

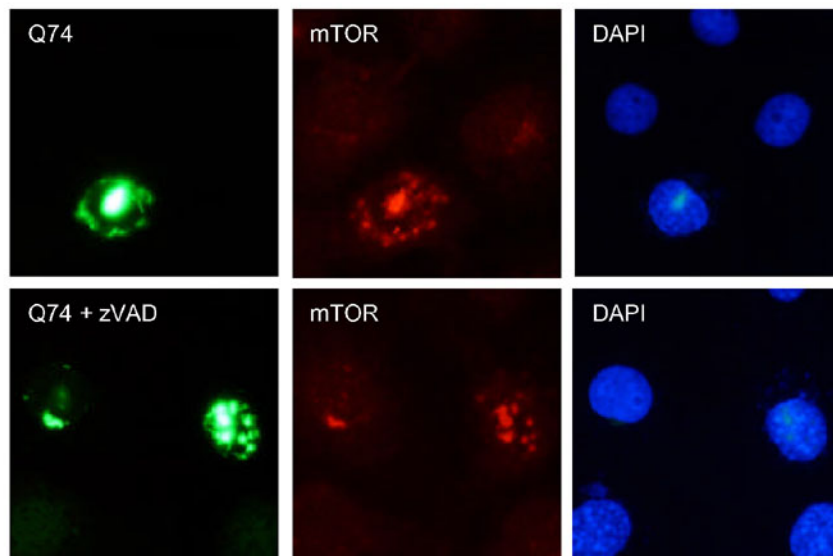

Figure 7

Supplementary figure 7

mTOR colocalises with huntingtin aggregates in non-apoptotic cells.

Immunostaining with anti-mTOR antibody of COS-7 cells expressing Q74 (green) either untreated (top panel) or treated with a pan-caspase inhibitor z-VAD-fmk (bottom panel) shows colocalisation of mTOR (red) with Q74 aggregates in healthy cells as judged by morphology of DAPI-stained nucleus (blue).
