

Supplementary Fig. S1.

Mapping of the interaction between DNA methyltransferases (DNMTs) and EZH2 . Representation of GST fusions of DNMT1 (a), DNMT3A (b), and DNMT3B (c). *In vitro* translated (IVT) and ^{35}S -labelled full-length EZH2 was incubated with equivalent amounts of the indicated bacterially expressed GST fusions and analysed by SDS-PAGE. In lane 1 of each panel, input 10%, corresponds to 10% of the IVT product used in the GST pull-downs.
