Supplementary information, Figure S5

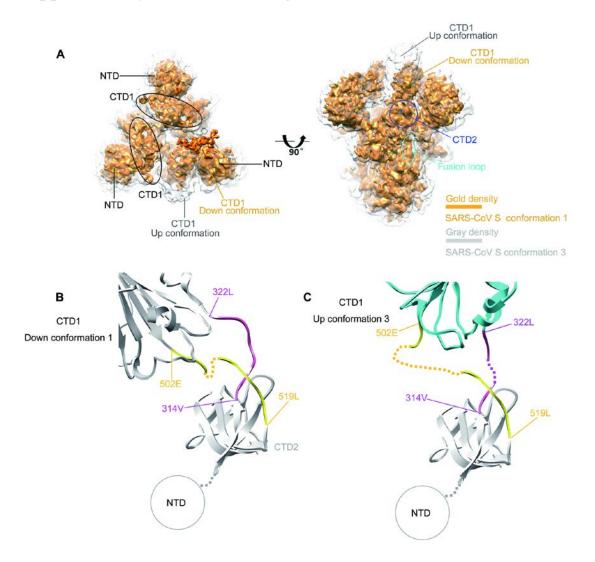

Figure S5 Structural comparisons between conformation 1 and conformation 3 of the SARS-CoV S trimer. (A) Superimposed conformation 1 (gold) and 3 (grey) density maps. Three NTDs and two CTD1s (highlighted by black ellipses) are superimposed well between the two density maps, whereas one CTD1 of the conformation 3 protrudes up compared with the "down" CTD1 of the conformation 1. (B-C) Loops connecting NTD to CTD1 (residues 314-322, magenta) and CTD1 to CTD2 (residues 502-519, yellow) constitute the hinge for the "down" (B) to "up" (C) rotation of the CTD1.
