Conventions

(a) Consonants, vowels and diphthongs

Syllable-final plosives [p, t, k] are unreleased, i.e. [p̚, t̚, k̚]. Syllable-initial [t, tʰ, n] and final [t, n] are apico-laminal denti-alveolar; syllable-initial [s, ts, tsʰ] are laminal alveolar; and syllable-initial [l] is apical denti-alveolar or apical alveolar. [n] rarely occurs in syllable-initial position; syllable-initial [ŋ] is often deleted. [i, y, ε, œ, a, ɔ, u] occur in open syllables as well as syllables closed by a plosive or nasal. In open syllables, [i, y, u] are about cardinal; [ε] = [ɛ̞]; [œ] = [œ̞]; [ɔ] = [ɔ̞]; and [a] = [a̞]; [i, y, u, ε, œ, ɔ, a] are lowered in syllables closed by a plosive or nasal. [i, y, ε, œ, a, ɔ, u] are long in open syllables and short (a third shorter) in syllables closed by a plosive or nasal. [ɪ, ø, ɐ, ʊ] which occur only in syllables closed by a plosive or nasal are extra-short (two thirds shorter than [i, y, ε, œ, a, ɔ, u] in open syllables). All diphthongs are long; the first elements in [ai, au, ɔi, ui, iu, eu] are longer than the second elements; and the first elements in [ɐi, ɐu, ei, øy, ou] are similar to the second elements in length. [ai] = [ai̯]; and [eu] = [eu̯]. The alternative transcriptions for vowels and diphthongs given above differ in whether these length distinctions are indicated.

(b) Tones

[˦, ˨, ˨˨, ˨˨˨, ˨˨˨˨, ˨˨˨˨˨] (= high; mid; low-mid; low-mid to low, falling; low-mid to high, rising; low-mid to mid, rising) are long tones; [˨] is relatively shorter. The short or extra-short variants of [˦, ˨, ˨˨] occur on syllables closed by a plosive. On a compound-final syllable, [˨, ˨˨] and their variants and [˨] are often replaced by [˨˨].

Orthographic version (non-standard, vernacular)

有一次，北風同太陽嗰度拗緊邊個叻嘞。佢哋啱啱睇到有個人行過，哩個人着住件大褸。佢哋就話嘞，邊個可以整到哩個人除咗件褸呢，就算邊個叻嘞嘞。於是，北風就搏命咁吹。點知，佢越吹得犀利，嗰個人就越係啱實件褸。最後，北風冇晒符，唯有放棄。跟住，太陽出嚟晒咗一陣，嗰個人就即刻除咗件褸嘞。於是，北風唯有認輸啦。
