Topline

KFF Health Tracking Poll – July 2020

METHODOLOGY

This *KFF Health Tracking Poll* was designed and analyzed by public opinion researchers at the Kaiser Family Foundation (KFF). The survey was conducted July 14-19, 2020, among a nationally representative random digit dial telephone sample of 1,313 adults ages 18 and older, living in the United States, including Alaska and Hawaii (note: persons without a telephone could not be included in the random selection process). The sample included 292 respondents reached by calling back respondents that had previously completed an interview on the KFF Tracking poll at least nine months ago. Computer-assisted telephone interviews conducted by landline (323) and cell phone (990, including 714 who had no landline telephone) were carried out in English and Spanish by SSRS of Glen Mills, PA. To efficiently obtain a sample of lower-income and non-White respondents, the sample also included an oversample of prepaid (pay-as-you-go) telephone numbers (25% of the cell phone sample consisted of prepaid numbers) as well as a subsample of respondents who are parents of children ages 5 to 17 who had previously completed interviews on the SSRS Omnibus and Sports polls (*n*=101). Both the random digit dial landline and cell phone samples were provided by Marketing Systems Group (MSG). For the landline sample, respondents were selected by asking for the youngest adult male or female currently at home based on a random rotation. If no one of that gender was available, interviewers asked to speak with the youngest adult of the opposite gender. For the cell phone sample, interviews were conducted with the adult who answered the phone. KFF paid for all costs associated with the survey.

The combined landline and cell phone sample was weighted to balance the sample demographics to match estimates for the national population using data from the Census Bureau's 2018 American Community Survey (ACS) on sex, age, education, race, Hispanic origin, and region along with data from the 2010 Census on population density. The sample was also weighted to match current patterns of telephone use using data from the January-June 2019 National Health Interview Survey. The weight takes into account the fact that respondents with both a landline and cell phone have a higher probability of selection in the combined sample and also adjusts for the household size for the landline sample, and design modifications, namely, the oversampling of prepaid cell phones and likelihood of non-response for the re-contacted sample. All statistical tests of significance account for the effect of weighting. The sample of parents with school-age children was weighted by: gender, age, educational attainment, race/ethnicity, and Census region.

The margin of sampling error including the design effect for the full sample is plus or minus 3 percentage points. Numbers of respondents and margins of sampling error for key subgroups are shown in the table below. For results based on other subgroups, the margin of sampling error may be higher. Sample sizes and margins of sampling error for other subgroups are available by request. Note that sampling error is only one of many potential sources of error in this or any other public opinion poll. Kaiser Family Foundation public opinion and survey research is a charter member of the [Transparency Initiative of the American Association for Public Opinion Research](#).

Group	N (unweighted)	M.O.S.E.
Total	1,313	± 3 percentage points
Party Identification		
Democrats	398	± 6 percentage points
Republicans	330	± 6 percentage points
Independents	450	± 6 percentage points
Parent		
Parent of child(ren) under 18	377	± 6 percentage points
Parent of child(ren) with a child who normally attends school	308	± 7 percentage points
Parent/Race		
White Parents	230	± 8 percentage points
Parents of color	136	± 11 percentage points
Voters		
Registered Voters	1,117	± 4 percentage points
Democratic Voters	353	± 6 percentage points
Independent Voters	380	± 6 percentage points
Republican Voters	304	± 7 percentage points
Swing Voters	285	± 7 percentage points
Battleground Voters	419	± 6 percentage points

Notes for reading the topline:

- Percentages may not always add up to 100 percent due to rounding.
- Values less than 0.5 percent are indicated by an asterisk (*).
- "Vol." indicates a response was volunteered by the respondent, not offered as an explicit choice
- Questions are presented in the order asked; question numbers may not be sequential.

All trends shown in this document come from the KFF Health Tracking Polls except for:
01/11: Kaiser Family Foundation/Harvard School of Public Health, *The Public's Health Care Agenda for the 112th Congress* (January 4-14, 2011)

ACA. As you may know a health reform bill was signed into law in 2010, known commonly as the Affordable Care Act or Obamacare. Given what you know about the health reform law, do you have a generally (favorable) or generally (unfavorable) opinion of it? [GET ANSWER THEN ASK: Is that a very (favorable/unfavorable) or somewhat (favorable/unfavorable) opinion?]

	Very favorable	Somewhat favorable	Somewhat unfavorable	Very unfavorable	Don't know/ Refused
