

Supplemental Figure 1. 1,25(OH)₂D₃ but not retinoic acid induces the expression of CCR10 on CD8⁺ T cells. Naïve T cells (0.7×10^6) were activated with anti-CD3 and anti-CD28 in the presence of medium, 1,25(OH)₂D₃ (1,25D₃, 10 nM), retinoic acid (RA, 10 nM), D₃ (6000 nM) or D₂ (6000 nM), and IL-12 (2.5 ng/ml). The percentage of gated CD8⁺ T cells within the indicated quadrants are shown. The figures show data from a representative experiment of 6–30 with similar results.
