

Supplementary Table 1: Associations between LOX and clinical criteria in breast cancer patients¹⁰, determined by Chi Square.

Sample size n=295	Probability
ER status	p=0.0014
Lymph node status	p=0.2679
High Grade (3 v 2 or 1)	p=0.1117
Size T1-T2 (T1≤2cm v T2>2cm)	p=0.4503
Age (Young <40 v 40-55 yr)	p=0.4965
Distant metastasis-free survival	p=0.1336
Overall survival	p=0.0674
Distant metastasis-free survival (ER-ve only)	p=0.0202
Overall survival (ER-ve only)	p=0.0149
