

Supplementary Figure 5: Role for LOX in invasion under anoxic conditions and in other cell types.

(A) Decreased LOX mRNA levels in antisense (AS) treated cells were verified by semi-quantitative RT-PCR by comparing levels to control (C) cells in normoxia (air) and anoxia.

(B-E) *In vitro* invasion assays were performed using cells treated with LOX antisense or sense phosphorothioate-modified oligonucleotides, or with BAPN, prior to incubation in normoxia (white bars) or anoxia (black bars). Results representative of at least three independent experimental repeats (plotted as mean \pm standard error).
