

Dear Fellow Shareholders,

Jamie Dimon,
Chairman and
Chief Executive
Officer

Across the globe, 2022 was another year of significant challenges: from a terrible war in Ukraine and growing geopolitical tensions – particularly with China – to a politically divided America. Almost all nations felt the effects of global economic uncertainty, including higher energy and food prices, mounting inflation rates and volatile markets, and, of course, COVID-19’s lingering impacts. While all these experiences and associated turmoil have serious ramifications on our company, colleagues, clients and the countries in which we do business, their consequences on the world at large – with the extreme suffering of the Ukrainian people and the potential restructuring of the global order – are far more important.

As these events unfold, America remains divided within its borders, and its global leadership role is being challenged outside of its borders. Nevertheless, this is the moment when we should put aside our differences and work with other Western nations to come together in defense of democracy and essential

freedoms, including free enterprise. During other times of great crisis, we have seen America, in partnership with other countries around the globe, unite for a common cause. This is that moment again, when our country needs to work across public and private sectors to lead while improving American competitiveness – which also means re-establishing the American promise of providing equal access to opportunity for all. JPMorgan Chase, a company that historically has worked across borders and boundaries, will do its part to ensure the global economy is safe and secure.

In spite of the unsettling landscape, 2022 was somewhat surprisingly another strong year for JPMorgan Chase, with the firm generating record revenue for the fifth year in a row, as well as setting numerous records in each of our lines of business. We earned revenue in 2022 of \$132.3 billion¹ and net income of \$37.7 billion, with return on tangible common equity (ROTCE) of 18%, reflecting strong underlying performance across our businesses. We also maintained our quarterly common dividend of \$1.00 per share and continued to reinforce our fortress balance sheet. We grew market share in several of our businesses and continued to make significant investments in products, people and technology while exercising strict credit discipline. In total, we extended credit and raised capital of **\$2.4 trillion** for our consumer and institutional clients around the world.

I remain proud of our company's resiliency and of what our hundreds of thousands of employees around the world have achieved, collectively and individually. Throughout these challenging past few years, we never stopped doing all the things we should be doing to serve our clients and our communities.

Adhering to our basic principles and strategies (see sidebar on Steadfast Principles on page 5) allows us to drive good organic growth and properly manage our capital (including dividends and stock buybacks), as we have

¹ Represents managed revenue.

consistently demonstrated for decades. Our performance results are shown in the charts on pages 6-12, which illustrate how we have grown our franchises, how we compare with our competitors and how we look at our fortress balance sheet. I invite you to peruse them at your leisure. In addition, I urge you to read the CEO letters in this Annual Report, which will give you more specific details about our businesses and our plans for the future.

As you know, we are champions of banking's essential role in a community – its potential for bringing people together, for enabling companies and individuals to attain their goals, and for being a source of strength in difficult times. As I often remind our employees, the work we do matters and has impact. We help people and institutions finance and achieve their aspirations, lifting up individuals, homeowners, small businesses, larger corporations, schools, hospitals, cities and countries in all regions of the world.

STEADFAST PRINCIPLES WORTH REPEATING

Looking back on the past two+ decades – starting from my time as CEO of Bank One in 2000 – there is one common theme: our unwavering dedication to help clients, communities and countries throughout the world. It is clear that our financial discipline, constant investment in innovation and ongoing development of our people are what enabled us to achieve this consistency and commitment. In addition, across the firm, we uphold certain steadfast tenets that are worth repeating.

First, our work has very real human impact. While JPMorgan Chase stock is owned by large institutions, pension plans, mutual funds and directly by single investors, in almost all cases the ultimate beneficiaries are individuals in our communities. More than 100 million people in the United States own stock; many, in one way or another, own JPMorgan Chase stock. Frequently, these shareholders are veterans, teachers, police officers, firefighters, healthcare workers, retirees or those saving for a home, education or retirement. Often, our employees also bank these shareholders, as well as their families and their companies. Your management team goes to work every day recognizing the enormous responsibility that we have to all of our shareholders.

Second, shareholder value can be built **only** if you maintain a healthy and vibrant company, which means doing a good job of taking care of your customers, employees and communities. Conversely, how can you have a healthy company if you neglect any of these stakeholders? As we have learned over the past few years, there are myriad ways an institution can demonstrate its compassion for its employees and its communities while still upholding shareholder value.

Third, while we don't run the company worrying about the stock price in the short run, in the **long run** we consider our stock price a measure of our progress over time. This progress is a function of continual investments in our people, systems and products, in good and bad times, to build our capabilities. These important investments will also drive our company's future prospects and position it to grow and prosper for decades. Measured by stock performance, our progress is exceptional. For example, whether looking back 10 years or even farther to 2004, when the JPMorgan Chase/Bank One merger took place, we have significantly outperformed the Standard & Poor's 500 Index and the Standard & Poor's Financials Index.

Fourth, we are united behind basic principles and strategies (you can see the How We Do Business principles on our website) that have helped build this company and made it thrive – from maintaining a fortress balance sheet, constantly investing and nurturing talent to fully satisfying regulators, continually improving risk, governance and controls, and serving customers and clients while lifting up communities worldwide. This philosophy is embedded in our company culture and influences nearly every role in the firm.

Fifth, we strive to build enduring businesses, which rely on and benefit from one another, but we are not a conglomerate. This structure helps generate our superior returns. Nonetheless, despite our best efforts, the walls that protect this company are not particularly high – and we face extraordinary competition. I have written about this reality extensively in the past and cover it again in

this letter. We recognize our strengths and vulnerabilities, and we play our hand as best we can.

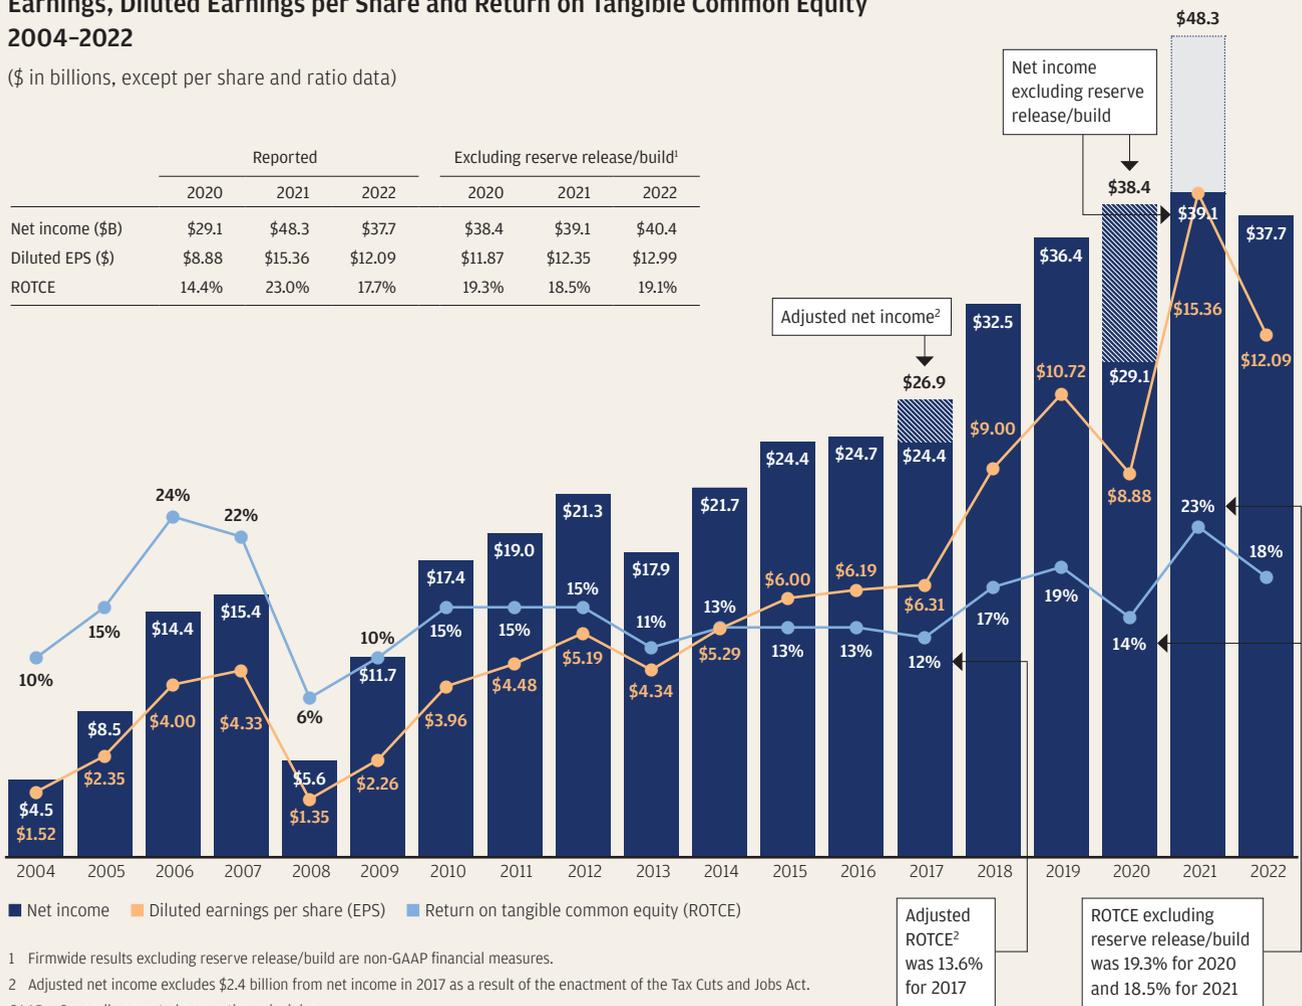

Sixth, we operate with a very important silent partner – the U.S. government – noting as my friend Warren Buffett points out that his company's success is predicated upon the extraordinary conditions our country creates. He is right to say to his shareholders that when they see the American flag, they all should say thank you. We should, too. JPMorgan Chase is a healthy and thriving company, and we always want to give back and pay our fair share. We do pay our fair share – and we want it to be spent well and have the greatest impact. To give you an idea of where our taxes and fees go: In the last 10 years, we paid more than \$43 billion in federal, state and local taxes in the United States and almost \$19 billion in taxes outside of the United States. We also paid the Federal Deposit Insurance Corporation over \$10 billion so that it has the resources to cover failure in the American banking sector. Our partner – the federal government – also imposes significant regulations upon us, and it is imperative that we meet all legal and regulatory requirements imposed on our company.

Seventh and finally, we know the foundation of our success rests with our people. They are the frontline, both individually and as teams, serving our customers and communities, building the technology, making the strategic decisions, managing the risks, determining our investments and driving innovation. However you view the world – its complexity, risks and opportunities – a company's prosperity requires a great team of people with guts, brains, integrity, enormous capabilities and high standards of professional excellence to ensure its ongoing success.

Earnings, Diluted Earnings per Share and Return on Tangible Common Equity 2004-2022

(\$ in billions, except per share and ratio data)

	Reported			Excluding reserve release/build ¹		
	2020	2021	2022	2020	2021	2022
Net income (\$B)	\$29.1	\$48.3	\$37.7	\$38.4	\$39.1	\$40.4
Diluted EPS (\$)	\$8.88	\$15.36	\$12.09	\$11.87	\$12.35	\$12.99
ROTCE	14.4%	23.0%	17.7%	19.3%	18.5%	19.1%

1 Firmwide results excluding reserve release/build are non-GAAP financial measures.

2 Adjusted net income excludes \$2.4 billion from net income in 2017 as a result of the enactment of the Tax Cuts and Jobs Act.

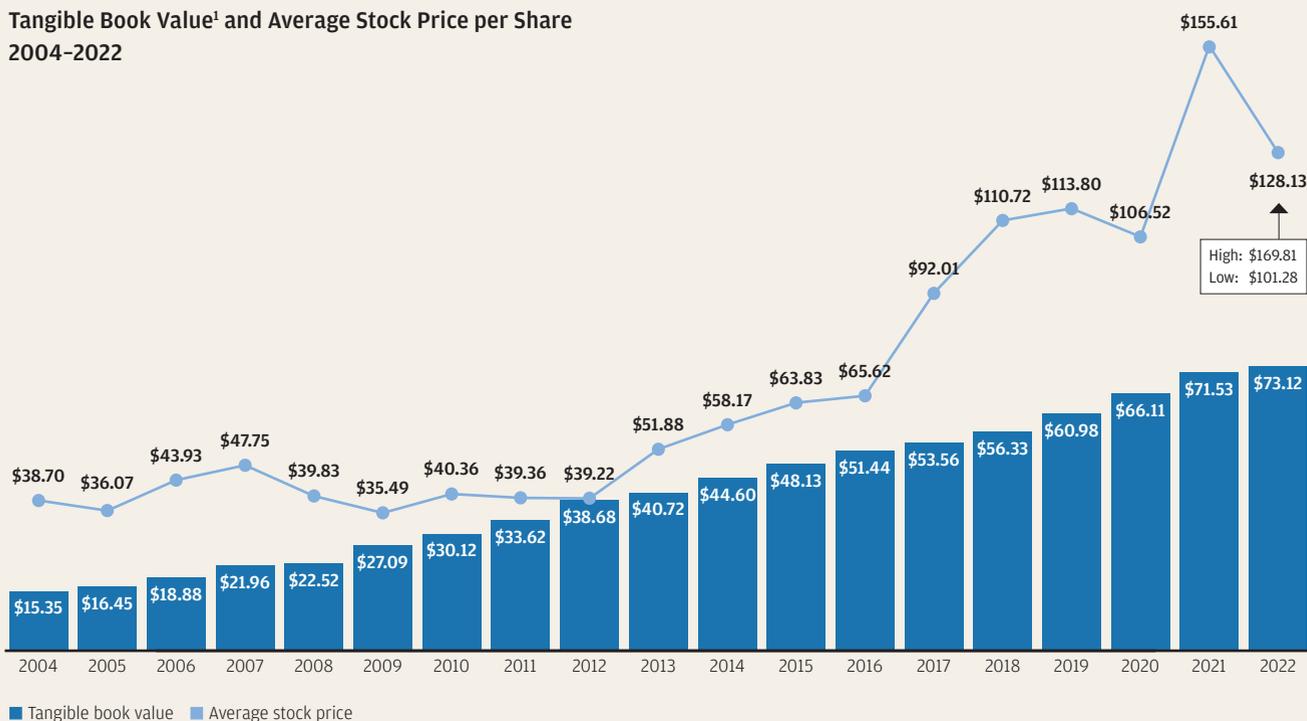

GAAP = Generally accepted accounting principles

ROTCE = Return on tangible common equity

An important note to describe why we are showing the table above: The loan loss reserve accounting rules – which are life-of-loan estimated losses based upon probability-based economic scenarios – generate huge swings in earnings that can be unrelated to actual credit performance. This was particularly true for the COVID-19 years when, during the first six months of the pandemic, we built approximately \$16 billion in reserves. Then in the next six quarters, we released essentially the equivalent number. We did so only because the scenarios used to estimate future credit losses changed dramatically.

The table above shows reported net income, with and without loan loss reserve changes. Throughout this period, the credit portfolio was healthy, and charge-offs remained below pre-pandemic levels. Either way, the company had strong absolute and relative performance.

Why We Are Proud of JPMorgan Chase

Our vision is simple and unchanged: We aim to be the most respected financial services firm in the world, serving corporations and individuals. To that end, it is imperative that we run a healthy, vibrant and responsible company. In addition to traditional banking, we do a lot to help the communities in which we operate, which, in turn, provides the foundation for increased opportunity and prosperity for all. And just to note, while we are proud of the good things we do every day, we are also an organization that acknowledges the mistakes we make along the way, which is important to do. And when we do make mistakes, we own up to them, learn from them and then move on.

UNITED BY PRINCIPLES AND PURPOSE

We've always had – and published – principles to guide how we do business, with values embedded within them, which I described in the preceding section. These tenets unite our company across the globe. To complement these guidelines, we recently developed a clearly stated purpose – ***Make dreams possible for everyone, everywhere, every day*** – to knit together our values with our everyday business principles and explain how we have done business for years.

While our company has a rich history, is proud of the critical role it plays in powering economic growth and has done exceptionally well over the past 200 years, research has shown that purpose-driven companies achieve stronger business

results and have greater impact by doing better for their customers, employees and shareholders. Our intention in documenting our purpose for ourselves is to help energize our employees, differentiate our company from our competitors, and push our organization to innovate on behalf of our clients, colleagues and communities. In addition, we are launching a new effort – internally and externally – to showcase how the work we do matters and has tangible impact locally and around the world.

In detailing the elements of our purpose, shown in the following sidebar, we have tried to make every word meaningful.

Our Purpose

The impact that JPMC aspires to have

Make Dreams Possible

for everyone, everywhere, every day

Our Vision

The ambition we hold ourselves to

We aim to be the most respected financial services firm in the world, serving corporations and individuals.

Our Values

The mindsets that unite us all

Service

We put our customers first, building with their needs in mind, providing world-class service and growing to reach people, businesses and communities everywhere.

Heart

We take pride in what we do and care deeply about our customers, communities and each other. We have a culture of teamwork, trust, humanity and humility. We create space for people to bring their full selves to work.

Curiosity

We're distinguished by our capacity to imagine and build. Our innovations are powered by a deep understanding of our customers and clients. We bring our capabilities and experience to bear on the toughest challenges in the world.

Courage

We lead with expertise, foresight and fortitude to deliver exceptional results. We face facts and make disciplined decisions grounded in data, with a long-term view. We strive to stand up for what we believe in and do the right thing.

Excellence

Our quality and rigor at scale are unmatched. We attract world-class talent and create an environment where they can thrive. We set high expectations, commit to strong performance and hold ourselves accountable to the highest standards of integrity.

Our Principles

The Business Principles that guide how we work

Exceptional Client Service

Operational Excellence

A Commitment to Integrity, Fairness and Responsibility

A Great Team and Winning Culture

Our Promises

Our value proposition to employees, customers, communities, and shareholders

We power economic growth, serving our customers, clients and communities for over 200 years.

We uplift communities around the world, making tangible impact at scale.

We champion opportunity and enterprise that unlock equity, inclusion and sustainable growth.

We are a great place to work – an unmatched combination of humanity and excellence at scale.

We are also dedicated to corporate responsibility, and our efforts extend far beyond significant philanthropic contributions (which total more than \$350 million a year globally). For example, at the local level, we support educational institutions and work-skills training programs around the world, as well as finance affordable housing and small businesses. In addition, we help formulate broad-based policies that are good for countries on issues such as healthcare, infrastructure, education and employment. Sometimes we promote specific initiatives; for example, programs that help individuals with a criminal background get a sec-

ond chance. Lest anyone think that I've become a little soft, rest assured your CEO is a red-blooded, patriotic, free-enterprise and free-market capitalist (properly regulated, of course) and finds nothing inconsistent with the multifaceted ways we use our capabilities to lift up our communities.

Part of our corporate responsibility efforts are focused on progress toward diversity, equity and inclusion (DEI), which is detailed in the sidebar below. And the sidebar on pages 18 and 19 shows how our work on the ground translates to a particular geography, in this case the state of Ohio.

HIGHLIGHTING OUR DIVERSITY, EQUITY AND INCLUSION EFFORTS

We seek to create a company that reflects the diverse communities that we serve, a workplace in which all employees feel they belong and are respected. We believe these efforts not only make us a positive work environment, but they also make our company stronger, our business more profitable and our institution a better global corporate citizen. This objective is integrated into how we do business every day. Some of our recent progress is highlighted below:

- We continue to identify ways to support our military veterans. In 2011, along with 10 other companies, JPMorgan Chase co-founded the Veteran Jobs Mission (VJM), a coalition committed to hiring at least 100,000 veterans by 2020. Since its founding, more than 300 member companies representing various industries across the United States have reported over **880,000 veteran hires**. In 2022, VJM increased its goal to 2 million veteran hires and 200,000 military spouse hires over the next decade. JPMorgan Chase alone has hired over **18,000 veterans** since 2011 and currently employs approximately **3,000 military spouses**.
- We continue to make strides in developing a diversified workplace. By year-end, women represented 49% of the firm's total workforce. Overall, Hispanic, Asian and Black representation

grew to 21%, 18% and 14%, respectively. In 2022, the number of employees who self-identified as LGBTQ+ **increased by 35%** year-over-year, following 50% year-over-year growth in 2021.

- The firm's Office of Disability Inclusion (ODI) continues to lead strategy and initiatives aimed at advancing careers while helping the firm be a bank of choice for people with disabilities. As ODI kicked off its business growth and entrepreneurship work in 2022, it provided **business coaching to over 225 entrepreneurs with disabilities** and commissioned research with the National Disability Institute, which identified unique opportunities and challenges among small business owners who have a disability.

An update on our \$30 billion racial equity commitment

What began in 2020 as a \$30 billion, five-year commitment is now transforming into a consistent business practice that our lines of business deliver each day to support Black, Hispanic, Latino and other underserved communities.

By the end of 2022, we reported nearly **\$29 billion in progress toward our original goal**. But our focus is not on how much money is deployed – it is on long-term impact and outcomes.

Here are some details on our program's progress through 2022:

- **Supplier diversity.** In 2022, our firm spent approximately **\$2.1 billion directly with diverse suppliers** – an increase of 25% over 2021. As a part of our racial equity commitment, **\$400 million was spent** in 2022 with over 200 Black-, Hispanic- and Latino-owned businesses – more than doubling the amount spent in 2021.
- **Affordable rental housing.** Through our Affordable Housing Preservation program, we approved funding of approximately \$18 billion in loans to incentivize the preservation of nearly 170,000 affordable housing rental units across the United States. Additionally, we financed approximately \$4 billion for the construction and rehabilitation of affordable rental housing.
- **Homeownership.** In a rising rate environment, we continue our efforts to provide homeownership opportunities for Black, Hispanic and Latino households across all income levels, including advocating for policies that reduce barriers to owning a home. The biggest barriers are upfront cash for a down payment and closing costs. In 2022, we expanded our \$5,000 Chase Homebuyer Grant program to include over 11,000 majority Black, Hispanic and Latino communities. Since our grant program began in 2021, we have provided about 2,700 grants totaling \$13.5 million. We have also assisted Black, Hispanic and Latino homeowners with 11,500 incremental home loans together worth over \$4 billion, mainly driven by refinance activity when rates were low.
- **Small business.** In 2022, we launched a Special Purpose Credit Program, the first of its kind nationally, to expand credit access for small businesses in majority Black, Hispanic and Latino communities, which have traditionally been underserved. When I visited Houston last year, I met Sherice and Steve Garner, Chase customers who own a local barbecue business, Southern Q. They are examples of the types of customers we want to support. Previously, they had been using their personal bank account to run their business. We helped them secure a small business loan to purchase their business location. To assist more families like the Garners, we hired **45 local senior business consultants** to provide one-on-one coaching and host educational events, community workshops and business training seminars to support minority entrepreneurs across 21 U.S. cities.
- **Minority depository institutions (MDI) and community development financial institutions (CDFI).** We invested more than \$100 million in equity in diverse financial institutions and provided over \$200 million in incremental financing to CDFIs to support communities that lack access to traditional financing. We also helped them build their capacity so they can provide a greater number of critical services like mortgages and small business loans. Additionally, we do not charge a fee for nearly all our participating MDI and CDFI customers who make a withdrawal at a Chase ATM.
- **Access to banking.** We helped **more than 400,000 customers** open low-cost checking accounts; we've also opened 13 Community Center branches (a total of **15 Community Center branches** since 2019), often in areas with larger Black, Hispanic and Latino populations; and we hired over **140 Community Managers** in underserved communities to build relationships with community leaders, nonprofits and small businesses. These Community Center branches are unique spaces in the heart of urban communities with more space than standard bank branches to host local events, small business mentoring sessions and financial health seminars. The majority were built with minority contractors from the community; we hire staff locally and we engage local artists to help ensure these locations complement their neighborhood. We have been pleased by the dramatic positive effect these specialized branches have had on their communities to date and expect to expand the program.

By driving inclusive economic growth, we can help create a brighter future for all, no matter where people live or the circumstances they're born into. We provide regular updates on our corporate website about our progress toward equity and equality, and I encourage you to read about the meaningful impact we're making within our firm and with the people we serve.

THE STATE OF OHIO: HOW JPMORGAN CHASE DRIVES COMMUNITY GROWTH

When JPMorgan Chase does business in a community, we do more than just open branches. We lend to small, mid-sized and big businesses; we hire, pay well and provide great benefits; and we finance hospitals, schools, grocery stores, homes, automobiles and governments. For more than 200 years, this approach has enabled us to make investments that have a lasting impact on local economies, families and neighborhoods while also supporting them in good and challenging times.

We have been in Ohio since 1812, and our experience there serves as a great example of how our resources drive growth on the ground.

Our support to government, higher education, healthcare and nonprofit organizations:

- We serve approximately 150 government, higher education, healthcare and nonprofit clients throughout the state, and over the last five years, we provided nearly \$9 billion in credit and capital to them.
- Our clients range from University Hospitals Health System, Inc. to the Ronald McDonald House in Columbus and the University of Dayton in Dayton.
- We are the primary treasury bank for Ohio State University and the primary bank for the city of Columbus; we also bank nearly 50 counties, cities and school districts across the state.

Our support to investment and middle market banking clients:

- Our support includes \$120 billion in credit and capital over the last five years for Commercial & Industrial clients such as energy, retail and auto businesses.
- We have over 4,800 large and mid-sized clients in Ohio, up over 70% compared with 2019, which also includes emerging middle market companies owned by veterans, women, LGBTQ+ individuals and people of color. This gives us leading market shares in the state compared with other banks.

Our support to local financial firms:

- We have provided nearly \$20 billion in credit and capital over the last five years for financial institutions such as local banks, insurance companies, asset managers and securities firms.
- Importantly, we bank 19 of Ohio's regional, mid-sized and community banks, helping them serve local communities and accomplish their other goals.

Our support to small businesses:

- By the end of 2022, loan balances for small business customers in Ohio totaled over \$800 million – funds being used to run and grow companies and create jobs.
 - Includes support for distribution of the federal government's Paycheck Protection Program (PPP) to help small businesses navigate the pandemic in 2020 and 2021
- In 2022 alone, JPMorgan Chase helped over 160,000 small businesses thrive and grow through access to customers, capital and networks, giving us the second largest business banking market share in the state. We also offered some 106,000 hours of advice and support to small businesses.

Our support to consumer banking needs:

- We operate nearly 225 branches and over 530 ATMs across the state.
- To help Ohioans build wealth and be financially healthy, we have provided more than 4 million savings, checking and credit card accounts, enabling these consumers to gain access to resources such as free financial health services, as well as mortgage and auto loans.
 - Ranked as the second largest provider of consumer banking in Ohio with over 2 million checking and savings accounts and customer deposits totaling nearly \$37 billion in 2022
- In 2022, we oversaw more than \$20 billion in investment and annuity assets for clients.

Our business and community investments:

- The firm's national \$30 billion racial equity commitment takes place very specifically on the ground. Since the program began, we have committed more than \$260 million across the state, including:
 - Over \$163 million in loans for Black, Hispanic and Latino households to purchase or refinance a home
 - \$54 million financed through investments and loans for the construction and rehabilitation of affordable housing
 - \$14 million in New Markets Tax Credit investments to support the Ronald McDonald House Charities in central Ohio
 - Over \$12 million spent with Black, Hispanic and Latino suppliers
- We've committed \$45 million in philanthropic support across the state since 2018 such as:
 - \$5 million to support The 614 for Linden, a CDFI and nonprofit collaborative, in Columbus, which helped catalyze a \$20 million fund for affordable housing; create or preserve nearly 750 affordable housing units; provide 57 microloans to local entrepreneurs; support technical assistance for over 100 small businesses; and increase wraparound services for prenatal care, as well as facilitate access to healthy food

Our impact as a proud employer in Ohio:

- Today, as the largest private employer in Columbus, JPMorgan Chase employs over 20,000 Ohioans throughout the state, including more than 2,000 veterans and 500 people with a criminal background who deserve a second chance.
- We also support an additional 3,200 jobs for contractors in our branches and corporate offices across the state.
- In Ohio, our average salary is \$96,000, not including benefits. Our lowest **starting** wage is \$41,000 (plus a comprehensive annual benefits package worth nearly \$15,000) compared with Ohio's **average** salary of \$35,000¹.

¹ Ohio per capita income of \$35,000 sourced from 2021 U.S. Census Bureau American Community Survey data released December 2022.

Update on Specific Issues Facing Our Company

CLIMATE COMPLEXITY AND PLANNING

The window for action to avert the costliest impacts of global climate change is closing. At the same time, the ongoing war in Ukraine is roiling trade relations across Europe and Asia and redefining the way countries and companies plan for energy security. The need to provide energy affordably and reliably for today, as well as make the necessary investments to decarbonize for tomorrow, underscores the inextricable links between economic growth, energy security and climate change. We need to do more, and we need to do so immediately.

To expedite progress, governments, businesses and non-governmental organizations need to align across a series of practical policy changes that comprehensively address fundamental issues that are holding us back. Massive global investment in clean energy technologies must be done and must continue to grow year-over-year.

At the same time, permitting reforms are desperately needed to allow investment to be done in any kind of timely way. We may even need to evoke eminent domain – we simply are not getting the adequate investments fast enough for grid, solar, wind and pipeline initiatives. Policies like the Bipartisan Infrastructure Law, the Creating Helpful Incentives to Produce Semiconductors (CHIPS) and Science Act, and the Inflation Reduction Act (IRA) – that hold the potential to unlock over \$1 trillion in clean technology development – need to be implemented *effectively*. The upside is undeniable: Widespread investing across the private sector will aid domestic manufacturing, invigorate research and development in green innovation, help create resilient supply chains, lift up local economies and build the U.S. clean energy workforce by up to 9 million jobs over the next decade. While major advances have been made in the last few years on technology to help this cause, we are hopeful that the great American innovation machine (most advancements

will ultimately come from the huge capabilities and capital of America's *largest* companies) will find the additional technologies that are desperately needed. There is a downside – massive, inefficient and malinvestment of capital. I talk more about this in the last section on public policy.

Polarization, paralysis and basic lack of analysis cannot keep us from addressing one of the most complex challenges of our time. Diverse stakeholders need to come together, seeking the best answers through engagement around our common interest. Bolstering growth must go hand in hand with both securing an energy future and meeting science-based climate targets for future generations.

AI, DATA AND OUR JOURNEY TO THE CLOUD

Artificial intelligence (AI) is an extraordinary and groundbreaking technology. AI and the raw material that feeds it, data, will be critical to our company's future success – the importance of implementing new technologies simply cannot be overstated. We already have more than 300 AI use cases in production today for risk, prospecting, marketing, customer experience and fraud prevention, and AI runs throughout our payments processing and money movement systems across the globe. AI has already added significant value to our company. For example, in the last few years, AI has helped us to significantly decrease risk in our retail business (by reducing fraud and illicit activity) and improve trading optimization and portfolio construction (by providing optimal execution strategies, automating forecasting and analytics, and improving client intelligence).

We currently have over 1,000 people involved in data management, more than 900 data scientists (AI and machine learning (ML) experts who create new models) and 600 ML engineers (who write the code to put models in production). This group is

focused on AI and ML across natural language processing, time series analysis and reinforcement learning to name a few. We're imagining new ways to augment and empower employees with AI through human-centered collaborative tools and workflow, leveraging tools like large language models, including ChatGPT.

We also have a 200-person, top-notch AI research group looking at the hardest problems and new frontiers in finance. We were recently ranked #1 on the Evident AI Index, the first public benchmark of major banks on their AI maturity. We take the responsible use of AI very seriously and have an interdisciplinary team of ethicists helping us prevent unintended misuse, anticipate regulation, and promote trust with our clients, customers and communities. AI and data use is complex; it must be done following the laws of the land. But it is an absolute necessity that we do it both for the benefits I just described and, equally, for the protection of the company and the financial system – because you can be certain that the bad guys will be using it, too.

All of our technology groups firmwide work together in a flywheel of innovation and deliver state-of-the-art improvements. We are proud that our AI teams have contributed top-quality novel research and compelling solutions that are transforming more and more business cases every day.

AI is inextricably linked with cloud-based systems, whether public or private, and digital capabilities. Our company needs the cloud for its on-demand compute capacity, flexibility, extensibility and speed. Native cloud-based approaches will ultimately be faster, cheaper and aligned with the newest AI techniques, and they will give us easy access to constantly evolving developer tools.

We have spent over \$2 billion building new, cloud-based data centers and are working to modernize a significant portion of our applications (and their related databases) to run in both our public and private cloud environments. To date, we have migrated approximately 38% of our applications to the cloud, meaning over 50% of our application portfolio (this includes third-party, cloud-based applications) is running on modern environments.

This journey to the cloud is hard work but necessary. Unlocking the full potential of the cloud and nearly 550 petabytes of data will require replatforming (putting data in a cloud-eligible format) and refactoring (i.e., rewriting) approximately 4,000 applications. This effort will involve not just the 57,000 employees we have in technology but the dedicated time of firmwide management teams to help in the process.

BANKING TURMOIL AND REGULATORY GOALS

The recent failures of Silicon Valley Bank (SVB) in the United States and Credit Suisse in Europe, and the related stress in the banking system, underscore that simply satisfying regulatory requirements is not sufficient. Risks are abundant, and managing those risks requires constant and vigilant scrutiny as the world evolves. Regarding the current disruption in the U.S. banking system, most of the risks were *hiding in plain sight*. Interest rate exposure, the fair value of held-to-maturity (HTM) portfolios and the amount of SVB's uninsured deposits were always known – both to regulators and the marketplace. The unknown risk was that SVB's over 35,000 corporate clients – and activity within them – were controlled by a small number of venture capital companies that moved their deposits in lockstep.

It is unlikely that any recent change in regulatory requirements would have made a difference in what followed. Instead, the recent rapid rise of interest rates placed heightened focus on the potential for rapid deterioration of the fair value of HTM portfolios and, in this case, the lack of stickiness of certain uninsured deposits. Ironically, banks were incented to own very safe government securities because they were considered highly liquid by regulators and carried very low capital requirements. Even worse, the stress testing based on the scenario devised by the Federal Reserve Board (the Fed) never incorporated interest rates at higher levels. This is not to absolve bank management – it's just to make clear that this wasn't the finest hour for many players. All of these colliding factors became critically important when the marketplace, rating agencies and depositors focused on them.

As I write this letter, the current crisis is not yet over, and even when it is behind us, there will be repercussions from it for years to come. But importantly, recent events are nothing like what occurred during the 2008 global financial crisis (which barely affected regional banks). In 2008, the trigger was a growing recognition that \$1 trillion of consumer mortgages were about to go bad – and they were owned by various types of entities around the world. At that time, there was enormous leverage virtually everywhere in the financial system. Major investment banks, Fannie Mae and Freddie Mac, nearly all savings and loan institutions, off-balance sheet vehicles, AIG and banks around the world – all of them failed. This current banking crisis involves far fewer financial players and fewer issues that need to be resolved.

These failures were not good for banks of any size.

Any crisis that damages Americans' trust in their banks damages *all banks* – a fact that was known even before this crisis. While it is true that this bank crisis “benefited” larger banks due to the inflow of deposits they received from smaller institutions, the notion that this meltdown was good for them in any way is absurd.

Let's be very thoughtful in our reaction to recent events.

While this crisis will pass, lessons will be learned, which will result in some changes to the regulatory system. However, it is extremely important that we avoid knee-jerk, whack-a-mole or politically motivated responses that often result in achieving the opposite of what people intended. Now is the time to deeply think through and coordinate complex regulations to accomplish the goals we want, eliminating costly inefficiencies and contradictory policies. Very often, rules are put in place in one part of the framework without appreciating their consequences in combination with other regulations. America has had, and continues to have, the best and most dynamic financial system in the world – from various types of investors to its banks, rule of law, investor protections, transparency, exchanges and other features. We do not want to throw the baby out with the bath water.

We should have common goals on how we want the banking system to work.

- **We want to strengthen regional, midsized and community banks, which are essential to the American economic system.** They fill a critical role in small communities, offering local knowledge and local relationships that some large banks simply can't provide – or can't provide cost-effectively. Overall, we want to maintain the extraordinary strength this tiered system affords. JPMorgan Chase directly supports this goal as we are one of the largest bankers in America to regional and community banks. We bank approximately 350 of America's 4,000+ banks across the country. This means we make loans to them or raise capital for them. In addition, we process payments for them, finance some of their mortgage activities, advise them on acquisitions, provide them with interest rate swaps and foreign exchange, and buy and sell securities for them. And we also finance their local communities (think hospitals, schools and larger companies) in ways they cannot.
- **We need large, complex banks to continue to play a critical role in the U.S. and global financial system.** And we need to recognize that they do so in a way regional banks can't. Large banks are complex not because they want to be but because they operate in complex global markets. Regional banks simply cannot manage the scale and complexity of transactions in 50 or 60 countries around the world to help some of America's best and largest companies accomplish their goals. Think of equity, debt, M&A, research, swaps, foreign exchange, large payments systems, global custody and so on. It takes a global workforce with deep expertise and significant capabilities to provide these services. These large global banks finance not just the world's largest companies but the world's development institutions and even countries. Having some of the best large, complex banks in the world is essential to the success of America's biggest companies, its economic system and its global competitiveness, which says nothing against the importance of having great midsized and community banks as well. And contrary to

what some say – to be safe, a global bank needs both huge economies of scale and the strength of diversified earnings streams.

- **We should want a system in which a bank failure does not cause undue panic and financial harm.** While you don't want banks to fail all the time, it should be allowed to happen, and the resolution should follow a completely prescribed process. In almost all bank failures, uninsured deposits never resulted in lost money – but the very fear of loss can cause a run on any bank having characteristics similar to a bank that has failed. Resolution and recovery regulations did not work particularly well during the recent crisis – we should bring clarity and reassurance to both the unwinding process and measures to reduce the risk of additional bank runs. It should also be noted that banks pay for any bank failure (through fees paid to the Federal Deposit Insurance Corporation) as they pay for the whole financial regulatory system. And yes, while these costs are ultimately passed on to their customers – that is true for all industries – the cost is just the price of implementing proper regulations.
- **We want proper transparency and strong regulations.** However, it should be noted that regulations, the supervisory regime and the resolution regime currently in place did not stop SVB and Signature Bank from failing – and from causing systemwide issues. We should not aim for a regulatory regime that eliminates all failure but one that reduces the chance of failure and the odds of contagion. We should carefully study why this particular situation happened but not overreact.

Strong regulations should not only minimize bank failures but also help to maintain the strength of banks as both the guardians of the financial system and engines that finance the great American economic machine.

- **We should want market makers to have the ability to effectively intermediate,** particularly in difficult markets, with central banks only stepping in during exceptional situations. In the last few years, we have had many situations in which disruptions in the market were, in my opinion, largely caused by certain regulations that did

not improve the safety of the market maker but, instead, damaged the safety of the whole system. In addition, many of the new “shadow bank” market makers are fair-weather friends – they do not step in to help clients in tough times.

- **We need banks to be there for their clients in tough times.** And they have been. Banks can flex their capital and provide their clients with a lot of loans and liquidity when they really need it. For example, at the beginning of the COVID-19 crisis in March 2020, banks deployed over \$500 billion in liquidity for clients and \$500 billion in PPP loans – and this does not include banks' share of the nearly \$2 trillion in loans that entered forbearance. Banks also play a unique and fundamental role in the transmission of monetary policy because deposits in banks can be loaned out, effectively “creating” money. Some regulations and some accounting rules have become too procyclical and make it harder to do this.
- **Regulation, particularly stress testing, should be more thoughtful and forward looking.** It has become an enormous, mind-numbingly complex task about crossing t's and dotting i's. For example, the Fed's stress test focuses on only one scenario, which is unlikely to happen. In fact, this may lull risk committee members at any institution into a false sense of security that the risks they are taking are properly vetted and can be easily handled. A less academic, more collaborative reflection of possible risks that a bank faces would better inform institutions and their regulators about the full landscape of potential risks.
- **We should decide a priori what should stay in the regulatory system and what shouldn't.** There are reasons for certain choices, and they should not be the accidental outcome of uncoordinated decision making. Regulatory arbitrage is already forcing many activities, from certain types of lending to certain types of trading, outside the banking system. Among many questions that need definitive answers, a few big ones would be: Do you want the mortgage business, credit and market making, along with other essential financial services, inside the banking

system or outside of it? What would be the long-term effect of that choice? Under the new scheme, would nonbank credit-providing institutions be able to provide credit when their clients need them the most? I personally doubt that many of them could.

- **We need banks to be attractive investments.**

It is in the interest of the financial system that banks not become “un-investable” because of uncertainty around regulations that affect capital, profitability and long-term investing. Erratic stress test capital requirements and constant uncertainty around future regulations damage the banking system without making it safer. While it is perfectly reasonable that a bank refrain from stock buybacks, dividends or growth under certain circumstances, it would be far better for the entire banking system if these rules were clearly enumerated (i.e., stipulate that a bank needs to reduce its buybacks and dividend if they breach certain thresholds).

If done properly, banking regulations could be calibrated – adding virtually no additional risk – to make it easier for banks to make loans, intermediate markets, finance the economy, manage a run on their bank and fail if need be. When it comes to political debate about banking regulations, there is little truth to the notion that regulations have been “loosened,” at least in the context of large banks. (To the contrary, our capital requirements have been increasing for years, as shown on the chart on page 12.) The debate should not always be about *more or less* regulation but about what *mix of regulations will keep America’s banking system the best in the world*, such as capital and leverage ratios, liquidity and what counts as liquidity, resolution rules, deposit insurance, securitization, stress testing, proper usage of the discount window, tailoring and other requirements (including potential requirements on shadow banks). Because of the recent problems, we can add to this mix the review of concentrated customers, uninsured deposits and potential limitations on the use of HTM portfolios. Ideally, new rules and regulations would also make it easier for banks to provide credit in tougher times.

ADJUSTING OUR STRATEGY TO THE NEW REGULATORY REALITY (BASEL III ENDGAME)

The Basel III Endgame (called Basel IV by some) – which, *incredibly*, has been nearly 10 years in the making – seems likely to increase, yet again, capital requirements for banks in general, through higher operational risk changes, and for trading and capital markets activity in particular, among other things. Whether or not we agree with all these changes (and we’ve discussed these regulations in detail in prior letters), we will simply have to adjust to them immediately. It’s important we describe to our shareholders how we will go about doing that and what it means for banks and, in particular, our bank.

First and foremost, banks must satisfy all of their regulators.

We must satisfy all of our regulators, and, remember, we have regulators all around the world, including more than 10 in the United States alone. Regulations include stress testing, reporting, compliance, legal obligations and trading surveillance, among others. While the business is the first line of defense on all these issues, we also have 3,700 people in compliance, 7,100 in risk and 1,400 lawyers actively working every day to meet the letter and the spirit of these rules along with the final line of defense – audit.

Rules are constantly changing and/or being enhanced and are sometimes, unfortunately, driven by political motivations. Relationships with regulators can often be intense, and, recently, we have lost some terrific people in our firm because of this. Regulators know that when banks disagree, we essentially have no choice – there is no one to appeal to, and even the act of appealing can make them angry. We simply ask respectfully to be heard, but at the end of the day, we will do what they ask us to do.

Size of the Financial Sector/Industry

(\$ in trillions)

		2010	2022
Size of banks in the financial system	Global GDP ¹	\$ 64.9	\$ 89.5
	Total U.S. debt and equity market	\$ 57.5	\$ 123.2
	Total U.S. broker-dealer inventories	\$ 4.1	\$ 4.4
	U.S. G-SIB market capitalization	\$ 0.8	\$ 1.2
	U.S. bank loans	\$ 6.6	\$ 12.1
	U.S. bank liquid assets ²	\$ 2.8	\$ 7.5
	Federal Reserve total assets	\$ 2.4	\$ 8.6
	Federal Reserve RRP volume	\$ <0.1	\$ 2.6
Shadow banks	Hedge fund and private equity AUM ³	\$ 2.8	\$ 9.0
	Top 50 sovereign wealth fund AUM ⁴	\$ 3.6	\$ 10.3
	Total private direct credit ⁵	\$ 14.0	\$ 22.0

RRP = Reverse repurchase agreements

K = Thousands

For footnoted information, refer to page 43 in this Annual Report.

Banks will play a smaller role in the global financial system.

The chart above shows both the decreasing role and size of U.S. banks relative to the global economy alongside the increasing role and size of shadow banks. The data illustrates this dynamic. We expect this trend to continue for all the reasons I've discussed.

Banks will continue to be guardians of the financial system.

Properly regulated banks are meant to protect and enhance the financial system. They are transparent with regulators, and they strive mightily to protect the system from terrorism financing and tax evasion as they implement know your customer guidelines and anti-money laundering laws. They protect clients' assets and clients' money in movement. Banks also help customers – from

protecting their data and minimizing fraud and cyber risk to providing financial education – and must abide by social requirements, such as the Community Reinvestment Act, which requires banks to extend their services into lower-income communities. As mentioned previously, unlike the private market, banks do not always choose when to provide a product or service but need to be there for their clients when they need credit or liquidity the most.

Looking forward, we constantly modify our strategies to adjust to our market realities.

It's always best to adjust to new reality quickly. We really don't like crying over spilled milk, although we sometimes do. The new reality is that some things – for example, holding certain types of credit – are more efficiently done by a nonbank.

Here are some actions we are taking to help our business succeed in the current and future environments:

1. First and foremost, we must conclude that holding certain types of credit, loans or otherwise has generally become less profitable because of the high levels of capital that need to be held against it – generally more than the market demands. What this means is that some credit is better held in a nonbank. Increasingly, for a credit relationship to make sense, banks need a lot of noncredit-related revenue.
2. Because of various capital requirements, we try to reduce clients' nonoperating cash deposits.
3. We are seeking to implement much tighter management and execution of business strategies. This includes repricing certain businesses, running off certain unprofitable products, changing the mix of business for a client, and more rigorously evaluating client selection and resource optimization applied to clients.
4. We are exploring new capital optimization strategies, which could include partnerships and perhaps one day more securitizations, among other opportunities.
5. Unfortunately, it is becoming increasingly difficult for banks to stay in the mortgage business, which ultimately hurts everyday Americans. The high costs of origination and servicing along with the complexity of regulations create a costly business with significant legal, reputational and operational challenges. In addition, given capital requirements and the lack of a healthy securitization market, it barely makes sense for banks to hold mortgages or mortgage-servicing rights. Many banks have already reduced much of this business. We are hanging on, continuing to hope for meaningful change.

6. We have the ability to add low-capital or no-capital revenue streams, like providing valuable data and analytics in trading, travel and other relevant offers in the consumer bank, wealth management and payment services businesses, among others.

If you review our CEO letters, you will see that we have many growth opportunities in front of us and our plans to attack them. We face the future and the new competition, large and small, with confidence, strength and a dash of humility.

KEEPING AN EYE ON ALL OF OUR COMPETITORS

The growing competition to banks from each other, as well as shadow banks, fintechs and large technology companies, is intense and clearly contributing to the diminishing role of banks *and* public companies in the United States and the global financial system. The pace of change and the size of the competition are extraordinary, and activity is accelerating. Walmart, for example (with over 200 million in-store customers each week), can use new digital technologies to efficiently bring banking-type services to their customers. Apple, already a strong presence in banking-type services with Apple Pay and the Apple Card, is actively moving into other similar services such as payment processing, credit risk assessment, person-to-person payment systems, merchant acquiring and buy-now-pay-later offers. Large tech companies, already 100% digital, have hundreds of millions of customers, as well as enormous resources, in data and proprietary systems – all of which give them an extraordinary competitive advantage.

We remain confident that as long as we stay vigilant, hungry, adaptable, fast and disciplined, we will continue to succeed in building this great company.

Management Lessons

As recent countries and companies have demonstrated, great management and leadership are critical to any large organization's long-term success. While providing strong management is a disciplined and rigorous process – facts, analysis, detail, rinse and repeat – creating an exceptional management team is an art, not a science.

In the rest of this section, I talk about some management lessons – I always enjoy sharing what I have learned over time by watching others and through my own successes and failures.

BUILDING TRUE FRANCHISE VALUE

Accounting can distort actual economic reality.

I have spoken in the past about good and bad revenue and good and bad expenses. Certain expenses, such as opening well-designed and well-located branches, actually are long-term investments of great value. Conversely, poorly underwritten credit creates revenue that you are bound to regret. Further, there are accounting practices that may distort the true value of actions you take. For example, when we create a new credit card account, we recognize origination costs over 12 months, but an average account exists for over eight years. And with the new accounting rules for loan loss reserves – called the current expected credit losses standard – you book the expected life of loan losses on the day you make the loan, while the revenue comes in over multiple years.

Increasingly in the modern world, many valuable things are not reflected on our balance sheet in generally accepted accounting principles – for example, previously expensed intellectual property or extraordinary human capital. At the end of the day, human capital is the most valuable asset. Think of a great athlete, a great lawyer or a great artist. It's not simply the equipment – it's the extraordinary training and talent of those involved, as we've also seen with the U.S. military. And sometimes it's not the individual but the highly coordinated activities of the **team** that deliver the championship.

Finally, if any value is based upon models, one must really test the sensitivity of the outcome against changes in assumptions. Understanding the range of potential outcomes may be far more important than the point estimate created by a model. In some cases, you can have an excellent average outcome but with a chance of death.

The point is: Accounting can distort economic reality and can lead one to make the wrong decisions.

Building true franchise value requires an outcomes-based outlook.

In banking, specific examples illustrate how merely following accounting and capital rules – without thinking through the outcomes – can lead one astray. I'm going to describe just two examples, but there are hundreds more.

If you buy or create a loan at par and put it on your balance sheet at par (think of a mortgage) and internally finance it, even match-funded with 10% capital, you might believe you have a 12% return. Many companies subscribe to this interpretation and simply continue to borrow money to invest in such a thing. But I would tell you this product has

no franchise value because it is only worth par, and, in fact, a small change in that value (because of interest rates and credit spread) could mean that you have made a huge mistake. If, on the other hand, you create a loan and sell it at more than par at a profit, you have created value – whether or not you keep it on your balance sheet. And far more important, if you create a loan and at the same time forge a client relationship – and you add additional capital-light revenue, such as asset management and cash management – you have created something of long-term value that you can nurture and grow. This is franchise value.

Simply taking interest rate risk (which contributed to the downfall of SVB) is not a business. Nor is simply taking credit risk. One person and a computer will suffice – you do not need 290,000 people circling the globe to do that.

Another example relates to any branch-based business. Let's say I build a system with well-designed and well-located branches, staffed by well-trained personnel who can offer customers great products and services and who strive to do every task a little bit better. Then you build a branch system with outdated sites in poor locations (often to save money) that have undertrained and underpaid staff and lower-quality products and services. Between the two, my branch system will win every time. One system will have high franchise value and be self-perpetuating with high returns. The other enterprise is probably on the road to eventual failure. If you study the history of business, you can see this phenomenon play out in grocery stores, car companies, restaurants, retailers and various other enterprises.

LEARNING FROM INVESTOR DAY

In February 2021, we did not hold our annual Investor Day for the obvious reason – COVID-19. When February 2022 came around, we were somewhat happy to be relieved of that responsibility again. Investor Day is a tremendous amount of work. But from 2020 to 2022, we did a lot of investment spending and made several acquisitions. Some of our analysts questioned whether we were being transparent enough in terms of what we were doing and why we were doing it. While sometimes we get frustrated with investor demands – and not all investors are created equally – all investors should be treated fairly and with respect. So, in 2022, we gave it more thought and reversed course with an extensive Investor Day. Our senior management team explained in detail our acquisitions and our investments, answering every question to the best of their ability. Having to explain your business to investors, comparing yourself with competitors and looking at the business as a whole – across sales, marketing, returns, growth, risks and strategic opportunities – was a terrific exercise for *us*. We learned our lesson!

This also raises another issue. Of course, it is critically important to analyze your business at the right disaggregated level – right down to the branch – inside the company. But it is also important to have the proper segments reported externally to the company, properly accounted for and generally aligned to their relevant competitors. This actually helps hold managers accountable by forcing them to accurately assess performance – the good, the bad and the ugly – without any attempts to avoid reality through an external obfuscation of results.

BALANCING A CUSTOMER-CENTRIC APPROACH WITH (EXCESSIVE) RISK

Most businesses, including banks like us, say they put their customers first. We often go further than that statement to say that we *need* to be there for them, in good times and in bad. However, banking is a complex industry, and this customer-centric approach requires a little more explanation.

In our business, we are essentially a financial partner to a client. While we strive to build great client relationships based on trust over the long run, our role has intricacies. For example, we do not need every transaction to make economic sense – just the overall client relationship, year after year. Whatever the transaction, we need to be properly compensated for the risks we bear, which can be extraordinary. Very often, a client will merely look for the lowest price, which we completely understand; we recognize that sometimes banks are perfectly willing to make a certain transaction for a client at a loss. There are also occasions when we need to tell a client that a specific financial transaction would be imprudent – maybe for us *and* the client.

Say, for example, that a very strong client of ours is simply trying to get the best price for a leveraged loan. If we believe the desired price is unwise and another institution is willing to offer it, we will advise the client to take that option. For us, this is pure counterparty risk and not really part of our core relationship. Conversely, should the same

client come to us and request something that extends beyond what we consider reasonable for that transaction, we may nonetheless do it. Perhaps the client is in the middle of an M&A transaction in difficult markets and simply cannot get the financing they need – other than from us. In recent crises, we have often gone the extra mile for a client at great risks to ourselves, not to make a profit but to rescue the client from financial calamity.

Fundamentally, putting the client first means always providing them with the products and services they need (although they may go somewhere else because of price) and having our whole team work hard for them – either in the United States or around the world, reliably and with constancy. One of the most important things we do for a client, above all else, is to be a steady hand, providing financial safety and security at every turn.

Some Commonsense Principles for Corporate Governance

I have written before about the diminishing role of public companies in the American financial system. They peaked in 1996 at 7,300 and now total 4,600. Conversely, the number of private U.S. companies backed by private equity firms has grown from 1,900 to 11,200 over the last two decades. And this does not include the increasing number of companies owned by sovereign wealth funds and family offices. This migration is serious and worthy of critical study, and it may very well increase with more regulation and litigation coming. We really need to consider: Is this the outcome we want?

There are good reasons for such healthy private markets, and some good outcomes have resulted from them as well. The reasons are complex and may include public market factors such as onerous reporting requirements, higher litigation expenses, costly regulations, cookie-cutter board governance, less compensation flexibility, heightened public scrutiny and the relentless pressure of quarterly earnings.

With intensified public reporting, investors' growing needs for environmental, social and governance information and the universal proxy – which makes it very easy to put disruptive directors on a board – the pressure to become a private company will rise. Corporate governance principles are becoming more and more templated and formulaic, which is a negative trend. For example, sometimes proxy advisors automatically judge board members unfavorably if they have been on the board a long time, without a fair assessment of their actual contributions or experience. And some simple, sensible governance principles are far better than the formulaic ones. The governance of major corporations is evolving into a bureaucratic compliance exercise instead of focusing on its relationship to long-term economic value. Good corporate governance is critical, and a little commonsense would go a long way.

PROMOTING OPEN COMMUNICATION AND TRUST WITH THE BOARD

As authorized and coordinated by the board, directors should have unfettered access to management, including those below the CEO's direct reports. At every board meeting, to ensure open and free discussion, the full board should meet in executive session *without the CEO* or other members of management. The independent directors should ensure that they have enough time to do this properly.

This one act would allow the board to have a completely open conversation and provide candid feedback to the CEO and management team. Good CEOs, who are trying to do the best job they can, should appreciate this important feedback – and should know how difficult it is to gather in a large group. This type of quality discussion among and with board members leads to collaboration and good succession planning since every meeting should include a real conversation around this important topic. Meetings such as these allow the board to nurture the extraordinary value of collaboration and trust.

CONFRONTING SUCCESSION PLANNING

Our board is responsible for succession planning, and it is on the agenda every time board members meet – both when they are with me and when I am not in the room. We already have a “hit-by-the-truck” plan ready to go (not all companies can say this), and we have multiple successor candidates who are well-known to the board and to the investor community. The board believes this is one of its paramount priorities. You can rest assured that our board members are on the case and are very comfortable with where we are.

ACTIVE ENGAGEMENT WITH ASSET MANAGERS

We – companies and investors – need to become more active and involved in proxy issues each year to foster better communication between the investors and the board of the companies they own. Whether it's issues around climate risk or say on pay, it should be appropriate for the management team or board to actively engage with investors during proxy season to hear and understand each other's views on key issues and ***communicate their positions in real time***. Investors should also require proxy advisors to share any communications they have with a company in real time before investors make voting decisions. In my view, too many portfolio managers and investors have partially ceded critical decisions on key proxy issues to their internal stewardship groups or external proxy advisors. Stewardship teams are also often under pressure to follow proxy advisors by bureaucratic internal systems at investment firms that discourage disagreement and encourage the safety of the herd. Many portfolio managers have told me that even when they have the authority to override the internal group, it is frequently very difficult to do so.

The new universal proxy is likely to create havoc for companies.

The new universal proxy makes it such that one investor with one share, who owns it for as little as one day, can nominate a director for any reason, at relatively low cost. In my view, it is likely that not just activists but also special interest groups will nominate directors. Not only would this be extremely disruptive to the board, but, almost by their nature, special interest groups would be counter to shareholders' interests. While we fully respect being transparent – protecting investors and shareholder rights – director election processes are becoming too far removed from shareholder interests.

While there are legitimate complaints against entrenched boards, good boards often tend to interview prospective candidates for their brains, integrity, work ethic, management and collaboration skills, and experience. With this new universal proxy, it's easy to envision a time when a proxy season will be like a political campaign, with interest groups on both sides of an issue trying to elect a board member. Disruptive boards, which can be caused by just a single troublesome member, are an anathema to shareholders' interests. This is unlikely to end well.

Evaluating and Managing the Economic and Geopolitical Risks Ahead

We usually don't worry about typical economic fluctuations and often compare economic forecasting with weather forecasting: It is extremely complicated, easy to do in the short term and far more difficult to do in the long run. It is particularly hard to forecast true longer-term inflection points in the economy. Although we don't want to waste time on "normal" fluctuations, we do want to be **prepared** for economic extremes – we look at multiple possibilities and probabilities and manage our company so that we can **handle all of them**, whether or not we think they actually will happen. After we spoke last year about storm clouds, some of those storms did indeed hit, and, unfortunately, some of those threatening clouds are still here.

2022 was not normal, economically speaking, and, in fact, 2022 witnessed several dramatic events – the Ukraine war began; inflation hit a 40-year high of 9%; the federal funds rate experienced one of its most rapid increases, up 425 basis points, albeit from a low level; stock markets were down 20%; unemployment fell to a 50-year low at 3.5%; and the U.S. economy was bolstered by frequent fiscal stimulus and by high and rising government debt while supply chain issues eased. In addition, work from home began to raise commercial real estate challenges, and, finally, long- and short-term interest rates presented a sharply inverted yield curve, which is "eight for eight" in terms of predicting a recession (more on this later). But, surprisingly, the global economy marched ahead.

THE CURRENT ECONOMY: PRETTY GOOD BUT STORM CLOUDS AHEAD

Until the collapse of Silicon Valley Bank, the current economy was performing adequately, both here in the United States and remarkably better than anyone expected in Europe. The "market" was generally forecasting either a soft landing or a mild recession, with interest rates peaking at 5% and then slowly coming down.

There has been a lot of market volatility over the past year, partially, in my opinion, as people over-extrapolate monthly data, which is highly distorted by inflation, supply chain adjustments, consumer substitution, basically poor assumptions about housing costs and other factors. But underlying all this, consumers have been spending 7% to 9% more than in the prior year and 23% more than pre-COVID-19. Similarly, their balance sheets are in great shape as they still have, according to our own analysis, \$1.2 trillion more "excess cash" in their checking accounts than before the pandemic (credit card debt is simply normalizing). In addition, unemployment is extremely low, and wages are going up, particularly at the low end. We've had 10 years of home and stock price appreciation, and even if we go into a recession, consumers would enter it in far better shape than during the great financial crisis. Finally, supply chains are recovering, businesses are pretty healthy and credit losses are extremely low.

The failures of SVB and Credit Suisse have significantly changed the market's expectations, bond prices have recovered dramatically, the stock market is down and the market's odds of a recession have increased. And while this is nothing like 2008, it is not clear when this current crisis will end. It has provoked lots of jitters in the market and will clearly cause some tightening of financial conditions as banks and other lenders become more conservative. However, it is unclear whether this disruption is likely to slow consumer spending (as of April 1, 2023, spending has been consistently running higher versus the prior year). Although higher rates, particularly in mortgages, have reduced both home sales and prices, do remember that consumer spending drives more than 65% of the U.S. economy.

Here & Now	> In Front of Us: Storm Clouds Ahead	
<p>Still Good Economy</p> <ul style="list-style-type: none"> ■ Healthy consumer ■ Healthy jobs ■ Higher wages ■ Good credit ■ Home values up over 10 years ■ Recovering supply chain ■ Normalized interest rates ■ Healthy business 	<p>Abnormal QT & Fiscal Spending</p> <ul style="list-style-type: none"> ■ Consumer excess savings close to zero by year-end ■ Large quantitative tightening (QT) and other unknowns, reducing liquidity and triggering higher long-term interest rates ■ Higher fiscal spending ■ Higher climate spending ■ Lingering effects of fiscal stimulus ■ Possible persistent inflation, requiring higher interest rates ■ Maybe no end in sight 	<p>War, Energy Crisis, Trade, China</p> <ul style="list-style-type: none"> ■ Unpredictable war ■ Energy and food crisis averted for now ■ Disproportionate suffering imposed on poor people and nations ■ Inflationary trade adjustments ■ Economic alliances in flux ■ Potential for rising oil and gas prices ■ Huge economic and geopolitical strains

While the current crisis has exposed some weaknesses in the system, it should not be considered, as I pointed out, anything like what we experienced in 2008. Nonetheless, we do have other unique and complicated issues in front of us, which are outlined in the chart above.

POTENTIAL TROUBLE BREWING FROM UNPRECEDENTED FISCAL SPENDING, QUANTITATIVE TIGHTENING AND GEOPOLITICAL TENSIONS

Having already confessed to how difficult it is to predict the future, for planning purposes it still makes sense to try to assess the environment ahead by laying out those factors that may be significantly different from the past.

Fiscal stimulus is still surging through the system.

In the last three years, partially but not entirely due to the pandemic, the federal government had a deficit of \$3.1 trillion (2020), \$2.8 trillion (2021) and \$1.4 trillion (2022). These are extraordinary numbers, which ended up in consumers' pockets, in states and local municipalities, and even in companies. We pointed out last year that you simply cannot have this level of spending and say that it's not inflationary. It's also important to point out that there is a multiplier effect of this stimulus; that is, one person's spending is another person's income and so on. The deficit for the next three years is now estimated to be \$1.4 trillion to \$1.8

trillion per year, which is also an extraordinary number, with no end in sight. In Europe, fiscal deficits are high – even before the enormous subsidies given to consumers to counterbalance higher energy prices. It's also important to note that borrowing to invest is fundamentally different from borrowing to consume – borrowing to consume can only be inflationary.

This is before any additional costs related to future recessions, the war or any other unforeseeable events. Offsetting this, by sometime late this year or early next year, we expect consumers will have spent the bulk of their remaining excess savings. It remains to be seen whether this will cause a little bit of a cliff effect or whether consumer spending will simply slow down. Either way, this will add to whatever recessionary pressures there are sometime in the future.

Today's quantitative tightening is following more than a decade of quantitative easing.

In the two years after COVID-19, the Fed bought \$4.5 trillion of U.S. Treasuries and mortgage-backed securities, bringing its total balance sheet to \$9 trillion. We have experienced almost 12 years of quantitative easing (QE), which drove interest rates down – so much so that U.S. short-term rates were virtually zero, and the 10-year bond hit a low of 0.5%. Amazingly, tens of trillions of dollars of debt, mostly in Europe, sold at *negative* interest rates (we will look back upon this with total astonishment). This period of QE also led to extraordinary liquidity (and a surging money

supply) that undoubtedly drove increased prices across many investment classes – from stocks and bonds to crypto, meme stocks and real estate, among others. Importantly, this also increased bank deposits from \$13 trillion to \$18 trillion (and the now-famous uninsured deposits from \$6 trillion to \$8 trillion).

QE is now being reversed into quantitative tightening (QT) as the Fed grapples with inflation. So far, the Fed has reduced its securities holdings by approximately \$550 billion and is committed to reducing its holdings by almost \$100 billion in securities each month or over \$1 trillion each year.

How all this will unfold is still unknown as the direction and speed of money have changed significantly from prior years. To varying degrees, banks will compete for money, not only among one another but also with money market funds, other investments and the Fed itself. Money market fund total assets under management have increased by \$650 billion since April 2022, with a significant portion migrating into the Fed's reverse repo facility, thereby draining deposits from the banking system. So while the Fed's balance sheet has come down by approximately \$550 billion, deposits at the banks have come down by \$1 trillion, largely uninsured deposits. Unfortunately, some banks invested much of these excess deposits in "safe" Treasuries, which, of course, went down in value as rates rose faster than most people expected.

It should be noted that an inordinate amount of attention is focused on short-term interest rates, which the Fed affects directly. But the Fed does not completely control long-term rates and liquidity, which are influenced by both supply and demand (QT) and global investor preferences and sentiment – importantly, including views on risk and safety. It is also important to remember that while the central banks of the world are now selling instead of buying securities, the governments of the world have larger debts to finance. The United States alone needs to sell \$2 trillion in securities, which must be absorbed in the market. This turn of events is generally true globally.

There has been huge intervention by central banks around the world over the last decade. While it was completely necessary in 2008 and 2009 to stop the worst of the global financial crisis, and again in

2020 to stop the effects of the global pandemic, the depth and breadth of these interventions will be studied for years as will the extent to which we need QT (whose full effect may not be known immediately). It is unclear how the Fed incorporated the enormous fiscal spending into both its forecasts for growth and inflation, as well as its need to continue QE as it did. And importantly, the Fed's ability to reverse course on this strategy (QT) is somewhat constrained by higher inflation (though, of course, it can temporarily adjust its actions to deal with the current bank failure crisis).

War complicates geopolitics and materially adds risks.

We have not had a major land war in Europe since 1945. The war in Ukraine, already into its second year, has been particularly devastating in terms of casualties and damage and has been haunted by the threat of nuclear weapons. It may very well last for many more years. Wars are unpredictable, and at the start, most predictions about how they will end have been completely wrong.

This war is also affecting global energy and food supplies, with a disproportionate and negative effect falling on poor people and poorer nations, including millions of Ukrainian refugees. There is still a risk that energy and food supply lines, which are not secure, will lead to higher prices and the large migration of people, triggering another level of geopolitical dislocation.

The tensions of this war are also leading to the rethinking of many economic alliances, as well as trade and national security. All these factors create more risk and potentially higher inflation, and their confluence (along with inflation and QT) creates a somewhat unpredictable and dangerous outcome.

This may be a once-in-a-generation sea change, with material effect.

Of course, there is always uncertainty. I am often frustrated when people talk about today's uncertainty as if it were any different from yesterday's uncertainty. However, in this case, I believe it actually is.

Less predictable geopolitics, in general, and a complex adjustment to relationships with China are probably leading to higher military spending and a realignment of global economic and military alliances.

Higher fiscal spending, higher debt to gross domestic product (GDP), higher investment spend in general (including climate spending), higher energy costs and the inflationary effect of trade adjustments all lead me to believe that we may have gone from a savings glut to scarce capital and may be headed to higher inflation and higher interest rates than in the immediate past.

Essentially, we may be moving, as I read somewhere, from a virtuous cycle to a vicious cycle.

PREPARING FOR WHAT MAY BE A NEW AND UNCERTAIN FUTURE

Of course, we hope that everything turns out okay and that all of these storm clouds peacefully and painlessly dissipate – and we need to be prepared for that outcome. We also need to be prepared for a new and uncertain future. The new risks (in addition to the normal ones, like recession) are higher inflation for longer, the market effects of QT and growing political risks. Of course, I cannot be sure this will happen, but I place higher odds on it than the “market.”

Managing risks is far more than simply meeting the Fed’s annual stress test.

While it is critical that we meet and pass the Fed’s Comprehensive Capital Analysis and Review (CCAR) stress test, managing risk is far more than that – and we are fairly fanatical when it comes to managing risk. Our company does hundreds of stress tests a week, which include market movements reflective of many past crises (such as volatility resulting from the Russia-Ukraine conflict and the pandemic in 2020) and *rapidly rising interest rates*.

The Fed’s CCAR stress test, by its nature, has fairly arbitrary results since it uses only one different and hypothetical scenario each year. This creates uncertainty around our capital requirements (as I mentioned, this may damage the value of bank stocks and the banking system). If I were a shareholder, I would want to know if my company would

really lose the \$44 billion after taxes (over a nine-quarter period) that the stress test shows. And the answer is absolutely not.

While I understand why regulators stress test this way – they are essentially trying to ensure that banks survive the worst-case scenario (which assumes multiple problems at a struggling bank without any benefit from good management or rapid response) – the methodology clearly does not result in an accurate *forecast* of how our company would perform under adverse circumstances. I have very little doubt that if the severely adverse scenario played out, JPMorgan Chase would perform far better than the stress test projections. I believe we would actually make money over the nine quarters in the Fed’s stress scenario.

Here’s one example that illustrates this. From March 5 to March 20, 2020, when the stock market fell 24% and the bond index spread gapped from 191 to 446 basis points prior to major Fed intervention, our *actual* trading revenue was higher than normal as we actively made markets for our clients. By contrast, the *hypothetical* stress test had us losing a huge amount of money in market making, based on the way it is calculated. One more thing to point out: JPMorgan Chase now has enough total loss-absorbing capacity to bear out peak CCAR losses (using the Fed’s numbers) more than *eight times over*.

In addition to CCAR testing, we stress test for various types of huge market disruptions. For example, we stress counterparties – such as hedge funds, large asset managers or trading houses – for extremely large market moves, perhaps an instantaneous 130 basis point move in Treasuries or 50% to 60% moves in commodities. Our shareholders should know that regarding any major international bank, we remain well-collateralized across all of our exposures. Even if one of those banks went bankrupt overnight, we would be okay. While there is always a risk that we won’t receive a margin call or that some trades may default and leave us exposed to large market risk, the losses likely would not be material.

Suffice it to say, our company prepares not only for various forms of extreme economic risk but for various forms of geopolitical risk. Later in this letter I describe how we have enhanced those efforts.

Don't underestimate the extreme importance of interest rates.

Interest rates are extraordinarily important – they are the cosmological constant, or the mathematical certainty, that affects all things economic. Before I comment on that, I want to share some astounding numbers to illustrate this point:

Net present value (NPV) of \$1.00 annuity		
	Lifetime NPV	% NPV in first 10 years
1% interest rate	\$100	9%
10% interest rate	\$10	61%

When you analyze a stock, you look at many factors: earnings, cash flow, competition, margins, scenarios, consumer preferences, new technologies and so on. But the math above is immovable and affects all.

In a rapidly rising rate environment, any investment where the cash flows were expected in the out years would have been dramatically affected – think venture capital or real estate development, for example. Any form of carry trade (effectively borrowing short and investing long) would be sorely disappointed. Carry trade exists not just in banks but is embedded and is silently present in companies, investment vehicles and others, including situations that require recurring refinancing.

We are prepared for potentially higher interest rates, and we may have higher inflation for longer.

If we have higher inflation for longer, the Fed may be forced to increase rates higher than people expect despite the recent bank crisis. Also, QT may have ongoing impacts that might, over time, be another force, pushing longer-term rates higher than currently envisioned. This may occur even if we have a mild – or not-so-mild – recession, as we saw in the 1970s and 1980s.

Today's inverted yield curve implies that we are going into a recession. As someone once said, an inverted yield curve like this is “eight for eight” in predicting a recession in the next 12 months. However, it may not be true this time because of the enormous effect of QT. As previously stated, longer-term rates are not necessarily controlled by central banks, and it is possible that the inversion we see today is still driven by prior QE and not the dramatic change in supply and demand that is going to take place in the future.

We have always looked at the “fat tails” of higher interest rates, particularly on our own company. We were premature in thinking about the possibility of interest rates going to 5%, 6% or 7% – which still might not happen, but we always want to be protected against this outcome. For example, we have spoken about stockpiling cash, not investing in sovereign debt when rates were low and being willing to forgo income to protect against rising rates. Rest assured, our company can handle significantly higher interest rates no matter how anyone analyzes capital.

Higher interest rates will obviously have an important impact, not just for banks but for some of those who borrow on a floating rate or those who have to refinance in a higher rate environment. If this tide goes out, you should assume that it will expose additional weaknesses in the economy. However, our company is prepared – not only for higher rates but for a potential recession that could arise and related credit losses. That preparation includes analyzing all of our clients (in particular our leveraged lending, real estate and other clients) for what the impact of higher rates may mean for them. We believe the risks within our own portfolio are manageable. And we try to analyze the impact of these factors on companies and industries away from us. For example, we do expect that some types of real estate in certain locations may come under pressure.

Finally, we assume all of these risks and uncertainties will result in volatile markets.

There are risks and opportunities in the restructuring of global economic relations.

There is no question that supply chains need to be restructured for three different reasons:

- For any products or materials that are essential for national security (think rare earths, 5G and semiconductors), the U.S. supply chain must be domestic or only open to completely friendly allies or partners. We cannot and should not ever be reliant on processes that can and will be used against us, especially when we are most vulnerable. All countries will be protecting their national security in their own way, tailoring their strategies as they see fit.
- Countries will also be taking specific action to protect critical industries (think electric vehicles (EV), AI and chips) that may not be directly related to national security but are key to national competitiveness. This is essentially what America's IRA is meant to do.
- Companies will diversify their supply chains simply to be more resilient.

This restructuring will likely take place over time and does not need to be excessively disruptive. There will be winners and losers – some of the main beneficiaries will be Brazil, Canada, Mexico and friendly Southeast Asian nations.

For similar national security reasons, activities – including investment activities – that help create a national security risk (e.g., sharing critical technology with potential adversaries) should be restricted.

While focusing on the risks, it's also important not to forget the opportunities. The transition to a green economy will eventually require \$4 trillion a year in capital expenditures. The IRA, CHIPS Act and Bipartisan Infrastructure Law combined will create huge opportunities for companies, investors and entrepreneurs across virtually every industry group in the United States. You can rest assured that our company is organizing to help clients make the most of these opportunities.

Along with reconfiguring our supply chains, we must create new trading systems with our allies. My preference would be to rejoin the Trans-Pacific Partnership – it is the best geostrategic trade arrangement possible with allied nations. You can be certain that our company is closely monitoring and adjusting to the risks and opportunities created by current events.

Believe it or not, inflation and interest rates are not the things that worry me the most. I'm most concerned about large geopolitical events, cyber attacks, nuclear proliferation, large dysfunctional markets (partially due to poorly calibrated regulations; e.g., the U.K. Gilt and U.S. Treasury markets) and failure of other critical infrastructure.

We have established a new Security Forum.

The war in Ukraine has exposed the severity, complexity and interconnectivity of threats such as physical security, the loss of nonbank critical infrastructure (i.e., communication networks), pandemics, insider threats, trade relations, political risk, sanctions, data privacy, war, and the impact of regulatory and governmental actions. All these factors affect our company, as well as our clients and countries and their governments. You should know that we have formed a new **Security Forum**, which meets periodically and enables management to continually assess the impact of ongoing threats to our company, our clients and countries around the globe. These risks – which include market risk, credit risk, cyber risk and operational risk, among others – are also covered at the board level by our Risk Committee.

Finally, when one talks about risk for too long, it begins to cloud your judgment. Looking ahead, the positives are huge. However events play out, it is likely that 20 years from now, America's GDP will be more than twice the size it is today, and hundreds of millions of people around the world will have been lifted out of poverty. In the next section, I talk more about the need for a global economic strategy.

Our Serious Need for More Effective Public Policy and Competent Government

Like most Americans, I get frustrated with the mediocrity and bureaucracy of the massive administrative state. We accept it too readily. And it damages the confidence we have in our own country. I have enormous respect for the people who work for the U.S. government, but we simply don't invest enough in making it more effective. Some examples are: **antiquated systems** at the Federal Aviation Administration, United States Postal Service and Internal Revenue Service; inefficient ports and crumbling infrastructure; an ineffective immigration policy; policies that prevent affordable housing and leave apartments vacant; policies that hurt Puerto Rico; tenure versus merit-based compensation and promotion; and work rules that dramatically reduce efficiency. We have a vast system with a lack of accountability and proper reporting. And usually when reports are issued, they only address how much money was spent – not, for example, how many highway miles were built, in what time period and at what cost. Government, which is 20% of the economy, seems to be getting less productive over time, unlike the rest of the economy. In addition, we have too much litigation – this is the bureaucratization of America – think Europe.

To be completely fair, I am also frustrated with the typically shortsighted selfishness of some businesses, asking for abundant special tax breaks and often using regulations to protect the incumbent. I also want to express exasperation with some of my fellow citizens who don't pay the taxes they owe on the order of \$600 billion a year, who won't consider sensible policy measures like a carbon tax to stem climate change and who sometimes seem to only like democracy when the voters agree with them. Democracy by its nature is compromise. One of the lessons of the past decade is that if major legislation cannot be done in a bipartisan way, maybe it should not be done at all.

DEVELOPING EFFECTIVE POLICY AND EFFECTIVE GOVERNMENT

Theology is not policy. Policy based on falsehood or oversimplified facts is doomed to failure. Too often now, policy starts as politics without the benefit of analytics and experts.

Policy should precede politics – not the other way around.

Policy should be painstakingly developed based on facts and analysis (and on information about how policies were productively developed in other parts of the world). You can effectively crowd-source policy expertise. Why were Germany and Switzerland so successful with apprenticeship programs? Why were Canada and Singapore so effective with permitting and infrastructure? All policies, like education, infrastructure and regulation, need to start with an **agreed-upon goal** – and be comprehensive and coordinated to accomplish it. After the core of a policy is developed, then, of course, it will be modified by political leaders – but it is hoped the core of the policy remains intact. If those modifications bastardize it in such a way as to render it inefficient, it should be dropped.

We require a 21st century government.

In a company, you are constantly setting up your organization for success. We need to find a way to more rapidly reorganize our government for the new world. While Congress can often move very quickly in a crisis, we are unable to move quickly as a government over the medium term. We need to move faster, adopt new technologies and retrain human capital more quickly. Even in a good company, reorganizing for change can be hard – business and staff units fight to maintain their status quo and perceived prerogatives as if their lives were at stake. I can only imagine how hard this is in the government, but it will only get worse if we do not fix this in our fast-changing world.

The West Needs America's Leadership

How the U.S. can marshal its strengths—not only military but also moral, economic and diplomatic

By **Jamie Dimon**

Russia's invasion of Ukraine punctured many assumptions about the future of the world and thus was a pivotal moment in history. America and the West can no longer maintain a false sense of security based on the illusion that dictatorships and oppressive nations won't use their economic and military powers to advance their aims—particularly against what they perceive as weak, incompetent and disorganized Western democracies. In a troubled world, we are reminded that national security is and always will be paramount, even if it seems to recede in tranquil times.

It should also lay to rest the idea that America can stand alone. U.S. leaders must always put America first, but global peace and order is a vital American interest. Only America has the full capability to lead and coalesce the Western world, though we must do so respectfully and in partnership with our allies. Without cohesiveness and unity with our allies, autocratic forces will divide and conquer the bickering West. America needs to lead with its strengths—not only military but also economic, diplomatic and moral. Here's what we can do:

•Rededicate ourselves to the qualities and principles that made America great. These principles are life, liberty, the pursuit of happiness and the idea that all people are created equal. Democracy and human freedom are inseparable from freedom of speech, freedom of religion and free enterprise. It would help to educate all Americans about the sacrifice of those who came before us for democracy at home and abroad.

We need to acknowledge the critical role that government plays—and we need government to be more competent and accountable. We must build stronger safety nets to care for the poor, the old and the disabled, and to cushion adjustment to economic change, while also maintaining economic dynamism, individual responsibility and the dignity of work. We must confront crises and failures of public policy by developing better policies and by dealing with realities. We can recognize the mistakes America has made without disparaging the nation.

We support global human rights and stand on the side of liberty, but we also have to be realistic about the compromises

necessary to accomplish long-term goals. Remember Franklin D. Roosevelt and Winston Churchill allied with Stalin against Hitler's imminent threat.

•Develop a Marshall Plan for global energy and food security. This will be critical both in keeping the Western alliances together and minimizing the global suffering caused by starvation. Global energy and food supply chains are precarious by their nature. And it should be self-evident that energy security and preventing climate change aren't contradictory: Secure and reliable oil and gas production is compatible with reducing CO2 over the long run, and is far better than burning more coal. It should also be self-evident that global food and energy security relies on realistic trade policy and American military strength.

•Increase military spending, along with our allies, as much as necessary to protect the world. Not only is America a bastion of freedom; it is still the arsenal of democracy, and economic sanctions are no substitute for an effective military. "We know only too well that war comes not when the forces of freedom are strong, but when they are weak," as Ronald Reagan said in 1980. Military strength needs to be combined and coordinated with strong diplomatic and economic aid for the developing world. Thoughtful policies would help many nations lift up their people, develop their human rights and join economic unions that are good for all involved.

•Recover our economic dynamism. A strong economy is the foundation for American power, and we haven't focused enough on economic growth. Between 2000 and 2020, real U.S. GDP grew at an average rate of only 1.7% a year. Had we grown at 3% instead, last year's gross domestic product per person would have been \$15,000 higher. That would help pay for much of what we need to do as a nation.

Economic growth will repair the fraying of the American dream, particularly if we share the wealth by improving education and wages for lower-paid citizens. There are many effective ways to do this, such as raising minimum wages and expanding the earned-income tax credit. We must also fix the immigration policies that are tearing us apart, dramatically reducing illegal immigration and dramatically increasing legal immigration. Economic growth will reduce

inflation, reduce the deficit, and make it easier to afford the strong military we need. We aren't going to have the economic growth we need with the legal, regulatory and bureaucratic system we have today.

Global trade will necessarily be restructured so that we don't rely on potential adversaries for critical goods and services. This will require more "industrial planning" than America is used to—and we must ensure it is properly done and is not used for political purposes. Yet America should also open its arms, through trade and aid, to all other nations. Most developing countries would prefer to align economically with the West if we help them solve their problems. We should develop a new strategic and economic framework to make ourselves their partner of choice.

•Deal with China thoughtfully and without fear. America still has an enormously strong hand—plenty of food, water and energy; peaceful neighbors; and what is still the most prosperous and dynamic economy the world has ever seen, with a per person GDP of over \$75,000 a year. We can have faith that our system will maintain the economic dynamism we need. China has done a great job lifting up its nation and bringing its GDP per person up to \$13,000 a year. Yet any fair assessment must recognize its challenges—not enough food, water and energy; a very complex geopolitical situation with tough neighbors; a lack of freedom that creates economic rigidity and malinvestment.

Whether you think it is a competitor or a potential adversary, we, along with our allies, should firmly negotiate with China (where my company and its predecessor firms have done business for more than a century). We should acknowledge that we have common interests in combating nuclear proliferation, climate change and terrorism. Tough but thoughtful negotiations over strategic, military and economic concerns—including unfair competition—should yield a better situation for all. If America leads well, China will be better off forming partnerships with a strong Western world than with Russia, Iran and other such nations.

Together, we can ensure America's leadership for the next 100 years.

Mr. Dimon is Chairman and CEO of JPMorgan Chase & Co.

CREATING A COMPREHENSIVE GLOBAL ECONOMIC STRATEGY

Just as we need a comprehensive military strategy, globally, to deal with future security risks, we need a comprehensive global economic strategy to deal with future economic risks. Done properly, this will help strengthen and coalesce the Western democratic alliances over an extended period of time. This strategy has four pillars.

First, we need a U.S. growth strategy.

Between 2000 and 2022, real U.S. GDP grew at an average rate of only 2% a year. Had we grown at 3% instead, last year's GDP per person would have been \$15,000 higher. That would help pay for much of what we need to do as a nation. We simply have not focused enough on growing the U.S. economy.

In prior letters, we have spoken about how we need to get public policy right to address a multitude of areas, which span ineffective education systems, soaring healthcare costs, excessive regulation and bureaucracy, the inability to plan and build infrastructure efficiently, inequitable taxes, a capricious and wasteful litigation system, frustrating immigration policies and reform, inefficient mortgage markets and housing markets and housing policy, a partially untrained and unprepared labor force, excessive student debt, and the lack of proper federal government budgeting and spending. I believe that our poor policies have restrained our growth, and simply improving those policies would accelerate our growth.

We should also focus on reducing the worker shortages by allowing both more merit-based immigration and seasonal immigration. Reducing trade barriers could also have a rapid effect, and decreasing regulations and bureaucracy would be helpful. For example, starting a small business today generally requires multiple licenses, which take precious months to get. But it doesn't end there. Talk with any small business owner, and that person will describe the mountains of red tape, inefficient systems and huge amount of documentation involved to operate the business. We need to reduce the burdens that are imposed on those who want to open and run a small business.

By seeking a bold, comprehensive approach, we increase our ability to positively impact economic growth and jobs; in fact, this is also the best way to reduce inflation and the deficit.

Second, an industrial policy, done properly, could drive growth and also protect our national security.

The United States has essentially never had an "industrial policy," a strategy by which the federal government, through incentives and policies, drives American industry. We have done it indirectly through things like the Defense Advanced Research Projects Agency and NASA's moon mission but not generally by favoring industries. More directly, the IRA and the CHIPS Act provide specific incentives for EVs, semiconductors, rare earths, alternative energy sources and others. There are two reasons we should develop an industrial policy: 1) specifically to safeguard our national security and 2) to counter unfair economic competition, particularly where our national security is directly concerned. For example, making bicycles would not be part of the second example. But China, using subsidies and its economic muscle to dominate batteries, rare earths, semiconductors or EVs, could eventually imperil national security by disrupting our access to these products and materials. We cannot cede these important resources and capabilities to another country.

Crafting an industrial policy should be done properly and with a tightly restricted scope. If the policy is politically motivated, it will be used to benefit various political benefactors and eventually provoke extreme misallocation of capital and corruption. Managing the economy is extremely complex, and Adam Smith's invisible hand still prevails – in a way we can never understand. If the government starts to micromanage through an industrial policy, it will not stop, and much of the efficiencies meant to be created will not be realized. Industrial policy should come with twins – very strict limitations on political interference and related comprehensive policy around factors like permitting requirements, which if not drastically improved will inhibit our ability to make investments and allow infrastructure to be built.

Third, fixing income inequality will reignite the American dream.

Of all the policy errors we need to remedy in America, there are two that I believe will have a dramatic effect on growth and equality – and go a long way toward repairing the frayed American dream. The first is providing graduating students and other individuals with work skills (in fields such as advanced manufacturing, cyber, data science and technology, healthcare and so on) that will lead to better paying jobs. This would be good for growth and much that ails us. And we know what to do. High schools and community colleges should work with local businesses to create specific skills-training programs, internships and apprenticeships that prepare graduating students to be job ready – whether they go on to earn a credential, to work or to attend college. With 10.8 million job openings and 5.9 million unemployed workers in the United States, work-skills training has never been needed more. Businesses must be involved in this process, and programs need to be offered locally because that is where the actual jobs are.

The second step is related to the first: Get more income to lower-paid workers. The gap between skilled and unskilled workers has been growing dramatically – so much so that unskilled labor has become less and less a “living wage.” Of the 150 million Americans working today, approximately 21 million are paid less than \$15 per hour. It is hard to live on \$15 an hour, particularly for families (even if two household members are working). But all jobs should be treated with respect. Jobs and living wages bring dignity, lead to more opportunity – in housing, education, childcare, health and overall well-being – and also help rebuild communities as that income is used to improve how people live.

A major step would be to expand the Earned Income Tax Credit (EITC), which many Democrats and Republicans already agree upon. Today, the EITC supplements low- to moderate-income working individuals and couples, particularly with children. For example, a single mother with two children earning \$9 an hour (approximately \$20,000 a year) could receive a tax credit of more than \$6,000 at year’s end. Workers without children receive a very small tax credit – this should be dramatically expanded, too – and personally, I would eliminate the child requirement altogether. Last year, the EITC program cost the United States about \$64 billion, and 31 million individuals received the credit. We should convert the EITC to make it more like a negative income payroll tax, paid monthly. Many people who are eligible for this benefit do not get it (often because they do not know about it). Proper reform of this program could increase benefits where deserved and reduce fraudulent and improper payments. Any tax credit income should not be offset by any other benefits these individuals already receive.

I have little doubt that this *would do more than anything else* to lift up lower-income neighborhoods as the money is spent on lifting up their families. I also have little doubt that this would add to GDP – because most of this money would, in fact, be spent.

Fourth, America must take the lead on devising a comprehensive global economic strategy.

In an op-ed published by *The Wall Street Journal* earlier this year, I wrote: “Only America has the full capability to lead and coalesce the Western world, though we must do so respectfully and in partnership with our allies. Without cohesiveness and unity with our allies, autocratic forces will divide and conquer the bickering West. America needs to lead with its strengths—not only military but also economic, diplomatic and moral.”

Getting military strategy right isn't sufficient. We must keep the Western alliances together and actively appeal to developing nations. A comprehensive economic strategy would tighten the bonds, strengthen our alliances and, importantly, maximize our economic resources. Furthermore, it must encompass a global trade and investment strategy, a holistic plan around energy security and food security, and far more dynamic development finance for emerging markets. Done properly, the economic strength to emerge from such collaboration will preserve our alliances, entice

nations such as India into the fold, guarantee the strength of the U.S. military and preserve the mighty U.S. dollar as the world's reserve currency.

Finally, more active diplomacy and more dynamic communication around the principles that motivate the Western world are required. These principles are life, liberty, the pursuit of happiness and the idea that all people are created equal. Democracy and human freedom are inseparable from freedom of speech, freedom of religion and free enterprise. We should loudly and proudly sing these values from the rooftops.

In Closing

I would like to express my deep gratitude and appreciation for the 290,000+ employees, and their families, of JPMorgan Chase. From this letter, I hope shareholders and all readers gain an appreciation for the tremendous character and capabilities of our people and how they continue to help communities around the world. They have faced these times of adversity with grace and fortitude. I hope you are as proud of them as I am.

Finally, we sincerely hope that all the citizens and countries of the world return to normal after the pandemic, see an end to the ongoing war in Ukraine, and see a renaissance of a world on the path to peace and democracy.

Jamie Dimon
Chairman and Chief Executive Officer

Footnotes

Client Franchises Built Over the Long Term (page 8)

Note: figures may not sum due to rounding

- 1 Certain wealth management clients were realigned from Asset & Wealth Management to Consumer & Community Banking in 4Q20. 2006 and 2012 amounts were not revised in connection with this realignment.
- 2 Federal Deposit Insurance Corporation (FDIC) 2022 Summary of Deposits survey per S&P Global Market Intelligence applies a \$1 billion deposit cap to Chase and industry branches for market share. While many of our branches have more than \$1 billion in retail deposits, applying a cap consistently to ourselves and the industry is critical to the integrity of this measurement. Includes all commercial banks, savings banks and savings institutions as defined by the FDIC.
- 3 Barlow Research Associates, Primary Bank Market Share Database as of 4Q22. Rolling 8-quarter average of small businesses with revenue of more than \$100,000 and less than \$25 million.
- 4 Total payment volumes reflect Consumer and Small Business customers' digital (ACH, BillPay, PayChase, Zelle, RTP, External Transfers, Digital Wires), Non-digital (Non-digital Wires, ATM, Teller, Checks) and credit and debit card payment outflows. 2012 is based on internal JPMorgan Chase estimates.
- 5 Digital non-card payment transactions include outflows for ACH, BillPay, PayChase, Zelle, RTP, external transfers, and some wires, excluding credit and debit card sales. 2006 and 2012 are based on internal JPMorgan Chase estimates.
- 6 Represents general purpose credit card (GPCC) spend, which excludes private label and Commercial Card. Based on company filings and JPMorgan Chase estimates.
- 7 Represents general purpose credit card (GPCC) loans outstanding, which excludes private label, American Express Company (AXP) Charge Card and Citi Retail Cards, and Commercial Card. Based on loans outstanding disclosures by peers and internal JPMorgan Chase estimates.
- 8 Represents users of all web and/or mobile platforms who have logged in within the past 90 days.
- 9 Represents users of all mobile platforms who have logged in within the past 90 days.
- 10 Based on 2022 sales volume and loans outstanding disclosures by peers (American Express Company (AXP), Bank of America Corporation, Capital One Financial Corporation, Citigroup Inc. and Discover Financial Services) and JPMorgan Chase estimates. Sales volume excludes private label and Commercial Card. AXP reflects the U.S. Consumer segment and JPMorgan Chase estimates for AXP's U.S. small business sales. Loans outstanding exclude private label, AXP Charge Card, Citi Retail Cards, and Commercial Card.
- 11 J.D. Power, 2022 U.S. Mortgage Origination Satisfaction Study.
- 12 Inside Mortgage Finance, Top Owned Mortgage Servicers as of 4Q22.
- 13 Experian Velocity data as of 4Q22. Reflects financing market share for new and used loan and lease units at franchised and independent dealers.
- 14 Dealogic as of January 2, 2023.
- 15 Coalition Greenwich Competitor Analytics (preliminary for FY22). Market share is based on JPMorgan Chase's internal business structure and revenue. Ranks are based on Coalition Index Banks for Markets. 2006 rank is based on JPMorgan Chase analysis. 2021 excludes the impact of Archegos.
- 16 Client deposits and other third-party liabilities pertain to the Payments and Securities Services businesses.
- 17 Firmwide Payments revenue metrics exclude the net impact of equity investments
- 18 Coalition Greenwich Competitor Analytics (preliminary for FY22). Reflects global firmwide Treasury Services business (CIB and CB). Market share is based on JPMorgan Chase's internal business structure, footprint and revenues. Ranks are based on Coalition Index Banks for Treasury Services.
- 19 Institutional Investor.
- 20 Based on third-party data.
- 21 Nilson, Full Year 2022.
- 22 Based on Assets Under custody reported in company filings.
- 23 Prior year new relationship numbers have been revised to conform to current presentation.
- 24 Includes gross revenues earned by the Firm for investment banking and payments products sold to CB clients that are subject to a revenue sharing arrangement with the CIB.
- 25 S&P Global Market Intelligence as of December 31, 2022.
- 26 Refinitiv LPC, FY22.
- 27 Aligns with the affordable housing component of the firm's \$30B racial equity commitment.
- 28 Represents the Nomura "star rating" for Japan-domiciled funds and Morningstar for all other domiciled funds. Includes only Asset Management retail open-ended mutual funds that have a rating. Excludes money market funds, Undiscovered Managers Fund, and Brazil- and Korea-domiciled funds. Mutual fund rating services rank funds based on their risk-adjusted performance over various periods. A 5-star rating is the best rating and represents the top 10% of industry-wide ranked funds. A 4-star rating represents the next 22.5% of industry-wide ranked funds. A 3-star rating represents the next 35% of industry-wide ranked funds. A 2-star rating represents the next 22.5% of industry-wide ranked funds. A 1-star rating is the worst rating and represents the bottom 10% of industry-wide ranked funds. The "overall Morningstar rating" is derived from a weighted average of the performance figures associated with a fund's three-, five- and 10-year (if applicable) Morningstar Rating metrics. For U.S.-domiciled funds, separate star ratings are given at the individual share class level. The Nomura "star rating" is based on three-year risk-adjusted performance only. Funds with fewer than three years of history are not rated and hence excluded from this analysis. All ratings and the assigned peer categories used to derive this analysis are sourced from these fund rating providers as mentioned. Past performance is not indicative of future results.
- 29 In the fourth quarter of 2020, the Firm realigned certain wealth management clients from AWM to CCB. Prior-period amounts have been revised to conform with the current presentation.
- 30 Traditional assets includes Equity, Fixed Income, Multi-Asset and Liquidity AUM; Brokerage, Administration and Custody AUS.
- 31 AUM only for 2006. Prior period amounts have been restated to include changes in product categorization.
- 32 Source: Euromoney.

- 33 All quartile rankings, the assigned peer categories and the asset values used to derive this analysis are sourced from the fund ranking providers. Quartile rankings are done on the net-of-fee absolute return of each fund. The data providers re-denominate the asset values into U.S. dollars. This % of AUM is based on fund performance and associated peer rankings at the share class level for U.S.-domiciled funds, at a "primary share class" level to represent the quartile ranking of U.K., Luxembourg and Hong Kong funds, and at the fund level for all other funds. The "primary share class" is defined as C share class for European funds and Acc share class for Hong Kong and Taiwan funds. In case the share classes defined are not available, the oldest share class is used as the primary share class. The performance data could have been different if all share classes would have been included. Past performance is not indicative of future results. Effective September 2021, the Firm has changed the peer group ranking source from Lipper to Morningstar for U.S.-domiciled funds (except for Municipal and Investor Funds) and Taiwan-domiciled funds, to better align these funds to the providers and peer groups it believes most appropriately reflects their competitive positioning. This change may positively or adversely impact, substantially in some cases, the quartile rankings for one or more of these funds as compared with how they would have been ranked by Lipper for this reporting period or future reporting periods. The source for determining the rankings for all other funds remains the same. The classifications in terms of product suites and product engines shown are J.P. Morgan's own and are based on internal investment management structures.
- 34 Source: Company filings and JPMorgan Chase estimates. Rankings reflect publicly traded peer group as follows: Allianz, Bank of America, Bank of New York Mellon, BlackRock, Charles Schwab, Credit Suisse, DWS, Franklin Templeton, Goldman Sachs, Invesco, Morgan Stanley, State Street, T. Rowe Price and UBS. JPMorgan Chase ranking reflects Asset & Wealth Management client assets, U.S. Wealth Management investments and new-to-firm Chase Private Client deposits.
- 35 Source: iMoney.net.
- 36 Represents AUM in a strategy with at least one listed female and/or diverse portfolio manager. "Diverse" defined as U.S. ethnic minority.

JPMorgan Chase Exhibits Strength in Both Efficiency and Returns When Compared with Large Peers and Best-in-Class Peers (page 11)

- 1 Bank of America Corporation (BAC), Citigroup Inc. (C), The Goldman Sachs Group, Inc. (GS), Morgan Stanley (MS) and Wells Fargo & Company (WFC).
- 2 Managed overhead ratio = total noninterest expense/managed revenue; revenue for GS and MS is reflected on a reported basis.
- 3 Best-in-class peer overhead ratio represents the comparable business segments of JPMorgan Chase (JPM) peers: Bank of America Consumer Banking (BAC-CB), Goldman Sachs Investment Banking and Global Markets (GS-IB & GM), Truist Financial Corp (TFC), Northern Trust Asset Management (NTRS-WM) and Allianz Group (ALLIANZ-AM).
- 4 Best-in-class all banks ROTCE represents implied net income minus preferred stock dividends of the comparable business segments of JPM peers when available, or of JPM peers on a firmwide basis when there is no comparable business segment: Bank of America Consumer Banking (BAC-CB), and Goldman Sachs Investment Banking and Global Markets (GS-IB & GM), Wells Fargo & Company Commercial Banking (WFC-CB) and UBS Global Wealth Management & Asset Management (UBS-GWM & AM).
- 5 Best-in-class G-SIB ROTCE represents implied net income minus preferred stock dividends of the comparable business segments of JPM G-SIB peers when available, or of JPM G-SIB peers on a firmwide basis when there is no comparable business segment: Bank of America Consumer Banking (BAC-CB), Goldman Sachs Investment Banking and Global Markets (GS-IB & GM), Wells Fargo & Company Commercial Banking (WFC-CB) and Morgan Stanley Wealth Management and Investment Management (MS-WM & IM). WFC-CB is the only G-SIB peer to disclose a comparable business segment to Commercial Banking.
- 6 Given comparisons are at the business segment level, where available; allocation methodologies across peers may be inconsistent with JPM's.

Our Fortress Balance Sheet (page 12)

- 1 Basel III Transitional rules became effective on January 1, 2014; prior period CET1 data is based on Basel I rules. As of December 31, 2014, the ratios represent the lower of the Standardized or Advanced approach calculated under the Basel III Fully Phased-In basis.
- 2 Includes average eligible high-quality liquid assets (HQLA) as defined in the liquidity coverage ratio rule and unencumbered marketable securities, such as equity and debt securities, that the firm believes would be available to raise liquidity, including excess eligible HQLA securities at JPMorgan Chase Bank, N.A., that are not transferable to nonbank affiliates.
- 3 Capital returned to common stockholders includes common dividends and net repurchases.

Size of the Financial/Sector Industry (page 25)

- 1 2010 is sourced from WorldBank.org annual GDP publication. 2022 is calculated using JPM Research forecasts. Figures are represented in 2015 prices.
- 2 Consists of cash assets and Treasury and agency securities.
- 3 2022 figure is annualized based on available data through 1Q.
- 4 Top 50 fund AUM data per Sovereign Wealth Fund Institute, where unavailable 2021 disclosure was used in place of 2022.
- 5 Loans held by nonbank entities per the FRB Z.1 Financial Accounts of the United States.
- 6 U.S. money market fund investment holdings of securities issued by entities worldwide.
- 7 Methodology updated in 2022. 2010 has been restated.
- 8 NYSE + NASDAQ; excludes investment funds, exchange-traded funds' unit trusts and companies whose business goal is to hold shares of other listed companies; a company with several classes of shares is only counted once.
- 9 Inside Mortgage Finance and JPMorgan Chase internal data; consists of Top 50 Originators.
