

Supplementary Figure 1. Analysis of lymphatic vasculature in adult *Foxc2*^{+/-} mice. (a,b) Normal lymphatic flow and lymphatic vascular patterning in the skin of *Foxc2* heterozygous adult mice ($n=8$). Functioning lymphatic vessels were visualized after the injection of FITC-dextran. (c,d) Lymphatic vasculature of the ears was stained using antibodies against Lyve-1 (green). Large blood vessels (mainly arteries) were visualized using antibodies against SMA (red). Bar, 250 μm (a,b) and 80 μm (c,d).
