
Special Issue on Operations Research & Optimization

Call for Papers

Optimization is concerned with the analysis and algorithmic aspects of maximizing or minimizing an objective function subject to constraints, often in complex problems in high dimension. Operations research is a problem solving and decision taking technique. It is considered a kit of scientific and programmable rules which provides the management a “quantitative basis” for decisions concerning the operation under its control.

In this special issue, we intend to invite front-line researchers and authors to submit original research and review articles on **Operations Research & Optimization**. Potential topics include, but are not limited to:

- Optimization algorithms
- Optimization models
- Optimization techniques
- Linear and nonlinear optimization
- Convex optimization
- Bayesian optimization
- Combinatorial optimization
- Estimation and optimization
- Global optimization
- Stochastic optimization
- Integer programming
- Simulation optimization
- Integrated methods for optimization
- Numerical optimization techniques
- Optimization in large scale problems
- Optimization in logistics
- System planning and optimization
- Optimization methods in management science
- Queuing theory and revenue management
- Facility location and vehicle routing
- Supply risk analysis
- Decision support

Authors should read over the journal’s [For Authors](#) carefully before submission.

Prospective authors should submit an electronic copy of their complete manuscript through the journal's [Paper Submission System](#).

Please kindly notice that the “**Special Issue**” under your manuscript title is supposed to be specified and the research field “**Special Issue – Operations Research & Optimization**” should be chosen during your submission.

According to the following timetable:

Submission Deadline	February 23rd, 2023
Publication Date	April 2023

For publishing inquiries, please feel free to contact the Editorial Assistant at submission.entrance1@scirp.org
