## ABSTRACT

Military and intelligence services use different types of energy weapons. Application of these energy weapons falls in wide range including, synthetic telepathy, modifying military personnel mode and behavior in their or enemy troops. The behavior changes could be inducing fear and anxiety in enemy troops by weapon mounted in helicopter, air planes, installed on ground or on satellites rotating earth. Inducing modes such has increasing brevity or self-confidence for their own troops during wars can be their goals too. All of them are done by sending ULF signals to skull and body to manipulate neural system according to their objective. Brain enclosed in skull which contains calcite minerals especially with crystals by high resonance potential in ears section. They can use voice to skull technology from far distance to communicate between military personnel by synthetic telepathy. Brain itself can produce lots of electrical signals which can be seen in EEG test of brain. By resonating skull, ear bones and agitating body neural system and changing brain natural electrical frequency they can even induce synthetic dreams or nightmare in targeted personals for mind control purpose by programming the individual for upcoming day. Apart from these energy weapons they developed other types which I call them Super weapons and can be used for triggering earthquakes, erupting volcanoes, triggering landslide, and sinkhole or snow avalanches. Also they can resonate structures mainly built with concrete which contains resonant sand and gravel crystals inside the concrete and finally collapse concrete building by fracturing it. Most important task here is obtaining building collapse resonance frequency considering applied steel bars in them to collapse individual building. Main focus of this paper is about application of super weapons for Earth disasters induced by superweapons.

KEYWORDS: Super weapon; Energy weapon; Earthquake; Landslide; Sinkhole; Snow Avalanche

## INTRODUCTION

HAARP or the High Frequency Active Auroral Research Program was originated as an ionospheric study program equally sponsored by the U.S. Air Force, the U.S. Navy, the Defense Advanced Research Projects Agency (DARPA), and the University of Alaska Fairbanks.  The main objective of this projects was to study the ionosphere and explore the possibility of mounting ionospheric improvement technology for radio communications and reconnaissance. HAARP (Figure 1 and 2) is a high-power, high-frequency transmitter applied for investigation of the ionosphere. A high-power radio frequency transmitter (IRI) device functions in the high frequency (HF) band. The IRI job is to briefly stimulate a restricted area of the ionosphere. Supplementary instruments includes a VHF and a UHF radar, a fluxgate magnetometer, a *digisonde* (an ionospheric sounding instrument),

and a stimulation magnetometer which are used to investigate the physical developments that happen in the agitated section. Lots of videos, interviews and debates have been published on websites and youtube that HAARP is used for weather modification like creating storms and hurricanes. Hurricane Katrina, and severe storms in Florida and Texas were due to weather manipulation. The main reasons which can be speculated for inducing hurricane and storms are stimulating US economy through construction and insurance industry and depopulation of poor people. However less discussion is conducted about ability of HAARP and other super (energy weapons) in inducing earthquakes, landslides, sinkholes, snow avalnches and activating volcanoes due to lack of knowledge and understanding the mechanisms. Even, usually less insiders can explain and comprehend all aspects of these projects. Secret projects conducted in places such as Los Alamos national laboratory, US Airforce, Area 51… etc. are classified and co-workers just work on a special part of one project without knowing what other colleagues do in other room. Then all findings are assembled by special person(s) without knowing the details and final product which is a super weapon or energy weapon is created finally. Final product would be similar to closed source code of windows program that operators use it based on commands receiving from top without knowing the out coming results.

## MECHANISM OF ACTIVATION OF EARTHQUAKE FAULTS BY SUPERWEAPONS

A Key crystal which create mountain belts and fault splits, located in the tectonic plates is quartz (largely in igneous, metamorphic and sedimentary rocks by significant amount) and calcite (primarily in sedimentary rocks). These two kinds of crystals have been organized in hexagonal structure and indicate substantial resonance potential as a result of their hexagonal structure. Dependency among large quartz quantity and earthquakes have been studied by Lowrey and Pérez-Gussinyé and appeared in nature journal, 2011. Quartz and calcite minerals generate resonance because of magnetosphere irregularity and modification in adjacent electromagnetic frequency (EMF) especially extremely low frequency waves (ELF). The alteration in Earth magnetosphere can be as a result of natural reason like effect of radiation in solar system or artificial that can be done by super (energy) weapons. These alteration can cause resonance in mentioned hexagonal crystals leading to earthquakes (See video 1 and 2). Crack dispersal in earthquake faults will shape based on fractal geometrical pattern (As can be seen in sand arrays in video 2). It means formation and activation of micro fractures in minor scale results in formation or stimulation of macro-fractures and lastly movement of fault lines in main trend. Quartz or calcite resonance can induce bond fractures in small scale and form micro-fractures that activate continental and oceanic faults in bigger scale and trigger earthquakes. Chief filling material in the middle of fault or fracture walls in active faults composed of gouge and breccia which have substantial amount of quartz. These fillers act as a lubricant and play important role in activating faults. Usually normal faults are activated easier than reverse and lateral sliding faults. However if earthquake zone would have composed of different types of fault complex, movement of normal faults will initiate movement of reverse and lateral sliding faults. HAARP and other super (energy weapons) can modify own installed antenna arrangement in defined geometrical array and radiate ELF or ULF to ionosphere in special elevation which finally relay backs to earth surface and start to resonate fault materials for activation and triggering of earthquake.

# EARTHQUAKE MAGNETIC PRECURSORS RECORDED FROM SPACE SHOWING SUPERWEAPON EARTHQUAKE INDUCEMENT
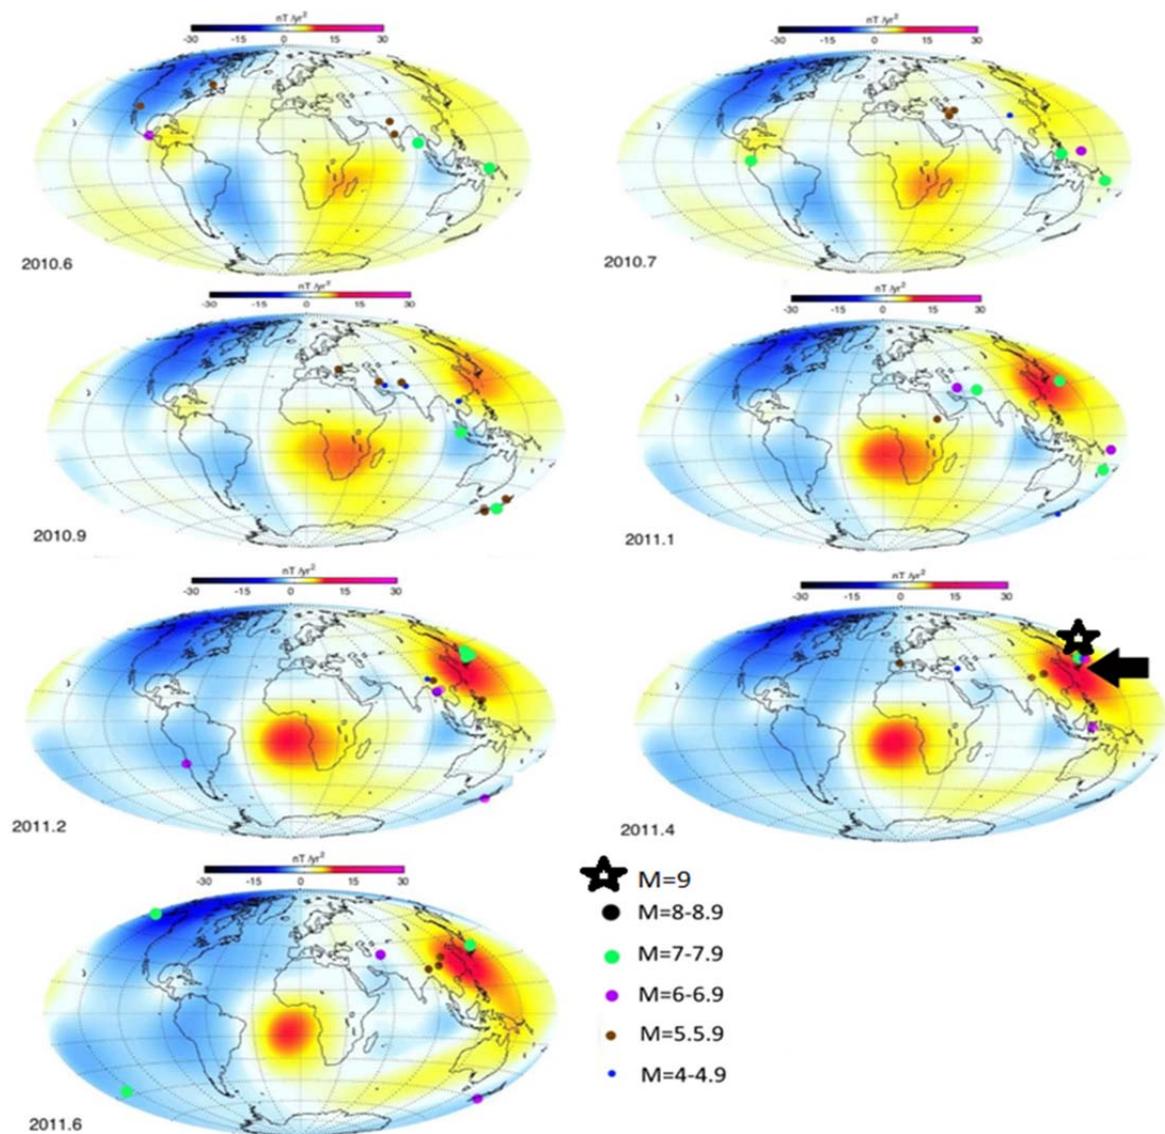

The magnetic field of Earth is produced principally by a present ocean of melted, whirling liquid iron in external core of Earth situated at 3000 km underneath surface. It yields electrical currents comparable to dynamo and consequently a persistently fluctuating electromagnetic field. The

acknowledgement of electromagnetic activisms earlier than fault split or volcanic eruptions, typically has been measured as a modest and functioning technique for detecting the crustal activities. Seismo-electromagnetic incidences have been suggested as a promising occurrence for short term earthquake forecast. The Swarm mission has delivered the greatest cutting-edge survey of the geomagnetic field and its sequential development that helps in new identifications of the Earth system. Swarm was launched in 2010 by European space agency (ESA).The geomagnetic inconsistencies before earthquakes are produced by momentary existence of earthquake-associated high conductivity materials or the existence of electrical current beside faults. The Figure 3 displays differences in the amount at which Earth's magnetic field fortified and faded amid August 2009 and January 2010 acquired from ESA's Swarm mission. Spaces in which variations in the magnetic field have decelerated are presented in blue while areas that variations speeded up are presented in red. For instance, variations in the field have decelerated near South Africa but variations speeded up over South Pole and Haiti. The Haiti country in Figure 3 displays quick localized field variations in light red color that is related to Haiti earthquake in January 2010 with magnitude of seven (Mw=7). This earthquake led to 300000 fatalities. It can be inferred that this area was targeted by super (energy weapon) ELF-ULF radiation to activate earthquake fault.

**Figure 3:** Earth magnetic field variations near to Haiti around earthquake time, produced from Swarm mission, see black arrow for light red color (source: DTU space; Danish technical university space program).

Also Changes in magnetic field or precursors for Tohoku earthquake seen from space detected by Swarm mission is visible in Figure 4 for amid July 2010 and July 2011. This period covers before and after Tohoku mega earthquake with magnitude of nine (Mw=9) that caused Fukushima disaster and additional 15000 fatalities in March 2011. Irregularities in magnetic field typically are perceived in recording stations earlier than earthquake. Information about strange pattern in logged geomagnetic diurnal trace in Z component was showing an extraordinary event happening inside the 3 years long recorded normal background. It was inferred that this irregularity is not as a result of global geomagnetic turbulences, but practically connected to the Mw=9.0 Tohoku earthquake. From Swarm map, it can be realized that fluctuations in magnetic field started to speed up in red color during few months earlier than earthquake, close to Tohoku region. These irregularities in magnetic field were documented by ground stations too. Geomagnetic diurnal variations in Z component could basically be obstructed by inhomogeneous streams in the Ionosphere, somewhere that these currents and situation could only endure for merely few days. It means Tohoku region was targeted by superweapons to create earthquake and economic instability in Japan, the world third economy and one of main exporters. Additional earthquakes with magnitude among 4 and 9 have been acquired from NOAA earthquake database and were proposed in Figure 4 for judgement in view of earthquake susceptible regions.

**Figure 4:** Earth magnetic field variations near to Tohoku earthquake occurrence time created by Swarm mission. Note: Tohoku Earthquake (March 2011) has been projected in April Figure and compare it to May and July 2010 (source: DTU space; Danish technical university space program).

ULF emission waves can be identified in greater epicentral distance for earthquakes with estimated magnitude of 6 or above and can propagate in the Earth ionosphere channel into long distances. These ULF radiations propagate before earthquake in longer periods of time associated to irregularities created by ionosphere streams enduring for only few days. The geomagnetic anomalies, containing ULF emissions can be documented in ground stations and newly can be detected from space through Swarm mission. These are very favorable precursors to forecast earthquakes in time periods nearer to earthquake's happening time. Even though investigation by Swarm space data covers massive areas in quicker format, nevertheless by grouping with ground stations data can result in further precise forecast of earthquakes.

## CAN VOLCANOES AND SUPER VOLCANOES BE ACTIVATED BY SUPER WEAPONS?

The answer is yes. Author performed a primary research on mechanism of activating volcanoes by super weapons but stopped it due to getting a cold feet in obtaining secrets that can cause worldwide cataclysmic phenomena which appears more dangerous and dooms day like occurrence in contrast to earthquakes which happen and impact local scale. Just in few words volcano activation by super weapons happens based on combination of levitation of Iron bearing minerals and magma content using magnetism from depth of mountains, congestion of available space due to pressurized water vapor and ash that can be described by fluid mechanics and finally leading to ash and molten magma eruption in space.

## CAN LANDSLIDES, SINKHOLES AND SNOW AVALANCHES BE TRIGGERED BY SUPERWEAPONS?

The answer is yes. As it can be seen in sand particles response to ELF-ULF resonance (Video 2), they change pattern according to frequency range which happens in fractal geometry shapes. Most of soils in some places have been composed of sand particles which contain hexagonal crystals such as Quartz and Calcite. Even if clay or silt particles be present at the soil formation, resonance of mentioned crystals can cause micro- fracture due to shear strength loss and develop in larger scale to slope slide (Land slide). Similar analogy applies to sinkholes triggered by Superweapons Fig.5 and Fig.6 which happened in Ottawa-Rideau Street, Canada and Fukuoka in southwestern Japan. In these scenarios resonance of soil particles results in shear strength loss and subsidence. Snow particles usually are formed from snow crystals which have hexagonal structure, resonance and vibration by ULF waves can trigger snow avalanche which happened in British Columbia of Canada few years ago.

## GOALS THAT CAN BE ACHIEVED USING SUPER WEAPONS FROM TRIGGERING EARTHQUAKES

It is almost one year has passed that biggest bomb of United States, nick named mother of all bombs was tested in Afghanistan mountainous region. Generally different goals can be achieved by inducing earthquakes through super weapons. Testing scale of triggered earthquakes and their damage in different lithologies, fault mechanisms, and targeted countries can be some of them. However the main achievement is obtaining superiority in military scale by advanced technology and creating fear in enemies from this point of view. In other hand it can be used for economic war, trade war, and covert destabilizing countries by destroying them and getting rebuilding contracts with economic benefits in those countries. Other reasons which came into mind but it is hard to accept is depopulation of poor countries with low contribution to world balance that can be seen in illuminati agenda, a good example can be Haiti earthquake which happened in poorest country of American continent (See Table 1).

**Table 1:** Speculated list of earthquakes which were triggered by super weapon (Energy weapon) with possible reason.

| Earthquake | Year | Magnitude $(M_w)$ | Casualties | Reason |
|---|---|---|---|---|
| Haiti | 2010 | 7 | 300000 | Depopulation of poorest country in American continent |
| Japan | 2011 | 9 | 15000 | Economic or trade war |
| USA (Napa area) California | 2014 | 6 | 1 Killed 200 Injured | Experimenting superweapons and stimulating related business like construction and insurance |
| USA (Cook Inlet region of Alaska) | 2016 | 7.1 | 1 injury | Experimenting superweapons and stimulating related business like construction and insurance |
| Central Italy | 2016 | 6.2 | 299 Killed 388 Injured 4500 Homeless | Experimenting superweapons and trade war |
| USA (Northern California off coast) | 2016 | 6.5 | 0 | Experimenting superweapons, Experimenting superweapons, Stimulating related business like construction and insurance |
| Mexico city | 2017 | 7.1 | 369 | Economic or trade war |
| Iran (Khorasan) | 2017 | 5.8 | 2 | Destabilizing enemy country and creating chaos |
| Iran (Kermanshah) | 2017 | 7.3 | 630 | Destabilizing enemy country and creating chaos |
| Iran (Kermanshah) | 2017 | 7.3 | 630 | Destabilizing enemy country and creating chaos |
| USA (Los Angeles) | 2018 | 5.3 | 0 | Experiment of Super weapons with low magnitude Earthquake and Experimenting superweapons |

**Table 2:** Speculated list of volcanoes which was activated by super weapon (Energy weapon) with possible reason

| Volcanic activity | Year | Reason |
|---|---|---|
| Piton de la Fournaise, Reunion at Indian Ocean | 2016 | Experimenting superweapons and creating chaos possibly for example for Airways |
| Sakuraima, Japan | 2016 | |
| Bogoslof Island, Bering Sea | 2016 | |
| Sinabung, Indonesia | 2016 | |
| Turrialba, Costa Ric | 2016 | |
| Mount Etna, Sicily | 2016 | |
| Hawaii | 2018 | |

# CONCLUSION: GOOD, BAD, AND UGLY EFFECTS OF SUPERWEAPONS IN CHANGING EARTH SYSTEM

Superweapons for inducing earthquakes and activating volcanoes, however have developed to enhance strategic power balance in one or two countries but they can be used by different effects. Good application of these superweapons can be inducement of low or moderate earthquakes in earthquake prone areas to release accumulated stress inside faults and prevention of big and disastrous earthquakes. Bad application of these weapons as mentioned can be for economic and trade war, and destabilizing enemy countries. Ugly application of these weapons that might be in illuminati agenda would be depopulation of earth by inducing earthquake in mega cities especially in third world countries and activating volcanoes and super volcanoes which looks like dooms day that everybody in the  world have heard about it from religious or illuminati mind controlled propaganda.
