

Supplementary Table 1. Comparison of EAE clinical disease parameters induced by active immunization in WT and CB₂^{-/-} mice.

	WT	CB ₂ ^{-/-}
Number of Mice	12	13
Incidence ¹	75%	100%
Average Day of Onset	13	12
Average Day of Peak	21	21
Average Score at Peak ± SD	1.05 ± 0.6	2.5 ± 0.7 ⁴
Percent Recovery ²	100%	20%
Average Cumulative Disease Score ³	10.5 ± 0.3	59 ± 0.9 ⁴

¹Represents the percentage of mice that developed a clinical score of at least one.

²Represents the percentage of mice that recovered after EAE.

³The cumulative disease score was calculated by adding the disease score from the day of onset to day 40. The values shown are the mean ± SD of all the mice with disease in each group.

⁴The p value 0.001 was calculated between WT and CB₂^{-/-} mice.
