultaneously).—I, II, III. (I, II, III.)

104B. Writing in the Professions: Law (4)

Lecture/discussion—3 hours. Prerequisite: course 1 or 3 or the equivalent and upper division standing. Instruction in advanced principles of critical thinking, argumentation, and style, with special emphasis on their application to situations in the legal profession. Suitable for students planning careers in law, business, administration, or management. GE credit: Wrt (cannot be used to satisfy a college or university composition requirement and GE writing experience simultaneously).—I, II, III. (I, II, III.)

104C. Writing in the Professions: Journalism (4)

Lecture/discussion—3 hours. Prerequisite: course 1 or 3 or the equivalent and upper division standing. Advanced instruction in writing non-fiction for magazines and newspapers, including problems of style and language. Special emphasis on conducting research, interviewing, analyzing markets, and writing query letters. GE credit: Wrt (cannot be used to satisfy a college or university composition requirement and GE writing experience simultaneously).—I, II, III. (I, II, III.)

104D. Writing in the Professions: Elementary and Secondary Education (4)

Lecture/discussion—3 hours. Prerequisite: course 1 or 3 or the equivalent and upper division standing. Advanced instruction in a variety of modes of expository writing, concentrating on topics related to teaching and issues in contemporary American education. Strongly recommended for teaching credential candidates. GE credit: Wrt (cannot be used to satisfy a college or university composition requirement and GE writing experience simultaneously).—I, II, III. (I, II, III.)

104E. Writing in the Professions: Science (4)

Lecture/discussion—3 hours. Prerequisite: course 1 or 3 or the equivalent and upper division or graduate science curriculum. Advanced instruction in writing abstracts, research proposals, scientific papers, other forms of scientific communication and in presenting data graphically. Primarily for students engaged in or planning careers in basic or applied research. GE credit: Wrt (cannot be used to satisfy a college or university composition requirement and GE writing experience simultaneously).—I, II, III. (I, II, III.)

104F. Writing in the Health Profession (4)

Lecture/discussion—3 hours; extensive writing. Prerequisite: course 1 or 3 or the equivalent, advanced standing. Advanced instruction in several forms of expository writing common in the health professions, focusing on topics related to health, disability, and disease and emphasizing effective communication between the writer and different audiences. Suitable for students planning careers in such health professions as medicine, dentistry, physical therapy, genetic counseling, and optometry. GE credit: Wrt (cannot be used to satisfy a college or university composition requirement and GE writing experience simultaneously).—I, II, III. (I, II, III.)

105. History of the English Language (4)

Lecture/discussion—3 hours; term paper. Prerequisite: course 1 or 3 or the equivalent. History of the English language. Examination of the language as recorded from Old English to present-day English. Relationship of English to other languages; development of vocabulary, phonology, and grammatical patterns. GE credit: ArtHum, Wrt.—II. (II.)

106. English Grammar (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 1 or 3 or Linguistics 1 or consent of instructor. Survey of present day English grammar as informed by contemporary linguistic theories. The major syntactic structures of English; their variation across dialects, styles, and registers, their development, and their usefulness in describing the conventions of English. (Same course as Linguistics 106.) Not open for credit to students who have completed Linguistics 104. GE credit: ArtHum.—I. (III.)

106P. English Grammar Practicum (2)

Discussion—2 hours. Prerequisite: course 106/Linguistics 106 (may be taken concurrently). Practice in teaching the principles of grammar to the kinds of audiences teachers encounter in California. Discussions with teachers who teach in these areas. Examination of pedagogical research on teaching grammar. (P/NP grading only.)—(III.)

107. Freedom of Expression (4)

Lecture—3 hours; term paper. Prerequisite: course 1 or 3 or the equivalent. Historical development of fundamental issues and contemporary controversies about freedom of expression, with emphasis on literary and artistic censorship. Not open for credit to students who have completed Rhetoric and Communication 125 or Communication 107. (Former course Rhetoric and Communication 125.) GE credit: ArtHum, Wrt.—II.

110A. Introduction to Principles of Criticism (4)

Lecture/discussion—3 hours; term paper. Prerequisite: course 1 or 3. Essentials of literary criticism and its history from Aristotle to the modern era, with emphasis on the major critics. GE credit: Wrt.—II, III. (II, III.)

110B. Introduction to Principles of Criticism (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 1 or 3. The history of literary criticism in the modern era, with emphasis on the ties with the past and the special problems presented by modern literary theory.—I, II, III. (I, II, III.)

111. Medieval Literature (4)

Lecture/discussion—3 hours; term paper. Prerequisite: course 1 or 3. Historically or thematically focused intensive examination of topics in medieval literature. May be repeated for credit when content differs. GE credit: Wrt.—I, III.

113A. Chaucer: Troilus and the "Minor" Poems (4)

Lecture—3 hours; term paper. Prerequisite: course 1 or 3. Development of the poet's artistry and the evolution of the poet's ideas from his first work to his culminating masterpiece, *Troilus and Criseyde*. Courses 113A and 113B need not be taken in sequence. GE credit: Wrt.—II.

113B. Chaucer: The Canterbury Tales (4)

Lecture—3 hours; term paper. Prerequisite: course 1 or 3. *The Canterbury Tales* complete as a work of art. Courtly love, literary forms, medieval science and astrology, theology and dogma as they inform the reading of Chaucer. Courses 113A and 113B need not be taken in sequence. GE credit: Wrt.—III.

115. Renaissance Literature (4)

Lecture/discussion—3 hours; term paper. Prerequisite: course 1 or 3. Historically or thematically focused study of works of the Renaissance. May be repeated for credit when content differs. GE credit: Wrt.—III.

117A. Shakespeare: The Early Works (4)

Lecture/discussion—3 hours; term paper. Prerequisite: course 1 or 3. Selected major works from Shakespeare's early period, up to 1599. Courses 117A-117B-117C need not be taken in sequence. GE credit: Wrt.—I, II.

117B. Shakespeare: The Middle Period (4)

Lecture/discussion—3 hours; term paper. Prerequisite: course 1 or 3. Selected major works from Shakespeare's middle period, up to 1604. Courses 117A-117B-117C need not be taken in sequence. GE credit: Wrt.—III.

117C. Shakespeare: The Later Works (4)

Lecture/discussion—3 hours; term paper. Prerequisite: course 1 or 3. Selected major works from Shakespeare's later period. Courses 117A-117B-117C need not be taken in sequence. GE credit: Wrt.—I.

118. Shakespeare (4)

Lecture/discussion—3 hours; term paper. Prerequisite: course 1 or 3. Selected major works by Shakespeare. Recommended for non-majors. May not be applied toward the English major. GE credit: ArtHum, Wrt.

122. Milton (4)

Lecture/discussion—3 hours; term paper. Prerequisite: course 1 or 3. Selected major works, including *Paradise Lost*. GE credit: Wrt.—I. (I.)

123. 18th-Century British Literature (4)

Lecture/discussion—3 hours; term paper. Prerequisite: course 1 or 3. Historically or thematically focused study of 18th-century English literature. May be repeated for credit when content differs. GE credit: Wrt.—III.

130. British Romantic Literature (4)

Lecture/discussion—3 hours; term paper. Prerequisite: course 1 or 3. Historically or thematically focused study of works of Romantic English literature. May be repeated for credit when content differs. GE credit: Wrt.—II.

133. 19th-Century British Literature (4)

Lecture/discussion—3 hours; term paper. Prerequisite: course 1 or 3. Historically or thematically focused study of works of 19th-century English literature. May be repeated for credit when content differs. GE credit: Wrt.—II.

137. 20th-Century British Literature (4)

Lecture/discussion—3 hours; term paper. Prerequisite: course 1 or 3. Historically or thematically focused study of works of 20th-century English literature. Authors who might be taught are Conrad, Joyce, Lawrence, Eliot, Woolf, Larkin. May be repeated for credit when content differs. GE credit: Wrt.—II.

142. Early American Literature (4)

Lecture/discussion—3 hours; term paper. Prerequisite: course 1 or 3. Historically or thematically focused study of American literature of the 17th and 18th centuries. May be repeated for credit when content differs. GE credit: Wrt.—I.

143. 19th-Century American Literature to the Civil War (4)

Lecture/discussion—3 hours; term paper. Prerequisite: course 1 or 3. Historically or thematically focused study of works of 19th-century American literature. May be repeated for credit when content differs. GE credit: Wrt.—I, II.

144. Post-Civil War American Literature (4)

Lecture/discussion—3 hours; term paper. Prerequisite: course 1 or 3. Historically or thematically focused study of works of post-Civil War American literature. May be repeated for credit when content differs. GE credit: Wrt.

146. 20th-Century American Literature (4)

Lecture/discussion—3 hours; term paper. Prerequisite: course 1 or 3. Historically or thematically focused study of works of 20th-century American literature. May be repeated for credit when content differs. GE credit: Wrt.—I, III.

149. Topics in Literature (4)

Lecture/discussion—3 hours; term paper. Prerequisite: course 1 or 3. Intensive examination of literature considered in topical terms, not necessarily historically. May be repeated for credit when content differs. GE credit: Wrt.—II, III.

150A. British Drama to 1800 (4)

Lecture/discussion—3 hours; term paper. Prerequisite: course 1 or 3 or the equivalent. Historically or thematically focused study of works of English drama prior to 1800. May be repeated for credit when content differs. GE credit: Wrt.—II.

150B. British Drama from 1800 to the Present (4)

Lecture/discussion—3 hours; term paper. Prerequisite: course 1 or 3 or the equivalent. Historically or thematically focused study of works of British drama from 1800 to the present. May be repeated for credit when topic differs. GE credit: Wrt.

152. American Drama (4)

Lecture/discussion—3 hours; term paper. Prerequisite: course 1 or 3. Study of American dramatic literature. Either a historical survey from 18th-century beginnings to the present or an in-depth analysis of fewer playwrights, such as O'Neill, Miller, Williams. May be repeated for credit when content differs. GE credit: Wrt.

153. Topics in Drama (4)

Lecture/discussion—3 hours; term paper. Prerequisite: course 1 or 3. Historical or thematic study of drama. May be repeated for credit when topic differs. GE credit: Wrt.—I.

155A. 18th-Century British Novel (4)

Lecture/discussion—3 hours; term paper. Prerequisite: course 1 or 3 or the equivalent. Historically or thematically organized examination of the 18th-century British novel, with particular emphasis on its evolution, including the epistolary novel, the picaresque novel, and the Gothic novel: Richardson, Fielding, Sterne, Austen. GE credit: Wrt.

155B. 19th-Century British Novel (4)

Lecture/discussion—3 hours; term paper. Prerequisite: course 1 or 3 or the equivalent. Historically or thematically organized examination of 19th-century British novelists, with emphasis on the historical novel, the social novel, and novels by women: Scott, Dickens, the Brontës, Eliot, Hardy. GE credit: Wrt.—I.

155C. 20th-Century British Novel (4)

Lecture/discussion—3 hours; term paper. Prerequisite: course 1 or 3 or the equivalent. Historically or thematically organized examination of the 20th-century British novel, with emphasis on impressionism; the revolt against naturalism; the experimental novel; the anti-modernist reaction: Conrad, Joyce, Woolf, Lawrence, Drabble, Rhys. GE credit: Wrt.—III.

156. The Short Story (4)

Lecture/discussion—3 hours; term paper. Prerequisite: course 1 or 3. The short story as a genre; its historical development, techniques, and formal character as a literary form. European as well as American writers. GE credit: ArtHum, Wrt.—III.

158A. The American Novel to 1900 (4)

Lecture/discussion—3 hours; term paper. Prerequisite: course 1 or 3 or the equivalent. Historically or thematically organized examination of the rise and development of the American novel from its beginnings; Hawthorne, Melville, Twain, James, and others. GE credit: Wrt.—III.

158B. The American Novel from 1900 to the Present (4)

Lecture/discussion—3 hours; term paper. Prerequisite: course 1 or 3 or the equivalent. Historically or thematically organized examination of American novelists of the twentieth century; Faulkner, Hemingway, Fitzgerald, Morrison, and others. GE credit: Wrt.—II.

159. Topics in the Novel (4)

Lecture/discussion—3 hours; term paper. Prerequisite: course 1 or 3. Examination of major novels arranged thematically. Topics might include Bildungsroman, stream-of-consciousness novel, Gothic novel, historical novel. May be repeated for credit when topic differs. GE credit: Wrt.—I.

160. Film As Narrative (4)

Discussion—2 hours; lecture and film study—3 hours. Prerequisite: course 1 or 3. Study of modern film (1930 to the present) as a storytelling medium. GE credit: ArtHum, Wrt.

161A. Film History I: Origins to 1945 (4)

Lecture—3 hours; film viewing—3 hours. Prerequisite: course 1 or 3. Cultural and aesthetic history of filmmaking from its origins in the 1890's through 1945. (Courses 161A and 161B need not be taken in sequence.) Offered in alternate years. GE credit: ArtHum, Wrt.—I.

161B. Film History II: 1945 to present (4)

Lecture—3 hours; film viewing—3 hours. Prerequisite: course 1 or 3. Cultural and aesthetic history of filmmaking from 1945 through the present. (Courses 161A and 161B need not be taken in sequence.) Offered in alternate years. GE credit: ArtHum, Wrt.—II.

162. Film Theory and Criticism (4)

Lecture—1 hour; discussion—2 hours; laboratory—3 hours. Prerequisite: course 1 or 3. Film theory and criticism, with a study of ten major works of international film art. Offered in alternate years. GE credit: ArtHum, Wrt.

163S. Topics in British Literature and Culture (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 1 or 3. Study of writers, playwrights and novelists who lived/worked in London. Program will examine Elizabethan, Restoration, Augustan, Romantic/Victorian, and the Modernist/Post-Modernist periods. To be taught in London.—II, III. (II, III.)

165. Topics in Poetry (4)

Lecture/discussion—3 hours; term paper. Prerequisite: course 1 or 3 and course 45. Intensive examination of various topics expressed in poetry from all periods of English and American literature. May be repeated for credit when topic covers different poets and poems. GE credit: Wrt.—III.

166. Love and Desire in Contemporary American Poetry (4)

Lecture/discussion—3 hours; term paper. Prerequisite: course 1 or 3. Close reading of contemporary American poems on the theme of love and desire by poets of diverse ethnicities and of gay, lesbian, and heterosexual orientations. Offered in alternate years. GE credit: Div, Wrt.—II.

167. Twentieth-Century African American Poetry (4)

Lecture/discussion—3 hours; term paper. Prerequisite: course 1 or 3 or the equivalent. Twentieth-century African American poetry, including oral and literary traditions. Authors covered may include Gwendolyn Brooks, Countee Cullen, Robert Hayden, and Langston Hughes. Offered in alternate years. GE credit: Div, Wrt.

171A. The Bible as Literature: The Old Testament (4)

Lecture/discussion—3 hours; term paper. Prerequisite: course 1 or 3. May be taken independently of course 171B. Selected readings from the Old Testament illustrating various literary forms. Emphasis on the Pentateuch, the Historical Books, and the Wisdom Books. Offered in alternate years. GE credit: ArtHum, Div, Wrt.

171B. The Bible as Literature: Prophets and New Testament (4)

Lecture/discussion—3 hours; term paper. Prerequisite: course 1 or 3. May be taken independently of course 171A. Selected readings from the Old Testament prophets and the New Testament. Offered in alternate years. GE credit: ArtHum, Div, Wrt.—I.

173. The Literature of Science Fiction (4)

Lecture/discussion—3 hours; term paper. Prerequisite: course 1 or 3. Study of the literary modes and methods of science fiction. The course will analyze representative novels and short stories which exemplify major themes and styles in this genre—e.g., time travel; alternative universes; utopian, anthropological, sociological science fiction. GE credit: ArtHum, Wrt.

175. American Literary Humor (4)

Lecture/discussion—3 hours; term paper. Prerequisite: course 1 or 3, or standing above freshman level. American humorous vision of man, nature, and the supernatural. Includes one or more of the following: colonial humor; southwestern and New England humor; pre- and post-Civil War masters; local colorists; journalistic gadflies; anti-provincialists; modernist poets and prose writers; black humor. GE credit: ArtHum, Wrt.

177. Study of an Individual Author (4)

Lecture/discussion—3 hours; term paper. Prerequisite: course 1 or 3. Survey of the works of an individual author other than Chaucer, Shakespeare, or Milton. May be repeated for credit when a different author is studied. GE credit: Wrt.—II, III.

178. Special Topics in Ethnic Literature (4)

Lecture/discussion—3 hours; term paper. Prerequisite: course 1 or 3. Intensive study of a topic drawn from multiethnic literature. Course may focus on particular ethnic groups, historical periods, writers, genres, and/or themes. May be repeated once for credit when topic differs. GE credit: Div, Wrt.

179. Multi-Ethnic Literature (4)

Lecture/discussion—3 hours; papers. Prerequisite: course 1 or 3, or standing above freshman level. Fiction, poetry, and other writings by Americans of ethnic minority background (Native, Black, Hispanic, Jewish, Italian, etc.) which reveal their immigrant experience, cultural diversity, and contributions to American literature. GE credit: Div, Wrt.—I.

180. Children's Literature (4)

Lecture/discussion—3 hours; term paper. Prerequisite: course 1 or 3. Historical backgrounds and development of types of children's literature, folklore and oral tradition, levels of interest, criticism and evaluation, illustration and bibliography. GE credit: ArtHum, Wrt.—III. (III.)

181A. African American Literature to the Harlem Renaissance (4)

Lecture/discussion—3 hours; term paper. Prerequisite: course 1 or 3 or the equivalent. African American literature from the slavery period to the end of the 1930s. Particular attention to the rapid development of the African American literary culture from a primarily oral tradition. Offered in alternate years. GE credit: Div, Wrt.—III.

181B. African American Literature from the Harlem Renaissance to the Present (4)

Lecture/discussion—3 hours; term paper. Prerequisite: course 1 or 3 or the equivalent. Major African American writers in the context of cultural history from 1940 to the present. Writers may include Richard Wright, Ann Petry, James Baldwin, Ralph Ellison, Paule Marshall, Toni Morrison, Alice Walker, Clarence Major. Offered in alternate years. GE credit: Div, Wrt.—II.

182. Literature of California (4)

Lecture/discussion—3 hours; term paper. Prerequisite: course 1 or 3. California literature in the context of California's social, political, and intellectual history. Reading of poetry, fiction, and essays. Emphasis on nineteenth- and twentieth-century naturalists, turn of the century novelists, the Beats, and writers of the last two decades. Offered in alternate years. GE credit: ArtHum, Div, Wrt.—III.

183. Adolescent Literature (4)

Lecture—3 hours; term paper. Prerequisite: acceptance to the English Department Subject Matter Preparation Program or consent of instructor. The theoretical, critical, and literary complexities that inform the study and teaching of American adolescent literature.

184. Literature of the Wilderness (4)

Lecture/discussion—3 hours; term paper. Prerequisite: course 1 or 3. Study of the theme of wilderness primarily in American Literature, with some consideration of Biblical and European antecedents. Major attention given to Thoreau, Muir, London, Austin, Faulkner, Snyder, and Abbey. Offered in alternate years. GE credit: ArtHum, Wrt.—I.

185A. Literature by Women I (4)

Lecture/discussion—3 hours; term paper. Prerequisite: course 1 or 3. English language literature by women from Bradstreet and Behn to the Brontës, Eliot, and Dickinson. The effects of social constraints upon women's art; the rise of feminism; new trends in literary criticism. GE credit: Div, Wrt.

185B. Literature by Women II (4)

Lecture/discussion—3 hours; term paper. Prerequisite: course 1 or 3; course 185A recommended. English language literature by women from Chopin and Woolf to Plath, Rich, and Morrison. The effects of social constraints upon women's art; the rise of feminism; new trends in literary criticism. GE credit: Div, Wrt.—II, III.

186. Literature, Sexuality, and Gender (4)

Lecture/discussion—3 hours; term paper. Prerequisite: course 1 or 3. Historically or thematically focused intensive examinations of gender and sexuality in British and American literature. May be repeated for credit when content differs. GE credit: Div, Wrt.—III.

187. Literature and the Other Arts (4)

Seminar—3 hours; term paper. Prerequisite: junior or senior standing with a major in English or consent of instructor. Group study of the relationship between the forms of literature and the forms of the other arts, with detailed study of one of the crucial periods of artistic development in western culture. GE credit: Wrt.

188. Special Topics in Literary Studies (4)

Seminar—3 hours; term paper. Prerequisite: junior or senior standing with a major in English or consent of instructor. Group study of a special topic drawn from English or American literature. Course will be offered in sections according to the topic studied, and papers will be assigned. Limited enrollment. GE credit: Wrt.—I, II, III. (I, II, III.)

189. Seminar in a Major Writer (4)

Seminar—3 hours; term paper. Prerequisite: junior or senior standing; a major in English or consent of instructor. One major writer's artistic development with attention to intellectual and literary milieu. Limited enrollment. GE credit: Wrt.—II.

192. Internship in English (1-12)

Internship—3-36 hours. Prerequisite: course 1 or 3. Internships in fields where students can practice their skills. A maximum of 4 units is allowed toward the major in English. May be repeated for credit for a total of 12 units. (P/NP grading only.)

194H. Special Study for Honors Students (4)

Seminar—3 hours; term paper. Prerequisite: admission to English Department Senior Honors Program. Study of a special literary topic or of the works of a major writer, and preparation for writing an honors thesis in course 195H.

195H. Honors Thesis (4)

Independent study—12 hours. Prerequisite: course 194H. Preparation of a thesis, under the supervision of an instructor. Students satisfying requirements for the general major or the teaching emphasis write on a scholarly or critical subject; creative writing students submit a volume of poems or fiction.

197T. Tutoring in English (1-5)

Tutoring—1-5 hours. Prerequisite: upper division standing and consent of Chairperson. Leading of small voluntary discussion groups affiliated with one of the department's regular courses. Does not fulfill requirement for major. May be repeated for credit for a total of 8 units. (P/NP grading only.)

197TC. Community Tutoring in English (1-4)

Tutoring—1-4 hours. Prerequisite: upper division standing and a major in English; consent of Chairperson. Field experience, with individuals or in classroom in instruction of English language, literature, and composition. Does not fulfill requirement for major. May be repeated for credit. (P/NP grading only.)

198. Directed Group Study (1-5)

Prerequisite: one course from courses 1, 3, 5F, 5P. (P/NP grading only.)

198S. Directed Group Study (4)

Lecture/discussion—4 hours. Prerequisite: course 163S concurrently. Group study will be closely tied to the texts and periods studied in course 163S. Investigations of historical sites, museums, galleries, and performances. To be taught in London. (P/NP grading only.)—II, III. (II, III.)

199. Special Study for Advanced Undergraduates (1-5)

(P/NP grading only.)

Graduate Courses**200. Introduction to Graduate Studies in English (4)**

Seminar—3 hours; term paper or discussion—1 hour. Prerequisite: graduate standing. Introduction to literary scholarship with special attention to the elements of professionalism and to different modes of literary investigation. (S/U grading only)—I. (I.)

205. Anglo-Saxon Language and Culture (4)

Lecture—3 hours; conference and term paper. The language and culture of Anglo-Saxon England; readings in Old English prose and poetry. Offered in alternate years.—III.

206. Beowulf (4)

Discussion—3 hours; oral and written reports; conferences with students. Prerequisite: course 205 or the equivalent. A study of the poem and the Heroic Age of Germanic literature. Offered in alternate years.

207. Middle English (4)

Seminar—3 hours; term paper. Study of the phonology, morphology, syntax, and lexicon between 1100 and 1500 with investigation of the regional dialects; pertinent facts on both the internal and external linguistic history; intensive reading of texts.

210. Readings in English and American Literature (4)

Seminar—3 hours; conference—1 hour. Prerequisite: upper division English course in area to be studied. Offered in multiple sections each quarter. Content varies according to speciality of instructor. Course designed for students preparing for their comprehensive examinations. May be repeated for credit.

225. Topics in Irish Literature (4)

Seminar—3 hours; conference—1 hour. Prerequisite: course 139. Course will vary from quarter to quarter and will include such topics as the nineteenth-century novel, contemporary Irish poetry, rise of the drama, or a study of a major author.

230. Study of a Major Writer (4)

Seminar—3 hours; conferences with individual students—1 hour; research papers. Artistic development of one major writer and his intellectual and literary milieu. May be repeated for credit when a different writer is studied.

232. Problems in English Literature (4)

Seminar—3 hours; conferences with individual students—1 hour. Selected issues in the current study and critical assessment of a limited period or topic in English literature. May be repeated for credit when different period or topic is studied.—I.

233. Problems in American Literature (4)

Seminar—3 hours; conferences with individual students—1 hour; research papers. Selected topics for intensive investigation. May be repeated for credit when different topic or period is studied.—I, II.

234. Dramatic Literature (4)

Seminar—3 hours; conference—1 hour. Historical introduction to dramatic theory; the genres of tragedy, comedy, and tragicomedy.

235. Theory of Fiction (4)

Seminar—3 hours; conference—1 hour. Prerequisite: graduate standing. Theories of fiction as they relate to the professional writer's practice of the craft. For students in the creative writing program. May be repeated for credit when focus differs.

236. Poetics (4)

Seminar—3 hours; conference—1 hour. Prerequisite: graduate standing. Theories of poetry as revealed in structure, prosody, and idiom of British and American poems, variably approached—through intensive study of a single poet, historically, or theoretically—at the instructor's discretion. For students in the Creative Writing Program. May be repeated for credit when focus differs.—III.

238. Special Topics in Literary Theory (4)

Seminar—3 hours; term paper. Prerequisite: course 237 or the equivalent. Advanced topics in literary theory and criticism. Preparation and evaluation of research paper. May be repeated for credit when topic and/or reading list differs. Offered in alternate years.—II, III.

240. Medieval Literature (4)

Seminar—3 hours; conference—1 hour. Studies of Medieval literature. Course materials to be selected by the instructor. Preparation and evaluation of research papers. May be repeated for credit when a different topic is studied.—III.

242. Sixteenth-Century Literature (4)

Seminar—3 hours; conference—1 hour. Studies in sixteenth-century literature. Course materials to be selected by the instructor. Preparation and evaluation of research papers. May be repeated for credit when a different topic is studied.

244. Shakespeare (4)

Seminar—3 hours; conference—1 hour. Studies in Shakespeare. Course materials to be selected by the instructor. Preparation and evaluation of research papers. May be repeated for credit when a different topic is studied.—II.

246. Seventeenth-Century Literature (4)

Seminar—3 hours; conference—1 hour. Studies in seventeenth-century literature. Course materials to be selected by the instructor. Preparation and evaluation of research papers. May be repeated for credit when a different topic is studied.—I.

248. Eighteenth-Century Literature (4)

Seminar—3 hours; conference—1 hour. Studies in eighteenth-century literature. Course materials to be selected by the instructor. Preparation and evaluation of research papers. May be repeated for credit when a different topic is studied.—II.

250. Romantic Literature (4)

Seminar—3 hours; conference—1 hour. Studies in Romantic literature. Course materials to be selected by the instructor. Preparation and evaluation of research papers. May be repeated for credit when a different topic is studied.—II.

252. Victorian Literature (4)

Seminar—3 hours; conference—1 hour. Studies in Victorian literature. Course materials to be selected by the instructor. Preparation and evaluation of research papers. May be repeated for credit when a different topic is studied.—II, III.

254. Twentieth-Century British Literature (4)

Seminar—3 hours; conference—1 hour. Studies in twentieth-century British literature. Course materials to be selected by the instructor. Preparation and evaluation of research papers. May be repeated for credit when a different topic is studied.—I, II.

256. Early American Literature (4)

Seminar—3 hours; conference—1 hour. Studies in Early American literature. Course materials to be selected by the instructor. Preparation and evaluation of research papers. May be repeated for credit when a different topic is studied.

258. American Literature: 1800 to the Civil War (4)

Seminar—3 hours; conference—1 hour. Studies in American literature from 1800 to Civil War. Course materials to be selected by the instructor. Preparation and evaluation of research papers. May be repeated for credit when a different topic is studied.—I.

260. American Literature: Civil War to 1914 (4)

Seminar—3 hours; conference—1 hour. Studies in American literature from the Civil War to 1914. Course materials to be selected by the instructor. Preparation and evaluation of research papers. May be repeated for credit when a different topic is studied.

262. American Literature after 1914 (4)

Seminar—3 hours; conference—1 hour. Studies in American literature after 1914. Course materials to be selected by the instructor. Preparation and evaluation of research papers. May be repeated for credit when a different topic is studied.—II, III.

264. Studies in Modern British and American Literature (4)

Seminar—3 hours; conference—1 hour. Studies in modern British and American literature. Course materials to be selected by the instructor. Preparation and evaluation of research papers. May be repeated for credit when a different topic is studied.—III.

270. Studies in Contemporary World Literature (4)

Seminar—3 hours; conference—1 hour. Prerequisite: graduate standing, consent of instructor, with preference given to those enrolled in the masters program in Creative Writing. Emerging global, international or transnational techniques, theories, and individual works of contemporary world prose or poetry. Discussion, seminar reports, research papers. May be repeated for credit when topic differs.

285. Literature by Women (4)

Seminar—3 hours; conference—1 hour. Studies in literature by women and the theoretical approaches to literature by women. Course materials to be selected by the instructor. Preparation and evaluation of research papers. May be repeated for credit when topic and/or reading list differs.

290F. Seminar in Creative Writing of Fiction (4)

Seminar—3 hours; 1 additional hour of writing. Prerequisite: consent of instructor; graduate standing, with preference given to those enrolled in master's program in Creative Writing. Writing of prose. Evaluation of written materials and individual student conferences. May be repeated for credit.—I, II, III. (I, II, III.)

290NF. Seminar in Creative Writing of Non-Fiction (4)

Seminar—3 hours; term paper. Prerequisite: consent of instructor; graduate standing, with preference given to those enrolled in the master's program in Creative Writing. A workshop in the writing of literary non-fiction, with emphasis—according to staff and student interest—on autobiography, biography, memoir, the occasional or nature essay, or other non-fiction prose narratives.

290P. Seminar in Creative Writing of Poetry (4)

Seminar—3 hours; 1 additional hour of writing. Prerequisite: consent of instructor; graduate standing, with preference given to those enrolled in master's program in Creative Writing. Writing of poetry. Evaluation of written materials and individual student conferences. May be repeated for credit.—I, II, III. (I, II, III.)

298. Directed Group Study (1-5)

(S/U grading only.)

299. Individual Study (1-12)

(S/U grading only.)

299D. Special Study for the Doctoral Dissertation (1-12)

(S/U grading only.)

Professional Courses**390. Theory and Practice of University-Level Composition Instruction (4)**

Seminar—3 hours; term paper. Prerequisite: graduate standing; appointment as Teaching Assistant in the Composition Program. Examination of current theories about the teaching of writing and their practical application to undergraduate writing courses at UC Davis. (S/U grading only.)—III. (III.)

391. Teaching Creative Writing (2)

Discussion—2 hours. Prerequisite: graduate standing, appointment as Teaching Assistant in the Composition Program. Designed for new instructors of English 5F or 5P; discussion of ways to facilitate creative writing workshops and to respond to student manuscripts. (S/U grading only.)—I. (I.)

392. Teaching Expository Writing (2)

Discussion—2 hours. Prerequisite: graduate standing, appointment as Teaching Assistant in the Composition Program; completion of course 390 or the equivalent. Discussion of problems related to teaching expository writing at the university level, with special emphasis on teaching reading and writing skills and responding to student papers. (S/U grading only.)—I. (I.)

393. Teaching Literature and Composition (2)

Discussion—2 hours. Prerequisite: graduate standing, appointment as Teaching Assistant in the Composition Program. Designed for new instructors of English 3 or the equivalent courses; discussion of problems related to teaching literature and composition to lower division students. (S/U grading only.)—III. (III.)

396. Teaching Assistant Training Practicum (1-4)

Prerequisite: graduate standing. May be repeated for credit. (S/U grading only.)—I, II, III. (I, II, III.)

The Major Program

The Entomology major is a general biological science program. The curriculum is designed to develop an understanding of fundamental biological concepts by studying insects. Insects offer unique opportunities to study biological systems and are model experimental animals. Many insects are also pests. Students may focus on specific areas of interest including agricultural entomology; insect systematics and evolution; behavior and ecology; medical entomology; and insect molecular science, physiology and toxicology.

The Program. Students begin their study in entomology with selected insect biology courses. After completing these courses, students may enroll in courses in their particular area of interest. A student interested in applied entomology, for example, could enroll in courses such as arthropod pest management, biological control, and apiculture.

Career Alternatives. Entomology graduates find careers in many different areas of applied or basic biology. Graduates have the opportunity to continue in professional graduate programs such as veterinary or human medicine, or get advanced degrees leading to careers in biotechnology, conservation biology, or academic teaching and research. Many graduates have participated in internship programs with the California Department of Food and Agriculture and found careers in insect diagnostic laboratories, conducting insect surveys, and/or developing entomological collections. Other graduates have worked in agriculture in the area of insect pest management. Graduates are prepared for managerial and technical positions with state and federal agencies and in agricultural production and supporting industries. Some entomology graduates pursue careers in primary and secondary science education.

B.S. Major Requirements:

English Composition Requirement0-8
See College Requirement

Preparatory Subject Matter46-47
Biological Sciences 1A, 1B, 1C15
Chemistry 2A, 2B, 8A, 8B16
Mathematics 16A3
Physics 1A, 1B6
Statistics 13, 32, or Agricultural Systems and Environment 1203-4
Agricultural Systems and Environment 21, Engineering 5, or Mathematics 16B3

Breadth Subject Matter6-24
Satisfaction of General Education requirement

Depth Subject Matter32-36
Microbiology 102, Plant Biology 118, 148, or Plant Pathology 1204-5
Biological Sciences 1014
Environmental Science and Policy 100 or Evolution and Ecology 1014
Evolution and Ecology 1003-4
Biological Sciences 102 and 103 or Animal Biology 102 and 1036
Entomology 100, 100L5
At least 7 units from Entomology 101, 102, 103, 104, 107, 109, or 1167

Restricted Electives34
Upper division entomology courses14
Upper division electives related to student's interest with approval of adviser20
Note: No more than a total of 6 units from Entomology 192, 197T and 199 may count toward fulfilling depth subject matter or restricted elective units.

Unrestricted Electives32-60

Total Units for the Major180

Major Adviser. L. Ehler.

Minor Program Requirements:

The Department of Entomology has five minor programs open to students in other disciplines who are interested in rounding out their academic study with a concentration in the area of entomology.

Insect Biology18-24
Entomology 100, 100L5
At least two courses from Entomology 101, 102, 103, 104, 1077-8
At least two additional upper division Entomology courses (except courses 192, 198, 199)6-11

Agricultural Entomology and Bee Biology21
Entomology 100, 100L, 110, 119, 13518
At least three units from Entomology 123, Evolution and Ecology 121, Plant Biology 102, 173, 1743

Insect Ecology and Evolution19-20
Entomology 100, 100L, 1048

Seven units from Entomology 103, 107, 109, 116, 1587-8
Evolution and Ecology 149 or Environmental Science and Policy 1214

UNITS

Medical-Veterinary Entomology18
Entomology 100, 100L, 104, 153, 15615
At least three units from Entomology 156L, 158; Pathology, Microbiology and Immunology 126, 126L, 1283

Minor Adviser. L. Ehler.

Graduate Study. The Department of Entomology offers a program of study and research leading to the M.S. and Ph.D. degrees. See the Graduate Studies section and the *Graduate Announcement* for further details.

Graduate Advisers. See *Class Schedule and Registration Guide*.

Related Courses. See courses in Nematology.

Courses in Entomology (ENT)

Lower Division Courses

1. Art, Science and the World of Insects (3)

Lecture—3 hours; laboratory—3 hours. Fusion of entomology and art to create an appreciation of insect biology, ecology, interactions with humans and importance in human culture. Multidisciplinary approaches in education and career paths in entomology and art. GE credit: ArtHum or SciEng.—I. (I.) Ullman

2. Biodiversity (3)

Lecture—2 hours; lecture/discussion—1 hour. Introduction to nature, scope and geographical distribution of biodiversity (the diversity of life, with emphasis on plants and animals, especially insects). Humans and biodiversity—domestication, aesthetics, ethics and valuation. Species richness and "success." Biodiversity through time; monitoring, evaluation and conservation. Biomes—global, continental and Californian. (Same course as Evolution and Ecology 2.) GE credit: SciEng, Wrt.—I. Gullan, Cranston, Sanderson, Shaffer, Shapiro

10. Natural History of Insects (3)

Lecture—3 hours. Designed for students not specializing in entomology. Not open for credit to students who have had course 100, but students who have taken this course may take course 100 for credit. An introduction to the insects detailing their great variety, structures and functions, habits, and their significance in relation to plants and animals including man. GE credit: SciEng.—II. (II.) Kaya, Ullman

90X. Special Topics in Entomology (2)

Seminar—2 hours. Freshman seminar for in-depth examination of a special topic in entomology.

92. Internship (1-12)

Internship—3-36 hours. Prerequisite: consent of instructor. Work-learn experience on and off campus in all subject areas offered by the department, supervised by a member of the faculty. May be repeated up to 12 units of credit. (P/NP grading only.)

99. Special Study for Undergraduates (1-5)

(P/NP grading only.)

Upper Division Courses

100. General Entomology (4)

Lecture—3 hours; term paper. Prerequisite: Biological Sciences 1B. Biology, anatomy, physiology, development, classification, ecology and relation of insects to human welfare. GE credit: SciEng, Wrt.—I. (I.) Kimsey

100L. General Entomology Laboratory (2)

Laboratory—6 hours. Prerequisite: course 100 (may be taken concurrently). Anatomy, development, population ecology, methods of collecting, classification and identification of insects of all orders and of major families. GE credit with concurrent enrollment in course 100: Wrt.—I. (I.) Kimsey

101. Functional Insect Morphology (3)

Lecture—2 hours; laboratory—3 hours. Prerequisite: course 100. Study of the basic external and internal

structures, organs and tissues of insects, with emphasis on functional systems. Functional anatomy, histology and fine structures of important organs and tissues will be discussed. GE credit: SciEng.—II. (II.) Peng

102. Insect Physiology (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 100 or course in physiology or invertebrate zoology. Processes by which insects maintain themselves, reproduce, and adapt to environment. Insects as models for basic/applied research through detailed analysis of metabolic, physiological, and behavioral processes. Emphasis on analysis of methodology, fact, and theory. GE credit: SciEng.—III. (III.) Hammock, Leal

103. Insect Systematics (3)

Lecture—2 hours; discussion—1 hour. Prerequisite: introductory course in zoology or entomology. Principles and methods of systematics, with particular reference to insects. Emphasis on different theories of classification, and analysis of phylogenetic relationships. GE credit: SciEng, Wrt.—III. (III.) Ward

104. Behavioral Ecology of Insects (3)

Lecture—3 hours. Prerequisite: introductory biology or zoology. Basic principles and mechanisms of insect behavior and ecology. An evolutionary approach to understanding behavioral ecology of insects. GE credit: SciEng.—II. (II.) Page

107. California Insect Diversity (5)

Lecture—1 hour; laboratory—6 hours; fieldwork—6 hours. Prerequisite: an introductory course in entomology. Survey of the diversity of insects from selected ecological zones in California with emphasis on collection, identification, and natural history. Offered in alternate years. GE credit: SciEng, Wrt.—III. Kimsey

109. Field Taxonomy and Ecology (7)

Lecture—2 hours; laboratory—36 hours; five-week course. Prerequisite: an introductory course in entomology or consent of instructor. The study of insects in their natural habitats; their identification and ecology. Offered in alternate years. GE credit: SciEng, Wrt.—(summer) Ward

110. Arthropod Pest Management (5)

Lecture—3 hours; laboratory—6 hours. Prerequisite: Biological Science 1B. Development of the ecological basis for the integrated pest management paradigm with emphasis on agriculture. Ecological and practical aspects of control tactics. Laboratory emphasizes identification of pests and beneficials of agriculture and urban situations. GE credit: SciEng, Wrt.—II. (II.) Granett

116. Biology of Aquatic Insects (3-5)

Lecture—2 hours and laboratory (Saturday field trips); optional laboratory on identification and/or aquatic insect collection. Prerequisite: course 100 or consent of instructor. A study of the life history, ecology, and identification of insects associated with streams, ponds, and lakes. GE credit: SciEng.—III. (III.) Lawler

117. Longevity (4)

Lecture—3 hours; term paper. Prerequisite: upper division standing or consent of instructor. Nature, origin, determinants, and limits of longevity with particular reference to humans; emphasis on implications of findings from non-human model systems including natural history, ecology and evolution of life span; description of basic demographic techniques including life table methods. (Same course as Human Development 117.) GE credit: SciEng, Wrt.—I. Carey

119. Apiculture (3)

Lecture—3 hours; papers. Prerequisite: Biological Sciences 1C recommended. Biology and behavior of honeybees; communication, orientation, social organization, foraging activities, honey production, pollination activities. GE credit: SciEng, Wrt.—III. (III.) Peng

123. Plant-Virus-Vector Interaction (3)

Lecture—3 hours. Prerequisite: Biological Sciences 1A, 1C, 101; Plant Biology 105, Plant Pathology 120, and course 100 recommended. Analysis of the interactions necessary for viruses to infect plants. Interactions among insect vectors and host plants

involved in the plant-virus life cycle. Evolutionary aspects of the molecular components in viral infection and modern experimental approaches to the interdiction of viral movement. Offered alternate years. (Same course as Plant Biology 123/Plant Pathology 123.)—(I.) Lucas, Gilbertson, Ullman

135. Introduction to Biological Control (4)

Lecture—3 hours; laboratory—3 hours. Prerequisite: course 100 or 110. Principles of biological control of arthropod pests and weeds. Biology of pathogens, entomopathogenic nematodes, parasitoids, and predators. Implementation in classical and augmentative biological control. Role of biological control in pest management. Offered in alternate years—(III.) Ehler, Kaya

153. Medical Entomology (3)

Lecture—3 hours. Prerequisite: Biological Sciences 1A, 1B, upper division standing in one of the biological sciences, or consent of instructor. Basic biology and classification of medically important arthropods with special emphasis on the ecology of arthropod-borne diseases and principles of their control. Relationships of arthropods to human health. GE credit: SciEng, Wrt.—I. (I.) Scott

156. Biology of Parasitism (3)

Lecture—3 hours. Prerequisite: Biological Sciences 1A or consent of instructors. Lectures on the biological and ecological aspects affecting host-parasite relationships using selected examples from protozoan and metazoan fauna. GE credit: SciEng.—III. (III.) Kimsey, Theis, Westerdahl

156L. Biology of Parasitism Laboratory (1)

Laboratory—3 hours. Prerequisite: course 156 (concurrently) or consent of instructor. Laboratory demonstrations using selected examples of protozoan and metazoan organisms along with various techniques used in parasitology to exemplify concepts presented in the lecture course. GE credit with concurrent enrollment in course 156: Wrt.—III. (III.) R. Kimsey

158. Forensic Entomology (3)

Lecture—2 hours; laboratory—4 hours. Prerequisite: Biological Sciences 1B or Entomology 100, upper division standing. Arthropods, their general biology, succession, developmental cycles and population biology in matters of criminal prosecution and civil litigation. Emphasis on basic arthropod biology, ecological and developmental concepts and methods, development of reasoning abilities, implication, development of opinions and evidence. GE Credit: SciEng or SocSci, Wrt.—III. (III.) R. Kimsey

192. Internship (1-12)

Internship—3-36 hours. Prerequisite: completion of 84 units and consent of instructor. Laboratory experience or fieldwork off and on campus in all subject areas offered in the Department of Entomology. Internships supervised by a member of the faculty. (P/NP grading only.)

197T. Tutoring in Entomology (1-3)

Discussion—1-3 hours. Leading small discussion groups. Preview assignments and prepare guidelines for discussion. (P/NP grading only.)

198. Directed Group Study (1-5)

Prerequisite: consent of instructor. (P/NP grading only.)

199. Special Study for Advanced Undergraduates (1-5)

(P/NP grading only.)

Graduate Courses

206. Ecology of Insect Parasitoids (4)

Lecture—3 hours; seminar—1 hour. Prerequisite: introductory animal ecology or behavior. Insect parasitoids will be investigated as model systems to address current topics in behavior, population, and evolutionary ecology. Theory will be synthesized and critical empirical tests of ecological hypotheses emphasized. Offered in alternate years. (Same course as Population Biology 206.)—(II.) Rosenheim

212. Molecular Biology of Insects and Insect Viruses (3)

Lecture—3 hours. Prerequisite: consent of instructor. A molecular biological analysis of insect systematics, physiology, and defense mechanisms. Molecular

biology of insect viruses. Baculovirus expression vectors and post-translation modification of expressed polypeptides. Biological control of using neuropeptides and toxin genes in insect viruses.—II. (II.)

225. Terrestrial Field Ecology (4)

Seminar—1 hour; field work—12 hours. Prerequisite: introductory ecology and introductory statistics or consent of instructor. A field course conducted over spring break and four weekends at Bodega Bay, emphasizing student projects. Ecological hypothesis testing, data gathering, analysis and written and oral presentation of results. (Same course as Ecology 225/Population Biology 225.)—III. (III.) Karban

230. Advanced Biological Control (4)

Lecture—2 hours; laboratory—6 hours. Prerequisite: graduate or upper division standing in biological science or consent of instructor. Principles and current issues in biological control of arthropod pests and weeds; laboratory devoted to identification and life history of the major groups of parasitic and predaceous arthropods. Offered in alternate years.—III. Ehler

253. Advanced Medical Entomology (3)

Lecture—2 hours; discussion—1 hour. Prerequisite: one upper division course in entomology (other than course 153) and one course in microbiology: course 153 strongly recommended. An analysis of several arthropod-borne human diseases with emphasis on the relationships of the biology of the vector to the ecology of the disease. Discussion includes demonstration of vectors and techniques. Offered in alternate years.—III.

290. Special Topics in Entomology (1-4)

Seminar—1-4 hours. Prerequisite: consent of instructor.—I, II, III. (I, II, III.)

291. Current Topics in Medical and Veterinary Entomology (2)

Seminar—2 hours. Prerequisite: course 153. Discussion of parasitology, ecology and epidemiology related to vectors of pathogens causing disease in humans and animals. May be repeated once for credit. Not offered every year.—I, II, III. Kimsey, Scott, Edman

292. Seminar in Insect Physiology (2)

Seminar—2 hours. Prerequisite: course 102. Critical examination of areas of current interest to insect physiology and biochemistry. May be repeated for credit.—I. (I.) Hammock

294. Current Topics in Insect Ecology, Evolution, and Systematics (2)

Seminar—2 hours. Prerequisite: course 103, general course in ecology or evolution. Discussions of advanced topics in ecology, evolution and systematics with emphasis on analysis of factors influencing the distribution, abundance, adaptations and evolutionary relationships of insects. Includes consideration of applications of basic theory (e.g. biological control). May be repeated three times for credit. Not offered every year.—I, II, III.

295. Seminar in Agricultural Entomology (2)

Seminar—2 hours. Prerequisite: course 110. Discussion of advanced topics relating to the principles of pest insect population management. May be repeated for credit.—II. (II.) Ehler, Granett, Parrella, Rosenheim

296. Seminar in Bee Biology (2)

Seminar—2 hours. Prerequisite: course 119 or the equivalent. Discussions of behavior, ecology, management, and general biology of bees (Apoidea) with emphasis on the honeybee. May be repeated for credit.—I. (I.) Page, Peng

297. Seminar in Insect Behavior (2)

Seminar—2 hours. Prerequisite: a course in animal behavior. Analysis of contemporary advances in insect behavior, interpretation and description of observations, physiological mechanisms, functional kinds of behavior, application of general principles to the solution of problems in the laboratory and field. May be repeated for credit.—III. (III.) Dingle, Page

298. Group Study (1-5)

(S/U grading only.)

299. Research (1-12)

(S/U grading only.)

Environmental Biology and Management

(College of Agricultural and Environmental Sciences)

Faculty

See under the Department of Environmental Science and Policy.

The Major Program

The environmental biology and management major offers an education in the basic natural sciences, especially ecology, together with a set of management and public policy analysis courses. Students completing the program will understand the scientific basis for environmental decision making, and the legal, economic, and political issues involved in management of the environment in the United States and worldwide.

The Program. Courses in chemistry, physics, mathematics, biology, and earth sciences form the foundation of the curriculum; these are then tied together by courses in ecology. Computing, statistics, and other methods courses give the student basic quantitative research skills. Economics, political science, and techniques of quantitative management offerings dominate the management and public policy requirements.

A moderate degree of specialization is permitted in three upper division options. Students in the *Conservation Biology and Management* option take courses in conservation biology, genetics, evolution and biogeography, resource economics, environmental policy making, quantitative analysis and field experience. This option emphasizes the study of biological diversity and the natural and human processes that control it. Key areas of the option include the design of nature reserves, the management of small populations of endangered species, environmental law, policy and economics.

Students in the *Environmental Biology* option take course work in population ecology, physiology, and other biological specialties, as well as quantitative analysis.

Students in the *Environmental Management* option take courses in recreation, resource economics, planning and public policy, and, especially, quantitative management techniques. This option emphasizes the management of public lands and natural resources in wildland and rural areas. Practical courses in field level planning and management are featured. Students interested in urban problems and/or legislative approaches should examine the Environmental Policy Analysis and Planning major.

Career Alternatives. The major prepares students to enter careers in management of natural resources and public lands, as well as basic ecological research. Students interested in professional schools, e.g., medicine, should consult an adviser early to plan for their special requirements, such as organic chemistry. Graduates who choose the Environmental Biology option are prepared for graduate or professional training and, eventually, careers working for public agencies and private firms specializing in environmental quality, natural resources, or ecological research. Graduates with the Environmental Management option are prepared for jobs in public agencies at the federal, state, or local levels.

B.S. Major Requirements:

UNITS

English Composition Requirement.....	6-15
See College requirement	0-8
English 102A, 102B, 102C, 102D, 102E, 102F, or 102G concurrently with Environmental Science and Policy 1.....	4
Communication 1 or Dramatic Art 10.....	3-4

Preparatory Subject Matter.....49-54

Biological Sciences 1A, 1B, 1C	15
Chemistry 2A-2B or 2AH-2BH.....	10
Agricultural Management and Rangeland Resources 21, or Computer Science Engineering 10, 15, or 30	3-4
Environmental Science and Policy 1 or 30; choose Environmental Science and Policy 1 if the Environmental Management option is selected.....	3-4
Political Science 1 or Economics 1A; choose Economics 1A if Environmental Management option is selected.....	4-5
Mathematics 16A-16B or 21A-21B	6-8
Physics 7A-7B or 9A-9B.....	8

Breadth/General Education.....12-24

Satisfaction of General Education requirement to include 12 units of humanities and/or Civilization and Culture.....12-24

Depth Subject Matter.....27-32

(These units must be taken for a letter grade attaining an overall grade-point average of 2.0 or higher.)

Select one of Plant Biology 117, Environmental Science and Policy 100, Evolution and Ecology 101, Wildlife, Fish, and Conservation Biology 151	3-4
Environmental Science and Policy 110 and 172	8
Select two courses from Atmospheric Science 120, Environmental Science and Policy 150A, Environmental and Resource Sciences 131, Geology 134, Hydrologic Science 100, 141, Soil Science 100.....	6-8
Select one course from Environmental Science and Policy 161, 163, 166, 171, 179; Agricultural and Resource Economics 147, 175, 176	3-4
(Choose Agricultural and Resource Economics if Environmental Management option is selected.)	
Select one course from: Mathematics 16C, 21C, 22A, 22B, Agricultural Management and Rangeland Resources 120, Statistics 102 or upper division mathematics, computing or statistics. Environmental Management students should enroll in Agricultural Systems and Environment 120, or Statistics 102.....	3-4
Environmental Science and Policy 123, 178, or Wildlife, Fish, and Conservation Biology 100. Management students should enroll in Environmental Science and Policy 178.....	4

Areas of Specialization.....25-38

Conservation Biology and Management Option

Wildlife, Fish, and Conservation Biology 154	4
Biological Sciences 101.....	4
Choose one from Entomology 147, Evolution and Ecology 100, 102, 138, 147, 149, Geology 107	3-4
Agricultural and Resource Economics 176 or Environmental Science and Policy 175...4 (Students must select a course which was not taken in "Depth Subject Matter.")	
Choose one from Agricultural and Resource Economics 147, Environmental Science and Policy 161, 166, 171, 172	3-4
(Students must select a course which was not taken in "Depth Subject Matter.")	
Environmental Science and Policy 121 or Wildlife, Fish, and Conservation Biology 122	4
Choose from Environmental Science and Policy 123, 124, 151L, 155L, Wildlife, Fish, and Conservation Biology 100, 102...3-10 (Students may select Biological Sciences 122 or a course at an approved field station or an off-campus field biology research site.)	

Environmental Biology Option

Choose one of Anthropology 154A, Entomology 104, Evolution and Ecology 137, Neurobiology, Physiology, and Behavior 102, Psychology 150, Wildlife, Fish, and Conservation Biology 140	3-5
Choose one of Biological Sciences 101, Evolution and Ecology 100, Geology 107	3-4
Mathematics 22A-22B, upper division mathematics or statistics	6-8
Choose from Entomology 103, Evolution and Ecology 112-112L, Plant Biology 102, 108, 116, Wildlife, Fish, and Conservation Biology 110, 111, 111L, 120	4-8
Note: Most of these courses require one or two additional chemistry or basic physiology courses as prerequisites. Plan a sequence in consultation with adviser.	
Choose from Entomology 102, Neurobiology, Physiology, and Behavior 101, Plant Biology 111, or Wildlife, Fish, and Conservation Biology 121	3-5
Choose two courses from the following: Avian Sciences 100, Environmental Science and Policy 121, 151, 151L, 150B, 150C, 155, 155L, Evolution and Ecology 149, Hydrologic Science 122, 122L, Plant Biology 102, 117, Wildlife, Fish, and Conservation Biology 100, 120, 122, 130	6-8

Environmental Management Option

Resource policy evaluation (see adviser) ...4	
Economics 100 or 104 or Agricultural and Resource Economics 100A.....	4-5
Environmental Science and Policy 166 or Political Science 182.....	4
Environmental Science and Policy 179.....	3
Agricultural and Resource Economics 106 or Sociology 106 or Statistics 108.....	4
Management of a natural resource, choose two courses from one of the following three groups.....	6-8
<i>Animal Resources:</i> Agricultural Management and Rangeland Resources 135, or Wildlife, Fish, and Conservation Biology 110, 111, 120, 122, 151, 154, or Environmental Science and Policy 123.	
<i>Forest and Rangeland Resources:</i> Agricultural Systems and Environment 131, 134.	

<i>Air, Water, and Soil Resources:</i> Environmental and Resource Sciences 131, or Hydrologic Science 103, 122, 141, or Soil Science 118, or Environmental Science and Policy 151 and 151L, 155 and 155L.

Unrestricted Electives20-62

Total Units for the Degree180

Major Adviser: J.F. Quinn (*Environmental Science and Policy*).

Minor Program Requirements:

The faculty for Environmental Biology and Management offers a minor in Recreation for students in Physical Education, Psychology, Sociology, or Human Development; students in Landscape Architecture desiring to specialize in recreation area design; Community and Regional Development students wishing to work in educational and therapeutic recreation; Environmental Policy Analysis and Planning students seeking careers in public recreation policy analysis and management; Agricultural and Managerial Economics students wishing to go into the administration of commercial recreation enterprises; and those students in Plant Science interested in park landscape construction and maintenance.

UNITS

Recreation18-20
 Agricultural and Resource Economics 147, 1763-4
 Environmental Planning and Management 1344
 Recreation policy analysis (see adviser)....4
 Agricultural and Resource Economics 112, Community and Regional Development 163, Political Science 183, 1894
 Internship in Recreation Management, Environmental Science and Policy 192.....4

Minor Adviser. R.A. Johnston (*Environmental Science and Policy*).

Courses. Questions pertaining to courses in Environmental Biology and Management should be directed to the Environmental Biology and Management advising office, 2134 Wickson Hall. See also Environmental Planning and Management listing following Environmental Horticulture.

Environmental Design

(College of Agricultural and Environmental Sciences)
 Patricia Harrison, M.Arch., Chairperson, Design Program

Dean MacCannell, Ph.D., Chairperson, Landscape Architecture Program

Department Office, 142 Walker Hall (530-752-6223)

World Wide Web: <http://envdes.ucdavis.edu>

Faculty. See faculty listings under Design and Landscape Architecture.

Programs of Study. See the undergraduate majors in Design and Landscape Architecture, the Graduate Group in Geography and the graduate program in Textile Arts and Costume Design (information pertaining to the Textile Arts and Costume Design graduate degree is listed under the Design major).

Related Courses. See Design and Landscape Architecture course lists.

Environmental Geology

(College of Letters and Science)

The minor in Environmental Geology examines the multidisciplinary factors of geology and related earth science fields, and planning and resources oriented programs. Students in the minor are encouraged to participate in internship programs that assist them in solidifying the Environmental Geology minor with their Geology major or other major field areas that include geologic components.

The minor is sponsored by the Department of Geology, 174 Physics/Geology Building.

Minor Program Requirements:

UNITS

Environmental Geology.....22-24
 Geology 130, 134, and Environmental and Resource Sciences 1869
 Soil Science 1184
 Hydrologic Science 141 or Civil and Environmental Engineering 1423
 Two courses chosen from Environmental Science and Policy 160, 171, 179, Geology 135, Hydrologic Science 144, 146.....6-8

Minor adviser: K. Versosub, (*Geology*) 378 Physics/Geology Building, 752-6911.

Environmental Horticulture

(College of Agricultural and Environmental Sciences)

The Program. Students of Environmental Horticulture learn how plants improve the environment and the quality of our lives. Plants are used to revegetate and restore disturbed landscapes, control erosion, and reduce energy and water consumption. The ornamental use of plants to improve the aesthetic quality of urban and rural landscapes, recreational areas, and commercial sites is an important aspect of the study of environmental horticulture.

Students interested in Environmental Horticulture can obtain a B.S. degree in Environmental Horticulture and Urban Forestry and may specialize in Floriculture/Nursery Management, Urban Forestry, Landscape Management/Turf or Plant Biodiversity/Restoration. Students can develop an individual major with the help of an Environmental Horticulture faculty adviser and approval of the College's Individual Major Committee. A minor in Environmental Horticulture or Landscape Restoration is available to students in other majors.

Career Alternatives. Opportunities in this field include growing and/or managing plants in a variety of settings, consulting as an urban, landscape, or restoration horticulturist, business ownership, working for public agencies or private landscape firms/corporations, park management and landscape contracting. Students are encouraged to develop internships on or off campus to augment their activities in the classroom and laboratory.

Minor Program Requirements:

Graduate Study. For graduate study, refer to the Graduate Studies chapter of this catalog.

Related Courses. See Plant Biology.

Courses in Environmental Horticulture (ENH)

Lower Division Courses

1. Introduction to Environmental Horticulture/Urban Forestry (3)

Lecture—3 hours. Introduction to the use of plants to enhance the physical, visual and social environment. The use of ecological principles in developing sustainable, low maintenance landscape systems will be presented. Career opportunities will be discussed. GE credit: SciEng, Wrt.—I. (I.) Burger

6. Introduction to Environmental Plants (4)

Lecture—1 hour; discussion—2 hours; laboratory—3 hours. Classification, nomenclature and variation of environmental plants. The use of floral and vegetative characteristics and terminology to key unknown plants. Characteristics of plant groups and basics of climate, soils and plant selection. Identification of 150 common landscape plants.—I. (I.) Young

92. Internship in Environmental Horticulture (1-12)

Internship—3-36 hours. Prerequisite: course 1 or 6 or Biological Sciences 1C or Agricultural Management and Rangeland Resources 2 and consent of instructor. Work experience in an area of Environmental Horticulture and Urban Forestry, including flower and nursery production and marketing, landscape management, arboriculture, turf management, and landscape restoration. Internships supervised by a member of the faculty. (P/NP grading only.)

99. Special Study for Lower Division Students (1-5)

(P/NP grading only.)

Upper Division Courses

100. Urban Forestry (4)

Lecture—2 hours; laboratory—3 hours; term paper. Prerequisite: Biological Sciences 1C or Agricultural Management and Rangeland Resources 2. Principles and practices of planning and managing urban vegetation. Basics of tree appraisal, natural resource inventory, and development of long term urban forest management plans.—I. (I.)

102. Physiological Principles in Environmental Horticulture (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: Biological Sciences 1C. Physiological principles and processes essential to floriculture, nursery crop production, turf culture and landscape horticulture. Emphasis on the control of vegetative and reproductive development for a broad species range in greenhouse and extensive landscape environments.—III. (III.)

105. Taxonomy and Ecology of Environmental Plant Families (4)

Lecture—2 hours; laboratory—6 hours. Prerequisite: course 6 or consent of instructor. Classification and identification of introduced and native species used in urban forests, with emphasis on floral and vegetative characteristics of the prominent families of angiosperms and gymnosperms, adaptations to environmental variations in western landscapes, and horticultural classification.—III. (III.) Harding

110. Urban and Regional Planning (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: upper division standing. Urban and regional plan-

ning principles, methods, and techniques; the planning process and the General Plan; historical perspective; urban design; policy issues, including land use and growth management. Not open for credit to students who have completed Environmental Planning and Management 110. (Former course Environmental Planning and Management 110.)

112. Recreation Planning (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: course 110 or the equivalent recommended. Basic concepts, principles, techniques and methods used to prepare park, recreation, and open space plans for urban environments. Not open for credit to students who have completed Environmental Planning and Management 134. (Former course Environmental Planning and Management 134.)

120. Management of Container Media (3)

Lecture—2 hours; laboratory—3 hours. Prerequisite: Soil Science 10. Principles of soil science and practices related to management of container media are taught, emphasizing appropriate use of soils and amendments, irrigation, and fertilizers. Physical and chemical properties are tested and effects of management on crops are evaluated in the laboratory.—I. (I.)

125. Greenhouse and Nursery Crop Production (5)

Lecture—3 hours; discussion—1 hour; laboratory—3 hours. Prerequisite: Agricultural Management and Rangeland Resources 2. Principles and techniques for the production of ornamental greenhouse and nursery crops. Hands-on experience producing greenhouse crops.—II. (II.) Lieth

129. Analysis of Horticultural Problems (4)

Lecture—1 hour; laboratory—6 hours. Prerequisite: course 102, Entomology 110, Plant Pathology 120, and Soil Science 100 or the equivalents. Methods of analysis of common plant disorders seen in the landscape, greenhouse, and nursery. Diagnosis of plant disorders caused by soil, water, insects, disease, chemical agents, climatic conditions or cultural practices. Approaches to diagnosis that emphasize acquisition and integration of information.—III. (III.) Burger

130. Turfgrass and Amenity Grassland Utilization and Management (4)

Lecture—2 hours; discussion—1 hour; laboratory—3 hours. Prerequisite: Biological Sciences 1C or Agricultural Systems and Environment 2. Utilization and management of amenity and landscape grassland systems. Emphasis on biology of grass species, ecology and culture practice of sports turf and landscape grassland systems, social and environmental benefits, environmental impacts, and integrated management systems.—III. (III.) Wu

133. Woody Plants in the Landscape: Growth, Ecology and Management (4)

Lecture—3 hours; laboratory—2 hours; discussion—1 hour. Prerequisite: Biological Sciences 1C or the equivalent preparation in plant biology. Principles and practices of managing trees and shrubs in the urban landscape and other managed environments. Topics include woody plant form; growth response and adaptation; tree management in relation to soil, moisture, climate; plant problems.—II. (II.) Berry

144. Trees and Forests (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: Biological Sciences 1C. Biological structure and function of trees as organisms; understanding of forests as communities and as ecosystems; use of forests by humans; tree phenology, photosynthesis, respiration, soil processes, life histories, dormancy, forest biodiversity, and agroforestry. (Same course as Environmental and Resource Sciences 144 and Plant Biology 144.)—I. (I.) Barbour, Berry, Bledsoe

145. Tree Improvement and Utility (3)

Lecture—2 hours; discussion—1 hour. Prerequisite: course 102 and Biological Sciences 1C; Plant Biology 160 recommended. Life histories, adaptive plasticity, longevity, utility of trees and the uniqueness of biological materials. Applications of cloning, secondary products, wood science, and space biology in the context of academic, governmental and industrial viewpoints.—(III.) Durzan

149. Evolution and Diversity of Environmental Plants (4)

Lecture—3 hours; laboratory—3 hours; optional field trips. Prerequisite: course 105, Plant Biology 102 or 108, or consent of instructor. Classification of environmental plants using primitive and advanced characteristics to develop a model for macro evolution. Use of the processes of mutation, inbreeding, hybridization, polyploidy, gene flow and natural selection in explanation of micro evolutionary changes. Not open for credit to students who have taken course 107.—III. (III.) Harding

150. Genetics and Plant Conservation: The Biodiversity Crisis (3)

Lecture/discussion—3 hours. Prerequisite: Biological Sciences 1C or the equivalent. Conservation of genetic diversity, measurement of diversity, threats to diversity and reasons for protection, the process of extinction, distribution of diversity, determination of what to conserve and means of conservation. Examples drawn largely from forest tree species.—III. (III.) Ledig

160. Restoration Ecology (4)

Lecture—3 hours; fieldwork—3 hours. Prerequisite: Plant Biology/Evolution and Ecology 117 or Evolution and Ecology 121 or equivalent course in ecology/plant ecology. Conceptual bases of restoration ecology; tools used by restoration ecologists to solve practical problems; scope and success of actual restoration projects. Four required weekend field trips.—III. (III.) Young

192. Internship in Environmental Horticulture (1-12)

Internship—3-36 hours. Prerequisite: upper division standing, completion of at least 84 units, two upper division courses in Environmental Horticulture appropriate for the internship, and consent of instructor. Work experience in an area of Environmental Horticulture and Urban Forestry, including flower and nursery production and marketing, landscape management, arboriculture, turf management and landscape restoration. Internships supervised by a member of the faculty. (P/NP grading only.)

197T. Tutoring in Environmental Horticulture (1-4)

Hours and duties will vary depending on course tutored. Prerequisite: upper division standing, completed course or the equivalent being tutored, and consent of instructor. Leading discussion sections, conducting laboratory exercises or proctoring in individualized instruction format classes under faculty guidance. Weekly conferences on subject matter and instructional techniques. May be repeated once for credit if different course is tutored.

198. Directed Group Study (1-5)

Prerequisite: 3 units of upper division work in environmental horticulture; consent of instructor. (P/NP grading only.)

199. Special Study for Advanced Undergraduates (1-5)

Prerequisite: 3 units of upper division work in environmental horticulture; consent of instructor. (P/NP grading only.)

Graduate Courses

229. Analysis of Horticultural Problems (5)

Lecture—1 hour; laboratory—8 hours; discussion—1 hour; project. Prerequisite: equivalent of B.S. degree in Environmental Horticulture and Urban Forestry, Plant Biology, Agricultural Systems and Environment, or related major, or consent of instructor. Methods of analysis of common plant disorders seen in the landscape, greenhouse, and nursery. Diagnosis of plant disorders caused by soil, water, insects, disease, chemical agents, climatic conditions or cultural practices. Approaches to diagnosis that emphasize acquisition and integration of information. Not open for credit to students who have completed course 241.—III. (III.)

290. Seminar (1)

Seminar—1 hour. Prerequisite: graduate standing. Topics in environmental horticulture, including plant morphogenesis, floriculture, greenhouse production and modeling, landscape plant ecology, arboricul-

ture, turf culture, postharvest, plant propagation and breeding, urban forestry, plant biodiversity and restoration. (S/U grading only.)—I, II, III. (I, II, III.)

290C. Research Group Conference (1)

Discussion—1 hour. Prerequisite: students in a plant science graduate program. Research conference conducted by departmental faculty to discuss design, philosophy, and interpretation of ongoing specific research areas which includes plant morphogenesis, floriculture, greenhouse production, landscape plant ecology, arboriculture, turf culture, post harvest, and plant breeding related to environmental horticulture. (S/U grading only.)—I, II, III. (I, II, III.)

297T. Tutoring in Environmental Horticulture (1-4)

Tutoring—4-8 hours; discussion—1 hour. Prerequisite: graduate student standing; completion of course to be tutored (or the equivalent) and/or consent of instructor. Leading discussion sessions, conducting laboratory exercises, and lecturing in Environmental Horticulture classes under faculty guidance. Weekly conference on subject matter and instructional techniques. May be repeated for credit by tutoring in different courses.

298. Group Study (1-5)

Prerequisite: graduate standing. Group study of advanced topics in Environmental Horticulture. (S/U grading only.)

299. Research (1-12)

Prerequisite: graduate standing. (S/U grading only.)

Professional Course

396. Teaching Assistant Training Practicum (1-4)

Prerequisite: graduate standing. May be repeated for credit. (S/U grading only.)—I, II, III. (I, II, III.)

Environmental Horticulture and Urban Forestry

(College of Agricultural and Environmental Sciences)

Faculty. See under Department of Environmental Horticulture.

The Major Program

Students majoring in Environmental Horticulture and Urban Forestry learn how plants improve the environment and the quality of our lives. The major focuses on the biological and physical concepts and horticultural principles of plant production, management of plants and plant ecosystems in landscape settings and sociological aspects of plant/people interactions in the urban environment. Plants are used to revegetate and restore disturbed landscapes, control erosion and reduce energy and water consumption. The ornamental use of plants to improve the aesthetic quality of urban and rural landscapes, recreational areas, interiorscapes and commercial sites is an important aspect of this major. Students may select one of the following four areas of specialization: Urban Forestry, Floriculture/Nursery, Landscape Management/Turf, or Plant Biodiversity/Restoration.

Internships and Career Opportunities. Students are encouraged to develop internships on or off campus to augment their activities in the classroom and laboratory. Internships are available with the department's greenhouse facility, the UC Davis Arboretum, landscape designers, government agencies or regional nurseries. Career opportunities in this field include growing and/or managing plants in a variety of settings, consulting as an urban, landscape, or restoration horticulturist; business ownership; working for public agencies or private landscape firms/corporations; park management and landscape contracting.

B.S. Major Requirements

Major Adviser. J.A. Harding.	

Environmental Policy Analysis and Planning

(College of Agricultural and Environmental Sciences)

The Major Program

The major in environmental policy analysis and planning develops an understanding of governmental policy-making and skills for analyzing policy in fields related to environmental quality.

Any student in good standing is eligible to transfer to the EPAP major; to do so, please see the major adviser, S.I. Schwartz (2140 Wickson Hall) or staff adviser (2134 Wickson Hall).

The Program. This major provides students with a general background in the natural sciences relevant to environmental policy. It also provides sufficient training in mathematics, statistics, and research methodology to quantitatively analyze environmental problems and policy options. A strong background in policy analysis, including the evaluation of policy alternatives and the study of factors affecting policy formulation and implementation is included. In addition, students are encouraged to develop substantive knowledge in a specific field of environmental policy, such as urban and regional planning, water pollution control, or energy.

Career Alternatives. Environmental policy analysis and planning graduates are prepared for employment in public agencies, consulting firms, and businesses concerned with environmental affairs. The major is also excellent preparation for students who want to go on to graduate work in law, planning, public policy, or management.

B.S. Major Requirements:

	UNITS
English Composition Requirement	10-11
See College requirement	0-8
English 102A, 102B, 102C, 102D, 102E, 102F, or 102G concurrently with Environmental Science and Policy 1.....	4
Communication 1 or Dramatic Art 10.....	3-4

Breadth/General Education	6-24
Satisfaction of General Education requirement	
Depth Subject Matter	42-44
(Students must take these units on a letter grade basis, and must attain an overall grade point average of 2.0 or higher in the Depth Subject Matter courses.)	
Environmental Science and Policy 110, 160, 164, 168A.....	16
Environmental Science and Policy 166 or Political Science 187.....	4
Environmental Science and Policy 161 or 173*.....	4
Environmental Science and Policy 171 or 179**.....	3-4
Environmental Science and Policy 178 or Community and Regional Development 160.....	4

Select one from Sociology 106, Statistics 100, 103, 108, Economics 140.....	4
Economics 100 or Agricultural and Resource Economics 100A.....	4-5
Agricultural and Resource Economics 175 or 176.....	4

* Students in the City and Regional Planning area of specialization should enroll in Environmental Science and Policy 173; all others enroll in Environmental Science and Policy 161.

** Students taking Environmental Science and Policy 179 are strongly encouraged to take Environmental Science and Policy 179L concurrently.

Areas of Specialization (choose one)17-20

Advanced Policy Analysis Option	
Political Science 102, 105, 108, or 155.....	4
Political Science 164, 165, or 170.....	4
Environmental Science and Policy 165, Political Science 175.....	4
Environmental Science and Policy 168B....	4
Civil and Environmental Engineering 153, Agricultural and Resource Economics 106, Agricultural Systems and Environment 121, or Economics 130.....	4

City and Regional Planning Option	
Applied Biological Systems Technology 180, Agricultural Management and Rangeland Resources 132.....	3-5
Civil and Environmental Engineering 165, Environmental Science and Policy 163.....	3-4
Soil Science 118 or Environmental Science and Policy 179.....	3-4
Environmental Science and Policy 172.....	4
Political Science 100, 102, Community and Regional Development 152, 156, 157, 171.....	4
(Enroll for Environmental Science and Policy 173 under Depth Subject Matter above.)	

Energy Policy Option	
Environmental Science and Policy 126 or Environmental Toxicology 101.....	4
Engineering 160.....	4
Geology 130.....	3
Environmental Science and Policy 175.....	4
Environmental Science and Policy 163, 167.....	4

Environmental Science Option	
Students choosing the Environmental Science area of specialization must consult with a faculty adviser to identify an emphasis within this specialization and to select suitable courses. Possible areas of emphasis are biological conservation, pollutants in the environment, ecology, planning in the presence of environmental hazards. If you are considering this area of specialization, please contact the major adviser as soon as possible.	

Transportation Planning Option	
Civil and Environmental Engineering 165....	3
Environmental Science and Policy 167, 168B, 172, 175, Agricultural Management and Rangeland Resources 121, 132, Applied Biological Systems Technology 180.....	8-9
Environmental and Resource Sciences 131.....	3
Environmental Science and Policy 163.....	4

Water Quality Option	
Environmental Science and Policy 172.....	4
Environmental and Resource Science 121, Geology 135.....	3
Hydrologic Sciences 141, 143, Geology 134, Soil Sciences 118.....	3-4

Environmental Science and Policy 151, 155, Environmental and Resource Sciences 100, Hydrologic Sciences 122, Wildlife, Fish, and Conservation Biology 120...3-4

Total Units for the Degree180

Major Adviser. S.I. Schwartz (*Environmental Science and Policy*).

Minor Program Requirements

The faculty for environmental policy analysis and planning offers the following two minors. The Energy Policy minor is for students from any major seeking basic training in energy technology, impacts and policy analysis methods applied to energy systems. The Environmental Policy Analysis minor is for natural and social science students desiring basic training in policy analysis theory and methods.

UNITS

Environmental Policy Analysis.....23-24

Preparation: Economics 1A; basic course in political science.

Environmental Science and Policy 1.....4

Environmental Science and Policy 160, 161, 168A.....13

Environmental Science and Policy 163, 170, 171, 172, 179.....6-8

Minor Adviser. S.I. Schwartz (*Environmental Science and Policy*).

Environmental and Resource Sciences

(College of Agricultural and Environmental Sciences)

Faculty. See under departments of Agricultural and Resource Economics, Agronomy and Range Science, and Land, Air and Water Resources.

The Major Program

The environmental and resource sciences major is a program for study of the biological, chemical, and physical features of environmental resources, and the economical and social considerations associated with their use, conservation, protection, and management and restoration. Students who choose this major include those with an interest in careers associated with environmental resource utilization and management, as well as those pursuing post-baccalaureate, academic, or professional training.

The Program. The curriculum for the major provides flexibility in meeting individual needs, interests, and objectives. At the same time, certain courses are required in the basic physical and biological sciences areas. Upper division general environmental resource sciences courses, a resource economics course, and a specified number of units of environmental and resource-oriented courses are required for all students in the major. Students select environmental and resource-oriented courses in consultation with and approval of the student's adviser. Considerable care should be taken to ensure effective utilization of the flexibility of the major, and to meet individual academic and career objectives. Students may specialize their study by selecting one of the options within the major or, in consultation with their adviser, pursuing other specializations.

Internships and Career Alternatives. Positions now held by graduates in environmental and resource sciences are quite varied, but many are employed as resource analysts and planners as well as technical and environmental specialists with government agencies, municipalities, and private firms. A significant proportion of graduates undertake further studies leading to advanced degrees in resources, the environment, and related fields.

B.S. Major Requirements:

UNITS

Written/Oral Expression0-8
See College requirement

Preparatory Subject Matter53-69

Biological Sciences 1A-1B-1C15

Chemistry 2A-2B10

Economics 1A5

Environmental Toxicology 10.....3

Geology 1 or 503-4

Environmental and Resource Sciences 60.....3

Mathematics 16A-16B or 21A-21B6-8

Agricultural Management and Rangeland Resources 21, 121, Engineering 5, Computer Science Engineering 10, 153-4

Physics 1A-1B or 7A-7B-7C or 9A-9B-9C—see option requirements6-12

Physics 7A-7B-7C or 9A-9B-9C required for Air option.

Statistics 13 or 100 or 102.....4

Breadth/General Education.....18-24

Satisfaction of General Education requirements; additional units in social sciences and humanities to total 24 units.

Depth Subject Matter24-27

Written expression (in addition to college requirement), English 101, 104A, 104B, 104C, 104D, 104E, or 104F.....4

Agricultural and Resource Economics 147 or 1483-4

Atmospheric Science 60 or Environmental and Resource Sciences 131.....3-4

Soil Science 1004

Environmental and Resource Sciences 100 or 121.....3-6

Agricultural Management and Rangeland Resources 101, Environmental Science and Policy 161, 179; Environmental Toxicology 138, Geology 134, Nature and Culture 120, Political Science 107, 171 or Wildlife, Fish, and Conservation Biology 1543-4

Agricultural Management and Rangeland Resources 130, Entomology 104, Environmental and Resource Sciences 144, Environmental Science and Policy 100, Evolution and Ecology 101, or Plant Biology 117 or 142.....3-4

Atmospheric Science 1923

Areas of Specialization (choose one)

Air Resource Option26-28

Directed towards a general understanding of the atmosphere as a finite resource and of environmental problems currently faced by humankind. The option provides a broad understanding of the physical and chemical properties of the atmosphere, including the impacts of air pollution and global climate change. Employment opportunities include positions within federal, state, and county agencies concerned with environmental quality and with private companies.
Atmospheric Science 30, 110, 116, 124, 13316
Environmental Science and Policy 110.....4
Choose two from Atmospheric Science 115, 149, 160; Environmental and Resource Sciences 131, 173, 185, 186; or Environmental Science and Policy 1166-8

Unrestricted electives (to total 180)25-52

Environmental Resources Option.....18-26

For the general study of the physical, chemical and biological features of renewable natural resources, and the economic and social considerations associated with their use, protection and management. For those who plan careers associated with resource utilization and management, and those pursuing post-baccalaureate, academic, or professional training.
Choose at least two from Soil Science 102, 111, 112, 118; Geology 130, 1346-9
Choose at least two from Atmospheric Science 116, 124, 133, 160; Environmental Toxicology 131, 1386-7

Unrestricted electives (to total 180)25-52

Environmental Resources Option.....18-26

For the general study of the physical, chemical and biological features of renewable natural resources, and the economic and social considerations associated with their use, protection and management. For those who plan careers associated with resource utilization and management, and those pursuing post-baccalaureate, academic, or professional training.
Choose at least two from Agricultural Management and Rangeland Resources 132; Environmental and Resource Sciences 136, 144, 173, 185, 186; Geology 135; Hydrologic Science 134, 141, 145...6-10

Choose at least two from Agricultural Management and Rangeland Resources 132; Environmental and Resource Sciences 136, 144, 173, 185, 186; Geology 135; Hydrologic Science 134, 141, 145...6-10

Unrestricted electives (to total 180)25-60

GIS and Remote Sensing Option.....26

Conceptual and practical training in the application of remote sensing technology and geographical information systems to natural resource assessment and to monitoring human impacts on the environment. Appropriate training for those seeking employment as GIS specialists with natural resource management agencies or environmental consulting firms.

Environmental and Resource Sciences 105, 185, 186; Applied Biological Systems Technology 180, 181, 182.....26

Unrestricted Electives (to total 180).....25-52

Hydrobiology Option32-35

Training in the biological aspects of water resources focusing on the understanding and protection of polluted and unpolluted water systems; the structure, function, and principles of aquatic systems. Graduates may seek employment with state and federal agencies such as Water Resources Control Board, Department of Fish and Game, Department of Water Resources, or consulting firms concerned with environmental impacts.

Choose 28-35 units from Entomology 116; Environmental and Resource Sciences 136; Environmental Science and Policy 123, 124, 151, 155; Environmental Toxicology 101; Geology 116, 135, 139; Hydrologic Science 134, 141; Plant Biology 118, 178; Soil Science 102; Wildlife, Fish, and Conservation Biology 120, 120L, 123, 15328-35

Unrestricted Electives (to total 180).....16-50

Land and Water Management Option17-29

A broad background in management of soil and water resources in both natural and agricultural ecosystems. Emphasis on analysis of soils and plants for estimating crop nutrient requirements and principles of irrigation and drainage of agricultural land. Appropriate for those seeking employment with state and federal agencies or with agriindustry.

Choose at least two from Soil Science 102, 105, 109, 111, 118, 1208-13

Choose at least two from Hydrology 110, 124, 134, 141, 143, 1446-12

Choose at least one from Agricultural Management and Rangeland Resources 132; Environmental and Resource Sciences 144, 173; Geology 134, 1353-4

Unrestricted Electives (to total 180).....22-61

Plant Environmental Interactions Option.....22-28

Provides background in plant functioning and allows integration of biological and environmental science to provide understanding of natural and managed ecosystems. (Note: Chemistry 8A, 8B prerequisite to Plant Biology 111 and 112.)
Choose 23-28 units from Agricultural Management and Rangeland Resources 130, 131; Atmospheric Science 133; Environmental and Resource Sciences 144, 173; Environmental Science and Policy 123, 155; Hydrologic Science 124; Plant Biology 111, 111D, 111L, 112, 112D, 117, 141, 142, 157, 158; Soil Science 109, 111, 11223-28

Unrestricted Electives (to total 180).....23-55

Total Units for the Major180

Major Adviser. J. Stasulat (South Hall).

Advising Center for the major is located in 148 Hoagland Hall (530-752-1669).

Related Courses. See courses listed under Agricultural and Resource Economics, Agricultural Manage-

ment and Rangeland Resources, Animal Science, Entomology, Environmental Biology and Management, Environmental Science and Policy, Environmental Toxicology, Evolution and Ecology, Geography, Geology, Hydrologic Science, Plant Biology, Range Science, Soil Science, Wildlife, Fish, and Conservation Biology.

Courses in Environmental and Resource Sciences (ERS)

Questions pertaining to the following courses should be directed to the instructor or to the Resource Sciences Teaching Center, 148 Hoagland Hall (530-752-1669).

Lower Division Courses

6. Map Reading and Remote Sensing (3)

Lecture/discussion—3 hours. Basic skills in map reading, map grid systems, projections, aerial photography, photogrammetry, remote sensing sensors and platforms; the role of cartography and remote sensing in environmental analysis.—I. Bahre

10. California: The State (3)

Lecture—3 hours. Prerequisite: introductory geology or geography recommended. Introduction to geomorphology, physiography and natural resources of California. Interrelated impacts of terrain, climate and resources upon essential human activities. Analysis of the fundamental concepts and methods of inquiry guiding existing resource management policies. GE credit: SocSci.—III. (III.) Stasulat

10G. California: The State (Discussion) (1)

Discussion—1 hour; brief essays. Prerequisite: course 10 concurrently. Small group discussion of topics assigned for course 10. Preparation and discussion of essays. GE credit with concurrent enrollment in course 10: Wrt.—III. (III.) Stasulat

60. Global Environmental Interactions (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: high school algebra and chemistry or biology. Relationships among climate, hydrology, biogeochemical cycles and vegetation distribution in diverse landscapes and biomes. Emphasis on physical, chemical, and biological processes affecting ecosystems from the poles to the equator. GE credit: SciEng, Wrt.—II. (II.) Southard, Zasoski

92. Resource Sciences Internship (1-12)

Internship—3-36 hours. Prerequisite: lower division standing and consent of instructor. Work experience off and on campus in resource sciences. Internship supervised by a member of the faculty. (P/NP grading only.)

98. Directed Group Study (1-5)

Prerequisite: consent of instructor. Primarily for lower division students. (P/NP grading only.)

99. Special Study for Undergraduates (1-5)

(P/NP grading only.)

Upper Division Courses

100. Principles of Hydrologic Science (4)

Lecture—4 hours. Prerequisite: Chemistry 2B, Mathematics 16B, and Physics 7A or 9A. Topics include hydrology (surface and ground water), hydraulic flow through porous media, water in the soil-plant-atmosphere continuum, water quality, flow through open channels, and representative water-resource problems. GE credit: SciEng.—I. (I.) Grismer

100L. Principles of Hydrologic Science Laboratory (2)

Laboratory—3 hours; discussion—1 hour. Prerequisite: course 100 concurrently. Principles governing water transport in pipes, soil, and rainfall runoff. Water quality concerns associated with salinity and contamination. GE credit with concurrent enrollment in course 100: Wrt.—I. (I.) Grismer

105. Principles of Cartography for GIS (4)

Lecture—2 hours; laboratory—6 hours. Properties and components of maps. Compilation and generalization of base-map data; projections; coordinate systems; reference ellipsoids; symbolization and processing of map data; cartographic design; typography; map production; and cartographic and

photographic equipment utilized in producing maps.—III. (III.) Bahre

121. Water and Society (3)

Lecture—2 hours; discussion—1 hour. Prerequisite: Physics 10 or Geology 1. The role of water as an essential natural resource in contemporary society. Aspects of the scientific method, including descriptions of natural phenomena, measurement techniques, and predictive models. Supply and use of water for municipalities, agriculture, industry, wildlife and recreation. GE credit: SciEng, Wrt.—I. (I.) Silk

131. Air as a Resource (3)

Lecture—2 hours; discussion—1 hour. Prerequisite: Chemistry 10. Degradation of the atmospheric resource, historical aspects and effects of air pollution examined. Evaluation of primary gaseous and particulate pollutants and discussion of their impact. GE credit: SciEng, Wrt.—II. (II.) Flocchini

136. Chemistry of the Hydrosphere (3)

Lecture—3 hours. Prerequisite: Chemistry 2B and an upper division course in soil science, hydrologic science, geology, or limnology. Chemical characteristics of water in the hydrologic cycle. Understanding processes and conditions regulating chemical composition of natural waters with particular emphasis on dissolved mineral constituents. Not open for credit to students who have completed Water Science 180 or Hydrologic Science 136. (Former course Hydrologic Science 136.)—III. (III.) Tanji

140. Culinary and Medicinal Herbs (3)

Lecture/discussion—3 hours. Prerequisite: Biological Sciences 1C. Growth, identification, cultivation, and use of common culinary and medicinal herbs; herbal plant families; effects of climate and soils on herbs; herbal medicine; ecology and geography of herbs; herb garden design; secondary chemistry of active compounds. (Same course as Plant Biology 140.)—III. Bledsoe.

141. Role of Fire in Natural Ecosystems (4)

Lecture/discussion—4 hours. Prerequisite: Biological Sciences 1B and 1C, general ecology or environmental science course, upper division or graduate standing or consent of instructor. Fire regimes and roles in major North American vegetation types, especially in the west. Physics of fire, fire effects on organisms and ecosystem functioning, reconstructing fire histories, fire in resource management; and fire use by indigenous people.—II. Barbour

144. Trees and Forests (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: Biological Sciences 1C. Biological structure and function of trees as organisms; understanding of forests as communities and as ecosystems; use of forests by humans; tree phenology, photosynthesis, respiration, soil processes, life histories, dormancy, forest biodiversity, and agroforestry. (Same course as Environmental Horticulture 144 and Plant Biology 144.)—I. (I.) Barbour, Berry, Bledsoe

173. Humans and Vegetation Change (4)

Lecture—3 hours; term paper. Prerequisite: course 60, Geography 1, Environmental Science and Policy 30, or Biological Sciences 1C. Role of humans in modifying the earth's vegetation. Emphasis on cultural-historical and ecological approaches to the evolution of wild landscapes, factors of plant distribution, mapping of vegetation, world vegetation patterns, human impact on major regions, and case studies of land-use and vegetation change.—II. (II.) Bahre

185. Aerial Photo Interpretation and Remote Sensing (4)

Lecture—2 hours; laboratory—4 hours. Basics of remote sensing and photogrammetry, grids and map projections, aerial photo interpretation, sensors and platforms for aerial and space photography and non-photographic imaging systems, aerial thermography, microwave sensing, and introduction to remote sensing applications.—I. (I.) Bahre

186. Environmental Remote Sensing (3)

Lecture—3 hours. Prerequisite: Mathematics 16B and Physics 7C or 9B; upper division standing. Overview of satellite, airborne, and ground-based remote sensing. Building on properties of EM Radiation, isotropic and non-isotropic scattering and

absorption, examines applications in hydrologic processes, weather and climate, ecology and land use, soils, geology, forestry, and agriculture. Not open for credit to students who have taken Hydrologic Science 186. (Former course Hydrologic Science 186.)—II. (II.) Ustin

186L. Environmental Remote Sensing Lab (2)

Laboratory—4 hours. Prerequisite: course 186 with grade of C or better. Computer based analysis and visualization of digital images and image processing techniques. Continuation of course 186 providing theory and direct experience in digital image processing.—III. (III.) Ustin

192. Resource Sciences Internship (1-12)

Internship—3-36 hours. Prerequisite: completion of 84 units and consent of instructor. Work experience off and on campus in resource sciences. Internship supervised by a member of the faculty. (P/NP grading only.)

194H. Senior Honor Thesis (2-6)

Independent study. Prerequisite: senior standing, overall GPA of 3.25 or higher and consent of master adviser. Two or three successive quarters of guided research on an environmentally related subject of special interest to the student. (Deferred grading only, pending completion of thesis.)

198. Directed Group Study (1-5)

(P/NP grading only.)

199. Special Study for Advanced Undergraduates (1-5)

Prerequisite: consent of instructor. (P/NP grading only.)

The Program of Study

Environmental Science and Policy is a teaching and research department offering courses, workshops, and directed group study classes that focus on the complex problems of human-environment relations.

The department offers Bachelor of Science degrees in Environmental Biology and Management and in Environmental Policy Analysis and Planning. Courses in Environmental Science and Policy also supplement major programs in a wide variety of established disciplines, although highly motivated undergraduates who find existing majors unsuited to their educational objectives are encouraged to contact the chairperson and faculty of the department regarding individual majors in the College of Agricultural and Environmental Sciences (see Individual Major).

Current Information. Through its continuing contacts with many other departments and teaching divisions on the campus, the department develops each year a variety of special courses and workshops that cannot be listed here. Check with the department office and with the expanded course description handbook of the College of Agricultural and Environmental Sciences for up-to-date information about courses.

Graduate Study. The faculty of the department offers the M.S. and Ph.D. degree programs of the Graduate Group in Ecology, as well as instruction through the graduate programs of the disciplines with which they are associated, such as agricultural and resource economics, evolution and ecology, sociology, political science, civil engineering, and anthropology. Further information about graduate programs in ecology should be obtained from the chairperson of the Graduate Group in Ecology.

Graduate Adviser. K. J. Rice (*Ecology*).

Courses in Environmental Science and Policy (ESP)

(Formerly courses in *Environmental Studies*.)

Lower Division Courses

1. Environmental Analysis (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: English 1; English 102, Economics 1A, 1B, Biological Sciences 1A, and Political Science 1 recommended. Analysis of the biological, physical, and social interactions which constitute environmental problems, such as food production, energy development and conservation, pollution, and the conservation of natural environments. Emphasis on analysis of problems and the consequences of proposed solutions.—III. (III.) Holyoak

10. Introduction to Environmental Studies (4)

Lecture—3 hours; discussion—1 hour. Prerequisite: elementary biology recommended. Survey of the importance of ecology and systems behavior for man-environment relationships and management problems. Resources, environmental quality, urban dynamics, environmental perception, and conservation are covered. Includes several integrative case studies, and features individual reading in environmental problems. Not open for credit to students who have taken course 1. GE credit: SciEng, Wrt.—I, III. (I, III.) M. Schwartz

30. The Global Ecosystem (3)

Lecture—3 hours; 1 one-day field trip. Prerequisite: Biological Sciences 10 or Geography 1 or Anthropology 2. The interaction of climate and biotic adaptation and the production of ecological systems. The limits and opportunities for human use of different natural environments, and human utilization of the earth's biotic resources. GE credit: SciEng.

30G. The Global Ecosystem: Laboratory/Discussion (2)

Laboratory/discussion—3 hours. Prerequisite: course 30 concurrently. Presents natural history skills in plant and animal identification, soils, and geology. Emphasis on the diverse organisms and habitats of Northern California. GE credit with concurrent enrollment in course 30: Wrt.

92. Internship (1-12)

Internship—3-36 hours. Prerequisite: lower division standing and consent of instructor. Work experience off and on campus in all subject areas offered in the College of Agricultural and Environmental Sciences. Internship supervised by member of the faculty. (P/NP grading only.)

98. Directed Group Study (1-5)

Prerequisite: consent of instructor. Primarily for lower division students. (P/NP grading only.)

Upper Division Courses

100. General Ecology (4)
